- 1) Revise the listing of rates for various Private Line and Network Service Local Access service offerings. In order to improve presentation of rates and to eliminate duplicate listings we have moved the rate tables for Private Line and Network Service Local Access services to a separate section of the tariff;
- 2) Introduce a new chart of SONET charges;
- 3) Correct text, a per mile charge, and remove Pre-VBS DDS service from table located on the following sheets: 215, 217, 219, and 220; and

VIII. INTRASTATE NETWORK SERVICES LOCAL ACCESS SERVICE (CONT'D.)

1. SERVICE DESCRIPTION (CONT'D.)

1.3 Intrastate T1 Digital Access (Cont'd.):

1.3.2 Features and Options (Cont'd.):

1.3.2.3. Integrated Services Digital Network (ISDN) Service: Intrastate ISDN integrates voice, data, and video communications services via standard interfaces.

1.3.2.3.1 Primary Rate Interface (PRI): Through Intrastate PRI, a Customer can share access facilities among the following Intrastate Long Distance Voice Services of MCI Communications Services: outbound service and inbound toll-free services. An attribute of PRI, Call-by-Call Service Configuration, allows for these services to share dynamically allocated individual circuits within the PRI. Intrastate Private Line Service is also available with the above combinations.

The PRI consists of a 64 kbps D channel and 23 B channels of 64 kbps each. The bearer, or B, channels are used to access Company services supported over the PRI. The D channels are used to carry signaling and control information for the associated B channels.

In addition to providing basic access to the services specified above, the PRI interface can be configured to support the following advanced ISDN features: Call-by-Call Service Configuration, Non-Facility Associated Signaling, D-Channel Backup, Automatic Number Identification (ANI), Dialed Number Identification Service (DNIS) and, for intrastate outbound service with Feature Option C-1, Calling Station Identification (CSI). Call-by-Call Service Configuration allows the B channels of a PRI to be shared between multiple services carried on the PRI. With Non-Facility Associated Signaling, one PRI D channel can control up to a maximum of 20 T-1 Digital Access channels. D Channel Backup provides a redundant hot stand-by of the PRI's primary D Channel. Automatic Number Identification (ANI) allows a Customer to receive the originating caller's working telephone number provided this information is forwarded to the Company by the caller's Local Exchange Carrier (LEC). DNIS provides the called party with the number dialed by the Customer or a translated version of the dialed number. The delivery of ANI and DNIS is ordered along with intrastate outbound service with Feature Option C-1. CSI is provided to intrastate outbound service with Feature Option C-1 where Customers order PRI. Intrastate T-1 Digital Access is required to obtain intrastate ISDN PRI. Each time a change in the number of Private Line DS0s is required, a PRI reconfiguration charge will be assessed.
