This publication is a reference manual for anyone needing quick information about the electric, natural gas, telecommunications, and water and wastewater industries in Florida. The facts have been gathered from in-house materials, outside publications, and websites. Every effort has been made to accurately reference the source of the information used. Though most of the data refers specifically to Florida, some data from other states and national averages are included for comparison purposes. If you have questions about this publication, please contact:

Pursuant to Chapter 366, Florida Statutes (F.S.), as of December 2018, the Florida Public Service Commission (FPSC) has regulatory authority over:

- **5 investor-owned electric companies** (all aspects of operations, including rates and safety)
- **34 municipally owned electric utilities** (limited to safety, rate structure, territorial boundaries, bulk power supply, operations, and planning)
- **18 rural electric cooperatives** (limited to safety, rate structure, territorial boundaries, bulk power supply, operations, and planning)

### Generating Capacity
**Generating Capacity**
(utility and non-utility)
As of December 31, 2017

- **Summer:** 58,505 Megawatts (MW)
- **Winter:** 62,894 MW

### Transmission Capability
**Transmission Capability**
for Peninsular Florida

- **Import:**
  - Summer: 3,400 MW
  - Winter: 3,300 MW
- **Export:**
  - Summer: 1,000 MW
  - Winter: 300 MW

*Generating capacity is higher in winter due to thermodynamics/cooling water.

**Export transmission capacity varies due to thermal ratings of lines and seasonal load patterns.
Florida Energy Generation by Fuel Type

2017 (Actual %)
- Natural Gas: 64.92%
- Nuclear: 11.82%
- Coal: 17.30%
- Renewables: 1.77%
- Purchases: 3.09%
- Other: 0.90%
- Oil: 0.20%

2027 (Forecast %)
- Natural Gas: 65.60%
- Nuclear: 11.81%
- Coal: 11.91%
- Renewables: 1.75%
- Purchases: 1.25%
- Other: 1.75%
- Oil: 0.07%

Energy Sources (GWH)

| Source: FRCC 2018 Regional Load & Resource Plan, July 2018 |
Florida’s Renewable Capacity in MW (2017)
(Total: 2,583 MW)

- Biomass, 22.9%
- Solar, 31.1%
- Wind, 10.5%
- Municipal Solid Waste, 18.7%
- Landfill Gas, 2.9%
- Waste Heat, 11.8%
- Hydro, 2.0%
- Municipal Solid Waste, 18.7%
- Landfill Gas, 2.9%
- Waste Heat, 11.8%
- Solar, 31.1%
- Wind, 10.5%
- Biomass, 22.9%

Total Florida Renewable Capacity: 2,583 MW
Total Florida Electric Generation Capacity: 58,505 MW (Summer)

*Biomass*: Material collected from wood processing, forestry, urban wood waste, and agricultural waste.
*Landfill Gas*: Methane collected from landfills.
*Waste Heat*: Collected in processing phosphate into fertilizer and other products.

* Excludes local taxes, franchise fees, and gross receipts taxes that are billed as a separate line item. Includes cost recovery clause factors effective December 2018.

Note: Typical electric bill comparisons for municipally and cooperatively owned electric utilities are available in the Comparative Rate Statistics report available at: [http://www.floridapsc.com/Publications/Reports#](http://www.floridapsc.com/Publications/Reports#)
Average Residential Price of Electricity by State (2018)
(U.S. Residential Average Price per kWh = 13.64 cents)

Source:
Energy Information Administration’s Electric Power Monthly, Table 5.6.B.
Florida Power & Light Company (FPL) currently stores radioactive waste called “spent nuclear fuel” in water-filled pools inside containment structures at plant sites. As the pools become filled to capacity, some of the spent fuel is removed and placed in concrete storage containers (dry casks) on-site. Duke Energy Florida, LLC (DEF) has moved all of its spent nuclear fuel into dry cask storage.

Federal law requires the U.S. Department of Energy (DOE) to store and ultimately dispose of spent nuclear fuel and high-level radioactive waste in a geologic repository. Since 1983, Florida ratepayers have paid $903.6 million ($1.6895 billion with interest) into the federal nuclear waste fund established to cover the cost of transportation, storage, and disposal of spent fuel. DOE suspended collection of the nuclear waste fee in May 2014.

Florida Public Service Commission Map

Additional information about Florida’s investor-owned electric utilities is available from:
FPSC’s Statistics of the Florida Electric Utility Industry, October 2018
Pursuant to Chapter 366, F.S., as of December 31, 2018, the FPSC has regulatory authority over:

- **8 investor-owned natural gas utilities** (all aspects of operations, including safety)
- **27 municipally-owned natural gas utilities** (limited to safety and territorial boundaries)
- **4 special gas districts** (limited to safety and territorial boundaries)

Natural gas is transported to Florida customers through two major and two small interstate pipelines:

**Major**
1. Florida Gas Transmission Company (FGT)
2. Gulfstream Natural Gas System
3. Sabal Trail Interstate Pipeline

**Small**
1. Gulf South Pipeline Company
2. Southern Natural Gas

- FGT’s pipeline capacity is nearly 3 million cubic feet per day.
- Gulfstream’s pipeline capacity is 1.3 billion cubic feet per day.
- Sabal Trail’s pipeline capacity is 1 billion cubic feet per day.

Pursuant to Chapter 364, F.S., as of November 2018, the FPSC has regulatory authority over:

- **10 incumbent local exchange companies (ILECs)**
- **275 competitive local exchange companies (CLECs)**
- **44 pay telephone companies**

**Definitions**

- **Incumbent Local Exchange Telecommunications Company (ILEC)** - any company certificated by the Commission to provide local exchange telecommunications service in this state on or before June 30, 1995.

- **Competitive Local Exchange Telecommunications Company (CLEC)** - any company certificated by the Commission to provide local exchange telecommunications service in this state on or after July 1, 1995.

- **Pay Telephone Service Company (PATS)** - any certificated telecommunications entity which provides pay telephone service.

Broadband, VoIP, and Wireless

Broadband is a term describing evolving digital technologies offering consumers integrated access to voice, high-speed data services, video on demand services, and interactive information delivery services. Voice over Internet Protocol (VoIP) and wireless services compete with traditional wireline service and represent a significant portion of today’s communications market in Florida. VoIP is not the same as the Internet. It is a technology that allows you to make voice calls using a broadband internet connection instead of a regular telephone line. Broadband service also provides the basis for some VoIP services. These three services are not subject to FPSC jurisdiction.

Broadband

- In Florida, 65 percent of households had fixed broadband connections at download speeds of at least 25 megabits per second (Mbps) and 17 percent with connections of at least 100 Mbps in June 2016.
- Residential subscribership in Florida reached 94 percent in 2016, above the national average of 82 percent.

VoIP

- As of December 2017, there were an estimated 2.8 million interconnected residential VoIP subscribers in Florida.
- The Florida Internet and Television Association (FITA) reported an estimated 2.1 million residential cable digital voice (VoIP) subscribers as of December 2017, about the same number as reported for the preceding five years.

Wireless

- There were an estimated 21.5 million wireless voice subscriptions in Florida in 2017.
- The Centers for Disease Control (CDC) estimates that nationally 53.9 percent of households were wireless-only as of June 2017.

FPSC’s Report on the Status of Competition in the Telecommunications Industry, as of December 31, 2017. Figures 4-3 & 4-4
An access line is a telephone line extending from the telecommunications company’s central office to a point of demarcation, usually on the customer’s premises.

Universal Service Programs

The Federal Communications Commission (FCC) and Congress recognize that telephone service provides a vital link to emergency services, government services, and surrounding communities. To help promote telecommunications service nationwide, the FCC, as directed by Congress, developed the Federal Universal Service Fund (USF). The USF is administered by the Universal Service Administrative Company (USAC). The USF includes the High-Cost, Low-Income, Schools and Libraries, and Rural Health Care Programs.

1 **High-Cost Program.** The federal universal service high-cost program (also known as the Connect America Fund) is designed to ensure that consumers in rural, insular, and high-cost areas have access to modern communications networks capable of providing voice and broadband service, both fixed and mobile, at rates that are reasonably comparable to those in urban areas. The program fulfills this universal service goal by allowing eligible carriers who serve these areas to recover some of their costs from the federal Universal Service Fund.

2 **Low-Income Program.** Provides telephone service discounts to qualifying low-income consumers. It offers benefits through the Lifeline Assistance program:

   ▲ **The Lifeline Assistance Program:** Provides a monthly credit of $9.25 on basic monthly service or the option of receiving a free Lifeline cell phone and monthly minutes at the primary residence for qualified telephone subscribers. The telephone subscriber may receive a credit less than $9.25 if the subscriber’s bill for basic local telephone service is less than that amount.

   ▲ **Tribal Benefits:** Residents living on federally recognized tribal lands may receive a one-time discount of up to $100.00 in Link-Up support and enhanced Lifeline support (up to an additional $25.00 in support beyond current levels). Link-Up helps income-eligible consumers on tribal lands with initial installation or activation of a wireline or wireless telephone for the primary residence.

   ▲ **Monthly Lifeline Credit:** Under the FCC’s rules, monthly federal Lifeline support consists of a $9.25 monthly credit on basic monthly service or the option of receiving a free Lifeline cell phone and monthly minutes. Eligible subscribers living on tribal lands can receive a monthly discount of up to $34.25 ($9.25 plus an additional $25).
Low-Income Program (continued)

▲ Customer Eligibility: Customers with annual incomes up to 135 percent of the federal poverty guidelines may be eligible to participate in the Lifeline program. In addition, eligibility is determined by customer enrollment in any one of the following programs:

- Supplemental Nutritional Assistance Program (SNAP)
- Medicaid
- Supplemental Security Income (SSI)
- Federal Public Housing Assistance (Section 8)
- Veteran’s Benefit and Survivor’s Pension Programs
- Bureau of Indian Affairs Programs*

Beginning December 2, 2016, Lifeline assistance is available for voice (home phone or cell phone), broadband (Internet) or a bundle of the two services. Prior to this, only voice services were eligible for Lifeline discount. While many companies will now be offering Lifeline Assistance for broadband, consumers will need to check with their local company for its offerings. There is still only one Lifeline discount per household that can be used for phone service and/or broadband.

3 Schools and Libraries (or E-Rate) Program. Helps to ensure that the nation’s classrooms and libraries receive access to the vast array of educational resources that are accessible through the telecommunications network. While funding for the program is capped, the FCC has included an index for inflation to preserve the purchasing power of the program. The FCC increased the annual cap by 1.8 percent to $3.99 billion. The E-Rate program offers the following benefits:

▲ Eligible schools and libraries receive discounts on telephone service, Internet access, and internal connections (i.e., network wiring) within school and library buildings.

▲ The discounts range from 20 percent to 90 percent, depending on the school’s eligibility for the National School Lunch program (or a federally approved alternative mechanism) and whether or not the school or library is located in an urban or rural area.

* Eligible consumers living on tribal lands qualify for Link-Up and Lifeline if they participate in one of the following federal assistance programs: (1) Tribal TANF, (2) Bureau of Indian Affairs General Assistance, (3) Head Start Subsidy, or (4) Food Distribution Program on Indian Reservations.
Rural Health Care Program. The Rural Health Care Program supports health care facilities in bringing world class medical care to rural areas through increased connectivity. It provides up to $400 million annually in reduced rates for broadband and telecom services. There are two subprograms in the Rural Health Care Program: the Healthcare Connect Fund Program and the Telecommunications Program.

▲ The Healthcare Connect Fund supports high-capacity broadband connectivity and broadband networks for eligible Health Care Providers with a 65 percent discount. The Healthcare Connect Fund will reform, expand, and modernize the FCC’s existing universal service health care programs.

▲ The Rural Health Care Telecommunications Program ensures that eligible Health Care Provider’s pay no more than their urban counterparts for telecommunication services. The Telecommunications Program supports the urban-rural difference for telecommunications services for rural Health Care Providers.

Federal Communications Commission
http://www.fcc.gov/egb/consumerfacts/universalservice.html
Low-Income Program

▲ Coordinated Enrollment Process  In 2006, FPSC and the Department of Children and Families (DCF) staff developed a process whereby potential Lifeline customers, once certified through a DCF program, could receive Lifeline discounts. From the perspective of the client, the coordinated enrollment process established by the FPSC and DCF is seamless, from filling out the DCF web application to receiving Lifeline discounts.

The coordinated enrollment process entails the DCF client checking a “yes” or “no” box. DCF then forwards the names of the clients who have chosen and been approved for Lifeline, along with their relevant enrollment information, to the FPSC. The FPSC electronically sorts the information by eligible telecommunications carrier (ETC) and places the names on a secure website for retrieval and enrollment by the appropriate ETC.

▲ Lifeline Annual Recertification  All ETCs are now required to perform an annual recertification of their Lifeline subscribers to verify their ongoing eligibility. Subscribers failing to respond to recertification efforts must be de-enrolled from Lifeline. ETCs may contact and receive recertification responses from subscribers in writing, by phone, by text message, by e-mail, by Interactive Voice Response, or otherwise through the internet using an electronic signature. If an ETC is unable to recertify a subscriber because the subscriber did not respond to the recertification request, the ETC must de-enroll the subscriber. If an ETC receives a response that the subscriber is no longer eligible, the subscriber must be de-enrolled within five business days, and offered transitional Lifeline benefits for up to 12 months.

▲ National Lifeline Accountability Database (NLAD)  The FCC directed the Universal Service Administrative Company (USAC) to establish a database to both eliminate existing duplicative support and prevent duplicative support in the future. To prevent waste in the Universal Service Fund, the FCC created and mandated the use by ETCs of a National Lifeline Accountability Database to ensure that multiple ETCs do not seek and receive reimbursement for the same Lifeline subscriber. The NLAD conducts a nationwide real-time check to determine if the consumer, or another person at the address of the consumer, is already receiving a Lifeline-supported service. In 2016, the FCC directed USAC to establish a national Lifeline eligibility verifier to confirm the eligibility of consumers. Currently, ETCs verify the eligibility of consumers. The FCC has established a three year phase in schedule that concludes by December 2019.

Source:
FPSC’s Number of Customers Subscribing to Lifeline Service and the Effectiveness of Procedures to Promote Participation, December 2018
Low-Income Program  (continued)

Eligible Telecommunications Carriers (ETC)  A carrier that is granted ETC status is eligible to receive federal universal service support pursuant to FCC rules. To qualify as an ETC, a common carrier must offer services that are supported by federal universal service support mechanisms either using its own facilities or using a combination of its own facilities and another carrier’s resold service. Additionally, the carrier must advertise the availability of such services and charges using media of general distribution. As of June 2018, Florida had 19 ETCs, comprised of 10 incumbent local exchange companies, 5 competitive local exchange companies, and 4 wireless companies. FCC rules allow state commissions, upon their own motion or upon request, to designate a common carrier that meets certain requirements as a landline ETC. As of July 2012, the Federal Communications Commission approves wireless providers applying for ETC designation in Florida. As of August 2018 there were 35 Florida ETC wireless petitions pending at the FCC.

Regulatory Authority

Pursuant to Chapter 367, F.S., as of December 2018, the FPSC has jurisdiction over 150 investor-owned water and/or wastewater utilities in 38 of Florida’s 67 counties.

Use of Reclaimed Water Data for 2017

- Approximately 813 mgd* of reclaimed water from these facilities was reused for beneficial purposes and represents approximately 48% of the total domestic water flow in the state.
- The 1,690 mgd of reuse capacity represents approximately 66% of the total domestic wastewater treatment capacity in the state.

Utility Classifications

The National Association of Regulatory Utility Commissioners uses three classes to define the size of water and wastewater utilities:

Class A  Utilities having annual water or wastewater revenues of $1,000,000 or more
Class B  Utilities having annual water or wastewater revenues of $200,000 or more but less than $1,000,000
Class C  Utilities having annual water or wastewater revenues of less than $200,000

• A Class C utility may serve as few as 50 customers, while a Class A utility serves thousands.

• The number of customers served may be obtained from each utility’s annual report filed at the FPSC and available online at http://www.floridapsc.com/UtilityRegulation/CompaniesRegulatedByPSC.

Rate Structure

• The base facility charge and gallonage charge rate structure is the most common rate structure used by FPSC-regulated water and wastewater utilities.

• The base facility charge is a flat charge that recovers the fixed costs of utility service that remain the same each month regardless of consumption.

• The gallonage charge recovers the variable costs associated with the utility service such as electricity, chemicals, and labor.

• The gallonage charge is assessed for each 1,000 gallons of water that is registered on the customer’s meter.

• Inclining block rate structures are used to encourage water conservation. (The inclining block is similar to the base facility charge and gallonage charge rate structure, but includes additional gallonage charges for higher levels or blocks of usage.)

Residential Wastewater Gallonage Cap

• A maximum (or cap) is set on the number of gallons of water consumption a customer is billed for wastewater service.

• The monthly cap is normally between 6,000 and 10,000 gallons. (Any water consumption over that amount is generally considered to be used for purposes such as irrigation or washing cars.)

Water & Wastewater Utility Rates

• The rates charged by all water and wastewater utilities under the Commission’s jurisdiction are shown in alphabetical order by county in the FPSC’s Comparative Rate Statistics Report, available online at http://www.floridapsc.com/Publications/Reports#.
