BEFORE THE  
FLORIDA PUBLIC SERVICE COMMISSION

PROJECT NO. 980000B-SP

In the Matter of: :  
Issue Identification Workshop for :  
Undocketed special Project: Access :  
by Telecommunications Companies to :  
Customers in Multi-tenant Environments: :

PROCEEDINGS: SPECIAL PROJECTS WORKSHOP

CONDUCTED BY: CATHERINE BEDELL  
Staff Attorney

DATE: Wednesday, August 12, 1998

TIME: COMMENCED AT 9:30 A.M.  
CONCLUDED AT 3:30 P.M.

PLACE: BETTY EASLEY CONFERENCE CENTER  
ROOM 152  
4075 USPLA E WAY  
TALLAHASSEE FLORIDA

REPORTED BY NANCY S. METZKE, RPR, CCR  
POST OFFICE BOX 3093  
TALLAHASSEE, FLORIDA 32315

STAFF PARTICIPATING:

JOHN CUTTING, FPSC Staff.  
RICK MOSES, FPSC Staff.  
DAN HOPPE, FPSC Staff.  
PATTI DANIEL, FPSC Staff.

1 sheet, and I understand that will be happening too.

2           The third handout that we have is just a review  
3 summary of the issues, just so everyone is clear as to what  
4 the issues are, for people who might not have filed and are  
5 just coming for the first time, might need to know what  
6 issues we are talking about.

7           And the fourth handout is a brief presentation  
8 that will be given my Rick Moses on our demarcation rule,  
9 just for a brief review for every one. So those are the  
10 four handouts we'll be working from.

11           I want to also take this opportunity to thank all  
12 the parties who filed. We were really -- I want to  
13 compliment you all on your responsiveness to our issues.  
14 We got a lot of good information, and I would hope that you  
15 would continue to give us that type of information  
16 throughout this process. You all filed very timely. I  
17 think there was only one party who filed late, and I just  
18 want to thank you all for getting us the information as  
19 quickly as possible.

20           I do want to apologize for the fact that our home  
21 page was down for a while. Some of you probably tried to  
22 access our home page. Our system crashed about two weeks  
23 ago, and then last week the server got hit with lightning,  
24 so it was down two different times. I do want to  
25 apologize, so any people who tried to get access through

1 the home page might not have been able to do so.

2 Today we have overhead equipment for anybody who  
3 might want to give -- have overheads for their  
4 presentation, so we do have an overhead projector with a  
5 screen. We also have a court reporter, so anybody who  
6 wants copies of the transcripts, please get with the court  
7 reporter sometime today.

8 I guess that's about all I really have to say  
9 right now. I'll be turning it over to Cathy. Rick will be  
10 giving a brief presentation in the introduction, and I  
11 guess I'll turn it over to Cathy now.

12 MS. BEDELL: Well, I was going to turn it over to  
13 Rick. I did want to tell you all that, when Rick is  
14 finished, you're certainly free to ask him any questions  
15 that you would like, but we need you to come up to the mike  
16 and identify yourselves if you do that. And you are also  
17 free, when we talk about what we are going to do for the  
18 next round, that we'll include your filing rebuttal  
19 comments to things you've heard today. That would also  
20 include any rebuttal that you might like to file in  
21 response to Mr. Moses's presentation. We are offering this  
22 because we just thought that it would be useful to clarify  
23 the difference between the federal MPOE and the Florida  
24 demarcation point rule and the reasons for that  
25 difference. I turn it over to Rick.

1           MR. MOSES: Good morning everyone. I just wanted  
2 to go through some of the different scenarios that we have  
3 got as far as our rules and show you where the differences  
4 are between the Florida PSC's rules and the Federal  
5 Communications rules. I know this first one doesn't really  
6 relate to the job at hand as far as multi-tenant, but I  
7 thought I would go through the entire rule just to give you  
8 our interpretation of it.

9           On a single unit, which would be similar to your  
10 house or a townhouse or something of that nature, our rules  
11 and the FCC are very similar. The FCC says it's going to  
12 be within 12 inches of the protector or the minimum point  
13 of entry. The PSC rules is at the nearest physical point  
14 that you can demarc on the property, which can --  
15 usually is normally the outside protector on the outside of  
16 the house, so we don't have a conflict with the FCC in that  
17 regard.

18           Then we get into the area of the multi-tenant  
19 environment. This one is without common equipment, and  
20 what we mean by common equipment is a CPU of a key system  
21 or a PBX system where there is common equipment that is  
22 serving all of the tenants in that particular area. The  
23 FCC has left the decision up to the multi-premises owner,  
24 which would be the property owner or the building landlord,  
25 that they can select where they want the demarcation point

1 as a single point or they can have it as a multi-point; and  
2 it will be within 12 inches of where the wiring enters the  
3 customer's premises. In that instance the FCC has  
4 determined that the customer would be the property owner,  
5 the way they have interpreted that.

6 Our rule, for the common equipment -- or excuse  
7 me, this is without common equipment -- that each one of  
8 those tenants is a separate customer, and that customer is  
9 the customer of the incumbent local exchange company; and  
10 I'll be speaking of the incumbent local exchange company in  
11 these rules. Therefore, the demarcation point is the hand  
12 off between the regulated entity and the customer, which  
13 would be inside of each one of those customer's premises;  
14 and that's where we have a conflict with the FCC at that  
15 point. We don't allow it to be left up to the building  
16 owner. It's the customer's right to dedicate where the  
17 demarcation point would be as close as possible inside of  
18 their premises.

19 We have less of a conflict with the FCC when we  
20 talk about multi-tenant environment with common equipment,  
21 such as a PBX or a key system. The FCC has got the same  
22 rule as we do without the common equipment. It's the  
23 minimum point of entry. The PSC's rules require that the  
24 demarcation point be located within 25 feet and in the same  
25 room as the common equipment. The reason for that is there

1 has been situations where the demarc was dumped off at,  
2 say, the outside of the building or in an equipment room  
3 where the common equipment wasn't located, and say you are  
4 15 floors up and that is where your CPU is or your PBX,  
5 there was a big gap between the service; and there was no  
6 way of getting it up there in some instances, so we wanted  
7 to make sure that the local exchange companies were held  
8 responsible to make sure that that wire and the service was  
9 delivered to the customer and not the building owner.

10           And on the shared tenant, we have recently, I  
11 think about a year or maybe two years ago now, time is kind  
12 of escaping me, we had rulemaking on it where we did some  
13 clarification; and this is the one area where our rules  
14 actually address compensation of the wire that is used by  
15 someone other than the local exchange company. In other  
16 words, on the shared tenants, your demarcation point is the  
17 same as that multi-tenant with the common equipment, except  
18 for if one of these tenants elects to opt out of the shared  
19 tenant environment. Now your demarcation changes. It  
20 goes back up to that tenant's property, and that's where we  
21 conflict with the FCC again in that area.

22           In the shared tenant rules we have a compensation  
23 clause in there that says that if the wire meets the  
24 National Electric Safety Standards and it is telephonic  
25 wire, then the local exchange company is required to use

1 that wire and pay compensation at a rate no higher than  
2 what it would have cost for them to put in their own  
3 services. So we do have a precedent as far as compensation  
4 on these issues.

5 Is there anyone that has got any questions on  
6 this? I'm sure someone has.

7 (NO RESPONSE)

8 MR. MOSES: I wouldn't have expected this.  
9 Okay. Thank you.

10 MR. CUTTING: We'll begin the presentations.  
11 You'll notice that people were asking why the order came  
12 out the way it did. These are the way they were received  
13 in our records department. So for the gentleman who said,  
14 We arrived here at 4:25 in the afternoon. We can't believe  
15 we're possibly so high on the list. Obviously you may have  
16 been the last one in the door but the first on the top of  
17 the pile when records documented them and put your document  
18 number on them. So there is no preferential treatment as  
19 to how the list was derived.

20 But I do understand that Time Warner and Teligent  
21 wanted to reverse, and apparently Teligent is ready to go  
22 first. Please identify who you are. And everyone will be  
23 limited to 15 minutes, and I'm going to be a pretty strict  
24 gatekeeper about that. Following each presentation, if  
25 there are some brief clarifying questions only, we'll be

1 glad to take those. In the event there is time left over  
2 in the rest of the afternoon following the presentations,  
3 we'll certainly get into more indepth discussions. But if  
4 it's strictly a clarification question, please feel free to  
5 ask that once the 15 minutes is over. So Teligent, if you  
6 would like to go first, feel free.

7 MS. DANIEL: Please introduce yourselves, and if  
8 you need the hand held mike, we have that.

9 MR. Mince: Good morning. My name is Mike Mince,  
10 and I'm here with my colleague Stuart Kupinsky. We are  
11 in-house attorneys with Teligent. My area is real estate  
12 and Stuart's is regulatory. We are going to tag team our  
13 presentation this morning. I'm going to talk a bit about  
14 Teligent and also the issues we face in giving tenants  
15 choice in carrier, and Stuart is going to talk about  
16 possible solutions.

17 To let you understand our vantage point regarding  
18 these issues, let me tell you about Teligent for just a  
19 moment. We are a competitive local exchange carrier, like  
20 Southwestern Bell or MPS. We complete the call from the  
21 long distance provider to the end user and can deliver a  
22 full array of local, long distance, video, data or Internet  
23 services. We are high speed, high band width and highly  
24 reliable, just like fiber providers, but we are wireless.

25 Wireless. Is that like PCS or cellular? No, we

1 are more like MFS or Southwestern Bell. When they collect  
2 traffic from the customers and bring it down to their loops  
3 in the basement, typically take it underground out to the  
4 publicly switched network, we collect the traffic from the  
5 customers and bring it up to a 12-inch antenna on the roof  
6 and beam it to a node collecting point where it then goes  
7 into the publicly switched network. We're the opposite of  
8 PCS or cellular. Where their antennas serve mobile users  
9 outside the building, our antenna serves only the customers  
10 in the building. Because we are wireless, we don't dig up  
11 streets or lawns or use public rights of way. We are low  
12 impact and low cost.

13           So what's the problem? The problem is in giving  
14 the tenants a choice. Our customers are tenants in  
15 commercial office buildings, and to provide service to  
16 those customers, to give them choice in the telecom  
17 carriers, we have to go through different monopolists: the  
18 building owner and the ILEC. In a real sense, the building  
19 owner has monopoly power over the tenant's choice of  
20 carrier. Some building owners and managers fail to permit  
21 tenant choice in telecom providers and services. If the  
22 owner doesn't permit the competitive carrier to install in  
23 the building then the tenant's choice is limited to the  
24 incumbent carrier. And the long-term leases that tenants  
25 sign prevent their exercising choice. Most leases are

1 typically ten years in length. And even if they could  
2 move, moving is an onerous and unrealistic alternative for  
3 most tenants. That is an enormous expense to move from one  
4 building to another.

5           Here is the reality as we see it. Landlords,  
6 being good capitalists, would like to charge everyone who  
7 uses the building as much as they can get. But every  
8 landlord also wants at least basic telephone service for  
9 their building, so the incumbent is in every building for  
10 free. The landlord can't charge the incumbent because the  
11 landlord has no choice, but the competitive carriers, he  
12 can charge them because he has a choice. Ironically, once  
13 the competitive carrier gets in the building, then the  
14 landlord would have a choice because he could charge the  
15 incumbent as well.

16           But here is the result: Even though, typically,  
17 the CLEC has a lower cost, lower network cost than the  
18 incumbent, if the landlord is only charging the CLEC, then  
19 that additional access charge takes away the competitive  
20 edge that the CLEC might have available to bring  
21 competition to that building and provide the tenant with a  
22 choice. The landlords only charge the CLECs, and that  
23 discrimination hurts competition and delays bringing  
24 competitive choice to Florida's commercial telecom  
25 customers.

1           The ILEC's control of the risers in the wiring  
2 furthers that discrimination. The incumbent controls  
3 access to the existing riser and house wiring at the MPOE.  
4 If access is permitted at all, the ILEC dictates the timing  
5 and cost of providing competitive services; and Stuart will  
6 speak more about that in a moment. It adds significant  
7 cost and disruption if you have to rewire. And what we are  
8 talking about here, again, is the service to the customer  
9 if we have to -- to the extent that we have to deal with  
10 the incumbent in terms of getting connected.

11           And the last point to notice is that, well, what  
12 if we took away that discrimination, what if the landlord  
13 was charging both the ILEC and the CLEC. Well, there has  
14 to be a reasonableness to it because, remember, the tenants  
15 are locked into a long-term lease, often ten years; so if  
16 the landlord charges both the ILEC and the CLEC the same  
17 fee for access but it's an unreasonably high fee, both of  
18 those carriers are going to pass that cost on to the  
19 customer who has no choice because he can't move.

20           And now I'm going to turn it over to Stuart who  
21 will discuss some of the potential solutions.

22           MR. KUPINSKY: I'm going to take a stab at no  
23 microphone. Mike is a little bit more soft spoken than I  
24 am.

25           MS. BEDELL: She has got a direct feed. She

1 needs --

2 MR. KUPINSKY: Oh, is that right? Well, then  
3 okay, I'll use that.

4 So what is the solution? We believe there is a  
5 win solution for all the parties involved. A win for  
6 tenants would be something congress has already decided  
7 upon, which is, competitive carriers vying to provide the  
8 lowest cost and highest quality services. A win for  
9 building owners would include a wide latitude to negotiate  
10 fair and reasonable terms and conditions for access. But  
11 in order to make it a win for carriers, there have to be  
12 limitations on that latitude, because a win for carriers  
13 would be for the market to send the right economic signals  
14 to carriers and to instruct carriers on the basis of the  
15 quality and cost of their services. And, you know, those  
16 signals have to pass through the lens of a building owner,  
17 and where the building owner is not interested in the cost  
18 or the quality of the services being provided, they can be  
19 attenuated.

20 So the solution really reduces to two sort of  
21 fundamental concepts. The first is nondiscrimination as to  
22 both carrier and to technology. Send the right signal. So  
23 the tenant should send the signal to the carrier on the  
24 basis of cost and quality. And the building owner should  
25 not be discriminating on the basis of carrier, and the

1 tenant should be making a fundamental choice on the basis  
2 of technology.

3           The second concept is reasonableness, something  
4 we introduce into contracts and laws all the time; and that  
5 includes reasonableness as to the charges that the building  
6 owner imposes on tenant access, and the reasonable terms  
7 and conditions. These two concepts, while they can play a  
8 major role in your recommendation to the legislature, you  
9 can, today, by moving the demarcation point to the MPOE,  
10 address a little bit of the first one, discrimination  
11 between carriers. Given that the ILEC already has ready  
12 access to the risers in a building and competitors don't,  
13 that would address part of the problem, but it would be a  
14 significant step.

15           MR. MOSES: Could I ask you a question on this  
16 part right here?

17           MR. KUPINSKY: Sure.

18           MR. MOSES: You're saying about the  
19 nondiscrimination, and you have placed the building owner  
20 as an integral part of this nondiscrimination; and as you  
21 realize, we have no regulatory authority over that building  
22 owner. How would you suggest we address that part? In  
23 other words, how is a consumer going to be guaranteed  
24 service?

25           MR. KUPINSKY: Well, let's see, where you have

1 jurisdiction, you can take unilateral action. So the MPOE  
2 requirements, you have jurisdiction to adjust them in  
3 accordance with the nondiscriminatory environment, such as  
4 Illinois and California, where they've located the  
5 demarcation point in the -- at the MPOE.

6 MR. MOSES: Okay, that gets the service to the  
7 buildings, but I've still got a customer 30 floors up in  
8 the air that doesn't have the service yet. How are we  
9 going to ensure that that customer gets that service?

10 MR. KUPINSKY: As far as sort of carrier of last  
11 resort or --

12 MR. MOSES: Well, no, not necessarily carrier of  
13 last resort. You are talking about moving everything back  
14 to the MPOE. If we were to do that, carrier of last  
15 resort's responsibility stop at that point; so we still  
16 haven't ensured that the customer has gotten the service  
17 that they've ordered.

18 MR. KUPINSKY: Well, California and Illinois have  
19 stopped at the MPOE, and it doesn't seem to have created  
20 that problem in those states; and so we would suggest that,  
21 you know, the market will take care of that aspect. I mean  
22 if that problem were to arise as far as the customer not  
23 getting the ordered service, I assume it would have arisen  
24 in California and Illinois.

25 MR. MOSES: Well, we have experienced that here

1 even though we have got a rule that says otherwise, but we  
2 have experienced that here in Florida, so that is why the  
3 rules are structured the way they are. And I'm not sitting  
4 here trying to be adversary about it, don't get me wrong.  
5 I'm just trying to get all the facts out as to you're  
6 talking about it not being nondiscrimination, but we can  
7 only take it to a point, so we still have to keep the  
8 consumer in mind.

9 MR. KUPINSKY: No, and I think that's obviously a  
10 consideration that you're paid to keep in mind. I think,  
11 you know, the idea is there has to be a solution whereby we  
12 don't depend on the incumbent for when we can access riser  
13 cable, when we can access a tenant; and it's an opportunity  
14 to use the current risers, the existing equipment in the  
15 building. And, you know, we would certainly entertain  
16 whatever requirements, if there weren't two competitors  
17 serving a building, that kind of thing that would address  
18 your concerns.

19 MR. MOSES: Well, my understanding, you're using  
20 a wireless service so the demarcation really isn't a factor  
21 as such because you are not getting local loops from the  
22 incumbent LEC; is that right?

23 MR. KUPINSKY: No, it's an enormous factor. What  
24 we do is we locate an antenna on the roof, and we drop a  
25 cable down to the wiring closet; and then in the -- once we

1 are in the wiring closet, we look like any other carrier.  
2 For example, a fiber carrier might come in here  
3 (indicates), if this is the wiring closet. We will be, you  
4 know, trying to tap into the demarcation down here and  
5 bring the wiring up to the customer prem, just like any  
6 other fiber carrier.

7 MR. MOSES: Where do you pick up the dial tone?

8 MR. KUPINSKY: Where do we pick up the dial tone?

9 MR. MOSES: Uh-huh, where does the dial tone  
10 originate?

11 MR. KUPINSKY: In our switch. We have a regular  
12 circuit switch.

13 MR. MOSES: So you go from your switch to  
14 wireless at the top of the building, and then you come down  
15 and pick up at the demarcation point only for -- which  
16 isn't a demarcation point because there is no regulated  
17 company at that point; so all you're doing is picking up  
18 the riser cable, right?

19 MR. KUPINSKY: Correct.

20 MR. MOSES: So how does this enter into this  
21 picture at all? Because that wire can belong to anybody.  
22 That is not regulated.

23 MR. KUPINSKY: Well, in most cases -- for  
24 example, BellSouth may be controlling a lot of the riser  
25 cables in the building.

1 MR. MOSES: They may have facilities there,  
2 but --

3 MR. KUPINSKY: Right. Rather than having to  
4 rewire the entire building or, for example, dropping a  
5 cable down and drilling up through and going to a  
6 particular customer floor.

7 MR. MOSES: Do they lease you those pairs?

8 MR. KUPINSKY: We have an agreement with  
9 BellSouth in Florida that allows us to lease riser cable.  
10 What it does, though, is it forces us to call them whenever  
11 we want to serve a customer. It forces us to adhere to  
12 their schedule of sending someone out to the wiring closet  
13 and to limit the speed with which we can serve customers.

14 MR. MOSES: In your experience in Florida, have  
15 you experienced that a building owner owned that cable  
16 instead of BellSouth or any other LEC?

17 MR. KUPINSKY: Not in Florida today, but in other  
18 states that have similar rules as to building cable. What  
19 we have experienced is that it becomes a least common  
20 denominator service, that the RBOC dictates the time that  
21 we can go out and provision a service to a customer. And  
22 customers are looking for, you know, a higher grade, a  
23 higher quality of service, and it seriously debilitates our  
24 ability to do that.

25 MR. MOSES: Okay. Thank you.

1 MR. KUPINSKY: So what have other states done?  
2 We believe that the Texas statute is a good role model.  
3 The Texas statute divides into two parts, one part talks  
4 about what building owners can do, and the other part talks  
5 about what they can't do. The part that talks about what  
6 they can do includes a lot of this concept of  
7 reasonability. They can impose reasonable safety,  
8 security, time, space, and appearance conditions,  
9 indemnification for damage and demand reasonable payment  
10 for access. It's a fairly comprehensive statute. It  
11 addresses a lot of the problems that we have encountered  
12 nationwide, and we think it's a good example.

13 Ohio and Connecticut have also addressed the  
14 issue. Ohio has a ruling that is fairly general, and while  
15 it supports our position, it is general enough that there  
16 is a lot of maneuvering room around it. Connecticut has an  
17 interesting statute. The interesting aspect is that even  
18 if there is a dispute as to compensation for tenant access,  
19 the statute provides that service will be installed pending  
20 the outcome of the dispute, and the Commission acts as the  
21 ultimate arbiter in resolving the dispute.

22 And then finally, we would recommend that you  
23 take a look at the recently adopted NARUC resolution  
24 regarding building access. NARUC supports allowing all  
25 telecom service providers to access at fair and

1 nondiscriminatory and reasonable terms and conditions,  
2 public and private property in order to serve a customer.  
3 We think it's a well-reasoned resolution and recommend that  
4 you take a close look at it.

5 Thank you for the opportunity to speak to you  
6 today, and we'd be happy to answer any other questions and  
7 ask that you send the right signal.

8 MR. CUTTING: Any questions from the floor?

9 (NO RESPONSE)

10 MR. FALVEY: Stuart, maybe -- This is Jim Falvey  
11 with e.spire. This is what would be friendly cross if  
12 there were a more formal hearing, but it seems in response  
13 to the universal service issue you do have the legislation  
14 picking up where the Commission's, ostensibly the  
15 Commission's jurisdiction leaves off; so that while,  
16 technically, the Commission, the Commission's jurisdiction  
17 may end at the point of demarc, there is no point along the  
18 line to the customer that is not regulated by either the  
19 building access statute or the Commission's direct  
20 jurisdiction, if you will; and as you say, in the  
21 Connecticut statute there is dispute resolution -- This  
22 is also not a question apparently.

23 MR. KUPINSKY: I think it would be better if I  
24 didn't say anything.

25 MR. FALVEY: No, but you certainly have a

1 connection between the two so that -- and I think that is  
2 why universal service has not suffered in California and  
3 Illinois to my knowledge. Stuart, if you could comment on  
4 that, please. That's my question.

5 MR. KUPINSKY: Thank you.

6 MR. CUTTING: Next in line is Cox Communications.  
7 I'm aware that they and TCG apparently reversed their  
8 order.

9 Please identify yourself and talk into the mike.

10 MR. HOFFMAN: Thank you. My name is Ken Hoffman.  
11 I'm with the law firm of Rutledge, Ecenia, Underwood,  
12 Purnell & Hoffman. I'm here this morning on behalf of  
13 Teleport Communications Group, Inc.

14 I would like to begin with a statement that,  
15 having participated actively on this issue during the past  
16 legislative session, I believe we are here because the  
17 legislature was sufficiently convinced that there is a  
18 segment of the Florida population, and I'm talking about  
19 both business and residential customers, who do not have a  
20 choice of local telecom providers because of the actions  
21 and the inactions and the policies of building owners and  
22 managers. TCG remains hopeful that the Public Service  
23 Commission will recommend through this study and that the  
24 legislature will enact legislation that will allow tenants  
25 and occupants in multi-tenant environments the ability to

1 choose their local provider of choice rather than having  
2 that choice left in the hands of the building owner or the  
3 landlord.

4           As we mentioned in our comments, we believe that  
5 this type of pro-competitive policy is clearly articulated  
6 in both the 1996 federal legislation and the prior 1995  
7 Florida legislation which opened up the local market to  
8 competition, and we provide a few examples in our  
9 comments.

10           First, the 1995 Florida legislation now mandates  
11 local governments to provide nondiscriminatory access to  
12 their rights of way. Now that the competing local provider  
13 can mandate nondiscriminatory access to rights of way, the  
14 provider may essentially be left at the sidewalk if the  
15 building owner denies access or demands discriminatory or  
16 unreasonable compensation.

17           The second example under Florida law can be found  
18 in the 1998 amendments to the shared tenant services  
19 statute. Now pursuant to these amendments in a building  
20 where shared tenant services are provided now, because of  
21 these amendments, both residential and commercial tenants  
22 have the right to demand direct access to their local  
23 provider of choice. We believe that these amendments and  
24 their legislative intent remain frustrated when  
25 nondiscriminatory or reasonable access is denied by

1 building owners and landlords.

2           As a third example, I would point you to the  
3 Commission's current rulemaking dockets, which was open for  
4 the purpose of adopting a fresh-look rule. The staff has  
5 published a preliminary proposed rule which would give all  
6 consumers of local exchange services the opportunity to  
7 terminate their contracts with the incumbent LECs in favor  
8 of a competing provider subject to the terms and conditions  
9 that are outlined in the rule. I should say proposed rule.  
10 Again, without legislation requiring multi-tenant building  
11 owners and managers to provide nondiscriminatory access to  
12 all providers, then the benefits of the Commission's  
13 anticipated fresh-look rule will be foreclosed to the  
14 tenants and occupants of multi-tenant buildings.

15           Lastly, I should say that TCG also maintains that  
16 nondiscriminatory access is particularly appropriate to  
17 foster state and federal encouragement of facilities-based  
18 local competition. TCG, as many or most of you are aware,  
19 is a certificated alternative local exchange company here  
20 in Florida and across the nation. TCG typically employs  
21 fiber optic cable in providing service in a multi-tenant  
22 building. The facilities are typically installed in a  
23 common telecommunications closet and extend along common  
24 conduit already installed and existing in the building by  
25 the incumbent LEC to the customer's premise. These

1 facilities are installed, operated, repaired by TCG and may  
2 be removed without consequence to other tenants or to the  
3 building.

4           The actual cost of providing access to the  
5 limited space necessary to install and maintain these  
6 facilities is negligible and certainly not commiserate with  
7 the excessive rents or percentage of profits that have been  
8 demanded by building owners. These demands are  
9 particularly anti-competitive when the incumbent LECs have  
10 been allowed entry, installation and operation of their  
11 facilities at no charge.

12           In defining the term multi-tenant environment,  
13 TCG believes the definition should include new and  
14 existing, public and private buildings used for residential  
15 or commercial purposes, including apartments, condominiums,  
16 cooperatives, office buildings and commercial malls. In  
17 terms of the term "direct access," TCG believes that  
18 services which should be included in the term "direct  
19 access" should include all telecommunications services,  
20 including services which may be accessed by a customer's  
21 local loop, such as information services and high speed  
22 data services.

23           Now on pages 11 and 12 of our comments, we have  
24 laid out what we believe to be the appropriate guidelines  
25 and parameters for legislation or Commission rules, or

1 both, governing a mandate of nondiscriminatory access.  
2 Specifically, we suggest that multi-tenant owners and  
3 managers not be permitted to deny a multi-tenant building  
4 tenant or occupant the choice of a competing provider by  
5 doing any of the following: First, by denying a competing  
6 provider physical access to install facilities; second, by  
7 interfering with competing providers installation of  
8 facilities requested by a tenant; third, by demanding  
9 payment from a tenant as a result of choosing a particular  
10 provider; fourth, by demanding payment from a competing  
11 provider on terms that discriminate between providers;  
12 fifth, by demanding payment from a competing provider on  
13 any basis other than the actual cost of providing access to  
14 the necessary space; and sixth, by entering into inclusive  
15 contracts with any provider.

16 Now for the remainder of my comments, I have some  
17 remarks that I would like to make in response to some of  
18 the comments that have been filed by the various property  
19 and building owner associations, and let me begin with the  
20 Florida chapter of International Council of Shopping  
21 Centers.

22 First, the Council of Shopping Centers indicates  
23 that there is no need for the Public Service Commission to  
24 intervene on the access issue because access is adequately  
25 regulated by the market place. We believe that the Florida

1 legislature took a different view by ordering the Public  
2 Service Commission to study these issues and report back to  
3 the legislature. Also, the FCC has repeatedly commented  
4 that there is not yet true local competition and has so  
5 found in a number of the section 271 orders.

6 Secondly, the shopping centers believe that  
7 reasonable compensation may be derived by contracts which  
8 require payments of percentages of gross revenues. Such  
9 terms are discriminatory when compared with the free access  
10 that is provided to the incumbent provider. Moreover, the  
11 extraction of percentages of gross revenues are predicated,  
12 in our opinion, on the unfounded assumption that  
13 multi-tenant building owners and managers are somehow  
14 entitled to increased revenues as a result of legislative  
15 mandates to open up the local markets. There is no  
16 indication in the 1996 federal act or the 1995 Florida law  
17 which would support such a notion.

18 Now they have attached a declaration that was  
19 submitted to the FCC by Harvard Professor Haar. If you go  
20 through that declaration, you'll see that the professor,  
21 like many of the other building owner participants in this  
22 project, places great emphasis on the Loretto decision.  
23 Now nowhere in the professor's comments, or for that matter  
24 in BOMA's or any other building owner's comments, is there  
25 a recitation to the more recent federal district court

1 decision in Gulf Power Company versus United States, a case  
2 which is cited and discussed in TCG's comments.

3           Very briefly, in Gulf Power, the federal district  
4 court recognized that there may, there may be a taking  
5 triggered by the amendments to the Federal Pole Attachment  
6 Act, which requires electric utilities to provide cable  
7 systems and telecom carriers with nondiscriminatory access  
8 to the electric utilities' poles. However, the court went  
9 on to say and went on to hold that the statutory scheme  
10 under which the FCC would resolve a dispute concerning  
11 rates for access to these electric utility poles subject to  
12 judicial review overcame the constitutional taking  
13 objection. We believe that, to the extent there is a  
14 taking, a similar statutory scheme authorizing the Public  
15 Service Commission to resolve compensation disputes,  
16 subject to judicial review, would be valid and lawful.

17           Finally, with respect to the shopping centers'  
18 comments on pages 14 and 15, they cite to a number of cases  
19 where courts have found that congress did not intend to  
20 authorize a taking. Here, of course, as part of this  
21 project and potential legislation the Florida legislature  
22 could do just that, with compensation, if any, to be  
23 determined by the Public Service Commission, subject to  
24 judicial review, consistent with the Gulf Power case.

25           Let me move to the Florida Apartment Association.

1 The apartment owners begin with a number of unfounded  
2 assumptions. First, they posit that competition for  
3 telecommunications services exist today in the residential  
4 market on a community level. This statement, obviously,  
5 overlooks and conflicts with the findings of this  
6 Commission last year in BellSouth's Section 271 proceeding.

7 Secondly, the apartment owners then suggest that  
8 property owners have the ability today to choose and change  
9 providers and will do so based on market demands. Again,  
10 this statement belies reality if competing providers cannot  
11 even gain access to the multi-tenant buildings.

12 The apartment owners, like others, such as the  
13 Community Associations Institute, also suggest exclusive  
14 contracts on the community level to promote competition and  
15 should be encouraged. TCG disagrees. Exclusive contracts  
16 eliminate the option of a competing provider. Even where  
17 exclusive contracts are subject to a bidding process, a  
18 matter not required under Florida law, exclusive contracts  
19 can still work to foreclose the desires of a particular  
20 tenant to choose a particular competing provider, because  
21 that specific provider is able to provide enhanced or  
22 bundled services at competitive rates or discounts.

23 Let me turn briefly to the Community Association  
24 Institute. The Community Associations suggests that there  
25 is no need for competitive choice for the owners of their

1 units because all owners are spoken for through a governing  
2 board of directors, who choose a particular telecom  
3 provider. In our opinion, the fact that five, seven,  
4 whatever the number may be, individual unit owners are  
5 appointed to govern the business and operations of a  
6 homeowners association does not eliminate the fact that  
7 there will often be individual unit owners who desire and  
8 should be offered the same choice of competing providers  
9 that other consumers in Florida are provided under the  
10 Florida and federal laws.

11 Now the Community Associations also argue the  
12 Loretto decision, and we would submit that even apart from  
13 the Gulf Power decision, which I've discussed, Loretto does  
14 not address the issue of whether competing providers use of  
15 space, which is already allocated for telecommunications  
16 use, would constitute a taking. We believe that a  
17 legitimate legal issue exists, even with Loretto, as to  
18 whether the de minimis use of an existing  
19 telecommunications closet and previously installed conduit  
20 would constitute a taking, even under Loretto.

21 The Community Associations also emphasize the  
22 forced nature of mandated access as though every competing  
23 provider is going to rush out and install their facilities,  
24 despite the lack of customers. First of all, there are  
25 relatively few facilities-based providers in the State of

1 Florida. Secondly, the facilities-based providers, like  
2 any other business, will make cost effective decisions.  
3 They have to make cost effective decisions, and they will  
4 not undertake investments and installation of facilities  
5 where the present or future customer base promises little  
6 or no return on investments.

7           Finally, a brief comment in response to the  
8 comments filed by the Central Florida Commercial Real State  
9 Society and the Greater Orlando Association of Realtors.  
10 The one point we'll make is their comment that landlords  
11 and owners should have unabridged rights to control the use  
12 of their property. That is their position. And we would  
13 respond by saying they do not have that today, as they  
14 submit to the tariffs of the incumbent LEC requesting the  
15 owners of multi-tenant buildings to allow the incumbent LEC  
16 to run their facilities into the building to provide local  
17 service without compensation paid by the incumbent LEC.  
18 The competing providers and the tenants who desire the  
19 services of the competing provider simply want the same  
20 treatment.

21           That concludes my comments. I'll be happy to  
22 respond to any questions.

23           MR. MOSES: Mr. Hoffman, let me ask you one  
24 question. You're aware of the rule as far as the ILEC,  
25 that as far as the easements and right of ways, you're

1 aware of that rule? In other words, it's up to the  
2 customer to obtain any easements or right of ways for the  
3 incumbent at no cost to the LEC?

4 MR. HOFFMAN: I'm generally familiar with it.

5 MR. MOSES: All right. If you applied that rule  
6 and the current demarcation rules, which are not currently  
7 applied to ALECs, would that alleviate some of the  
8 concerns?

9 MR. HOFFMAN: No, Rick, because I think the basic  
10 concern, the fundamental concern, based on the experience  
11 that TCG has had, is we can't get in the building in the  
12 first place.

13 MR. MOSES: But if those two rules were applied,  
14 why couldn't you get into that building?

15 MR. HOFFMAN: Well, I'm not sure that applying  
16 those rules in the marketplace would affect allowing a  
17 competing provider into the building. I mean I think  
18 that's an assumption that you're making in your question,  
19 but I don't know that I agree with that.

20 MR. MOSES: Okay.

21 MR. FALVEY: I haven't looked at the rule, but if  
22 I could just interject, I think what you're suggesting is  
23 that the customer has to do that.

24 MR. MOSES: Well, right now they do.

25 MR. FALVEY: There is a third party standing

1 between the customer and the provider, and the building  
2 owner who has, as they will repeatedly point out, the  
3 property right to the property between a provider and the  
4 willing customer, willing provider and willing customer.

5 MR. MOSES: Okay. Right now the ILEC faces that  
6 exact same situation. That is why that rule is in place.  
7 It is not up to the ILEC to make a taking. It is up to the  
8 customer to ensure that that ILEC has access.

9 MR. FALVEY: But the customer -- you know,  
10 standard approach in the industry, the CLEC industry, is to  
11 go to the customer and ask the customer to go on bended  
12 knee to the building owner and say, please, please, I want  
13 this person to come into the building. But if the building  
14 owner puts his property right between -- Now maybe you  
15 have a complaint at the Public Service Commission, but --

16 MR. MOSES: Well, let me give you an example;  
17 and, in fact, we do have a complaint.

18 MR. FALVEY: But it would be a customer's  
19 complaint, right? It wouldn't be my complaint as the  
20 carrier.

21 MR. MOSES: No, it was the ILEC's complaint. If  
22 a building owner denies an ILEC access to one of their  
23 customers that has requested their service, it's up to the  
24 customer to obtain the right of ways; it's not up to the  
25 ILEC. The ILEC can't go on in and force that building

1 owner to give them access. We can't go in there and force  
2 them. All they can do is say, There is not going to be any  
3 service provided.

4 MR. FALVEY: And the result is that any time I  
5 want to get into a building, I have to get a customer to  
6 file a complaint at the Public Service Commission.

7 MR. MOSES: But my point is that would make a  
8 level playing field, that's what I'm hearing everybody  
9 wanting, is the ILECs not to have any more access than a  
10 CLEC.

11 MR. FALVEY: The big problem there -- And we can  
12 go on all day.

13 MR. MOSES: I understand.

14 MR. FALVEY: And I'd be happy to, frankly. But  
15 the big distinction between my company and BellSouth is  
16 that BellSouth is in every building in Florida, literally,  
17 literally every single building in Florida, and my company  
18 is in a handful. So it's a done deal for them, and it's a  
19 big issue for all the carriers that are here today.

20 MR. MOSES: Well, here, let me just explain a  
21 little bit what I was thinking, and maybe I haven't made  
22 myself very clear, but if those rules were in place, you've  
23 got interconnection agreements as a CLEC that you have got  
24 to go into. That would give you access to that wire.

25 MR. FALVEY: I guess we can talk about that.

1 There is this idea of an unbundled inside wire, and when I  
2 speak in my turn, I will talk about that briefly.

3 MR. MOSES: Okay.

4 MR. KUPINSKY: Can I interject one comment?

5 MR. CUTTING: Please identify yourself for the  
6 record.

7 MR. KUPINSKY: Stuart Kupinsky from Teligent. I  
8 think the problem with what you are talking about, and I  
9 understand, I think, where you're going, is the level  
10 playing field is only skin deep because the situation is  
11 that the ILEC is already in the majority of buildings;  
12 there is already a relationship existing with a majority of  
13 the customers. And so while at first blush the playing  
14 field is level in terms of you may have situations where  
15 the ILEC has come to you with regard to the easements and  
16 filed a complaint, in the vast majority of situations, as  
17 Jim talked about, we are going to be going in after the  
18 ILEC has already established this relationship. And the  
19 level playing field becomes very skewed when we have to go  
20 to a customer and beg them to complain about it whereas  
21 the ILEC doesn't. And so the ILEC achieved this  
22 relationship in a very different environment than we did,  
23 and that is the fundamental problem, and it has a severe  
24 consequence.

25 MR. CUTTING: Next in line we have Cox

1 Communications.

2 MR. PHILLIP: Good morning, my name is Carrington  
3 Phillip, and I represent Cox Communications, in this  
4 instance, Cox Florida Telecom. I would like to thank the  
5 Commission for providing opportunity for Cox to speak here  
6 today.

7 Cox Communications is a telecommunications  
8 company that has as its primary business the cable  
9 television business. The network that's been put in place  
10 by Cox is one that has a substantial broad band capacity,  
11 and it is Cox's business plan to leverage off of that  
12 network to provide telephony services both to residential  
13 and to commercial customers.

14 Interestingly, with the passage of the 1996 Act,  
15 we at Cox thought that it would be relatively simple to  
16 leverage off of our network and provide telephone service  
17 to our residential customer base. What we have since  
18 discovered, though, is that because of the current state of  
19 the law of access to wiring in Florida, as well as in other  
20 states, that there absolutely exists a bottle neck or a bar  
21 to entry so that a company such as Cox, which is primarily  
22 facilities-based, can leverage off of its network and  
23 provide telephone services in competition with the  
24 incumbent local company. We very much, as I indicated  
25 before, appreciate the fact that the Florida legislature

1 and the Commission is taking a serious look at this issue,  
2 and hopefully, we'll come up with some very workable rules  
3 that will permit this type of access.

4 I will restrict my comments, basically, to  
5 talking about what the Commission should have as a policy  
6 in the development of the rules. Our comments give some  
7 suggestions, and I basically agree with everything I've  
8 heard so far in terms of what my colleagues from TCG and  
9 Teligent have suggested. We, like Teligent, agree that the  
10 minimum point of entry should be the demarc point; and if  
11 that becomes the rule in Florida, that will certainly  
12 simplify the access and will limit the ability of the  
13 incumbent to use their control over those facilities as a  
14 barrier to entry. However, we would advocate that we need  
15 to take it a little bit further.

16 After the MPOE, intra-network cabling or the  
17 cabling that goes from the MPOE to the various campus  
18 buildings should also be a subject to limited regulation by  
19 this Commission. What I mean by limited regulation is that  
20 I believe that the Commission should exert jurisdiction so  
21 that in the instances where that wiring is owned by the  
22 ILEC that there should be, as an option, that the building  
23 owner should be able to purchase that wiring at a fully  
24 depreciated cost. By permitting the building owner to  
25 purchase this wiring at depreciated cost, as part of their

1 contract, I believe that all carriers should be given  
2 access to riding those facilities to serve individual  
3 tenants.

4 In instances of riser cabling, I would make a  
5 similar proposal. In new building situations, where a  
6 contractor puts in this wiring, I believe that the building  
7 owner should be required to permit access to all carriers  
8 and that using the MPOE would be a simple and elegant  
9 solution so that a number of carriers could compete with  
10 serving individual tenants in that building.

11 I'm sure that a number of the participants here  
12 from the building industry are probably cringing at these  
13 comments and are kind of wondering, well, what do we get  
14 out of this? And frankly, I think that is a fair question.  
15 After all, that is their building. I think what they  
16 should get out of it is that they should be assured that  
17 their buildings, that the tenants in their building will  
18 have access to the wide range of very diverse services that  
19 are currently available; but, because of the current  
20 situation, are not currently provided to the majority of  
21 individual tenants.

22 Cox has no problem with an individual building  
23 owner entering into a marketing agreement, and I stress the  
24 word "marketing" as opposed to access agreement, with an  
25 incumbent or another CLEC. I believe that in a competitive

1 marketplace that carriers should and will compete based on  
2 marketing agreements so that they can, hopefully, attract  
3 the majority of the tenants in an individual building.  
4 However, just because there is a marketing agreement does  
5 not mean that another carrier cannot convince an individual  
6 tenant to subscribe to the services of that carrier; and by  
7 having the access rules written in such a manner, that  
8 would be possible and would be preferable for, I believe,  
9 the majority of individual tenants.

10           The Commission has to consider many competing  
11 factors in reaching its decision. That is relatively  
12 obvious based on the differing and diverging opinions that  
13 have been filed before it. However, the Commission in  
14 doing so should really go back to its purpose, and the  
15 purpose is really to regulate the public interest, and also  
16 with the recent passage of legislation, to ensure that the  
17 local exchange market is developed fully and is fully  
18 competitive.

19           The only way that this can occur is for the  
20 Commission to ensure that its rules make it possible for a  
21 large segment of the population -- I refer to the folks who  
22 live in multiple dwelling units -- to receive service from  
23 multiple carriers. It would certainly be inconsistent with  
24 the federal act if the Commission were to draft rules that  
25 would make it practically impossible for carriers to gain

1 access to wiring so that they could compete with each other  
2 to provide service to individual tenants. By contrast, and  
3 with the single dwelling homes, with once a carrier is able  
4 to get access to the street, they can usually find  
5 relatively easy access to the home and can provide  
6 telephone service.

7           Now I heard a comment a little bit earlier that,  
8 or a suggestion, that carriers can get access based on  
9 their interconnection agreements. Cox has interconnection  
10 agreements with every RBOC with the exception of BellSouth  
11 and Ameritech. However, based on my knowledge of those  
12 interconnection agreements, I don't believe that that's a  
13 good or viable solution. The suggestion that we can gain  
14 access based on our interconnection agreements seems to  
15 suggest that we need to approach the market in a particular  
16 manner, that is, either through resale or through  
17 purchasing unbundled network elements, basically transport  
18 and the wiring from the incumbent. I believe that would  
19 not be in the interest of Cox because Cox, based on the  
20 fact that it's a cable company, has extensive network that  
21 goes right up to the MPOE and some situations past the  
22 MPOE; and I don't see any good business reason why Cox  
23 would want to use unbundled network elements to gain access  
24 to a carrier when it could simply connect to an MPOE and  
25 ride the facilities which hopefully would be deregulated

1 and would be available for its use.

2           Finally, I just wanted to say that when the  
3 Commission considers the comments of the building industry,  
4 it should recognize that with the development of the new  
5 services that are being put forward by the various  
6 companies here that the building industry will be  
7 compensated by the fact that their tenants have access to  
8 those services. Most of the companies here today have  
9 expended substantial amounts of money to develop those  
10 services, and there is great value in making those services  
11 available to tenants. I think the building owners will  
12 come to realize the benefits of these services, and the  
13 Commission needs to at this point ensure that the  
14 individual tenants can get access to those services. Thank  
15 you very much.

16           MR. CUTTING: I've got a quick clarifying  
17 question. You made reference to marketing agreements, and  
18 I'm wondering if you have any problems or concerns with  
19 those marketing agreements potentially, say, cutting cost  
20 to some of the services such as that the incumbent comes in  
21 and provides a marketing agreement with a landlord. Do you  
22 see any problems with discriminatory treatment of the  
23 marketing terms such that a competitor couldn't compete in  
24 terms of price?

25           MR. PHILLIP: Well, I believe that existing law

1 should be able to guard against any type of  
2 anti-competitive conduct. I mean this would essentially be  
3 marketing contracts, and then we have the antitrust laws as  
4 well as various state laws that should be able to control  
5 any type of excesses. However, I think you do raise a good  
6 point, and I do believe that the Commission may want to  
7 consider some type of very limited rules for the  
8 development of marketing agreements. And also, my  
9 colleague mentioned the fresh-look provision. Cox supports  
10 the fresh-look provision because the existing state of  
11 affairs finds incumbents with a majority of long-term  
12 contracts, and we would like to compete for that business.

13 MR. CUTTING: That was my concern on jurisdiction  
14 as to whether the Commission could actually enter into the  
15 civil area of contract terms versus strictly the regulation  
16 of the companies, and I've been reading other statutes in  
17 other states and looking at what is there, and there seems  
18 to be a diversity between the states as to whether they  
19 want to allow their commissions and/or their courts to get  
20 involved in, you know, how those terms are regulated. The  
21 Commission hasn't really, my information here, got into the  
22 area of contract terms. That is the reason I asked the  
23 question, was to clarify how you perceived that problem.

24 MR. PHILLIP: Well, I think as long as the term  
25 relates to the provision of local exchange service the

1 Commission has jurisdiction. I think that is fairly clear  
2 and not really debatable. In terms of other services,  
3 so-called unregulated services, possibly cable television  
4 service, the courts certainly are available if a carrier  
5 has an issue with a contract.

6 MR. CUTTING: Thank you. Any other questions,  
7 comments?

8 MR. KATZENSTEIN: Just one.

9 MR. CUTTING: Please identify yourself.

10 MR. KATZENSTEIN: My name is Mike Katzenstein. I  
11 represent Optel. The use of marketing agreements,  
12 exclusive or otherwise, in our view, should only be  
13 permitted when there are the physical impediments to  
14 competitive access, i.e., the availability of facilities  
15 has been overcome. In other words, in a property in which  
16 there is no single MPOE for access, no physical ability of  
17 a competitor to access except through the purchase of  
18 unbundled elements, there should be no authority in an  
19 incumbent to enter into exclusive or semi-exclusive  
20 marketing agreements because those would essentially  
21 disable any, any competitive forces that would militate  
22 towards the future establishment of an MPOE. And that is a  
23 big concern to us, and it's been a factor in other states  
24 in which we do business.

25 MR. PHILLIP: I wanted to note that I was very

1 careful not to use the word "exclusive." I completely  
2 agree with my colleague. Certainly we're not advocating  
3 exclusive agreement, but I do believe that marketing  
4 agreements are an acceptable form of developing the market.

5 MR. CUTTING: Thank you.

6 MS. BUTLER: I just wanted to make a comment --  
7 Jill Butler with Cox Communications -- and that is, what  
8 I'm hearing from the staff is a lot of questions about the  
9 jurisdiction of the Commission. And I guess how I've  
10 looked at this series of workshops, as you make a  
11 recommendation to the legislature at the end of it, that  
12 the Commission does, is that some of the recommendations  
13 that you make may go beyond issues that are within the  
14 jurisdiction of the Commission and that -- I want to make  
15 sure to kind of keep that in mind as we go forward because  
16 I know that you would focus on that, but there are issues  
17 that go, in my mind, way beyond it.

18 MR. CUTTING: Optel, I guess you're next in  
19 line.

20 MR. KATZENSTEIN: Thank you, ladies and  
21 gentlemen. I appreciate the opportunity to cook our meal a  
22 little bit on your stove here. Optel is a --

23 MS. BEDELL: Tell us what your name is again.

24 MR. KATZENSTEIN: I'm sorry, Mike Katzenstein.  
25 I'm a representative of Optel, and specifically of Optel

1 Florida Telecom, an ALEC here in Florida. Optel is a  
2 deliverer of integrated communication services, video,  
3 voice, data, exclusively to residential markets and  
4 exclusively to the MDU marketplace. We believe our  
5 perspective and experience in these issues is as broad as  
6 any company in the country. We have operations in ten  
7 states and are going through these same issues in many of  
8 them. It is our experience, unfortunately, that  
9 competition in Florida has been substantially retarded  
10 because of the position on certain of these issues that has  
11 been advocated principally by incumbents, and we are free,  
12 we feel, to comment on our experience in other states where  
13 the terms of access for competitive providers are better  
14 developed, in our view.

15 Optel agrees substantially with the positions  
16 advocated by our competitive brethren. I must say, though,  
17 that Optel's view, vis-a-vis the property owner is far less  
18 sinister, and it may just be that our being limited to the  
19 residential multi-family marketplaces has changed or has  
20 not subjected us to the overwhelming stories of greed and  
21 angst that others have experienced.

22 Optel is usually at a residential multiple  
23 dwelling unit complex because it has been invited by a  
24 property owner who wants both a business partnership but  
25 also an alternative to the ILEC. Optel's rates are always

1 less than that of the incumbent. We believe our services,  
2 absent problems with provisioning, et cetera, from the  
3 ILEC, are as good or better, our systems modern, advanced,  
4 and our networks broad band.

5 Today I really want to focus on what we view as  
6 the critical first-base stumbling block for competition;  
7 and that is, the establishment of a point of entry at  
8 multiple dwelling units that would permit any and all  
9 competitors access regardless of the issues of who gets to  
10 go. If these issues are not resolved, no one but the ILEC  
11 will have access to the resident in unit 36-J, in building  
12 14 of Campus Style Apartment Building.

13 Optel's -- and I think that the, to cut to the  
14 chase, and the panel is very well versed I'm sure on the  
15 pleadings, the issue really is what choices does a  
16 competitor have to physically access a tenant? And I think  
17 Teligent pointed out that these issues are technology  
18 neutral. We bring our signal via point to point microwave  
19 to properties. Where that is not feasible, or if a better  
20 solution is to bring it by fiber, we bring it by fiber. If  
21 that fiber can be built by us, we build. If it's cheaper  
22 to lease, we lease. The issue is not how you get to the  
23 property but once you are at the property line how do you  
24 get to the customer.

25 We have the full cooperation of the MDU owners

1 and ownership associations which have invited us on.  
2 Nonetheless, even with that cooperation, we are stymied and  
3 our services have faltered at the door step. That has  
4 resulted in delays in our delivering services to customers,  
5 to the detriment of the reputation of CLECs, generally and  
6 certainly to Optel's detriment, in the perception of  
7 unreliable services because the incumbent is permitted to  
8 put -- under color of state law, to place obstacles in our  
9 accessing customers, and in a myriad of other business  
10 problems which have been at best vexing to Optel and I  
11 believe to others in this room.

12           The issue is simply that Florida law does not now  
13 require properties to be reconfigured to permit access, and  
14 that is a problem. It's a problem to you because you need  
15 to be in a position where you can say we are doing what  
16 other states are doing to make residential competition a  
17 reality. It is far easier for us to compete, provide  
18 services, even with -- and all this is with the invitation  
19 of our property owner in states like Texas and California.  
20 You are, unfortunately, in the same category as states like  
21 Arizona and Colorado, what we call U.S. worst states, where  
22 the tariffs do not require reconfiguration of essential  
23 facilities. And we are facing the same issues, and I think  
24 Cox and others probably will say that they have the same  
25 issues.

1           What can be done about it? Well, there is a  
2 thorny bed of property issues. We think there are ways to  
3 work them out. We think Pure 95 is a pretty workable,  
4 livable solution -- that's the Texas solution -- and there  
5 may be the requirement to involve the legislature in this  
6 important issue. But right now, within the Commission's  
7 powers, we certainly think that rethinking the demarcation  
8 issue, rethinking the -- in advance, a formulation that  
9 would require the ILECs to reconfigure their networks such  
10 that the CPE begins at the property line. The regulated  
11 versus unregulated areas of their network will be  
12 bifurcated at the property line will be a start.

13           What would that mean? Well, that means in campus  
14 style environments requiring the ILEC to reconfigure the  
15 networks such that all campus wiring runs to a single point  
16 at a building or building complex, which can be easily  
17 accessed by competitors. Granted, there are still issues  
18 about access, and property owners' rights. Optel thinks  
19 that those issues have been commented on by others, but we  
20 think that this is the first point, the starting point and  
21 the only way that there will be competition.

22           Optel is forced to buy loops. UNEs -- And we  
23 know that with the development of the law in the circuit  
24 courts, the only way it can essentially buy is a full  
25 packet of services, often at pretty unreasonable discounts,

1 and we can tell you that that manner of competition does  
2 not have a business case at Optel, and I don't think that  
3 it has a business case with many others, which is why you  
4 see such a dearth in competition in residential markets  
5 today. We think that if there is an access point that  
6 facilities-based competitors will come. We will come. We  
7 will do what is necessary to get there, and we will do what  
8 is necessary to get the tenants' ear so that we can provide  
9 services which are cheaper and we believe better.

10           The reality today, which cannot be ignored, is  
11 that the ILECs, although not now a de jure monopoly, are  
12 still a de facto monopoly in the marketplace. The business  
13 market, the business competitive marketplace is much better  
14 developed. There is robust competition. In certain  
15 elements in the residential marketplace, there is virtually  
16 nothing.

17           The Commission has an interest we believe in  
18 seeing facilities-based competition come to each multiple  
19 dwelling building in the state, and the only way that that  
20 will happen is if there is a paradigm set from the  
21 Commission down to allow for access. In our comments we  
22 think we lay out what can be done and how it can be done.  
23 We think that this action should be taken up also by the  
24 FCC in analyzing whether there should be subloop unbundling  
25 and how far that should go, but until that time we need the

1 help of the Commission in making competitive services in  
2 Florida a reality. Thank you.

3 MR. CUTTING: Any questions?

4 MS. DANIEL: I wanted to ask one. Did I  
5 understand you to say that you believe that the ILECs  
6 should be required to reconfigure back to the MPOE.

7 MR. KATZENSTEIN: Yes, we do. And in many  
8 states, for instance, in Texas, when there is a request  
9 from a property owner, on any kind of property, new,  
10 rebuilt, no matter when built, no matter at what level, the  
11 plant which was mostly paid for at the backs of the  
12 ratepayers anyway, at no matter what age that plant is, a  
13 competitor can come in with the request of a property owner  
14 and a plan schematic for the establishment of a central  
15 single demarcation point to reconfigure the network to that  
16 point such that the only issue would be getting to the  
17 inside wiring demarcation point, the common punch block,  
18 which could be feet or, you know, yards from the property  
19 line, so that a competitor can come in and by a simple and  
20 single cross connect establish a point of presence in  
21 facilities that will serve a customer. That is the key.  
22 If you can't do that, then you can't have competition.

23 And I sympathize very much with Teligent which  
24 has to call the incumbent and rely on their good graces and  
25 their truck roll to get service. It's an unworkable

1 circumstance. If your service is not in your own hand,  
2 then your destiny is also in the hands of your competitor,  
3 and I have never seen a competitor give its competitors the  
4 same service that it gives its customer. It's just -- it's  
5 an unworkable situation and one that can't be encouraged.  
6 There is -- in our view, there is no other solution.

7 MS. DANIEL: Thank you.

8 MR. CUTTING: In order to give all the  
9 competitors an equal shot, we are going to take a 10-minute  
10 break and let the competitors go for the doughnuts.

11 (BRIEF RECESS)

12 MR. CUTTING: We're going to hear from e.spire  
13 Communications at this time.

14 MR. FALVEY: Thank you. Jim Falvey with e.spire  
15 Communications, Inc. E.spire is an integrated  
16 communications provider. We provide local, long distance  
17 telephone service as well as data and Internet access  
18 services, in many cases all over the same pipeline, which  
19 is our e.spire platinum service, which I'd encourage you  
20 all to purchase here in Florida.

21 We are providing service or intend to provide  
22 service in Miami, Jacksonville and Tampa. We've got 32  
23 networks nationwide and 17 voice switches and 45 data  
24 switches comprising a voice and data network throughout our  
25 operating service territory.

1           We are here to make a few simple points about  
2 this issue. First and foremost, that legislation is  
3 definitely needed. I think you'll see that there isn't a  
4 single facilities-based provider, major facilities-based  
5 provider in Florida who has figured this issue out and  
6 decided they don't need to come to this workshop. Our  
7 company has been working on this issue since its inception,  
8 and many of the people in our company were working on  
9 unlocking or resolving this issue for five years before  
10 that at MPS and TCG and other places. So there is a  
11 conundrum that no one has been able to figure out. There  
12 is no simple solution. Why can't you just anything. All  
13 of those suggestions, frankly, are part of what people are  
14 doing today, but what people are doing today in many cases  
15 is not getting into very large office buildings, which  
16 represent a substantial portion of the market.

17           Why does e.spire need them specifically? People  
18 have talked about unbundled loops. We do buy unbundled  
19 loops, but we also build facilities, and in many cases in  
20 the downtown urban areas which connect very large office  
21 buildings with an enormous amount of telecom services  
22 provided within them. We need to get into those, on that  
23 building in order to provide service to those customers.  
24 You want to encourage people to build facilities here in  
25 Florida, and if you want to encourage the building of

1 facilities, you need to encourage building access.

2           The idea of building access, it's kind of the  
3 step sister issue among many facilities-based CLECs. It's  
4 the one that we would all like to get to but haven't been  
5 able to. Frankly, we don't have the fire power to lobby  
6 legislators, and the action has to come from the  
7 legislators. Building access legislation will complete the  
8 intents of the Telecom Act by removing one of the most  
9 significant remaining barriers to entry.

10           I should mention that mandated building access  
11 has a precedent in Florida as it does in most states. When  
12 STS providers came into the market in Florida and  
13 elsewhere, one of the critical provisions in every STS  
14 tariff is that the STS provider must retain the right of  
15 BellSouth to come in and access tenants in the building.  
16 So BellSouth has lobbied for it in the past, and there is a  
17 precedence for this type of legislation.

18           Building owners are themselves monopolies. I  
19 think that is something we shouldn't overlook. Their  
20 customers tend to be locked into five- and ten-year  
21 contracts, and today many of those contracts were entered  
22 into before local competition was even legal or certainly  
23 not widespread here in Florida. There was mention of the  
24 Kodak case in the Teligent papers, and I personally worked  
25 on a parallel case which involves Xerox, and these types of

1 antitrust cases are very real and they are out there. What  
2 we are trying to avoid is filing little mini antitrust  
3 cases against every building owner that shuts us out of the  
4 building. We don't have the resources to begin to do that,  
5 and that's why we need the legislation.

6           You could also see this as access to an essential  
7 facility, which is another antitrust doctrine, or the  
8 refusal to deal by a monopolist under Section 2 of the  
9 Sherman Act. So there are theories which, for the most  
10 part, have not been tested, but I don't think anyone in  
11 this room wants to go down the road of litigating this  
12 issue from an antitrust perspective.

13           I know there are some BOMA people and some  
14 building owners in the room, and I have spoken at BOMA  
15 conventions, and you start to feel very, very unwelcome  
16 within a very short period of time. So I would like to  
17 take this opportunity to welcome them, and to point out  
18 that there are many good apples, if you will, that many of  
19 the worst cases come from a few bad apples. But I would  
20 also add that I wouldn't absolve the entire industry so  
21 quickly that even some of the better cases, when you do get  
22 in, there are plenty of provisions that you only sign  
23 because it is essentially a contract of adhesion and you  
24 have no choice but to sign the agreement if you want to  
25 gain access to the building.

1           In terms of legal impediments to legislation, I  
2 guess the way I look at that issue is that the idea of the  
3 legislation would be to lay some ground rules, to put  
4 everyone -- to get everyone to the negotiating table. The  
5 issues, the takings issues, I think they go more to how you  
6 craft the legislation to ensure that it does pass muster,  
7 constitutional muster, as opposed to, as some would argue,  
8 don't do any legislation at all. There is a significant  
9 problem for CLECs in Florida and elsewhere, and the  
10 legislation is an absolute necessity.

11           In terms of other provisions of the Telecom Act,  
12 utilities have mandated access, and there was some brief  
13 discussion of the Gulf Power case. Our company is a party  
14 to that case which is brought by a series of southern  
15 utilities, largely southern utilities saying that the pole  
16 attachment provisions of the Telecom Act represent a taking  
17 without just compensation. I think we are all going to  
18 address this further on rebuttal. I didn't come prepared  
19 to fully discuss the legal issues, but I will say a few  
20 points along those lines.

21           There is some case law that states, essentially,  
22 that once you've given access to one provider for free,  
23 then having to give it to the next guy isn't necessarily as  
24 a taking. You know, as I say, you've already enacted a  
25 giving the first time, so how can it be a taking the second

1 time? And I guess the corollary is you can't complain  
2 about a taking when -- If it was a taking the first time,  
3 you put up with that for however many years, and that  
4 seemed to pass judicial muster for all this time because we  
5 are all up on the utility poles today.

6           So I looked at the Gulf Power case. The issue  
7 there was really who determines just compensation. They  
8 said the FCC can't do that. It has to be done by an  
9 Article 3 court because, just to back up a little bit, a  
10 taking is only illegal if it is a taking without just  
11 compensation. So what they said was the FCC can determine  
12 just compensation because it is subject to review by the DC  
13 circuit in every instance, which itself is an Article 3  
14 court. So we'll brief that a little bit further in the  
15 next round.

16           But the point is that the Telecom Act puts all  
17 sorts of restrictions on all sorts of entities. They  
18 restrict the cities in Section 253 with some of precisely  
19 the same language, fair, reasonable, nondiscriminatory  
20 treatment of all carriers. The Telecom Act restricts  
21 states, for crying out loud. It restricts you, the  
22 Commission, in Section 253 as well. So the suggestion that  
23 the federal government can restrict what you can do but you  
24 and the Florida legislature cannot restrict actions of  
25 building owners which impede competition to me seems a

1 little bit inconsistent. So, again, if we craft the  
2 legislation carefully, I think it will pass legal muster.

3 I also would agree with those who have said that  
4 the Texas statute represents a good model. And I want to  
5 emphasize that for all of us carriers to be coming in and  
6 saying that the Texas statute is a starting point is itself  
7 a huge compromise. I mean what I would like to see is BOMA  
8 come to the table and say that was a compromise and we'll all  
9 go forward with that as a proposal.

10 One point that Teligent failed to mention in its  
11 slide is that a prerequisite to building access under the  
12 Texas statute is that you have to begin with a tenant  
13 request, so this isn't someone coming in out of nowhere  
14 burdening the building owner. It's a tenant that initiates  
15 the process even under the Texas statute. It does require  
16 nondiscriminatory access, which is our sort of key note for  
17 this whole process; but it also builds in many protections  
18 for landlords, including recovery of costs imposed by CLECs  
19 or ALECs.

20 E.spire's experience with the statute in Texas  
21 has been extremely positive, that the statute works not so  
22 much by legally forcing someone to enter into a particular  
23 agreement, what it does is it forces the party to the  
24 negotiating table under some very basic ground rules, and  
25 you will let us in, and we will pay you for it. And it

1 simplifies the negotiations. Those that have bought  
2 initially in Texas have very quickly come to the table when  
3 we have sent, faxed -- literally faxed them a copy of the  
4 statute, and then we sit down and we enter into an  
5 agreement and everyone moves on.

6 I think the landmarks of any legislation  
7 should be nondiscriminatory access. These are cases where  
8 access has already been provided to one carrier, and the  
9 rules should be very simple, that either everyone pays or  
10 no one pays. I think it's critical that we not build in  
11 too many limits. When you define "multi-tenant," you  
12 should define it very broadly. When you define "services,"  
13 and this is very critical, you should not limit it to  
14 telecommunications services. In fact, e.spire, as I said,  
15 has more data switches around the country than telecom --  
16 than voice switches. Everyone is rushing to try to provide  
17 voice over data and you'll only confuse them if you limit  
18 this to telecommunication services. The statute will last  
19 about -- have a useful life of about two years and then,  
20 God forbid, we'll all be back here two years from now.

21 I think reasonable cost-based compensation is  
22 certainly acceptable to every ALEC in this room. The  
23 concern is that many building owners see this as a revenue  
24 opportunity. I mean this is basically a stick up, Give me  
25 five percent of your revenues or I'm not going to let you

1 into my building, and I've got the bottleneck access to  
2 this building and so I can do that.

3           You have to remember that the companies that are  
4 ALECs in Florida take an enormous amount of risk to enter  
5 this business. Our stock has dropped roughly five points  
6 in the last couple of weeks, and I think the same could be  
7 said for every stock in this room practically. But I've  
8 also seen stocks that are teetering on the brink in the  
9 last couple of weeks that are down around five that may not  
10 survive this particular downturn in the market. The  
11 building owner who asks for five percent of the revenues  
12 takes none of that risk. Our stock is available on the  
13 Nasdaq, and they can go buy. They can also invest money to  
14 enter this business because it's a very interesting and  
15 open business, but it's not a risk-free business today.

16           It also takes enormous investment. Our company  
17 has raised a billion dollars in capital. We made 60  
18 million dollars last year, so by my math, we've got a long  
19 way to go. So it is critical that that kind of percent of  
20 revenues activity not be permitted.

21           The other typical responses about market rates  
22 for space, both recurring and nonrecurring charges, often  
23 to the extent of being prohibitive. Probably the most  
24 insidious and maybe the most common response is delay in  
25 failure to respond, and I mentioned one case in our

1 comments where people just don't return your phone calls or  
2 they don't provide -- sit down at the table and negotiate.  
3 So all of these types of responses should be illegal under  
4 the new statute.

5           In terms of contracts and restraint, we have  
6 attached a proposal that BellSouth made to the building  
7 owners here in Florida, and one of the building owners --  
8 one of the BOMA members gave it to one of our sales  
9 people. It was introduced by BellSouth in Georgia, and we  
10 then introduced it here, and what this agreement does is it  
11 says, if you, the building owner, sell more of our  
12 BellSouth service, we'll put money off in this little fund,  
13 this little slush fund, five hundred, a thousand dollars a  
14 month, whatever it adds up to; and you can then use that as  
15 a credit towards your own services, towards training  
16 programs for people who work for your real estate company  
17 and so on.

18           To me that is completely unacceptable. If that  
19 building owner sees three more carriers coming into his  
20 building, he has every incentive to turn them away. Even  
21 with a nondiscriminatory access statute, I don't think  
22 that -- I think there should be some language prohibiting  
23 the incumbent who, again, is in every building in Florida  
24 from entering into those kinds of agreements because I just  
25 don't think that -- as a matter of public policy, I don't

1 think they are good for competition.

2 I think there is some discussion also that the  
3 contract laws and the antitrust laws can be a restraint on  
4 these types of agreements. Typically, when a building  
5 owner does not return our phone calls, delays my access and  
6 effectively prohibits it by delaying, they don't also fax  
7 me a copy of the agreement they've entered into with  
8 BellSouth which says why they are not doing it. So I think  
9 another extremely potent piece of this legislation could be  
10 a provision that requires even marketing agreements entered  
11 into by the incumbent to be publicly filed with the  
12 Commission; and then maybe we can shed some -- put them in  
13 the light of day, and then we could decide which ones we  
14 should challenge under the various antitrust and fair trade  
15 statutes that we have at our disposal.

16 MR. CUTTING: You have just --

17 MR. FALVEY: A couple of more minutes?

18 MR. CUTTING: Yeah, and I noticed in your filings  
19 that you had not -- you said you were going to address here  
20 at the workshop demarcation point and 911.

21 MR. FALVEY: Yeah, that is my last thing.

22 MR. CUTTING: Make sure you get those in there.

23 MR. FALVEY: Yeah, appreciate that. Moving to  
24 the demarcation point, we essentially agree with Teligent  
25 that you have two alternatives: You can leave it so that

1 access comes from the building owners, or leave it so that  
2 access has to be obtained from BellSouth. In New York,  
3 they've left it with the incumbent, and they've -- and  
4 there is an unbundled element for the inside wire. That is  
5 not a typical arrangement in our interconnection  
6 agreements. It is certainly something we can ask for, but  
7 nobody -- the bottom line, you've heard it before -- nobody  
8 wants to be dependent upon BellSouth for yet another piece  
9 of the access because there are -- it takes time to get  
10 anything from BellSouth. I'm not even sure BellSouth wants  
11 that. But in any event we need to be able to get into the  
12 building.

13 In terms of 911, I think limiting the access to  
14 certificated entities brings that 911 issue back into the  
15 certification process, and there are certainly 911 rules,  
16 and certificated carriers are bound by them; so I think  
17 that that is the answer to that one.

18 MR. CUTTING: Any questions? Next in line is  
19 WorldCom. And we'll break -- As soon as we get close to  
20 the lunch hour, we'll see how many minutes we've got left  
21 as to how we'll fill the 15-minute blocks. We hope to end  
22 right around lunch or 12:15, somewhere in that category.

23 MR. SULMONETTI: Well, I hope to get us to lunch  
24 quicker. My name is Brian Sulmonetti. I'm with WorldCom.  
25 I don't really have anything more to add to my fellow

1 colleagues here from the CLEC industry. I think they've  
2 touched pretty much on all the key points we raised in our  
3 comments, and I will leave it at that unless you have any  
4 specific comments about our filing, and also because my  
5 subject matter expert couldn't make it.

6 MR. CUTTING: Appreciate your honesty. Next in  
7 line we've got the International Council of Shopping  
8 Centers.

9 MS. BLASI: My in name is Patricia Blasi, and I'm  
10 the state chairman for legislative affairs for the  
11 International Council of Shopping Centers. I'm going to  
12 speak for the first few minutes of our time on some of the  
13 more practical matters of why our organization is concerned  
14 about this issue and then leave the rest of our time to  
15 Julie Meyers with Smith, Bryan and Meyers who is going to  
16 talk to you more about the technical and legal positions of  
17 our argument.

18 The International Council of Shopping Centers is  
19 very unique to real estate organizations in that a  
20 component of our membership, unlike many of the other real  
21 estate organizations, is comprised of tenants; and when  
22 this telecom issue first came up during the legislative  
23 session and I started to poll our membership about their  
24 concerns, most of our tenants were going, What telecom  
25 issue? We have phone service. We like our phone service.

1 Why are we going to make this a big portion of our  
2 legislative agenda for this year? And we had more of an  
3 education process with our membership than we did anything  
4 else just trying to explain what the long-range  
5 implications of what was going on would be, and most of the  
6 tenant constituents came back and said, you know, when we  
7 negotiate a lease, we are going to get what we want; and if  
8 we don't, then we are going to go somewhere else.

9           And I think that you'll find the basis of a lot  
10 of the concern in the building owner, and if there were any  
11 tenant organizations, and you'll find them conspicuously  
12 missing from these proceedings, the people that are  
13 allegedly going to be protected by what comes out of this,  
14 a lot of what you're going to find is people saying, You  
15 know what, the market controls these kinds of things. And  
16 if we don't find in an office building or a shopping center  
17 or an industrial park the services that we need, then we  
18 are going to take our business elsewhere.

19           In addition to serving voluntarily as the state  
20 chair for my organization, I am by trade the vice president  
21 of a full service real estate company and function in the  
22 day to day management, leasing and development of  
23 commercial property. In that capacity, I have negotiated  
24 agreements with independent telecom carriers in this state  
25 and successfully, as we do with other vendors, obtained

1 license agreements from them, obtained fees for their  
2 renting of space; and now that I've learned that the real  
3 estate business is risk free, unlike the telecom business,  
4 I'm glad that I'm sitting on the side of the table that I  
5 am. But I think that one of the issues that is not being  
6 discussed in any detail at all here is, Where is the cost  
7 benefit to the tenant? And I will tell you, I've conducted  
8 focus groups with tenants about services in different types  
9 of environments and said, Hey, what do you think about our  
10 security? Would you like more security? And typically  
11 tenants go, Yeah, yeah, we want more security. How do you  
12 like the landscaping? What if we spruced it up, put some  
13 more stuff out here, flowers, you like that? Yeah, yeah.  
14 Do you want to pay for that? No, we don't want to pay for  
15 that.

16           And though a lot of these access issues are being  
17 treated as property rights, and there is certainly a lot of  
18 very valid legal arguments, the managing of the day-to-day  
19 process by which these carriers would be permitted access  
20 to the tenants is not really being talked about, and a lot  
21 of the reason why people participate in a multi-tenant  
22 environment, whether it's on the residential or the  
23 commercial side, is that they expect that the building  
24 owner is going to be responsible for a certain amount of  
25 their services, and decisions are going to have to be made;

1 and those decisions are going to be made through the  
2 agreement that governs the landlord/tenant relationship,  
3 which is the lease.

4 I also think that the savvy of the average tenant  
5 is being way underestimated in some of the discussions  
6 brought on by the telecom providers. Tenants are getting  
7 what they need and they vote with their dollars, and if  
8 they are not getting what they need, the lease agreement is  
9 going to allow them to terminate because, on the front end,  
10 most of these tenants have heavily negotiated what types of  
11 services they are going to be provided and how those  
12 services are going to be provided and precisely what  
13 happens if they are not getting what they are supposed to  
14 and the landlord isn't holding up his end of the bargain.

15 I also think that some delineation somewhere  
16 along the way is going to have to be made for existing  
17 buildings and new construction. We are faced now with a  
18 lot of issues in planning new developments on the  
19 commercial side where we are not really sure what we should  
20 be planning for in a building, but at least in certain  
21 instances we still have an ability to control what we are  
22 going to build. However, with an existing product, we  
23 don't have that flexibility.

24 Furthermore, we are encumbered by the rights of  
25 the existing tenants to things like quiet enjoyment and

1 just how many carriers will be able to fit in a building.  
2 I don't really know the answer to that because it's going  
3 to vary dramatically by property. But when we move from a  
4 situation where that access is not driven by the market and  
5 that access is driven by legislation, well, there is going  
6 to be a lot of court activity on figuring out what is  
7 reasonable and what do I do when my telephone room is  
8 filled up and only four carriers have had access and there  
9 are five more banging down my door? So I think that though  
10 we have focused a lot on this competition, I'm not sure  
11 that we are focusing on it on the right level. The  
12 competition is in the landlord's hand. Its what obligates  
13 him to get tenants, to be in business; and if he can't  
14 perform, then the tenant is going to go somewhere else.

15 I would also take exception -- I hear the number  
16 ten years being thrown around as an average lease term, and  
17 I don't believe that to be the case. I think that if you  
18 surveyed commercial property, you would find that average  
19 terms are probably more like five to seven years, and most  
20 renewal clauses give the tenant some market condition to  
21 base their deal on going forward, so I don't think that  
22 these tenants are as locked in as maybe as it may sound to  
23 you. And with that I'm going to turn it over to Julie and  
24 let her focus a little bit more on our legal and technical  
25 issues.

1 MS. MEYERS: My name is Julie Meyers. I was also  
2 a participant in the 1997 legislative session, the 1998  
3 legislative session, and our recollection and analysis of  
4 the legislature's intent is fairly different from some of  
5 the former speakers.

6 We believe that what happened was there was an  
7 express indication of a problem, and you have heard that  
8 from prior speakers, a problem exists, we can't get into  
9 the building. Unfortunately, or fortunately for our  
10 position, when asked to specify who, under what  
11 circumstances and what particular tenants were involved,  
12 there was a failure to bring forth any specific  
13 information; and certainly there were, at best, isolated  
14 incidents that then could not be supported upon further  
15 evaluation.

16 We believe that what the legislature's intent  
17 was, or that their understanding was, that they didn't know  
18 the extent of the problem, and they asked you, that  
19 independent body, to determine if, in fact, there is a  
20 significant problem that exist and then what the response  
21 should be. So our organization would request that that be  
22 your first order of business: Is there a factual basis for  
23 the charge that property owners aren't responding to  
24 tenants' requests? Are there private agreements out there  
25 between telecommunication provider to telecommunication

1 provider, telecommunication provider to property owner?  
2 What are the lease terms between property owners and  
3 tenants specific to this issue? I think you will find that  
4 the market and private contractual resolution is out there  
5 to the extent that the issue has presented itself at all.

6           And while we have provided you information with  
7 what we believe to be the more appropriate analysis of the  
8 state of the law on private property rights, there was an  
9 initial approach and attempt to mandate direct access  
10 without compensation. I think some of the speakers have  
11 talked about, Well, there could be reasonable compensation,  
12 but then comes the gotcha; and the gotcha is, but it needs  
13 to be nondiscriminatory, so -- And if you look farther at  
14 what nondiscriminatory means, it means if anybody else came  
15 in for free when there was no one else, then that means  
16 there should be no payment or compensation to an  
17 alternative provider.

18           And so when we use euphemisms like  
19 "nondiscriminatory," we mean free. Unfortunately,  
20 landlords are exposed to costs, and it is their space, and  
21 it is their property; and it may be, as hokey as it sounds,  
22 I'm pretty sure that there is no mention in the U.S.  
23 constitution about enhancing telecommunications services;  
24 and I'm pretty sure there is a specific requirement that  
25 private property rights and private property be adequately

1 addressed. So we would suggest to you that there be a  
2 recognition and maybe a reminder to the Florida legislature  
3 that, in fact, property -- private property rights of  
4 tenants is legally superior to the need, maybe, or the  
5 desire, certainly, of these companies to have a very robust  
6 market.

7           Again, I would say to you that if there should be  
8 a specific evaluation in Florida about market terms and  
9 conditions, existing market terms and conditions, you won't  
10 find these scary things of people charging 5% and 10% and  
11 20% overrides. I would also suggest to you that -- None  
12 of my clients have been fortunate enough to have their five  
13 hundred dollars or thousand dollar slush fund, but if that  
14 should exist, I would suggest to you, like any other  
15 service, if they are relying on someone to market a  
16 product, there is not anything in the world wrong with that  
17 kind of compensation. It's reasonable. Folks have talked  
18 about reasonable rates. We would suggest to you anything  
19 is reasonable that is agreed upon between the parties.

20           And so in conclusion we would ask that your  
21 eventual report and recommendations concern itself with  
22 what we believe to be the very fundamental issue at hand;  
23 and that is, is there a true and legitimate need for  
24 regulation and what that response would be and what the  
25 ramifications of that response would be. We are not

1 certain that the Florida legislature or the PSC wants to  
2 get into the business of negotiating the myriad of leases  
3 that could be out there in various commercial settings and  
4 when it's appropriate to add another provider and when it's  
5 not appropriate and under what market terms and  
6 conditions.

7 MR. CUTTING: Any questions or comments?

8 MR. KUPINSKY: Yeah, one question. Stuart  
9 Kupinsky of Teligent. I didn't catch the first lady's  
10 name.

11 MS. BLASI: Patricia.

12 MR. KUPINSKY: Patricia, just a question. You  
13 mentioned that you had negotiated contracts with  
14 independent telcos. Does that mean CLECs or does that --

15 MS. BLASI: If you don't mind, I'm going to  
16 mention by name, Intermedia Communications.

17 MR. KUPINSKY: Okay. In that building --

18 MS. BLASI: Very reasonable people, I might add.

19 MR. KUPINSKY: Great.

20 MR. WIGGINS: They are the best.

21 MR. CUTTING: That comment is on the record,  
22 right?

23 MR. WIGGINS: I get to bill more for that, it's  
24 great.

25 MR. KUPINSKY: I'm just wondering, in the

1 building in which you negotiated that agreement, are you  
2 charging the ILEC the same rates for access that you are  
3 charging Intermedia?

4 MS. BLASI: I don't know, and I know that one of  
5 those buildings is a single tenant user, so in that  
6 instance, it may be that Intermedia is the only provider.

7 MR. KUPINSKY: In other instances though where  
8 you have negotiated these agreements, do you charge the  
9 ILEC, generally speaking, that is currently serving the  
10 customer?

11 MS. BLASI: I don't know that we have any dual  
12 service right now.

13 MR. KUPINSKY: Okay. And then just one other  
14 quick comment. I think it's important to clarify that what  
15 at least Teligent and I think the other CLECs here are  
16 talking about is a very wide passage way of negotiation and  
17 not, you know, the PUC or the legislature dictating the  
18 negotiation ahead of time. All we are trying to do is  
19 exclude out the few bad apples that Jim mentioned. So the  
20 comments regarding, you know, access being driven by the  
21 market and not by the legislature I think are taken by all  
22 parties included, and we don't disagree with that at all.

23 And then lastly, you know, congress doesn't seem  
24 to agree that tenants are getting everything they need, and  
25 that was the nature of the '96 Act, that we wanted more

1 competition for better services, that kind of thing. So I  
2 was involved in the Act when it was still a bill. And some  
3 of the RBOCs came in and said, you know, everybody seems to  
4 be pretty happy. Why don't we not, you know, rock the  
5 boat? And I think this is sort of the similar comment,  
6 that I think competition is healthy, we are in a  
7 development stage, and there is a temporal issue as to who  
8 is happy now and who would be happier had we had  
9 competition. Thank you.

10 MR. CUTTING: Go ahead.

11 MR. HOFFMAN: I'm Ken Hoffman on behalf of  
12 Teleport Communications Group.

13 I just wanted to make one comment in response to  
14 the presentation of the shopping centers, and that is, with  
15 respect to the statement that no information was provided  
16 to the legislature concerning the problems that are out  
17 there in the field during the legislative session. I can  
18 confirm that at a meeting of the house utilities and  
19 communications committee, midway through the session, part  
20 of the materials that were distributed to the legislature  
21 and to the public included a list of buildings, provided by  
22 Teleport Communications Group, concerning situations for  
23 one reason or another where TCG had been denied access.  
24 I'll also state for the record that during some discussions  
25 I had with Mr. Brewerton, who is the counsel for BOMA,

1 there certainly was some disagreement as to whether or not  
2 TCG had been denied access. But the statement that the  
3 information was not provided to the legislature during the  
4 session is inaccurate.

5 MS. BLASI: May I respond to that a moment?

6 MR. CUTTING: Please keep it brief.

7 MS. BLASI: No, and I will. I know of that  
8 second hand through the people at BOMA, and quite frankly,  
9 it was brought to my attention because the name of the firm  
10 that I'm employed by appeared on one of these lists, at  
11 which point we obtained written documentation from that  
12 particular building manager that he had not been contacted.  
13 So I have a feeling there is a lot of he said, she said  
14 involved in that particular issue.

15 MR. CUTTING: Thank you. I think we'll have time  
16 for at least one more before lunch. Next in line will be  
17 the Florida Apartment Association. Please state your name  
18 for the record.

19 MR. ROSENWASSER: Good morning. My name is Mark  
20 Rosenwasser. I thank you for the opportunity to speak. In  
21 my paid capacity, I am a regional vice president for a  
22 property management firm located in central Florida. We  
23 manage about two thousand units representing about six  
24 thousand residents. In my volunteer capacity, I am  
25 president elect of the Florida Apartment Association

1 representing some quarter million units with some three  
2 quarter million residents. I am here today with Gary  
3 Cherry, a small owner here in Tallahassee.

4           During my comments, I hope that I'm forgiven for  
5 my lack of technical knowledge. I couldn't tell you what  
6 an ILEC stands for, and I am simply here to address our  
7 issues.

8           Unlike many in this room, I am not a paid  
9 staffer, paid lobbyist, paid attorney, nor will I make my  
10 money based upon the recommendations that you make to the  
11 legislature. To the contrary, any recommendations that you  
12 make will in some cases cause loss and higher rents to the  
13 residents of this state.

14           We seek to protect our property from ongoing  
15 physical and aesthetic property destruction. We do not  
16 have any objection to the competition. If such competition  
17 is achieved via wireless or resale agreements of existing  
18 wiring. Multi-family residential units should not be  
19 included in the access issue. Our tenancies are very  
20 short. Our average lease and tenancy is nine months with  
21 some leases being as short as seven months. No leases are  
22 longer than one year. We experience a 60% turnover in our  
23 residency. Our density is as little as 12 units per acre  
24 with an average density of 17 units per acre. We do not  
25 have equipment closets or any common conduit.

1           It is for that reason that the Florida Apartment  
2 Association believes mandatory or direct access is  
3 unnecessary to promote competition. The issue presented is  
4 whether individual residential renters should be considered  
5 customers in multi-tenant environments. The Florida  
6 Apartment Association believes that the customer is the  
7 community and that the residential competition already  
8 exists on that community level.

9           Direct access to residential apartment customers  
10 is unwieldy, presents many logistic, safety and liability  
11 concerns, and as mentioned by somebody earlier, might be an  
12 unconstitutional taking. If the Public Service Commission  
13 determines that providers must have direct access to the  
14 individual renters, then it must take several issues into  
15 account. It must take into account the construction. Some  
16 of our communities are high rise buildings, some are campus  
17 style housing, and some are spread out types of garden  
18 apartments.

19           Any access law must take into account the  
20 property rights held by the owner as well as the right of a  
21 tenant to quiet enjoyment of their home. Any access law  
22 that allows constant wiring and rewiring of properties  
23 based on any telecommunications provider's desire is not  
24 acceptable. Owners should not be obligated to tolerate  
25 destruction of their property or disruption in their

1 communities on a regular and ongoing basis.

2           Liability is a further concern. Competition  
3 already exists in the residential market. The high level  
4 of fragmentation in the market means that no individual  
5 owner has any significant degree of market power. Because  
6 of the resulting competition, building operators and owners  
7 must respond to the needs of the tenants by accommodating  
8 their requests for service. Many apartment units in  
9 Florida are owned by publicly traded companies. These  
10 owners have a fiduciary duty to return value to their  
11 shareholders. They will provide whatever services are  
12 economically feasible to ensure high occupancy rates. If  
13 more than one communication provider is demanded by our  
14 market, we as owners will respond.

15           Many providers compete to service a community.  
16 Usually the property owner enters into an agreement with a  
17 provider to bring service to the entire community. This  
18 ability to guarantee the entire community to the provider  
19 helps new and smaller companies compete. Without this  
20 guaranteed volume, the smaller competitors cannot justify  
21 the cost of competing for just a few customers. Direct  
22 access will be a barrier to competition for small  
23 companies.

24           The competition for an entire community keeps the  
25 prices low. Each provider offers its best deal to the

1 owner. No barrier to competition exists in the residential  
2 family market. Competition exists between the providers  
3 who compete to serve entire communities; therefore, the  
4 government does not need to create artificial rules.

5 Multi-tenant environment should not include  
6 residential properties where an occupant has no ownership  
7 interest. It certainly should not include tenancies that  
8 are shorter than 13 months. Direct access in a  
9 non-ownership setting of short tenure results in confusion  
10 for the entire property. Can tenants change providers  
11 monthly? Would buildings be violated and construction  
12 personnel be on site constantly?

13 Direct access grants non-owners new rights that  
14 override the owner's rights, particularly in areas of short  
15 tenancy. Choice in this setting is impossible to manage.  
16 Direct access cannot include destruction of property or  
17 disruption in communities. Unlike commercial buildings,  
18 we, as I said earlier, do not have phone rooms or conduit.  
19 Service is provided through a box outside the buildings or  
20 inside a single unit. Inside wire is run through the  
21 ceilings and attics. Access to facilities is mostly  
22 through someone's apartment. A renter will have -- In  
23 many cases renters will have to live in buildings where  
24 workers will always be fishing wires through the wall.

25 Many apartments are constructed with a mandatory

1 fire wall between every two units. The fire wall cannot be  
2 breached. How will wiring be accomplished? The PSC is not  
3 in a position to develop and enforce comprehensive safety  
4 regulations. Those matters are appropriately governed by  
5 state and local building codes. If the fire wall is  
6 breached and not repaired, the communication provider who  
7 caused the damage must be liable for any resulting  
8 injuries. Property owners must be granted statutory  
9 immunity.

10           In many properties, the ground and parking lots  
11 must be dug up to bury the wire. Holes and trenches  
12 scattered on the property are unacceptable. Even single  
13 routes are unacceptable if they are regularly dug up.  
14 Aesthetic considerations undeniably affect property value.  
15 Wire nests outside the buildings are also unacceptable.  
16 Subsequent providers sometimes inadvertently interrupt  
17 current service and the property pays for this with higher  
18 vacancy rates due to unhappy residents. Just as providers  
19 are not experts in property management, we in property  
20 management are not telecommunications experts.

21           Direct access might be acceptable if all service  
22 is provided through a single set of wires. Providers would  
23 have to repair any and all damages or changes to the  
24 property and all wiring must be underground. Providers  
25 should bear legal liability for damage and personal injury.

1 They should have to provide some sort of guarantee of  
2 service to the owners and the residents.

3 Exclusive contracts are not appropriate for a zip  
4 code or area code; however, on a community level, exclusive  
5 contracts promote competition. They should be encouraged.  
6 They guarantee volume, and they allow for the new and  
7 smaller companies to compete based upon that guaranteed  
8 volume. Only large companies can compete without  
9 guaranteed volume.

10 With our turnover rates, providers would face  
11 administrative nightmares keeping track of customers.  
12 Exclusive contracts carry a guarantee term of service; this  
13 lowers costs. By all means current contracts should be  
14 honored. Owners should have the ability to renew existing  
15 contracts as well.

16 Somebody has already addressed the easement  
17 concerns and with the resale of communities. That would  
18 certainly cause some title difficulty and should not  
19 legislatively be mandated.

20 Compensation in a non-owner residential setting  
21 is appropriate on a limited basis. Some properties own the  
22 wiring on and inside their property. This asset is  
23 sometimes sold outright to a provider. Property owners  
24 should have the right to sell their property, even if the  
25 property is wires.

1 I'd like to thank you for the opportunity to  
2 appear and ask that any recommendation that you make to the  
3 legislature clearly show the distinction between  
4 multi-tenant and multi family, and we thank you for your  
5 time.

6 MR. CUTTING: Thank you. Any questions?

7 (NO RESPONSE)

8 MR. CUTTING: We can put Mr. Wiggins on the  
9 bubble or we can wait until after lunch.

10 MR. WIGGINS: I've only got about three minutes,  
11 four minutes.

12 MR. CUTTING: Why don't you go ahead then.

13 MR. WIGGINS: This is Patrick Wiggins for  
14 Intermedia Communications.

15 You know, a lot of ground has been covered today,  
16 and I won't subject you to redundant comments. You know,  
17 the initial question you posed for all of us to answer is  
18 whether there should be direct access. Interestingly  
19 enough, I don't -- the enabling legislation doesn't mention  
20 direct access. In fact, my only knowledge of direct access  
21 being mentioned in Florida legislation is 364.339, which  
22 refers to shared tenant services and guarantees or provides  
23 that the incumbent shall have direct access to the tenant.

24 I mention this because although direct access  
25 sounds like a word that means the same thing to everybody,

1 it probably doesn't. For example, if I understand  
2 BellSouth's comments correctly, direct access means their  
3 wire going into the tenant's, the end user's premises; or  
4 as a second choice, some other carrier's wire going to that  
5 end user's premises with them having maintenance, if I  
6 understood what they were saying. Whereas, I think for  
7 Intermedia and for some other folks, an MPOE approach  
8 would, in fact, constitute direct access; but I think  
9 BellSouth looks at that as being indirect access. I  
10 mention this only to say that we need to be careful about  
11 our vocabulary.

12           The standard that Intermedia would suggest, I  
13 think, is one that probably everyone would agree to, that  
14 there ought to be competitively neutral access to the end  
15 user or to the tenant in a way that respects the property  
16 rights of the owner. And in that regard, we should be --  
17 we should not be compromising the safety, making permanent  
18 changes to the owner's property without some sort of  
19 permission by them. The problem with that standard, which  
20 I think everyone would agree to, is that the devil is in  
21 the details. I mean how do you get from here to there?

22           And as we looked at it, I think we are probably  
23 struggling the same way everyone else is, trying to be  
24 practical and trying to be reasonable at the same time;  
25 and we are already on the record as being reasonable. I

1 think what we came to is that really, for the most part,  
2 this has to be negotiated on a case-by-case basis with  
3 maybe, you know, obviously some guidelines; and we think  
4 the most appropriate one right now is the Commission  
5 receding from its current point of demarcation rule and  
6 embracing the minimum point of entry. With the minimum  
7 point of entry approach and competitively neutral use of  
8 that last wire from the MPOE to the tenant, a lot of these  
9 problems can be resolved.

10           And my last comment, I wanted to endorse the  
11 comments of Cox with respect to the importance of  
12 addressing a horizontal riser in campus situations. It's  
13 absolutely essential if we are going to have a  
14 competitively neutral, tenant friendly and property  
15 friendly environment. Thank you.

16           MR. CUTTING: Any questions?

17           (NO RESPONSE)

18           MR. CUTTING: Meet back here in one hour?

19           MS. BEDELL: One o'clock.

20           MR. CUTTING: One o'clock we'll resume.

21           (LUNCH RECESS)

22           MR. CUTTING: Please, take our seats please.

23 We'll reconvene the meeting. Next in the order is Sprint.  
24 Mr. Rehwinkel, I believe is going to represent Sprint this  
25 afternoon.

1 MR. REHWINKEL: Thank you. My name is Charles J.  
2 Rehwinkel. I'm with Sprint Florida, Incorporated. I'm  
3 appearing in this proceeding with Jeff Wahlen of the Ausley  
4 firm also on behalf of Sprint Florida.

5 In my comments here today, I just want to make  
6 clear up-front that when I refer to the phrase MTE, I'm  
7 referring to multi-tenant environment.

8 Prior to 1995, the Florida Public Service  
9 Commission had complete authority to decide who should  
10 provide local exchange services in a particular geographic  
11 area. It did so by giving a small number of local exchange  
12 companies an exclusive franchise to serve all of a discreet  
13 geographic area. Congress and the Florida legislature did  
14 not take steps to invite competition into the local  
15 exchange market so that building owners, property managers  
16 and landlords could assume the historical role of the  
17 Florida Public Service Commission by deciding which carrier  
18 service an MTE used through contracts or otherwise.  
19 Rather, provisions of the Telecommunications Act and  
20 Florida statutes constitute a basis for carriers to compete  
21 for end user customers on a nondiscriminatory competitively  
22 neutral basis.

23 This kind of competitive environment requires  
24 nondiscriminatory equal access by certificated carriers at  
25 some point on or at the premises of an MTE. To allow

1 otherwise would subordinate the interest of end user  
2 customers in the development of a competitive local  
3 exchange market to the landlords. Sprint supports an  
4 approach to MTEs that balances the interest of the affected  
5 parties, especially end user customers, promotes  
6 competition and encourages the development of new  
7 technology and services by certificated carriers.

8           In general, Sprint believes that an MTE should be  
9 broadly defined to include all tenant situations whether  
10 residential or commercial or single or multiple buildings.  
11 However, it should not include transient and certain other  
12 sharing arrangements. The definition should include  
13 residential condominiums as well as new and existing  
14 facilities.

15           Restrictions to direct access to customers in an  
16 MTE should only be allowed upon a compelling showing that  
17 the restriction is in the public interest. There should be  
18 a strong rebuttable presumption that any arrangement  
19 whereby a telecommunications carrier obtains exclusive use  
20 of a private building, riser space, conduit, easement,  
21 closet space and the like is anti-competitive and  
22 unlawful.

23           The FPSC's current demarcation rule generally  
24 places the demarc point closer to the customer and  
25 minimizes landlord responsibility and control over portions

1 of the telecommunications network but presents potential  
2 problems when different tenants in an MTE demand service  
3 from different carriers. Sprint believes that revisiting  
4 the definition of demarc point in MTEs could be a way to  
5 balance the interest of customers, carriers and landlords.  
6 We would urge the Commission to consider a comprehensive  
7 review of its existing rule as an extension of this current  
8 study project.

9           We also believe that there is a tension between  
10 our universal service and carrier of last resort  
11 obligations and the relative duties and obligations of  
12 landlords and tenants. We believe that the Commission  
13 needs to take this tension into consideration into whatever  
14 decision is made or whatever recommendation is made to the  
15 Florida legislature.

16           The provisions of facilities in an MTE beyond the  
17 demarc point should be considered an obligation of the  
18 landlord or the customer and not the carrier. If the  
19 customer in an MTE demands service from a carrier and  
20 existing facilities cannot be used by the carrier to  
21 provide that service, the costs of installing the necessary  
22 facilities at the property should be included in the rental  
23 charge or allocated as a matter of separate contract  
24 between the landlord and tenant but not involve the carrier  
25 unless carriers can otherwise recover these costs from the

1 customers requesting the service. Forcing carriers to pay  
2 these costs creates an implicit subsidy in favor of MTE  
3 tenants.

4 There are other issues that we have discussed in  
5 our written comments, but in the interest of time, I will  
6 leave the discussion until later in this proceeding or in  
7 our rebuttal comments.

8 MR. CUTTING: Any questions or comments from the  
9 floor?

10 (NO RESPONSE)

11 MR. CUTTING: Thank you. Next will be the  
12 Community Associations Institute. I believe Mr. Spears is  
13 here.

14 MR. SPEARS: I am here. Thank you. My name is  
15 Richard Spears. I am legislative chairman of the Florida  
16 legislative alliance of the Community Associations  
17 Institute. I've always heard that a good speech is a short  
18 speech, and this will be one of the three greatest speeches  
19 you'll hear today.

20 I would like to set the stage a little bit by  
21 quoting Mark Twain, one of our greatest Americans, who  
22 honest to goodness did say, quote, I would like to wish  
23 everyone a merry Christmas except the inventor of the  
24 telephone. Those were his words. I think he may have been  
25 right.

1           Like the representatives of the Apartment Owners  
2 Association, I'm an unpaid volunteer who won't make a  
3 nickel out of the outcome of these proceedings one way or  
4 the other, and I represent my own home owners association  
5 in Orlando. I represent the Orange County homeowners  
6 association which is a coalition of 170 HOAs with a  
7 population of 80 thousand citizens, the Florida Legislative  
8 Alliance which represents in these proceedings nearly four  
9 million people who live in these kind of community  
10 associations in our state and the National Community  
11 Associations Institute. I'm an officer of each of those at  
12 each level.

13           Even though I spent five years of my career in a  
14 legislative capacity on the U.S. senate staff, like my  
15 colleague from the apartment owners' group, I feel very  
16 much like a David in a room full of Goliaths here today  
17 since communications law is not my forte. So in the  
18 interest of conserving your time and because they have  
19 already delivered most of my remarks, I would like to  
20 endorse the remarks of the representatives of the  
21 International Council of Shopping Centers and the Florida  
22 Apartment Association. The Florida Legislative Alliance  
23 would also like to associate itself with the remarks of the  
24 building owners and managers association who will be  
25 batting clean up here today. We think that there may be

1 some problems in competition, but they should not be ours.

2 Homeowners associations, condos and co-ops are  
3 different because no owner/tenant relationship exists in  
4 them. Residents are the owners, and things such as  
5 telecommunication provider selection, these things are  
6 decided democratically in the best interest of the  
7 community as a whole. If there is a financial gain to a  
8 community as we've heard mentioned in some cases today to  
9 owners of a building, it is used to the benefit of the  
10 owner residents themselves in reducing assessments for such  
11 things as building and common ground maintenance, so there  
12 is no profit to be made.

13 Should an individual resident be permitted to opt  
14 out of his obligations under the declarations of covenants,  
15 conditions and restrictions, the result would be a great  
16 dilution of the other services to his fellow owners and an  
17 increase in their assessments. This is unfair to all. In  
18 community associations, by definition, the burden is evenly  
19 distributed among all residents. Because of the unique  
20 relationships that exist, we reiterate that there is no  
21 owner/tenant relationship in condos, co-ops and HOAs, and  
22 for this most basic reason, they should be specifically  
23 excluded from any recommendation made to the legislature.  
24 Thank you.

25 MR. CUTTING: Thank you. Next we have the

1 Central Florida Commercial Society and the Orlando  
2 Association of Realtors. Anybody here to speak on their  
3 behalf?

4 (NO RESPONSE)

5 UNIDENTIFIED VOICE: She is here, but she is out  
6 of the room.

7 MR. CUTTING: Okay. Is Ms. Kim Caswell  
8 available?

9 MS. CASWELL: We are in the same situation. Our  
10 subject matter person is out of the room. I'll try and  
11 find him.

12 MR. CUTTING: BellSouth.

13 MR. MILNER: We are right here. Good afternoon,  
14 I'm Keith Milner. I'm senior director for interconnection  
15 services for BellSouth. I will apologize, first of all,  
16 for the -- for my slide presentation. If there are books  
17 on how to construct effective graphics, I've probably  
18 broken all those rules; but I do have a hard copy of the  
19 slides that I'll present here. I'll leave these up here,  
20 and if you would like a copy, please feel free to grab  
21 one.

22 What I will do is summarize the remarks we made  
23 in our filing. Let me see if I can make everything fit on  
24 the page at once here. What you have here is a summary of  
25 our filing, so I will summarize the summary. In the first

1 point, BellSouth believes that companies should have  
2 direct access to the customers living in multi-dwelling  
3 units. And by direct access, let me clarify something I  
4 heard a little bit earlier. By that we mean that direct  
5 access -- that the demarcation be located within the end  
6 user customer's premises such that we could deliver service  
7 entirely to the end user of that service, and that direct  
8 access could be attained either by facilities that that  
9 company owns or operates or by acquiring the facilities of  
10 some other carrier.

11 BellSouth offers, by law we are obligated under  
12 the Telecommunications Act to make our own facilities  
13 available to others, so we've talked a bit about subloop  
14 unbundling, and I'll talk about that a little bit later on.  
15 But BellSouth would hope that even companies not obligated  
16 by law to make their facilities available to BellSouth  
17 would do so in sort of a reciprocal fashion.

18 The second point I would like to make is that we  
19 consider the companies that should have direct access to  
20 include all companies who provide services or potentially  
21 provide those services, and we don't really draw a  
22 distinction between whether it's the incumbent, a CLEC, an  
23 independent company or whoever else.

24 Our definition of multi-tenant environment is  
25 likewise broad; and that is, that any facility whose access

1 is controlled by another party should be considered a  
2 multi-dwelling unit or a multi-tenant service arrangement.  
3 So we have drawn a pretty broad definition, we think, of  
4 what telecommunications companies should be -- the rule  
5 should apply for as well as the environment itself and the  
6 services; that's the next point that I'll raise.

7           Going to the question of what services we believe  
8 should be embraced by that definition, basically all.  
9 First of all, we think all services. We think that those  
10 services should be offered in a technology neutral fashion;  
11 that is, we don't draw distinctions about whether services  
12 delivered over fiber or copper or wireless or any other  
13 method that may come along. And third, that carriers  
14 should be able to provide any services in a direct access  
15 environment that lawfully they are permitted to offer.

16           Let me speak a moment to the question of what  
17 restrictions BellSouth believes might apply. First of all,  
18 we think that using our direct -- our definition of "direct  
19 access," that the property owners' concerns must be  
20 addressed. We understand that, and we appreciate that.  
21 However, if the stance comes to be that the property owner  
22 has the authority to prevent a carrier from providing its  
23 services, then that in effect is a restriction to direct  
24 access.

25           Second, and we've talked a good bit about minimum

1 points of entry or MPOEs. Any rule that a property owner  
2 might be permitted to impose that also prevents indirect  
3 access, such as MPOEs, is likewise a restriction to  
4 access.

5 Now we as an incumbent and some other companies  
6 in this room have some special requirements placed on us as  
7 carrier of last resort, and so let me speak to that  
8 briefly. Our position is that as we are required to, that  
9 we be permitted on a direct access basis to serve customers  
10 who ask for our services when we are operating as a carrier  
11 of last resort. And lastly on this slide, that carriers,  
12 including BellSouth, should not be prevented from marketing  
13 their services to occupants of multi-tenant buildings.

14 Now let me speak to something that was discussed  
15 both pro and con earlier; and that is, this notion of  
16 marketing agreements, and our friends at e.spire referred  
17 to those as creating a slush fund. Let me respond directly  
18 to that. First of all, they are not slush funds. The  
19 agreements are voluntary, they are cancelable by either  
20 party within 30 days for any reason, and the agreement  
21 itself in no way restricts access to the property by any  
22 service provider. We do have an agreement with the  
23 property manager that is more like a sales agency than  
24 anything else, and we provide credits to those managers who  
25 promote BellSouth's products. If the property owner

1 doesn't like our arrangement, within 30 days they can  
2 cancel that arrangement and make a similar or different  
3 arrangement with anybody else, and we are okay with that.  
4 The question is access, not sales and marketing.

5           Let me move on in the interest of time to the  
6 question of how the demarcation point should be defined;  
7 that is, by the existing PSC rules or by some presumption  
8 that the FCC requires an MPOE, which by the way, we don't  
9 agree with. First of all, we say that the demarcation  
10 point should be that point at which responsibility ends for  
11 the service provider and where responsibility by somebody  
12 else begins. Our choice has been, under the rules that FCC  
13 has put forward and other states and by the rules of this  
14 state, our business plan is to provide service all the way  
15 to the end user in every case that we can; so we are  
16 responsible for the facilities that get that service  
17 delivered. So we think that the demarcation point, rather  
18 than relying on lots of technical merits, although those  
19 are important, should take into view as to service  
20 responsibility as to who is going to do what when the  
21 customer calls and says my phone doesn't work and who is  
22 going to respond the that call.

23           Likewise, to the issue of where that demarcation  
24 point is located, the subscriber, we believe, should  
25 designate that point in accordance with statutes. And at

1 multi-tenant properties, where such demarcation points have  
2 to be established before anybody has moved in, then we  
3 think that the demarcation point should be assumed to be  
4 located within the premises of the tenants or the end user  
5 subscribers.

6           Bear with me, I only have a few more slides. It  
7 takes me longer to adjust it on the screen than to say what  
8 is on it. The next slide talks about the responsibilities  
9 of the various parties: The landlords and owners. We  
10 believe that at least part of their responsibility is to  
11 make very clear to their tenants who all can provide  
12 services and to clearly communicate any terms and  
13 condit'ons that the tenant might be interested in regarding  
14 access to such services.

15           For the tenants and the customers and end users  
16 themselves, we believe they ought to have rights to allow  
17 them to choose the services they want from the carrier they  
18 want to provide them; and we think that they ought to be  
19 able to choose that without either direct or indirect  
20 economic penalty. Now I've used the term "penalty" in a  
21 rather narrow frame here, and by that I mean a penalty is a  
22 charge for which there is not -- from the end user  
23 customer's perspective, any value added. It's not recovery  
24 of a cost or anything like that, but rather just something  
25 that's not supported by any value being added that is

1 perceived by the end user. And finally, we believe that  
2 all telecommunications service providers should not be  
3 prevented from offering their services to anybody in  
4 multi-tenant properties.

5           Regarding compensation, I think I just kind of  
6 got to our general theme on that. The notion of  
7 compensation needs to be based, at least in part, on some  
8 discussion of what value was transferred. Again, I'll  
9 speak to our requirements as carrier of last resort. In  
10 those instances where we are providing services, within our  
11 franchise area and as long as this Commission believes that  
12 we have special obligations as COLR, then we believe no  
13 compensation is appropriate.

14           Now I also heard something earlier that I'll  
15 speak to as well. Perhaps the folks here from GTE and  
16 Sprint were somewhat dismayed and other companies to learn  
17 that BellSouth provides service in each and every building  
18 in the State of Florida. I wish that were so, personally,  
19 but it is not. But the point really is where we operate  
20 outside of our franchise area as an ALEC, as a competitor,  
21 just like most of you, we want the freedom to serve or not  
22 serve; and likewise, we will be negotiating terms and  
23 conditions for access to multi-tenant buildings, so  
24 that's -- Our proposals, I believe, are consistent with  
25 our operating both within our franchised area and in those

1 cases where we venture out as new competitors in a market.

2           Lasclly, a couple of slides here on E911. I think  
3 these points have been covered pretty well. Our belief,  
4 obviously, is that E911 is a valuable resource to the  
5 consumers in this state; and we as service providers must  
6 do everything we can to mitigate any unintended difficulty  
7 or disruption of 911 service.

8           But a couple of things do pop up when you begin  
9 to talk about providing service only to a minimum point of  
10 entry. The question immediately arises as to what happens  
11 if a customer needs to dial 911 and BellSouth, for example,  
12 might have located the demarc at the MPOE, and yet either  
13 in the second case here, the dial tone works fine at the  
14 jack at the MPOE but is not delivered all the way to the  
15 end user customer. So even though we might argue that we  
16 had fulfilled our requirements of delivering service to the  
17 MPOE, that would be of little comfort to a person trying to  
18 dial 911 but could not.

19           And then secondly, another complication of using  
20 the MPOE as the demarcation is that that is the address we  
21 would show in the records as far as where our facilities  
22 ended, and there needs to at least be some mechanism  
23 made -- That address might be the club house or the  
24 basement or the equipment room or something like that, so  
25 something needs to be -- some work needs to be taken on in

1 those cases where the service provider ends its service at  
2 MPOE to identify accurately in the 911 database that it's  
3 apartment 12 and the customer's name.

4           On just for a moment to a couple of other  
5 issues. BellSouth is obligated to provide service to all  
6 customers that ask us to, and immediately the issue of  
7 paying for things like access to easements and support  
8 structures, we believe that that is not appropriate.

9           Secondly, there are some supporting structures  
10 that we'll call fixtures that remain a part of the building  
11 rather than of any telecommunication service and would be  
12 there for the benefit of all parties, including other  
13 service providers. So we think that when we address this  
14 issue it's very important to separate out those things that  
15 you might rightfully call fixtures and separate those from  
16 other kinds of support structures.

17           And then lastly on this slide, we are not in  
18 favor of government mandated standards for owner-provided  
19 support structures. That list becomes very long very  
20 quickly as to all the many ways that you can provide  
21 equipment closets and back boards and hundreds of other  
22 things like that.

23           Let me return just for a moment to the issue of  
24 the minimum point of entry or MPOE. I've heard a couple of  
25 times today that this whole issue will be resolved if

1 incumbent carriers would just move their demarcation point  
2 back to the MPOE. Well, that ignores, I think, two or  
3 three pretty important considerations. One, and I'm no  
4 lawyer, but immediately to my untrained mind we get into  
5 issues of jurisdiction, potentially of confiscation, of  
6 customer service delivery issues, customer confusion issues  
7 as to who is going to fix what when it breaks and a whole  
8 myriad of issues. But obviously, if that were the case,  
9 then the question then becomes -- or becomes, how do  
10 carriers get service beyond that point?

11           The other point that I would raise is that there  
12 is a different situation when a carrier is requested or  
13 required to place its demarcations at the end user premises  
14 but is not permitted to install the wiring that takes you  
15 there. And in Florida right now we have some rules on the  
16 books that say generally that BellSouth must utilize in  
17 shared-tenant service arrangements wiring owned by a third  
18 party, if it meets two fairly broad requirements. One,  
19 that it meets the requirements of the national electrical  
20 code, which is not all embracive. There are lots of other  
21 codes and requirement, and there are also technology choice  
22 issues. And second, that those costs are no higher than  
23 what BellSouth could provide for itself. So we think that  
24 if the -- we think these two restrictions should be relaxed  
25 and let business decisions drive the question of who uses

1 what facilities and for what reasons.

2           Again, I'll say that BellSouth by law is required  
3 to provide its network to whoever wants it on an unbundled  
4 basis, and that includes a lot of the facilities that we  
5 are talking about, riser cable in multi-story buildings,  
6 network terminating wire and the like. We've got, I  
7 believe Teligent agreed that they had -- or said that they  
8 had signed an agreement, apparently uncomfortable with some  
9 of the conditions of that regarding whether or not  
10 BellSouth would have to dispatch each time they wanted to  
11 use that. Well, in remembering the old oil filter  
12 commercial, it's kind of a case of pay me now or pay me  
13 later. If you want to pay me now, I'll give you as many  
14 pairs as you'd like. You can use those loops as you like  
15 and when you like, and BellSouth would not be required to  
16 dispatch each time. And if you want to pay me later, that  
17 is, pay me as we go, then yes, BellSouth would have to  
18 dispatch each time to make those facilities available. My  
19 point is that there are alternatives available to Teligent  
20 and whoever else would like to use that part of our loop  
21 for getting to those customers.

22           And then to close on this, no carrier, whether a  
23 COLR or not, should be forced by regulatory dictate to use  
24 facilities owned by someone else.

25           We go to the question of use of space, a couple

1 of points that I heard earlier which I agree with. The  
2 trend in equipment and facilities is toward smaller, not  
3 larger. Fiber optic cables I heard someone say about a  
4 half inch or so, or less than an inch wide compared to  
5 probably four inches wide for a copper cable of 16 hundred  
6 pairs or so; and the multiplexers and all the other  
7 equipment are likewise getting smaller and not larger.

8 More importantly I think though is that within a  
9 given building there is a certain appetite for telephone  
10 services regardless of whether there is one service  
11 provider or twelve. I mean you reach some point that that  
12 appetite has been satisfied. So our position is, first,  
13 property owners have a responsibility to make sure that  
14 their tenants can have the kinds of services that they  
15 want. Second, I think that we believe it's wrong to make  
16 compensation for that space a profit making endeavor, but  
17 we do recognize that property owners need to monitor and  
18 check for reasonableness the use of space by the various  
19 service providers that may be in there.

20 And if you'll bear with me one moment, my very  
21 last slide, I promise, is the issue of access; and here  
22 again, we think the watch word should be "negotiations,"  
23 not "mandated." Some tenants will want 7 by 24 access,  
24 that is, seven days a week, 24 hours a day, other tenants  
25 may not; and it really depends on the nature of the

1 customer, their business needs or their residential needs.  
2 And we think that those -- we think that the arena for that  
3 to work through in is negotiations rather than specific  
4 mandates. So I thank you for your kind attention, and  
5 that's all I have.

6 MR. CUTTING: Go ahead.

7 MR. KUPINSKY: Stuart Kupinsky from Teligent.  
8 First, we very much appreciate the substantive comments  
9 that BellSouth filed. If more incumbents were filing good  
10 solid substantive comments, we would resolve these issues a  
11 lot faster.

12 That said, suffice it to say that when we showed  
13 up at the dealership, we were told that we didn't have an  
14 oil filter, the tires were gone, and you can pay us now.  
15 It is, to the best of my knowledge, that we were not given  
16 the option to pay ahead of time and access risers whenever,  
17 and that may have been a miscommunication of some kind, I'm  
18 not sure. I did not take part, I want to say very clearly,  
19 in the specific negotiations with BellSouth. However, with  
20 other carriers that have sold us tires and the engine, we  
21 haven't even gotten as far as we did with BellSouth. So  
22 that option, to my knowledge, wasn't available to us.

23 And it's really a critical factor, and as we  
24 stated earlier, we are not alleging that BellSouth is, you  
25 know, acting in contravention of the '96 Act. We did sign

1 an agreement with them to acquire unbundled risers, if you  
2 so -- so to speak. The problem is that we really are in a  
3 lowest common denominator situation when we have to go to  
4 them each time to get a dispatch and wait for them and, you  
5 know, they've got a lot of responsibilities, and they can't  
6 be waiting around to meet us at every building of every  
7 minute of everyday. These technical issues are not  
8 complex. This is not rocket science. California and  
9 Illinois have been operating under this scenario for a long  
10 time. So with that, thank you.

11 MR. MILNER: Yeah, if I could just respond to  
12 that. Since neither of us were direct parties -- To the  
13 extent that Teligent would like to renegotiate that part of  
14 its contract, we are more than willing to. We have struck,  
15 you know, similar things with other carriers, and we would  
16 like to talk with you about it.

17 MR KATZENSTEIN: What other carriers have you  
18 struck those agreements?

19 MR. MILNER: Let's see, with some companies that  
20 started out as shared-tenant service providers in other  
21 states, and then we're --

22 MR. KATZENSTEIN: Have you done it in Florida?

23 MR. MILNER: I don't recall any in Florida, but I  
24 know in North Carolina and Tennessee.

25 MR. KATZENSTEIN: The law is different there, I

1 believe.

2 MR. MILNER: Tom Larson is telling me that we do  
3 in Florida as well.

4 MR. LARSON: My Name is Tom Larson with  
5 BellSouth. Just to answer the question, you know, we do  
6 have agreements with Comcast and Media One, and I know we  
7 are negotiating with Teligent now in Florida.

8 MR. KUPINSKY: Those are complete.

9 MR. LARSON: They may be completed, I'm not sure.  
10 Does that answer your question?

11 MR. KATZENSTEIN: What do the agreements cover?  
12 I'm sorry.

13 MR. LARSON: They cover wire from the outside of  
14 an apartment building up to each tenant's space and  
15 possibly distribution cable within the complexes, I'm not  
16 sure; but I know they cover that wire from the outside of  
17 each building to the tenant's space. And, of course, we  
18 have others in other states, but we are just talking  
19 Florida now, okay?

20 MR. FALVEY: Before you go too far, I have a few  
21 questions. I don't mean to interrupt you, but I wanted to  
22 make sure you didn't believe --

23 MR. CUTTING: Will you identify yourself for the  
24 court reporter?

25 MR. FALVEY: Sure. Jim Falvey with e.s.pire. I

1 guess, you know, sometimes it sounds like we are agreeing,  
2 and then I get very concerned. Maybe we are for a change,  
3 that would be great. But I noticed that you mentioned  
4 that you support the right of all carriers to have access  
5 to buildings, and I was wondering if you support  
6 nondiscriminatory access, which is sort of the hallmark for  
7 us. It's one thing to have access at a rate of -- that's,  
8 you know, five thousand dollars a month as opposed to for  
9 free; but then I've got to build the five thousand dollars  
10 into my rate structure and my cost structure and you  
11 don't. So I guess my question is, first question, do you  
12 support nondiscriminatory access for all carriers?

13 MR. MILNER: Well, certainly we do. Now to the  
14 point what rate is allowed for us to charge for those  
15 things, as you well know, you know, this very Commission is  
16 responsible for setting the rates that we could charge for  
17 unbundled network elements, which is what we are talking  
18 about here. I would presume that they set rates that are  
19 nondiscriminatory. At least that --

20 MR. FALVEY: No, I'm talking about building  
21 access. We have been going down the road of unbundled  
22 elements and getting to the riser, and I'm really happy to  
23 hear you say that if you are going to keep the MPOE at the  
24 customer prem then you would offer it on an unbundled  
25 basis; but my question is do you support nondiscriminatory

1 access to buildings? And I question the follow-up question  
2 is, do you support legislation and what form should that  
3 legislation take? For example, would you support the Texas  
4 statute that so many other telecommunications carriers here  
5 seem to be supportive of?

6 MR. MILNER: Let me take the easy part of that  
7 first. I'm not knowledgeable enough of the Texas statute  
8 to say whether I agree with it or not. Secondly, our  
9 obligations flow at least from the 1996 Telecommunications  
10 Acts, and consistent with that, we provide access, we  
11 believe, in a nondiscriminatory fashion. Are we in favor  
12 of such access? Absolutely.

13 MR. FALVEY: And you would support legislation --  
14 I'm not talking about -- because now you're talking  
15 about -- It sounds like BellSouth owned buildings that  
16 you would permit access, but that is not any point. I  
17 guess I'm trying to find out if you support legislation to  
18 give nondiscriminatory access to your CLEC competitors.

19 MR. MILNER: Well, first of all, I'm not sure  
20 that legislation is required. Secondly --

21 MR. FALVEY: Okay, now we are getting there.

22 MR. MILNER: -- you said BellSouth owned  
23 buildings, I don't believe you mean BellSouth center in  
24 Atlanta.

25 MR. FALVEY: I'm not sure. You mentioned that we

1 give access to ourselves, and so I assumed that you must  
2 have been talking about BellSouth owned buildings, but just  
3 ignore that.

4 MR. MILNER: No, I had no specific reference to  
5 any BellSouth owned building. I was referring to BellSouth  
6 assets, such as those parts of our loop that some people  
7 call riser cable, network terminating wire and the like.

8 MR. FALVEY: Okay. That's all.

9 MR. KATZENSTEIN: Mike Katzenstein, Optel. I  
10 just wanted to -- hopefully these will remain questions and  
11 not -- It appears that BellSouth's position if cut to the  
12 essence is that the status quo is just fine, that the  
13 current rules for demarcation point, the current rules on  
14 access are fine; and if I were in BellSouth's shoes I would  
15 certainly agree with that, given the noticeable dearth in  
16 competition notwithstanding substantial expenditure by  
17 competitors.

18 I think it would be useful to try to parse  
19 through some of the issues that BellSouth has raised  
20 because I think many of them are strong arguments and have  
21 been addressed in other states where access has been moved  
22 to the MPOE by mandate or on a case by case basis upon the  
23 request of a competing carrier and a property owner,  
24 notwithstanding when the building was built or how it was  
25 configured.

1           We are in interconnection negotiations right now  
2 with BellSouth, and I am the negotiator for BellSouth and  
3 asked at our first in-person meeting whether BellSouth  
4 would consider making a part of the interconnection  
5 negotiations elements of the loop which are in the -- on  
6 the MDU premises, and BellSouth's position was, unless I've  
7 misunderstood it, and if not, maybe you could say so on the  
8 record, that subloop unbundling is not required by federal  
9 law and that the only thing they would make available on an  
10 unbundled network basis are the loops through the NID  
11 individually. But elements such as the wiring from the  
12 point that it enters into a building would not be broken  
13 out as subloop elements, and I think that is something that  
14 the Commission should focus on. It has been focused on by  
15 other commissions specifically.

16           Even so, the sub -- Even were the Commission to  
17 do so, the situation in most of the MDU properties that we  
18 deal with is different than the high rise. Sure, there are  
19 high rise apartment buildings in the state, and some of  
20 them have single points of entry into the building, and  
21 then there is a wire -- a riser wiring that can be easily  
22 accessed by the competitor that brings a T1 right into the  
23 building. But in the campus style apartment environment,  
24 you may have eight, six, five different points of entry by  
25 the LEC into the building, and we've been through this with

1 BellSouth before; and we asked why won't you reconfigure?  
2 And the answer was, It's easy, we don't have to roll a  
3 truck this way. We can just cross connect and keep our  
4 lines hot to a customer from our switch. Whereas, if you  
5 require everything to be moved to the MPOE, sure, we can  
6 give arguments that E911 will be comprised, that who will  
7 take care of the network, it will comprise the COLR  
8 requirements; but the bottom line is that BellSouth will  
9 have to roll a truck, will have to compete on a level  
10 playing field with a competitor who brings its facilities  
11 to the property the same way.

12 In many states, including Texas, California,  
13 among others, we are working perfectly well with multiple,  
14 with single demarc points at an MPOE. There is an exchange  
15 of information for E911 purposes. Certainly it adds  
16 responsibilities to both parties, but those  
17 responsibilities are easily fulfilled.

18 There are questions about who will maintain the  
19 wiring in the premises afterwards, but those are matters  
20 that are worked out between property owners and carriers  
21 with no -- with little or no problem, and I would like to  
22 know whether BellSouth has experience with the -- has  
23 actual experience with properties which are served by MPOE  
24 which have required them to take a position, this position  
25 in this proceeding.

1 MS. WHITE: Well, finally a question. That's why  
2 I'm up here. I've heard a lot of rebuttal. Nancy White  
3 for BellSouth. I've heard a lot of rebuttal, and I believe  
4 Optel just repeated its presentation from earlier, but I  
5 hadn't heard a question, so --

6 MR. MILNER: Let me comment on two or three  
7 things that I did pick up. First of all, this Commission  
8 has already ordered BellSouth to do subloop unbundling in  
9 the arbitrations between BellSouth and AT&T and MCI. So  
10 this Commission has already heard that issue, has already  
11 ordered us, and we are already providing in this state  
12 unbundled subloop elements, at least to Sprint and some  
13 others. So, A, we are unbundling our network as we are  
14 required to do. We are happy to do that.

15 Secondly, I think your question is to what degree  
16 must the network be unbundled; and that is, should loop  
17 distribution be taken apart and be made available in  
18 smaller pieces than that? The pieces that I've referred  
19 to, being riser cable and network terminating wire, I've  
20 already said that we are willing to negotiate terms for  
21 access to those. So if you want to call that sub subloop  
22 unbundling, that is, taking apart the larger piece parts,  
23 we've agreed to do that; we are doing that. Tom Larson  
24 named some companies here that we are providing those  
25 things to.

1           Back to your question about whether we have, do  
2 we have experience with minimum points of entry. Certainly  
3 we do. In other states, the rules are different, and in  
4 some cases, at the property owner's request, we have  
5 established the demarcation there. So, yes, we have  
6 considerable experience with that; and, yes, we understand  
7 the difficulty in guaranteeing your service to a customer  
8 that really doesn't care anything at all about subloop  
9 unbundling about whether those phones work or not. So,  
10 yes, we have significant experience in that regard.

11           MR. PHILLIP: Carrington Phillip with Cox  
12 Communications. I really do have two questions. They  
13 relate to the concerns that you raised about the minimum  
14 point of entry solution as you termed it. Were you  
15 suggesting that if a CLEC got a customer in an MDU  
16 environment and there was a problem with the wiring from  
17 the MPOE that BellSouth would have responsibility for that  
18 particular problem?

19           MR. MILNER: If I understand your -- Let me  
20 answer your question. If the CLEC were using, for example,  
21 BellSouth's riser cable or network terminating wire or that  
22 part of our loop, then, yes, we maintain that at the CLEC's  
23 request.

24           MR. PHILLIP: Would you have responsibility to  
25 the customer, the actual end user?

1 MR. MILNER: No, the CLEC is our customer in that  
2 regard.

3 MR. PHILLIP: Okay. So in this instance your  
4 concern related to your agreement with the particular  
5 ALEC?

6 MR. MILNER: Yes, our service obligation is to  
7 restore the service that we provide to the CLEC, we would  
8 have no direct relationship to the -- an indirect  
9 relationship for that matter.

10 MR. PHILLIP: And typically the ALEC as a  
11 certificated carrier would have responsibility per this  
12 Commission's rules to the end user?

13 MR. MILNER: Well, I don't know what rules a CLEC  
14 in the state is subject to. I'm very aware of the service  
15 rules that BellSouth is subject to.

16 MR. PHILLIP: Okay. Fair enough. The second  
17 question I have for you is that you seem to have some  
18 concern that the minimum point of entry solution would  
19 require BellSouth to make some changes as to where the end  
20 point of the network was. Was that a concern that I heard  
21 you raise?

22 MR. MILNER: No, not exactly. The notion that I  
23 heard earlier was that if BellSouth was either ordered to  
24 or volunteered to move its demarcation to the MPOE that  
25 competition would flourish. I have some real questions

1 about that given my understanding of competition that has  
2 arisen in those states that we have heard about today where  
3 apparently demarcations at the MPOE are prevalent. So  
4 there is at least that question as to whether that's a real  
5 stimulus to competition or not.

6 But in answer to your question, our concerns are  
7 that if BellSouth were ordered to move all its demarcations  
8 to the MPOE -- and I don't know the answers to this, I'm  
9 not a lawyer, and I'm not sure that anybody knows for sure.  
10 There is no silver bullet here that says one solution would  
11 fix all of these. I merely said that there were a number  
12 of issues raised: Confiscation, jurisdiction, service  
13 delivery, customer confusion, that would all need to be  
14 weighed into that decisions before we were ordered to move  
15 back to an MPOE.

16 MR. PHILLIP: From a technical perspective -- I  
17 realize you're not a lawyer -- from a technical  
18 perspective, would BellSouth have any problem in  
19 identifying its customers if a minimum point of entry  
20 solution were instituted in Florida?

21 MR. MILNER: That's not the issue.

22 MR. PHILLIP: I know, but would you mind  
23 answering the question?

24 MR. MILNER: Could we identify where the  
25 demarcation was? Of course we could. That's not the

1 issue, however.

2 MR. PHILLIP: Could you identify your customers  
3 if there were competing ALECs providing service to other  
4 customers in the same MDU environment?

5 MR. MILNER: We possibly could or could not,  
6 depending on how many CLECs, you know, had their  
7 demarcations at the very same point.

8 MR. PHILLIP: Okay.

9 MR. MILNER: So, you know, I don't know the  
10 answer to that; but, again, I think that misses the mark.

11 MR. PHILLIP: Thank you.

12 MR. CUTTING: Any other comments?

13 (NO RESPONSE)

14 MR. CUTTING: Thank you.

15 MS. WHITE: Is the witness excused?

16 MR. CUTTING: Yes.

17 MR. CUTTING: Go back to the original listing. I  
18 believe we have the Central Florida Commercial Society and  
19 the Greater Orlando Association of Realtors.

20 MS. CALLEN: Hi, my name is Frankie Callen. I'm  
21 the vice president of governmental affairs for the Greater  
22 Orlando Association of Realtors.

23 I'm going to try and not reiterate points that  
24 have already been made so we can kind of help expedite  
25 this. I think, first of all, to a certain extent, we all

1 agree that there is an unlevel playing field here in  
2 Florida when it comes to providing telecommunications  
3 services; however, property owners didn't create that  
4 problem, nor should we be required to remedy it.  
5 Understanding that current providers right now have put out  
6 capital outlay in the past to provide this in buildings.  
7 You know, 20 years ago you didn't have a choice of who  
8 provided your phone company. It was simply whoever was  
9 there at the time as to who ended up providing it.

10 My members have no interest in getting into the  
11 telecommunications business. Their concerns with this  
12 issue are really pretty simple. If we have to provide  
13 nondiscriminatory access to our buildings for  
14 telecommunications companies, reality has to be taken into  
15 consideration. There is limited amount of space available  
16 in buildings to provide for telecommunications companies  
17 for their equipment, and the Commission needs to consider  
18 this in terms of when we are talking about existing  
19 buildings and when we are talking about new construction  
20 because there are really two very different issues there.

21 I also wanted to skip ahead in my remarks in  
22 terms of BellSouth when he was discussing in terms of the  
23 carriers of last resort in terms of whether or not building  
24 owners ought to be able to be compensated for space. In  
25 his presentation, the assumption was that tenants have a,

1 quote, unquote, right or rather telecommunications  
2 companies have a, quote, unquote, right to provide services  
3 to tenants. And unless I'm wrong, I'm not sure that has  
4 actually ever been established as a right that a tenant or  
5 a telecommunications company has.

6 Point B is we are entering into an entirely  
7 different area in terms of how we look at how we provide  
8 the telecommunications company. We are entering a new area  
9 in terms of relationships between property owners and the  
10 telecommunications company, and I would just simply like to  
11 point out, if BellSouth doesn't think it's fair that  
12 property owners should be able to charge for space, we  
13 don't think it's fair that telecommunications companies  
14 should be able to be paid for service. I mean we provide  
15 space as a service to tenants and we are compensated for  
16 that, and I was a little confused in BellSouth's feeling  
17 like that, that we are entering a new area in the way that  
18 relationships were done before are not going to be the way  
19 they are going to be done in the past. So I think it's  
20 important to remember that property owners aren't in the  
21 business because they don't want to make money. I mean the  
22 same thing with telecommunications companies, they are not  
23 in the business because they want to provide a service,  
24 they are in the business because it makes money for them.

25 The other point being is that if

1 telecommunications are going to have unlimited access into  
2 buildings there are a lot of considerations that have to be  
3 taken into account, again, the space. How are we to  
4 determine as property owners, if we can only have four  
5 companies in our building, how do we determine what those  
6 four companies are? And granted any incumbent  
7 telecommunications company ought to be required to bid for  
8 that service as any other new carrier or new provider would  
9 if they are coming into the area.

10           Property owners also have to be able to control  
11 access into their building in terms of security purposes,  
12 after hours entry, equipment. There is a huge liability  
13 issue that we haven't even talked about yet. When we start  
14 talking about putting equipment on roofs, when we start  
15 talking about hanging material and we start talking about  
16 telecommunications personnel coming into buildings and  
17 liability issues with security and that type of thing, that  
18 is also an area that the Commission needs to look at in  
19 terms of what requirements a property owner is going to  
20 have in providing that.

21           Property owners should also have the right to  
22 enter into any contractual relationship with a  
23 telecommunications company that is providing service into  
24 their building. That should also be considered a fair  
25 grounds for market. In other words, if a

1 telecommunications company is going to come into the area,  
2 they are not going to come into an area that they are not  
3 going to make money in; and I would assume that that would  
4 be true. The second thing is, is that property owners  
5 ought to be able to do contractual relationships or  
6 marketing agreements with companies. They ought not to be  
7 able to gouge telecommunications companies, and there is a  
8 question on whether or not they should actually be able to  
9 charge, if we want to use the term "a monthly rate for  
10 providing space." That is also another issue that the  
11 Commission is going to have to take a look at.

12 I'd also like to just reiterate shortly the  
13 comments made by the International Council of Shopping  
14 Centers in terms of who are we really doing this for and  
15 who are the real customers out there. My members have  
16 expressed a concern that their tenants or customers are not  
17 the ones with the problems. As far as they are concerned,  
18 all the tenants want from the telecommunications company is  
19 good service, responsive repair service and a bill that  
20 doesn't require a Ph.D. to understand. If they want to  
21 shop their phone service, then the market will dictate  
22 where they go on that. If it's cheaper for them to receive  
23 service from one telecommunications company over another,  
24 then obviously they will go and do that.

25 We'd also like the Commission to consider new and

1 emerging technologies in this discussion in terms of -- and  
2 I think a gentleman said it earlier, in 18 months we may be  
3 back here because the technology is totally different. We  
4 would like for you to consider that. We'd also like for  
5 the conversation to also move to the next step, which is  
6 what are we talking about when we start talking about  
7 microwaves, we start talking about antennas, and we start  
8 talking about different technology that is already out  
9 there in the market. And what as property owners are we  
10 going to be required to do when you start talking about use  
11 of roofs? Also, there are other considerations to be done,  
12 because property owners are also under contractual  
13 relationships with other companies. For example, someone  
14 mentioned, how about a roofer, somebody who comes in and  
15 provides roofing for them and they've had a new roof put on  
16 and you get six telecommunications companies who are  
17 running all over that roof poking holes in it and  
18 everything. Where is the liability of who is responsible  
19 for that roof after the property owner has already paid all  
20 of that money to get it fixed? These are just day-to-day  
21 management questions that property owners deal with on a  
22 daily basis in terms of having to provide this access for  
23 telecommunications companies.

24 I'd also just quickly like to talk about the  
25 gentlemen from Cox Cable Company who mentioned that

1 compensation should be -- that compensation in their mind  
2 was the idea that as a property owner that now we can  
3 provide choices to our tenants and that is what our  
4 compensation should be. This isn't something that we look  
5 at as being a great thing. This is not a -- We are doing  
6 it because we are almost going to have to do it in a way.  
7 So for our only compensation is to turn around and say to a  
8 tenant, well, you now have three choices; that doesn't do  
9 anything for us. It's not compensation in real terms of  
10 the space we have to give up or the money or the type of  
11 things I talked about before.

12           Also, I would also just like to finish with  
13 saying that when we talk about providing choices to our  
14 tenants or to our customers, the telecommunications company  
15 is unique in that it's simply -- it's like utility  
16 companies also where there has only been one person or one  
17 provider for so long; but if we are getting into a  
18 competitive market and we are getting into the marketplace,  
19 what you are asking property owners and building owners to  
20 do is to take on the responsibility to allow this  
21 marketplace to occur. In other words, we're the ones that  
22 are going to have to be responsible for providing the  
23 avenue for people to compete, and so I would just like to  
24 make that point. So property owners should not be the ones  
25 responsible to make this happen or to make it a fair

1 market. That's all.

2 MR. CUTTING: Any questions?

3 (NO RESPONSE)

4 MR. CUTTING: Next is GTE.

5 MR. LA PORTE: My name is Karl La Porte, and I  
6 represent GTE, and I'd like to thank the Commission for the  
7 opportunity to speak today. I would just like to provide  
8 kind of an overview of our comments and our positions and  
9 then just maybe touch on a few points that have been raised  
10 by some of the other parties.

11 Regarding direct access, GTE believes that  
12 certified telecommunications companies should have direct  
13 access to tenants in a multi-tenant environment. The  
14 multi-tenant location owner manages access, an essential  
15 element in the delivery of telecommunications to tenants,  
16 and telecommunications is essential to the public welfare.  
17 The owner should, therefore, be required to permit  
18 certified telecommunications companies nondiscriminatory  
19 access to space efficient to provide telecommunications  
20 service to tenants.

21 Regarding the definition of "multi-tenant," GTE  
22 believes that multi-tenant locations should be defined as a  
23 building or a continuous property that is under the control  
24 of a single owner of a management unit with more than one  
25 tenant that is not affiliated with the owner or management

1 unit. Multi-tenant environments include both new and  
2 existing facilities, such as multi-tenant residential  
3 apartment buildings, multi-tenant commercial office  
4 buildings, existing shared tenant service locations,  
5 condominiums, townhouses, duplexes, campus situations and  
6 business parks, shopping centers and any other facility  
7 arrangement that is not classified as a single unit.

8 GTE further believes that direct access should  
9 include the network functions that are enjoyed and  
10 currently available to most Floridians today, i.e., basic  
11 local service. While technology and regulatory changes are  
12 rapidly creating new opportunities for all customers to  
13 benefit from the vast array of services over existing and  
14 new telecommunication infrastructures, there is  
15 considerable uncertainty about the precise form of emerging  
16 telecommunications structure and what it will take in the  
17 future. Therefore, we believe that it's not certain  
18 whether multi-tenant telecommunications markets will be  
19 served by copper wire, co-axe, high capacity optics,  
20 wireless, satellite or hybrid combination of these or other  
21 technologies. Similarly, it's unknown what mix of  
22 telecommunication services that customers would want or be  
23 willing to pay for.

24 Tenants' rights on direct access should,  
25 therefore, be defined in accord with existing statutory

1 basic service definition rather than including items like  
2 Internet access, video and data. The Commission always has  
3 the option of expanding the scope of direct access as  
4 technologies and demand becomes better defined. In other  
5 words, if in the past, if the Commission or if a  
6 legislative body or regulatory body had defined that cars  
7 in the future, or say 20 years ago, should be steam or we  
8 should have eight track tape decks, that would be the  
9 technology, we just don't believe that -- that's not a good  
10 policy, public policy.

11           Regarding exclusionary contracts, GTE does not  
12 believe that exclusionary contracts are ever appropriate.  
13 First, each tenant should have the right to choose a  
14 telecommunications company or companies.

15           Second, if the company adopts the FCC's minimum  
16 point of entry as recommended by GTE, the location  
17 demarcation point will be readily accessible to new  
18 entrants which will effectively facilitate intralocation  
19 competition.

20           Third, the FCC has ruled under it's MPOE policy  
21 that the incumbent local exchange carrier owns existing  
22 inside wire but does not control the use of the wire;  
23 therefore, the new entrant has the option of using existing  
24 intralocation cabling if suitable or install new cabling.  
25 This option facilitates the new entrant's ability to enter

1 the market and argues against the employment of  
2 exclusionary contracts.

3           Finally, if the Commission or the legislature  
4 permitted exclusive contracts, it must recognize the effect  
5 of this policy on the existing carrier of last resort  
6 obligations. If multi-level location owners are permitted  
7 to negotiate exclusive agreements, then for all practical  
8 purposes the Commission or legislature will have concluded  
9 that the carrier of last resort, or COLR, obligation does  
10 not apply to multi-tenant locations.

11           Again, regarding -- GTE's recommendation is that  
12 the Commission adopt the minimum point of entry as  
13 recommended by the FCC in CC Docket 8857 with the caveat  
14 that, if the Commission does move from a maximum point of  
15 entry as exists today to an MPOE regime, the ILEC must be  
16 ensured full recovery of its affected facilities.

17           There has been some comment about California.  
18 GTE's experience in California was that they did adopt an  
19 MPOE regime. It was over a transition period over a number  
20 of years. California is a price-regulated state as is  
21 Florida for GTE, and the way the California commission  
22 handled that was approving an accelerated amortization of  
23 the inside wire. In many cases existing inside wire counts  
24 have relatively long depreciation lines, sometimes 20  
25 years. What the California commission did is approve an

1 accelerated amortization of a five-year period for recovery  
2 of that plant, and they allowed the company to recover  
3 through a surcharge mechanism. For those of you that  
4 aren't familiar with California, they've had for a number  
5 of years a surcharge/surcredit mechanism which they use for  
6 a number of adjustments. It's not broken out by line item;  
7 it's just they use it for a number of adjustments. So they  
8 included this five-year amortization as a surcharge, and it  
9 only amounted to a few pennies per month in GTE's case  
10 because of the size.

11           Regarding the responsibilities of landlords and  
12 telecommunications companies, GTE would -- again, would  
13 promote, say, a minimum point of entry; and so for any new  
14 construction, obviously, it would be constructed with an  
15 MPOE with the owner responsible for the placement of inside  
16 wire cabling from the demarcation point to the tenant's  
17 location. Construction operation and maintenance and  
18 wiring of that service would be on the owner's side of the  
19 demarcation and would be the owner's responsibility.

20           In existing multi-tenant locations, the point of  
21 demarcation would be relocated to the minimum point of  
22 entry, if adopted by the Commission when one of the  
23 following conditions is fulfilled: Number 1, the building  
24 owner or customer asks GTE to move or change the physical  
25 location of the network termination.

1           Secondly, the building owner or customer requires  
2 new and/or additional network outside plant facilities.  
3 The point of demarcation for the new and/or additional  
4 facilities will be established at the minimum point of  
5 entry upon completion of the outside plant work order.

6           Thirdly, we would move to an MPOE when a new  
7 entrant telecommunications company requested the use of the  
8 incumbent companies intralocation cable. GTE believes  
9 that's, under those three conditions, to be the cleanest  
10 way to handle that transition.

11           The telecommunications company under the MPOE  
12 regime would be responsible for the maintenance, repair and  
13 service quality of facilities up to the point for the  
14 demarcation. Multi-tenant location owner or possibly  
15 tenant is responsible for installation, maintenance, repair  
16 and service quality of inside wire from that demarcation  
17 point to the tenant's location.

18           GTE believes also that the telecommunications  
19 company should have 24 hour -- 7/24 access to that point of  
20 demarcation and, of course, that would just generally be to  
21 some type of an equipment closet. The amount of space  
22 required would also depend on the type of facility placed,  
23 such as copper, or derived channels, the number of  
24 customers and tenants served and the types of services that  
25 are provided.

1           Regarding E911, there was -- I guess there was  
2 some question about on an MPOE regime whether you would  
3 just get the billing location or whether you would get  
4 apartment 12 or whatever. I think that was the concern or  
5 why this question was raised. GTE offers an optional PBX  
6 product called PS-911 which provides individual station  
7 location and automatic number identification within  
8 multi-tenant locations. So, therefore, even at the MPOE,  
9 demarcation, if this -- It would be an upgrade. Where  
10 provided, it would provide the actual location of the  
11 party. And that's all I have.

12           MR. CUTTING: Go ahead.

13           MR. FALVEY: Jim Falvey with e.spire. I just  
14 have a couple of quick questions. The same question as for  
15 BellSouth, do you affirmatively support legislation to  
16 require nondiscriminatory access in Florida?

17           MR. LA PORTE: Again, I'm not sure. Is  
18 legislation required for nondiscriminatory access? We are  
19 in favor of nondiscriminatory access, GTE is, as a policy  
20 of favoring nondiscriminatory access to the MPOE.

21           MR. FALVEY: So you kind of answered my question  
22 with a question, and I'm tempted to say, I get to ask the  
23 questions here. So I think that's a no. I think both  
24 BellSouth and you are saying, well, we support it but --  
25 you know, in principle, but we don't support specific

1 legislation or recommend the Texas statute or this statute  
2 or that statute. Is that a fair characterization?

3 MR. LA PORTE: We do not support the Texas  
4 statute, and I'll give you an example why. That's been  
5 recently passed, and we have had the experience, and I'm  
6 not sure if it was -- I guess if it was a new location, a  
7 new building going in that -- and it was in our area, in  
8 our franchise area. The compensation for that space was  
9 excessive. In other words, if you did the math, it  
10 actually exceeded the -- and it was on a monthly basis, and  
11 it was a monthly recurring charge, and it actually exceeded  
12 the rent requirement for a tenant in that building. Of  
13 course, obviously, it's a small space, only 50 square feet  
14 or something; but again, it's in an unfurnished equipment  
15 room with a hundred watt light bulb and the rent was, we  
16 deemed to be excessive. So, yes, in answer to your  
17 question, we are not in favor of the Texas legislation.

18 MR. FALVEY: My next question, I think I want to  
19 take some of the science fiction out of the Internet access  
20 and the data aspect of this. You mention that you only  
21 support it for basic local service, and going back to a  
22 product that we offer, we have a PRI, and the customer  
23 chooses whether they want to have it. How many channels on  
24 that PRI will be dedicated to local service, how many  
25 channels to long distance, and how many channels to

1 Internet access? So let's say -- I think there are 24  
2 channels. Feel free to correct me if I'm wrong. So let's  
3 say they started out with eight channels of each local,  
4 long distance and Internet access and they get mandatory  
5 building access to put the fiber in at the building and the  
6 next month the customer calls up and says, okay, I change  
7 my mind, I want 24 channels of Internet access over that  
8 same fiber. So just sort of to bring us into the current  
9 age of telecommunications that we are in, do I no longer  
10 have access to the building when the customer calls up and  
11 switches the channels over to 24 channels of Internet  
12 access, bearing in mind that the next month he could call  
13 me back and say, let's go, eight, eight, eight again?

14 MR. LA PORTE: In response to your question, I  
15 guess my attempted example of the steam car and the eight  
16 track, you may need to clarify that a little bit, if that  
17 answers your question. I don't think that it needs to be  
18 defined that tightly, but when you go from three eights to  
19 one 24 of a particular service, my point is I don't think  
20 it needs to be defined that tightly for access. I think it  
21 should be left open, and that was my point with we  
22 shouldn't have regulated it, mandated steam cars, we  
23 shouldn't have mandated eight track tape decks, and we  
24 shouldn't mandate voice, data and Internet, you know, or  
25 specific technologies.

1 MR. FALVEY: But, see, I thought what you said  
2 was that you would only get direct access for basic local  
3 service, and I guess my next example would be the guy that  
4 uses his Internet to make phone calls all the time, which  
5 again, is not science fiction, people do it all the time,  
6 particularly to far away places; and there is going to be a  
7 trend going forward where people gradually start to use  
8 that service more and more as the bugs get worked out. So  
9 I guess what I'm saying is, you are apparently, appear to  
10 be saying that the access should only be required for eight  
11 tracks and not for CDs and that we are trying to make --  
12 you know, turn our CDs into something, whatever the next  
13 generation is after CDs.

14 MR. LA PORTE: Again, I was just trying --

15 MR. FALVEY: Would you comment on that, please?

16 MR. LA PORTE: I was just trying to define it as  
17 the lowest common denominator as it exists today, and  
18 basically I would have thought that would give anybody  
19 access, meaning basic local service. If we want to leave  
20 it open ended, then we can go from there.

21 MR. FALVEY: Fair enough.

22 MR. KATZENSTEIN: Mike Katzenstein. I have one  
23 quick question, and I will resist the urge to repeat our  
24 entire presentation this time.

25 First of all, we welcome and are quite refreshed

1 by GTE's position which shows a great deal of flexibility  
2 and, we believe, recognition of the reality of  
3 facilities-based competition. The question, you had  
4 mentioned that you would envision because of price  
5 regulation and accommodation in a surcharge which would be  
6 on a tariff basis for your -- all customers in your service  
7 area would receive a surcharge which would allow you  
8 essentially to advance the depreciations for the inside  
9 wire which is stranded, just to keep everything simple.

10 MR. LA PORTE: Yes.

11 MR. KATZENSTEIN: At the point -- so what  
12 confused me was you were suggesting that the premises  
13 wiring from the demarc point to the customer would remain  
14 property of the ILEC even after the MPOE was established.  
15 I thought in California that the commission ruled that that  
16 would become CPE, that you would get your cost recovery but  
17 that all carriers would have access, and it would be up to  
18 the property owner to figure out how it would be managed,  
19 maintained and who would pay what for the use of the wiring  
20 from and after the date that the MPOE was established.

21 MR. LA PORTE: Yes, that is correct. That is our  
22 position.

23 MR. KATZENSTEIN: Terrific. No further  
24 questions. Thank you.

25 MR. CUTTING: Thank you. Time Warner had

1 switched earlier in the day. Are they ready to present at  
2 this time?

3 MS. MAREK: Good afternoon. My name is Carol  
4 Marek. I'm the vice president of regulatory affairs for  
5 the southeast region for Time Warner Telecom, and I  
6 appreciate the opportunity to make a few comments here.

7 Both the Florida Statutes and the  
8 Telecommunications Act of 1996 had some broad policy  
9 mandates to try and foster and encourage competition in the  
10 local exchange. To that end, the legislature has asked the  
11 PSC to make some recommendations, specifically to whether  
12 or not there should be legislation enacted around allowing  
13 telecommunications companies access to multi-tenant  
14 buildings. I think there are some guiding principles.

15 One I believe was stated in the first workshop,  
16 that the interest of the consumers, in this case the  
17 tenants, should be paramount. If we look back in terms of  
18 the statutes that competition is in the public interest,  
19 that allowing competition -- or by allowing access into a  
20 building that competition will be fostered or encouraged by  
21 that and that consumers or the tenants will be able to  
22 receive the benefits of competition. So sort of the  
23 basic, if you look at the guiding principles, the  
24 conclusion really becomes that building access is in the  
25 public -- allowing building access is in the public

1 interest.

2           There are really three key issues, I think, that  
3 keep coming up here today: Direct access, demarcation  
4 point, and compensation. In terms of direct -- And I'll  
5 try and just summarize because being the last of the  
6 industry, telecommunications industry people we have really  
7 beat the horse. But the access to the -- Time Warner  
8 believes that the access should be to an entire building or  
9 a commercial complex under one common ownership. That  
10 would also be helpful in negotiating agreements where there  
11 would be one agreement per property, that the access should  
12 be on a nondiscriminatory and competitively neutral basis  
13 as compared to the ILEC and that it should include all  
14 services under the jurisdiction of the Florida Commission.

15           In terms of the demarcation point, the definition  
16 should be consistent with the federal minimum point of  
17 entry definition. Any definition that this Commission  
18 adopts should also include access to building wiring. I  
19 think we have heard that theme repeatedly today as well.

20           The real -- really this boils down to a  
21 show-me-the-money case. You know, we wouldn't be here if  
22 compensation or the money -- we weren't getting into  
23 everybody's pockets right now, and Time Warner really  
24 believes that there are fundamentally two ways of handling  
25 this. And when we are saying nondiscriminatory treatment,

1 I wanted to address the one comment that was made earlier.  
2 By nondiscriminatory we don't mean free, we mean  
3 nondiscriminatory. The two alternatives are that the  
4 property owners charge everybody or the property owners  
5 don't charge anybody, so that is really the mechanism or  
6 the definition of "nondiscriminatory" that we are hoping  
7 that is applied.

8           One recommendation for compensation would be that  
9 compensation should be based on the difference of the value  
10 of the property before and after the physical access is  
11 allowed or the loss incurred by the property owner as a  
12 result of allowing physical access. I think if you look at  
13 that Loretto case that was referenced earlier that the  
14 supreme court did, in fact, ruled that there was a taking  
15 but that when it went through all of the court systems --  
16 and my attorney can help me with all of the legalese -- but  
17 the bottom line was, is that one of the state commissions  
18 ruled that a reasonable compensation fee was a dollar.  
19 I've got mine, and we can go home, but I'm ready to ante up  
20 my dollar if that is the reasonable just compensation. And  
21 I think the real reason for that is if you look at access,  
22 if you look at the property before allowing competitors in,  
23 and you look at the value of the property afterwards, we  
24 really argue that we are increasing the value of that  
25 property. We are increasing the value by offering more

1 services to the tenants of that building, and I think that  
2 is probably why the court came up with a dollar. That's  
3 all my comments for today.

4 MS. AUGER: I don't have to add anything after  
5 that.

6 MR. CUTTING: Okay. Just one small question. In  
7 your filings you made reference to a two-year contract  
8 limit as one of the possible criteria used for  
9 circumstances that would justify restrictions to access,  
10 and I was just wondering how you came up with that two-year  
11 limit.

12 MS. MAREK: It was only -- On exclusionary  
13 contracts?

14 MR. CUTTING: Right.

15 MS. MAREK: It was just trying to set -- There  
16 ought to be rights in terms of contracts between building  
17 owners and tenants and telecommunications companies, and we  
18 tried to also balance those interests when we looked at the  
19 rights and obligations of each of the three parties  
20 involved in this.

21 So when we started saying about exclusionary  
22 contracts, we said, well, two years was an arbitrary time  
23 frame, but it was one we thought, again, was reasonable.  
24 Again, also saying though that two or more providers had to  
25 be able -- have access to that building. There were other

1 restrictions around, that a bidding process, and probably  
2 most importantly that all tenants of the building at the  
3 time the contract is open for bids consented that exclusive  
4 arrangement; so again, we are going back to the consumer  
5 interest or the tenant interest.

6 MR. CUTTING: Thank you. And last but not least  
7 a BOMA representative is here.

8 MR. BREWERTON: Good afternoon. My name is John  
9 Brewerton. I am representing the Building Owners and  
10 Managers Association of Florida. Interestingly enough,  
11 today we thought that these proceedings were going to yield  
12 one thing, but it seems like we are in sort of a tug of war  
13 between the incumbent carriers and the alternative carriers  
14 and maybe the commercial office building tenants and the  
15 property manager or the rope in the tug of war.

16 First of all, let me reiterate something that we  
17 have said time and time again, that the commercial office  
18 building is definitely in favor of competition. We do  
19 think that competition is to the benefit of our buildings.  
20 We think it's for the benefit of our tenants. In the long  
21 run, everybody is going to benefit. Whether or not we are  
22 responsible for drops in stock prices among various  
23 carriers here, whether or not we are responsible for --  
24 whether or not they can make money in their business or  
25 their profits are going down, we think that's a little bit

1 misguided.

2           The real issue here is, and I've heard a lot of  
3 statements to this effect today, that the  
4 telecommunications carriers are here today to protect the  
5 interest of tenants; and somewhere I'm missing something  
6 here. Somewhere I think the real estate industry is  
7 missing something because, nothing against the carriers  
8 personally, but since when did they become such great  
9 corporate citizens that they are really worried about the  
10 tenants? We all know that they want access to commercial  
11 office building tenants because that is where the  
12 profitable is, and that is fine; we are all in the business  
13 to make money. That is perfectly fine.

14           The tenants are not the ones complaining here.  
15 The commercial office building owners are only complaining  
16 when you try to shove something down their throats. If you  
17 have a legislature that enacts a mandatory access statute  
18 and says, you will let this guy onto your property and you  
19 cannot govern any term of access whatsoever as to what that  
20 person is going to have to do or not do on your property,  
21 you're causing that property owner a problem, a major  
22 problem.

23           Several of the people here in the real estate  
24 industry have talked about some management issues. I'm not  
25 going to reiterate all of those. Security is a major

1 issue. Contractors are being used by just about every one  
2 of these carriers that are here today. Those contractors  
3 have employees. Those employees have access to the  
4 buildings. We all know what kind of problems result from  
5 that.

6           There are cost issues associated with it, and  
7 I've heard the cost standard iterated a number of times  
8 today. The problem with the cost standard is then you  
9 force a property building owner to come here in front of  
10 this commission or in front of some other regulatory agency  
11 and establish what the building owners cost is to manage  
12 multiple carriers in the building. You're causing that  
13 property owner to spend more money to simply recover its  
14 own costs.

15           One of the major problems that the real estate  
16 industry had with the proposed mandatory access legislation  
17 was that in its original draft proposed by the telecom  
18 carriers it actually incorporated a concept that said  
19 nothing shall prohibit a landlord from recovering costs  
20 from the carrier. The problem was that that recovery of  
21 cost was simply an after-the-fact remedy which, once again,  
22 the landlord would have to go to court to try to enforce  
23 that remedy, to sue under a contract or whatever else.  
24 There are protections that landlords need to be able to put  
25 in their agreements with carriers, just like they do with

1 tenants. If a tenant comes to a building and wants to  
2 lease space in a building, the landlord typically says,  
3 okay, here is our standard operating lease; and then the  
4 parties enter into negotiations. If the tenant has  
5 specific telecommunications needs, those are negotiated.

6           Once again, someone alluded to numbers earlier of  
7 five to ten years on tenant leases. Those are probably a  
8 bit long. I say three to seven years is probably a little  
9 bit more accurate. But nevertheless, some of those leases  
10 are in effect already, and those tenants do come to  
11 property owners and say, look, I want to use an alternative  
12 carrier. Well, there are additional costs associated with  
13 managing an additional carrier in the building. When an  
14 incumbent carrier came to the building, they got free  
15 access, we'll all admit that here, and that's one of the  
16 biggest problems with the nondiscriminatory standard, from  
17 the real estate industry's perspective. The problem is  
18 that the first carrier got in for free, so to say that we  
19 are not urging free access or uncompensated access is  
20 really a bit misleading because it is free access if it's  
21 nondiscriminatory when compared to the incumbent carrier  
22 who has been there forever and brought the original E911  
23 service to the building and brought the original dial tone  
24 to the building.

25           So you as a commission, you as staff members of

1 the Commission, are charged with making policy  
2 recommendations to the legislature; and you have, you know,  
3 a couple of alternatives. You can take the new carriers,  
4 the ALEC carriers, CLEC carriers, competitive access  
5 providers, whatever name you want to give them today, but  
6 you can take those guys and you can elevate them to the  
7 incumbent or monopolistic carrier status. You can give  
8 them free access like the first carrier got when it came to  
9 the building because he brought -- the first carrier,  
10 excuse me, not he -- the first carrier brought E911 service  
11 to the building and original dial tone. You can elevate  
12 the status of all the ALEC carriers to that of a  
13 monopolistic carrier, or you can look at maybe the  
14 alternative to that, the converse of bringing the  
15 monopolistic carrier down to the CLEC status or the ALEC  
16 status. Both of those cause problems.

17           If you impose a nondiscriminatory standard on a  
18 landlord, a landlord cannot go to BellSouth or GTE in their  
19 tariffed territories and say, You from now on are going to  
20 comply with these restrictions and these mandates to the  
21 building, mandates for getting access to the building, and  
22 you are going to pay me compensation. Because the only  
23 thing the landlord can do if the carrier says no, which the  
24 carrier does do, is try to terminate their service. And  
25 that is political nightmare. It's a public relations

1 nightmare for a building owner or a property manager. So  
2 the next step is, obviously, the CLECs would like to see  
3 the same terms and conditions; otherwise, there is a  
4 competitive advantage.

5           Somehow we are going to have to ferret out that  
6 issue because it seems that it's a much more inequitable  
7 situation. If you talk about balancing the interest of  
8 landlords and tenants and carriers, if you are talking  
9 about balancing the interests, somebody has got to pay for  
10 the cost of that access. There are additional risks that  
11 the landlord incurs. Somebody has got to pay for that  
12 access. Are those risks paid for in the form of the price  
13 for the telecommunications service, or are they paid for in  
14 the form of additional rent, or higher rent or higher  
15 operating costs for the tenants? We submit that since the  
16 carrier is the one that is going to profit from that  
17 business and for them to deny that they are not going to --  
18 to deny that they are going to profit from the business, I  
19 can't understand; but the costs of that access should be  
20 borne by the carrier, not by the building owner. And  
21 eventually it's going to pass through to the tenant, we all  
22 know that. Whether it goes in the form of rent or  
23 increased prices for telecommunications service, one way or  
24 another the tenant is going to pay for it. So the question  
25 is, do you saddle the landlords with this obligation, who

1 really aren't getting an additional benefit from this  
2 personally, or is that obligation something that should be  
3 more likely borne by the telecommunications carriers who  
4 are profiting from this service.

5           The reasonable standard is a good standard and  
6 concept. I use it all the time in contracts. I represent  
7 property managers all over the country. We have probably  
8 done three or four hundred of these license agreements that  
9 you've heard talked about today just since January 1. The  
10 problem with statutorily mandating a reasonableness term is  
11 then you have parties in litigation fighting over what is  
12 reasonable. That's the entire problem with the Texas  
13 statute right now.

14           And speaking of Texas statutes, we have heard  
15 people refer to Ohio, you've heard them refer to Texas,  
16 you've heard them refer to Connecticut. Well, the  
17 Connecticut statute was passed before anybody knew what was  
18 going on, and there is only one city in that state that had  
19 any high-rise buildings anyway: Hartford. So then you  
20 might look at Ohio, they are contesting the Ohio state  
21 statute as we speak. And you look at the litigation and  
22 litigation expenses that have been incurred by landlords in  
23 the State of Texas, and it seems to me that if you put a  
24 reasonable standard in there, you are creating leverage in  
25 favor of a telecommunications carrier who has a much deeper

1 pocket than an individual building owner to litigate an  
2 issue; and I strongly suggest that you think about that.

3           One of the things you need to think about is what  
4 kind of leverages are you creating if there is going to be  
5 any compensation whatsoever, and we submit that there must  
6 be compensation. We suggest if you doubt that there should  
7 be any compensation here that you guys recommend to the  
8 full Commission that the Commission obtain from the  
9 attorney general's office an opinion on the  
10 constitutionality of a mandatory access provision. We've  
11 said this all along. You know, let's not argue as lawyers  
12 here in this room what the Loretto standard says. Let's  
13 have the attorney general give us an opinion on it before  
14 we go down that road and have to continue fighting this  
15 battle every year. When we fought this battle in April, we  
16 were told that the telecom carriers will be back, this  
17 issue is not over, we are going to fight it every year.  
18 We'd like to not have to fight this battle every single  
19 year. It's very expensive. We are a nonprofit trade  
20 association representing our owners throughout the country  
21 and this state, and it just seems a bit overburdensome.

22           Regarding the MPOE issue, BOMA does not have an  
23 official stand on that position yet. At this point we are  
24 content to remain with the status quo, but we are not  
25 opposed to any modification of that. We have members in

1 all other states. It seems that if it makes sense for  
2 everyone. Contractually -- If you don't have a mandatory  
3 access statute, we don't really care whether it's MPOE or  
4 demarcation point, to be honest with you, because  
5 contractually we are going to allocate those obligations,  
6 benefits and burdens, if you will, of maintaining the  
7 system and servicing the customer. We are going to  
8 allocate those to the carriers pursuant to license  
9 agreements.

10           And speaking of license agreements, let's talk  
11 about a case that was mentioned here earlier today  
12 regarding a pole attachment agreement, and by analogy, I  
13 think landlords have been portrayed here as monopolies, and  
14 if they are monopolies, I'm sure rents will be a lot higher  
15 in the state. But back to the issue, in the case, the Gulf  
16 Power case, we are talking about a pole attachment  
17 agreement here; and I've seen a number of these  
18 agreements. I don't think I've ever seen a pole attachment  
19 agreement in the last ten years, for example, that is less  
20 than 75 pages long, seven point type. This pole attachment  
21 agreement for a creosote wooden pole, for Christ's sake,  
22 addresses everything you could possibly imagine. And for a  
23 carrier to say that that's a reasonable document but yet  
24 for a landlord to protect its own property worth millions  
25 of dollars with tenant obligations pursuant to leases with

1 tenants, for a carrier to take the position that that type  
2 of license agreement is unreasonable or burdensome, I just  
3 can't understand it. It just doesn't make sense to me.

4           The marketing contracts that were referred to  
5 earlier, there have been a few isolated incidents that I'm  
6 aware of marketing contracts. I know that, for example,  
7 BellSouth in its home office territory in Georgia signed an  
8 agreement with BOMA Atlanta which was a marketing  
9 contract. BOMA is not necessarily in favor of that. That  
10 is an individual city where an individual board took a  
11 position on a particular issue, and they are entitled to do  
12 that. In the State of Florida, we are also advised that  
13 the City of Miami's BOMA chapter entered into a marketing  
14 agreement with BellSouth pursuant to which BellSouth agreed  
15 to pay any member of BOMA in that city -- or not pay, but  
16 to give them a credit to be offset against other charges  
17 incurred by that particular member based on percentage of  
18 square footage in the building that was actually under  
19 contract with BellSouth's customers. It's not an exclusive  
20 contract. It's not a preferred carrier contract. I'm not  
21 necessarily in favor of those.

22           And with respect to exclusive agreements, I'll  
23 tell you that I advise all my clients to stay as far away  
24 from it as you possibly can. If a landlord wants to enter  
25 into an exclusive agreement, it's probably his

1 constitutional right to do so. It may not be the most  
2 prudent thing in most cases but, you know, that's his  
3 constitutional right to do so. BOMA is not in favor of  
4 those.

5           Regarding the excessive rent issue, I've heard a  
6 number thrown out here of five thousand dollars a while ago  
7 of rent being paid -- five thousand dollars per month to a  
8 landlord to get access to tenants. I know that everyone of  
9 my clients would jump on that in a heartbeat. The five  
10 percent number that has been thrown out is a number that,  
11 while it may have been used, and it is being used in  
12 contractual negotiations, that number is actually being  
13 offered by one of the alternative carriers here in this  
14 room. So if a carrier is willing to pay five percent of  
15 gross revenues to a building owner to get access to that  
16 building owner's tenants and to put equipment in that  
17 building and do whatever else, why are you going to tie the  
18 hands of the building owner to enter in that contract with  
19 that particular carrier? That doesn't make sense. It  
20 doesn't make sense for the government to get involved in  
21 arms length negotiations between private parties. It's  
22 unnecessary government regulation. I understand the  
23 mandates of the Federal Act to try to remove barriers to  
24 competition, but I suggest that you look at the real  
25 barriers to competition and not try to portray the building

1 owners or allow anyone else to portray the building owners  
2 as the parties who are the barriers to competition.

3           Someone said earlier, with respect to the  
4 constitutional right to do business, I think you do need to  
5 weigh, once again, the relative interests of the parties,  
6 compare your right to own private property versus a  
7 telecommunications carrier's, quote, unquote, right to  
8 serve someone in your property. Let the free market ferret  
9 itself out. It's a very young industry. Rates have gone  
10 up and down. They are all over the place. It seems like  
11 it's just premature to try to regulate anything by this  
12 committee.

13           Lastly, a couple of parties said here today  
14 that -- you know, I guess gave their impressions of what  
15 the legislative intent was in its charge to you to conduct  
16 a study. I would certainly disagree with their  
17 interpretations, at least from the carriers. We don't  
18 think the legislative intent was to tell you to go back and  
19 tell them that they ought to enact a mandatory access  
20 statute. If that were the case, then they would have done  
21 just that last spring.

22           I would also like to remind you that mandatory  
23 access has been lobbied for very, very significantly at the  
24 federal level and at state levels all over the country.  
25 While three states may have adopted some forms of mandatory

1 access statute, congress expressly rejected it. A number  
2 of other states have expressly rejected it as well. So I  
3 would ask that you take that into consideration. That will  
4 conclude my comments. Do you have any questions?

5 MR. FALVEY: A couple of quick questions. Just a  
6 couple of quick questions and clarification.

7 MR. BREWERTON: Sure.

8 MR. FALVEY: Just for the record, I was born in  
9 Connecticut, and there are high rise facilities in  
10 Stamford, Bridgeport --

11 MS. BEDELL: Mr. Falvey, don't forget to share  
12 with our court reporter what your name is.

13 MR. FALVEY: Jim Falvey, vice president of  
14 regulatory affairs, e.spire Communications, Inc. And I was  
15 just saying for the record there are high rise building in  
16 Stamford, Bridgeport, New Haven and many other cities in  
17 Connecticut, as Time Warner, which is headquartered in  
18 Stamford, will attest. But leaving that aside, I guess my  
19 question is, are you aware that under the Texas statute,  
20 you can still put in limitations on liability, you can  
21 still govern the terms and conditions of your contract but  
22 that the statute does force you to come to the table and at  
23 least negotiate a contract?

24 MR. BREWERTON: I am intimately familiar with the  
25 statute. I am aware of those mandates to come to the table

1 and negotiate a contract. And once again, you know, I can  
2 speak for my clients and the people who are active in the  
3 BOMA organization here in Florida, those guys are coming to  
4 the table and negotiating contracts. I think it's been  
5 clearly stated here today that there are a few bad apples  
6 who may not be doing that; but I don't think you should  
7 fetter, if you will, or impose legislation on 98% of the  
8 market because of 2% of the bad apples, if that's what you  
9 want to call them. I think there are other remedies  
10 available.

11 MR. FALVEY: I would suggest that if it were 2%  
12 we wouldn't all be here, and that if the 2% are the high  
13 rise buildings in downtown Miami, we all have a very big  
14 problem in terms of competing in the market. And as I  
15 mentioned, the 98% will typically include provisions that  
16 are totally unacceptable and we still have to sign them.  
17 So I've given examples in my testimony. There has been  
18 some comment about it, no examples. Teligent has given  
19 examples, and those are just a few examples. But there is  
20 a lot of discussion about that people are going to rip  
21 things up and not put them back, that we have to worry  
22 about indemnification and so on, and I just want to make  
23 the point that in Texas as in anywhere else, we still sit  
24 down and we take all that into account in the contract.

25 You mentioned that the reasonableness standard

1 leads to litigation in Texas, and my company's experience,  
2 as I mentioned, has been that the reasonableness standard  
3 in Texas has led to negotiation and negotiated contracts.  
4 And so I was wondering if you would give me examples of  
5 this extensive litigation that has taken place in Texas as  
6 a result of the Texas statute.

7 MR. BREWERTON: Well, I think it's clear what  
8 happened in the Brooks Fiber situation. With respect -- I  
9 do agree that as between reasonable parties, if you have a  
10 reasonableness standard in the contract, 99 times out of a  
11 hundred you are going to get to a situation where the  
12 parties are going to work things out.

13 I would like to address the comment you just  
14 alluded to, which is one you raised earlier and I forgot to  
15 address. I think you mentioned that landlords -- contracts  
16 or license agreements with carriers are contracts of  
17 adhesion and you sign them even though you don't like  
18 them. I think that that standard would apply also to lease  
19 agreements with tenants, but they are still negotiated; and  
20 actually I negotiated an agreement with some attorneys from  
21 e.spire. They did express discontent with some provisions  
22 of the agreement but we did negotiate a significant number  
23 of them.

24 MR. FALVEY: One of those was probably -- I  
25 don't know if one of those was one of the ones we

1 mentioned, but we are very unhappy with them, and  
2 that's why I flew all the way down here, but I guess my  
3 question --

4 MR. BREWERTON: You flew all the way down here  
5 because you are unhappy with one agreement?

6 MR. FALVEY: No, no, maybe just the ones you  
7 negotiated. No. There are quite a few; that's my point.

8 But going back to this issue of free access, to  
9 be clear on that point, there is absolutely nothing that  
10 says you can't go back and negotiate with the RBOC. What  
11 I'm hearing you say is that the RBOC is much bigger than  
12 you and they have the ability to create what you've termed  
13 a PR nightmare if you have the gall to challenge them, and  
14 yet we don't have that ability, and we are not wired at the  
15 same level that they are; and, therefore, you are able to  
16 force unreasonable rates on these much smaller competitors.  
17 Am I missing something in terms of why you can't negotiate  
18 with the REOCs and kick them out of the building if need  
19 be? I wouldn't think it would come to that, but --

20 MR. BREWERTON: Actually we would love to, but I  
21 challenge you to take on the burden of telling a tenant  
22 that you are going to disconnect his phone service because  
23 you don't like the fact that the RBOC will not sign a  
24 contract with you and pay you compensation or pay you for  
25 the cost of access to that building.

1 MR. FALVEY: But there are other providers that  
2 would step into the void, believe me.

3 MR. BREWERTON: In some cases. If you are  
4 talking about a very dense market, you're exactly right,  
5 but that's not always the case.

6 MR. FALVEY: I'm talking about the cases where we  
7 come in, and so there is, obviously, an alternative  
8 provider. And to me you're just illustrating the point  
9 that the RBOC is too big to negotiate with so you have to  
10 make -- recover the additional costs of new carriers as  
11 well as the costs of the incumbent, because you are not  
12 getting anything from them, all out of the new carriers.

13 MR. BREWERTON: Actually I didn't say that. I  
14 didn't say anything about recovering cost with respect to  
15 the incumbent's access to the property. I think there's --  
16 you know, at least this is incumbent's argument that there  
17 is some quid pro quo there when the incumbent came to the  
18 building first and brought dial tone service and E911  
19 service to the building and then got access as a result of  
20 that. The question is, what does the next carrier bring to  
21 the building? And I understand your point, believe me, and  
22 I agree with it fundamentally. But simply because the ILEC  
23 got in for free without an agreement should not mean that  
24 my client or any other building owner should be required to  
25 allow every other carrier that wants access to a property

1 or to a tenant free access to the building to put equipment  
2 on a roof top, to put equipment in an equipment room, to  
3 run cables in the risers, horizontal and vertical. I mean  
4 that is problematic. It raises additional risks and  
5 burdens.

6 MR. FALVEY: And I appreciate that, and I'm just  
7 making the point that it's not a simple request for free  
8 access. It's nondiscriminatory access, and I'm going to  
9 leave it at that.

10 MS. BEDELL: I think we have both Mr. Falvey's  
11 and Mr. Brewerton's point.

12 Ms. Caswell, do you have --

13 MS. CASWELL: Yeah, I just have one question.  
14 I'm Kim Caswell from GTE. And I would just like to ask if  
15 one of the chief motivating factors behind your position in  
16 this proceeding is creating maximum profit opportunities  
17 for building owners?

18 MR. BREWERTON: You know, that is what has been  
19 portrayed. I know that there was a marketing publication  
20 generated by BOMA International. It was called "Wired for  
21 Profit." You know, you can read whatever you want into the  
22 title. I think we made it perfectly clear to this  
23 Commission that we didn't necessarily endorse that book,  
24 that was a BOMA international book. But if you read the  
25 concepts within the book, they talk about license

1 agreements. It's meant to be a guide for people to address  
2 what is going on in the marketplace. And I don't -- You  
3 can pick it apart line by line. I can probably find more  
4 complaints with it than you can because I'm intimately  
5 familiar with it unfortunately. But I do think that there  
6 are some misconceptions about what property owners want in  
7 the grand scheme of things. They are not trying to get --  
8 as it was portrayed to the legislature in March and April,  
9 we were told specifically that property owners were trying  
10 to get 40% overrides on telecom services, which is  
11 absolutely absurd.

12 MS. CASWELL: Yeah, just for the record, I would  
13 like to note the title of the publication is "Wired for  
14 Profit, The Property Management Professional's Guide to  
15 Capturing Opportunities in the Telecommunications Market,"  
16 and it was published, I believe, in January of 1998 by  
17 BOMA.

18 MR. BREWERTON: BOMA International, right?

19 MS. CASWELL: Yes, you are correct.

20 MR. BREWERTON: I think we have provided you guys  
21 with a copy of that already.

22 MS. BEDELL: I was going to tell Ms. Caswell. We  
23 were told about the publication, and then we asked BOMA to  
24 provide us with a copy and they have.

25 MS. CASWELL: Okay.

1 MR. CUTTING: Anything else to POMA.

2 MR. MINTZ: My name is Mike Mintz. I'm with  
3 Teligent. I think John has done a really good job of  
4 distilling the issues. It's hard to disagree with how he  
5 has characterized some of the issues except I want to ask a  
6 couple of questions.

7 John, with regard to the management of having a  
8 carrier, other additional carriers in the building, and you  
9 mentioned there are contractors coming in, but those are  
10 issues that can be resolved just as you can resolve having  
11 electricians or plumbers come in the building. I mean you  
12 approve the contractors, and you make sure they are  
13 insured; and, in fact, there are provisions in the "Wired  
14 for Profit" for an agreement that would address those; is  
15 that not right?

16 MR. BREWERTON: It does address a lot of those  
17 issues, that's correct. It was intended to be a  
18 checkpoint -- a checklist, excuse me, for people to take to  
19 their attorneys within the respective states and evaluate  
20 with their engineers and their property managers what  
21 things apply, what things don't apply, what things they are  
22 having a problem with. I mean, for example, in one of the  
23 issues that D. K. Mink, who is sitting next to me who is  
24 our legislative committee chair in the State of Florida,  
25 just pointed out there are costs associated with every

1 carrier that comes in the building. She brought me this  
2 week photographs of a number of properties' internal rooms,  
3 equipment rooms from various members in her chapter where  
4 people have taken hammers and punched through fire rated  
5 walls. There are disconnected wires that are left hanging.  
6 Those are management nightmares, and there are costs  
7 associated with that on a basis.

8 MR. MINTZ: But those are issues that the telecom  
9 contractors are not -- you know, it's not particular to  
10 them. I mean you could have electricians or plumbers or --

11 MR. BREWERTON: No question, except as we  
12 discussed earlier, Mike, the telecom contractor, if you  
13 will, is in a different position because it has an ongoing  
14 presence in facilities in the building whereas a plumber  
15 may not or an electrician may not. They might come in and  
16 install something and sell it and then leave, whereas, a  
17 telecommunication carrier is conducting an ongoing business  
18 there and it has contractors coming in on an ongoing basis  
19 which have to be managed.

20 MR. MINTZ: And if they have an ongoing  
21 relationship, then they have an incentive to keep a good  
22 relationship with the building owner; is that right.

23 MR. BREWERTON: You would think so. I mean --

24 MS. MINK: Can I address this, Mike?

25 D. K. Mink with BOMA. You would think so. We

1 spent on one building one of our members brought forth  
2 about five thousand dollars on a 60 thousand square foot  
3 building, that was done two years ago. The fire Marshall  
4 came in and said, All your walls are permeated. You've got  
5 a fire risk here, plug up everything. That was two years  
6 ago. The current pictures today show conduit where you had  
7 telecommunications wires removed, and now other wires  
8 coming through there or new holes in the wire walls where,  
9 whether it's been a screwdriver or a hammer. These are  
10 telecommunication wires. But that's just -- I mean that is  
11 a minor point. They run through fire dampers in there so  
12 when you have your fire inspector come back. You have  
13 ongoing problems.

14           So with deregulation, you need to know who is in  
15 your room, who is installing it. You don't know what wire  
16 it is. Your existing buildings -- your point of  
17 demarcation might be in the common area of a tenant's  
18 space, so you have a-multi liability issue there. Your  
19 current carriers do not want to sign a license agreement  
20 that would take care of a liability issue now as any other  
21 contractor coming in our building will do and we make sure  
22 we have. In fact, the liability is on us to prove that  
23 they were in that room and that they are the ones that  
24 drilled that wire. If we don't have the information from  
25 our tenant, because that's a customer of the carrier, we

1 don't even know what wire is coming into the building or  
2 what they are installing. In an open air plenum return you  
3 have to have a fire rated conduit of fire rated wire. That  
4 is not necessarily being done because they are not aware of  
5 it.

6 MR. MINTZ: John, let me go to the next  
7 question. I hear your concerns about owners wanting to  
8 recover the cost of managing multiple carriers in the  
9 building and the additional carrier, but aren't the owners  
10 really interested in more than recovering costs? Aren't  
11 they interested in also profiting from that second carrier,  
12 profits that they don't ask or get from the incumbent?

13 MR. BREWERTON: It's a trap question. I like  
14 it. As we said earlier, to suggest that building owners do  
15 not want do make profits on the space in their building is  
16 ridiculous. That is what they are in the business for.  
17 There's -- you know, it's been estimated by a Wall Street  
18 Journal article just two months ago there are going to be  
19 three hundred thousand new roof top sites in the United  
20 States within the next two years. Roof top is becoming  
21 valuable space, so is space in equipment rooms, so is space  
22 in risers. This Commission right now is addressing issues  
23 and looking at issues regarding utility dereg. That is  
24 space that maybe alternatively would be occupied by you or  
25 be occupied by one of our competitors or maybe a power

1 company, so that space is valuable. That's the reason  
2 they built buildings and they buy buildings, is to make  
3 money off of their space, no question about it.

4 MR. MINTZ: Thank you. That is all the questions  
5 that I have. Stuart.

6 MR. KUPINSKY: That's fine.

7 MR. BREWERTON: One point of clarification, the  
8 question is whether we are talking about excessive profits,  
9 and the portrayal has been, once again, at the legislative  
10 level that, you know, you are looking at 30 or 40 percent.  
11 Most of the agreements that we're signing are relatively  
12 nominal sums, but they do allow the building owner to  
13 recover costs, for example, the personnel that have to  
14 manage carriers in the building, five thousand dollar cost  
15 here, two thousand dollar cost there, et cetera.

16 MS. CALLEN: I just want to, if I could, mention  
17 something in terms of -- Frankie Callen with the Greater  
18 Orlando Association of Realtors. In terms of property  
19 owners, his comment about asking whether or not property  
20 owners are in the business of making money off a  
21 telecommunications company, if there is an opportunity for  
22 a property owner to make money off a second  
23 telecommunications company coming into a building, I would  
24 assume that there would also then be the opportunity to  
25 make the money off the first guy that came in the building.

1 And if we are talking about a market competition, if -- and  
2 just for conversation purposes, let's use Apple Phone  
3 Company is the one that is already in there and Pear Phone  
4 Company wants to come in; and if you, as a public service  
5 commission, tell me as a property owner I have to let  
6 everybody who wants in to come in, at a minimum I have to  
7 be able to cover -- I have to be able to recover anything  
8 it costs me to let Apple and Pear come in my building.  
9 Whatever monies or whatever profit occurs after that point  
10 in time would be the Public Service Commission's  
11 jurisdiction to tell me what I can and cannot use or what I  
12 can and cannot generate off that agreement.

13 Now if I'm going to enter -- if you allow me to  
14 enter into contractual relationships with Apple, Pear  
15 Orange and Grape --

16 MS. BEDELL: And Microsoft.

17 MS. CALLEN: -- and Microsoft or whoever and you  
18 give me broad guidelines, that's what the market is going  
19 to control. But it's really insulting for telephone  
20 companies to come up to us as property owners and say, let  
21 us in to do whatever we want to do and don't think about  
22 making money off of it. I mean that is why we are here, is  
23 because the telephone companies want to come in and make  
24 money. And that's okay, nobody has a problem with that.  
25 But don't insult property owners and say, Because the truth

1 of the matter is we've got your customers. Now if you guys  
2 want to go out and build buildings, feel free to do it.  
3 Use a realtor, but go build them, and rent them out and use  
4 your service, then do that. But don't turn around and say  
5 this is going to be all okay for telecommunications company  
6 and your anti-consumer because you want to recover your  
7 cost and you want to make money at the same time.

8 MR. MINTZ: Could I just respond to that? The  
9 last thing we want to do is insult the building owners. We  
10 are trying to do deals with them. Let me clarify a couple  
11 of things.

12 MR. BREWERTON: That's why we are here.

13 MR. MINTZ: Teligent, and I don't think any of  
14 the other CLECs are asking for mandatory access. What we  
15 have been asking is for nondiscriminatory treatment, and if  
16 you want to make money off of carriers, that's fine, just  
17 charge the ILEC as well.

18 MR. BREWERTON: We'd love to.

19 MS. CALLEN: Yeah.

20 MR. CUTTING: We're all reasonable people. Why  
21 don't we take about a 15-minute break and then we'll come  
22 back and have some general discussions.

23 (BRIEF RECESS)

24 MS. BEDELL: We are ready to go back on the  
25 record. Hopefully we won't have to take up too much more

1 of your time.

2           Since we have had such lively discussion this  
3 afternoon already, we are going to move straight to the  
4 announcements portion so those of you who have planes to  
5 catch or other commitments can plan on how to spend the  
6 rest of your afternoon, and then we will go back to the  
7 discussion if we still need to have some.

8           We do appreciate everybody's comments. We  
9 understand that you all have come with particular concerns  
10 and interests, and we appreciate your sharing them with  
11 us.

12           Our next meeting is September the 15th. If we  
13 can, we will try to reserve this room. The room will be in  
14 the notice. Prior to the 15th, we would appreciate any  
15 comments that you would like to make in writing, any  
16 material you would like to send us, anything you think that  
17 we have not covered or that we should have discussed,  
18 anything that has not been raised in the issues, you know,  
19 we, this will be your -- this is the last scheduled  
20 opportunity to receive material from you.

21           That material will be due on August 26th, that's  
22 two weeks. The transcript will be ready?

23           THE COURT REPORTER: Shooting for the end of next  
24 week.

25           MS. BEDELL: Shooting for the end of next week.

1 In terms of filing your comments, we are going to attempt,  
2 we didn't do so well this last time, but if you file them  
3 on diskette and if the computer system is up and if the  
4 server is up at FSU, you may be able to get them. We did  
5 our best. We did our best out here in the frontier and --  
6 but at any rate, if you file them on diskette, we will get  
7 them on the system. And as far as I know, everything that  
8 was filed on diskette is now on the system. Once it  
9 gets -- The fellows here tell me it is up.

10 MR. HOPPE: The system.

11 MS. BEDELL: The system, the FSU system is up.

12 MR. CUTTING: Yes.

13 MS. BEDELL: And as far as we know, the computers  
14 are not down, today.

15 Our final meeting, you know, we may be able to  
16 send you a list of questions that we would like people to  
17 address if we have some final questions that we would like  
18 to have more information on. Those will come to you early  
19 enough for you to have time to prepare for those, I hope.  
20 We will open it up for discussion again at that time to  
21 make sure that we hear everything we've got to hear from  
22 everybody.

23 I don't have any other announcements to make.  
24 Does anybody want to -- Is there any further discussion  
25 that we need to have today? Is there anybody we didn't --

1 MR. CUTTING: We are all reasonable people.

2 MS. BEDELL: Kim.

3 MS. CASWELL: Can I just ask if BOMA filed their  
4 comments on disk and/or if it got onto the Internet?  
5 Because we didn't get them.

6 MS. BEDELL: BOMA filed their comments last  
7 Thursday.

8 MR. BREWERTON: Wednesday.

9 MR. CUTTING: Wednesday. Our computers were down  
10 Wednesday, Thursday and Friday.

11 MR. BREWERTON: We did send them on disk though.  
12 We tried to file electronically, and we couldn't get  
13 through to the computer.

14 MS. CASWELL: It will be posted for us to access?

15 MR. CUTTING: You could not have accessed them on  
16 Tuesday, Wednesday -- no, Monday or Tuesday.

17 MS. CASWELL: But they are there now?

18 MR. CUTTING: You should be able to get to them  
19 today.

20 MS. CASWELL: Okay. Thanks.

21 MS. BEDELL: If you go and check with Brad Martin  
22 in records, he might be able to tell you if it's actually  
23 there, loaded yet.

24 MS. CASWELL: Okay. Thanks.

25 MR. CUTTING: Those are the glasses that were

1 left last time in case anybody wants them. Do we have  
2 anything else?

3 (NO RESPONSE)

4 MS. BEDELL: If not, we really appreciate your  
5 time, your interest, your concerns. Thank you very much.
