

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

 In the Matter of : DOCKET NO. 981390-EI
 :
 Investigation into the :
 equity ratio and return on :
 equity of Florida Power & :
 Light Company. :

PROCEEDINGS: AGENDA CONFERENCE
ITEM NO. 10

BEFORE: CHAIRMAN JULIA L. JOHNSON
COMMISSIONER J. TERRY DEASON
COMMISSIONER SUSAN F. CLARK
COMMISSIONER JOE GARCIA
COMMISSIONER E. LEON JACOBS, JR.

DATE: Tuesday, November 3, 1998

TIME: Commenced at 9:30 a.m.

PLACE: Betty Easley Conference Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY: JOY KELLY, CSR, RPR
Florida Public Service Commission
Chief, Bureau of Reporting

1 **PARTICIPATING:**

2 **ROBERT ELIAS**, FPSC Division of Legal
3 Services.

4 **TOM BALLINGER** and **MIKE HAFF**, Division of
5 Electric & Gas.

6 **TIM DEVLIN**, **BETH SALAK**, **PETE LESTER**, **ANDREW**
7 **MAUREY**, **DAVID DRAPER** and **JOHN SLEMKEWICZ**, Division of
8 Auditing & Financial Analysis.

9 **MATTHEW CHILDS**, Steel, Hector & Davis, representing
10 Florida Power & Light

11 **VICKI GORDON KAUFMAN**, Decker, Kaufman, Arnold &
12 Steen, representing Florida Industrial Power Users Group

13 **RICHARD J. SALEM**, Salem, Saxon & Nielsen,
14 representing Harris Corporation.

P R O C E E D I N G S

1
2 **MR. LESTER:** Commissioners, Item 10 is an
3 investigation into the equity ratio and return on
4 equity for Florida Power and Light Company. For
5 1998, according to the Forecasted Surveillance Report, FP&L's
6 equity ratio was 65.7%, and that's very high compared with
7 other electric utility companies. It remains high after
8 allowing for the effect of purchased power agreements. Also
9 FP&L's equity ratio has increased steadily over the past four
10 years. Common equity is the highest cost source of capital so
11 the higher percentage of common equity in capital structure,
12 the higher the overall cost of capital.

13 Regarding the return on equity, long-term
14 interest rates have declined and are currently quite
15 low. And other states have set ROEs that are lower
16 than FPL's currently authorized ROE of 12%.

17 For these reasons Staff believes there's
18 potential overearnings and we're recommending a
19 hearing at this time.

20 Staff has passed out an exhibit that
21 condenses these issues. This shows the revenue effect
22 of return on equity and equity ratio at various
23 levels.

24 **CHAIRMAN JOHNSON:** Who wants to go -- I'm
25 not sure who you represent, I'm sorry. If you could

1 state your name and who you represent.

2 **MR. SALEM:** Madam Chairman, members of the
3 Commission, Staff, I'm Richard Salem with Salem, Saxon
4 on behalf of Harris Corporation, together with Robert
5 Sands, vice president of Harris Corporation.

6 As you're aware, Harris Corporation is
7 headquartered in Melbourne, Florida, with 28,000
8 employees worldwide. 8500 of them reside in the
9 Florida Power and Light service area.

10 This item is of vital importance to Harris
11 Corporation. It consumes a great deal of electric
12 power, and it is concerned, as we all are, on
13 increasing costs and expense in doing business.

14 To the extent that the Staff has recommended
15 that the return on equity, the earnings ratio and
16 earnings be reviewed on an analytical basis, and to
17 the extent that those considerations can be taken into
18 account in reviewing the embedded rates and leasing
19 and electric rates themselves, Harris Corporation
20 commends the Staff, and recommends and requests that
21 the Commission consider carefully this item in
22 proceeding with the investigation as recommended.

23 Mr. Sands is here to answer any inquiries
24 you might have. And we appreciate your consideration.

25 **CHAIRMAN JOHNSON:** Thank you. Ms. Kaufman.

1 **MS. KAUFMAN:** I'm Vicki Gordon Kaufman of
2 the McWhirter Reeves law firm. I'm here on behalf of
3 the Florida Industrial Power Users Group.

4 And we support the Staff's recommendation to
5 hold hearings on the appropriate ROE and equity
6 structure for Florida Power and Light.

7 **MR. CHILDS:** Commissioners, my name is
8 Matthew Childs. I'm here on behalf of Florida Power
9 and Light Company. The Staff recommendation is rather
10 lengthy and technical, and I have some comments that
11 will take some time, but bear with me.

12 We ask that this Commission take the longer
13 view towards addressing the best interests of the
14 customers and not look to, what I think is in the
15 recommendation, more of a short-term perspective.

16 I remind the Commission that its longer view
17 was addressed as recently as January of this year when
18 the Commission extended the amortization authorized
19 for Florida Power and Light Company for two years
20 through 1999.

21 The plan under the Commission's policy was
22 to authorize FP&L to record additional expense in
23 those years equal to 100% of the revenue between the
24 low band, and most likely revenue band forecast from
25 1996, and at least 50% of the amount of revenue

1 actually -- this is base rate revenue -- actually
2 realized above that most likely band.

3 That amount, the amortization, was to be
4 applied under the Commission's approved method to
5 various categories. Appendix B of your Order in
6 January sets those out.

7 For instance, it says that they are to go to
8 the correction of any depreciation reserve deficiency
9 resulting from an approved depreciation study, writing
10 off the unamortized loss on reacquired debt,
11 correction of the reserve deficiency, if any,
12 existing in FPL's fossil dismantlement reserves, and
13 correction of the reserve deficiency, if any, existing
14 in FP&L's nuclear decommissioning reserves.

15 In prior years, 1995 through '97, the amount
16 that FP&L -- this is under an earlier version of the
17 amortization plan -- FP&L amortized and charged to
18 expense about \$60 million for its depreciation reserve
19 deficiency, \$109 million for the loss on reacquired
20 debt, and nearly \$175 million relating to the nuclear
21 production depreciation reserve deficiency. In
22 addition, \$30 million was charged per year for nuclear
23 production plant amortization.

24 Outside of the plan, the amortization plan
25 in 1995 and '97, FP&L wrote off on the balance sheet

1 approximately \$87 million in litigation costs that had
2 been deferred by prior action of this Commission, and
3 \$21 million for nuclear maintenance reserves.

4 These write-offs and actions to improve
5 FP&L's balance sheet and to effect the basis for a
6 long-term cost reduction were the result of FP&L's
7 aggressive control of costs.

8 To refresh our recollection a little bit on
9 the prior efforts of Florida Power and Light I have
10 some statistics. Between 1991 and 1997 FP&L's capital
11 expenditures were \$5.9 billion. It added 2,794
12 megawatts of capacity. However, its O&M costs in that
13 same period declined -- that's O&M cost per
14 customer -- declined by 24%; from \$380 to \$290. Rates
15 for a thousand kilowatt hours declined a little over
16 \$3 in that same period for residential service,
17 thousand kilowatts, \$80.43 to \$77.30.

18 During this period where these declining
19 costs were recognized, and despite the substantial
20 increase in the investment by Florida Power and Light,
21 the annual decommissioning costs increased by
22 \$47 million a year and the dismantlement costs
23 increased by \$7 million a year. Even before the PSC
24 had authorized amortization, FP&L incurred substantial
25 cost reductions and charged approximately \$228 million

1 to achieve those cost reductions in manpower in the
2 '91 and '93 period. Between '91 and 1997 FP&L retired
3 \$4.7 million in debt.

4 During those years FP&L did not limit its
5 write-off amount or the expenses, that is expenses
6 charged, so as only to produce an earned return equal
7 to the maximum authorized. In fact, it consistently
8 was below the maximum authorized, and for two years
9 was below the minimum of the zone.

10 Those are a lot of facts and figures. And I
11 ask you to take them, and they are being presented
12 because I think they have a lot to do with what is
13 before you today.

14 We believe that these efforts have already
15 produced substantial benefits for FP&L's customers and
16 have the opportunity to continue to produce
17 substantial benefits but of a more long-term nature.
18 I think that it's more important that we focus on that
19 goal now. There are several positions, however with
20 the recommendation that's before you today that
21 trouble us. And although we think the long-term goal
22 is the proper focus, I believe it's appropriate to
23 comment on several matters that are in that
24 recommendation.

25 First, on Page 2 of the recommendation the

1 Staff says that FP&L's Forecasted Earnings
2 Surveillance Report projects an equity ratio of 65.7%.
3 It says this is high, and it uses this as a point of
4 departure to attempt to compare Florida Power and
5 Light Company to other utilities to make the point
6 that the equity ratio is not appropriate. And it does
7 that in Attachment 3.

8 First of all, I'd like to comment that
9 FP&L's report, its Surveillance Report, its forecast
10 for 1998 operations, nowhere states an equity ratio of
11 65.7%. Instead, this number is a number that was
12 constructed for purposes of the recommendation to make
13 a point. In the recommendation, significant or
14 repetitive references are made to S&P --

15 COMMISSIONER DEASON: Mr. Childs, do you
16 disagree with the number?

17 MR. CHILDS: I disagree with the
18 significance of the number, and that's what I'm trying
19 to get to, Commissioner. That the comparison that the
20 Staff uses -- if you look at Attachment 3, which is
21 the basis for Attachment 6 that Staff just handed
22 out -- is a comparison of equity ratios between FP&L
23 and various other utilities that have AA ratings.
24 Now, this is a selected group where Staff eliminated
25 some of the utilities that have AA ratings, and did

1 its comparison. The significance of Standard & Poor,
2 however, is this is Standard & Poor's rating of AA,
3 and, therefore, the number that the Staff has used, I
4 think, of 57% is important.

5 Standard & Poor does not calculate this
6 equity ratio. When they determine how to rank the
7 riskiness of utilities, they don't compute the equity
8 ratio that Staff did. Instead, they recognize a debt
9 ratio. And in calculating the debt ratio, they
10 include off-balance sheet obligations, or a portion of
11 off-balance sheet obligations, to determine what the
12 real debt is when those off-balance sheet obligations
13 are included. In fact, they treat it as debt, a
14 certain portion of those obligations, because the
15 utility, in their view, has to pay them, and it
16 affects cash flow.

17 Now, if one were to look to the ratings,
18 it's based upon adjusted debt/equity as one of the
19 components -- excuse me, debt ratio as one of the
20 components, not adjusted equity. However, Staff's
21 calculation has another omission, I think, and that is
22 that it does not reflect the differences in the
23 companies for their preferred. So their number does
24 not produce 100% of capitalization, and if you looked
25 at -- and the numbers are available -- if you looked

1 at the preferred stock for the various companies and
2 included the preferred stock as equity instead of just
3 common equity, you would see a different result.

4 Three or four of the companies have ratios that are
5 higher than Florida Power and Light has.

6 My point, Commissioner Deason, as to whether
7 I disagree with the number is that I believe the
8 Staff's view is backwards. It looks at a constructed
9 equity number instead of an adjusted debt ratio. And
10 I believe the backwardness of that is illustrated on
11 Page 7 of the recommendation where it -- the comment
12 is made that the debt cost for Florida Power and Light
13 Company in a recent issuance -- the issuance was only
14 for ten years -- normally they are 30. But,
15 nevertheless, the Staff used this as a basis to
16 conclude that when comparing the cost for the debt for
17 FP&L to the cost of debt for Con-Ed and said there
18 isn't very much difference. But it pointed out that
19 the equity ratio for Florida Power and Light was
20 64.1%, and that's for a different period,
21 Commissioner. That's for the period ending March
22 31st, 1998. So it was 64.1% for Florida Power and
23 Light Company, and 54.9% for Con-Ed; nearly 9%, or a
24 little more than a 9% difference. Now, the Staff does
25 as a parenthetical note on that Page 7, the

1 adjusted -- so-called adjusted equity ratios. But the
2 point is, is that looking at Attachment 3 you see that
3 the S&P rating for these AA -- you see these companies
4 are rated AA that the Staff has selected. That rating
5 is based upon the debt ratio. And when you look at
6 the debt ratio of Con-Ed from the same data source
7 that Staff had you see it's 45.8% and Florida Power
8 and Light Company's is 42.5%. The reason simply is
9 Florida Power and Light, as a percentage of capital,
10 has a significantly greater amount of off-balance
11 sheet obligations than Con-Ed does.

12 **COMMISSIONER DEASON:** Could you repeat those
13 percentages again?

14 **MR. CHILDS:** 45.8% for Con-Ed and 42.5% for
15 FP&L. That's the adjusted debt ratio recognizing the
16 off-balance sheet. The riskiness of the bonds is
17 based on that ratio, not an equity ratio.

18 Now, my point about the preferred stock is
19 simply that the reciprocal of the debt ratio is one
20 minus the debt ratio. And when you do that
21 calculation you get a number. It's not apparent or
22 evident in the calculation that the Staff has done,
23 and they make no comparison for the differences
24 between the companies when you look at preferred.

25 Staff's method, in short, is based upon, I

1 think, a questionable selection process of the
2 companies that are in its comparable group. It's
3 based upon a flawed methodology, with the stated goal
4 of reducing FP&L's equity ratio, quote, "to the
5 average." And it proposes to do so --

6 **COMMISSIONER CLARK:** Mr. Childs, just so I'm
7 clear, they've sort of laid out their analysis to
8 date, and they provide that analysis as the basis for
9 suggesting we look at it through a hearing process.

10 **MR. CHILDS:** Right.

11 **COMMISSIONER CLARK:** And you're suggesting
12 that analysis is so flawed that we shouldn't even look
13 at it through a hearing process?

14 **MR. CHILDS:** My suggestion, Commissioner, is
15 that, first, to remind the Commission that we're in
16 the midst of a two-year amortization program just
17 approved this year, running through 1999. And my
18 position, as I urged the Commission, is to take the
19 longer view and to stay with that program and not take
20 this side trip that is suggested to you. And in
21 addressing that, what I was attempting to point out is
22 that I believe there are sufficient difficulties with
23 the analysis that's presented to you, particularly
24 when you look at what the longer term view could
25 achieve, that it's not necessary or appropriate to

1 follow through with the recommendation that is being
2 made to you.

3 Their recommendation, to repeat, is to move
4 the equity ratio of Florida Power and Light Company to
5 the average, and to do so regardless of consideration
6 of the preferred equity ratios and regardless,
7 apparently, of how the equity ratio came about.

8 What they just distributed is their basis
9 for this. If you look at the number 57.13 that they
10 have there. That is shown on their Attachment 6 where
11 they show, supposedly, an adjusted -- excuse me, an
12 equity ratio of Florida Power and Light of 57.13. And
13 if they adjust that equity ratio of Florida Power and
14 Light to the average that they compute for their
15 selected group, then they would produce a revenue
16 effect. We think that's flawed. They bring us to --

17 **COMMISSIONER DEASON:** Mr. Childs, it's
18 flawed because you disagree with 57.13% as being the
19 average, or you disagree because it's inappropriate to
20 base it upon an average?

21 **MR. CHILDS:** Well, I disagree -- I disagree,
22 first of all, because I think it's flawed as a matter
23 of technique. I think it's flawed as a matter of
24 technique simply because Standard & Poor, which is the
25 rating agency that Staff has used for its selection of

1 comparables, looks at adjusted debt ratio; it does not
2 look at adjusted equity ratio.

3 **COMMISSIONER DEASON:** But you indicated that
4 the adjusted debt ratio is -- I forget my mathematical
5 terminology -- but it's one minus the debt ratio would
6 equal the equity ratio.

7 **MR. CHILDS:** That's correct. And what I'm
8 saying is, is that the numbers that are shown here on
9 the Staff's Attachment No. 3, under adjusted equity
10 ratios, are not the result of one minus the adjusted
11 debt ratio. In fact, all they present is the common
12 equity ratio. They ignore preferred. So you don't
13 know that if one company has more preferred than
14 another -- which is the case -- you don't know how
15 they fit. You don't know what the relationship is.
16 And that's the other part of what I think is a
17 technical flaw, and I think it's a significant one in
18 the calculation.

19 The third area of flaw in that
20 methodology --

21 **COMMISSIONER DEASON:** I'm sorry. What was
22 the second flaw?

23 **MS. CHILDS:** The second is that it does not
24 include the preferred component and then make a
25 comparison that way.

1 Now, the selection process itself that the
2 Staff has used is to exclude any AA companies that did
3 not have off-balance sheet obligations. I think you
4 can see that if you compute an adjusted equity ratio,
5 if you don't have any off-balance sheet obligations,
6 your equity ratio is what it was before. It's not
7 adjusted. They didn't include any of those so you
8 don't get that view either.

9 I think another flaw in the approach is
10 this: It doesn't look to how the equity ratio that
11 Florida Power and Light has come about. Just as, for
12 instance, it doesn't look to how the adjusted equity
13 ratio that they've computed for other companies may
14 have come about. For instance, that Florida Power and
15 Light has spent substantial money -- and I gave the
16 figure earlier, \$4.7 billion of debt that had been
17 redeemed, and that's going to have an impact on your
18 capital structure. I don't think -- and this is
19 another area of the difficulties that I have with this
20 suggestion -- I don't think that it's appropriate to
21 look sort of in mid-stream when we're in the process
22 of attempting to take and implement a long-term view
23 to cost reduction and say, "Well, let's stop here."

24 COMMISSIONER CLARK: Well --

25 MR. CHILDS: Let me finish that thought.

FLORIDA PUBLIC SERVICE COMMISSION

1 For instance, and I think it's only to give the flip
2 side a little bit, but for instance, in rate cases
3 this Commission, when companies have gone through
4 heavy construction programs where they've issued a lot
5 of debt and their equity ratios are low and they have
6 a lot of debt outstanding because of the heavy
7 commitment for construction programs -- this is
8 something that happened with a lot of utilities in the
9 '70s. When those companies came in for rate
10 increases, they had low equity ratios. The Commission
11 didn't say, "Well, it ought to be higher." In fact,
12 what it said is -- and it said this to Florida Power
13 and Light in the '80s, "It may make sense to improve
14 your equity ratio, but outside of a rate case." I'm
15 not saying that that justifies a particular ratio, but
16 I think it justifies taking a longer term view as
17 opposed to a shorter term view.

18 Now, I think that the result, when you see,
19 for instance, the Attachment 6 that's in color now,
20 that based upon the Staff's computation that was in
21 the recommendation, or someone's recommendation, that
22 the way that he would achieve this result of producing
23 the 57.13% equity ratio to the average for the AA
24 companies selected would be issue approximately
25 \$610 million of debt and dividend it all upstream to

FLORIDA PUBLIC SERVICE COMMISSION

1 the parent. That would fix the equity ratio. And I
2 don't think that's appropriate financial behavior.

3 **COMMISSIONER CLARK:** I'm sorry, Mr. Childs.
4 Would you repeat that?

5 **MR. CHILDS:** That if the Florida Power and
6 Light Company were to implement the recommendation,
7 that is to reduce the equity ratio that's on this
8 sheet that was just passed out to you at the start,
9 reduce that adjusted -- or that equity ratio from
10 57.13% to the 48.93% that is computed for the other AA
11 companies that are the comparables, that would require
12 a transfer of funds to change the equity ratio of the
13 company. Which would mean, you'd have to dividend out
14 approximately \$600 million to the parent. The only
15 way you're going to get that money is to either stop
16 your amortization substantially and issue debt, or
17 issue all debt and dividend it out. I think that's --
18 I bring that to you because I think it supports what
19 our view is, is that you're being asked to look to a
20 short-term view.

21 The next point on the recommendation --

22 **CHAIRMAN JOHNSON:** Could you go back to that
23 point? You said you'd have to dividend out about
24 600 million to the parent. You said the only way you
25 could do that is what mechanism?

1 MR. CHILDS: My point is -- I'm sorry, the
2 only way to do that is what?

3 CHAIRMAN JOHNSON: The two mechanisms.

4 MR. CHILDS: Well, assuming that a plan
5 continues at all, if you follow this recommendation,
6 if the plan continues at all for a continued
7 amortization expense, then in theory cash produced by
8 the amortization expense could be dividended upstream
9 to the parent. But you wouldn't have enough, so you'd
10 have to issue debt to make up the \$600 million. And I
11 think that's one of the points that I'm trying to
12 make, Commissioner Johnson, when you bring it up. As
13 you go through time, when cash is produced, one of the
14 things a company could do is to say, well, cash is
15 produced through some of these expenses that we're
16 recognizing. Well, what do we do with it? One of the
17 things that was done was to redeem some long-term
18 debt. Of course, you could dividend it out.

19 And I think that in terms of looking at
20 it -- and I hope to get to some better comparisons --
21 that when you see the impact of some of these actions
22 and what I think is an inappropriate view of those
23 actions, that you might see the difference.

24 On Attachment 4 of the recommendation, this
25 is presented to support the assertion on Page 5 that

1 FP&L's actual and adjusted equity ratio increase
2 significantly from '93 to March 31, 1998. And then
3 Page 5 the recommendation states, "Whereas, the
4 averages for the peer group do not show a
5 corresponding increase." Well, if we turn to
6 Attachment 4 and look at the entries under "Adjusted
7 Equity Ratio" you'll see that what is said is true.
8 What is said is true. Except it doesn't point out to
9 you that FP&L's adjusted equity ratio number for 1994
10 is 11% lower than the average for those companies for
11 the prior year. So as someone might say, you started
12 with your foot in the bucket and then you measure your
13 rate of change. I don't think that's a fair
14 comparison.

15 Another interesting factor, however, is look
16 up the page to Florida Power Corporation. And this is
17 an issue of why are these numbers what they are? And
18 look at the entry for the year '96 and the year '97.
19 And you see that Florida Power Corporation's equity
20 ratio declined from 51.9% to 42.3%. No mention at all
21 as to why. Well, you know, I don't know why, but I
22 doubt that it was something that wasn't dramatic. It
23 seemed that was about the time there were some
24 write-offs by them of some costs. But when you're
25 computing averages and saying the goal is to reduce

1 you to the average, I think some these factors are
2 important. We don't think that they were taken into
3 account.

4 The Staff refers to other recent ROEs that
5 have been allowed, and they refer to that on Pages 10
6 and 11 of the Recommendation. There's several
7 difficulties that we have with this.

8 First of all, in earlier documentations that
9 were given to us by the Staff in some of our
10 discussions it showed that AA companies, which are now
11 being used as the comparable for Florida Power and
12 Light, had allowed returns of under one list 12.3%,
13 that's the midpoint, and under another 12.5%. So
14 those were the comparables and those were the allowed
15 returns.

16 The other thing is that -- or another point,
17 as I look at the companies, and we have, quite
18 frankly, had some difficulty running some of these
19 down to find out what happened. And I don't have a
20 complete explanation. I know that I got one, I think
21 just this morning, while I was sitting here, and it's
22 Empire. The best I can figure out is that Empire was
23 a distribution-only company, very small, less than
24 5,000 customers in Arkansas. And it was a settled
25 case. And I don't think that indicates a whole lot.

1 Pacific Corp was a distribution-only case. It had,
2 incidentally, in addition to the 10% return for ROE,
3 it had a program where the range was, the cap was 2.5
4 points higher. So it earned a 12.5 under that. And
5 the bottom was 2.5 in the other direction. One of the
6 other ones, I think it's Concord, was a
7 distribution-only case. Some of these
8 distribution-only cases are cases where they are
9 setting returns for distribution in connection with
10 various reorganizations. I think it was also
11 Concord -- pardon me if I'm wrong -- but one of them I
12 looked at in trying to read the order -- they are not
13 published and they are not easy to find -- but it said
14 yes, it acknowledged that its 10% return had been
15 challenged because there was no evidence to support
16 it. But they noted that it was a return that any of
17 the companies could adjust when they came in with
18 their rate filings. So I don't take that as
19 indicating much of anything.

20 I would note that the only other recent
21 allowance that I'm aware of is one for Wisconsin
22 Electric. It's a AA rated company. It's not on this
23 list. It was allowed in April of '98, 12.2 as an
24 equity return.

25 Finally, what I want --

1 **COMMISSIONER CLARK:** Let me ask a question.
2 What is Con-Ed rate?

3 **MR. CHILDS:** A+. It was AA through, I
4 believe, 1995.

5 **COMMISSIONER CLARK:** A+ is less than AA-
6 right?

7 **MS. CHILDS:** It's the next bracket down.

8 Finally, what I want to comment on is
9 Attachment 5 to the Recommendation. And the
10 Recommendation's conclusion is set forth on Page 7.
11 And at this time I'd like to ask you to turn to
12 Attachment 5 and there you see these lines. It's not
13 real clear on the copy that I have what the numbers
14 are exactly. But you can get pretty close. And I
15 think you can take the clue that Florida Power and
16 Light's the top one on each graph. And it shows that
17 what the Staff has done is fixed, as they state, the
18 cost, the return rate on equity at 12%. And then they
19 computed the cost of capital using the other
20 components of capital other than -- and they've
21 excluded deferred taxes, customer deposits, tax and
22 credits.

23 Now, Page 7 of the Recommendation talks
24 about that a little bit, and this is in the middle
25 paragraph. It says "However," middle paragraph, I

1 think it's about third sentence down, "However, in
2 FP&L's situation equity maintained at the utility
3 level has increased significantly without commensurate
4 decrease in the cost of debt." And the final sentence
5 in that paragraph says "This shows that over the past
6 five years" and it names the companies, one company's
7 cost of capital has increased slightly, and FPC and
8 Gulf's costs have declined in contrast to FP&L's
9 overall cost of capital has steadily increased.

10 Now, when you look at this sheet, Attachment
11 5, you see this is their point; the cost rate is
12 steadily increasing. And I want to distribute at this
13 point a sheet also for you to look at.

14 What we've done, while that's being
15 distributed -- what we've done is -- and we didn't do
16 it for all, we just didn't have the time to include
17 the Gulf number, but we went to the reports,
18 Surveillance Reports for the other utilities, and we
19 computed the total capital and the sources of capital
20 and the weighted cost rate from those surveillance
21 reports. And you'll see, for instance, that for the
22 entry at the top, under the column headed 12/31/98,
23 that the cost for Florida Power and Light is shown as
24 10.57%, and that corresponds to what is shown in the
25 attachment that I was just referring to that's

1 attached to the recommendation.

2 This is what I want to point out. If we
3 look at the cost rate, we can see that the cost rate,
4 that is on the rate of cost for capital for Florida
5 Power and Light, did increase in those years from
6 10.02 to 10.57. The next company down increased under
7 the weighted average cost, the capital cost rate, a
8 little bit; not as much as FP&L. And the final
9 company listed is about the same in '98 as it was in
10 '94. This is the point I want to make.

11 Look at the weighted cost, the capital.
12 That's the comparable to rate base. The capital.
13 Florida Power and Light's capital, even though it has
14 made over \$5 billion in additions, and I don't
15 think -- that's not over the same periods, so the
16 amount is not that big -- but as a matter of change,
17 FP&L's capital has declined absolutely by over
18 \$500 million. It's declined. Now, we see that the
19 next company down, it's much, much smaller than
20 Florida Power and Light, its capital increased or rate
21 base increased by \$350 million. So we have a
22 \$850 million difference between those two companies.
23 Florida Power and Light and the next one down.

24 **COMMISSIONER CLARK:** Mr. Childs, is some of
25 that decline in rate base as a result of us allowing

1 the amortization plan?

2 **MR. CHILDS:** It's the result -- it is the
3 result of the amortization plan in our view
4 principally. In our view it's the amortization plan
5 that we want you to continue that we think has had
6 this kind of an effect.

7 Now, if you go to the last company it shows
8 that the capital in that period increased by 18% or
9 nearly \$500 million. If you look at the rate of the
10 cost of capital you will see that FP&L's rate is a
11 little higher. If you look at the base to which that
12 rate is applied you'll see that FP&L has a substantial
13 decrease, \$500 million. We think that -- and the next
14 point is that even in the annual cost, FP&L's annual
15 cost has actually declined while the other companies
16 have increased substantially. And stated differently,
17 if FP&L's rate base had grown at the 18% level that
18 one of these companies actually experienced, and the
19 cost rate for FP&L's capital were reduced to the 9.54%
20 that that company shows, then FP&L's cost of capital
21 in 1998 would have been \$860 million, or \$100 million
22 higher than it is.

23 So I guess my point on that is that we look
24 at this effect and say that's good, that offers
25 long-term benefits. The Recommendation looks at it

1 and says that's bad. And we think that you ought to
2 stay with what you're doing and that you should
3 continue to recognize that there's this opportunity to
4 go forward.

5 One final comment to make, and that is a
6 suggestion that in the Recommendation that perhaps we
7 could change the equity ratio for Florida Power and
8 Light Company and there wouldn't be any impact on
9 Florida Power and Light Company's credit rating
10 because -- and there's a discussion of other
11 factors -- because. I would point out that the
12 Standard & Poor report for Florida Power and Light
13 Company covers situations I guess somewhat analogous
14 to that and it points out -- and it's analogous in the
15 sense that it says FP&L's rating is stable. It
16 doesn't say it's tenuous or that it would -- you know,
17 right at the top or right at the bottom; it says it's
18 stable. Therefore, I don't think that a suggestion
19 that you should make this dramatic change is
20 appropriate, and we urge you to continue with the
21 program that you have. Thank you very much.

22 **COMMISSIONER CLARK:** I didn't understand
23 that last point. Would you repeat it?

24 **MR. CHILDS:** Yes. Standard & Poor, which
25 again is a credit rating agency that rates all of

1 these companies that was used by Staff to select the
2 comparables that it shows in various of its documents,
3 it issues a report on the credit rating for the
4 company, any comments on it. It's a narrative. Talks
5 about the financial posture of the companies and the
6 business posture of the companies.

7 In the Recommendation, however, where
8 there's a discussion about the need to change the
9 equity ratio for Florida Power and Light Company, it
10 is suggested that FP&L is healthy in other areas.
11 And, therefore, suggested that you can change FP&L's
12 equity ratio and it wouldn't affect the credit rating.

13 What I'm saying to you, first of all, that's
14 little bit like reading tea leaves. But on the other
15 hand, there is some evidence. And the evidence is
16 what the rating agency itself says. It says the
17 rating is stable. It doesn't say that you can draw
18 that conclusion, that changing the equity ratio would
19 have no affect on credit rating.

20 COMMISSIONER CLARK: I don't get that.

21 MR. CHILDS: Okay.

22 COMMISSIONER CLARK: It seems to me if they
23 say it's stable, it indicates to me that you have a
24 stable credit rating and if you do make some
25 fluctuations, it won't affect it being stable,

1 whereas, if it were at the top or at the bottom a
2 change is more likely to affect that rating.

3 **MR. CHILDS:** I don't think so I think the
4 stable means, and as they discuss, they are reading it
5 and looking at all of these factors, and it's in an
6 equilibrium. For instance, when you saw that
7 Con-Edison --

8 **COMMISSIONER CLARK:** So the factors making
9 up the rating are stable, not that the rating is
10 stable.

11 **MR. CHILDS:** I think they both go together.
12 The factors are stable. That's why you have a stable
13 rating. Because the business profile and the
14 financial profile is stable. For instance, they state
15 in there that in 1997 FP&L dividended up most of its
16 earnings and they expected it to continue in the
17 future. That's one of the factors that they look to
18 when they say it's stable.

19 **COMMISSIONER JACOBS:** Your argument is that
20 the debt ratio is going to be a more accurate
21 reflection of the demands on cash flow?

22 **MS. CHILDS:** It's a more accurate reflection
23 of the relationship of credit worthiness of one
24 company versus another because it measures the cash
25 flow relationship of the two companies.

1 **COMMISSIONER CLARK:** Mr. Childs, what is the
2 difference between your cost of capital as a result of
3 maintaining -- are you AA- or are you AA?

4 **MR. CHILDS:** AA-.

5 **COMMISSIONER CLARK:** AA- as opposed to A+.

6 **MS. CHILDS:** What is the result of cost of
7 capital?

8 **COMMISSIONER CLARK:** What's the difference
9 in the cost of capital? Because it would seem to me
10 one thing you would want to look at is, is it
11 appropriate for you to maintain that ratio.

12 **MR. CHILDS:** Sure. And I think that's
13 implicit in the Recommendation.

14 **COMMISSIONER CLARK:** You think Staff is
15 saying implicitly that you should maintain that
16 rating.

17 **MS. CHILDS:** I think they may be saying
18 that. I think they probably are saying that.
19 However, I think that that's my point, Commissioner,
20 about the difference between the long view and the
21 short view, is that the company's situation as to its
22 equity ratio is in large part due to the efforts that
23 it is now undergoing, and has undergone, to which we
24 think have produced very significant effects with our
25 rates being lower than they were before.

1 You need to -- I think we're urging you to
2 keep that in mind when you look at and say, "Well, is
3 your equity ratio two points higher or two points
4 lower than somebody else?" Secondly, as I said on the
5 flaw, on the equity ratio when you look at preferred,
6 we're not -- do not have the same difference that is
7 shown in the Recommendation. But finally,
8 Commissioner, as to the cost, I mean it's like the
9 exercise in a rate case. Exercise in a rate case --
10 and you've looked at it, you've looked at it once and
11 said, "Well, do we have increase earnings in order to
12 permit a company to improve its credit rating?" And
13 the Commission has concluded that no, it didn't want
14 to that. But it didn't want to do that in the context
15 of a rate case. That's my point is that in a rate
16 case where you had to grant additional revenue for
17 that purpose, said, no, we shouldn't do that.
18 However, outside of a rate case it makes sense to do
19 it.

20 I think that over the long term, for
21 instance, we can look at the spreads and issuance
22 costs for Con-Ed and Florida Power and Light in the
23 recent past and say, well, what does that prove? I
24 don't know, when you look at the capital markets in
25 the short term, what that proves. But I think we need

1 to take the longer term. Because once you change
2 these ratios -- Florida Power and Light Company had a
3 lower ratio for years, and it took years of -- after
4 the changes, construction schedule and construction
5 budget, to get out from under some of those earlier
6 ratings. So my point is that precipitous actions are
7 not necessarily the right ones.

8 **COMMISSIONER CLARK:** I'm not sure we're
9 suggesting a precipitous action. I think all the
10 Staff has said is here are some factors that argue a
11 closer look.

12 **MR. CHILDS:** Well --

13 **COMMISSIONER CLARK:** And let me just ask the
14 second question. If we don't take action now and do
15 as you suggest, that we wait until after the
16 amortization has run out, which is 1999 if I
17 understand what you've said, we've lost any
18 opportunity to recover for the ratepayers any money
19 that we might subsequently believe was excessive
20 because of the ratio equity or the return on equity
21 allowed.

22 **MR. CHILDS:** Well, I guess what I'm urging
23 the Commission to do -- I don't think that -- I mean
24 we know that the program continues through '99, and we
25 acknowledge the Commission can look at that program.

1 We understand that. I'm suggesting to you that I
2 think the longer term view is to not say today -- not
3 say as a Recommendation, that the information
4 presented to you suggests that there's an imbalance as
5 to equity ratio, and the information presented today
6 suggests there's an imbalance on equity returns and
7 that you ought to do something. Once you start taking
8 that action it has an effect on it. And that's one
9 reason I made the point, Commissioner, that in the
10 past, when it was company management choice about what
11 it was writing off, it didn't write down to the
12 maximum of the authorized rate of return. And in two
13 years even though it was engaged in write-offs it
14 didn't even earn the minimum.

15 And I sort of feel that we're in a situation
16 now where there's a bump up against a level that the
17 authors of the Recommendation think is appropriate and
18 we've got to stop right now. I'm urging please take
19 the longer view because you can't turn it around real
20 fast.

21 **COMMISSIONER CLARK:** With respect to looking
22 at the concern expressed about higher debt to equity
23 ratio and the point that the Commission did not feel
24 it was appropriate to do that in the rate case, that
25 it would be appropriate to take place outside of the

1 rate case, I assume what that meant was we weren't
2 going to allow increased revenues that would reflect a
3 higher equity ratio than actually existed, but that as
4 it was improved, that that higher equity ratio, for
5 surveillance purposes, would be reported and would
6 earn the higher ratio -- it would earn the equity
7 rate, not that it would be kept at the prior ratios of
8 equity to debt that were found in the rate case.

9 And I would point out, at least, I think, in
10 a United Telephone case we found that they had too
11 much equity. We imposed a hypothetical equity ratio
12 and allowed returns based on that. And the Court said
13 that that was appropriate to do.

14 **MS. CHILDS:** I think if that's being
15 considered, that it ought to be considered very
16 seriously, Commissioner, and I would ask to go back
17 and look through the sheet I passed out. That's my
18 distinction between cost rate and cost. Is that if
19 you think that the -- now, what is being measured here
20 is the effect of the ratio. That's the change that's
21 being measured. Because they've kept -- you see from
22 the prior attachment they've kept the return on equity
23 constant. So the increase is only the result of the
24 change in the equity ratio. And what I'm attempting
25 to say is when you look at that -- and it's criticized

1 in the recommendation -- when you look at that and you
2 see Florida Power and Light Company has had an
3 absolute reduction, even though it's added billions of
4 dollars in plants, had an absolute reduction in its
5 plant in service or its rate base.

6 Yes, if you do the calculation so that you
7 measure the impact of the equity ratio change on cost
8 of capital, FP&L's cost of capital overall has gone up
9 a little bit here compared to these other companies
10 but its costs have gone down substantially. And once
11 again, it's the costs all along in terms of FP&L's
12 programs in the past. It's the ability to contain
13 costs, the effort and incentive to contain costs that
14 the company had which made it able to do that. And
15 those costs then were fed back into the process.

16 So if you -- I don't know how it can be said
17 that, well, we don't want to change the equity ratio
18 but we won't allow you to have it, because if you
19 don't allow the company to have an equity ratio,
20 then -- I mean it's different to say we're going to
21 look at it, we're going to monitor it, that's fine.
22 But if you're going to change it and the
23 recommendation is to change rates on that basis then
24 we would urge you no.

25 **COMMISSIONER CLARK:** As I understand the

1 recommendation it's to, in effect, investigate through
2 a hearing process.

3 MR. CHILDS: Well --

4 COMMISSIONER CLARK: Is there another way
5 you'd like us to investigate it?

6 MR. CHILDS: I know it asked to investigate,
7 but one of the, I guess, points of concern is, is that
8 first of all, you know, repetitively, we think we're
9 correct. But independent of that, when a docket is
10 opened to say investigate, it suggests a lot of
11 things. And I have -- I mean it suggests that -- I
12 mean we have this docket, for instance, that suggests
13 an investigation, but it suggests you have a hearing
14 and you have it right away. And I think once you
15 start rolling downhill that way, it sometimes becomes
16 difficult to say, well, let's remind ourselves this
17 was just an investigation.

18 CHAIRMAN JOHNSON: Any questions?

19 COMMISSIONER DEASON: Commissioners, is it
20 Staff's intent to try to go through a line-by-line
21 rebuttal of what Mr. Childs has said?

22 MR. DEVLIN: No, Commissioner I wanted to
23 make a couple of comments and then pass out a sheet of
24 paper.

25 COMMISSIONER DEASON: I don't want to

1 preclude you from doing that but let me at least say a
2 little something and we may not need to go there.
3 Obviously the other Commissioners want to see it. But
4 let me just say I think we need to stop for just a
5 moment and look and see where we are.

6 I think the discussion that we have had here
7 has been official but it is not an evidentiary
8 hearing. We're just trying to determine if we want to
9 go forward with one.

10 I believe that Staff, in the Recommendation,
11 has pointed out some areas of concern. I think
12 Mr. Childs, on behalf of the company, has indicated
13 some areas of concern within Staff's analysis. And
14 we're not here today to decide who is right or who is
15 wrong but I think we're here today to assess where we
16 are and where we want to go.

17 As a matter of history, if you'll indulge me
18 for a moment, I think that it is good that the
19 Commission has these type problems to deal with. I
20 remember the days when we had companies with low
21 equity ratios, low interest coverage ratios,
22 inadequate cash flows to meet construction budgets;
23 having to go to debt market when interest rates were
24 at all time highs; the threat of eminent and serious
25 rate increases at times of high inflation on

1 customers. Those would not happy times.

2 This company has engaged in a series of cost
3 reductions and those were quite painful; engaged in
4 and made a very difficult decision to reduce the
5 dividend payout ratios, which if that dividend payout
6 ratio had been maintained, perhaps, we wouldn't have
7 the equity ratio problem we have now. I don't know
8 what that impact would be. Mr. Childs indicated that
9 a quick fix would be to declare dividends and pay out
10 excess cash flows to the parent company. But I don't
11 think we want to encourage that either. But from a
12 historical perspective, it's good we have these type
13 problems as opposed to the other side of the coin as
14 those problems.

15 We have been through the company's cost
16 reductions and through negotiated settlements which
17 have encouraged the reduction of what I refer to as
18 balance sheet costs, capital cost and the regulatory
19 assets, reserve deficiencies, things of that nature.
20 This company has positioned itself quite well, and I
21 think that's illustrated by the handout that was
22 presented by Mr. Childs, indicating while there may
23 have been an increase in the cost of capital, the fact
24 that it is applied to a much smaller base actually
25 shows a net reduction in total capital costs. That I

1 believe is significant. I cannot accept this on its
2 face and say that cures all the problems and addresses
3 all the problems which Staff has raised. It does not.

4 I guess the bottom line that I'm trying to
5 get to is that this Commission has encouraged the
6 companies to become more efficient. I think the
7 companies have responded to that encouragement from
8 the Commission, as well as from the reality that
9 perhaps there's going to be a day of reckoning, i.e.,
10 competition. That perhaps has had more impact than
11 even this Commission.

12 I think this company has taken those --
13 reacted accordingly, and this Commission over the
14 years has implemented a number of plans to take
15 advantage of a window of opportunity to reduce costs
16 in the long term. And I think the Commission and
17 company has taken the long term perspective. But I
18 think we cannot ignore what Staff is bringing to us.

19 But before we actually go to a proceeding,
20 declare a hearing and look at these matters, I think
21 we owe it to the parties, including everyone that has
22 appeared here today, and our Staff, to give the
23 negotiated process one more opportunity to see if a
24 negotiated settlement cannot be reached. I know we
25 have a plan in effect already, but I think that the

1 concern Staff raises are legitimate, and that if there
2 is not a negotiated settlement, I'm fully prepared to
3 go forward with an evidentiary hearing and we'll sort
4 through all of the things Mr. Childs has been saying
5 and more, and perhaps things that our Staff would be
6 saying in some of the rebuttal they probably have
7 prepared here today. But I would want to give that
8 opportunity one more chance. And I would advise our
9 Staff, the company and the parties that it is time to
10 make a decision.

11 **COMMISSIONER CLARK:** I would agree.

12 **COMMISSIONER DEASON:** Because we do -- if
13 we're going to go forward, we do need to put -- make a
14 decision. And if the decision in what Staff
15 recommended is such that we need to put money subject
16 to refund, that needs to be done in a timely manner.
17 But I'm not prepared to do that today.

18 I think that to some extent some of the
19 cards have been placed on the table, and I think
20 that's beneficial and it's certainly educational for
21 the Commissioners.

22 But I guess I would recommend, and if a
23 motion is in order, I would move that we keep this
24 docket open, that we allow the parties one more
25 opportunity to sit down and negotiate, and

1 negotiate -- lay out all the cards on the table and
2 agree what you can agree with. And if you cannot
3 agree, come back to the Commission say "We can't agree
4 and we're prepared to go to hearing." Because that's
5 what's going to be the result. If there's not an
6 agreement, we're going to go to hearing, at least
7 that's what I would vote to do, to go to hearing. But
8 I want that process to have one last opportunity. And
9 I would suggest that we do it in very short order. I
10 think there's an agenda for the 1st of December, and
11 come back on the 1st of December either with this same
12 recommendation or a recommendation of a settlement,
13 one or the other, and then go forward from there.

14 **COMMISSIONER CLARK:** I would support that if
15 you add to it that when the recommendation comes back
16 to us, if there is no agreement, that there be a
17 response to -- that the recommendation include a
18 response to the points made in opposition to what the
19 Staff has suggested so we have the opportunity to read
20 that ahead of time.

21 **COMMISSIONER DEASON:** I don't have a problem
22 with doing that. The only thing I'm saying today is I
23 don't want to get involved in a line-by-line
24 rebuttal --

25 **COMMISSIONER CLARK:** Not today, no.

1 **COMMISSIONER DEASON:** -- or what they had to
2 say today. If they want to include that in the
3 next -- if there's no settlement and they want to
4 provide that in the recommendation, that's fine.

5 **COMMISSIONER CLARK:** That would be --

6 **COMMISSIONER DEASON:** But I'm convinced even
7 without that rebuttal of what Mr. Childs said that I
8 think Staff's original recommendation raises enough
9 concern if there's not a negotiated settlement, I'd
10 vote to go to hearing and just lay that out on the
11 table. Because while I agree Mr. Childs raises a lot
12 of concerns that perhaps are legitimate and would
13 be -- would come out in a evidentiary hearing, to me
14 they don't solve all of the problems Staff has
15 indicated. But, anyway, that would be my motion.

16 **COMMISSIONER CLARK:** I second.

17 **CHAIRMAN JOHNSON:** There's a second.

18 **COMMISSIONER GARCIA:** Did you modify it
19 because I certainly would like to have Staff address
20 some of issues that Mr. Childs --

21 **COMMISSIONER CLARK:** In a subsequent
22 recommendation, if it is necessary.

23 **COMMISSIONER GARCIA:** Right.

24 **COMMISSIONER DEASON:** That's fine. That
25 would be -- that's perfectly permissible.

1 **COMMISSIONER GARCIA:** What you mean by
2 subsequent recommendation is when they come back to
3 us.

4 **COMMISSIONER CLARK:** December 2nd or
5 whatever it is.

6 **CHAIRMAN JOHNSON:** Motion and second. Is
7 there any further discussion?

8 **MR. SALEM:** Commissioners, may we mention
9 any other concerns, Chairman?

10 **CHAIRMAN JOHNSON:** I'm sorry. You said can
11 you mention other concerns.

12 **MR. SALEM:** Yes. Is there an opportunity
13 for us to -- for Harris Corporation to advance any
14 further thought on this before you vote?

15 **CHAIRMAN JOHNSON:** In the negotiation
16 process with Staff, interested parties can
17 participate. To the extent there are other issues
18 that need to be addressed, they can be raised in that
19 forum.

20 **MR. SALEM:** We understand that negotiations
21 have been ongoing for quite some time, and the issues
22 that Mr. Childs raised, in all deference to it, they
23 are of an eloquent, cogent nature, are compelling
24 inasmuch as they do address needs that need to be
25 aired in a hearing. And our interest is to put all of

1 the issues on the table for you, as the protectors of
2 our well being and our rates in the future, to
3 consider them in an open forum, in the Sunshine State,
4 as opposed to negotiations behind closed doors. So --

5 **COMMISSIONER DEASON:** I don't think there's
6 been any negotiations behind closed doors. And I
7 think that is an inappropriate statement to make and I
8 take offense by it. When has there been a closed door
9 that you have confronted and you've not been allowed
10 to enter?

11 **MR. SALEM:** We were unaware, Commissioner --

12 **COMMISSIONER DEASON:** Unawareness is not a
13 closed door, sir.

14 **MR. SALEM:** Well, I apologize, Commissioner.
15 I didn't mean it in the sense they were locked doors
16 but --

17 **COMMISSIONER JACOBS:** Can I ask one -- are
18 there issues that you would intend to raise consistent
19 with the ROE issues that have been raised by Staff or
20 are they outside of those?

21 **MR. SALEM:** The issues that we are -- intend
22 to raise are those that are consistent with the
23 factual data that the Staff has developed. Now, how
24 those factor into the equation, Commissioner, we're
25 not certain at this point. But in preparation for

1 hearing, the issues would be framed and the
2 information developed sufficient to present to you for
3 consideration.

4 **COMMISSICNER JACOBS:** Sounds like it would
5 be appropriate then, at least for the short term, for
6 you to be a part of -- Staff has -- what I'm hearing
7 you saying, Staff has framed your issues properly.
8 You would be involved in whatever negotiation takes
9 place from this point until we come back, if we are to
10 come forward again, and you'll be able to deal with
11 that in the context of those negotiations?

12 **MR. SALEM:** We believe that the data that
13 the Staff has raised is adequate to frame issues, and
14 in deference to Mr. Childs' arguments, some of the
15 methodology and techniques do deserve scrutiny for the
16 fairness of all parties, including customers. So in
17 that context we do want to ferret out how best to look
18 at the information so that the customers, such as
19 Harris Corporation and our employees, do get the
20 benefit of the effort in your final decision making.

21 **COMMISSIONER CLARK:** Madam Chairman, I don't
22 think deferring this to provide for settlement will
23 change the hearing dates. The hearing dates are the
24 9th and 10th. I don't think allowing a little more
25 time for negotiation is going to adversely affect that

1 date. Even if we decide in December to go to hearing,
2 I think they would still be good. So, you know, we're
3 just --

4 MR. ELIAS: That's our belief.

5 COMMISSIONER CLARK: We're just saying let's
6 see if a negotiated process will bear fruit.

7 CHAIRMAN JOHNSON: There's a motion and
8 second. Any further discussion?

9 COMMISSIONER JACOBS: No comments.

10 CHAIRMAN JOHNSON: Seeing none, all those in
11 favor signify by saying "aye." Aye.

12 COMMISSIONER DEASON: Aye.

13 COMMISSIONER CLARK: Aye.

14 COMMISSIONER JACOBS: Aye.

15 COMMISSIONER GARCIA: Aye.

16 CHAIRMAN JOHNSON: Opposed? Show it
17 approved unanimously.

18 MR. ELIAS: So we're clear procedurally,
19 there will be no order issued as a result of this
20 discussion. The motion was to defer action on the
21 recommendation, continue to negotiate, and if those
22 negotiations are unsuccessful, come back with a
23 recommendation that addresses the issues that were
24 raised by the parties.

25 COMMISSIONER JOHNSON: That's right.
