

# Exhibit B

# REDACTED

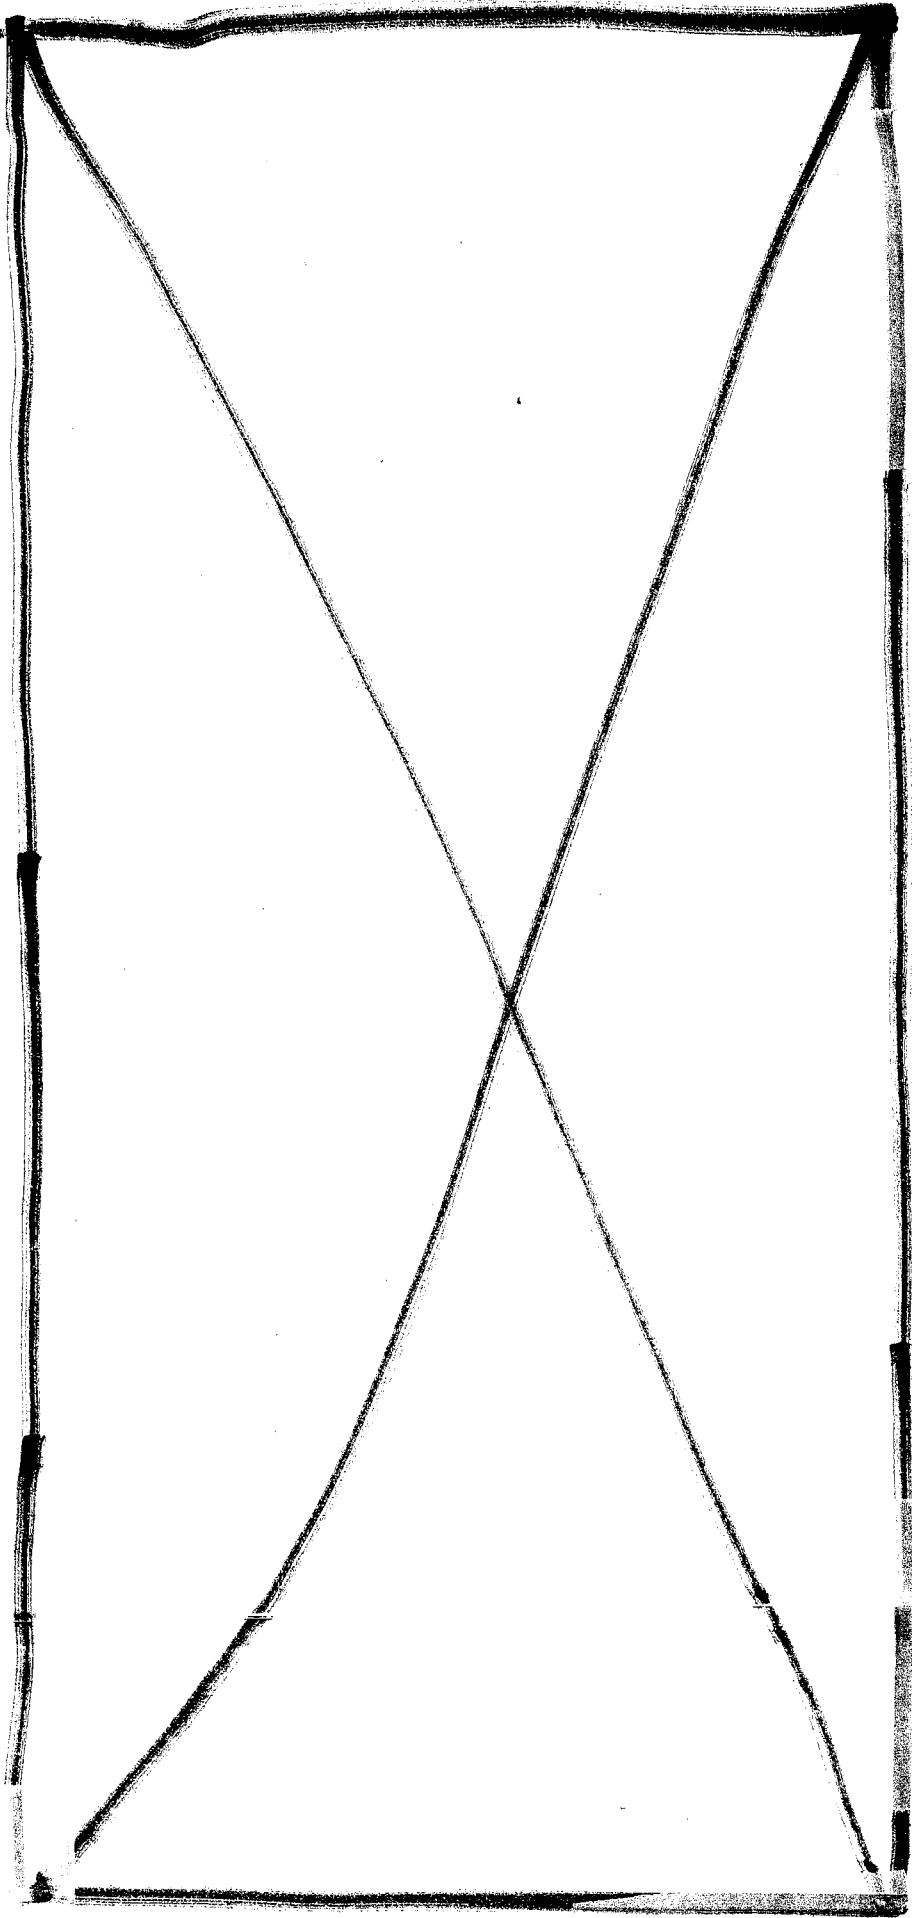

2. What are the cost components that make up the \$7,000,000 incremental difference in vegetation management between the FPSC plan and the PEF IVM program? How were these amounts estimated? Provide assumptions used. In addition, if not included in the \$7,000,000 incremental difference, please provide PEF's best estimate of offsetting (O&M) costs reflecting reduced outage restoration costs which may be expected during non-storm periods associated with the FPSC Plan and the PEF IVM program. If it is not part of the \$7,000,000, explain why it is not.
