**Comments**

20. Please provide any comments, suggestions or information you believe will assist staff in evaluating and reporting on the development of local exchange competition in Florida. We would appreciate any comments or information on intermodal local competition (e.g., wireless, cable telephony, VoIP), reports or studies you have completed on CLEC market share, or anything else that you believe to be relevant.

**Windstream participated in the recent report by NERA on local competition in the state of Florida. In this report, NERA describes in detail the level of intermodal competition not just for local voice services but for a suite of services such as local, long distance, broadband and video services. More and more customers are demanding a suite of services bundled together at one price on one bill. Wireless has become a viable substitute for traditional wireline service, offering voice, data and video services in direct competition to services offered by Windstream. Almost 100% of Windstream's customers in Florida have access to 2 or more wireless providers (99%) and a growing percentage have access to VoIP services provided by CLECs or Cable providers. We believe the Florida telecommunications market is sufficiently competitive in both urban and rural areas so as to warrant revisions in the regulatory scheme so that all communications services providers can compete fairly without unnecessary rules and regulations that add cost to doing business while adding no real value in meeting customer needs. The NERA report has been filed in Docket No. 080159-TP and is available for review there.**

**TL716**

**THIS TABLE IS TO ONLY CAPTURE VoIP LINES. DO NOT INCLUDE LINES REPORTED IN TABLE 1.**

Complete Table 5 if you provided VoIP service to Florida *end users* via one or more *voice-grade equivalent (VGE)* lines or wireless *VGE* channels.

An access line connects the end user's customer premises equipment (CPE) to the serving switch and allows the end user to originate and/or terminate local telephone calls on the public switched telephone network (PSTN). The access line counts in Table 5 below must be based on **all** of your different types of access lines (including fixed wireless) that are used to provide VoIP service.

Each field must be populated. All entries must be made without quotation marks.

**TABLE COLUMN INSTRUCTIONS:**

Column (a). List Exchanges in alphabetical order corresponding to the primary location where service is provided. **Reported exchange data should not be based on secondary service locations (i.e., where service has been moved temporarily to a secondary location such as a vacation home).**

Column (b). Enter the abbreviation **Res** for Residential lines or **Bus** for Business lines. **Residential lines and business lines must be entered in separate rows.**

Column (c). Enter line count as *voice-grade equivalents (VGEs)*. Report *VGEs* based on how the customer is billed. If the customer is billed for a dynamic bandwidth VoIP product, the line count would be the maximum number of VoIP lines available. If the customer is billed for a specific number of VoIP lines, or a range of lines, the VoIP line count would be the number of VoIP lines or the highest number of the range, respectively. **Each line count must be entered in separate rows.**

**Please provide data as of June 30, 2007 and as of December 31, 2007 in two separate tables.**
