B. Usage Charges, *cont'd.*

A termination fee, equal to the Number of lines cancelled x number of months remaining on the contract x $25.00, will be assessed when a VIP Standard or VIP Plus Customer terminates service prior to the completion of the then current term. For a dedicated service customer the "number of lines" is equal to the number of channels (i.e., a T1 loop would constitute 24 lines).

Frontier VIP may be applied at the parent or child account levels. (Allowing different child accounts to have different long distance products). For customers with VIP Plan at the parent account level, all qualified billing rolls up to the parent to determine total monthly billing and the appropriate "super-volume" discount level for that month. Child account discounting will be applied based on the higher (parent or child) VIP Plan term and "total volume" discount. Discounts will be shown per call type at the account level on billing statements.

C. Ancillary Services

An additional $1.99 per call surcharge will be assessed on all calls placed for intrastate Directory Assistance. Frontier TravelCard may be used in conjunction with this service. (N)

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 Direct Dial Service, *cont'd.*

3.6.15 FrontierWorks LD * (N)

FrontierWorks LD is a non-distance sensitive product that includes direct dial 1+ outbound service and (8XX) toll free inbound service. Pre-subscription of the primary line is required to subscribe to FrontierWorks LD offered by Frontier Communications of America, Inc (FCA). This plan is available to customers of local exchange companies (LEC) with whom the carrier has a billing and collections contract, and is enrolled in the FrontierWorks Small Business Solutions product offered by that associated LEC. This product is only available in conjunction with the FrontierWorks LD plan from Frontier Communications of America, Inc.'s interstate Domestic Price List.

Term plans and termination liability that the customer agrees to for FrontierWorks LD in conjunction with the FrontierWorks Small Business Solutions product can be found in the local exchange tariff of FCA's associated LEC.

A. Rate Structure

FrontierWorks switched calls are non-distance sensitive, flat-rated, with the following rating periods:

Monday - Friday		Saturday & Sunday
D= Day	8:00 AM - 4:59PM	N = Night 12:00AM Saturday through 11:59 PM on Sunday.
E= Evening	5:00 PM - 11:59PM	
N= Night	12:00 AM - 7:59AM	

* This service is limited to existing customers at their existing locations. (N)

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 Direct Dial Service, *cont'd.*

3.6.15 FrontierWorks LD, *cont'd.* * (N)

B. Usage Charges

Customers enrolled in this product will receive a total of 100 free direct dial 1+ and (8XX) toll free interstate, interLATA or intraLATA minutes per month, measured at the account level. Any usage above the allotted free minutes will be subject to an overage rate that can be found in the rate section of this tariff.

A single optional Block of Time (BOT) quantity of minutes can be ordered in conjunction with FrontierWorks LD, in monthly increments of 250, 500, and 1000 minutes, for an additional monthly recurring charge (MRC). The MRC for the BOT is applied at the account level, and can be found in the FrontierWorks LD plan from FCA's interstate Domestic Price List. Any usage above the 100 free minutes and the BOT minutes will be rated at an intrastate overage rate per minute, and these rates can be found in the rate section of this tariff. Overage rates may vary depending upon which BOT is selected. If a new customer to FrontierWorks LD signs up mid-billing cycle, free minutes and the BOT minutes will be prorated. If moving between BOTs, minutes will be prorated based upon the number of days of that billing cycle and will be charged the appropriate overage rate for the BOT selected at the time the call was completed. Usage will be billed in arrears. Excluded from the BOT minutes are: long distance Directory Assistance, calling cards, and 900 calls.

In the event a customer has multiple lines on their account, and any of the auxiliary lines are not on the FrontierWorks Small Business Solutions product of the associated LEC, those lines are not eligible for the 100 free minutes or a BOT selection offered by FrontierWorks LD. If a customer selects an FCA product for auxiliary lines other than FrontierWorks, the customer will be subject to the rates, terms and conditions of that product.

* This service is limited to existing customers at their existing locations. (N)

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 **Direct Dial Service,** *cont'd.*

3.6.15 **FrontierWorks LD,** *cont'd.* * (N)

B. **Usage Charges,** *cont'd.*

Interstate rates for usage outside the zero-rated minutes or the optional BOT minutes are found in the Domestic Price List of Frontier Communications of America, Inc. International rates for this product are found in the International Product Guide of Frontier Communications of America, Inc.

All calls are subject to a minimum billing of eighteen seconds with an additional billing increment of six seconds. Charges will be rounded up to the next cent on a per call basis.

C. **Ancillary charges**

An additional per call surcharge will be assessed on all calls placed for intrastate Directory Assistance, and rates can be found in the rate section of this tariff.

* This service is limited to existing customers at their existing locations. (N)

I. INTRODUCTION

1. In this proceeding, the Commission proposes to amend its regulations to address issues raised by the provision of 911 and enhanced 911 services through certain telecommunications technologies. The primary objective of this proceeding is to ensure broad availability of 911 and enhanced 911 services to users of the public switched telephone network (PSTN) whose health and safety may depend on 911 emergency services systems. Toward this end, we intend to ensure that the effective operation of 911 services is not compromised by new developments in telecommunications. First, we address a petition filed by the Adcomm Engineering Company ("Adcomm") to amend Part 68 of the rules by proposing technical performance requirements that ensure the compatibility of private branch exchanges (PBXs) with enhanced 911 emergency services.[1] In this *Notice of Proposed Rulemaking*, we seek comment on proposals for ensuring the compatibility of private branch exchanges (PBXs) and other dispersed private telephone systems with enhanced 911 emergency services.

[1] Comments were filed by Associated Public-Safety Communications Officers, Inc. (APCO), Bell Atlantic, BellSouth, GTE, South Carolina Budget and Control Board, and the Telecommunications Industry Association (TIA), and reply comments were filed by Adcomm and the North American Telecommunications Association (NATA).

000687

2. Second, we propose to adopt rules that would require wireless services, in particular commercial mobile radio services (CMRS)[2] that provide real time voice services, to include features that will make enhanced 911 services available to mobile radio callers. These features include Station Number Identification (SNI), Automatic Location Information (ALI), Selective Routing (SR), and other features for 911 calls provided over wireless mobile units. This action responds to a Petition for Reconsideration filed by the Texas Advisory Commission on State Emergency Communications (TX-ACSEC) under the Office of the Attorney General for the state of Texas.[3] It also responds to the issues raised in the Emergency Access Position Paper filed recently by the Associated Public Safety Communications Officials-International, Inc. (APCO), the National Emergency Number Association (NENA), the National Association of State Nine One One Administrators (NASNA), and the Personal Communications Industry Association (PCIA).[4]

II. BACKGROUND

3. Since AT&T's announcement in 1965 that the digits 9-1-1 would be made available nationally as an emergency telephone number, the use of 911 for emergency purposes has become widespread. The Commission's Network Reliability Council, in performing a special study of the reliability of 911 services, found that "the American public depends on 911 services in its emergencies."[5] The Council found that 89 percent of the wireline access lines in the United States are served by some form of 911 service and that the service is increasingly engineered to provide a high level of reliability.[6] Currently, about 260,000 calls nationwide are placed to 911 every day.

4. 911 emergency services enable telephone users to receive, and state and local governments to provide, fast response to emergency situations. The ability to dial 911 offers several advantages to users. First, it is a single, nationally used three-digit number that is easy to remember and dial in emergency situations. This provides callers, including children, with easy access to emergency services in areas where the telephone number for the various emergency service providers is not readily known. Second, because 911 calls are sent to Public Safety Answering Points (PSAPs) over dedicated telephone lines, these calls are recognized and answered as emergency calls by professionals trained to assist callers in need of emergency assistance. Third, the use of 911 shortens the response time to requests for assistance because PSAP professionals have ready access to police, fire, and health emergency response service providers.

5. There are different levels of 911 services available, depending on the location. Basic 911 service is a forwarding arrangement in which calls dialed to the 911 telephone number are translated at a telephone company switch and are transmitted to a public safety agency for response. Most emergency systems, however, have enhanced this service.

6. Enhanced 911 systems help emergency services personnel achieve the shortest possible emergency response time by using Automatic Number Identification (ANI)[7] to route an emergency call to the PSAP nearest the caller's location. At a minimum, enhanced 911 service provides the PSAP with the ANI of the calling party, permitting the PSAP to call back in the event the call is disconnected. A fully enhanced 911 system not only displays the ANI, but also permits an attendant at the PSAP to identify the calling party's address through the use of an external Automatic Location Identification (ALI) database. The ALI feature also permits selective routing (SR) of the call to the appropriate PSAP for the identified location and displays the public safety agencies (fire, police and emergency medical services) covering that location on the PSAP terminal.[8] A fully enhanced 911 system may also provide the PSAP with other information, including the name of the subscriber, city, zip code, telephone number, date, time of day, and the class of telephone service (business, residential, etc.).[9] Approximately 85% of 911 services include some form of enhanced 911 service.

7. Congress created the Federal Communications Commission "for the purpose [among others] of promoting safety of life and property through the use of wire and radio communication ...."[10] This Commission has jurisdiction to license the electromagnetic spectrum, and also to regulate "instrumentalities, facilities [and] apparatus" through which wire and radio services are provided.[11] It is difficult to identify a nationwide wire or radio communication service more immediately associated with promoting safety of life and property than 911. We believe that broad

---

[2] CMRS is defined as "any mobile service... that is provided for profit and makes interconnected service available (A) to the public or (B) to such classes of eligible users as to be effectively available to a substantial portion of the public...." The term "interconnected service" means "service that is interconnected with the public switched network...." Omnibus Budget Reconciliation Act of 1993, Pub.L. No. 103-66, Title VI, §§6002(b)(3)(B), 107 Stat 312, 392(1992).

[3] The Petition for Reconsideration was filed in response to Amendment of the Commission's Rules to Establish New Personal Communications Services, GEN Docket No. 90-314, September 23, 1993, 8 FCC Rcd 7700 (1993)(*Second Report and Order*). Because this inquiry is broader than the proposals made in the TX-ACSEC petition, we are initiating this separate proceeding.

[4] This paper was filed on July 5, 1994, as an *ex parte* comment to GEN Docket No. 90-314. It is attached at Appendix D.

[5] *Network Reliability: A Report to the Nation*, National Engineering Consortium, June, 1993 at Section F, page 1.

[6] Wireline carriers and 911 service providers may employ diverse routing of interoffice facilities, multiple 911 tandem switch architectures, alternate public safety answering positions (PSAPs), special marking of 911 equipment, back-up power sources for PSAP facilities and diverse links for automatic line identification database access to ensure 911 service is reliable.

[7] The use of the term "automatic number identification" or "ANI" in this NPRM is not intended as a reference to billing number presentation provided as part of Feature Group B or D local exchange services. Although the number presented to a PSAP on a wireline call is often derived from Feature Group B or D services, the number presented to a PSAP on a wireless call may be generated by several other means. Thus, the term ANI merely identifies a number associated with the caller and used to reference the caller's location. The term does not reflect a specific service or technology.

[8] Selective routing is not needed in all areas. This feature is useful when telephone exchange boundaries extend into two or more PSAP jurisdictions.

[9] A list of the 911 call features currently available to many emergency call taking organizations, listed in order of importance as defined by NENA/APCO leadership, is shown in Appendix B.

solutions.[174] What role would be most productive for the Commission to play in facilitating the adoption of one or more of these possible solutions, or facilitating some other solution, to automatically identify a VoIP service customer's location? Are any of these solutions more promising than others? Are there any reasons why certain of these solutions are unworkable? What other solutions could be used to provide location information automatically in the VoIP service context? Should the Commission require all terminal adapters or other equipment used in the provision of interconnected VoIP service sold as of June 1, 2006 to be capable of providing location information automatically, whether embedded in other equipment or sold to customers as a separate device? Under what authority could the Commission take such actions?

58. We also seek comment on issues raised by our decision today to impose E911 service obligations on providers of interconnected VoIP services. The scope of today's Order is limited to providers of interconnected VoIP services. We seek comment on whether the Commission should extend these obligations, or similar obligations, to providers of other VoIP services that are not covered by the rules adopted today. For instance, what E911 obligations, if any, should apply to VoIP services that are not fully interconnected to the PSTN? Specifically, should E911 obligations apply to VoIP services that enable users to terminate calls to the PSTN but do not permit users to receive calls that originate on the PSTN? Should E911 obligations apply to the converse situation in which a VoIP service enables users to receive calls from the PSTN but does not permit the user to make calls terminating to the PSTN?[175] We tentatively conclude that a provider of a VoIP service offering that permits users generally to receive calls that originate on the PSTN and separately makes available a different offering that permits users generally to terminate calls to the PSTN should be subject to the rules we adopt in today's Order if a user can combine those separate offerings or can use them simultaneously or in immediate succession. Are there any other services upon which the Commission should impose E911 obligations, including any IP-based voice services that do not require a broadband connection?

59. Does the Commission need to adopt regulations in addition to those imposed by today's Order to ensure that interconnected VoIP service customers obtain the required level of E911 services? It is our expectation that end-user updates of Registered Location information will take place immediately. If this is not feasible, what performance standards should the Commission adopt regarding the length of time between when an end user updates Registered Location information and when the service provider takes the actions necessary to enable E911 from that new location? How should such requirements be structured? How should providers of interconnected VoIP service satisfy the requirements we adopt today in cases in which a subscriber's Registered Location is not associated with a street address? What requirements, if any, should we impose on providers of interconnected VoIP service in geographic areas served by PSAPs that are not connected to a Selective Router? How should the use of wireless broadband connections such as Wi-Fi or WiMax impact the applicability of the obligations we adopt today? Would providers of wireless interconnected VoIP service be more appropriately subject to our existing 911/E911 rules for CMRS? Should the Commission require VoIP service providers to create redundant systems for providing E911 services, such as requiring redundant trunks to each Selective Router and/or requiring that multiple Selective Routers be able to route calls to each PSAP? We also seek comment on whether the Commission should impose additional or more restrictive customer notification requirements relating to E911 on VoIP providers, and on the sufficiency of our customer acknowledgement requirements.

Deployment of Wireline Services Offering Advanced Telecommunications Capability	)	CC Docket Nos. 98-147, 98-11, 98-26, 98-32, 98-78, 98-91

ORDER ON REMAND

Adopted: December 23, 1999 **Released: December 23, 1999**

By the Commission: Commissioner Furchtgott-Roth approving in part, dissenting in part and issuing a statement.

I. INTRODUCTION AND OVERVIEW

1. Among the fundamental goals of the Telecommunications Act of 1996 (1996 Act)[1] is the promotion of innovation, investment and competition among all participants and for all services in the telecommunications marketplace, including advanced services.[2] The Commission has issued three orders in this proceeding to date and most recently took an additional step toward implementing Congress's goals for the deployment of competitive advanced services by instituting line sharing obligations for incumbent LECs pursuant to section 251, and establishing spectrum management policies

[1] Telecommunications Act of 1996, Pub. L. 104-104, Feb. 8, 1996, 110 Stat. 56, codified at 47 U.S.C. § 151 et seq. (1996 Act). The 1996 Act amended the Communications Act of 1934. We refer to the Communications Act of 1934, as amended as the "Communications Act" or "the Act."

[2] Joint Statement of Managers, S. Conf. Rep. No. 104-230, 104th Cong. 2d Sess. 1 (1996) *(Joint Explanatory Statement)*. For purposes of this order, we use the term "advanced services" to mean high speed, switched, broadband, wireline telecommunications capability that enables users to originate and receive high-quality voice, data, graphics and video telecommunications. The term "broadband" is generally used to convey sufficient capacity – or bandwidth – to transport large amounts of information. As technology evolves, the concept of "broadband" will evolve with it: we may consider today's "broadband" services to be "narrowband" services when tomorrow's technologies appear.

19. U S WEST acknowledges that section 3(47)(B) may expand the range of services that constitute "telephone exchange service" within the meaning of the Act.[48] It argues, however, that the 1996 Amendment extends only to "those services that are functionally similar to and can substitute for the switched local services" described in section 3(47)(A).[49] According to U S WEST, support for this interpretation of section 3(47)(B) can be found in at least two prior Commission orders. It notes, for example, that the Commission previously has construed the term "comparable" as referring to: (1) services that could become "true economic substitutes for wireline local exchange service;"[50] and (2) the provision of local exchange service over alternative facilities, such as substitutes for the copper loop.[51]

2. Discussion

a) Section 3(47)(A)

20. We conclude that xDSL-based advanced services, when used to permit communications among subscribers within an exchange, or within a connected system of exchanges, constitute telephone exchange services within the meaning of section 3(47)(A) of the Act. U S WEST correctly notes that, in cases involving voice communication, the Commission has long interpreted the traditional telephone exchange definition to refer to "the provision of individual two-way voice communication by means of a central switching complex to interconnect all subscribers within a geographic area."[52] Contrary to U S WEST's contention, however, the Commission has never suggested that the telephone exchange service definition is limited to voice communications provided over the public circuit-switched network.

21. As we noted in the *Advanced Services Memorandum Opinion and Order*, neither the statutory language nor the legislative history accompanying section 3(47) limits the term "telephone exchange service" to the provision of voice services.[53] Moreover, we note that the local public switched network has been used for dial-up

---

therefore, do not permit "ubiquitous local intercommunication." U S WEST Brief at 19-20. Finally, US WEST contends that DSL services are not covered by the exchange service charge. U S WEST Brief at 22.

[49] U S WEST Brief at 23-24.

[50] U S WEST Brief at 24 (citing *Local Competition Order*, 11 FCC Rcd. at 15999-16000).

[51] U S WEST Brief at 25 (citing Federal-State Joint Board on Universal Service, 13 FCC Rcd. 11501, 11528 (1998)).

[52] *Midwest Corp.*, 53 FCC.2d 294, 300 (1975); *Offshore Tel. Co. v. South Cent. Bell Tel. Co.*, 6 FCC Rcd. 2286, 2287 (1991); *Domestic Public Radio Svc.*, 76 FCC.2d 273, 281 (1980); *Application of BellSouth Corp. for Provision of In-Region, InterLATA Services in Louisiana*, 13 FCC Rcd. 20599, 20621 (1998).

[53] *Advanced Services Memorandum Opinion and Order*, 13 FCC Rcd at 24032, ¶ 41. *See also* Cable and Wireless Reply Comments at 5.

access to data transmission services for many years.[54] For example, whenever a facsimilie is sent from a home or office to another party within the local area, the transmission is a data transmission rather than a voice transmission, but such transmissions nevertheless constitute telephone exchange service. Consistent with this, the Commission has expressly made the rules governing basic telephone exchange service equally applicable to LEC provision of data and voice services.[55] The parties have not persuaded us that we should depart from this long-standing practice. Indeed, in this era of converging technologies, limiting the telephone exchange service definition to voice-based communications would undermine a central goal of the 1996 Act--opening local markets to competition to all telecommunications services. We thus conclude, consistent with past practice, that the term "telephone exchange service" encompasses voice and data services.

22. We further disagree with U S WEST that the statutory language or Commission precedent suggest that the term "telephone exchange service" is limited to services that employ circuit-switching technology. Although the definition of what constitutes an "exchange" traditionally has been linked to the area served by a switch, or by an interconnected system of switches,[56] the statutory language does not support a conclusion that only services that employ circuit-switching technology constitute telephone exchange service within the meaning of the Act.[57] Indeed, we have previously noted that the "[t]he concept of an exchange is based on geography and regulation, not equipment."[58] Thus, the interconnection obligations set forth in section 251(c)(2) apply to packet-switched services as well as circuit-switched services.

23. Although we reject the contention that the term telephone exchange service is limited to voice communications, we agree with U S WEST that the statutory text and Commission precedent support a conclusion that telephone exchange services

[54] *See e.g.*, CoreComm Comments at 8.

[55] *In the Matter of International Business Machines Corp. Petition for Declaratory Ruling that Southern Bell Telephone and Telegraph Company Offer its Local Area Data Transport Service on an Unbundled and Detariffed Basis Pursuant to Section 64.702 of the Commission's Rules*, FCC 86-122, ENF 83-34, Memorandum Opinion and Order on Reconsideration (1986); *see also Advanced Services Order* at ¶ 47 (noting that the interconnection obligations set forth in section 251 apply equally to voice and data services). Some commenters point out that at least four state commissions have concluded that certain packet-switched services, such as frame-relay service, constitute "telephone exchange services," within the meaning of the Act. *See e.g.*, Joint CLEC Commenters Comments at 17-18.

[56] *See* U S WEST Brief at 7 (citing Harry Newton, NEWTON'S TELECOM DICTIONARY 301 (15th ed. 1999).

[57] We note that in the "pre-switching" era, plugs and cords, not circuit switches, were used to provide the original "telephone service, and this original telephone service actually established a "private line" between two parties. This was the typical arrangement in 1934, the year of the adoption of the original Communications Act.

and an incumbent LEC's STP; (6) between a competitive provider's dedicated transport and an incumbent LEC's office; and, (7) between incumbent LEC and non-incumbent LEC STPs.[445] MFS argues that, regardless of the specific points listed by the Commission, states should be able to expand the list of technically feasible points.[446]

3. Discussion

209. We conclude that we should identify a minimum list of technically feasible points of interconnection that are critical to facilitating entry by competing local service providers. Section 251(c)(2) gives competing carriers the right to deliver traffic terminating on an incumbent LEC's network at any technically feasible point on that network, rather than obligating such carriers to transport traffic to less convenient or efficient interconnection points. Section 251(c)(2) lowers barriers to competitive entry for carriers that have not deployed ubiquitous networks by permitting them to select the points in an incumbent LEC's network at which they wish to deliver traffic. Moreover, because competing carriers must usually compensate incumbent LECs for the additional costs incurred by providing interconnection, competitors have an incentive to make economically efficient decisions about where to interconnect.[447]

210. We conclude that, at a minimum, incumbent LECs must provide interconnection at the line-side of a local switch (at, for example, the main distribution frame), the trunk-side of a local switch; the trunk interconnection points for a tandem switch; and central office cross-connect points in general. This requirement includes interconnection at those out-of-band signaling transfer points necessary to exchange traffic and access call related databases. All of these points of interconnection are used today by competing carriers, noncompeting carriers, or LECs themselves for the exchange of traffic, and thus we conclude that interconnection at such points is technically feasible.

211. A varied group of commenters, including Bell Atlantic and AT&T, agree that interconnection at the line-side of the switch is technically feasible.[448] Interconnection at this

point is currently provided to some commercial mobile radio service (CMRS) carriers[449] and may be necessary for other competitors that have their own distribution plant, but seek to interconnect to the incumbent's switch. We also agree with numerous commenters that claim that interconnection at the trunk-side of a switch is technically feasible and should be available upon request.[450] Interconnection at this point is currently used by competing carriers to exchange traffic with incumbent LECs. Interconnection to tandem switching facilities is also currently used by IXCs and competing access providers, and is thus technically feasible. Finally, central office cross-connect points, which are designed to facilitate interconnection, are natural points of technically feasible interconnection to, for example, interoffice transmission facilities. There may be rare circumstances where there are true technical barriers to interconnection at the line- or trunk-side of the switch or at central office cross-connect points, however, the parties have not presented us with any such circumstances. Thus, incumbent LECs must prove to the state commissions that such points are not technically feasible interconnection points.

212. We also note that the points of access to unbundled elements discussed below may also serve as points of interconnection (*i.e.*, points in the network that may serve as places where potential competitors may wish to exchange traffic with the incumbent LEC other than for purposes of gaining access to unbundled elements), and thus we incorporate those points by reference here. Finally, as noted above, we have identified a minimum list of technically feasible interconnection points: (1) the line-side of a local switch; (2) the trunk-side of a local switch; (3) the trunk interconnection points for a tandem switch; (4) central office cross-connect points; (5) out-of-band signaling transfer points; and (6) the points of access to unbundled elements. In addition, we anticipate and encourage parties and the states, through negotiation and arbitration, to identify additional points of technically feasible interconnection. We believe that the experience of the parties and the states will benefit our ongoing review of interconnection.

G. Just, Reasonable, and Nondiscriminatory Rates, Terms, and Conditions of Interconnection

1. Background

213. Section 251(c)(2)(D) requires that incumbent LECs provide interconnection "on rates, terms, and conditions that are just, reasonable, and nondiscriminatory."[451] In the NPRM,

[449] AT&T comments in CC Docket No. 95-185 at 6 n.6 (Mar. 4, 1996).

D.C. Circuit in *Bell Atlantic v. FCC*,[1341] which was decided prior to enactment of the 1996 Act. While section 251(c)(6) limits an incumbent LEC's duty to provide physical collocation in certain circumstances, we find that it does not limit our authority to require, under sections 251(c)(2) and (c)(3), the provision of virtual collocation. We note that under our *Expanded Interconnection* rules, that were amended subsequent to the Bell Atlantic decision, competitive entrants using physical collocation were required by many incumbent LECs to convert to virtual collocation. If the Commission concluded that subsection (c)(6) places a limitation on our authority to require virtual collocation, competitive providers would be required to undertake costly and burdensome actions to convert back to physical collocation even if they were satisfied with existing virtual collocation arrangements. We conclude that Congress did not intend to impose such a burden on requesting carriers that wish to continue to use virtual collocation for purposes of section 251(c). Further, the record indicates that this requirement would be costly and would delay competition.[1342] In short, we conclude that, in enacting section 251(c)(6), Congress intended to expand the interconnection choices available to requesting carriers, not to restrict them.

552. We also conclude that requiring incumbent LECs to provide virtual collocation and other technically feasible methods of interconnection or access to unbundled elements is consistent with Congress's desire to facilitate entry into the local telephone market by competitive carriers. In certain circumstances, competitive carriers may find, for example, that virtual collocation is less costly or more efficient than physical collocation. We believe that this may be particularly true for small carriers which lack the the financial resources to physically collocate equipment in a large number of incumbent LEC premises.[1343] Moreover, since requesting carriers will bear the costs of other methods of interconnection or access, this approach will not impose an undue burden on the incumbent LECs.

553. Consistent with this view, other methods of technically feasible interconnection or access to incumbent LEC networks, such as meet point arrangements, in addition to virtual

[1342] *See* Teleport comments at 32; ALTS comments at 23; Time Warner comments at 42-44 (objecting to non-recurring charges for the reconnection of existing interconnected virtual collocation services to a replacement physical collocation arrangement).

[1343] *See* Hyperion comments at 15.

and physical collocation, must be available to new entrants upon request.[1344] Meet point arrangements (or mid-span meets), for example, are commonly used between neighboring LECs for the mutual exchange of traffic, and thus, in general, we believe such arrangements are technically feasible.[1345] Further, although the creation of meet point arrangements may require some build out of facilities by the incumbent LEC, we believe that such arrangements are within the scope of the obligations imposed by sections 251(c)(2) and 251(c)(3). In a meet point arrangement, the "point" of interconnection for purposes of sections 251(c)(2) and 251(c)(3) remains on "the local exchange carrier's network"[1346] (*e.g.*, main distribution frame, trunk-side of the switch), and the limited build-out of facilities from that point may then constitute an accommodation of interconnection.[1347] In a meet point arrangement each party pays its portion of the costs to build out the facilities to the meet point. We believe that, although the Commission has authority to require incumbent LECs to provide meet point arrangements upon request, such an arrangement only makes sense for interconnection pursuant to section 251(c)(2) but not for unbundled access under section 251(c)(3). New entrants will request interconnection pursuant to section 251(c)(2) for the purpose of exchanging traffic with incumbent LECs. In this situation, the incumbent and the new entrant are co-carriers and each gains value from the interconnection arrangement. Under these circumstances, it is reasonable to require each party to bear a reasonable portion of the economic costs of the arrangement. In an access arrangement pursuant to section 251(c)(3), however, the interconnection point will be a part of the new entrant's network and will be used to carry traffic from one element in the new entrant's network to another. We conclude that in a section 251(c)(3) access situation, the new entrant should pay all of the economic costs of a meet point arrangement. Regarding the distance from an incumbent LEC's premises that an incumbent should be required to build out facilities for meet point arrangements, we believe that the parties and state commissions are in a better position than the Commission to determine the appropriate distance that would constitute the required reasonable accommodation of interconnection.

MEMORANDUM OPINION AND ORDER

Adopted: July 17, 2002 **Released: July 17, 2002**

By the Chief, Wireline Competition Bureau:

TABLE OF CONTENTS

PARAGRAPH

I. INTRODUCTION 1

II. PROCEDURAL HISTORY 8

that petitioners' language more closely conforms to the Commission's current rules governing points of interconnection and reciprocal compensation than do Verizon's proposals. Because we adopt the petitioners' proposals, rather than Verizon's, we also determine that WorldCom's motion and Cox's objection are moot with respect to Issue I-1.

52. Under the Commission's rules, competitive LECs may request interconnection at any technically feasible point.[117] This includes the right to request a single point of interconnection in a LATA.[118] The Commission's rules implementing the reciprocal compensation provisions in section 252(d)(2)(A) prevent any LEC from assessing charges on another telecommunications carrier for telecommunications traffic subject to reciprocal compensation that originates on the LEC's network.[119] Furthermore, under these rules, to the extent an incumbent LEC delivers to the point of interconnection its own originating traffic that is subject to reciprocal compensation, the incumbent LEC is required to bear financial responsibility for that traffic. The interplay of these rules has raised questions about whether they lead to the deployment of inefficient or duplicative networks.[120] The Commission is currently examining the interplay of these rules in a pending rulemaking proceeding.[121] As the Commission recognized in that proceeding, incumbent LECs and competitive LECs have taken opposing views regarding application of the rules governing interconnection and reciprocal compensation.[122]

53. We find that the petitioners' proposed language more closely conforms to our existing rules and precedent than do Verizon's proposals.[123] Verizon's interconnection proposals

---

[117] *See* 47 U.S.C. § 251(c)(2); 47 C.F.R. § 51.305(a)(2).

[118] *See Developing a Unified Intercarrier Compensation Regime*, CC Docket No. 01-92, Notice of Proposed Rulemaking, 16 FCC Rcd 9610, 9634, 9650, paras. 72, 112 (2001) (*Intercarrier Compensation NPRM*); *SWBT Texas 271 Order*, 16 FCC Rcd at 18390, para. 78 n.174.

[119] *See* 47 C.F.R. § 51.703(b).

[120] *See Intercarrier Compensation NPRM*, 16 FCC Rcd at 9617, para. 14.

[121] *See id.*, 16 FCC Rcd at 9650-52, paras. 112-14.

[122] *See id.*, 16 FCC Rcd at 9650, para. 112.

[123] We note that the Commission declined to find that policies similar to GRIPs and VGRIPs violated the Act in the *Verizon Pennsylvania 271 Order*. *See Application of Verizon Pennsylvania Inc., Verizon Long Distance, Verizon Enterprise Solutions, Verizon Global Networks, Inc., and Verizon Select Services, Inc. for Authorization to Provide In-Region, InterLATA Services in Pennsylvania*, Memorandum Opinion and Order, 16 FCC Rcd 17419, 17474-75, para. 100 (2001) (*Verizon Pennsylvania 271 Order*). The Commission has not, however, required that all "new and unresolved interpretive disputes about the precise content of an incumbent LEC's obligations" be resolved in a Bell Operating Company's (BOC) favor in order for the BOC's section 271 application to be granted. *See Joint Application by SBC Communications Inc., Southwestern Bell Tel. Co., and Southwestern Bell Communications Services, Inc., d/b/a Southwestern Bell Long Distance for Provision of In-Region, InterLATA Services in Kansas and Oklahoma*, Memorandum Opinion and Order, 16 FCC Rcd 6237, 6246-47, para. 19 (2001) (*SWBT Kansas/Oklahoma 271 Order*). Thus, the *Verizon Pennsylvania 271 Order* is not determinative of the question we address here, which is whether Verizon's or petitioners' language is more consistent with the Act and our rules.

require competitive LECs to bear Verizon's costs of delivering its originating traffic to a point of interconnection beyond the Verizon-specified financial demarcation point, the IP. Specifically, under Verizon's proposed language, the competitive LEC's financial responsibility for the further transport of Verizon's traffic to the competitive LEC's point of interconnection and onto the competitive LEC's network would begin at the Verizon-designated competitive LEC IP, rather than the point of interconnection.[124] By contrast, under the petitioners' proposals, each party would bear the cost of delivering its originating traffic to the point of interconnection designated by the competitive LEC. The petitioners' proposals, therefore, are more consistent with the Commission's rules for section 251(b)(5) traffic, which prohibit any LEC from charging any other carrier for traffic originating on that LEC's network; they are also more consistent with the right of competitive LECs to interconnect at any technically feasible point.[125] Accordingly, we adopt the petitioners' proposals.

54. Verizon raises serious concerns about the apportionment of costs caused by a competitive LEC's choice of points of interconnection, such as, for example, the apportionment of costs for virtual FX traffic transported to distant points of interconnection.[126] As we have noted, the Commission is currently examining similar concerns on an industry-wide basis in a pending rulemaking proceeding.[127] Should the Commission's rules governing interconnection and reciprocal compensation change during that proceeding, we expect the agreements' change of law provisions to apply. As we indicate above, however, in this proceeding, we will decide the issues presented based on the Commission's existing rules, and the petitioners' interconnection proposals more closely conform to those rules than do Verizon's proposals.

c. Additional Interconnection Language (Issues VII-1 and VII-3)

(i) Positions of the Parties

55. The arguments raised by Verizon under Issues VII-1 and VII-3 overlap considerably with the questions addressed above under Issue I-1, and relate to the same sections of proposed language. While we thus discuss most of these arguments above, we discuss in this section a number of other specific criticisms raised by Verizon relating to AT&T's proposed Section 4. Specifically, Verizon contends:

[124] *See* Verizon Network Architecture Brief at 6. Verizon states that a competitive LEC could discharge that financial responsibility, for example, by purchasing UNE transport from Verizon. *See id.* at 6.

[125] 47 C.F.R. § 51.703(b).

[126] For a more extensive discussion of Verizon's concerns regarding virtual FX traffic, *see infra*, Issue I-6.

[127] *See Intercarrier Compensation NPRM* at 9634-38, 9650-52, paras. 69-77, 112-15.

Commission.[193] Also, Verizon may advocate alternative payment regimes before the Commission in the pending *Intercarrier Compensation Rulemaking* docket.[194]

70. Moreover, although Verizon complains that it should not be forced to buy transport from petitioners, we note that this is not the only method that Verizon uses to deliver its traffic to them. Cox presented evidence showing that, under its current agreement with Verizon, the parties interconnect and exchange a substantial amount of traffic through a mid-span meet, under which each party transports its own traffic up to the meet point.[195] Cox also states that it has agreed with Verizon to include mid-span meet interconnection provisions in the parties' new agreement, which will permit Verizon to continue to control its costs and engineer and provision its own facilities.[196] The Verizon witness did not dispute this testimony.[197] In Issue III-3, we decide the terms under which AT&T and WorldCom may establish mid-span meets with Verizon.[198]

71. Finally, although it is true that the statute permits competitive LECs to choose where they may deliver their traffic to the incumbent.[199] carriers do not always deliver originating traffic and receive terminating traffic at the same place.[200] The "single point of interconnection" rule benefits the competitive LEC by permitting it to interconnect for delivery of *its* traffic to the incumbent LEC network at a single point. It does not preclude the parties from agreeing that the incumbent may deliver its traffic to a different point or additional points that are more convenient for it. It appears from the record that AT&T and Cox have offered to negotiate such additional

---

[193] *See id.* As we note in our discussion of Issue I-9, Verizon has presented no evidence that any of the petitioners are charging it unreasonable rates and, with respect to Cox, has admitted it would challenge any unreasonable rates.

[194] *Intercarrier Compensation Rulemaking*, 16 FCC Rcd 9610.

[195] *See* Tr. at 1022; 1260; Cox Ex. 2, at 13.

[196] *See* Cox Ex. 1, at 12, citing Cox Proposed Agreement to Verizon at § 4.4. Cox also demonstrated that it currently offers two interconnection points in the Norfolk LATA, which is one of two LATAs in Virginia where these carriers currently interconnect. *See* Tr. at 1252-53; *see also* Cox's November Proposed Agreement to Verizon at § 4.2.3.

[197] *See* Tr. at 1260.

[198] *See infra*, Issue III-3.

[199] 47 U.S.C. § 251(c)(2).

[200] The Commission's rules define "interconnection" as the "linking of two networks for the mutual exchange of traffic." 47 C.F.R. § 51.5. The parties' respective obligations to interconnect with each other, however, arise from different provisions of the Act. Incumbent LECs are required by section 251(c)(2) to permit any requesting telecommunications carrier to interconnect "for the transmission and routing of telephone exchange service and exchange access" with the incumbent's network "at any technically feasible point within the [incumbent] carrier's network." Non-incumbent carriers, on the other hand, are required by section 251(a)(1) "to interconnect directly or indirectly with the facilities and equipment of other telecommunications carriers."

points with Verizon.[201] WorldCom already permits Verizon to self-provision transport to WorldCom's facility.[202] To the extent that Verizon seeks prophylactically to "address future situations as well as other CLECs adopting this agreement,"[203] we do not think that is appropriate in this proceeding, particularly given the evidence presented, and thus decline to do so.

3. Issue I-3 (Reciprocal Collocation)

a. Introduction

72. Section 251(c)(6) of the Act requires incumbent LECs to permit the collocation of equipment at the incumbent's premises.[204] Verizon seeks the reciprocal right to collocate equipment at the premises of AT&T, Cox, and WorldCom, so that it can reduce its costs of transporting traffic to their networks.[205] The petitioners oppose this request. We reject Verizon's proposal.

b. Positions of the Parties

73. The petitioners assert that the Commission lacks authority to compel them to offer collocation to Verizon.[206] They argue that the Commission's rules forbid state commissions from imposing incumbent LEC obligations on competitive LECs,[207] and that several state commissions have held that competitive LECs cannot be required to offer collocation.[208] They claim that Congress distinguished between incumbent LECs and competitive LECs in enacting the

---

[201] For example, AT&T's contract permits the parties to mutually agree to points where Verizon may interconnect with AT&T for delivery of its traffic, in addition to AT&T's switch. *See* AT&T's November Proposed Agreement to Verizon, Sch. 4, Part A, § 1.3, Part B § 2; *see also* AT&T Ex. 3 (Direct Testimony of D. Talbott & J. Schell, Jr.), at 139. Cox's witness testified that, in Virginia, Cox is willing to accept Verizon traffic from Verizon facilities within four miles from the Cox switch. *See* Tr. at 1021-23; *see also* Cox's November Proposed Agreement to Verizon at § 4.3.4. Verizon's witness agreed that was a reasonable distance. Tr. at 1259. In this regard we note that both parties have a duty to negotiate in good faith the terms and conditions of interconnection agreements. 47 U.S.C. § 251(c)(1).

[208] *See, e.g.*, AT&T Brief at 33; Cox Brief at 21.

121. Although we adopt Verizon's language, we emphasize that Verizon's proposed terms for transit service should not be interpreted or applied to restrict the petitioners' rights to access UNEs. (These network elements could include, for example, tandem switching and interoffice transport.[396]) Verizon's testimony indicates that there is currently no tandem switching UNE in service in Virginia, or for that matter in any of the 14 Verizon East states.[397] We note, however, that Verizon has not argued that competitive LECs should be prevented from using UNEs to exchange transit traffic with third-party carriers. To avoid such a result, we remind the parties of the petitioners' rights to access UNEs independent of Verizon's terms for transit service. Furthermore, we caution Verizon not to apply its terms for transit service as a restriction on the petitioners' rights to access UNEs for the provision of telecommunications services, including local exchange service involving the exchange of traffic with third-party carriers.

7. Issues III-3, III-3-A (Mid-Span Fiber Meet-Point Interconnection)

a. Introduction

122. Verizon seeks language that would subject the implementation of fiber meet-point interconnection to the mutual agreement of the parties. AT&T and WorldCom oppose inclusion of this language, arguing that Verizon's consent should not be a precondition to the implementation of fiber meet-point interconnection. They propose language that would give them the sole right to determine whether and where to use fiber meet-point interconnection, subject to the limitations of technical feasibility. Verizon objects to the petitioners' proposals on the grounds that meet-point interconnection raises issues requiring joint coordination, including cost apportionment for the mid-span meet. Verizon also objects to AT&T's proposed language subjecting the implementation of a mid-span fiber meet to a 120 day timeline. We adopt, with slight modification, AT&T's proposed language – for both AT&T and WorldCom.

b. Positions of the Parties

123. AT&T proposes language that would require the establishment of a mid-span fiber meet at AT&T's election without Verizon's consent.[398] AT&T argues that it has the right to interconnect with Verizon using any technically feasible method, including fiber meet-point arrangements.[399] AT&T adds that interconnection via a meet-point arrangement is unarguably a technically feasible method of interconnection, explicitly having been endorsed by the

[399] *See* AT&T Brief at 40.

Commission.[400] Furthermore, AT&T states that its right to choose the point of interconnection gives it the right to choose the location of a fiber mid-span meet, including the fiber splice and terminating facility points.[401] AT&T agrees that joint coordination is important in establishing a meet-point arrangement, but argues that its proposed contract language adequately resolves concerns regarding such coordination.[402] Specifically, AT&T states that its proposed language identifies a process for the parties to reach agreement on implementation issues such as routing, facility size and equipment to be used, and invokes the agreement's dispute resolution provisions where they cannot reach agreement.[403]

124. AT&T states that Verizon's language by contrast would give Verizon the right to determine not simply how a meet-point interconnection should be established, but whether it would be established at all.[404] AT&T disputes Verizon's contention that mutual agreement is required to protect Verizon from extremely expensive build-outs of its facilities, noting that, under its proposal, each party would bear half the construction costs of the meet-point facilities, giving AT&T an incentive to choose a facility span that is not prohibitively expensive.[405] Accordingly, AT&T argues that Verizon should not be allowed to precondition the implementation of fiber meet-point interconnection on the mutual agreement of the parties or on the availability of facilities in its network.[406] AT&T adds that the Massachusetts Department of Telecommunications and Energy (Massachusetts Department) rejected a similar Verizon proposal in an interconnection arbitration between Verizon and MediaOne, adopting MediaOne's proposal instead.[407]

125. AT&T also proposes language requiring mid-span meets to be activated within 120 days of an initial implementation meeting between the parties, to be held no later than 10 days of Verizon's receipt of AT&T's responses to Verizon's mid-span fiber meet interconnection questionnaire.[408] AT&T states that, because Verizon has no incentives to implement meet-point

---

[400] *See id.* at 41, citing 47 C.F.R. § 51.321(b)(2) (listing meet-point arrangements as a technically feasible form of interconnection).

[407] *See id.* at 43-44, citing *MediaOne/Greater Media Arbitration Order*, D.T.E. 99-42/43, 99-52 (1999) (*Massachusetts Department MediaOne Arbitration Order*).

[408] *See* AT&T's November Proposed Agreement to Verizon, Sch. 4, Part B, § 1.6.4.

arrangements for its competitors, the agreement needs to include firm interconnection activation dates for meet-point interconnection.[409] According to AT&T, Verizon's proposal would require the parties to agree to all aspects of meet-point interconnection before any time frames began to run, and would therefore place no timing restrictions on Verizon. AT&T argues that this open-ended process is an unreasonable condition of interconnection under section 251(c)(2)(D) of the Act, and should be rejected.[410] AT&T adds that the imposition of time frames for other forms of interconnection, such as collocation, is commonplace, and recognizes a competitive carrier's need for certainty when expanding its network.[411] AT&T argues that its proposed 120-day completion timeline is a reasonable one, and notes that its proposal allows Verizon to seek a waiver of the timeline from the Virginia Commission, should exceptional circumstances arise.[412]

126. WorldCom similarly argues that Verizon should not be allowed the power to veto a mid-span meet-point arrangement or unreasonably restrict the conditions under which it may occur.[413] WorldCom adds that it is not difficult to imagine Verizon simply withholding agreement, given its testimony that a reasonable build-out should not extend more than a few hundred feet.[414] WorldCom states that its proposed language provides for the joint engineering and operation of the mid-span meet and provides for agreement on technical interface specifications.[415] WorldCom further states that its proposed interconnection architecture establishes a 50/50 sharing of the cost of interconnection, in conformance with the Commission's orders. Specifically, WorldCom states that its proposal provides for each party providing one fiber strand in a diverse, dual-fiber SONET ring interconnection, as well as all of the electronics on its own end of the interconnection.[416] WorldCom states that this arrangement addresses Verizon's concerns about excessively long mid-span meets and excessive costs, by giving WorldCom an incentive to limit the total costs of the mid-span meet.[417] WorldCom adds that its proposed architecture will benefit the customers of both carriers by providing route diversity and redundancy.[418] WorldCom disputes the assertion that it seeks a unilateral right to dictate the details of the mid-span meet. WorldCom states that its language envisions a cooperative process,

and would impose WorldCom's specifications only in the absence of agreement.[419] WorldCom further contends that Verizon's proposed language, by contrast, provides simply for open-ended negotiation of interconnection terms outside the context of the interconnection agreement.[420]

127. Verizon argues that the Commission should adopt its proposed language, which requires the parties to reach mutual agreement through a memorandum of understanding prior to deploying a mid-span meet.[421] Verizon objects to both AT&T's and WorldCom's proposals, on the grounds that they give the petitioners the ability to dictate to Verizon the technical specifications associated with the mid-span meet.[422] According to Verizon, the parties need to mutually agree on these technical specifications so that both parties to the fiber interconnection, rather than solely the petitioners, can derive the benefits of this architecture.[423] Verizon argues that if one party has the ability to dictate the particulars of the mid-span meet, then that party has the incentive and ability to impose an arrangement that may not be mutually beneficial.[424] Verizon cites WorldCom's proposed diverse, dual-fiber ring architecture as an example of an interconnection architecture replete with pitfalls for Verizon. According to Verizon, WorldCom's proposed architecture is not a classic mid-span meet architecture at all, since it would require Verizon to take fiber all the way to the location of WorldCom's fiber optic terminating equipment, potentially doubling Verizon's costs.[425]

128. In addition, Verizon objects to both petitioners' proposals on the grounds that they only account for a sharing of the construction costs associated with the fiber meet, rather than including maintenance costs and Verizon's embedded costs.[426] Verizon argues that the only way to ensure that the costs of the mid-span meet are apportioned equally is to have the parties mutually agree on the details of the particular mid-span meet.[427]

129. In addition, Verizon objects to AT&T's proposed 120 day timeline for the implementation of a mid-span meet. Although Verizon acknowledges that mid-span meet interconnections can usually be implemented within 120 days, Verizon argues that this implementation schedule is appropriate only once the technical and operational details of the

[423] *See id.* at 46.

[424] *See* Verizon NA Brief at 42-43.

[425] *See* Verizon NA Reply at 22-23.

[426] *See id.* at 24.

[427] *See id.* at 24.

mid-span meet have been worked out.[428] Verizon states that AT&T's proposal, by contrast, initiates the 120 day timeline from the moment AT&T informs Verizon it would like mid-span meet interconnection.[429] Verizon argues that mid-span meets are special arrangements with technical details that need to be agreed upon prior to implementation and that the Commission should therefore adopt its proposal, which requires the parties to reach mutual agreement before deploying a mid-span meet.[430]

c. Discussion

130. We adopt AT&T's proposed language for mid-span meet interconnection, with one modification, as set out below.[431] We find that this language adequately addresses the need for joint coordination between the parties in designing and implementing the mid-span meet. Specifically, AT&T's proposal provides for joint engineering planning sessions and cooperative development of technical interface specifications for the meet-point interconnection. We thus reject Verizon's claim that AT&T's proposal would enable it to dictate the particulars of the mid-span meet.[432] Indeed, AT&T's proposal establishes a mechanism for resolving disagreements in event the parties cannot agree on material terms relating to the implementation of the mid-span meet.[433] In this manner, AT&T's proposal envisions joint planning and mutual agreement (as urged by Verizon), but also provides for the resolution of disagreements.

131. We reject Verizon's proposed language with respect to both petitioners.[434] Like AT&T's proposal, Verizon's envisions that the parties will seek mutual agreement on all technical, compensation and other issues necessary to implement the interconnection. Unlike AT&T's, however, Verizon's proposal contains no process for resolving implementation disagreements between the parties. We thus find that AT&T's proposal will better serve the parties in the future by allowing for the prompt resolution of disagreements, if any are to arise, in the process of mutually planning and implementing these interconnection arrangements.

132. We also adopt AT&T's proposed language specifying a timeline for the activation of mid-span meet interconnection between the parties.[435] As Verizon acknowledges, 120 days is

[433] *See* AT&T's November Proposed Agreement to Verizon, Schedule 4, Part B, § 1.6.4.

[434] Verizon's November Proposed Agreement to AT&T, § 4.3 *et seq.*; Verizon's November Proposed Agreement to WorldCom, § 3 *et seq.*

[435] *See* AT&T's November Proposed Agreement to Verizon, Schedule 4, Part B, § 1.6.4.

ordinarily a suitable timeframe for the implementation of a mid-span meet once the technical and operation details of the interconnection have been determined. AT&T's proposal provides for an implementation meeting to allow the parties to work out such details prior to triggering the 120 day timeline, and provides a process under which Verizon may seek a waiver if the 120 day interval is unattainable. Verizon does not demonstrate that AT&T's approach, particularly in light of this waiver process, would be unreasonable or burdensome. Furthermore, we agree with AT&T that a wholly open-ended process amounts to having no timeline at all; we thus reject Verizon's proposed approach.

133. While as a whole AT&T's proposal for mid-span meet-point interconnection is more consistent with the Act and the Commission's implementing rules than Verizon's, Verizon raises valid concerns regarding AT&T's language allocating the costs of interconnection between the parties. In the *Local Competition First Report and Order*, the Commission stated, "In a meet point arrangement, each party pays its portion of the costs to build out the facilities to the meet point."[436] The Commission stated further that, in a meet point interconnection established pursuant to section 251(c)(2), the incumbent and the new entrant are "co-carriers and each gains value from the interconnection arrangement"; under these circumstances, the Commission reasoned, "it is reasonable to require each party to bear a reasonable portion of the economic costs of the arrangement."[437] AT&T's proposal splits the costs of construction between the parties equally, but does not split any of the costs of maintenance of the mid-span meet. Instead, AT&T's proposal leaves each party responsible for maintaining its side of the fiber splice. Depending upon the location AT&T chooses for the fiber splice, this could leave Verizon bearing an inequitable share of the costs of maintaining the mid-span meet. AT&T's proposal also does not account for situations where embedded plant is used to reach the meet point instead of newly constructed facilities. Excluding the economic cost of embedded plant from the costs to be shared equally by the parties does not result in each party bearing "a reasonable portion of the economic costs of the arrangement."[438] Accordingly, we modify the sentence in AT&T's proposed language governing the allocation of mid-span meet costs to include the costs of maintenance, and the forward-looking economic cost of embedded facilities used to construct the mid-span meet.[439]

---

[436] *Local Competition First Report and Order*, 11 FCC Rcd at 15780-81, para. 553.

[437] *Id.* at 15780-81, para. 553.

[438] *Id.* at 15780-81, para. 553.

[439] Specifically, we modify AT&T's proposed Schedule 4, Part B, section 1.6.2 as follows. The sentence that reads "The reasonably incurred construction costs for a Mid-Span Fiber Meet established pursuant to this Section will be shared equally...."is modified to read: "The reasonably incurred construction and maintenance costs for a Mid-Span Fiber Meet established pursuant to this Section, including the forward-looking economic cost of embedded facilities (*i.e.*, pre-existing facilities) used to construct the Mid-Span Fiber Meet, will be shared equally...."

134. We reject the language proposed by WorldCom,[440] and agree with Verizon that WorldCom's proposed interconnection architecture is not a proposal for the type of meet-point interconnection envisioned by the *Local Competition First Report and Order*. As the Commission stated in the *Local Competition First Report and Order*, for meet-point interconnection pursuant to section 251(c)(2) of the Act, it "makes sense" that "each party pays its portion of the costs to build out facilities to the meet point."[441] WorldCom's proposed interconnection architecture, however, raises entirely different issues regarding cost allocation between the parties than those raised by a meet-point arrangement. Under WorldCom's proposed interconnection architecture, Verizon potentially bears the cost of building new facilities all the way to a WorldCom central office location designated by WorldCom, rather than only to a meet-point between the two carriers' networks. Accordingly, we reject the language in section 1.1.5 of WorldCom's proposed Attachment IV.

135. Having rejected both the Verizon and WorldCom proposals to each other for this issue, we exercise our discretion under the Commission's rules to adopt language submitted by neither party.[442] For the reasons set forth above, we find that AT&T's proposed language, as modified herein, represents a reasonable approach for WorldCom's mid-span meet-point interconnection as well. Accordingly, we direct Verizon and WorldCom to include language consistent with AT&T's proposed language, as modified herein, in their final agreement.

8. Issue III-4-B (Disconnection of Underutilized Trunks)

a. Introduction

136. Verizon proposes language permitting it unilaterally to terminate its underutilized, one-way trunk groups, which it defines as groups with a utilization level of less than 60 percent during a 90-day period. Verizon claims to need this ability in order to manage its network efficiently. AT&T opposes Verizon's proposal, arguing that it is contrary to industry standards and could result in stranded costs and maintenance problems for AT&T. With certain modifications, we adopt AT&T's proposal.

b. Positions of the Parties

137. AT&T argues that Verizon's proposal would allow unilateral action contrary to industry standards and that, instead, the parties should follow the Ordering and Billing Forum (OBF) procedures that interconnected carriers typically use to add, modify, and discontinue interconnection trunks.[443] Specifically, AT&T contends that these procedures provide that the

APPENDIX ITR
(Interconnection Trunking Requirements)

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions for Interconnection provided by the applicable AT&T Inc. (AT&T) owned Incumbent Local Exchange Carrier (ILEC) and Competitive Local Exchange Carrier (CLEC).

1.2 This Appendix provides descriptions of the trunking requirements between CLEC and AT&T-13STATE. Any references to incoming and outgoing trunk groups are from the perspective of CLEC. The paragraphs below describe the required and optional trunk groups for Section 251(b)(5) Traffic, ISP-Bound Traffic, IntraLATA Toll Traffic, InterLATA "Meet Point" Traffic, Mass Calling, E911, Operator Services and Directory Assistance traffic.

1.3 Local Only and Local Interconnection Trunk Groups may only be used to transport traffic between the Parties' End Users.

1.4 **AT&T Inc. (AT&T)** means the holding company which directly or indirectly owns the following ILECs: Illinois Bell Telephone Company d/b/a AT&T Illinois, Indiana Bell Telephone Company Incorporated d/b/a AT&T Indiana, Michigan Bell Telephone Company d/b/a AT&T Michigan, Nevada Bell Telephone Company d/b/a AT&T Nevada, The Ohio Bell Telephone Company d/b/a AT&T Ohio, Pacific Bell Telephone Company d/b/a AT&T California, The Southern New England Telephone Company d/b/a AT&T Connecticut, Southwestern Bell Telephone Company d/b/a AT&T Arkansas, AT&T Kansas, AT&T Missouri, AT&T Oklahoma and/or AT&T Texas and/or Wisconsin Bell, Inc. d/b/a AT&T Wisconsin.

1.5 **AT&T-2STATE** - As used herein, **AT&T-2STATE** means **AT&T CALIFORNIA** and **AT&T NEVADA**, the applicable AT&T-owned ILEC(s) doing business in California and Nevada.

1.6 **AT&T-4STATE** - As used herein, **AT&T-4STATE** means Southwestern Bell Telephone Company d/b/a AT&T Arkansas, AT&T Kansas, AT&T Missouri, and AT&T Oklahoma the applicable AT&T-owned ILEC(s) doing business in Arkansas, Kansas, Missouri and Oklahoma.

1.7 **AT&T-7STATE** - As used herein, **AT&T-7STATE** means **AT&T SOUTHWEST REGION 5-STATE**, **AT&T CALIFORNIA** and **AT&T NEVADA**, the applicable AT&T-owned ILEC(s) doing business in Arkansas, California, Kansas, Missouri, Nevada, Oklahoma and Texas.

1.8 **AT&T-8STATE** - As used herein, **AT&T-8STATE** means **AT&T SOUTHWEST REGION 5-STATE**, **AT&T CALIFORNIA**, **AT&T NEVADA** and **AT&T CONNECTICUT** the applicable AT&T-owned ILEC(s) doing business in Arkansas, California, Connecticut, Kansas, Missouri, Nevada, Oklahoma and Texas.

1.9 **AT&T-10STATE** - As used herein, **AT&T-10STATE** means **AT&T SOUTHWEST REGION 5-STATE** and **AT&T MIDWEST REGION 5-STATE** an the applicable AT&T-owned ILEC(s) doing business in Arkansas, Illinois, Indiana, Kansas, Michigan, Missouri, Ohio, Oklahoma, Texas and Wisconsin.

1.10 **AT&T-12STATE** - As used herein, **AT&T-12STATE** means **AT&T SOUTHWEST REGION 5-STATE**, **AT&T MIDWEST REGION 5-STATE** and **AT&T-2STATE** the applicable AT&T-owned ILEC(s) doing business in Arkansas, California, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas and Wisconsin.

1.11 **AT&T-13STATE** - As used herein, **AT&T-13STATE** means **AT&T SOUTHWEST REGION 5-STATE**, **AT&T MIDWEST REGION 5-STATE**, **AT&T-2STATE** and **AT&T CONNECTICUT** the applicable AT&T-owned ILEC(s) doing business in Arkansas, California, Connecticut, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas and Wisconsin.

1.12 **AT&T ARKANSAS** - As used herein, **AT&T ARKANSAS** means Southwestern Bell Telephone Company d/b/a AT&T Arkansas, the applicable AT&T-owned ILEC doing business in Arkansas.

FOR NEGOTIATION PURPOSES ONLY - SUBJECT TO CONTRACT

1.13 AT&T CALIFORNIA - As used herein, AT&T CALIFORNIA means Pacific Bell Telephone Company d/b/a AT&T California, the applicable AT&T-owned ILEC doing business in California.

1.14 AT&T CONNECTICUT - As used herein, AT&T CONNECTICUT means The Southern New England Telephone Company, the applicable above listed ILEC doing business in Connecticut.

1.15 AT&T KANSAS - As used herein, AT&T KANSAS means Southwestern Bell Telephone Company d/b/a AT&T Kansas, the applicable AT&T-owned ILEC doing business in Kansas.

1.16 AT&T ILLINOIS - As used herein, AT&T ILLINOIS means Illinois Bell Telephone Company d/b/a AT&T Illinois, the applicable AT&T-owned ILEC doing business in Illinois.

1.17 AT&T INDIANA - As used herein, AT&T INDIANA means Indiana Bell Telephone Company Incorporated d/b/a AT&T Indiana, the applicable AT&T-owned ILEC doing business in Indiana.

1.18 AT&T MICHIGAN - As used herein, AT&T MICHIGAN means Michigan Bell Telephone Company d/b/a AT&T Michigan, the applicable AT&T-owned ILEC doing business in Michigan.

1.19 AT&T MIDWEST REGION 5-STATE - As used herein, AT&T MIDWEST REGION 5-STATE means Illinois Bell Telephone Company d/b/a AT&T Illinois, Indiana Bell Telephone Company Incorporated d/b/a AT&T Indiana, Michigan Bell Telephone Company d/b/a AT&T Michigan, The Ohio Bell Telephone Company d/b/a AT&T Ohio, and/or Wisconsin Bell, Inc. d/b/a AT&T Wisconsin, the applicable AT&T-owned ILEC(s) doing business in Illinois, Indiana, Michigan, Ohio and Wisconsin.

1.20 AT&T MISSOURI - As used herein, AT&T MISSOURI means Southwestern Bell Telephone Company d/b/a AT&T Missouri, the applicable AT&T-owned ILEC doing business in Missouri.

1.21 AT&T NEVADA - As used herein, AT&T NEVADA means Nevada Bell Telephone Company d/b/a AT&T Nevada, the applicable AT&T-owned ILEC doing business in Nevada.

1.22 AT&T OHIO - As used herein, AT&T OHIO means The Ohio Bell Telephone Company d/b/a AT&T Ohio, the applicable AT&T-owned ILEC doing business in Ohio.

1.23 AT&T OKLAHOMA - As used herein, AT&T OKLAHOMA means Southwestern Bell Telephone Company d/b/a AT&T Oklahoma, the applicable AT&T-owned ILEC doing business in Oklahoma.

1.24 AT&T SOUTHWEST REGION 5-STATE - As used herein, AT&T SOUTHWEST REGION 5-STATE means Southwestern Bell Telephone Company d/b/a AT&T Arkansas, AT&T Kansas, AT&T Missouri, AT&T Oklahoma and/or AT&T Texas the applicable above listed ILEC(s) doing business in Arkansas, Kansas, Missouri, Oklahoma and Texas.

1.25 AT&T TEXAS - As used herein, AT&T TEXAS means Southwestern Bell Telephone Company d/b/a AT&T Texas, the applicable AT&T-owned ILEC doing business in Texas.

1.26 AT&T WISCONSIN - As used herein, AT&T WISCONSIN means Wisconsin Bell, Inc. d/b/a AT&T Wisconsin, the applicable AT&T-owned ILEC doing business in Wisconsin.

2. DEFINITIONS

2.1 "Access Tandem Switch" is defined as a switching machine within the public switched telecommunications network that is used to connect and switch trunk circuits between and among End Office Switches for IXC (Inter-exchange Carrier) carried traffic and IntraLATA Toll Traffic in the AT&T SOUTHWEST REGION 5-STATE as well as switching Section 251(b)(5) Traffic and ISP-Bound Traffic in AT&T-2STATE, AT&T MIDWEST REGION 5-STATE and AT&T CONNECTICUT.

2.2 "End Office" or "End Office Switch" is a switching machine that directly terminates traffic to and receives traffic from end users purchasing local exchange services. A PBX is not considered an End Office Switch.

2.3 "IntraLATA Toll Traffic" or "IntraLATA Toll" is defined as traffic between one AT&T-13STATE local calling area and the local calling area of another AT&T-13STATE or LEC within one LATA within the respective state.

FOR NEGOTIATION PURPOSES ONLY

2.4 "IntraLATA Toll Trunk Group" is defined as a trunk group carrying IntraLATA Toll Traffic as defined above.

2.5 "ISP-Bound Traffic" is as defined in Attachment: Intercarrier Compensation.

2.6 "Local Interconnection Trunk Groups" are two-way trunk groups used to carry Section 251(b)(5)/IntraLATA Toll Traffic between CLEC End Users and AT&T-12STATE End Users. In AT&T CONNECTICUT these trunk groups will carry the same type of traffic, but they will be established and used as one-way.

2.7 "Local/IntraLATA Tandem Switch" is defined as a switching machine within the public switched telecommunications network that is used to connect and switch trunk circuits between and among subtending End Office Switches for Section 251(b)(5)/IntraLATA Toll Traffic.

2.8 "Local Only Tandem Switch" is defined as a switching machine within the public switched telecommunications network that is used to connect and switch trunk circuits between and among other End Office Switches for Section 251(b)(5) and ISP-Bound Traffic.

2.9 "Local Only Trunk Groups" are two-way trunk groups used to carry Section 251(b)(5) and ISP-Bound Traffic only.

2.10 "Local Tandem" refers to any Local Only, Local/IntraLATA, Local/Access or Access Tandem Switch serving a particular local calling area.

2.11 "Meet Point Trunk Group" carries traffic between CLEC's End Users and Interexchange Carriers (IXCs) via AT&T-13STATE Access or Local/Access Tandem Switches.

2.12 "Offers Service" is defined as when CLEC opens an NPA-NXX, ports a number to serve an End User or pools a block of numbers to serve End Users.

2.13 "Section 251(b)(5) Traffic" is as defined in Attachment: Intercarrier Compensation.

2.14 "Section 251(b)(5)/IntraLATA Toll Traffic" shall mean for purposes of this Attachment, (i) Section 251(b)(5) Traffic, (ii) ISP-Bound Traffic, (iii) IntraLATA Toll traffic originating from an End User obtaining local dialtone from CLEC where CLEC is both the Section 251(b)(5) Traffic and IntraLATA Toll provider, and/or (iv) IntraLATA Toll traffic originating from an End User obtaining local dialtone from AT&T-13STATE where AT&T-13STATE is both the Section 251(b)(5) Traffic and IntraLATA Toll provider.

3. ONE-WAY AND TWO-WAY TRUNK GROUPS

3.1 CLEC shall issue Access Service Requests (ASRs) for two-way Local Only Trunk Groups, Local Interconnection Trunk Groups and Meet Point Trunk Groups. CLEC shall issue ASRs for one-way trunk groups originating at CLEC's switch. AT&T-13STATE shall issue ASRs for one-way trunk groups originating at the AT&T-13STATE switch.

3.2 Trunk groups for ancillary services (e.g. OS/DA, BLVI, High Volume Call In, and E911) and Meet Point Trunk Groups can be established between CLEC's switch and the appropriate AT&T-13STATE Tandem Switch as further provided in this Appendix ITR.

3.3 Two-way Local Interconnection Trunk Groups can be established between CLEC's switch and an AT&T-12STATE Local Tandem or End Office Switch. Two-way Local Only Trunk Groups can be established between CLEC's switch and an AT&T-12STATE Local Tandem. These trunk groups will utilize Signaling System 7 (SS7) or multi-frequency (MF) signaling protocol, with SS7 signaling preferred whenever possible.

3.4 Local Interconnection Trunk Groups in AT&T CONNECTICUT must be ordered and provisioned as one-way to accommodate billing and technical limitations.

3.5 The Parties recognize that embedded one-way trunks may exist for Section 251(b)(5)/IntraLATA Toll Traffic. The Parties may agree to negotiate a transition plan to migrate the embedded one-way Local Only and/or Local Interconnection Trunk Groups to two-way Local Only and/or two-way Local Interconnection Trunk Groups. The Parties will coordinate any such migration, trunk group prioritization, and

FOR NEGOTIATION PURPOSES ONLY

implementation schedule. AT&T-12STATE agrees to develop a cutover plan and project manage the cutovers with CLEC participation and agreement.

4. TANDEM TRUNKING AND DIRECT END OFFICE TRUNKING

4.1 AT&T-13STATE deploys in its network Local Only Tandem Switches (AT&T SOUTHWEST REGION 5-STATE and AT&T MIDWEST REGION 5-STATE), Local/IntraLATA Tandem Switches (AT&T SOUTHWEST REGION 5-STATE) Local/Access Tandem Switches and Access Tandem Switches. In addition AT&T-13STATE deploys Tandems that switch ancillary traffic such as E911 (E911 Tandem or E911 Selective Routing Tandem), Operator Services/ Directory Assistance (OS/DA Tandem), and Mass Calling (choke Tandem).

4.2 CLEC shall establish Local Only or Local Interconnection Trunk Groups to all Local Tandems in the LATA in which CLEC Offers Service in AT&T CONNECTICUT, AT&T MIDWEST REGION 5-STATE, and AT&T-2STATE. If CLEC Offers Service in a LATA in which there is no AT&T Local Tandem, CLEC shall establish Local Interconnection Trunk Groups to each AT&T-13STATE End Office Switch in that LATA in which it Offers Service. CLEC shall establish Local Only or Local Interconnection Trunk Groups to all Local Tandems in the local exchange area in which CLEC Offers Service in AT&T SOUTHWEST REGION 5-STATE. If there are no Local Tandems in the local exchange area in which CLEC Offers Service in the AT&T SOUTHWEST REGION 5-STATE, CLEC shall establish a Local Interconnection Trunk Group to each AT&T-13STATE End Office Switch in that local exchange area in which CLEC Offers Service. CLEC shall route appropriate traffic (i.e. only traffic to End Offices that subtend that Local Tandem) to the respective AT&T-13STATE Local Tandem on the trunk groups defined below. AT&T-13STATE shall route appropriate traffic to CLEC switches on the trunk groups defined below.

4.3 Direct End Office Trunk Group(s) (DEOTs) transport Section 251(b)(5)/IntraLATA Toll Traffic between CLEC's switch and an AT&T-13STATE End Office and are not switched at a Local Tandem location. CLEC shall establish a two-way Direct End Office Trunk Group (one-way in AT&T CONNECTICUT) when actual or projected End Office Section 251(b)(5)/IntraLATA Toll Traffic requires twenty-four (24) or more trunks. Once provisioned, traffic from CLEC to AT&T-13STATE must be redirected to route first to the DEOT with overflow traffic alternate routed to the appropriate AT&T-13STATE Local Tandem. If an AT&T-13STATE End Office does not subtend an AT&T-13STATE Local Tandem, a direct final Direct End Office Trunk Group will be established by CLEC, and there will be no overflow of Section 251(b)(5)/IntraLATA Toll Traffic.

4.4 All traffic received by AT&T-13STATE on the DEOT from CLEC must terminate in the End Office, i.e. no Tandem switching will be performed in the End Office. Where End Office functionality is provided in a Remote End Office Switch of a host/remote configuration, CLEC shall establish the DEOT at the host switch. The number of digits to be received by the AT&T-13STATE End Office shall be mutually agreed upon by the Parties. This trunk group shall be two-way (one-way in AT&T CONNECTICUT).

4.5 Trunk Configuration

4.5.1 Trunk Configuration – AT&T SOUTHWEST REGION 5-STATE, AT&T MIDWEST REGION 5-STATE and AT&T CONNECTICUT

4.5.1.1 Where available and upon the request of the other Party, each Party shall cooperate to ensure that its trunk groups are configured utilizing the Bipolar 8 Zero Substitution Extended Super Frame (B8ZS ESF) protocol for 64 kbps Clear Channel Capability (64CCC) transmission to allow for ISDN interoperability between the Parties' respective networks. Trunk groups configured for 64CCC and carrying Circuit Switched Data (CSD) ISDN calls shall carry the appropriate Trunk Type Modifier in the CLCI-Message code. Trunk groups configured for 64CCC and not used to carry CSD ISDN calls shall carry a different appropriate Trunk Type Modifier in the CLCI-Message code.

4.5.1.2 Any AT&T-13STATE switch incapable of handling 64CCC traffic will require that Local Interconnection Trunk Groups be established at those switches using Alternate Mark Inversion (AMI).

FOR INTERNAL DISCUSSION ONLY

4.5.2 Trunk Configuration – AT&T-2STATE

4.5.2.1 When Interconnecting at AT&T-2STATE's digital End Offices, the Parties have a preference for use of Bipolar 8 Zero Substitution Extended Super Frame (B8ZS ESF) two-way trunks for all traffic between their networks. Where available, such trunk equipment will be used for Local Interconnection Trunk Groups. Where AMI trunks are used, either Party may request upgrade to B8ZS ESF when such equipment is available.

4.5.2.2 When interconnecting at AT&T CALIFORNIA's DMS Access Tandem(s), 64CCC data and voice traffic may be combined on the same two-way Local Interconnection Trunk Group. 64 CCC data and voice traffic must be on separate two-way Local Interconnection Trunk Groups and not combined at AT&T CALIFORNIA's 4E Access Tandems.

5. TRUNK GROUPS

5.1 When CLEC Offers Service in a Local Exchange Area or LATA, the following trunk groups shall be used to exchange various types of traffic between CLEC End Users and AT&T-13STATE End Users.

5.2 Local Only and Local Interconnection Trunk Group(s) in each Local Exchange Area: AT&T SOUTHWEST REGION 5-STATE.

5.2.1 A two-way Local Only Trunk Group shall be established between CLEC's switch and each AT&T SOUTHWEST REGION 5-STATE Local Only Tandem Switch in the local exchange area. Inter-Tandem switching is not provided.

5.2.2 A two-way Local Interconnection Trunk Group shall be established between CLEC switch and each AT&T SOUTHWEST REGION 5-STATE Local/IntraLATA Tandem Switch and each Local/Access Tandem Switch in the local exchange area. Inter-Tandem switching is not provided.

5.2.3 AT&T SOUTHWEST REGION 5-STATE reserves the right to initiate a one-way IntraLATA Trunk Group to CLEC in order to provide Tandem relief when a community of interest is outside the local exchange area in which CLEC is interconnected.

5.2.4 Where traffic from CLEC switch to an AT&T SOUTHWEST REGION 5-STATE End Office is sufficient (24 or more trunks), a Local Interconnection Trunk Group shall also be established to the AT&T SOUTHWEST REGION 5-STATE End Office.

5.2.5 A Local Interconnection Trunk Group shall be established from CLEC switch to each AT&T SOUTHWEST REGION 5-STATE End Office in a local exchange area that has no Local Tandem. This trunk group shall be established as a direct final.

5.2.6 When AT&T SOUTHWEST REGION 5-STATE has a separate Local Only Tandem Switch(es) in the local exchange area, and a separate Access Tandem Switch that serves the same local exchange area, a two-way IntraLATA Toll Trunk Group shall be established to the AT&T SOUTHWEST REGION 5-STATE Access Tandem Switch. In addition a two-way Local Only Trunk Group(s) shall be established from CLEC's switch to each AT&T SOUTHWEST REGION 5-STATE Local Only Tandem Switch.

5.2.7 Each Party shall deliver to the other Party over the Local Only and/or Local Interconnection Trunk Group(s) only such traffic that originates and terminates in the same local exchange area.

5.3 Local Only and/or Local Interconnection Trunk Group(s) in Each LATA: AT&T MIDWEST REGION 5-STATE, AT&T CONNECTICUT, AT&T-2STATE

5.3.1 Tandem Trunking – AT&T-2STATE and AT&T MIDWEST REGION 5-STATE

5.3.1.1 In AT&T-2STATE and AT&T MIDWEST REGION 5-STATE;

5.3.1.1.1 Section 251(b)(5) and ISP Bound Traffic shall be routed on Local Only Trunk Groups established at all AT&T Local Only Tandems in the LATA for calls destined to or from all AT&T MIDWEST REGION 5-STATE End Offices that

FOR NEGOTIATION PURPOSES ONLY

subtend the designated tandem. These trunk groups shall be two-way and will utilize Signaling System (SS7) signaling.

5.3.1.1.2 Section 251(b)(5)/IntraLATA Toll Traffic shall be routed on Local Interconnection Trunk Groups established at all AT&T Local/IntraLATA, Local/Access, or Access Tandem Switch(es) (AT&T-2STATE only) in the LATA for calls destined to or from all AT&T-2STATE and AT&T MIDWEST REGION 5-STATE End Offices that subtend the designated tandems. These trunk groups shall be two-way and will utilize Signaling System (SS7) signaling.

5.3.2 Tandem Trunking – AT&T CONNECTICUT

5.3.2.1 In AT&T CONNECTICUT, Section 251(b)(5)/IntraLATA Toll Traffic shall be routed on Local Interconnection Trunk Groups established at all AT&T Local Tandems in the LATA for calls destined to or from all AT&T CONNECTICUT End Offices that subtend the designated tandem. These trunk groups shall be one-way and will utilize Signaling System 7 (SS7) signaling.

5.3.3 Direct End Office Trunking

5.3.3.1 The Parties shall establish Direct End Office Trunk Groups for the exchange of Section 251(b)(5)/IntraLATA Toll Traffic where actual or projected traffic demand is or will be twenty-four (24) or more trunks.

5.4 Meet Point Trunk Group: AT&T-13STATE

5.4.1 IXC carried traffic shall be transported between CLEC's switch and the AT&T-13STATE Access Tandem Switch or Local/Access Tandem Switch over a Meet Point Trunk Group separate from Section 251(b)(5)/IntraLATA Toll Traffic. The Meet Point Trunk Group will be established for the transmission and routing of exchange access traffic between CLEC's End Users and IXCs via a AT&T-13STATE Access Tandem Switch or Local/Access Tandem Switch.

5.4.2 Meet Point Trunk Groups shall be provisioned as two-way and will utilize SS7 signaling, except multifrequency ("MF") signaling will be used on a separate Meet Point Trunk Group to complete originating calls to switched access customers that use MF FGD signaling protocol.

5.4.3 When AT&T-13STATE has more than one Access or Local/Access Tandem Switch in a local exchange area or LATA, CLEC shall establish a Meet Point Trunk Group to every AT&T-13STATE Access or Local/Access Tandem Switch where CLEC has homed its NXX code(s).

5.4.4 AT&T-13STATE will not block switched access customer traffic delivered to any AT&T-13STATE Access Tandem Switch or Local/Access Tandem Switch for completion on CLEC's network. The Parties understand and agree that Meet Point trunking arrangements are available and functional only to/from switched access customers who directly connect with any AT&T-13STATE Access Tandem Switch or Local/Access Tandem Switch that CLEC's switch subtends in each LATA. In no event will AT&T-13STATE be required to route such traffic through more than one of its tandem switches for connection to/from switched access customers. AT&T-13STATE shall have no responsibility to ensure that any switched access customer will accept traffic that CLEC directs to the switched access customer.

5.4.5 CLEC shall provide all SS7 signaling information including, without limitation, charge number and originating line information ("OLI"). For terminating FGD, AT&T-13STATE will pass all SS7 signaling information including, without limitation, CPN if it receives CPN from FGD carriers. All privacy indicators will be honored. Where available, network signaling information such as transit network selection ("TNS") parameter, carrier identification codes ("CIC") (CCS platform) and CIC/OZZ information (non-SS7 environment) will be provided by CLEC wherever such information is needed for call routing or billing. The Parties will follow all OBF adopted standards pertaining to TNS and CIC/OZZ codes.

FOR INTRADO INTERNAL USE ONLY

5.5 800/(8YY) Traffic: AT&T-13STATE

5.5.1 If CLEC chooses AT&T-13STATE to handle 800/(8YY) database queries from its switches, all CLEC originating 800/(8YY) traffic will be routed over the Meet Point Trunk Group. This traffic will include a combination of both Interexchange Carrier (IXC) 800/(8YY) service and CLEC 800/(8YY) service that will be identified and segregated by carrier through the database query handled through the AT&T-13STATE Access or Local/Access Tandem Switch.

5.5.2 All originating Toll Free Service 800/(8YY) calls for which CLEC requests that AT&T-13STATE perform the Service Switching Point ("SSP") function (e.g. perform the database query) shall be delivered using GR-394 format over the Meet Point Trunk Group. Carrier Code "0110" and Circuit Code (to be determined for each LATA) shall be used for all such calls.

5.5.3 CLEC may handle its own 800/(8YY) database queries from its switch. If so, CLEC will determine the nature (local/intraLATA/interLATA) of the 800/(8YY) call based on the response from the database. If the query determines that the call is a local or IntraLATA 800/(8YY) number, CLEC will route the post-query local or IntraLATA converted ten-digit local number to AT&T-13STATE over the Local Interconnection Trunk Group. In such case, CLEC is to provide an 800/(8YY) billing record when appropriate. If the query reveals the call is an InterLATA 800/(8YY) number, CLEC will route the post-query inter-LATA call (800/(8YY) number) directly from its switch for carriers interconnected with its network or over the Meet Point Trunk Group to carriers not directly connected to its network but are connected to AT&T-13STATE's Access or Local/Access Tandem Switch. Calls will be routed to AT&T-13STATE over the Local Only and/or Local Interconnection Trunk Groups or Meet Point Trunk Groups within the LATA in which the calls originate.

5.5.4 All post-query Toll Free Service 800/(8YY) calls for which CLEC performs the SSP function, if delivered to AT&T-13STATE, shall be delivered using GR-394 format over the Meet Point Trunk Group for calls destined to IXCs, or shall be delivered by CLEC using GR-317 format over the Local Only and/or Local Interconnection Trunk Group for calls destined to End Offices that directly subtend the tandem.

5.6 E911 Trunk Group

5.6.1 A dedicated trunk group for each NPA shall be established to each appropriate E911 switch within the local exchange area or LATA in which CLEC Offers Service. This trunk group shall be provisioned as one-way outgoing only and will utilize MF CAMA signaling or, where available, SS7 signaling. CLEC will have administrative control for the purpose of issuing ASRs on this trunk group. Where the parties utilize SS7 signaling and the E911 network has the technology available, only one E911 trunk group shall be established to handle multiple NPAs within the local exchange area or LATA. If the E911 network does not have the appropriate technology available, a SS7 trunk group shall be established for each NPA in the local exchange area or LATA. CLEC shall provide a minimum of two (2) one-way outgoing channels on E911 trunk groups per default PSAP or default ESN assignment dedicated for originating E911 emergency service calls from the Point of Interconnection (POI) to the AT&T-13STATE E911 Selective Router switch that serves a specified geographic rate area.

5.6.2 In AT&T CONNECTICUT only, CLEC will comply with the CT DPUC directives regarding the E911 trunk groups. The current directive requires CLEC to establish three separate dedicated trunk groups for each Connecticut NPA and default PSAP or default ESN assignment, from its switch to each of the Connecticut E911 Selective Routing tandems. For each NPA, one trunk group using SS7 signaling will go to the Primary E911 Selective Routing tandem. A second trunk group using SS7 will go to the Secondary E911 Selective routing tandem. The third trunk group will have MF CAMA signaling and will go to the Primary E911 Selective Routing tandem and serve as a backup. These trunk groups shall be provisioned by CLEC as one-way outgoing only. CLEC will have administrative control for the purpose of issuing ASRs.

FOR INTERNAL DISCUSSION ONLY

5.6.3 CLEC will cooperate with AT&T-13STATE to promptly test all E911 trunks and facilities between CLEC's network and the AT&T-13STATE E911 Selective Routing Tandem to assure proper functioning of E911 service. CLEC will not turn up live traffic until successful testing is completed by both Parties.

5.7 High Volume Call In (HVCI) / Mass Calling (Choke) Trunk Group: AT&T-12STATE

5.7.1 A dedicated trunk group shall be required to the designated Public Response HVCI/Mass Calling Network Access Tandem in each serving area. This trunk group shall be one-way outgoing only and shall utilize MF signaling. As the HVCI/Mass Calling trunk group is designed to block all excessive attempts toward HVCI/Mass Calling NXXs, it is necessarily exempt from the one percent blocking standard described elsewhere for other final Local Interconnection Trunk Groups. CLEC will have administrative control for the purpose of issuing ASRs on this one-way trunk group. The Parties will not exchange live traffic until successful testing is completed by both Parties.

5.7.2 This group shall be sized as follows:

Number of Access Lines Served	*Number of Mass Calling Trunks*
0 – 10,000	*2*
10,001 – 20,000	*3*
20,001 – 30,000	*4*
30,001 – 40,000	*5*
40,001 – 50,000	*6*
50,001 – 60,000	*7*
60,001 – 75,000	*8*
75,000 +	*9 maximum*

5.7.3 If CLEC should acquire a HVCI/Mass Calling customer, i.e. a radio station, CLEC shall notify AT&T-12STATE at least 60 days in advance of the need to establish a one-way outgoing SS7 or MF trunk group from the AT&T-12STATE HVCI/Mass Calling Serving Office to the CLEC customer's serving office. CLEC will have administrative control for the purpose of issuing ASRs on this one-way trunk group.

5.7.4 If CLEC finds it necessary to issue a new choke telephone number to a new or existing HVCI/Mass Calling customer, CLEC may request a meeting to coordinate with AT&T-12STATE the assignment of HVCI/Mass Calling telephone number from the existing choke NXX. In the event that the CLEC establishes a new choke NXX, CLEC must notify AT&T-12STATE a minimum of ninety (90) days prior to deployment of the new HVCI/Mass Calling NXX. AT&T-12STATE will perform the necessary translations in its End Offices and Tandem(s) and issue ASRs to establish a one-way outgoing SS7 or MF trunk group from the AT&T-12STATE Public Response HVCI/Mass Calling Network Access Tandem to CLEC's choke serving office.

5.7.5 In AT&T CONNECTICUT, where HVCI/Mass Calling NXXs have not been established, the Parties agree to utilize "call gapping" as the method to control high volumes of calls, where technically feasible in the originating switch, to specific high volume customers or in situations such as those described in Section 35 Network Maintenance and Management of the General Terms and Conditions.

5.8 Operator Services/Directory Assistance Trunk Group(s)

5.8.1 Terms and Conditions for Inward Assistance Operator Services are found in Appendix INW.

5.8.2 If AT&T-13STATE agrees through a separate appendix or contract to provide Directory Assistance and/or Operator Services for CLEC the following trunk groups are required:

FOR INTERNAL NEGOTIATION PURPOSES ONLY

5.8.2.1 Directory Assistance (DA)

5.8.2.1.1 CLEC may contract for DA services only. A segregated trunk group for these services will be required to the appropriate AT&T-13STATE Operator Services Tandem in the LATA for the NPA the CLEC wishes to serve. This trunk group is provisioned as one-way outgoing only and utilizes Modified Operator Services Signaling (2 Digit Automatic Number Identification (ANI)). CLEC will have administrative control for the purpose of issuing ASRs on this one-way trunk group.

5.8.2.2 Directory Assistance Call Completion (DACC)

5.8.2.2.1 CLEC contracting for DA services may also contract for DACC. This requires a segregated one-way trunk group to each AT&T-13STATE Operator Services Tandem within the LATA for the combined DA and DACC traffic. This trunk group is provisioned as one-way outgoing only and utilizes Modified Operator Services Signaling (2 Digit ANI). CLEC will have administrative control for the purpose of issuing ASRs on this one-way trunk group.

5.8.2.3 Busy Line Verification/Emergency Interrupt (BLV/EI)

5.8.2.3.1 When AT&T-13STATE's operator is under contract to verify the busy status of CLEC End Users, AT&T-13STATE will utilize a segregated one-way with MF signaling trunk group from AT&T-13STATE's Operator Services Tandem to CLEC switch. CLEC will have administrative control for the purpose of issuing ASRs on this one-way trunk group.

5.8.2.4 Operator Assistance (0+, 0-)

5.8.2.4.1 This service requires a one-way trunk group from CLEC switch to AT&T-13STATE's Operator Services Tandem. Two types of trunk groups may be utilized. If the trunk group transports DA/DACC, the trunk group will be designated with the appropriate traffic use code and modifier. If DA is not required or is transported on a segregated trunk group, then the group will be designated with a different appropriate traffic use code and modifier. Modified Operator Services Signaling (2 Digit ANI) will be required on the trunk group. CLEC will have administrative control for the purpose of issuing ASRs on this one-way trunk group.

5.8.2.5 Digit Exchange Access Operator Services Signaling

5.8.2.5.1 CLEC will employ Exchange Access Operator Services Signaling (EAOSS) from the equal access End Offices (EAEO) to the Operator Services switch that are equipped to accept 10 Digit Signaling for Automatic Number Identification (ANI).

5.8.2.6 OS Questionnaire

5.8.2.6.1 If CLEC chooses AT&T-13STATE to provide either OS and/or DA, then CLEC agrees to accurately complete the OS Questionnaire prior to submitting ASRs for OS and DA trunks.

6. TRUNK FORECASTING RESPONSIBILITIES: AT&T-13STATE

6.1 CLEC agrees to provide an initial forecast for all trunk groups described in this Appendix ITR. AT&T-13STATE shall review this trunk forecast and provide any additional information that may impact the trunk forecast information provided by CLEC. Subsequent trunk forecasts shall be provided on a semi-annual basis, not later than January 1 and July 1 in order to be considered in the semi-annual publication of the AT&T-13STATE General Trunk Forecast. Parties agree to the use of Common Language Location Identification (CLLI) coding and Common Language Circuit Identification for Message Trunk coding (CLCI-MSG) which is described in TELCORDIA TECHNOLOGIES documents BR795-100-100 and BR795-400-

FOR INTERNAL USE ONLY
DRAFT - FOR NEGOTIATION PURPOSES ONLY

100 respectively. Inquiries pertaining to use of TELCORDIA TECHNOLOGIES Common Language Standards and document availability should be directed to TELCORDIA TECHNOLOGIES at 1-800-521-2673.

6.2 The semi-annual forecasts shall include:

6.2.1 Yearly forecasted trunk quantities for all trunk groups required in this Appendix for a minimum of three (current plus 2 future) years; and

6.2.2 A description of major network projects anticipated for the following six months. Major network projects include trunking or network rearrangements, shifts in anticipated traffic patterns, orders greater than four (4) DS1s, or other activities that are reflected by a significant increase or decrease in trunking demand for the following forecasting period.

6.2.3 The Parties shall agree on these forecasts to ensure efficient trunk utilization. For forecast quantities that are in dispute, the Parties shall make all reasonable efforts to develop a mutually agreeable forecast.

6.2.4 Orders for trunks that exceed forecasted quantities for forecasted locations will be accommodated as mutually agreed to by the Parties. Parties shall make all reasonable efforts and cooperate in good faith to develop alternative solutions to accommodate these orders.

6.3 CLEC shall be responsible for forecasting two-way trunk groups. AT&T-13STATE shall be responsible for forecasting the one-way trunk groups terminating to CLEC and CLEC shall be responsible for forecasting the one-way trunk groups terminating to AT&T-13STATE, unless otherwise specified in this Appendix.

6.4 Each Party shall provide a specified point of contact for planning and forecasting purposes.

7. TRUNK DESIGN BLOCKING CRITERIA: AT&T-13STATE

7.1 Trunk requirements for forecasting and servicing shall be based on the blocking objectives shown in Table 1. Trunk requirements shall be based upon time consistent average busy season busy hour twenty (20) day averaged loads applied to industry standard Neal-Wilkinson Trunk Group Capacity algorithms (using Medium day-to-day Variation and 1.0 Peakedness factor until actual traffic data is available).

TABLE 1

Trunk Group Type	Design Blocking Objective
Local Interconnection Trunk Group - Direct End Office (Primary High)	ECCS*
Local Interconnection Trunk Group - Direct End Office (Final)	2%
IntraLATA Toll Trunk Group (Local/Access or Access Tandem Switch)	1%
Local Interconnection Trunk Group (Local Tandem)	1%
Meet Point (Local/Access or Access Tandem Switch)	0.5%
E911	1%
Operator Services (DA/DACC)	1%
Operator Services (0+, 0-)	1%
Busy Line Verification/Emergency Interrupt	1%

*During implementation the Parties will mutually agree on an Economic Centum Call Seconds (ECCS) or some other means for the sizing of this trunk group.

8. TRUNK SERVICING: AT&T-13STATE

8.1 Orders between the Parties to establish, add, change or disconnect trunks shall be processed by using an Access Service Request (ASR). CLEC will have administrative control for the purpose of issuing ASRs on two-way trunk groups. In AT&T CONNECTICUT where one-way trunks are provisioned, AT&T CONNECTICUT will issue ASRs for trunk groups for traffic that originates from AT&T CONNECTICUT and terminates to CLEC.

FOR NEGOTIATION PURPOSES ONLY

8.2 Both Parties will jointly manage the capacity of Local Only, Local Interconnection, and Meet Point Trunk Groups. Both Parties may send a Trunk Group Service Request (TGSR) to the other Party to trigger changes to the Local Only, Local Interconnection, and Meet Point Trunk Groups based on capacity assessment. The TGSR is a standard industry support interface developed by the Ordering and Billing Forum of the Carrier liaison Committee of the Alliance for Telecommunications Solutions (ATIS) organization. TELCORDIA TECHNOLOGIES Special Report STS000316 describes the format and use of the TGSR. Contact TELCORDIA TECHNOLOGIES at 1-800-521-2673 regarding the documentation availability and use of this form.

8.3 Utilization: Utilization shall be defined as Trunks Required as a percentage of Trunks In Service.

8.3.1 In A Blocking Situation (Over-utilization)

8.3.1.1 In a blocking situation, CLEC is responsible for issuing ASRs on all two-way Local Only, Local Interconnection and Meet Point Trunk Groups and one-way CLEC originating Local Only and/or Local Interconnection Trunk Groups to reduce measured blocking to design objective blocking levels based on analysis of trunk group data. If an ASR is not issued, AT&T-13STATE will issue a TSGR. CLEC will issue an ASR within three (3) business days after receipt and review of the TGSR. CLEC will note "Service Affecting" on the ASR.

8.3.1.2 In a blocking situation, AT&T-13STATE is responsible for issuing ASRs on one-way AT&T originating Local Only and/or Local Interconnection Trunk Groups to reduce measured blocking to design objective blocking levels based on analysis of trunk group data. If an ASR is not issued, CLEC will issue a TSGR. AT&T-13STATE will issue an ASR within three (3) business days after receipt and review of the TGSR.

8.3.1.3 If an alternate final Local Only Trunk Group or Local Interconnection Trunk Group is at seventy-five percent (75%) utilization, a TGSR is sent to CLEC for the final and all subtending high usages that are contributing any amount of overflow to the alternate final route.

8.3.1.4 If a direct final Meet Point Trunk Group is at seventy-five percent (75%) utilization, a TGSR shall be sent to CLEC.

8.3.2 Underutilization

8.3.2.1 Underutilization of Local Only Trunk Groups, Local Interconnection Trunk Groups and Meet Point Trunk Groups exists when provisioned capacity is greater than the current need. Those situations where more capacity exists than actual usage requires will be handled in the following manner:

8.3.2.1.1 If a Local Only Trunk Group, Local Interconnection Trunk Group or a Meet Point Trunk Group is under seventy-five percent (75%) of CCS capacity on a monthly average basis, for each month of any three (3) consecutive months period, either Party may request the issuance of an order to resize the Local Only Trunk Group, Local Interconnection Trunk Group or the Meet Point Trunk Group, which shall be left with not less than twenty-five percent (25%) excess capacity. In all cases, grade of service objectives shall be maintained.

8.3.2.1.2 Either party may send a TGSR to the other Party to trigger changes to the Local Only Trunk Groups, Local Interconnection Trunk Groups or Meet Point Trunk Groups based on capacity assessment. Upon receipt of a TGSR, the receiving Party will issue an ASR to the other Party within twenty (20) business days after receipt of the TGSR.

8.3.2.1.3 Upon review of the TGSR, if a Party does not agree with the resizing, the Parties will schedule a joint planning discussion within the twenty (20) business days. The Parties will meet to resolve and mutually agree to the disposition of the TGSR.

FOR INTERNAL DISCUSSION ONLY

8.3.2.1.4 If AT&T-13STATE does not receive an ASR, or if CLEC does not respond to the TGSR by scheduling a joint discussion within the twenty (20) business day period, AT&T-13STATE will attempt to contact CLEC to schedule a joint planning discussion. If CLEC will not agree to meet within an additional five (5) business days and present adequate reason for keeping trunks operational, AT&T-13STATE reserves the right to issue ASRs to resize the Local Only Trunk Groups, Local Interconnection Trunk Groups, or Meet Point Trunk Groups.

8.3.3 Trunk Servicing – AT&T SOUTHWEST REGION 5-STATE Exceptions

8.3.3.1 The Parties will process trunk service requests submitted via a properly completed ASR within ten (10) business days of receipt of such ASR unless defined as a major project. Incoming orders will be screened by AT&T SOUTHWEST REGION 5-STATE trunk engineering personnel for reasonableness based upon current utilization and/or consistency with forecasts. If the nature and necessity of an order requires determination, the ASR will be placed in held status, and a Joint Planning discussion conducted. Parties agree to expedite this discussion in order to minimize delay in order processing. Extension of this review and discussion process beyond two days from ASR receipt will require the ordering Party to Supplement the order with proportionally adjusted Customer Desired Due Dates. Facilities must also be in place before trunk orders can be completed.

8.4 Projects require the coordination and execution of multiple orders or related activities between and among AT&T-13STATE and CLEC work groups, including but not limited to the initial establishment of Local Only, Local Interconnection or Meet Point Trunk Groups and service in an area, NXX code moves, re-homes, facility grooming, or network rearrangements.

8.4.1 Orders that comprise a project, i.e. greater than four (4) DS1s, shall be submitted at the same time, and their implementation shall be jointly planned and coordinated.

8.5 Projects-Tandem Rehomes/Switch Conversion/Major Network Projects

8.5.1 AT&T-13STATE will advise CLEC of all projects significantly affecting CLEC trunking. Such Projects may include Tandem Rehomes, Switch Conversions and other major network changes. An Accessible Letter with project details will be issued at least 6 months prior to the project due dates. AT&T-13STATE will follow with a Trunk Group Service Request (TGSR) approximately 4 to 6 months before the due date of the project. A separate TGSR will be issued for each CLEC trunk group and will specify the required CLEC ASR issue date. Failure to submit ASR(s) by the required date may result in AT&T-13STATE ceasing to deliver traffic until the ASR(s) are received and processed.

9. TRUNK DATA EXCHANGE: AT&T-13STATE

9.1 The Parties agree to exchange traffic data on two-way trunk groups and to implement such an exchange within three (3) months of the date that two-way trunking is established and the trunk groups begin passing live traffic, or another date is agreed to by the Parties.

9.2 Exchange of traffic data enables each Party to make accurate and independent assessments of trunk group service levels and requirements. The Parties may agree to establish a timeline for implementing an exchange of traffic data utilizing the DIXC process via a Network Data Mover (NDM) or FTP computer to computer file transfer process. Implementation shall be within three (3) months of the date, or such date as agreed upon, that the trunk groups begin passing live traffic. The traffic data to be exchanged will be the Originating Attempt Peg Count, Usage (measured in Hundred Call Seconds), Overflow Peg Count, and Maintenance Usage (measured in Hundred Call Seconds on a seven (7) day per week, twenty-four (24) hour per day, fifty-two (52) weeks per year basis). The Parties agree that twenty (20) business days is the study period duration objective. However, on occasion a study period may be less than twenty (20) business days but at minimum must be at least three (3) business days to be utilized for engineering

FOR INTRADO INTERNAL USE ONLY

purposes, although with less statistical confidence. For AT&T originated one-way, or for any two-way trunk groups, these reports can be made available weekly upon request.

9.3 A trunk group utilization report (TIKI) is available upon request. The report is provided in an MS-Excel format.

10. NETWORK MANAGEMENT: AT&T-13STATE

10.1 Restrictive Controls

10.1.1 Either Party may use protective network traffic management controls such as 7-digit and 10-digit code gaps set at appropriate levels on traffic toward each other's network, when required, to protect the public switched network from congestion due to facility failures, switch congestion, or failure or focused overload. CLEC and AT&T-13STATE will immediately notify each other of any protective control action planned or executed.

10.2 Expansive Controls

10.2.1 Where the capability exists, originating or terminating traffic reroutes may be implemented by either Party to temporarily relieve network congestion due to facility failures or abnormal calling patterns. Reroutes will not be used to circumvent normal trunk servicing. Expansive controls will only be used when mutually agreed to by the Parties.

10.3 Mass Calling

10.3.1 CLEC and AT&T-13STATE shall cooperate and share pre-planning information regarding cross-network call-ins expected to generate large or focused temporary increases in call volumes.

11. OUT OF EXCHANGE TRAFFIC

11.1 Interconnection services are available in accordance with section 251(a)(1) of the Act for the purposes of exchanging traffic to/from a non-AT&T incumbent exchange and consistent with the Appendix Out of Exchange Traffic.

12. SWITCHED ACCESS TRAFFIC

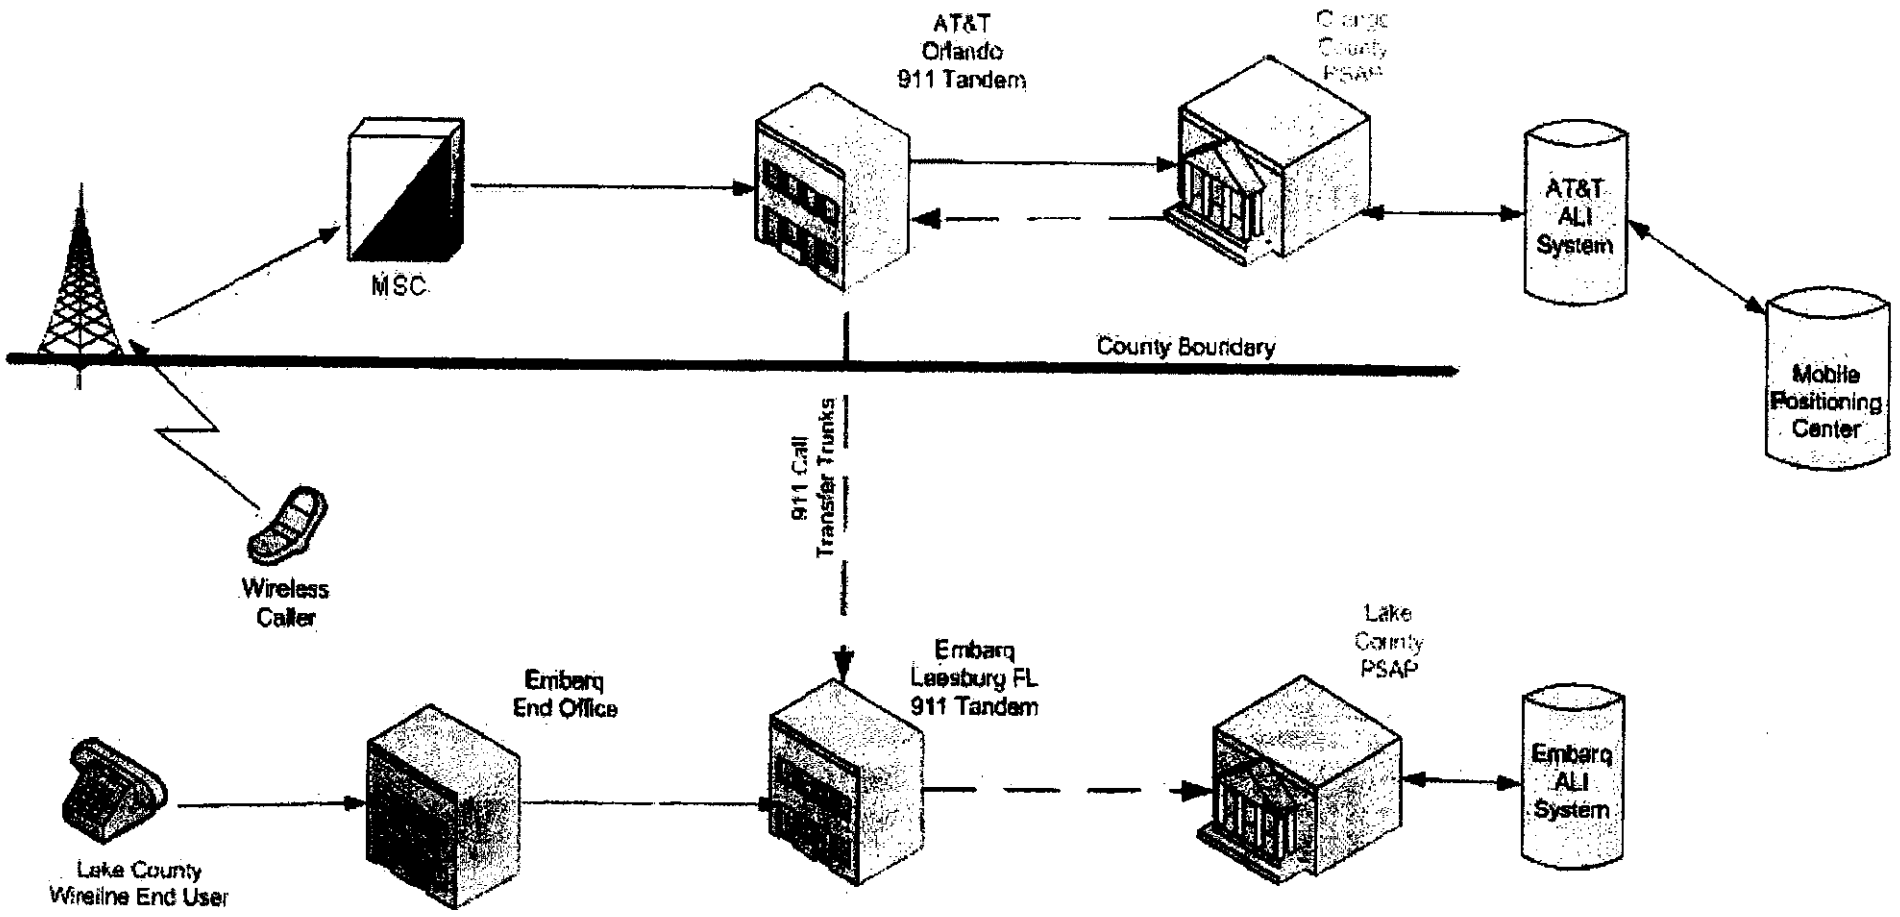
12.1 For purposes of this Agreement only, Switched Access Traffic shall mean all traffic that originates from an end user physically located in one local exchange and delivered for termination to an end user physically located in a different local exchange (excluding traffic from exchanges sharing a common mandatory local calling area as defined in AT&T-13STATE's local exchange tariffs on file with the applicable state commission), including, without limitation, any traffic that (i) terminates over a Party's circuit switch, including traffic from a service that originates over a circuit switch and uses Internet Protocol (IP) transport technology (regardless of whether only one provider uses IP transport or multiple providers are involved in providing IP transport) and/or (ii) originates from the end user's premises in IP format and is transmitted to the switch of a provider of voice communication applications or services when such switch utilizes IP technology and terminates over a Party's circuit switch. Notwithstanding anything to the contrary in this Agreement, all Switched Access Traffic shall be delivered to the terminating Party over feature group access trunks per the terminating Party's access tariff(s) and shall be subject to applicable intrastate and interstate switched access charges; provided, however, the following categories of Switched Access Traffic are not subject to the above stated requirement relating to routing over feature group access trunks:

(i) IntraLATA toll Traffic or Optional EAS Traffic from a CLEC end user that obtains local dial tone from CLEC where CLEC is both the Section 251(b)(5) Traffic provider and the intraLATA toll provider,

(ii) IntraLATA toll Traffic or Optional EAS Traffic from an AT&T end user that obtains local dial tone from AT&T where AT&T is both the Section 251(b)(5) Traffic provider and the intraLATA toll provider;

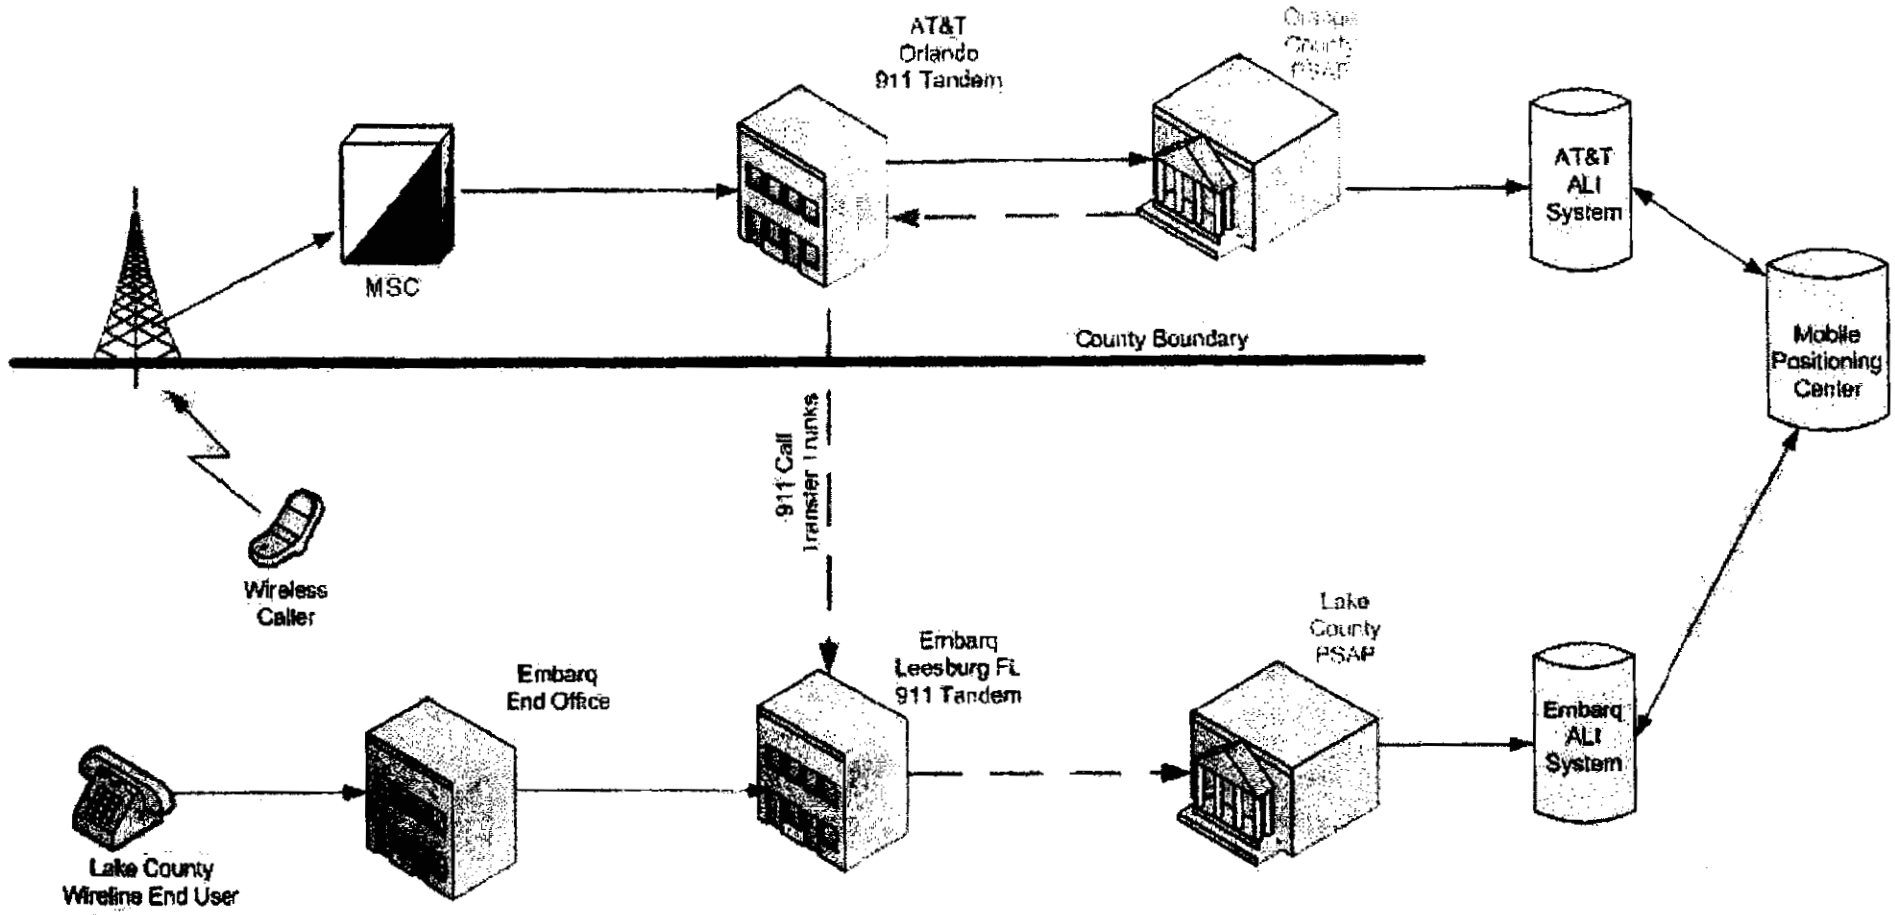
(iii) Switched Access Traffic delivered to AT&T from an Interexchange Carrier (IXC) where the terminating number is ported to another CLEC and the IXC fails to perform the Local Number Portability (LNP) query; and/or

FOR NEGOTIATION PURPOSES ONLY



(iv) Switched Access Traffic delivered to either Party from a third party competitive local exchange carrier over interconnection trunk groups carrying Section 251(b)(5) Traffic and ISP-Bound Traffic (hereinafter referred to as "Local Interconnection Trunk Groups") destined to the other Party.

Notwithstanding anything to the contrary in this Agreement, each Party reserves it rights, remedies, and arguments relating to the application of switched access charges for traffic exchanged by the Parties prior to the Effective Date of this Agreement and described in the FCC's Order issued in the Petition for Declaratory Ruling that AT&T's Phone-to-Phone IP Telephony Services Exempt from Access Charges, WC Docket No. 01-361(Released April 21, 2004).



12.2 In the limited circumstances in which a third party competitive local exchange carrier delivers Switched Access Traffic as described in Section 12.1 (iv) above to either Party over Local Interconnection Trunk Groups, such Party may deliver such Switched Access Traffic to the terminating Party over Local Interconnection Trunk Groups. If it is determined that such traffic has been delivered over Local Interconnection Trunk Groups, the terminating Party may object to the delivery of such traffic by providing written notice to the delivering Party pursuant to the notice provisions set forth in the General Terms and Conditions and request removal of such traffic. The Parties will work cooperatively to identify the traffic with the goal of removing such traffic from the Local Interconnection Trunk Groups. If the delivering Party has not removed or is unable to remove such Switched Access Traffic as described in Section 12.1(iv) above from the Local Interconnection Trunk Groups within sixty (60) days of receipt of notice from the other party, the Parties agree to jointly file a complaint or any other appropriate action with the applicable Commission to seek any necessary permission to remove the traffic from such interconnection trunks up to and including the right to block such traffic and to obtain compensation, if appropriate, from the third party competitive local exchange carrier delivering such traffic to the extent it is not blocked.

DATE 07/10/08

PROFFERING PARTY: Staff

I.D. # STIP-5

INTERROGATORIES

REQUEST: Was Issue 12 in this instant proceeding resolved by the Parties via negotiation in the 13-state agreement? If affirmative, please explain how it was resolved. Please explain why that same resolution could not be agreed to in Florida.

RESPONSE: Issue 12 is resolved in Florida.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: If Intrado's suggested additional language for Issue 12 is added to IC Section 1.1, how would AT&T Florida suggest handling possible conflicts with other terms and conditions that are either within the ICA or in a separate agreement or tariff?

RESPONSE: Issue 12 is resolved in Florida.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please refer to AT&T Florida witness' Pellerin direct testimony concerning Issue 13(a), pages 38-44.

a. How does the FCC define Section 251(b)(5) traffic? Please identify any applicable FCC orders or rules.

b. Please explain how Intrado's proposed language in accordance with "Applicable Law, including the rules, regulations and order of the FCC and courts of competent jurisdiction" is unnecessarily vague? Would Intrado's language result in changes in law with respect to these definitions being automatically incorporated into the agreement? Please explain your response.

c. Please identify the specific paragraphs in Order FCC 01-131 where ISP-Bound Traffic is defined.

d. Please identify all sources AT&T Florida relied on in developing its proposed definitions of "Section 251(b)(5) Traffic," "ISP-Bound Traffic," and "Switched Access Traffic."

e. How does the FCC define "switched access traffic?"

f. Is the FCC currently reviewing "switched access traffic" as it relates to intercarrier compensation? If affirmative, please identify the specific FCC docket(s).

RESPONSE

a. Section 251(b)(5) of the Act provides that all local exchange carriers ("LECs") have the duty to "establish reciprocal compensation arrangements for the transport and termination of telecommunications." The FCC concluded that "section 251(b)(5) reciprocal compensation obligations should apply only to traffic that originates and terminates within a local area" and that "reciprocal compensation for transport and termination of calls is intended for a situation in which two carriers collaborate to complete a local call."[1] The FCC did not disturb the access charge regime for interstate or intrastate interexchange traffic.[2]

[1] *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, CC Docket No. 96-98, *First Report and Order*, 11 F.C.C. Rcd. 15,499, FCC 96-325 (rel. Aug. 8, 1996) ("*First Report and Order*"), ¶ 1034.

[2] *Id.* at ¶¶ 1033-1035.

The FCC revisited the subject of Section 251(b)(5) compensable traffic in the context of ISP-bound traffic, reconsidering its justification for previously concluding that ISP-bound traffic was outside the scope of Section 251(b)(5).[3] The FCC focused its analysis on what was carved out of Section 251(b)(5) rather than the universe of traffic that falls within Section 251(b)(5). In doing so, the FCC concluded that ISP-bound traffic was subject to Section 251(g) and should be carved out of the universe of traffic subject to Section 251(b)(5). In that context, the FCC abandoned "local" as the term for traffic subject to reciprocal compensation under Section 251(b)(5).[4]

The FCC reaffirmed that Section 251(b)(5) reciprocal compensation only applies to traffic that originates and terminates in the same local exchange by excluding interexchange traffic from reciprocal compensation. FCC Rule 701(b) states that Section 251(b)(5) reciprocal compensation is inapplicable to "traffic that is interstate or intrastate exchange access, information access, or exchange services for such access."[5]

b. Intrado's language, which simply references Applicable Law, would require the parties to pore through the various "Applicable Law" provisions, FCC orders, and court decisions to administer the intercarrier compensation provisions of the ICA, which could lead to unnecessary disputes. By contrast, AT&T Florida's language is clear on its face as to what traffic is subject to Section 251(b)(5) reciprocal compensation and reflects the current state of the law.

[3] *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Intercarrier Compensation for ISP-bound Traffic*, CC Docket Nos. 96-98 & 99-68, *Order on Remand and Report and Order*, 16 F.C.C. Rcd. 9151, FCC 01-131 (rel. April 27, 2001) ("*ISP Remand Order*"), *remanded but not vacated, WorldCom, Inc. v. FCC*, No. 01-1218 (D.C. Cir. 2002), ¶ 30.
[4] *Id.* at ¶ 34.
[5] 47 C.F.R. § 51.701(b)(1).

Intrado's language could be interpreted to automatically incorporate what one party may believe is a "change in law." When there is a change in law, there is an ICA provision ("Intervening Law") to agreeing and incorporating into the ICA such agreed-to changes. Conversely, the parties are not necessarily obligated to agree to terms and conditions when the law changes. Parties to an ICA can forego a change in law. Thus, if neither party elected to amend the ICA to incorporate a change in law, the parties would continue to operate pursuant to the existing ICA terms and conditions.

c. In paragraph 1 of the *ISP Remand Order*, the FCC refers to "telecommunications traffic delivered to Internet service providers (ISPs)." In the remainder of the *ISP Remand Order*, the FCC refers to this traffic as "ISP bound traffic." For example, in paragraph 2, the FCC states:

> The regulatory arbitrage opportunities associated with intercarrier payments are particularly apparent with respect to ISP-bound traffic, however, because ISPs typically generate large volumes of traffic that is virtually all one-way -- that is, delivered to the ISP.

d. *See* AT&T Florida's responses to parts a, c, and e.

e. The FCC defines (federal) Access Service to include "services and facilities provided for the origination or termination of any interstate or foreign telecommunication."[6] The FCC does not directly define "switched access traffic." Rather, the Act defined "Exchange Access Service" as "the offering of access to telephone exchange services or facilities for the purpose of the origination or termination of telephone toll services."[7] The FCC concluded that interexchange carriers are entitled to Section 251(c)(2) interconnection only to the extent they provide telephone exchange service or exchange access service.[8]

[6] 47 C.F.R. § 69.2(b).
[7] 47 U.S.C. § 153(16).
[8] *First Report and Order*, ¶¶ 190-191.

Further, "Carrier's carrier charges shall be computed and assessed upon all interexchange carriers that use local exchange switching facilities for the provision of interstate or foreign telecommunications services."[9] Interexchange carriers transport telecommunications traffic between exchanges. Thus, federal switched access traffic is exchange access traffic, *i.e.*, interexchange traffic that uses local exchange carriers' switches. (At the state level, switched access service refers to exchange access traffic (*i.e.*, interexchange traffic using local exchange carriers' switches) that originate and terminate within a state.)

Additionally, the FCC states that: "*Interstate switched exchange access services* shall include the functional equivalent of the ILEC interstate exchange access services typically associated with following rate elements: carrier common line (originating); carrier common line (terminating); local end office switching; interconnection charge; information surcharge; tandem switched transport termination (fixed); tandem switched transport facility (per mile); tandem switching."[10]

The FCC also concluded in its *IP Access Charge Order*[11] that interexchange traffic is not exempt from switched access charges simply by utilizing internet protocol ("IP") technology.

f. Yes. The FCC is reviewing all intercarrier compensation, including switched access traffic, in its *Further Notice of Proposed Rulemaking* for CC Docket No. 01-92, *In the Matter of Developing a Unified Intercarrier Compensation Regime*, released March 3, 2005 (FCC 05-33).

RESPONSE PROVIDED BY: P.H. Pellerin

---

[9] 47 C.F.R. § 69.5(b).
[10] 47 C.F.R. § 61.26(a)(3) (emphasis in original).
[11] *In the Matter of Petition for Declaratory Ruling that AT&T's Phone-to-Phone IP Telephony Services are Exempt from Access Charges*, WC Docket No. 02-361, *Order*, 19 F.C.C. Rcd. 7457, FCC 04-97 (rel. Apr. 21, 2004) ("*IP Access Charge Order*").

REQUEST: Referring to footnote 35 on page 44 of witness Pellerin's direct testimony,

a. Please describe the differing requirements of wireless service.

b. What is meant by "To the extent Intrado intends to deliver wireless 911 traffic to AT&T Florida, the parties have agreed that Appendix IC does not apply to 911 traffic?"

RESPONSE:

a. In the context of intercarrier compensation, wireless carriers' calling scopes are based on Major Trading Areas ("MTA") rather than the local calling (or exchange) areas used by wireline carriers. In addition, many wireless carriers have different usage recording capabilities, necessitating a different method for exchanging billing records. In that situation, a factor based on the shared use of facilities is used to allow wireless carriers to calculate usage for billing reciprocal compensation. Thus the terms and conditions for wireless carriers necessarily vary from those of wireline carriers. AT&T's generic CLEC interconnection agreements do not accommodate the unique requirements of wireless carriers.

b. The dispute reflected in Issue 13(a) for 13-state language in Appendix Intercarrier Compensation Section 1.2 relates to reciprocal compensation for Section 251(b)(5) traffic – which does not include 911 traffic. Intrado should not be sending AT&T Florida wireless traffic pursuant to Appendix Intercarrier Compensation, and AT&T Florida's 13-state language in Section 1.2 properly qualifies that traffic as wireline. This, however, does not preclude Intrado from delivering 911 traffic to AT&T Florida pursuant to Appendix 911.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Does Issue 13(a) deal with the parties' exchange of non-911 traffic? If no, please explain specifically what AT&T Florida believes Issue 13(a) deals with.

RESPONSE: Yes. *See* AT&T Florida's response to Interrogatory No. 4.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please refer to page 44, lines 8-21, and page 45, lines 1-15, of witness Pellerin's direct testimony regarding Issue 14(a).

a. Is it AT&T Florida's position that it has no requirement to act as the transit provider or the exchange of traffic between Intrado and third-party carriers?

b. If the response to Interrogatory 6(a) is affirmative, please explain with specificity why.

c. Please identify any FCC orders and state commission orders that support this position.

RESPONSE: Issue 14(a) is resolved.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: On page 61 of AT&T Florida witness Pellerin's direct testimony, line 26, explain the inconsistent result that Intrado's proposed revisions to IC Section 17.4 will create?

RESPONSE: Issue 14(b) is resolved.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: On page 62 of AT&T Florida witness Pellerin's direct testimony, lines 2-5, please identify the source for the requirement that the originating carrier is responsible for compensating the terminating carrier to complete a call.

RESPONSE: Section 251(a) of the Act provides that all telecommunications carriers have a duty to interconnect, either directly or indirectly. Section 251(b)(5) provides that local exchange carriers have the added responsibility to "establish reciprocal compensation arrangements for transport and termination of telecommunications." In implementing these provisions, the FCC determined that:

> [R]eciprocal compensation for transport and termination of calls is intended for a situation in which two carriers collaborate to complete a local call. In this case, the local caller pays charges to the originating carrier, and the originating carrier must compensate the terminating carrier for completing the call. This reading of the statute is confirmed by section 252(d)(2)(A)(i), which establishes the pricing standards for section 251(b)(5). Section 251(d)(2)(A)(i) provides for "recovery by each carrier of costs associated with the transport and termination on each carrier's network facilities of calls that originate on the network facilities of the other carrier."[12]

RESPONSE PROVIDED BY: P.H. Pellerin

[12] *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, CC Docket No. 96-98, *First Report and Order*, 11 F.C.C. Rcd. 15,499, FCC 96-325 (rel. Aug. 8, 1996) ("*First Report and Order*"), ¶ 1034.

REQUEST: AT&T Florida identifies Issue 23 as being resolved. Please explain any disagreement between AT&T Florida and Intrado with respect to how the resolved language will be implemented in Florida.

RESPONSE: The disagreement remaining between the parties regarding resolution of Issue 23 is directly related to the Commission's future resolution of Issue 2 (ICA template). The language previously in dispute for Issue 23 was based on the 13-state template – language that simply does not exist if the 9-state template is used. The 13-state language was resolved between the parties in the context of negotiations in Ohio (which is properly based on the 13-state template). Intrado has indicated its unwillingness to close Issue 23 because it simply wants all the 13-state language, whether disputed or not. There is nothing for the Commission to decide regarding the language formerly in dispute for Issue 23.

In the event the Commission concludes that the 9-state template is the proper foundation for the parties' ICA in Florida, it would be inappropriate to import the 13-state language from Issue 23 into a 9-state agreement – just as it would be improper to require other 13-state language be included in an ICA that is based on the 9-state template. But that is exactly what Intrado seeks – to take 13-state language and re-label it as 9-state.

A decision by the Commission that the parties utilize the 13-state template in Florida would require additional analysis and would give rise to numerous additional issues that are as yet unidentified.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Regarding Issue 29(a), please refer to pages 48-51 of AT&T Florida witness Pellerin's direct testimony.

a. Please identify the industry standard for mileage rounding for distance sensitive rates referenced on page 48, line 20.

b. Please identify the industry standard for rounding usage for carrier billing referenced on page 50, lines 15-16.

c. Please identify all documents supporting the witness' assertion of the industry standards in response to Interrogatories 10(a) and 10(b).

RESPONSE:

a. The industry standard for mileage rounding for distance sensitive rates is to the next whole mile.

b. The standard industry practice for rounding usage for carrier billing is to the next whole minute. However, it is standard practice in AT&T's 9-state region to use jurisdictional reporting factors to bill reciprocal compensation rather than actual usage data.

c. The industry standard for mileage rounding is stated in the Alliance for Telecommunication Industry Solutions' ("ATIS") Multiple Exchange Carrier Access Billing ("MECAB") Guidelines, ATIS – 0401004-0009. Section 3.4 states as follows:

> ***3.4 Transport or Mileage Charge Calculations***
>
> The appropriate method for calculation of MPB for the distance sensitive portion of Local Transport (direct-trunk and tandem-switched), Channel Mileage (e.g. Special Transport), is as follows:
>
> 1. The Vertical and Horizontal (V&H) coordinates (filed in NECA Tariff FCC No. 4) are used to calculate the airline distance between two wire centers. Fractional mileage is rounded to the next whole number.

There is no published industry standard regarding rounding of usage for carrier billing. It is standard practice in AT&T's 9-state region to use jurisdictional reporting factors to bill reciprocal compensation. This is reflected in AT&T's 9-state generic interconnection agreement ("ICA"), Attachment 2, Section 8.3, which is offered to CLECs seeking an ICA in Florida. Regarding switched access billing, on page 49 of her direct testimony, Ms. Pellerin referenced AT&T Florida's access service tariff Sections E6.7.19 and E6.7.4.6 as evidence of AT&T Florida's standard usage rounding practice. AT&T's other state and federal tariffs contain similar rounding provisions. Moreover, as Ms. Pellerin testified on page 51 of her direct testimony, the impact to Intrado (if it ever actually offered service other than 911 service) would be negligible.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Regarding Issue 29(b), please refer to page 52, lines 3-12 of AT&T Florida witness Pellerin's direct testimony. The witness states that the parties have agreed that to the extent Intrado ordered a product or service not contained in the ICA, "AT&T would reject that order."

a. Is it AT&T Florida's position that it will nonetheless provision the requested product or service only if Intrado agrees to pay the AT&T Florida current generic contract rate, if no intrastate tariff rate exists?

b. If Intrado is billed and pays the generic contract rate, is it AT&T Florida's position that it can reject future orders and further provisioning of the product or service anytime it chooses? Please explain.

c. If the answer to Interrogatory 11(b) is affirmative, please explain why not reject orders for products and services not contained in the ICA, for which no intrastate tariff rates exist, until rates are set pursuant to the Sections 251 and 251 process.

RESPONSE: AT&T Florida has no obligation to accept and provision an order from Intrado for a service not contained in the ICA. It is AT&T Florida's intention, and Intrado has agreed, that such orders would be rejected and not provisioned.

a. No. Any provisioning of a service not contained in the parties' ICA would be inadvertent.

b. It is important to keep in mind that the service at issue is not in the ICA. Thus, even if AT&T Florida inadvertently provisions such a service, that does not obligate AT&T Florida to accept future orders for that service – until and unless the ICA is amended.

c. It is AT&T Florida's intention to reject orders for services not contained in the ICA. However, processing errors may occur on occasion.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please identify the witness responsible for Issue 8(a), and where in the witness' direct testimony Issue 8(a) is discussed.

RESPONSE: At the time direct testimony was filed, AT&T Florida understood Issue 8(a) to be resolved. Since that time, Intrado has introduced new language into the 911 Appendix, Sections 3.4.3 and 3.4.5, which AT&T Florida disputes and will address in rebuttal testimony.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: By way of clarification, have all issues relating to collection and remittance of 911/E911 surcharges contained in sections 7.2.2, 7.2.2.1, 7.2.2.2 been resolved by the parties?

RESPONSE: Yes. Issue 11 is resolved.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: By way of clarification, are issues relating to collection and remittance of 911/E911 surcharges contained in sections 7.2.1.1 and 7.2.1.2 still in dispute?

RESPONSE: No. Issue 11 is resolved.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 8, lines 5-7.

a. Is there language in the 13 state agreement analogous to the language AT&T proposes in Florida?

b. If the response to Interrogatory 15(a) is negative, please detail the language being proposed by AT&T in the thirteen state agreement.

RESPONSE: Ms. Clugy's testimony on page 8, lines 5-7, addresses Issue 11, which is now resolved.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please detail the specific language adopted in Ohio relating to the collection and remittance of 911/E911 surcharges.

RESPONSE: Issue 11 is resolved.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Neinast, page 45, lines 19 through page 46, lines 1- 21. Please identify the industry guidelines, principles and standards that apply to AT&T's trunk planning and engineering.

RESPONSE: Principles:
AT&T Trunk Planning and Engineering Trunking evolves to the task of determining the number of current trunks required to carry a given amount of load at some specific grade of service and to forecast the number of future trunks required in any given network using valid data.

Industry Guidelines:
Capacity tables used by AT&T Trunk Planning and Engineering to determine current trunks required and forecast future growth are Telcordia (The old Bell Core) Neal-Wilkinson (Final trunk groups) and Erlang B (High Usage trunk groups). List below are some of the Industry guidelines used by AT&T Trunk Planning and Engineering when creating a network;

Common Language-Message Trunk Circuit Codes (CLCI MSG Codes) BR-795-400-100

Common Language-Location Codes (CLLI™ Codes) Description for Location Identification BR 795-100-100

Telcordia Notes on the Network SR_2275

Standards:
Below are the standard Design Blocking Objectives used by AT&T Trunk Planning and Engineering when sizing various types of trunk groups;

Trunk Group Type	Design Blocking Objective
Local Interconnection Trunk Group - Direct End Office (Primary High)	ECCS*
Local Interconnection Trunk Group - Direct End Office (Final)	2%
IntraLATA Toll Trunk Group (Local/Access or Access Tandem Switch)	1%
Local Interconnection Trunk Group (Local Tandem)	1%
Meet Point (Local/Access or Access Tandem Switch)	0.5%
E911	1%
Operator Services (DA/DACC)	1%
Operator Services (0+, 0-)	1%
Busy Line Verification/Emergency Interrupt	1%

*During implementation the Parties will mutually agree on an Economic Centum Call Seconds (ECCS) or some other means for the sizing of this trunk group.

The standard document used to notify carriers of changes to the AT&T network or to requested changes to a carriers network is the TGSR. The TGSR is a standard industry support interface developed by the OBF of the Carrier Liaison Committee of the Alliance for Telecommunications Solutions (ATIS) organization. TELCORDIA TECHNOLOGIES Special Report STS000316 describes the format and use of the TGSR.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Neinast, page 46, lines 23 through page 47, lines 1-12.

a. Please identify the standard industry accepted systems and processes that apply to AT&T's ordering processes.
b. Please explain the "EXACT" system example that your provide in your testimony.
c. Please describe an Access Service Request (ASR).
d. Based upon the industry standards used by AT&T, does the language proposed by Intrado adhere to industry standards?
e. If your response to Interrogatory 18(d) is affirmative, how does Intrado's proposed language adhere to the industry standards?

RESPONSE: See response as follows:

a. The Alliance for Telecommunication Industry Solutions (ATIS) is a technical planning and standards development organization that is committed to rapidly developing and promoting technical and operations standards for the communications and related information technologies industry worldwide using a pragmatic, flexible and open approach. Over 1,100 participants from more than 350 communications companies are active in ATIS' 23 industry committees, and ATIS' Incubator Solutions Program. **http://www.atis.org/**

ATIS – 0404000-0036 Access Service Request Ordering Overview - Access Service Ordering Guidelines (ASOG) is an ATIS standard developed by the ISOP Committee under the ATIS Ordering and Billing Forum (OBF)

"This form/screen is based upon the Ordering and Billing Forum's (OBF) industry consensus approved guidelines, found in the Access Service Ordering Guidelines (ASOG) document. The ASOG may be obtained by contacting the Alliance for Telecommunications Industry Solutions (ATIS) at 1-800-387-2199 or: **https://www.atis.org/atis/docstore/index.asp**."

The ATIS Ordering and Billing Forum (OBF) provides a forum for customers and providers in the telecommunications industry to identify, discuss and resolve national issues which affect ordering, billing, provisioning and exchange of information about access services, other connectivity and related matters.

b. **From the EXACT User Manual:**

EXACT is a trademark of Telcordia Technologies, Inc.
The EXACT System provides mechanized order entry, control, and tracking support for service representatives in the Interexchange Customer Service Center (ICSC). EXACT, along with TUF (Translator to USOCs and FIDs), reduces the amount of personnel required in the ICSC and facilitates automated operations. Mechanized order entry, fewer missed dates, and shortened order processing intervals increase efficiency and improve provisioning of services.

EXACT provides a streamlined method for the ICSC to process requests for access service. Requests are submitted by the Interexchange Customer (IC) and are entered in the ASR Database in the following manner:
• The IC may submit order information on standard Access Service Requests (ASR) forms that are manually entered in the ASR Database by ICSC personnel.
• The IC may batch load access orders to tape. These requests are then added to the ASR Database in the batch mode by EC personnel.
• The IC may create batch files using a PC product, or their own systems, and submit these requests in batch mode or in Real-Time Mechanized Specification Input. *Real-Time is a client specific FAM protected enhancement for funding clients only.*
• The IC may use the UOM-ASR (Unified Ordering Model - Access Service Request) Real-time Interface. With this interface, the IC creates an XML-based order and submits it via Telcordia's ServiceGate product, which validates the schema and forwards the order to ARIS for real-time processing. *(This is a client specific FAM protected enhancement for funding clients only.*

- The IC may add and update access orders to the ASR Database using terminals with appropriate LTERM and user access security.
- The IC may invoke a GUI front-end

From the Carrier Coding Guide:

COMMON LANGUAGE ®(CL)

Function

Provide COMMON LANGUAGE® coding (ie., CLLI, CLFI, NC/NCI, General Codes, etc.) to OSP, COE, HICAP, Switching, Code Planners and other groups for network and circuit provisioning and new product development. Distributes codes to circuit provisioning systems (ie., TIRKS, PICS, etc.) and asset tracking systems (Accounting). Represents AT&T in national standards organization to secure new coding.

Goals and Objectives

Help establish National standards, advocating AT&T's Business positions and needs. Develop forums, opportunities, etc. to share the COMMON LANGUAGE® responsibilities and impacts to the corporation.

Work Structure and Scope

COMMON LANGUAGE® Code Sets apply National and International standards to the naming conventions utilized in the Telecommunications Industry. We interact with other Telecommunications Service Providers and the code sets are integral parts of most of AT&T's and other companies' Operating Systems.

c. Please refer to answer in b.

d. Intrado's offered ordering system does not comply with industry standards. Apparently, Intrado does not participate or subscribe to the ATIS Ordering and Billing Forum.

e. n/a.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Neinast, page 51, lines 3-24.

a. Please explain how AT&T categorizes the 911 customer if the customer is not an end user.

b. Please identify when AT&T provided its proposed language to Intrado to resolve the parity issue in 911 Appendix Section 3.1.

c. Please identify the specific cite in the 911 Appendix Section 3.1 where AT&T's proposed language can be found.

RESPONSE: The language is the 911 Appendix Section 3.1 has been resolved between AT&T and Intrado as of 5/8/08, although the same basic issue has now arisen in the 911 Appendix Section 5.1.

a. The end user originates the call. The 911 customer is the provider of the emergency service to the end user.

b. AT&T offered through negotiations the language to resolve this issue on 2/27/2008.

c. In the 5/13/2008 version, section 3.1 has now been agreed to, as below:

3.1 AT&T-(STATE) shall provide and maintain such equipment at the **AT&T-(STATE)** E911 Selective Router and the DBMS as is necessary to provide CLEC E911 Emergency Services at parity with that of **AT&T-(STATE)** retail End Users. **AT&T-(STATE)** shall provide CLEC access to the **AT&T-(STATE)** 911 System as described in this section.

Section 5.1, which was previously agreed to, now has disputed language (yellow highlighted) AT&T's language is **bold underlined** and Intrado's language is ***bold italics***:

5.1 CLEC shall provide and maintain such equipment at the CLEC E911 Selective Router and the DBMS as is necessary to provide to AT&T-(STATE) E911 Emergency Services at parity with that of CLEC's customers End Users. CLEC shall provide AT&T-(STATE) access to CLEC's 911 System as described in this Section.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Neinast, page 52, lines 4-11. Please describe how Intrado's definition of End User includes parties that are not customers that actually utilize 911 services.

RESPONSE: The language in Appendix 911 Section 3.1 is resolved.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 7, lines 1-5. Please describe how Intrado's proposed language regarding the parties' obligations imposes an unequal burden on AT&T.

RESPONSE: Intrado's proposed language, if adopted, would place an unequal burden on AT&T Florida by improperly shifting Intrado's costs to AT&T Florida, as discussed in Ms. Pellerin's direct testimony (pp. 8-9) and in the direct testimony of AT&T Florida witness, Mark Neinast. For example, Intrado's proposed language that would require AT&T Florida to establish a Point of Interconnection ("POI") on Intrado's network outside the Local Access Transport Area ("LATA"), in contravention of FCC rules. (*See* Exhibit MN-2, Appendix 911 NIM, Section 2.2.) Similarly, Intrado's language would require AT&T Florida to make extensive end office switch translations to segregate 911 traffic at the end office – requiring AT&T Florida to provide service to Intrado superior to that which AT&T Florida provides to itself. (*See* Exhibit MN-1, Appendix 911, Section 6.1.1.) If AT&T Florida is unable to make such modifications, Intrado's language would require AT&T Florida to compensate Intrado for any and all costs Intrado incurs. (*See* Exhibit MN-1, Appendix 911, Section 6.1.1.2.)

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 32, lines 1-6.

a. Please state whether AT&T's proposed language would require that rates for 911 database functions or trunking to be contained in AT&T's access tariff.

b. Why does AT&T believe that in certain situations rates for access to 911 services might be appropriate in an access tariff?

c. Does AT&T's proposed language appear in ICAs between AT&T and other carriers that provide 911 services in Florida?

d. If the response to Interrogatory 22(c) is affirmative, please identify the Florida agreements in which such language appears.

e. Why should certain types of rates appear in AT&T's access tariff, rather than in an ICA? Please explain.

RESPONSE:

a. AT&T Florida does not charge pursuant to its tariff for 911 database functions, and AT&T Florida's proposed language would not require AT&T Florida to add such rates to its access tariff. *See also* AT&T Florida's response to Interrogatory No. 24.

b. AT&T Florida is not obligated to provide unbundled network elements (e.g., dedicated transport on an unimpaired route) on Intrado's side of the parties' Point of Interconnection ("POI"). When Intrado elects to lease such facilities from AT&T Florida in order to route 911 calls, it should do so pursuant to AT&T Florida's access tariff; non-Section 251 services should not be included in a Section 251 ICA.

c. AT&T Florida does not have any ICAs with carriers providing 911 services in Florida. It does have agreements with adjacent ILECs for the provision of 911 service across their territory boundaries, as appropriate. Intrado is the first carrier to seek a Section 251 ICA for 911 services.

d. *See* part c.

e. *See* part b.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 32, lines 7-13. Please explain why AT&T's proposed language should be added to Appendix 911 Section 10.1

RESPONSE: As stated in AT&T Florida's response to Interrogatory No. 22, Intrado may elect to lease AT&T Florida's facilities on Intrado's side of the POI to provide for routing of 911 calls. Since these facilities could be purchased from AT&T Florida's access tariff, it is appropriate to include a reference to the tariff in Appendix 911, Section 10.1.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following requests, please refer to the direct testimony of AT&T witness Pellerin, page 32, lines 14-18. Please describe how and where trunking rates are normally addressed by AT&T and carriers interconnecting with AT&T, when such rates are not included in a Section 251 agreement.

RESPONSE: Ms. Pellerin's direct testimony on page 32, lines 14-18 is specific to trunking for 911. Her related direct testimony for Issues 1(c) and 1(d) stating that there are no charges for interconnection trunks was in error and will be corrected in her rebuttal testimony.

AT&T Florida's nonrecurring charges for interconnection trunks are set forth in the pricing schedule included with 9-state Attachment 3. There are no recurring or usage charges assessed.

When AT&T Florida interconnects with an adjacent independent local exchange company ("ICO") for the exchange of 911 calls, the parties do so based on a bill-and-keep arrangement – in other words, neither party charges the other for 911 trunks.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 33, lines 1-9. Is the language that AT&T has proposed to Intrado consistent with the language included in ICAs with other carriers in Florida that have sought interconnection with AT&T and have requested services not required pursuant to Section 251(c)? If not, please explain why disparate treatment is appropriate.

RESPONSE: Yes.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 34, lines 10 through page 35, lines 1-6. Does AT&T's consider the proposed language in Appendix Out-of-Exchange Traffic (OET) Section 1.1 unnecessary because the definition cannot be construed to include 911 traffic? Please explain.

RESPONSE: Yes. The definition of out-of-exchange traffic specifically includes Section 251(b)(5) Traffic, ISP-Bound Traffic, FX, intraLATA traffic and/or interLATA Section 251(b)(5) Traffic exchanged pursuant to an FCC interLATA boundary waiver. It does not include 911 traffic. It also does not include directory assistance traffic or operator services traffic. It is neither necessary nor appropriate to include in a definition all the various things *excluded* from the definition. In this case, such an approach could lead to confusion as to the status of traffic neither included nor expressly excluded from the definition.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following requests, please refer to the direct testimony of AT&T witness Pellerin, page 55, lines 10 - 20.

a. Please define "capitalization" as referenced in the ICA.

b. Please explain what is meant by "when their use are consistent with the defined term."

c. What methodology has AT&T used in ICAs with other carriers in Florida to determine which terms should be capitalized ?

d. Please identify all Florida agreements that used the methodology indicated in response to 27(c) that differ from the approach AT&T proposes in this proceeding.

RESPONSE:

a. In the context of the ICA, terms should be capitalized when the term is used in a manner in harmony with the definition of the term. When a term is capitalized in the ICA, it means what the definition says it means.

b. A term may have different meanings in an ICA depending on whether it is capitalized or not. For example, in the 13-state template the parties have a term "End Users" that is defined in the GTCs. When End Users is utilized anywhere in the ICA, it means exactly what the definition says it means. When "end users," which is not a defined term, is used, it is interpreted to mean the standard English definition of the term as it is commonly used in the context of telecommunications service.

For instance, suppose the term End Users was defined to mean the local dial tone subscribers of both parties to an ICA. When End Users appears in the ICA, it is interpreted to mean only the local dial tone subscribers of the two parties. It does not mean the local dial tone subscribers of a third party carrier. In the case of a third party carrier, the proper term would be the lowercase "end users."

c. During negotiations, AT&T Florida and the requesting carrier consider the terms and conditions each deem appropriate for the ICA. In some cases, definitions are added, deleted or changed. The parties review how a defined term is used in other terms and conditions in the ICA and capitalize the term when it is used to mean what the definition says it means. If it used more generally than the definition, it is lowercase. There is no formal process to determine which words to capitalize – it is simply done in the normal course of negotiations. Occasionally, whether a particular term is included in the definitions or not is an issue for arbitration. When this happens, the parties will handle related capitalization when conforming the ICA to the arbitration order.

d. There are none. AT&T Florida uses the basic methodology described in part c with all carriers that negotiate for an ICA. This simple process was not done with Intrado because, for all intents and purposes, Intrado did not negotiate with AT&T Florida prior to filing for arbitration.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: By way of clarification, have issues relating to the appropriate terms and conditions regarding billing and invoicing audits been resolved by the parties?

RESPONSE: Issue 20 addresses terms and conditions regarding billing and invoicing audits. The disagreement remaining between the parties regarding resolution of Issue 20 is directly related to the Commission's future resolution of Issue 2 (ICA template). The language previously in dispute for Issue 20 was based on the 13-state template – language that simply does not exist if the 9-state template is used. The 13-state language was resolved between the parties in the context of negotiations in Ohio (which is properly based on the 13-state template). Intrado has indicated its unwillingness to close Issue 20 because it simply wants all the 13-state language, whether disputed or not. There is nothing for the Commission to decide regarding the language formerly in dispute for Issue 20.

In the event the Commission concludes that the 9-state template is the proper foundation for the parties' ICA in Florida, it would be inappropriate to import the 13-state language from Issue 20 into a 9-state agreement – just as it would be improper to require other 13-state language be included in an ICA that is based on the 9-state template. But that is exactly what Intrado seeks – to take 13-state language and re-label it as 9-state.

A decision by the Commission that the parties utilize the 13-state template in Florida would require additional analysis and would give rise to numerous additional issues that are as yet unidentified.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: By way of clarification, have Issue Nos. 25(b), 25(c), and 25(d) been resolved by the parties?

RESPONSE: The disagreement remaining between the parties regarding resolution of Issues 25(b), 25(c), and 25(d) is directly related to the Commission's future resolution of Issue 2 (ICA template). The language previously in dispute for these issues was based on the 13-state template – language that simply does not exist if the 9-state template is used. The 13-state language was resolved between the parties in the context of negotiations in Ohio (which is properly based on the 13-state template). Intrado has indicated its unwillingness to close Issues 25(b), 25(c),and 25(d) because it simply wants all the 13-state language, whether disputed or not. There is nothing for the Commission to decide regarding the language formerly in dispute for Issues 25(b), 25(c) and 25(d).

In the event the Commission concludes that the 9-state template is the proper foundation for the parties' ICA in Florida, it would be inappropriate to import the 13 state language from Issues 25(b), 25(c) and 25(d) into a 9-state agreement – just as it would be improper to require other 13-state language be included in an ICA that is based on the 9-state template. But that is exactly what Intrado seeks – to take 13-state language and re-label it as 9-state.

A decision by the Commission that the parties utilize the 13-state template in Florida would require additional analysis and would give rise to numerous additional issues that are as yet unidentified

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 67, lines 10-11.

a. By way of clarification, will late payment charges only be applied if payments of properly disputed charges are not remitted to the escrow account by 30 calendar days of the invoice date?

b. If the response to Interrogatory 30(a) is negative, how will late payment charges apply?

c. Hypothetically, assume Intrado failed to pay a disputed invoice amount of $1000.00 within the allotted 30 day time frame. After 60 days, Intrado remits $1000.00 to a mutually determined, interest-bearing bank account returning 5% annually. After six months, the principal is deemed 100% owed to AT&T. Please provide detail of the late payment charges and interest that would be assessed to Intrado under this scenario.

RESPONSE:

a. Yes, assuming that the Commission requires AT&T Florida to use the 13-state template (Issue 2). There is no escrow language in the 9-state template.

b. *See* part a.

c. Intrado would owe late payment charges ("LPC") for the 30 days beyond the due date that its payment was late. Assuming 1.5% per month simple interest, Intrado would owe $15 in LPC for each month it did not pay . Once Intrado paid the $1000 into the escrow bearing account, the LPC would no longer be imposed on the $1000 balance. However, Intrado would still owe (but would not have paid) the $15 LPC. These charges are due regardless of the outcome of the dispute and will incur $0.225 per month in additional LPC until paid.

After six months, when the dispute is resolved, Intrado would owe AT&T Florida the following:

Original invoice		$1000.00
LPC on original 30 days past due	$15 + 6($0.225)	$ 16.35
Interest from escrow account (assuming 5% simple interest)	$1000 x 2.5%	$ 25.00
Total due after six months		$1041.35

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of Intrado Witness Spence-Lenss, page 18, lines 7-8, ". . . disputed amounts in escrow continue to be subject to late payment charges."

a. Under what circumstances would late payment charges apply?

b. What are the rates, terms, and conditions applicable to past due balances?

RESPONSE:

a. Ms. Spence-Lenss' direct testimony refers to language in dispute in the 13-state template. There is no escrow language in the 9-state template, so this dispute does not exist if the 9 state template is used.

Late payment charges apply when payment is not made by the due date. If the charges are undisputed, payment must be made to AT&T Florida. If Intrado disputes the charges, payment must still be made by the due date, but such payment is made into an interest bearing escrow account rather than to AT&T Florida.

b. *See* part a. above. *See also* AT&T Florida's response to Interrogatory No. 30.

RESPONSE PROVIDED BY: P.H. Pellerin

INTERROGATORIES

REQUEST: Please refer to page 34, line 13-15 of AT&T witness Neinast's direct testimony for the following questions.

a. Is Appendix 911 attached to this testimony as Exhibit MN-1?

b. Is Appendix 911 NIM attached to this testimony as Exhibit MN-2?

c. What is Appendix NIM and where is it located in this testimony?

RESPONSE: a. Yes.

b. Yes

c. Appendix Network Interconnection Methods (NIM) is part of the 13 State generic agreement that Intrado seeks to utilize in Florida, as reflected by Issue 2. I did not attach it to my testimony, because AT&T does not support its use in Florida. AT&T has addressed the disputed language in Appendix NIM §§ 2.2 and 2.3 based on the manner of inclusion/exclusion described by Ms. Pellerin in her direct testimony at pages 26-27. AT&T seeks a ruling on the substance of the dispute rather than the exact Appendix NIM language, since a decision in Issue 2 to utilize the 9-state template would result in use of Attachment 3 (9-state) rather than NIM (13-state)

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 36, lines 15-18 of AT&T witness Neinast's direct testimony for the following question. Why "must" Intrado's POI be on the AT&T network and not at the exchange area boundary? Please explain your answer and provide citations to pertinent rules and orders.

RESPONSE: Since Intrado is a CLEC and not an ILEC, there is no exchange area boundary that is shared between AT&T Florida and Intrado, as there is with an adjacent ILEC such as Verizon or Embarq. Intrado must follow the rules of Section 251 just like all other CLECs that are competing for service within an ILEC's exchange area. Section 251(c)(2) states:

> (2) INTERCONNECTION.--The duty to provide, for the facilities and equipment of any requesting telecommunications carrier, interconnection with the local exchange carrier's network--
>
> (A) for the transmission and routing of telephone exchange service and exchange access;
> (B) at any technically feasible point **within the carrier's network**;
> (C) that is at least equal in quality to that provided by the local exchange carrier to itself or to any subsidiary, affiliate, or any other party to which the carrier provides interconnection; and
> (D) on rates, terms, and conditions that are just, reasonable, and nondiscriminatory, in accordance with the terms and conditions of the agreement and the requirements of this section and section 252

Section 251(c)(2)(B) clearly says that the requesting carrier (CLEC) must interconnect within the carrier's (ILEC) network, which is not what Intrado is asking to do. Intrado is requesting to be treated as an ILEC when they are not an ILEC. There is no exchange area boundary.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 36, lines 20-21 of AT&T witness Neinast's direct testimony for the following question. Is the selective router on the AT&T network or at the exchange area boundary? Please explain your answer.

RESPONSE: The selective router is located within an AT&T central office building and is on the AT&T network. A typical central office serves an exchange area and is also referred to as a wire center, since the central office building is normally in the center of all local exchange cables that branch out from the central office to serve end user customers. Some exchanges in larger metropolitan cities also have multiple wire centers. In these cases, there are wire centers that do not reach to the edge of the exchange area.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 37, lines 6-7 of AT&T witness Neinast's direct testimony for the following question. What are the required cross-connect changes and how much does AT&T propose to charge for them?

RESPONSE: Intrado, AT&T Florida and third-party carriers typically have existing facilities to an AT&T Selective Router location. However, such existing facilities are connected to the AT&T Florida Selective Router. In the event Intrado begins serving a given PSAP, cross-connect changes would be required to connect AT&T Florida and third-party facilities to Intrado's facilities, instead of terminating those facilities to the AT&T Florida Selective Router.

There usually is a charge for making cross-connect changes, but each carrier's request for cross-connections would have to be reviewed on a case-by-case basis depending on how the facilities were ordered, e.g. via their interconnection agreement or from the access tariff. The terms could vary from agreement to agreement.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 38, lines 9-11 of AT&T witness Neinast's direct testimony for the following questions.

a. Where would the other POIs (i.e., the non-Selective Router POIs) be located?

b. Would these other POIs handle only 911 calls?

c. If one of the other POIs receives a 911 call would the call need to be sent to the selective router before it can be delivered to the PSAP? Please explain.

d. How many selective routers does AT&T have in Florida and where are they located?

e. How many POIs would AT&T expect to have with Intrado for 911 service?

RESPONSE: a. Intrado could work cooperatively with AT&T to select the best location for multiple POIs. Most of the times there are offices designated as "hubbing" offices that have facility access to most other offices, similar to a major intersection for a highway.

b. The POIs can handle any type of traffic, however, there will need to be trunk groups established for various traffic types, e.g., trunks for local/intraLATA toll traffic separate from trunks for 911 traffic. Intrado's discussions with AT&T have focused on trunks that will only handle 911 traffic.

c. I read this question as two-fold, first how the POI may relate to the trunk groups that have been established and second, whether a 911 call must route through a selective router before being delivered to the PSAP. A subset of the second part, may be whether a 911 call

should route through AT&T's selective router prior to being delivered to Intrado's selective router before being delivered to the PSAP. I will address these items below:

First, The POI is only where the two companies' facilities come together. The facility is the physical cable as described in my exhibit MN-3 discussion of facilities and trunks. Intrado may choose to split its trunk groups between the two POIs, using one POI for part of a trunk group and the other POI for the rest. For instance, a trunk group with 24 trunks may have 12 trunks going to each POI, so that if there was an outage at one POI, they would still be able to route 911 traffic via the other POI. This is a very typical example of diverse facility routing.

Second, Regardless of the POI used, a call must always route to a selective router to determine, based on the originating caller's ANI, which PSAP to deliver the call to. The key difference between the original 911 network, where there was no Automatic Location Identification (ALI), and the (Enhanced) E911 network is the database correlation between the ANI and the Master Street Address Guide (MSAG) to create the ALI that is presented to the 911 call taker's screen. Therefore, all E911 calls must go to a selective router.

The subset issue to my second point is one of the key issues in this arbitration for Intrado, Class Marking and their newest term – Line Attribute Routing. As I have stated in my testimony, this is an important issue to AT&T Florida, as it would entail massive changes to AT&T Florida's network and operational support systems that provide local exchange services.

When a 911 call is originated from an AT&T Florida End Office that overlaps (or is split between) AT&T's PSAP coverage area and Intrado's PSAP coverage area, AT&T Florida will need to determine which PSAP to deliver the call to. This can be easily done using the existing ALI database correlation, which is what AT&T proposes.

Class Marking does not exist in AT&T's network at this time and if ordered to by the Commission, will take a massive amount of translations software changes and time, before it can be used. To activate Class Marking on a customer's line, it will require a manual work step for each Service Representative taking customer orders to make the correct determination of which PSAP should be used when issuing each service order, on a customer-by-customer basis. This will be necessary for the entire embedded base of AT&T Florida's customers, as well as any new customer in the future. Also as I stated in my testimony, NENA has recognized that this method is fraught with errors, with a high probability for misrouted 911 calls. I see this as attempt by Intrado at cost-shifting to avoid Intrado's PSAP incurring a selective router charge, even at the expense of creating misrouted calls for life and death situations. The database correlation that the AT&T selective router provides is a tried and true method that is the industry standard.. It is ironic that Intrado's niche market to date has been 911 database correlations and now they are against it due to profit reasons, when it makes the most sense from a network reliability standpoint.

d. AT&T Florida has 10 selective routers in Florida located in Dayton Beach, Fort Lauderdale, Gainesville, Jacksonville, Miami, Orlando, Panama City, Pensacola and 2 in West Palm Beach.

e. There are 10 LATAs in Florida and Intrado needs to establish at least 1 POI in each LATA that it wishes to do business in. Thus, if Intrado wished to offer service in 8 of those LATAs, it would need to establish a minimum of 8 POIs. It makes sense that the parties would use the same POIs, regardless of which carrier is providing emergency service to the county.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 38, lines 11-14 of AT&T witness Neinast's direct testimony for the following questions.

a. Where in Intrado's proposed language is Intrado permitted to "establish a POI at a convenient location for Intrado and expect not only AT&T, but all carriers to move their facilities to the Intrado POI . . . ?"

b. With AT&T recommending multiple POIs (lines 9-10), would all carriers be required to move their facilities to any and all POIs, including Intrado's? Please explain.

RESPONSE: a. In the 911 NIM Appendix Section 2.2, it states "***This POI may be the AT&T Selective Router or any other point on the AT&T-(STATE) network where AT&T-(STATE) is the Designated E911 Service Provider and, CLEC may seek to establish more than one POI for the redundancy of the E911 Interconnection. Where CTESC is the Designated E911 Service Provider the POI shall be on the CLEC network and serve as a demarcation point between the facilities that each Party is responsible to provide.***" The language "any other point" indicates that it would be a point that is convenient for Intrado.

The main reason that AT&T Florida wants one of Intrado's POIs to be at the selective router location is also part of the answer to this question. Every carrier that provides service for an area covered by each selective router will have diverse facilities installed to interconnect with that selective router. If Intrado begins to offer 911 service in the same geographic area, then any carrier that is currently interconnected to AT&T Florida's selective router will need to interconnect with Intrado's selective router. Since each of these carriers currently has diverse facilities, it would be efficient and economical to maintain the existing POI at the AT&T Florida selective router location. It is also possible that some of the PSAPs in an area may use AT&T Florida and others may use Intrado, therefore certain carriers may have a need to interconnect to both Intrado and AT&T Florida.

b. If Intrado requires 2 POIs to have diversity, then each carrier that interconnects with Intrado's selective router would also be required to interconnect at each of those POIs. Otherwise, Intrado would still only have the one POI where any carrier was interconnected and there would be no diversity of facilities. There are efforts of carriers to aggregate this traffic, which means that carriers are providing wholesale services to other carriers and there may be a tendency to increase economies of scale at the cost of overall diversity. *See also* part a.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 38, lines 20-22 of AT&T witness Neinast's direct testimony for the following question. Please identify and describe the "more stringent guidelines for network diversity and reliability."

RESPONSE: Much of the circuitry of the PSTN utilizes redundancy at various levels. For example, each digital switch deployed by AT&T Florida uses dual synchronous processors, one in an active mode and the other in a standby mode. In the event the active processor fails, the standby processor automatically switches to the active mode with no interruption to customer service. This redundancy is carried throughout most of the design of each switch.

Most facility paths between central offices are not redundant, as it is very costly to have a duplicative network. There are two exceptions – where 911 trunks and SS7 link facilities are involved. AT&T Florida's engineering standards require as much diversity as possible, using either a logically diverse path that may utilize the same facility, but different electronic circuitry or a physically diverse path if one is available. Routine audits help to maintain this diversity on an ongoing basis.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 40, lines 2-4 of AT&T witness Neinast's direct testimony for the following questions.

a. Please identify the source for the "requirement that they must establish their POI at an AT&T Florida End Office or Tandem building for PSTN traffic."

b. How does Intrado's language "ignore[s] the requirement that they must establish their POI at an AT&T Florida End Office or Tandem building for PSTN traffic?" Please explain your answer.

c. Why is the requirement that Intrado "must" establish its POI at an AT&T End Office or Tandem building for PSTN traffic relevant to 911 traffic? Please explain.

d. Are AT&T's selective routers in Florida located in End Offices or Tandem buildings for PSTN traffic? If not, please explain where the selective routers are located.

RESPONSE: a. The Telecommunications Act of 1996 Section 251(c)(2) states that an ILEC has a "duty to provide, for the facilities and equipment of any requesting telecommunications carrier, interconnection with the local exchange carrier's network" and Section 251(c)(2)(B) "at any technically feasible point within the carrier's network".

AT&T Florida believes that the best place for the POI is at an End Office or Tandem building. This is based on certain facts that the central office buildings are designed specifically to house telecommunications equipment and facilities, as opposed to a mid-span meet point outside of AT&T Florida's network. AT&T Florida's central office buildings have cable vaults, cross-connect panels, back-up power and network monitoring capabilities that are critical for telecommunications traffic and especially critical for the 911 traffic Intrado has proposed to carry.

Intrado has proposed a mid span meet point at a location that is clearly not on AT&T Florida's network and does not comply with the Act. If Intrado were to propose a POI at a technically feasible point within AT&T Florida's network, that would have to be evaluated to determine if there are any problems associated with the proposal. There is, however, no reason to use a different POI for PSTN traffic from the 911 traffic.

b. Intrado's language in Appendix NIM Section 3.3.1.1 and in Appendix 911 NIM Sections 2.2 and 4.1.1 would require AT&T Florida to interconnect on Intrado's network, which is inconsistent with the Act since it's not within AT&T Florida's network. AT&T Florida's proposed language complies with the Act and is the best location for a POI, at the AT&T Florida End Office or Tandem building.

c. The language in Appendix NIM is not relevant to 911 traffic, however, Intrado has raised issues in this arbitration regarding non-911 traffic. AT&T has addressed the disputed language in Appendix NIM based on the manner of inclusion/exclusion described by Ms. Pellerin in her direct testimony at pages 26-27. AT&T seeks a ruling on the substance of the dispute rather than the exact NIM language, since a decision in Issue 2 to utilize the 9-state template would result in use of Attachment 3 (9-state) rather than Appendix NIM (13-state).

d. AT&T Florida's selective routers are functionally part of an End Office. These selective router End Offices are located in a combination of End Office buildings (4) and Tandem buildings (6). At a very high level, the difference between the End Office and Tandem switches are a combination of the hardware and software of each switch that establishes the functionality of the individual switch.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 40, lines 17-21 of AT&T witness Neinast's direct testimony for the following question. Please explain why Intrado's proposed language for a mid-span meet point "does not comport with federal law." Please provide citations to pertinent rules and orders.

RESPONSE: Federal law requires Intrado to establish a point of interconnection on AT&T Florida's network. Intrado wants AT&T Florida to establish an interconnection point on Intrado's network (e.g., Colorado). A mid-span meet point would be somewhere between Florida and Colorado (for example), which is outside any Florida LATA and definitely not on AT&T Florida's network, and therefore is inconsistent with the TRRO rule that the interconnection point reside within the ILECs network.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 41, lines 7-9 of AT&T witness Neinast's direct testimony for the following question. Please explain with specificity how Intrado is "shifting its costs to AT&T" and "attempting to limit AT&T's ability to be compensated."

RESPONSE: There are 2 components at play here. First, Intrado wants AT&T Florida to build out facilities to Intrado's network, rather than for Intrado to interconnect on AT&T Florida's network. Secondly, for PSTN traffic, reciprocal compensation is the appropriate compensation scheme to be used between Intrado and AT&T Florida for switching and transport. Under the FCC rule 47CFR51.701(e): "Reciprocal compensation. For purposes of this subpart, a reciprocal compensation arrangement between two carriers is one in which each of the two carriers receives compensation from the other carrier for the transport and termination on each carrier's network facilities of telecommunications traffic that originates on the network facilities of the other carrier."

Intrado's language in Appendix NIM Section 3.3.1.1 states: "***Notwithstanding any provision in this Agreement to the contrary, when the Parties interconnect using a Fiber Meet Point, each Party will be financially responsible for the facilities on its side of the Fiber Meet Point and will not bill the other Party for any portion of those facilities.***" With this language of not "billing the other Party", Intrado is clearly attempting to disallow AT&T Florida from being compensated for its cost of facility transport.

AT&T Florida is entitled to be compensated for transport and termination of PSTN traffic and Intrado's proposed language would deny AT&T Florida from billing the other party for any portion of these facilities. There is a problem in the language that needs to be resolved. Again, this is normal PSTN local exchange and access traffic, not 911 traffic.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 41, lines 10-15 of AT&T witness Neinast's direct testimony for the following question. Where does Intrado's language state that AT&T is responsible for 50% of Intrado's facility costs and that AT&T will not bill Intrado for any portion of "those facilities?"

RESPONSE: See Appendix NIM Section 3.3.1.1, as quoted in AT&T Florida's response to Interrogatory No. 39(b) above.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 47, line 26, through page 48, line 4 of AT&T witness Neinast's direct testimony for the following question. Please explain why it would not be possible to establish any new interconnection arrangements for Intrado if AT&T's language in 911 NIM Section 5.1 is excluded from the interconnection agreement.

RESPONSE: What I was trying to explain in testimony was that there are two main changes to interconnection arrangements, along with many minor changes. A minor change may be adding a new trunk group where there are existing POIs and facilities in place. A major change would be to establish a new POI or facilities in a LATA where there is none. This is the aspect of business that AT&T Florida's 911 NIM Section 5.1 addresses. Without this section, there would be no definitive rule to follow and each incident would require manual intervention and interpretation. AT&T Florida has established forms that provide all necessary information to allow for accurate establishment of POIs, trunks and the routing of traffic. A new interconnection arrangement for a LATA requires the parties to meet and exchange data relating to the POI location, the amount of traffic forecasted to be exchanged, and the type of trunk groups to be established, as well as many other considerations. Intrado opposes any meeting between the parties' engineers to exchange and agree upon this type of information which would make effectuating an interconnection arrangement difficult, if not impossible. There is no reason to re-invent the wheel or use some haphazard method that may lead to disputes.

AT&T Florida's language in 911 NIM Section 5.1 appropriately addresses adding facilities, while Intrado suggests that this section be intentionally omitted.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 48, lines 18-19 of AT&T witness Neinast's direct testimony for the following questions.

a. Why is AT&T's language in 911 NIM Section 5.3 necessary for switches? Please explain.

b. Is AT&T's language in 911 NIM Section 5.3 necessary for any facilities other than switches? Please explain.

RESPONSE: a. 911 NIM Section 5.3 only addresses the addition and/or removal of switches. It appears that Intrado is attempting to interpret 911 NIM Section 5.3 to address the addition of facilities or POIs. AT&T Florida's 911 NIM Section 5.1 language is intended for adding facilities, while Section 5.3 is intended for switches.

This is a very critical ongoing aspect of business, since switches are generally very expensive. These fall into a long range planning project that may take more than a year to cost justify, order, install, and perform the cutover activities associated with the new switch. Intrado suggests 30 days' notice, which is just not reasonable for accomplishing such an extensive undertaking. Intrado's language has the potential to create many short interval projects that could end in a major 911 outage. AT&T Florida typically provides 180 days to the industry when adding or removing switches, so AT&T Florida's proposed 120 day interval for Intrado is very reasonable.

b. No. 911 NIM Section 5.1 is necessary for the interconnection facilities and POI establishment, which is generally a shorter interval than installing and removing switches. Since a switch may have trunk groups to multiple carriers and an interconnection facility is just between 2 carriers, there is a significant difference in the time interval for notification in each situation.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 50, lines 16-18 of AT&T witness Neinast's direct testimony for the following question. Please identify Intrado's proposed language that would "cut the PSAP out of the process and require database entries to be made regardless of whether both PSAPs agreed to receive these calls or not."

RESPONSE: In Appendix 911 Section 1.4, Intrado's proposed language is "If a 911/E911 Customer requests either Party to establish a PSAP to PSAP transfer arrangement, the Parties will ***discuss and establish operational procedures*** consistent with the 911/E911 Customer 's request for such an arrangement", which would only include AT&T and Intrado, who are the two parties to this agreement. It appears to me that with this language the PSAPs that are not party to this agreement are in fact cut out of the process.

AT&T Florida's proposed language is "If a 911/E911 Customer requests either Party to establish a PSAP to PSAP transfer arrangement, the Parties will **negotiate such a separate agreement** consistent with the 911/E911 Customer 's request for such an arrangement. **The 911/E911 Customer will be a party to this separate agreement.** This language appropriately includes the PSAP 911/E911 Customers in the negotiation process and as parties to the agreement. There are cases where PSAPs may not want to receive other PSAPs' 911 traffic for one reason or another, and none of these PSAPs are a party to this interconnection agreement. This separate agreement would include any database entries, as well as call routing aspects.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 4, section 2.16 of Exhibit MN-1, attached to witness Neinast's direct testimony for the following question. Why does AT&T disagree with Intrado's proposed language "facilities on its side"? Please explain your answer.

RESPONSE: This language not only does not provide value and creates vagueness, it also does not make sense. Please read the phrase: "serves as a demarcation point between the facilities to which each Party is responsible to provide facilities on its side" versus "serves as a demarcation point between the facilities to which each Party is responsible to provide". As with much of Intrado's proposed language, there is a component of cost-shifting to AT&T Florida.

Since my testimony was filed, Intrado now proposes to omit entirely the definition of POI in Appendix 911. This would result in the application to 911 service of the more general definition of POI – which does not require Intrado to establish its POI(s) for 911 service at AT&T Florida's selective router location(s). *See also* AT&T Florida's response to Interrogatory No. 37(a).

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 10, section 6.3.5 of Exhibit MN-1, attached to witness Neinast's direct testimony for the following questions.

a. What is the significance of AT&T's proposed "on" versus Intrado's proposed "from" on the second line, in the sentence, "AT&T is responsible for the isolation, coordination and restoration of all 911 facility and trunk maintenance problems [on or from] . . . "?

b. What is the significance of AT&T's proposed "side of the POI" versus Intrado's "End Offices to the CLEC POI(s)" on the second and third lines?

RESPONSE: This issue has been resolved.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 4, section 3.3.2 of Exhibit MN-2, attached to witness Neinast's direct testimony for the following question. What is the significance of AT&T's proposed language "end office and inter Selective Router" in the second and third lines of the section? Please explain your answer.

RESPONSE: This issue has been resolved.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 5, section 4.1.1 of Exhibit MN-2, attached to witness Neinast's direct testimony for the following question. Why does AT&T disagree with Intrado's proposed language in section 4.1.1? Please explain your answer.

RESPONSE: Intrado is requesting interconnection with AT&T Florida to compete within AT&T Florida's local exchanges in the state of Florida. Intrado is required by the Telecommunications Act of 1996 to establish a POI on AT&T Florida's network. The language that Intrado is proposing would require AT&T Florida to interconnect on Intrado's network and establish a collocation arrangement on Intrado's network (e.g., Colorado), which is outside of AT&T Florida's network.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to page 5, section 4.2.1 of Exhibit MN-2, attached to witness Neinast's direct testimony for the following question. Why does AT&T disagree with Intrado's proposed language in section 4.2.1? Please explain your answer.

RESPONSE: This language creates an obligation to interconnect on Intrado's network beyond what is required of AT&T Florida by the Act. The PSAPs serving Florida end user customers are in Florida, not Colorado or elsewhere.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's direct testimony concerning Issue 30, pages 55-57.

a. Does Telcordia define the term PSTN? If so, provide this definition and explain whether this definition is appropriate for the purposes of resolving Issue 30. If not, provide AT&T's definition for this term that supports its position in Issue 30.

b. Does Telcordia define the term Central Office Switch? If so, provide this definition and explain whether this definition is appropriate for the purposes of resolving Issue 30. If not, provide AT&T's definition for this term that supports its position in Issue 30.

c. Does Telcordia define the term Tandem Office Switch? If so, provide this definition and explain whether this definition is appropriate for the purposes of resolving Issue 30. If not, provide AT&T's definition for this term that supports its position in Issue 30.

d. Does Telcordia define the term Selective Router? If so, please provide this definition and explain whether this definition is appropriate for the purposes of resolving Issue 30. If not, provide AT&T's definition for this term that supports its position in Issue 30.

RESPONSE: This issue has been resolved.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: For the following questions, please refer to the specific portion of AT&T witness Pellerin's direct testimony identified at the beginning of each question.

a. Page 4, lines 20-21 and page 5, line 1. Please identify all applicable statutes, rules, orders or other pertinent materials, including specific page(s) and/or paragraph(s) numbers where applicable, that support your assertion that Intrado must provide telephone exchange service and/or exchange access to qualify for a Section 251 agreement. Please define telephone exchange service and exchange access services.

b. Page 16, lines 1-12. Has AT&T ever included terms, conditions, or pricing for one-way arrangements in its interconnection agreements?

RESPONSE:

a. Section 251(c) is the section of the Act that sets forth AT&T Florida's obligations with respect to requesting carriers. This includes (in part) the following duties: (1) negotiate an interconnection agreement, (2) interconnection, (3) unbundled access to network elements, and (4) resale. Section 251(c)(2) states:

> INTERCONNECTION.--The duty to provide, for the facilities and equipment of any requesting telecommunications carrier, interconnection with the local exchange carrier's network –
>
> (A) for the transmission and routing of telephone exchange service and exchange access;

The Act defines Telephone Exchange Service as follows:

> The term "telephone exchange service" means (A) service within a telephone exchange, or within a connected system of telephone exchanges within the

> same exchange area operated to furnish to subscribers intercommunicating service of the character ordinarily furnished by a single exchange, and which is covered by the exchange service charge, or (B) comparable service provided through a system of switches, transmission equipment, or other facilities (or combination thereof) by which a subscriber can originate and terminate a telecommunications service.

The Act defines Telecommunications Service as follows:

> The term "telecommunications service" means the offering of telecommunications for a fee directly to the public, or to such classes of users as to be effectively available directly to the public, regardless of the facilities used

The Act defines Telecommunications as follows:

> The term "telecommunications" means the transmission, between or among points specified by the user, of information of the user's choosing, without change in the form or content of the information as sent and received

The Act defines Exchange Access as follows:

> The term "'exchange access" means the offering of access to telephone exchange services or facilities for the purpose of the origination or termination of telephone toll services.

b. AT&T has not included in ICAs terms and conditions for Section 251(c)(2) interconnection with the capability for delivery of traffic over the public switched telephone network between the parties only in one

direction – AT&T's ICAs have the capability for exchange of such traffic in both directions, i.e., CLEC to AT&T and AT&T to CLEC. AT&T's interconnection agreements do provide for one-way interconnection for 911 service, as discussed in Ms. Pellerin's direct testimony (*see* pp. 14-15) regarding Scenario 1 (CLEC end user to AT&T E911 customer). AT&T does not concede that such traffic is subject to Section 251(c)(2), but includes such provisions in its ICAs for convenience.

RESPONSE PROVIDED BY: P. H. Pellerin

REQUEST: On page 75, lines 1-5 of her direct testimony, AT&T witness Pellerin's appears to state that the definition of the term "End User" can vary based on the context of the service being offered. Please explain why AT&T is proposing a single definition for "End User," as opposed to a distinct definition for:

a. an "end user" of 911 service?

b. an "end user" of basic local exchange service?

RESPONSE: This issue is resolved.

RESPONSE PROVIDED BY: P. H. Pellerin

INTERROGATORIES

REQUEST: Please refer to page 18 of AT&T witness Pellerin's rebuttal testimony, lines 8-12. Please identify the specific FCC order and paragraph therein where "the FCC reaffirmed that Section 251(b)(5) reciprocal compensation only applies to traffic that originates and terminates in the same local exchange."

RESPONSE: The FCC's ISP Remand Order reaffirmed that exchange access is not subject to Section 251(b)(5). At paragraph 34, the FCC states:

> We conclude that a reasonable reading of the statute is that Congress intended to exclude the traffic listed in subsection (g) from the reciprocal compensation requirements of subsection (b)(5). Thus, the statute does not mandate reciprocal compensation for "exchange access, information access, and exchange services for such access" provided to IXCs and information service providers. (footnote omitted)

The Act defines Exchange Access as follows:

> The term "'exchange access" means the offering of access to telephone exchange services or facilities for the purpose of the origination or termination of telephone toll services.

The Act defines Telephone Toll Service as follows:

> The term "telephone toll service" means telephone service *between stations in different exchange areas* for which there is made a separate charge not included in contracts with subscribers for exchange service. (emphasis added)

The FCC interpreted Section 251(g) "as a carve-out provision" and focused its inquiry on "the universe of traffic that falls within subsection (g) and *not* the universe of traffic that falls within subsection (b)(5)." (ISP Remand Order at ¶ 34, emphasis in original)

Ms. Clugy cites to FCC rule 51.703 in support of her assertion that the FCC does not require originating and terminating subscribers to be in the same (or extended) local calling areas for traffic to be subject to Section 251(b)(5). However, Ms. Clugy neglects to consider rule 51.701(b)(1), which specifically excludes interexchange services from reciprocal compensation.

Thus, traffic that originates in one exchange area and terminates within the same exchange area (i.e., not exchange access) is subject to Section 251(b)(5).

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Intrado witness Hicks testifies on page 2 of his rebuttal testimony, lines 22-23, and page 3, lines 1-2, that it is immaterial if Intrado is providing local dial tone services in its E911 tariff offering. The witness asserts that because it is authorized to provide local services, any terms and conditions of a 251 interconnection agreement should reflect that ability. Does AT&T agree with witness Hicks? Please explain why or why not.

RESPONSE: AT&T does not agree with the way Mr. Hicks characterizes Intrado's services. Mr. Hicks implies that because Intrado is authorized to provide local exchange service, interconnection for access to its 911 service should automatically be included in a Section 251(c) interconnection agreement. AT&T disagrees that Intrado's 911 service is either "telephone exchange service" or "exchange access" service. In her direct testimony (p. 11), Ms. Pellerin pointed out that Intrado's tariff for IEN service specifically states that it does *not* include the offering of "local exchange service" – from which one can infer that the service Intrado offers pursuant to that tariff (i.e., IEN) is not local exchange service.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Intrado witness Hicks testifies on page 3 of his rebuttal testimony, lines 6-9, that Scenario 2 "merely reflects the reciprocal side of a mutual exchange of E911 traffic when Intrado Comm has been designated as the E911 Service Provider and therefore is appropriately addressed in the context of a 251 agreement." Does AT&T agree with witness Hicks? Please explain why or why not.

RESPONSE: AT&T disagrees with Mr. Hicks' statement that AT&T agrees that Scenario 1 (i.e., AT&T is the 911 provider receiving 911 calls from Intrado) is "appropriate for a 251 interconnection agreement," implying that AT&T agrees it is *obligated* by Section 251(c) to include Scenario 1. AT&T does not agree that it is obligated to include Scenario 1. Rather, Ms. Pellerin stated in her direct testimony (pp. 14-15) that the Commission need not consider whether or not AT&T is obligated to included Scenario 1 – AT&T includes Scenario 1 in its ICAs for convenience. The overwhelming majority of an ICA's terms and conditions are associated with a CLEC's provision of local exchange service and are unrelated to 911 service. That is not the case with Intrado, which has a business plan (and tariff) that is limited to the provision of emergency services.

AT&T agrees that Scenario 2 is the reciprocal of Scenario 1 but does not agree that either Scenario 1 or Scenario 2 is subject to Section 251(c) interconnection.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Intrado witness Hicks testifies on page 3 of his rebuttal testimony, lines 10-19, that Scenario 3 should be addressed in a 251 agreement because it "goes to the heart of making competing E911 networks interoperable for the benefit of consumers." Does AT&T agree with witness Hicks? Please explain why or why not.

RESPONSE: No. Scenario 3 is the PSAP-PSAP transfer functionality, which is not used by the majority of PSAPs and would therefore not be at the heart of E911 network interoperability. AT&T Florida is willing to meet with Intrado and the PSAPs that want to utilize this functionality, but AT&T Florida does not believe it is part of an agreement that is necessary for interconnecting Local Exchange Carriers. PSAP-PSAP transfer is an arrangement between Intrado's PSAP customer and AT&T Florida's PSAP customer. Terms for retail customers that are not party to the interconnection agreement should not be included in the interconnection agreement. The necessary trunk group and routing of traffic language for this functionality has been already agreed to in the 911 Appendix Section 7.4.1, using bi-directional inter selective router trunking. AT&T Florida has and will continue to establish these arrangements, but believes it should be done external to the interconnection agreement and includes both Intrado's PSAP and AT&T Florida's PSAP customers.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: On page 4 of Intrado witness Hicks' rebuttal testimony, lines 1-12, the witness asserts that because Intrado's E911 Selective Router and ALI database will be marketed in areas where AT&T is offering services off the AT&T E911 Selective Routers and ALI hosts, system interoperability is required to maximize consumer choice and promote network efficiencies. Does AT&T agree with witness Hicks? Please explain why or why not.

RESPONSE: Mr. Hicks' is incorrect in his assumptions. AT&T believes that system interoperability may be accomplished in several ways. This is accomplished through switch translations for the variables required to establish the trunking and routing between networks. This is always required in order to deliver the signaling, e.g., ANI digits to the Selective Router and ALI host systems. Any time calls are delivered and successfully complete from one switch to another there is system interoperability. When one switch signals to another switch for call set-up or any other part of call processing, there is system interoperability. Calls will not complete at all between switches without system interoperability. AT&T Witness Ms. Pellerin, on pages 5-6 of her direct testimony, is not testifying about system interoperability, but whether or not it is necessary for Intrado to enter into an ICA or a Commercial Agreement in order to compete for 911 services.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to Revised Exhibit PHP-3, page 2 of 2, attached to witness Pellerin's rebuttal testimony. This exhibit indicates that certain contract language disputes will be eliminated from arbitration using the 9-state template. Footnote 1 states that "other contract provisions remain in dispute for these issues, thus the issues are not completely eliminated from the arbitration." Please indicate what specific contract provisions remain in dispute for each issue identified in Revised Exhibit PHP-3, page 2 of 2.

RESPONSE: Please refer to Revised Exhibit PHP-2 for the contract provisions remaining in dispute for Issues 3b, 4b, 4c, 7a, 7b, 9, 13a, and 29a if the 9-state template is utilized. Since that exhibit was prepared, the parties have resolved the contract provisions reflected for Issue 7(b), which includes NIM Sections 1.26 and 3.41. In addition, AT&T has offered to withdraw the language to which Intrado objected in GTC Section 44.6.1.2 for Issue 3(b), but Intrado has not responded to AT&T's concession on this language.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please refer to AT&T witness Pellerin's rebuttal testimony, page 5, lines 8-9. Please explain in what ways Intrado intends to provide 911 services differently than AT&T.

RESPONSE: AT&T is not privy to the particular specifications of Intrado's emergency services. Based on Intrado's testimony and other available information, it appears that Intrado intends to provide emergency services utilizing a different network design than is used by AT&T. For example, Intrado operates a nation-wide network with a limited number of switches. (Intrado response to RFI No. 33c) Intrado does not have end offices or end users of its own, but intends to aggregate 911 calls originated by end users of other carriers, including wireless and VOIP providers. In addition, Intrado's preferred network design would require AT&T to reprogram its end offices and establish facilities and trunking to route 911 traffic directly to Intrado rather than utilize the existing network infrastructure. As Mr. Neinast testifies for Issue 3a, this unnecessarily introduces labor intensive and error prone procedures.

Intrado's tariff also demonstrates variations between its emergency services and those offered by AT&T. For instance, Intrado's tariff offers service not only to local governmental customers (PSAPs), but also to non-governmental customers, including wireless carriers, telematic and VOIP providers, and any other customer desiring aggregation of end user-originated 911 calls. In contrast, AT&T's tariffed E911 service is limited to local governmental agencies for the receipt of emergency calls.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please list the source documents supporting the rates shown on AT&T's 9-state pricing attachment.

RESPONSE: AT&T Florida's generic rates for local interconnection were established by the Commission in its May 21, 2001 decision in Docket No. 990469 and its September 27, 2002 decision in Docket No. 990649A.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Has AT&T made a review to determine the changes that would be needed if the Commission were to determine to utilize a 13-state template rather that the 9-state template? If no, why not? If yes, please list all provisions that need to be changed.

RESPONSE: AT&T has not undertaken the significant effort to identify the changes that would be necessary if the Commission ordered the use of the 13-state template for Intrado's ICA. In her rebuttal testimony (pp. 13-14), Ms. Pellerin indicated some of common items that would require review and modification for porting an ICA from 13-state to 9-state (or vice versa). AT&T's personnel that evaluate and implement porting requests are focused on those legitimate requests. It would be an inefficient utilization of AT&T's resources to perform the significant exercise to identify changes to its 13-state template for Intrado's use in Florida (which is not a porting request) by redirecting those resources from evaluating legitimately ported ICAs. Importantly, Intrado has not sought to port an entire effective interconnection agreement, as merger commitment 7.1 requires. Intrado acknowledges as much in that it has abandoned its position, relied on in its arbitration petition, that AT&T is obligated by the merger commitments to utilize the 13-state template in Florida. Furthermore, because a Commission order to utilize the 13-state template in Florida would not be based on AT&T's merger commitments, AT&T's revisions (which would be extensive in any event) would not be limited to the parameters set forth in the merger commitments.

Intrado's witnesses state that because the parties have continued to negotiate the 13-state language for Ohio, the same language negotiated for Ohio should automatically apply to Florida. AT&T disagrees. AT&T was more than willing to continue negotiations with Intrado based on the 9-state language, which negotiations began before Intrado filed for arbitration, but Intrado refused.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please refer to AT&T witness Pellerin's rebuttal testimony, page 6, footnote 8. Please explain why AT&T does not charge for interconnection trunks in the 13-state region but does in the 9-state region.

RESPONSE: Ms. Pellerin has deleted the portion of the last sentence in her rebuttal testimony, page 6, footnote 8 that referenced AT&T's interconnection trunk charges in its 13-state region, making this question moot. Specifically, footnote 8 now reads as follows:

> AT&T's 9-state ICA was provided with its response to Intrado's arbitration petition. This is another example of a situation where AT&T's 13-state standard terms and conditions are inappropriate for a 9-state agreement~~, since AT&T does not charge for interconnection trunks in the 13-state region~~.

However, AT&T's price structures and rates vary by state based on commission proceedings in each state. Since what is now AT&T was five different companies when the Act was passed in 1996, each of those companies independently proposed its own price structures when rate-setting proceedings were conducted. Thus, price structures within an AT&T region (based on the pre-merger company) are generally the same, but there are differences between regions. While AT&T does impose charges for interconnection trunks in the 13-state region, the rate structures in those states are different than in the 9-state region.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please refer to AT&T witness Pellerin's rebuttal testimony, page 8, lines 8-10. Is it AT&T's position that the rates should be reciprocal, as well as the pricing terms and conditions? Please explain.

RESPONSE: Yes, but only to the extent the services provided are the same. For example, Intrado may decide to lease entrance facilities from AT&T, and AT&T would charge for that. But if AT&T is not obtaining entrance facilities from Intrado, Intrado's charges should not include entrance facilities. The parties' trunk (port) rates should be the same because they provide comparable functionality. Intrado should not be entitled to assess a commercial rate on AT&T when AT&T's rate to Intrado is subject to TELRIC pricing. If Intrado believes a commercial rate is appropriate, it should negotiate for a commercial agreement.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please refer to AT&T's response to Staff's 1st Set of Interrogatories, No. 9, regarding Issue 23.

a. What is the 13-state language that was resolved between the parties in the context of negotiations in Ohio?

b. What is AT&T's specific objection to agreeing to the same language agreed to in Ohio, other than it is part of a 13-state template?

RESPONSE:

a. The parties agreed to the following 13-state language for Ohio in GTC Section 6.3.2 (a dispute remains regarding capitalization of "end user"):

> For any CESTC Company Code Change, CESTC must submit a service order changing the OCN/ACNA for each ~~e~~End ~~u~~User record and/or a service order for each circuit ID number, as applicable. CESTC shall pay the appropriate charges for each service order submitted to accomplish a CESTC Company Code Change; such charges are contained in the Appendix Pricing, Schedule of Prices. In addition, CESTC shall pay any and all previously approved charges required for re-stenciling, re-engineering, changing locks and any other work necessary with respect to Collocation, as determined on an individual case basis.

b. The language in GTC Section 6.3.2 above is part of a larger section addressing company code changes; this section does not stand alone. In addition, revisions to the 13-state generic language offered to Intrado, which resulted in the language quoted above, were made based on specific procedures in Ohio. AT&T has not evaluated the procedures in Florida to determine if it could offer the same language there. There is no comparable language in the 9-state template.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please refer to AT&T's response to staff Interrogatory 10 regarding Issue 29(a).

a. In response to staff Interrogatory 10(a), AT&T asserts that the standard industry practice for rounding usage for carrier billing is to the next whole minute. However, in response to Interrogatory 10(b), AT&T states that there is no published industry standard regarding rounding of usage for carrier billing. If there is no published industry standard, how is AT&T's practice considered an industry standard?

b. Why does AT&T use jurisdictional reporting factors to bill reciprocal compensation in the 9-state region rather than actual usage?

RESPONSE:

a. There is a difference between standard industry guidelines, which are published, and standard industry practice. Standard industry practice refers to common behavior in the industry. In the case of intercarrier usage rounding, there are no formal published standard industry guidelines. Rather, it is standard practice to round usage to the next whole minute. Mr. Hicks suggests that AT&T's standard rounding practice "does not reflect standard industry norms or new technologies that have the ability to measure in increments less than one minute or less than one mile." (Intrado response to Interrogatory No. 14) AT&T's standard practice of rounding usage to the next whole minute is the norm for a legacy network such as AT&T's.

b. AT&T utilizes jurisdictional reporting factors to bill reciprocal compensation to CLECs due to current switch limitations for usage recording. AT&T does not currently record usage in sufficient detail in the 9-state region to render reciprocal compensation bills based on actual usage data. AT&T should not be required to upgrade its switches and billing systems simply to accommodate Intrado's desire for 6 second usage rounding – especially considering that 1)

Intrado does not intend to offer local exchange service utilizing its own switches (and will therefore have no usage subject to reciprocal compensation); 2) the financial impact to Intrado would be *de minimus*, even if Intrado did offer local service; and 3) the minimal increase to AT&T's reciprocal compensation bills to Intrado (based on whole minute rounding) would be offset by similar increases in Intrado's reciprocal compensation bills to AT&T.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Would AT&T agree to Intrado's proposed additional language to Pricing Section 1.10.1 if it were modified to state that the rates are either mutually agreed to by both parties or the parties accept the rates the Commission approves? If no, why not?

RESPONSE: Yes, to the extent the Commission orders AT&T to use the 13-state template for Intrado's ICA (Issue 2).

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Regarding AT&T's proposed definition of Section 251(b)(5) Traffic, Intrado asserts in its response to staff Interrogatory 8(c) that the FCC's ISP Remand Order and Section 51.703 do not require that the originating party and terminating party be located in the "same ILEC Local Exchange Area" or in different areas that are subject to an EAS arrangement. Additionally, Intrado asserts that the FCC has determined that compensation should be based on the telephone number, not the physical location of the calling and called parties. Given this, please explain why the ICA should contain the qualifications AT&T proposes.

RESPONSE: In responding to staff Interrogatory 8(c) to Intrado, Ms. Clugy cites to FCC rule 51.703 in support of her assertion that the FCC does not require originating and terminating subscribers to be in the same local (or extended local) calling areas for traffic to be subject to Section 251(b)(5). However, Ms. Clugy neglects to consider rule 51.701(b)(1), which specifically excludes interexchange services from reciprocal compensation. *See* AT&T response to Interrogatory No. 54.

Ms. Clugy's assertion that the FCC has determined that intercarrier compensation is based solely on the originating and terminating telephone numbers, and not the physical location of the calling and called parties is equally misleading. The order she cites is an arbitration order specific to the state of Virginia, not a general FCC pronouncement. In fact, other state commissions, including Florida, have previously determined that it is the end users' physical locations and not their telephone numbers that dictate the proper intercarrier compensation.

In its order regarding intercarrier compensation, the Florida Commission concluded that:

> We believe that a comparison of NPA/NXXs is used as a *proxy* for determining the actual physical location of the particular customer being called. In other words, the NPA/NXX provides a reasonable presumption of the physical location of a customer as being within the calling area to which the NPA/NXX is homed.

> Therefore, carriers have been able to determine whether a call is local or toll by comparing the NPA/NXXs of the calling and called parties. However, this presumption may no longer be valid in an environment where NPA/NXXs are disassociated from the rate centers to which they are homed.
>
> We believe that the classification of traffic as either local or toll has historically been, and should continue to be, determined *based on the end points of a particular call.* We believe this is true regardless of whether a call is rated as local for the originating end user (e.g., 1-800 service is toll traffic even though the originating customer does not pay the toll charges).[1] (Emphases added)

Similarly, the Connecticut Department of Public Utility Control ("DPUC") determined that foreign exchange ("FX") services[2] are interexchange services.[3] The DPUC reaffirmed its prior conclusion that:

> ... FX service was an interexchange service and not eligible for mutual compensation because calls must

[1] Docket No. 000075-TP, *Investigation into appropriate methods to compensate carriers for exchange of traffic subject to Section 251 of the Telecommunications Act of 1996*, Order No. PSC-02-1248-FOF-TP, September 10. 2002 at page 30.

2 AT&T and Intrado have agreed in 13-state IC Section 6.2 that: "Foreign Exchange (FX) services are retail service offerings purchased by FX customers which allow such FX customers to obtain exchange service from a mandatory local calling area other than the mandatory local calling area where the FX customer is physically located, but within the same LATA as the number that is assigned. FX service enables particular end-user customers to avoid what might otherwise be toll calls between the FX customer's physical location and customers in the foreign exchange. 'FX Telephone Numbers' are those telephone numbers with rating and routing point that are different from those of the geographic area in which the End User is physically located."

[3] Connecticut Docket No. 01-01-29RE01, *DPUC Investigation of the Payment of Mutual Compensation for Local Calls Carried Over Foreign Exchange Service Facilities – FCC Verizon Order*, decision dated November 13, 2002. ("CT FX Decision")

> originate and terminate in the same local service area where the originating end user was physically located. ... [and that] the payment of mutual compensation be limited to local calls that originate and terminate within the caller's local calling area.[4]

AT&T and Intrado have agreed to language in 13-state IC Section 6.2.3 that states:

> FX Traffic is not Section 251(b)(5) Traffic and instead the transport and termination compensation for FX Traffic is subject to a Bill and Keep arrangement in AT&T-OHIO.

The Parties agreed-upon terms and conditions related to FX services would be nonsensical if intercarrier compensation was solely based on telephone number assignment. AT&T's definition of Section 251(b)(5) traffic properly reflects that reciprocal compensation applies based on the physical location of the originating and terminating participants to a call.

RESPONSE PROVIDED BY: P.H. Pellerin

4 CT FX Decision, page 5.

REQUEST: Regarding AT&T's proposed definition for ISP-Bound Traffic, please identify all FCC orders (Order number, docket number, and release date) in which the term has been defined with respect to originating and terminating points.

RESPONSE: In its ISP Remand Order at paragraph 1, the FCC stated its intention to reconsider "the proper treatment of intercarrier compensation of telecommunications traffic delivered to Internet Service Providers (ISPs)." The FCC properly concluded that ISP-bound traffic is not subject to reciprocal compensation. However, the FCC also concluded in paragraph 90 that:

> ... we see no reason to impose different rates for ISP-bound and voice traffic. The record developed in response to the *Intercarrier Compensation NPRM* and the *Public Notice* fails to establish any inherent differences between the costs on any one network of delivering a voice call to a local end-user and a data call to an ISP. Assuming the two calls have otherwise identical characteristics (*e.g.*, duration and time of day), a LEC generally will incur the same costs when delivering a call to a local end-user as it does delivering a call to an ISP. *We therefore are unwilling to take any action that results in the establishment of separate intercarrier compensation rates, terms, and conditions for local voice and ISP-bound traffic.* (emphasis added, footnote omitted)

It is appropriate, therefore, to apply the same qualifications to ISP-bound traffic as applied to Section 251(b)(5) traffic.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Does AT&T's proposed definition for Switched Access Traffic encompass interconnected VoIP services? If affirmative, please explain if AT&T's language goes beyond the parameters of the current FCC rules, given that the FCC has not yet determined whether or not interconnected VoIP services are telecommunications or information services or whether interconnected VoIP services are subject to switched access charges.

RESPONSE: Yes. The FCC has a "general policy that all users of local exchange access should pay for the use of those [local access] facilities."[5] This effectively applies access charges to all interexchange services that originate or terminate on the PSTN. Applying access charges to interexchange IP-PSTN traffic is fully consistent with the FCC's statement in the *IP-Enabled Services NPRM* that "[a]s a policy matter, we believe that any service provider that sends traffic to the PSTN should be subject to similar compensation obligations, irrespective of whether the traffic originates on the PSTN, on an IP network, or on a cable network. We maintain that the cost of the PSTN should be borne equitably among those that use it in similar ways."[6] By adopting AT&T's proposed contract language, the Commission will preserve the regulatory status quo for intercarrier compensation until the FCC completes its *IP-Enabled Services NPRM.* Thus, until the FCC issues further rules specific to IP-PSTN traffic, the Commission should follow the guidance of the FCC in its NPRM and adopt AT&T's definition of Switched Access Traffic.

RESPONSE PROVIDED BY: P.H. Pellerin

5 *In the Matter of WATS Related and Other Amendments of Part 69 of the Commission's Rules*, 64 Rad. Reg. 2d (P & F) 503, 3 F.C.C.R. 496, 3 FCC Rcd. 496, 1988 WL 487700, released February 1, 1988; CC Docket No. 86-1 (F.C.C.), ¶ 3.
6 *IP-Enabled Services NPRM*, WC Docket No. 04-36, FCC 04-28, ¶61.

REQUEST: Please refer to the rebuttal testimony of AT&T witness Pellerin, pages 15 and 16, lines 21-25 and 1-3, respectively. If the Commission concludes that the 9-state template is the proper foundation for the parties' ICA in Florida, please explain why it would be inappropriate to import the language from the ten issues (i.e., 18a-b, 20, 22, 23, 25b-d, 33, and 35) for which the parties have no content dispute.

RESPONSE: The 13-state language negotiated in the above-referenced issues[7] should be treated no differently than all of the 13-state language for which Intrado raised no dispute. The fact that Intrado initially objected to AT&T's language and the parties were able to resolve their differences regarding that language for Ohio does not make that language appropriate for Florida. It would be inconsistent to require the parties to use the 9-state template as the basis for their Florida ICA and then require certain 13-state language be imported to Florida simply because the parties at one time had a disagreement with that language for Ohio and subsequently resolved their differences.

RESPONSE PROVIDED BY: P.H. Pellerin

[7] Since the preparation of Ms. Pellerin's rebuttal testimony, the parties have also resolved the 13-state language dispute for Issue 25(a).

REQUEST: For purposes of the following request, please refer to the rebuttal testimony of AT&T Florida witness Pellerin, page 14, lines 22 through page 15, lines 19.

a. Have Intrado and AT&T reached agreement regarding the term for the interconnection agreement in Florida?

b. If the response to interrogatory (a) is negative, which part of Issue 18a remains in dispute ?

c. Have Intrado and AT&T reached agreement on the notice that Intrado should provide to AT&T with respect to a successor ICA?

RESPONSE:

a. Yes.

c. See part a.

d. Yes. If the 13-state template is used, the parties have agreed that Intrado has 10 days to respond to an AT&T notice of ICA expiration and indicate whether or not Intrado seeks to negotiate a new ICA. (Intrado had previously disputed the 10-day requirement to respond in Ohio.) If the 9-state template is used, because there are no notice provisions with respect to a successor ICA, there is nothing to dispute.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please list any applicable federal or state rules or provisions of the Telecommunications Act that supports AT&T Florida's contention that language for its ordering services from Intrado should be included in a commercial agreement instead of in a Section 251(c) agreement.

RESPONSE: Unless the parties mutually agree otherwise, products and services included in a Section 251(c) interconnection agreement should be limited to that which is required by Section 251(c) of the Act, i.e., telephone exchange service and exchange access. Therefore, the ordering of services from Intrado would only be included in an ICA to the extent the services ordered were also included in the ICA. *See also* AT&T's response to Interrogatory No. 52.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Referring to the rebuttal testimony of Intrado witness Clugy, page 3, lines 5-17, have AT&T and Intrado agreed to language regarding how Embarq[8] orders services from Intrado? If so, does the remainder of the dispute center around the type of agreement (commercial versus Section 251(c)) in which such language should appear?

RESPONSE: AT&T Florida does not agree to Intrado's proposed language for ordering services from Intrado. It is AT&T Florida's position that ordering services should follow established ordering systems and processes that have been agreed to by the entire industry. Intrado's proposed system is inadequate and would create manual work-steps that could create errors in order processing and possible delays in establishing service, neither of which benefits either party.

AT&T Florida's witness Ms. Pellerin has provided testimony regarding Issue 1 and on the issue of whether or not Intrado's agreement with AT&T Florida should be a commercial agreement or a Section 251 (c) agreement. It is AT&T Florida's position that this is a separate issue from the issue of ordering services. Nevertheless, AT&T Florida has provided language and testimony out of an abundance of caution if the Commission requires a Section 251 ICA between Intrado and AT&T Florida for the services Intrado seeks to offer.

RESPONSE PROVIDED BY: Mark Neinast

[8] AT&T counsel has verified with Staff that Staff meant "AT&T", rather than "Embarq".

REQUEST: For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 15, lines 3-15. Please identify the language agreed upon in Ohio concerning the interconnection agreement's audit procedures.

RESPONSE: The parties have agreed to the following 13-state language for their Ohio ICA. The parties have a remaining dispute in Section 13.3.1 regarding the inclusion of the term "customers" in addition to "End Users."

13. AUDITS – Applicable in AT&T-OHIO

13.1 Subject to the restrictions set forth in Section 22 "Confidentiality" and except as may be otherwise expressly provided in this Agreement, a Party (the "Auditing Party") may audit the other Party's (the "Audited Party") books, records, data and other documents, as provided herein, once annually, with the audit period commencing not earlier than the date on which services were first supplied under this Agreement ("service start date") for the purpose of evaluating (i) the accuracy of Audited Party's billing and invoicing of the services provided hereunder and (ii) verification of compliance with any provision of this Agreement that affects the accuracy of Auditing Party's billing and invoicing of the services provided to Audited Party hereunder. Notwithstanding the foregoing, an Auditing Party may audit the Audited Party's books, records and documents more than once annually if the previous audit found (i) previously uncorrected net variances or errors in invoices in Audited Party's favor with an aggregate value of at least five percent (5%) of the amounts payable by Auditing Party for audited services provided during the period covered by the audit or (ii) non-compliance by Audited Party with any provision of this Agreement affecting Auditing Party's billing and invoicing of the services provided to Audited Party with an aggregate value of at least five percent (5%) of the amounts payable by Audited Party for audited services provided during the period covered by the audit.

13.1.1 The scope of the audit shall be limited to the period which is the shorter of (i) the period subsequent to the last day of the period covered by the audit which was last performed (or if no audit has been performed, the service start date and (ii) the twelve (12) month period immediately preceding the date the Audited Party received notice of such requested audit, but in any event not prior to the service start date. Such audit shall begin no fewer than thirty (30) calendar days after Audited Party receives a written notice requesting an audit and shall be completed no later than thirty (30) calendar days after the start of such audit.

13.1.2 Such audit shall be conducted by an independent auditor acceptable to both Parties. Auditing Party shall cause the independent auditor to execute a nondisclosure agreement in a form agreed upon by the Parties.

13.1.3 Each audit shall be conducted on the premises of the Audited Party during normal business hours. Audited Party shall cooperate fully in any such audit and shall provide the auditor reasonable access to any and all appropriate Audited Party employees and any books, records and other documents reasonably necessary to assess (i) the accuracy of Audited Party's bills and (ii) Audited Party's compliance with the provisions of this Agreement that affect the accuracy of Auditing Party's billing and invoicing of the services provided to Audited Party hereunder. Audited Party may redact from the books, records and other documents provided to the auditor any Audited Party information that reveals the identity of **customers or** End Users of Audited Party.

13.1.4 Each Party shall maintain reports, records and data relevant to the billing of any services that are the subject matter of this Agreement for a period of not less than twenty-four (24) months after creation thereof, unless a longer period is required by Applicable Law.

13.1.5 If any audit confirms any undercharge or overcharge, then Audited Party shall (i) promptly correct any billing error, including making refund of any overpayment by Auditing Party in the form of a credit on the invoice for the first full billing cycle after the Parties have agreed upon the accuracy of the audit results and (ii) for any undercharge caused by the actions of the Audited Party, immediately compensate Auditing Party for such undercharge, and (iii) in each case, calculate and pay interest as provided in Section 10.1 for the number of calendar days from the date on which such undercharge or overcharge originated until the date on which such credit is issued or payment is made and available.

13.1.6 Except as may be otherwise provided in this Agreement, audits shall be performed at Auditing Party's expense, subject to reimbursement by Audited Party of one-quarter (1/4) of any independent auditor's fees and expenses in the event that an audit finds, and the Parties subsequently verify, a net adjustment in the charges paid or payable by Auditing Party hereunder by an amount that is, on an annualized basis, greater than five percent (5%) of the aggregate charges for the audited services during the period covered by the audit.

13.1.7 Any disputes concerning audit results shall be referred to the Parties' respective personnel responsible for informal resolution. If these individuals cannot resolve the dispute within thirty (30) calendar days of the referral, either Party may request in writing that an additional audit shall be conducted by an independent auditor acceptable to both Parties, subject to the requirements set out in Section 13.1. Any additional audit shall be at the requesting Party's expense.

13.2 Intentionally Omitted.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: If this Commission ultimately recommends that a third-party auditor, as opposed to in-house auditors, should be used, under what terms and conditions should the auditor be selected?

RESPONSE: The Commission does not need to consider whether the parties should use third-party auditors or in-house auditors or under what terms and conditions, as there is no dispute regarding this matter. Ms. Clugy's direct testimony on page 15 regarding the advantages and disadvantages of various auditing procedures is moot and only serves as a distraction from the real issue – which is whether to use the 9-state or the 13-state template as the basis for the parties' ICA.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: What are the advantages and disadvantages to utilizing third-party auditors for handling interconnection billing disputes?

RESPONSE: *See* AT&T response to Interrogatory No. 76.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Does AT&T's proposed language provide for any limitation as to the frequency of audits that one party may request in the proposed ICA?

RESPONSE: *See* AT&T response to Interrogatory No. 76.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of Intrado witness Spence-Lenss, page 18, lines 16-20. Are properly disputed charges, where funds are placed into an interest-bearing escrow account prior to the bill's due date, still considered delinquent, and constitute grounds for disconnection? Please explain.

RESPONSE: No. Moreover, there is no dispute regarding grounds for disconnection based on properly disputed charges. Ms. Spence-Lenss' direct testimony on page 18 regarding the grounds for disconnection based on disputed charges is moot and only serves as a distraction from the real issue – which is whether to use the 9-state or the 13-state template as the basis for the parties' ICA.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of Intrado witness Spence-Lenss, page 19, lines 10-14. By way of clarification, please indicate the beginning point for the 10 (or 15) business day cycle for payment remission.

RESPONSE: The cycle for payment remission begins following receipt of the billing party's notice of unpaid charges. Importantly, there is no dispute regarding this time interval. Ms. Spence-Lenss' direct testimony on page 19 regarding the payment period following notice of non-payment is moot and only serves as a distraction from the real issue – which is whether to use the 9-state or the 13-state template as the basis for the parties' ICA.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the direct testimony of Intrado witness Spence-Lenss, page 20, lines 4-7. Please describe how the invoice payment process will be conducted when an automatic clearinghouse (ACH) is used.

RESPONSE: The automated clearinghouse process utilizes electronic funds credit transfers for payment remittance. Importantly, there is no dispute regarding use of this process. Ms. Spence-Lenss' direct testimony on page 20 regarding use of the automated clearinghouse process is moot and only serves as a distraction from the real issue – which is whether to use the 9-state or the 13-state template as the basis for the parties' ICA.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please indicate AT&T's proposed language regarding the automatic clearinghouse process.

RESPONSE: AT&T proposes that the 9-state template be utilized for the parties' ICA. In Attachment 7 Billing, AT&T proposes the following language regarding electronic payments (AT&T will agree to reciprocal language for its payments to Intrado):

1.4 Payment Responsibility. Payment of all charges will be the responsibility of Intrado. Intrado shall pay invoices by utilizing wire transfer services or automatic clearing house services.

The parties have agreed to the following 13-state language in the General Terms and Conditions for their Ohio ICA:

10.3 The Parties shall make all payments to the other Party via electronic funds credit transfers through the Automated Clearing House Association (ACH) network to the financial institution designated by that Party. Remittance information will be communicated together with the funds transfer via the ACH network. CESTC must use the CCD+ or the CTX transaction set. CESTC and AT&T-OHIO will abide by the National Automated Clearing House Association (NACHA) Rules and Regulations. Each ACH credit transfer must be received by the other Party no later than the Bill Due Date of each bill or Late Payment Charges will apply. Neither Party is liable for any delays in receipt of funds or errors in entries caused by CESTC the other Party or Third Parties, including CESTC's a Party's financial institution. CESTC Each Party is responsible for its own banking fees.

10.3.1 Processing of payments not made via electronic funds credit transfers through the ACH network may be delayed. Each Party is responsible for any Late Payment Charges resulting from the Party's failure to use electronic funds credit transfers through the ACH network.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: For purposes of the following request, please refer to the rebuttal testimony of AT&T witness Neinast, page 3, lines 5-7 and 19-21, regarding Class Marking. Please explain what makes this system so poor, and why it is unreliable, prone to errors and has reliability concerns.

RESPONSE: The implementation of Class Marking is a complex process that not only affects AT&T Florida's network routing of 911 calls, but also service order provisioning and operational support systems for all retail service offerings. Class Marking changes to the network, systems and processes are expensive and labor intensive, and all of the changes to the network must be made prior to any use of the service. Once the network has been modified, then all existing customers will require service order changes to add the Class Marking class of service that routes to the correct PSAP, which is a manual process. This activity will require meticulous attention to detail to determine the correct routing of 911 traffic. The service order changes must be determined by Service Representatives, who are not trained in call routing. Please see the Supplemental Rebuttal testimony of Mark Neinast, filed on Friday, June 13, 2008 for further detail on this subject.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Why is Intrado proposing Class Marking? Please address whether AT&T believes this proposal provides a financial benefit to Intrado.

RESPONSE: Intrado proposes Class Marking to avoid the cost of two selective router charges (one by AT&T Florida and one by Intrado) when an AT&T Florida wire center is split between an Intrado PSAP and an AT&T Florida PSAP. This is purely a proposal based on a competitive and financial benefit to Intrado. However, AT&T Florida's language is fair to both parties and does not favor either carrier, since it is based wholly on the number of access lines serving a PSAP to determine which carrier is the Primary carrier for the split wire center. If Intrado's PSAP serves the majority of access lines for the AT&T Florida split wire center, Intrado's PSAP will only be billed one selective router charge by Intrado, and AT&T Florida's PSAP will be billed by both Intrado and AT&T Florida. Because the accuracy of routing 911 is so critical, it makes no sense to stop using the centralized selective router databases in favor of a troublesome, labor intensive process that is subject to human error.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please explain why AT&T believes provisioning Class Marking would be cost prohibitive to it.

RESPONSE: Class Marking would be cost prohibitive because the burden of the implementation would fall onto AT&T. Every AT&T Florida End Office would need complex switch translations changes for each class of service being offered in Florida, e.g. every variety of residential and business service such as flat rate, blocking 900, toll denial, blocking 900 and toll denial, etc. Once the network was configured, which could take up to a year to implement; all provisioning systems would need to be updated in order to accommodate the necessary changes. Training for Service Representatives will be necessary so they may know which End Offices will need to have the special handling required for Class Marking. Also, Service Representatives will need to know within each split wire center which parts of each End Office will need to be routed to which PSAP. All of this is currently performed by the existing selective router database in a mechanized flow with no human intervention to determine which PSAP will receive 911 calls. Furthermore, Intrado's proposal does not provide AT&T Florida with any mechanism to recover the costs associated with Class Marking.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to Intrado witness Hicks' rebuttal testimony on page 18, lines 13-16. Is witness Hicks correct when he asserts that "AT&T's proposed 911 Appendix and Interconnection Trunking Requirements ('ITR') Appendix sets forth no terms and conditions for such multiple interconnection points for 911"? Please explain why or why not.

RESPONSE: Mr. Hicks is correct in that neither Appendix 911 nor Appendix ITR is used to determine points of interconnection ("POI") requirements for 911 – but neither was intended for such use. They are for the purpose of trunk groups and routing of traffic. POI requirements for 911 are discussed in Appendix 911 NIM (Network Interconnection Methods). However, AT&T Florida has not required Intrado to implement multiple POIs, but has recommended to Intrado that they do. Intrado has consistently stated during negotiations that they are allowed to have a single POI, per the FCC's Order; however, AT&T Florida recommends that Intrado utilize multiple POIs in order to establish and maintain network redundancy and diversity.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to Intrado witness Hicks' rebuttal testimony on page 18, lines 16-18. Is witness Hicks correct when he asserts that "given that generally only a single selective router serves a given AT&T territory, it is difficult to establish diverse and redundant interconnection points at a single switch"? Please explain why or why not.

RESPONSE: Yes, it is difficult to establish and maintain network diversity through the use of a single POI, at a single switch location. This item is directly related to Item No. 86 concerning single POI. Diverse and redundant facilities are achievable, and while AT&T Florida has not requested a requirement be made for multiple POIs, AT&T Florida does recommend Intrado utilizes multiple POIs in its network deployment.

AT&T Florida proposes that Intrado's POI utilize the existing diverse facilities at the selective router location and any additional POIs be negotiated to achieve the highest level of diversity possible. AT&T Florida believes that network diversity is one of the most critical aspects of 911 networks. In its Post Katrina Order[9], the FCC has asked all carriers to review their diversity for 911 networks and has established criteria for this diversity for logical, physical or mostly physical. Every carrier, including AT&T Florida, has a large stake in maintaining the existing network diversity. If Intrado selects multiple POIs, which it should, one of the POIs should include the selective router central office building to ensure network diversity. The routing of 911 traffic is beyond the basic requirements of entry level service providers, but is at the heart of the safety of the general public at large.

RESPONSE PROVIDED BY: Mark Neinast

[9] *In the Matter of Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks.* FCC Order 07-107 at ¶ 20.

REQUEST: Please refer to Intrado witness Hicks' rebuttal testimony on page 18, lines 20-23 for the following questions.

a. Is witness Hicks correct when he asserts that AT&T maintains ten selective routers in Florida? If so, please list by county and identify the street address(es). If not, please identify AT&T's selective routers in Florida and list by county and identify the street address(es).

b. Is witness Hicks correct when he asserts that "only [the] Brevard County [selective router] is served by dual tandems"? Please explain why or why not.

c. Please explain the benefits of dual tandems at a selective router and what conditions exist that would necessitate dual tandems at a selective router.

d. Is witness Hicks correct when he asserts that because of the dual tandems in Brevard County, only Brevard County "would be conducive to establishing multiple POIs for the exchange of E911 services traffic"? Please explain why or why not.

RESPONSE:

a. Yes. The specific location of AT&T's selective routers is confidential information. AT&T Florida is providing this information subject to a Notice of Intent filed with this response.

County Street Address

b. No, Brevard County is served by one selective router. Mr. Hicks' testimony is unclear, but it appears that he believes that Intrado would implement POIs on a county basis, rather than on a LATA basis. If Intrado were attempting to establish POIs at the selective router location, then the LATA is the correct reference point, and not county.

c. AT&T is unaware of the existence of dual tandems at a selective router. However, there are limited instances of PSAPS deploying dual selective routers (tandems) that utilize two synchronized switches performing identical selective router functions such that if one incurs an outage, the other automatically routes all 911 calls.

Such dual selective router arrangement is rare and is ordered by PSAPs that want the highest level of redundancy possible at the switching level. This is the most expensive 911 network configuration to build because not only the facilities redundant, but the selective router switch itself, is also redundant. Because of the expense and the fact that that the PSTN Class 5 switches are

extremely reliable, there are not very many ordered throughout the nation. Most PSAPs consider this level of redundancy as cost prohibitive and rely on the fact that the Class 5 End Offices are designed with internal redundancy specifications that result in less than one hour of down-time over a 40 year period.

d. No, Mr. Hicks is not correct. The network configuration used in Brevard County is not related to multiple POIs. Dual selective routers provide redundancy at a switching level, as opposed to facility (POI) redundancy and diversity. A POI is where AT&T Florida's and Intrado's networks come together at a facility level where the fiber cables meet up at a point of hand-off or demarcation, and each carrier is responsible for the facilities on their respective side of the POI. A POI can be at any of the AT&T Florida central office buildings, but since this is 911 emergency services traffic, AT&T Florida strongly opposes placing a POI at indiscriminate locations. Intrado may want to establish a POI at a place that is more economical for Intrado, but there are certain AT&T Florida central office buildings that are categorized as hubbing offices and are the major intersections for fiber facilities and provide a logical point for a POI. Other carriers typically also use these central offices for their POIs, which will be important if these carriers must interconnect with Intrado for 911 services.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to Intrado witness Hicks' rebuttal testimony on page 19, lines 1-2. Is witness Hicks correct when he asserts that the "AT&T 911 Appendix and ITR make no exceptions for multiple POIs for E911 or dual E911 tandem configurations"? Please explain why or why not.

RESPONSE: Mr. Hicks is correct that AT&T Florida has made no requirements for either multiple POIs or dual E911 tandem configurations; however, he is once again referencing the wrong document for 911 POIs, which are defined in the 911 NIM Appendix. There is nothing that precludes Intrado from establishing multiple POIs or dual E911 tandem configurations. AT&T Florida's proposed language in 911 NIM Section 5.3 addresses adding switches to the network and 911 NIM Section 5.1 addresses installing the necessary facilities to establish the physical interconnection. Once the physical network components have been installed, the 911 Appendix can be used to establish the necessary trunking for the routing of traffic. Due to the extensive work required to implement interconnection and routing to a new switch, AT&T Florida would prefer its proposes a 120-day interval, rather than a mere 30 days Intrado proposes in 911 NIM Section 5.3 for adding switches.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 8, lines 22-23. If Intrado becomes the 911 provider, is it ever possible for there to be traffic from Intrado to AT&T? If not, please explain why. If so, under what circumstances, and approximately how much and what types of traffic?

RESPONSE: Yes, it is possible for there to be traffic from Intrado to AT&T if Intrado becomes the 911 provider. There at least two possibilities of Intrado delivering calls to AT&T. (1) Where AT&T Florida end users are served in a split wire center and Intrado is the Primary selective router, then Intrado will send calls to AT&T Florida's secondary selective router. (2) Any PSAP-PSAP call transfers. AT&T Florida is uncertain how much traffic these scenarios would entail.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 8, lines 25-26 for the following questions.

a. What are the "several subsequent FCC Orders," and the relevant paragraphs, referred to on line 26?

b. Would the provision of 911 service to PSAPs by Intrado in any way impact the rules implementing Section 251(c) and the "several subsequent FCC Orders"? Please explain why or why not.

RESPONSE: a. The FCC Orders and relevant paragraphs are: First Report and Order ¶¶ 177-212, TRO ¶¶ 365-369, and TRRO¶¶ 136-141.

b. No, the provision of 911 service to PSAPs by Intrado does not impact the rules implementing Section 251(c) because there are no references in these orders that addresses a competitive carrier providing 911 services. Furthermore, because AT&T does not believe 911 services are local exchange or exchange access services, AT&T does not believe Section 251(c) applies to these services.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 9, line 2. Does AT&T believe that Intrado wants to be treated as an ILEC? If yes, please provide examples, citing to Intrado's testimony.

RESPONSE: AT&T believes that Intrado wants to be treated both as an ILEC and a CLEC, depending upon which is more beneficial for Intrado at the time. For purposes of facility meet points at an exchange area boundary, Intrado suggests it be treated as an ILEC – even though Intrado is not an ILEC and has no exchange boundaries at which it could meet AT&T. In Mr. Hicks' direct testimony at page 21, lines 19-21, he states, "Intrado Comm seeks to mirror the type of interconnection arrangements that AT&T has used historically with other ILECs." Also, Mr. Hicks states in his direct testimony at page 23, lines 5-7, "Intrado Comm simply seeks to mirror the type of interconnection arrangements that AT&T and other ILECs have determined to be the most efficient and effective for the termination of emergency calls." On the other hand, Intrado is certificated as a CLEC in Florida and therefore apparently also wishes to interconnect as a CLEC pursuant to Section 251(c).

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 9, beginning at line 10 and continuing to page 10, line 1 for the following questions.

a. Please describe with specificity how Intrado "wants to be treated . . . as though it were an ILEC in other [instances]" (lines 15-18).

b. Please explain with specificity how "Intrado seeks to shift its costs to AT&T Florida . . . ."

RESPONSE: a. When Intrado is the 911 service provider, Intrado proposes that AT&T Florida interconnect within Intrado's network, as if Intrado were an ILEC, e.g. 911 NIM Section 2.2, which states: "***Where CLEC is the Designated E911 Service Provider the POI shall be on the CLEC network and serve as a demarcation point between the facilities that each Party is responsible to provide.***"

b. Intrado proposes a mid-span meet point between AT&T Florida and Intrado's network, similar to an ILEC-ILEC interconnection arrangement. However, ILEC-ILEC networks are typically adjacent where a mid-span meet point is established. Intrado's network may be in another state (or at least in another LATA), which financially does not compare to an adjacent ILEC-ILEC interconnection arrangement as Intrado has proposed.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 10, lines 7-11, for the following questions.

a. Is there ever an instance where a "CLEC's obligation to supply the facilities and equipment necessary to reach the ILEC's network" is less than 100 percent? If so, please provide examples.

b. Please describe with specificity, citing to Intrado's proposed language, where Intrado "seeks to . . . forc[e] AT&T Florida to provide all the facilities and equipment necessary to reach Intrado's network."

RESPONSE: a. No.

b. In 911 NIM Section 2.2, Intrado's proposed language states, ***"Where CLEC is the Designated E911 Service Provider the POI shall be on the CLEC network and serve as a demarcation point between the facilities that each Party is responsible to provide."*** In order for Intrado's language to be appropriate, AT&T Florida would need to be a certificated CLEC requesting interconnection with Intrado as an ILEC.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 10, lines 15-18 for the following questions.

a. Please define "very short" distances.

b. Please define "minimal" costs.

c. Using AT&T's interconnections with other Florida ILECs, please provide at least two examples of "typically very short" distances and "minimal" costs to both ILECs.

d. Are there any Florida ILECs with whom the distances are not "very short"? If so, which ones?

RESPONSE: a. Adjacent ILECs that use mid-span meet points will be required to install facilities to the edge of their exchange area boundary, which is approximately the radius of the local calling area. Each local calling area can vary in size, but an average local transport estimate was established at 14 miles by the Texas Public Utilities Commission in an arbitration between SWBT and AT&T, Docket Number 22315. All ILEC-ILEC interconnections will be within the same LATA, since ILECs are required to hand-off interlata traffic to an interexchange carrier for completion.

b. ILEC-ILEC interconnection arrangements are typically adjacent to each other and the two ILECs equally share the cost of the facilities. Since the carriers are not competing with each other, the proportional costs for the facilities are agreed to outside of Section 251(c).

c. Three examples of interconnection between AT&T Florida and another Florida ILEC are: 1) Starke-Jacksonville, which is 38 miles apart; 2) Indiantown-West Palm Beach, which is 27 miles apart; and

3) Sanderson-Jacksonville, which is 37 miles apart.

d. No, AT&T Florida does not have any ILEC-ILEC interconnections that are not "very short".

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 11, lines 12-16. In this section witness Neinast discusses a mid-span meet as an entrance facility that the CLEC "controls and is not impaired from ordering from third parties." Is it possible for Intrado to order an entrance facility from a third party in order to provision 911 service to PSAPs in AT&T's territory? Please explain why or why not.

RESPONSE: Yes. The FCC acknowledged in TRO and TRRO that CLECs could obtain entrance facilities from third parties and that entrance facilities were not impaired. The FCC states in the TRRO at paragraph 138 "Specifically, entrance facilities are less costly to build, are more widely available from alternative providers, and have greater revenue potential than dedicated transport between incumbent LEC central offices. As we noted in the *Triennial Review Order*, entrance facilities are used to transport traffic to a switch and often represent the point of greatest aggregation of traffic in a competitive LEC's network.[10]"

RESPONSE PROVIDED BY: Mark Neinast

[10] *See Triennial Review Order*, 18 FCC Rcd at 17204-05,¶ 367.

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 12, lines 5-23 for the following questions.

a. Is it AT&T's testimony that Intrado would bear the responsibility to establish multiple POIs on AT&T's network? If so, how many POIs and where should they be located? Please explain.

b. Please provide examples of how Intrado's placement of its single POI at a location other than AT&T's selective router "has the potential for a major FCC Reportable Service Disruption."

RESPONSE: a. Yes, in order to provide diverse facilities for 911 emergency services, multiple POIs are necessary. To date, there has not been a CLEC competing for 911 service. 911 services require additional facility investment for carriers to establish diverse facilities. Intrado's business model is clearly to provide 911 services, rather than local exchange and exchange access services, which do not require the same level of diversity.

Intrado will ultimately determine how many POIs it establishes and AT&T will assist in determining which of AT&T's central offices will have be the best fit for diversity and facility availability. AT&T central offices are designed specifically for telecommunications equipment, with access to back-up power, along with many other positive attributes such as 24x7 monitoring. The current selective router location has diverse facilities from all of AT&T Florida's end offices, as well as any other carrier that is using the AT&T Florida selective router. In each case, the selective router location should always be the first POI decision, followed by an analysis between Intrado and AT&T Florida to determine which AT&T central office will be used for additional POIs.

b. First and foremost, the current 911 service provided today is the gold standard for network reliability. This is due to the efforts that have been made over many years to install and maintain diverse, redundant facilities to the selective router. If Intrado were to provide 911 service to a PSAP, and the POI were at a location other than the selective router, AT&T Florida would be required to disconnect the existing diverse facilities from the selective router location and move them to the new Intrado POI. This rearrangement activity would need to be coordinated carefully and would require a very high degree of accuracy in order issuance and execution.

There are two basic factors to protect against in order to maintain network reliability, human errors and equipment failures. Equipment failures can cause outages and is the reason that diversity and redundancy is built into the 911 network. The first time a piece of equipment is used there is the highest probability of failure. Careful pre-testing can mitigate the possibility that an equipment failure will create an outage. Human error is more difficult to manage, as it requires training, methods and procedures, as well as judgment and execution.

Currently, the 911 network is static, with no work orders to rearrange circuits and re-route traffic. Once orders are issued to establish new circuits or change existing circuits, the possibility for error begins. If the work activity is coordinated well and all personnel have clear understanding, the project has a high probability of success. If there are misunderstandings, changes to orders, miscommunication or the technician(s) is/are inexperienced or untrained, the probability (or potential) of an outage goes up. In any network rearrangement, network service disruptions are undesirable, but with a 911 rearrangement, the consequences can literally be fatal.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 13, lines 3-5. By "building out" is AT&T referring to its building out of facilities to Intrado's second (or more) POIs? Please explain.

RESPONSE: No. The term "building out" was not intended to mean the building of new facilities, but the use of existing facilities at another AT&T central office building. The "building out" would be the ordering of DS1 circuits (or possibly DS3 circuits), followed by the placing of associated trunk orders for the handling of traffic.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 13, lines 11-13. Is there ever an exception to the selective router as the "proper demarcation point"? Please explain why or why not.

RESPONSE: Yes. The exception would be if multiple POIs were utilized. The best initial location for a POI is the selective router location, but if a second, third or more POIs were required, then distributing these POIs would be necessary.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 14, lines 18-19. Please provide citations to where "Mr. Hicks is complaining that Intrado will not know when these changes will occur.

RESPONSE: Mr. Hicks' testimony implies that AT&T has no intention of notifying Intrado of network changes; however, Intrado's language in 911 NIM Section 5.3 proposes a mere 30 days notice, while AT&T's language proposes 120 days notice. AT&T typically notifies carriers at least six months prior to major network changes that will require other carriers to modify trunking to accommodate the change, e.g., a switch replacement.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please refer to AT&T witness Neinast's rebuttal testimony on page 15, lines 23-26. What "industry standards body" exists that would review new protocols and define "ALI interoperability"? If an "industry standards body" exists, does AT&T have any knowledge of new protocols proposed by Intrado or an Intrado-proposed definition of "ALI interoperability"? Please explain.

RESPONSE: The Alliance for Telecommunication Industry Solutions ("ATIS") is the standards body used to resolve interoperability issues between carriers and manufacturers of switching equipment. Below is an excerpt from the ATIS website that describes about ATIS:

> ATIS is committed to providing leadership for, and the rapid development and promotion of, worldwide technical and operations standards for information, entertainment and communications technologies using a pragmatic, flexible and open approach.
>
> ATIS prioritizes the industry's most pressing, technical and operational issues, and creates interoperable, implementable, end to end solutions -- standards when the industry needs them and where they need them.
>
> Over 1,100 industry professionals from more than 300 communications companies actively participate in ATIS' 22 industry committees and incubator solutions programs. ATIS develops standards and solutions addressing a wide range of industry issues in a manner that allocates and coordinates industry resources and produces the greatest return for communications companies.
>
> ATIS creates solutions that support the rollout of new products and services into the communications marketplace. Its standardization activities for wireless and wireline networks include interconnection standards, number portability, improved data transmission, Internet telephony, toll-free access, telecom fraud, and order and billing issues, among others. ATIS is accredited by the American National Standards Institute (ANSI).

AT&T has no knowledge of any new protocols or definition of ALI interoperability as proposed by Intrado. The agreed upon standard for definitions during negotiations for this interconnection agreement was NENA, unless further detail was required and was mutually agreed to by the parties. This term uses two separate definitions that each are defined, but together the meaning is unknown. AT&T rejects the use of the term without a proper definition, which at this time has not been proposed.

DOCUMENTS REQUESTED

REQUEST: Please provide all documents that support your response to Interrogatory No. 17.

RESPONSE: AT&T Florida is providing responsive documents in the form of a CD-ROM. The information is proprietary, and is produced subject to a Notice of Intent that is being filed on this date.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide all documents that support your response to Interrogatory No. 25.

RESPONSE: The responsive documents are attached. These include Attachment 2, Section 1.2 (regarding unbundled network elements) and Attachment 3, Sections 3.3.2 and 4.5 (regarding interconnection) of AT&T Southeast's 9-State Interconnection Agreement that was attached to AT&T's January 15, 2008 Response to Intrado's Petition for Arbitration.

Rates ..... Exhibit A

Rates ..... Exhibit B

ACCESS TO NETWORK ELEMENTS AND OTHER SERVICES

1 Introduction

1.1 Except as set forth in Exhibit 1 hereto, this Attachment sets forth rates, terms and conditions for unbundled network elements (Network Elements) and combinations of Network Elements (Combinations) that AT&T offers to Intrado for Intrado's provision of Telecommunications Services in accordance with its obligations under Section 251(c)(3) of the Act. Additionally, this Attachment sets forth the rates, terms and conditions for other facilities and services AT&T makes available to Intrado (Other Services). Additionally, the provision of a particular Network Element or Other Service may require Intrado to purchase other Network Elements or services. In the event of a conflict between this Attachment and any other section or provision of this Agreement, the provisions of this Attachment shall control.

1.2 The rates for Network Elements, Combinations and Other Services are set forth in Exhibits A and B. If no rate is identified in this Agreement, the rate will be as set forth in the applicable AT&T tariff or as negotiated by the Parties upon request by either Party. If Intrado purchases service(s) from a tariff, all terms and conditions and rates as set forth in such tariff shall apply. A one-month minimum billing period shall apply to all Network Elements, Combinations and Other Services.

1.3 In some cases, Commissions have ordered AT&T to separate its disconnect costs and its installation costs into two separate nonrecurring charges. Accordingly, unless otherwise noted in this Agreement, the Commission ordered disconnect charges will be applied at the time the disconnect activity is performed by AT&T, regardless of whether or not a disconnect order is issued by Intrado. Disconnect charges are set forth in the rate exhibit of this Attachment. Intrado may purchase and use Network Elements and Other Services from AT&T in accordance with 47 C.F.R § 51.309.

1.4 The Parties shall comply with the requirements as set forth in the technical references within this Attachment 2.

1.5 Intrado shall not obtain a Network Element for the exclusive provision of mobile wireless services or interexchange services.

1.6 Conversion of Wholesale Services to Network Elements or Network Elements to Wholesale Services. Upon request, AT&T shall convert a wholesale service, or group of wholesale services, to the equivalent Network Element or Combination that is available to Intrado pursuant to Section 251 of the Act and under this Agreement or convert a Network Element or Combination that is available to Intrado pursuant to Section 251 of the Act and under this Agreement to an equivalent wholesale service or group of wholesale services offered by AT&T

(collectively "Conversion"). AT&T shall charge the applicable nonrecurring switch-as-is rates for Conversions to specific Network Elements or Combinations found in Exhibit A. AT&T shall also charge the same nonrecurring switch-as-is rates when converting from Network Elements or Combinations. Any rate change resulting from the Conversion will be effective as of the next billing cycle following AT&T's receipt of a complete and accurate Conversion request from Intrado. A Conversion shall be considered termination for purposes of any volume and/or term commitments and/or grandfathered status between Intrado and AT&T. Any change from a wholesale service/group of wholesale services to a Network Element/Combination, or from a Network Element/Combination to a wholesale service/group of wholesale services, that requires a physical rearrangement will not be considered to be a Conversion for purposes of this Agreement. AT&T will not require physical rearrangements if the Conversion can be completed through record changes only. Orders for Conversions will be handled in accordance with the guidelines set forth in the Ordering Guidelines and Processes and CLEC Information Packages as referenced in Sections 1.13.1 and 1.13.2 below.

1.7 Except to the extent expressly provided otherwise in this Attachment, in all states, Intrado may not maintain unbundled network elements or combinations of unbundled network elements, that are no longer offered pursuant to this Agreement (collectively "Arrangements"). In the event AT&T determines that Intrado has in place any Arrangements after the Effective Date of this Agreement, AT&T will identify such Arrangements and provide Intrado with thirty (30) days written notice to disconnect or convert such Arrangements. For orders submitted by Intrado within such thirty (30) day period, AT&T will charge the applicable switch as is charge set forth in Exhibit A. If Intrado fails to submit orders to disconnect or convert such Arrangements within such thirty (30) day period, AT&T will transition such circuits to the equivalent tariffed AT&T service(s), and shall charge Intrado all applicable disconnect charges as set forth in this Agreement and the full nonrecurring charges for installation of the equivalent tariffed AT&T service as set forth in AT&T's tariffs. For all transitions pursuant to this Section 1.7 that require a physical rearrangement, AT&T shall charge any applicable nonrecurring installation charges. To the extent no tariff equivalent service exists, AT&T shall disconnect such facility or Arrangement. The applicable recurring tariff charge shall apply to each circuit as of the Effective Date of this Agreement.

1.7.1 In addition to the foregoing, for the state of Florida, the applicable recurring tariff charges shall apply to each circuit beginning the day following the thirty (30) day notice period.

1.7.2 Notwithstanding the foregoing, for the state of Georgia, those circuits for which Intrado failed to submit a disconnect or conversion order within such thirty (30) day period and are subsequently transitioned by AT&T pursuant to this Section 1.7.2 shall be subject to the applicable switch-as-is charges set forth in Exhibit A.

If an equivalent service is set forth in Exhibit 1, AT&T shall transition to such service. Otherwise, AT&T shall transition to the equivalent tariff service. To the extent no tariff equivalent service exists and no equivalent service is set forth in Exhibit 1, AT&T shall disconnect such facility or Arrangement. The applicable recurring 271 rate, resale or tariffed charge shall apply to each circuit as of March 11, 2006.

1.7.3 Notwithstanding the foregoing, for the state of North Carolina, those circuits for which Intrado failed to submit a disconnect or conversion order within such thirty (30) day period and are subsequently transitioned by AT&T pursuant to this Section 1.7.3 shall be subject to applicable switch-as-is charges.

1.7.4 Notwithstanding the foregoing, for the state of Alabama, the written notice provided by AT&T, as described in Section 1.7, must identify by circuit identification number the specific Arrangements to be converted or disconnected. If Intrado fails to dispute AT&T's identified Arrangements or fails to submit orders to disconnect or convert such Arrangements within the established thirty (30) day period, AT&T will transition such circuits to the equivalent tariffed AT&T service(s) subject to the Commission-established switch-as-is rate. The full nonrecurring charges for installation of the equivalent tariffed AT&T service as set forth in AT&T's tariffs will not apply to such conversions. However, the applicable recurring tariff charges shall apply to each circuit upon conversion.

1.7.5 Notwithstanding the foregoing, for the state of Louisiana, AT&T will provide Intrado with written notice identifying the specific Arrangements which must be converted or disconnected. Intrado shall have thirty (30) days from the date of the notice to submit orders to disconnect or convert the Arrangements. Those circuits to be converted to other AT&T services shall be subject to nonrecurring charges associated with that conversion. If Intrado disputes AT&T's identification of Arrangements to be disconnected or converted, Intrado shall send written notice of its dispute within thirty (30) days of AT&T's notice. AT&T shall not disconnect the disputed Arrangements while the dispute is being resolved. If the Parties are unable to reach a voluntary resolution of the dispute, they may petition the Commission for assistance. If Intrado does not dispute AT&T's identification of Arrangements and fails to submit orders to disconnect or convert such Arrangements within the established thirty (30) day period, AT&T will transition such circuits to the equivalent tariffed AT&T services subject to the full nonrecurring charges for installation of the equivalent tariffed AT&T services as set forth in AT&T's tariffs. The applicable recurring tariff charges shall apply to each circuit upon conversion.

1.8 AT&T's Master List of Unimpaired Wire Centers as Approved by State Commissions in its Region (Master List of Unimpaired Wire Centers), located on the AT&T Interconnection Web site designates those wire centers that, in accordance with state Commission orders, met the FCC's established criteria for

non-impairment, as of March 11, 2005, where certain high capacity (DS1 and above) Loops and high capacity Dedicated Transport are no longer available as Network Elements. AT&T's List of Unimpaired Wire Centers in Kentucky and Tennessee (AT&T's List of Unimpaired Wire Centers), also located on the AT&T Interconnection Web site, are those wire centers that AT&T proposed met the FCC's established criteria for non-impairment as of March 11, 2005 but have not yet been approved by these respective Commissions. The Master List of Unimpaired Wire Centers and AT&T's List of Unimpaired Wire Centers shall be subject to modification and/or the addition of wire centers without amendment to this Agreement upon subsequent orders from state Commissions in the respective generic dockets establishing the wire centers that as of March 11, 2005, were unimpaired. Notification of such modification, addition or deletion of wire centers shall be made via AT&T's Carrier Notification process on AT&T's Interconnection Web site. Upon the Effective Date of this Agreement, Intrado may not place any new orders for high capacity Dedicated Transport or high capacity Loops, as applicable, in those wire centers listed on the Master List of Unimpaired Wire Centers. In those wire centers set forth on AT&T's List of Unimpaired Wire Centers, Intrado may place new orders for high capacity Loops and high capacity Dedicated Transport pursuant to Section 1.8.1 (self-certification) until such wire centers are approved by the Commissions. To the extent Intrado placed orders after March 10, 2005 for high capacity Loops or high capacity Dedicated Transport in wire centers designated on the Master List of Unimpaired Wire Centers, as amended as specified above, within thirty (30) days after the Effective Date of this Agreement, or in the case of additions to the Master List of Unimpaired Wire Centers, within thirty (30) days after the notice of such addition, Intrado shall submit an LSR(s) or spreadsheet(s), as applicable, identifying those non-compliant circuits to be disconnected or converted to the equivalent AT&T tariffed service or, in the state of Georgia, to the equivalent 271 service set forth in Exhibit 1. AT&T shall bill Intrado the difference between the UNE recurring rates for such circuits pursuant to this Agreement and the applicable recurring charges for the equivalent AT&T tariffed service or 271 service in the state of Georgia from the date UNE circuit was installed in the unimpaired wire center to the date the circuit is disconnected or transitioned to the equivalent AT&T tariffed service. If Intrado fails to submit an LSR or spreadsheet identifying such de-listed circuits within thirty (30) days as set forth above, AT&T will identify such circuits and convert them to the equivalent AT&T tariffed service, and charge Intrado applicable disconnect charges for the UNE circuit and the difference between the UNE recurring rate billed for such circuit and the full non-recurring and recurring charges for the tariffed service from the date the UNE circuit was installed in the unimpaired wire center to the date the circuit is transitioned to the equivalent AT&T tariffed service. To the extent there is no equivalent AT&T tariffed service for the de-listed UNE circuit, AT&T will disconnect the circuit and bill Intrado full disconnect charges.

1.8.1 Prior to submitting an order pursuant to this Agreement for high capacity Dedicated Transport or high capacity Loops, Intrado shall undertake a reasonably diligent inquiry to determine whether Intrado is entitled to unbundled access to such Network Elements in accordance with the terms of this Agreement. By submitting any such order, Intrado self-certifies that to the best of Intrado's knowledge, the high capacity Dedicated Transport or high capacity Loop requested is available as a Network Element pursuant to this Agreement. Upon receiving such order, except in wire centers set forth on the Master List of Unimpaired Wire Centers, or AT&T's List of Unimpaired Wire Centers, AT&T shall process the request in reliance upon Intrado's self-certification. To the extent AT&T believes that such request does not comply with the terms of this Agreement, AT&T shall seek dispute resolution in accordance with the General Terms and Conditions of this Agreement. In the event such dispute is resolved in AT&T's favor, AT&T shall bill Intrado the difference between the rates for such circuits pursuant to this Agreement and the applicable nonrecurring and recurring charges for the equivalent tariffed service from the date of installation to the date the circuit is transitioned to the equivalent tariffed service. Within thirty (30) days following a decision finding in AT&T's favor, Intrado shall submit an LSR(s) or spreadsheet(s) identifying those non-compliant circuits to be transitioned to tariffed services or disconnected.

1.8.2 In the event that (1) AT&T designated a wire center as unimpaired as set forth on the Master List of Unimpaired Wire Centers on the AT&T Interconnection Web site, or AT&T's List of Unimpaired Wire Centers, (2) as a result of such designation, Intrado converted high capacity Dedicated Transport or high capacity Loops to other services or ordered new services as services other than high capacity Dedicated Transport or high capacity Loop Network Elements subsequent to March 10, 2005, (3) Intrado otherwise would have been entitled to high capacity Dedicated Transport or high capacity Loops in such wire center at the time such alternative services were provisioned, and (4) AT&T acknowledges, or a state or federal regulatory body with authority determines, that, at the time AT&T designated such wire center as unimpaired, such wire center did not meet the FCC's unimpairment criteria, then upon request of Intrado consistent with the applicable ordering processes as reflected in the Guides located on AT&T's Interconnection Web site no later than sixty (60) days after AT&T acknowledges or the state or federal regulatory body issues an order making such a finding, AT&T shall transition to high capacity Dedicated Transport or high capacity Loops, as appropriate, any alternative services in such wire center that were established after such wire center was designated as unimpaired. In such instances, AT&T shall refund to Intrado the difference between the rate paid by Intrado for such services and the applicable rates set forth herein for high capacity Dedicated Transport or high capacity Loops, including but not limited to any charges associated with the Conversion (as defined in Section 1.6 above) from high capacity Dedicated Transport or high capacity Loops to other wholesale services,

if applicable, for the period from the later of March 11, 2005, or the date the circuit became a wholesale service to the date the circuit is transitioned to high capacity Dedicated Transport or high capacity Loop as described in this Section.

1.9 Intrado may utilize Network Elements and Other Services to provide services in accordance with this Agreement, as long as such services are consistent with industry standards and applicable AT&T Technical References.

1.10 AT&T will perform Routine Network Modifications (RNM) in accordance with FCC 47 C.F.R. § 51.319 (a)(7) and (e)(4) for Loops and Dedicated Transport provided under this Attachment. If AT&T has anticipated such RNM and performs them during normal operations and has recovered the costs for performing such modifications through the rates set forth in Exhibit A, then AT&T shall perform such RNM at no additional charge. RNM shall be performed within the intervals established for the Network Element and subject to the service quality measurements and associated remedies set forth in Attachment 9 to the extent such RNM were anticipated in the setting of such intervals. If AT&T has not anticipated a requested network modification as being a RNM and has not recovered the costs of such RNM in the rates set forth in Exhibit A, then such request will be handled as a project on an individual case basis. AT&T will provide a price quote for the request and, upon receipt of payment from Intrado, AT&T shall perform the RNM.

1.10.1 Notwithstanding the foregoing, for the states of Alabama and Georgia, AT&T shall perform RNM at no additional charge, provided however, for any RNM performed by AT&T for which costs are not recovered through existing rates, AT&T can seek resolution from the Commission.

1.11 Commingling of Services

1.11.1 Commingling means the connecting, attaching, or otherwise linking of a Network Element, or a Combination, to one or more Telecommunications Services or facilities that Intrado has obtained at wholesale from AT&T, or the combining of a Network Element or Combination with one or more such wholesale Telecommunications Services or facilities. Intrado must comply with all rates, terms or conditions applicable to such wholesale Telecommunications Services or facilities.

1.11.2 Subject to the limitations set forth elsewhere in this Attachment, AT&T shall not deny access to a Network Element or a Combination on the grounds that one or more of the elements: (1) is connected to, attached to, linked to, or combined with such a facility or service obtained from AT&T; or (2) shares part of AT&T's network with access services or inputs for mobile wireless services and/or interexchange services.

1.11.3 Except for the state of Georgia, notwithstanding any other provision of this Agreement, AT&T shall not be obligated to commingle or combine, pursuant to this Agreement, Network Elements or Combinations with any service, network element or other offering that it is obligated to make available pursuant only to Section 271 of the Act.

1.11.4 Unless otherwise agreed to by the Parties, the Network Element portion of a commingled circuit will be billed at the rates set forth in this Agreement and the remainder of the circuit or service will be billed in accordance with AT&T's tariffed rates, rates set forth in a separate agreement between the Parties, or in the state of Georgia only, in accordance with the rates set forth in Exhibit 1 of this Attachment, as applicable.

1.11.5 When multiplexing equipment is attached to a commingled circuit, the multiplexing equipment will be billed from the same agreement or tariff as the higher bandwidth circuit. Central Office Channel Interfaces (COCI) will be billed from the same agreement or tariff as the lower bandwidth circuit.

1.11.6 The Commingling process and requirements will be handled in accordance with the guidelines set forth in the Ordering Guidelines and Processes and CLEC Information Packages as referenced in Sections 1.13.1 and 1.13.2 below.

1.12 Terms and conditions for order cancellation charges and Service Date Advancement Charges will apply in accordance with Attachment 6 and are incorporated herein by this reference. The charges shall be as set forth in Exhibit A.

1.13 Ordering Guidelines and Processes

1.13.1 For information regarding Ordering Guidelines and Processes for various Network Elements, Combinations and Other Services, Intrado should refer to the "Guides" section of the AT&T Interconnection Web site.

1.13.2 Additional information may also be found in the individual CLEC Information Packages, located at the "CLEC UNE Products" on AT&T's Interconnection Web site.

1.13.3 The provisioning of Network Elements, Combinations and Other Services to Intrado's Collocation Space will require cross-connections within the central office to connect the Network Element, Combinations or Other Services to the demarcation point associated with Intrado's Collocation Space. These cross-connects are separate components that are not considered a part of the Network Element, Combinations or Other Services and, thus, have a separate charge pursuant to Attachment 4.

1.13.4 Testing/Trouble Reporting

1.13.4.1 Intrado will be responsible for testing and isolating troubles on Network Elements. Intrado must test and isolate trouble to the AT&T network before reporting the trouble to the Network Elements Customer Wholesale Interconnection Network Services (CWINS) Center. Upon request from AT&T at the time of the trouble report, Intrado will be required to provide the results of the Intrado test which indicate a problem on the AT&T network.

1.13.4.2 Once Intrado has isolated a trouble to the AT&T network, and has issued a trouble report to AT&T, AT&T will take the actions necessary to repair the Network Element when trouble is found. AT&T will repair its network facilities to its wholesale customers in the same time frames that AT&T repairs similar services to its retail customers.

1.13.4.3 If Intrado reports a trouble on an AT&T Network Element and no trouble is found in AT&T's network, AT&T will charge Intrado a Maintenance of Service Charge for any dispatching and testing (both inside and outside the CO) required by AT&T in order to confirm the Network Element's working status. AT&T will assess the applicable Maintenance of Service rates from BellSouth's FCC No.1 Tariff, Section 13.3.1.

1.13.4.4 In the event AT&T must dispatch to the customer's location more than once due to incorrect or incomplete information provided by Intrado (e.g., incomplete address, incorrect contact name/number, etc.), AT&T will bill Intrado for each additional dispatch required to repair the Network Element due to the incorrect/incomplete information provided. AT&T will assess the applicable Maintenance of Service rates from BellSouth's FCC No.1 Tariff, Section 13.3.1.

2 Loops

2.1 General. The local loop Network Element is defined as a transmission facility that AT&T provides pursuant to this Attachment between a distribution frame (or its equivalent) in AT&T's central office and the loop demarcation point at a customer premises (Loop). Facilities that do not terminate at a demarcation point at a customer premises, including, by way of example, but not limited to, facilities that terminate to another carrier's switch or premises, a cell site, Mobile Switching Center or base station, do not constitute local Loops. The Loop Network Element includes all features, functions, and capabilities of the transmission facilities, including the network interface device, and attached electronics (except those used for the provision of advanced services, such as Digital Subscriber Line Access Multiplexers (DSLAMs)), optronics and intermediate devices (including repeaters and load coils) used to establish the transmission path to the customer's premises, including inside wire owned or controlled by AT&T. Intrado shall purchase the

entire bandwidth of the Loop and, except as required herein or as otherwise agreed to by the Parties, AT&T shall not subdivide the frequency of the Loop.

2.1.1 The Loop does not include any packet switched features, functions or capabilities.

2.1.2 Fiber to the Home (FTTH) loops are local loops consisting entirely of fiber optic cable, whether dark or lit, serving a customer's premises or, in the case of predominantly residential multiple dwelling units (MDUs), a fiber optic cable, whether dark or lit, that extends to the MDU minimum point of entry (MPOE). Fiber to the Curb (FTTC) loops are local loops consisting of fiber optic cable connecting to a copper distribution plant that is not more than five hundred (500) feet from the customer's premises or, in the case of predominantly residential MDUs, not more than five hundred (500) feet from the MDU's MPOE. The fiber optic cable in a FTTC loop must connect to a copper distribution plant at a serving area interface from which every other copper distribution subloop also is not more than five hundred (500) feet from the respective customer's premises.

2.1.2.1 In new build (Greenfield) areas, where AT&T has only deployed FTTH/FTTC facilities, AT&T is under no obligation to provide Loops. FTTH facilities include fiber loops deployed to the MPOE of a MDU that is predominantly residential regardless of the ownership of the inside wiring from the MPOE to each customer in the MDU.

2.1.2.2 In FTTH/FTTC overbuild situations where AT&T also has copper Loops, AT&T will make those copper Loops available to Intrado on an unbundled basis, until such time as AT&T chooses to retire those copper Loops using the FCC's network disclosure requirements. In these cases, AT&T will offer a sixty-four (64) kilobits per second (kbps) voice grade channel over its FTTH/FTTC facilities.

2.1.2.3 Notwithstanding the foregoing, in the states of Alabama and Louisiana, AT&T shall make available DS1 and DS3 Loops in any wire center where AT&T is required to provide such Loop facilities. In the states of North Carolina and South Carolina, AT&T shall make available DS1 Loops in any wire center where AT&T is required to provide such Loop facilities.

2.1.2.4 Furthermore, in FTTH/FTTC overbuild areas where AT&T has not yet retired copper facilities, AT&T is not obligated to ensure that such copper Loops in that area are capable of transmitting signals prior to receiving a request for access to such Loops by Intrado. If a request is received by AT&T for a copper Loop, and the copper facilities have not yet been retired, AT&T will restore the copper Loop to serviceable condition if technically feasible. Except for the state of Georgia, in these instances of Loop orders in an FTTH/FTTC overbuild area, AT&T's standard Loop provisioning interval will not apply, and the order will be handled on a project basis by which the Parties will negotiate the applicable provisioning interval. For the state of Georgia, in these instances of Loop orders in an

FTTH/FTTC overbuild area, AT&T's standard Loop provisioning interval will apply.

2.1.3 A hybrid Loop is a local Loop, composed of both fiber optic cable, usually in the feeder plant, and copper twisted wire or cable, usually in the distribution plant. AT&T shall provide Intrado access to hybrid Loops pursuant to the requirements of 47 C.F.R. § 51.319(a)(2). AT&T is not required to provide access to the packet switched features, functions and capabilities of its hybrid Loops.

2.1.3.1 AT&T shall not engineer the transmission capabilities of its network in a manner, or engage in any policy, practice, or procedure, that disrupts or degrades access to a local Loop or Subloop, including the time division multiplexing-based features, functions and capabilities of a hybrid Loop, for which a requesting telecommunications carrier may obtain or has obtained access pursuant to this Attachment.

2.1.4 DS1 and DS3 Loop Requirements

2.1.4.1 For purposes of this Section 2, a Business Line is defined in 47 C.F.R. § 51.5.

2.1.4.2 For purposes of this Section 2, a "Fiber-Based Collocator" is defined in 47 C.F.R. § 51.5.

2.1.4.3 Notwithstanding anything to the contrary in this Agreement, AT&T shall make available DS1 and DS3 Loops as described in this Agreement, except in any wire center meeting the criteria described below:

2.1.4.3.1 DS1 Loops at any location within the service area of a wire center containing sixty thousand (60,000) or more Business Lines and four (4) or more fiber-based collocators.

2.1.4.3.2 DS3 Loops at any location within the service area of a wire center containing thirty-eight thousand (38,000) or more Business Lines and four (4) or more fiber-based collocators.

2.1.4.4 The Master List of Unimpaired Wire Centers and AT&T's List of Unimpaired Wire Centers as described in Section 1.8 sets forth the list of wire centers meeting the criteria set forth in Sections 2.1.4.3.1 and 2.1.4.3.2 above as of March 11, 2005.

2.1.4.5 Once any wire center exceeds both of the thresholds set forth in Section 2.1.4.3.1 above, no future DS1 Loop unbundling will be required in that wire center.

2.1.4.6 Once any wire center exceeds both of the thresholds set forth in Section 2.1.4.3.2 above, no future DS3 Loop unbundling will be required in that wire center.

2.1.4.7 Modifications and Updates to the Wire Center Lists and Subsequent Transition Periods

2.1.4.7.1 In the event AT&T identifies additional wire centers that meet the criteria set forth in Section 2.1.4.3 above but that were not included in the Master List of Unimpaired Wire Centers and AT&T's List of Unimpaired Wire Centers, AT&T shall include such additional wire centers in a carrier notification letter (CNL). Each such list of additional wire centers shall be considered a "Subsequent Wire Center List". AT&T will follow any notification procedures set forth in applicable Commission orders.

2.1.4.7.2 Intrado shall have thirty (30) business days to dispute the additional wire centers listed on AT&T's CNL. Absent such dispute, effective thirty (30) business days after the date of an AT&T CNL providing a Subsequent Wire Center List, AT&T shall not be required to unbundle DS1 and/or DS3 Loops, as applicable, in such additional wire center(s), except pursuant to the self-certification process as set forth in Section 1.8 of this Attachment.

2.1.4.7.2.1 For purposes of Section 2.1.4.7 above, AT&T shall make available DS1 and DS3 Loops that were in service for Intrado in a wire center on the Subsequent Wire Center List as of the thirtieth (30th) business day after the date of AT&T's CNL identifying the Subsequent Wire Center List (Subsequent Embedded Base) until one hundred eighty (180) days after the thirtieth (30th) business day from the date of AT&T's CNL identifying the Subsequent Wire Center List (Subsequent Transition Period).

2.1.4.7.2.2 The rates set forth in Exhibit B shall apply to the Subsequent Embedded Base during the Subsequent Transition Period.

2.1.4.7.2.3 No later than one hundred eighty (180) days from AT&T's CNL identifying the Subsequent Wire Center List, Intrado shall submit an LSR(s) or spreadsheet(s) as applicable, identifying the Subsequent Embedded Base of circuits to be disconnected or converted to other AT&T services.

2.1.4.7.2.3.1 In the case of disconnection, the applicable disconnect charges set forth in this Agreement shall apply.

2.1.4.7.2.3.2 If Intrado fails to submit the LSR(s) or spreadsheet(s) for all of its Subsequent Embedded Base by one hundred eighty (180) days after the date of AT&T's CNL identifying the Subsequent Wire Center List, AT&T will identify Intrado's remaining Subsequent Embedded Base, if any, and will transition such circuits to the equivalent tariffed AT&T service(s), or in the case of Georgia, to the equivalent 271 service(s) set forth in Exhibit 1. In the states of Florida, Mississippi and South Carolina, those circuits identified and transitioned by AT&T shall be subject to the applicable disconnect charges as set forth in this Agreement and the

full nonrecurring charges for installation of the equivalent tariffed AT&T service as set forth in AT&T's tariffs. In the states of Alabama, Georgia, and North Carolina, those circuits identified and transitioned by AT&T shall be subject to the applicable switch-as-is rates set forth in Exhibit A of Attachment 2. In the state of Louisiana, those circuits identified and transitioned by AT&T shall be subject to the full nonrecurring charges for installation of the equivalent tariffed AT&T service as set forth in AT&T's tariffs.

2.1.4.7.2.3.3 For Subsequent Embedded Base circuits converted pursuant to Section 2.1.4.7.2.3 above or transitioned pursuant to Section 2.1.4.7.2.3.2 above, the applicable recurring tariff charges shall apply as of the earlier of the date each circuit is converted or transitioned, as applicable, or the first day after the end of the Subsequent Transition Period.

2.1.5 Where facilities are available, AT&T will install Loops in compliance with AT&T's Products and Services Interval Guide available at AT&T's Interconnection Web site. For orders of fifteen (15) or more Loops, the installation and any applicable Order Coordination (OC) as described below will be handled on a project basis, and the intervals will be set by the AT&T project manager for that order. When Loops require a Service Inquiry (SI) prior to issuing the order to determine if facilities are available, the interval for the SI process is separate from the installation interval.

2.1.6 The Loop shall be provided to Intrado in accordance with AT&T's TR73600 Unbundled Local Loop Technical Specification and applicable industry standard technical references.

2.1.7 AT&T will only provision, maintain and repair the Loops to the standards that are consistent with the type of Loop ordered.

2.1.7.1 When an AT&T technician is required to be dispatched to provision the Loop, AT&T will tag the Loop with the Circuit ID number and the name of the ordering CLEC. When a dispatch is not required to provision the Loop, AT&T will tag the Loop on the next required visit to the customer's location. If Intrado wants to ensure the Loop is tagged during the provisioning process for Loops that may not require a dispatch (e.g., UVL-SL1, UVL-SL2, and UCL-ND), Intrado may order Loop Tagging. Rates for Loop Tagging are as set forth in Exhibit A.

2.1.7.2 For voice grade Loop orders (or orders for Loops intended to provide voice grade services), Intrado shall have dial-tone available for that Loop forty-eight (48) hours prior to the Loop order completion due date. This applies to all conversions from one provider to another provider as well as Service Rearrangements as set forth in Section 2.1.12. Where Intrado dial-tone is not available on the conversion date the Loop will not be cut over and the Loop order will be returned to Intrado for rescheduling.

2.1.8 OC and Order Coordination-Time Specific (OC-TS)

2.1.8.1 OC allows AT&T and Intrado to coordinate the installation of the SL2 Loops, Unbundled Digital Loops (UDL) and other Loops where OC may be purchased as an option, to Intrado's facilities to limit customer service outage. OC is available when the Loop is provisioned over an existing circuit that is currently providing service to the customer. OC for physical conversions will be scheduled at AT&T's discretion during normal working hours on the committed due date. OC shall be provided in accordance with the chart set forth below.

2.1.8.2 OC-TS allows Intrado to order a specific time for OC to take place. AT&T will make commercially reasonable efforts to accommodate Intrado's specific conversion time request. However, AT&T reserves the right to negotiate with Intrado a conversion time based on load and appointment control when necessary. This OC-TS is a chargeable option for all Loops except Unbundled Copper Loops (UCL) and is billed in addition to the OC charge. Intrado may specify a time between 9:00 a.m. and 4:00 p.m. (location time) Monday through Friday (excluding holidays). If Intrado specifies a time outside this window, or selects a time or quantity of Loops that requires AT&T technicians to work outside normal work hours, overtime charges will apply in addition to the OC and OC-TS charges. Overtime charges will be applied based on the amount of overtime worked and in accordance with the rates established in AT&T's intrastate Access Services Tariff, Section E13.2, for each state. The OC-TS charges for an order due on the same day at the same location will be applied on a per LSR basis.

2.1.9

	Order Coordination (OC)	Order Coordination – Time Specific (OC-TS)	Test Points	DLR	Charge for Dispatch and Testing if No Trouble Found
SL-1 (Non-Designed)	Chargeable Option	Chargeable Option	Not available	Chargeable Option – ordered as Engineering Information Document	Charged for Dispatch inside and outside Central Office
UCL-ND (Non-Designed)	Chargeable Option	Not Available	Not Available	Chargeable Option – ordered as Engineering Information Document	Charged for Dispatch inside and outside Central Office
Unbundled Voice Loops - SL-2 (including 2- and 4-wire UVL) (Designed)	Included	Chargeable Option	Included	Included	Charged for Dispatch outside Central Office
Unbundled Digital Loop (Designed)	Included	Chargeable Option	Included (where appropriate)	Included	Charged for Dispatch outside Central Office
Unbundled Copper Loop (Designed)	Chargeable in accordance with Section 2	Not available	Included	Included	Charged for Dispatch outside Central Office
For UVL-SL1 and UCLs, Intrado must order and will be billed for both OC and OC-TS if requesting OC-TS.					

2.1.10 CLEC to CLEC Conversions for Unbundled Loops

2.1.10.1 The CLEC to CLEC conversion process for Loops may be used by Intrado when converting an existing Loop from another CLEC for the same customer. The Loop type being converted must be included in Intrado's Agreement before requesting a conversion.

2.1.10.2 To utilize the CLEC to CLEC conversion process, the Loop being converted must be the same Loop type with no requested changes to the Loop, must serve the same customer location from the same serving wire center, and must not require an outside dispatch to provision.

2.1.10.3 The Loops converted to Intrado pursuant to the CLEC to CLEC conversion process shall be provisioned in the same manner and with the same functionality and options as described in this Agreement for the specific Loop type.

2.1.11 Bulk Migration

2.1.11.1 AT&T will make available to Intrado a Bulk Migration process pursuant to which Intrado may request to migrate port/loop combinations, provisioned pursuant to a separate agreement between the parties, to Loops (UNE-L). The Bulk Migration process may be used if such loop/port combinations are (1) associated with two (2) or more Existing Account Telephone Numbers (EATNs); and (2) located in the same Central Office. The terms and conditions for use of the Bulk Migration process are described in the AT&T CLEC Information Package. The CLEC Information Package is located on AT&T's Interconnection Web site. The rates for the Bulk Migration process shall be the nonrecurring rates associated with the Loop type being requested on the Bulk Migration, as set forth in Exhibit A. Additionally, OSS charges will also apply. Loops connected to Integrated Digital Loop Carrier (IDLC) systems will be migrated pursuant to Section 2.6 below.

2.1.11.2 Should Intrado request migration for two (2) or more EATNs containing fifteen (15) or more circuits, Intrado must use the Bulk Migration process referenced in 2.1.11.1 above.

2.1.12 Unbundled Loop (DS1 and below) Service Rearrangements

2.1.12.1 The Unbundled Loop Service Rearrangement processes will allow changes to be made to a working Loop facility assignment within the same end-user serving wire center. Service Rearrangements will result in service outages to the customer during the time the Loop is being moved.

2.1.12.2 An Unbundled Loop Service Rearrangement connecting facility change (CFC) allows Intrado to change its installed Loop from one working facility assignment to another facility assignment. CFC includes Connecting Facility Assignment (CFA) and Cable ID & Pair changes within same collocation arrangement or from collocation to collocation. CFA changes are allowed within the same multiplexer or from one multiplexer to another multiplexer. For a CFC, the Loop class of service, Loop type and the customer must remain the same.

2.1.12.3 An Unbundled Loop Service Rearrangement connecting facility move (CFM) allows Intrado to move the Loop facility assignment from a collocation

arrangement to a multiplexer or from a multiplexer to a collocation arrangement. CFMs require a change to the Loop basic class of service. The Loop type and the customer must remain the same.

2.1.12.4 For Unbundled Loop Service Rearrangements, AT&T shall charge the applicable "Service Rearrangement change in Loop facility" rate found in Exhibit A.

2.1.12.5 The Unbundled Loop Service Rearrangement process and requirements will be handled in accordance with the guidelines set forth in the Ordering Guidelines and CLEC Information Packages as referenced in Sections 1.13.1 and 1.13.2 above.

2.1.13 EEL to Loop Retermination

2.1.13.1 Intrado may utilize the EEL to Loop Retermination process to disconnect an EEL circuit and reterminate the Loop portion of the former EEL circuit to a collocation arrangement in the end-user's Serving Wire Center (EU SWC).

2.1.13.2 This process is available when the existing Loop portion of the EEL will be re-used and the resulting Loop will be subject to the rates, terms and conditions for that particular Loop as set forth in this Attachment. This process will apply only to EELs that include as a part of its combination a DS1 Loop, UVL-SL2 Loop, 4-Wire UDL Loop (64, 56 kbs) and a 2-Wire ISDN Loop.

2.1.13.3 AT&T shall charge the applicable EEL to Loop Retermination rates found in Exhibit A. Intrado shall also be charged applicable manual service order, collocation cross-connect and EEL (including the Transport and Loop portions of the EEL) disconnect charges as set forth in Exhibit A of this Attachment.

2.1.13.4 The EEL to Loop Retermination process is not available when a dispatch outside the serving wire center where the Loop terminates is required. If an outside dispatch is required, or if the Loop portion of the EEL is not one of the Loop types referenced in Section 2.1.13.2 above, or if Intrado elects not to utilize the EEL to Loop Retermination process, Intrado must submit an LSR to disconnect the entire EEL circuit, and must submit a separate LSR for the requested standalone Loop. In such cases, Intrado will be charged the EEL disconnect charges and the full nonrecurring rates for installation of a new Loop, as set forth in Exhibit A.

2.1.13.5 The EEL to Loop Retermination process and requirements will be handled in accordance with the guidelines set forth in the Ordering Guidelines and CLEC Information Packages as referenced in Sections 1.13.1 and 1.13.2 above.

2.2 Unbundled Voice Loops (UVLs)

2.2.1 AT&T shall make available the following UVLs:

2.2.1.1 2-wire Analog Voice Grade Loop – SL1 (Non-Designed);

2.2.1.2 2-wire Analog Voice Grade Loop – SL2 (Designed); or

2.2.1.3 4-wire Analog Voice Grade Loop (Designed).

2.2.2 UVL may be provisioned using any type of facility that will support voice grade services. This may include loaded copper, non-loaded copper, digital loop carrier systems, fiber/copper combination (hybrid loop) or a combination of any of these facilities. AT&T, in the normal course of maintaining, repairing, and configuring its network, may also change the facilities that are used to provide any given voice grade circuit. This change may occur at any time. In these situations, AT&T will only ensure that the newly provided facility will support voice grade services. AT&T will not guarantee that Intrado will be able to continue to provide any advanced services over the new facility. AT&T will offer UVL in two different service levels - Service Level One (SL1) and Service Level Two (SL2).

2.2.3 Unbundled Voice Loop - SL1 (UVL-SL1). Loops are 2-wire loop start circuits, will be non-designed, and will not have remote access test points. OC will be offered as a chargeable option on SL1 Loops when reuse of existing facilities has been requested by Intrado, however, OC is always required on UCLs that involve the reuse of facilities that are currently providing service. Intrado may also order OC-TS when a specified conversion time is requested. OC-TS is a chargeable option for any coordinated order and is billed in addition to the OC charge. An Engineering Information (EI) document can be ordered as a chargeable option. The EI document provides Loop Make-Up information which is similar to the information normally provided in a Design Layout Record (DLR). Upon issuance of a non-coordinated order in the service order system, SL1 Loops will be activated on the due date in the same manner and time frames that AT&T normally activates POTS-type Loops for its customers.

2.2.4 For an additional charge AT&T will make available Loop Testing so that Intrado may request further testing on new UVL-SL1 Loops. Rates for Loop Testing are as set forth in Exhibit A.

2.2.5 Unbundled Voice Loop – SL2 (UVL-SL2). Loops may be 2-wire or 4-wire circuits, shall have remote access test points, and will be designed with a DLR provided to Intrado. SL2 circuits can be provisioned with loop start, ground start or reverse battery signaling. OC is provided as a standard feature on SL2 Loops. The OC feature will allow Intrado to coordinate the installation of the Loop with the disconnect of an existing customer's service and/or number portability service. In these cases, AT&T will perform the order conversion with standard order coordination at its discretion during normal work hours.

2.3 Unbundled Digital Loops

2.3.1 AT&T will offer UDLs. UDLs are service specific, will be designed, will be provisioned with test points (where appropriate), and will come standard with OC and a DLR. The various UDLs are intended to support a specific digital transmission scheme or service.

2.3.2 AT&T shall make available the following UDLs, subject to restrictions set forth herein:

2.3.2.1 2-wire Unbundled ISDN Digital Loop;

2.3.2.2 2-wire Unbundled ADSL Compatible Loop;

2.3.2.3 2-wire Unbundled HDSL Compatible Loop;

2.3.2.4 4-wire Unbundled HDSL Compatible Loop;

2.3.2.5 4-wire Unbundled DS1 Digital Loop;

2.3.2.6 4-wire Unbundled Digital Loop/DS0 – 64 kbps, 56 kbps and below;

2.3.2.7 DS3 Loop; or

2.3.2.8 STS-1 Loop.

2.3.3 2-wire Unbundled ISDN Digital Loops. These will be provisioned according to industry standards for 2-Wire Basic Rate ISDN services and will come standard with a test point, OC, and a DLR. Intrado will be responsible for providing AT&T with a Service Profile Identifier (SPID) associated with a particular ISDN-capable Loop and customer. With the SPID, AT&T will be able to adequately test the circuit and ensure that it properly supports ISDN service.

2.3.4 2-wire ADSL-Compatible Loop. This is a designed Loop that is provisioned according to Revised Resistance Design (RRD) criteria and may be up to eighteen thousand (18,000) feet long and may have up to six thousand (6,000) feet of bridged tap (inclusive of Loop length). The Loop is a 2-wire circuit and will come standard with a test point, OC, and a DLR.

2.3.5 2-wire or 4-wire HDSL-Compatible Loop. This is a designed Loop that meets Carrier Serving Area (CSA) specifications, may be up to twelve thousand (12,000) feet long and may have up to twenty-five hundred (2,500) feet of bridged tap (inclusive of Loop length). It may be a 2-wire or 4-wire circuit and will come standard with a test point, OC, and a DLR.

2.3.6 4-wire Unbundled DS1 Digital Loop.

2.3.6.1 This is a designed 4-wire Loop that is provisioned according to industry standards for DS1 or Primary Rate ISDN services and will come standard with a test point, OC, and a DLR. A DS1 Loop may be provisioned over a variety of loop transmission technologies including copper, HDSL-based technology or fiber optic transport systems. It will include a 4-wire DS1 Network Interface at the customer's location. For the purposes of AT&T's unbundling obligations pursuant to this Agreement, for the states of Alabama, Florida, Georgia, Mississippi and South Carolina, DS1 Loops include 2-wire and 4-wire copper Loops capable of providing high-bit rate digital subscriber line services, such as 2-wire and 4-wire HDSL Compatible Loops. For the state of Louisiana, DS1 Loops include 2-wire and 4-wire HDSL-Compatible Loops to which the necessary electronics have been added to provide service speeds of 1.544 megabytes per second.

2.3.6.2 AT&T shall not provide more than ten (10) unbundled DS1 Loops to Intrado at any single building in which DS1 Loops are available as unbundled Loops.

2.3.7 4-wire Unbundled Digital/DS0 Loop. These are designed 4-wire Loops that may be configured as sixty-four (64)kbps, fifty-six (56)kbps, nineteen (19)kbps, and other sub-rate speeds associated with digital data services and will come standard with a test point, OC, and a DLR.

2.3.8 DS3 Loop. DS3 Loop is a two-point digital transmission path which provides for simultaneous two-way transmission of serial, bipolar, return-to-zero isochronous digital electrical signals at a transmission rate of forty-four point seven thirty-six (44.736) megabits per second (Mbps) that is dedicated to the use of the ordering CLEC. It may provide transport for twenty-eight (28) DS1 channels, each of which provides the digital equivalent of twenty-four (24) analog voice grade channels. The interface to unbundled dedicated DS3 transport is a metallic-based electrical interface. For the purpose of AT&T's unbundling obligations pursuant to this Agreement, DS3 Loops include STS-1 Loops.

2.3.9 STS-1 Loop. STS-1 Loop is a high-capacity digital transmission path with SONET VT1.5 mapping that is dedicated for the use of the ordering customer. It is a two-point digital transmission path which provides for simultaneous two-way transmission of serial bipolar return-to-zero synchronous digital electrical signals at a transmission rate of fifty-one point eighty-four (51.84) Mbps. It may provide transport for twenty-eight (28) DS1 channels, each of which provides the digital equivalent of twenty-four (24) analog voice grade channels. The interface to unbundled dedicated STS-1 transport is a metallic-based electrical interface.

2.3.10 Both DS3 Loop and STS-1 Loop require a SI in order to ascertain availability.

2.3.11 DS3 services come with a test point and a DLR. Mileage is airline miles, rounded up and a minimum of one (1) mile applies. AT&T's TR73501 LightGate®Service Interface and Performance Specifications, Issue D, June 1995 applies to DS3 services.

2.3.12 Intrado may obtain a maximum of a single Unbundled DS3 Loop to any single building in which DS3 Loops are available as Unbundled Loops.

2.4 Unbundled Copper Loops (UCL).

2.4.1 AT&T shall make available UCLs. The UCL is a copper twisted pair Loop that is unencumbered by any intervening equipment (e.g., filters, load coils, range extenders, digital loop carrier, or repeaters) and is not intended to support any particular telecommunications service. The UCL will be offered in two (2) types – Designed and Non-Designed.

2.4.2 Unbundled Copper Loop – Designed (UCL-D)

2.4.2.1 The UCL-D will be provisioned as a dry copper twisted pair (2-wire or 4-wire) Loop that is unencumbered by any intervening equipment (e.g., filters, load coils, range extenders, digital loop carrier, or repeaters).

2.4.2.2 A UCL-D will be eighteen thousand (18,000) feet or less in length and is provisioned according to Resistance Design parameters, may have up to six thousand (6,000) feet of bridged tap and will have up to thirteen hundred (1300) Ohms of resistance.

2.4.2.3 The UCL-D is a designed circuit, is provisioned with a test point, and comes standard with a DLR. OC is a chargeable option for a UCL-D; however, OC is always required on UCLs where a reuse of existing facilities has been requested by Intrado.

2.4.2.4 These Loops are not intended to support any particular services and may be utilized by Intrado to provide a wide-range of telecommunications services as long as those services do not adversely affect AT&T's network. This facility will include a Network Interface Device (NID) at the customer's location for the purpose of connecting the Loop to the customer's inside wire.

2.4.3 Unbundled Copper Loop – Non-Designed (UCL-ND)

2.4.3.1 The UCL–ND is provisioned as a dedicated 2-wire metallic transmission facility from AT&T's Main Distribution Frame (MDF) to a customer's premises (including the NID). The UCL-ND will be a "dry copper" facility in that it will not have any intervening equipment such as load coils, repeaters, or digital access main lines (DAMLs), and may have up to six thousand (6,000) feet of bridged tap

between the customer's premises and the serving wire center. The UCL-ND typically will be thirteen hundred (1300) Ohms resistance and in most cases will not exceed eighteen thousand (18,000) feet in length, although the UCL-ND will not have a specific length limitation. For Loops less than eighteen thousand (18,000) feet and with less than thirteen hundred (1300) Ohms resistance, the Loop will provide a voice grade transmission channel suitable for loop start signaling and the transport of analog voice grade signals. The UCL-ND will not be designed and will not be provisioned with either a DLR or a test point.

2.4.3.2 The UCL-ND facilities may be mechanically assigned using AT&T's assignment systems. Therefore, the Loop Makeup (LMU) process is not required to order and provision the UCL-ND. However, Intrado can request LMU for which additional charges would apply.

2.4.3.3 For an additional charge, AT&T also will make available Loop Testing so that Intrado may request further testing on the UCL-ND. Rates for Loop Testing are as set forth in Exhibit A.

2.4.3.4 UCL-ND Loops are not intended to support any particular service and may be utilized by Intrado to provide a wide-range of telecommunications services as long as those services do not adversely affect AT&T's network. The UCL-ND will include a NID at the customer's location for the purpose of connecting the Loop to the customer's inside wire.

2.4.3.5 OC will be provided as a chargeable option and may be utilized when the UCL-ND provisioning is associated with the reuse of AT&T facilities. OC-TS does not apply to this product.

2.4.3.6 Intrado may use AT&T's Unbundled Loop Modification (ULM) offering to remove excessive bridged taps and/or load coils from any copper Loop within the AT&T network. Therefore, some Loops that would not qualify as UCL-ND could be transformed into Loops that do qualify, using the ULM process.

2.5 Unbundled Loop Modifications (Line Conditioning)

2.5.1 Line Conditioning is defined as routine network modification that AT&T regularly undertakes to provide xDSL services to its own customers. This may include the removal of any device, from a copper Loop or copper Subloop that may diminish the capability of the Loop or Subloop to deliver high-speed switched wireline telecommunications capability, including xDSL service. Such devices include, load coils, excessive bridged taps, low pass filters, and range extenders. Excessive bridged taps are bridged taps that serves no network design purpose and that are beyond the limits set according to industry standards and/or the AT&T's TR 73600 Unbundled Local Loop Technical Specification. AT&T shall provide Line

Conditioning on Loops, as requested by Intrado, even in instances where AT&T does not provide advanced services to the end user on that Loop.

2.5.2 AT&T will remove load coils only on copper Loops that are equal to or less than eighteen thousand (18,000) feet in length. AT&T will remove load coils on copper Subloops where the total loop distance (feeder plus distribution) from the AT&T central office to the end user is equal to or less than 18,000 feet or, if there is no copper feeder, the distance from the remote terminal (RT) to the end user is equal to or less than 18,000 feet.

2.5.3 For any copper loop being ordered by Intrado which has over six thousand (6,000) feet of combined bridged tap will be modified, upon request from Intrado, so that the loop will have a maximum of six thousand (6,000) feet of bridged tap. This modification will be performed at no additional charge to Intrado. Loop conditioning orders that require the removal of bridged tap that serves no network design purpose on a copper Loop that will result in a combined total of bridged tap between two thousand five hundred (2,500) and six thousand (6,000) feet will be performed at the rates set forth in Exhibit A.

2.5.4 Intrado may request removal of any unnecessary and non-excessive bridged tap (bridged tap between zero (0) and two thousand five hundred (2,500) feet which serves no network design purpose), at rates pursuant to AT&T's SC Process as mutually agreed to by the Parties.

2.5.5 Rates for ULM are as set forth in Exhibit A.

2.5.6 AT&T will not modify a Loop in such a way that it no longer meets the technical parameters of the original Loop type (e.g., voice grade, ADSL, etc.) being ordered.

2.5.7 If Intrado requests ULM on a reserved facility for a new Loop order, AT&T may perform a pair change and provision a different Loop facility in lieu of the reserved facility with ULM if feasible. The Loop provisioned will meet or exceed specifications of the requested Loop facility as modified. Intrado will not be charged for ULM if a different Loop is provisioned. For Loops that require a DLR or its equivalent, AT&T will provide LMU detail of the Loop provisioned.

2.5.8 Intrado shall request Loop make up information pursuant to this Attachment prior to submitting a service inquiry and/or a LSR for the Loop type that Intrado desires AT&T to condition.

2.5.9 When requesting ULM for a Loop that AT&T has previously provisioned for Intrado, Intrado will submit a SI to AT&T. If a spare Loop facility that meets the Loop modification specifications requested by Intrado is available at the location for which the ULM was requested, Intrado will have the option to change the

Loop facility to the qualifying spare facility rather than to provide ULM. In the event that AT&T changes the Loop facility in lieu of providing ULM, Intrado will not be charged for ULM but will only be charged the service order charges for submitting an order.

2.6 Loop Provisioning Involving IDLC

2.6.1 Where Intrado has requested an Unbundled Loop and AT&T uses IDLC systems to provide the local service to the customer and AT&T has a suitable alternate facility available, AT&T will make such alternative facilities available to Intrado. If a suitable alternative facility is not available, then to the extent it is technically feasible, AT&T will implement one of the following alternative arrangements for Intrado (e.g., hairpinning):

1. Roll the circuit(s) from the IDLC to any spare copper that exists to the customer premises.
2. Roll the circuit(s) from the IDLC to an existing DLC that is not integrated.
3. If capacity exists, provide "side-door" porting through the switch.
4. If capacity exists, provide "Digital Access Cross-Connect System (DACS)-door" porting (if the IDLC routes through a DACS prior to integration into the switch).

2.6.2 Arrangements 3 and 4 above require the use of a designed circuit. Therefore, non-designed Loops such as the SL1 voice grade and UCL-ND may not be ordered in these cases.

2.6.2.1 If no alternate facility is available, and upon request from Intrado, and if agreed to by both Parties, AT&T may utilize its SC process to determine the additional costs required to provision facilities. Intrado will then have the option of paying the one-time SC rates to place the Loop.

2.7 Network Interface Device

2.7.1 The NID is defined as any means of interconnection of the customer's customer premises wiring to AT&T's distribution plant, such as a cross-connect device used for that purpose. The NID is a single line termination device or that portion of a multiple line termination device required to terminate a single line or circuit at the premises. The NID features two (2) independent chambers or divisions that separate the service provider's network from the customer's premises wiring. Each chamber or division contains the appropriate connection points or posts to which the service provider and the customer each make their connections. The NID provides a protective ground connection and is capable of terminating cables such as twisted pair cable.

2.7.2 AT&T shall permit Intrado to connect Intrado's Loop facilities to the customer's customer premises wiring through the AT&T NID or at any other technically feasible point.

2.7.3 Access to NID

2.7.3.1 Intrado may access the customer's premises wiring by any of the following means and Intrado shall not disturb the existing form of electrical protection and shall maintain the physical integrity of the NID:

2.7.3.1.1 AT&T shall allow Intrado to connect its Loops directly to AT&T's multi-line residential NID enclosures that have additional space and are not used by AT&T or any other telecommunications carriers to provide service to the premises;

2.7.3.1.2 Where an adequate length of the customer's customer premises wiring is present and environmental conditions permit, either Party may remove the customer premises wiring from the other Party's NID and connect such wiring to that Party's own NID;

2.7.3.1.3 Either Party may enter the subscriber access chamber or dual chamber NID enclosures for the purpose of extending a cross-connect or spliced jumper wire from the customer premises wiring through a suitable "punch-out" hole of such NID enclosures; or

2.7.3.1.4 Intrado may request AT&T to make other rearrangements to the customer premises wiring terminations or terminal enclosure on a time and materials cost basis.

2.7.3.2 In no case shall either Party remove or disconnect the other Party's loop facilities from either Party's NIDs, enclosures, or protectors unless the applicable Commission has expressly permitted the same and the disconnecting Party provides prior notice to the other Party. In such cases, it shall be the responsibility of the Party disconnecting loop facilities to leave undisturbed the existing form of electrical protection and to maintain the physical integrity of the NID. It will be Intrado's responsibility to ensure there is no safety hazard, and Intrado will hold AT&T harmless for any liability associated with the removal of the AT&T Loop from the AT&T NID. Furthermore, it shall be the responsibility of the disconnecting Party, once the other Party's loop has been disconnected from the NID, to reconnect the disconnected loop to a nationally recognized testing laboratory listed station protector, which has been grounded as per Article 800 of the National Electrical Code. If no spare station protector exists in the NID, the disconnected loop must be appropriately cleared, capped and stored.

2.7.3.3 Intrado shall not remove or disconnect ground wires from AT&T's NIDs, enclosures, or protectors.

2.7.3.4 Intrado shall not remove or disconnect NID modules, protectors, or terminals from AT&T's NID enclosures.

2.7.3.5 Due to the wide variety of NID enclosures and outside plant environments, AT&T will work with Intrado to develop specific procedures to establish the most effective means of implementing this section if the procedures set forth herein do not apply to the NID in question.

2.7.4 Technical Requirements

2.7.4.1 The NID shall provide an accessible point of interconnection and shall maintain a connection to ground.

2.7.4.2 If an existing NID is accessed, it shall be capable of transferring electrical analog or digital signals between the customer's customer premises and the distribution media and/or cross-connect to Intrado's NID.

2.7.4.3 Existing AT&T NIDs will be operational and provided in "as is" condition. Intrado may request AT&T to do additional work to the NID on a time and material basis. When Intrado deploys its own local loops in a multiple-line termination device, Intrado shall specify the quantity of NID connections that it requires within such device.

2.8 Subloop Distribution Elements.

2.8.1 Where facilities permit, AT&T shall offer access to its Unbundled Subloop Distribution (USLD) elements in accordance with 47 C.F.R. § 51.319(b) as specified herein.

2.8.2 Unbundled Subloop Distribution

2.8.2.1 The USLD facility is a dedicated transmission facility that AT&T provides from a customer's point of demarcation to an AT&T cross-connect device. The AT&T cross-connect device may be located within a remote terminal (RT) or a stand-alone cross-box in the field or in the equipment room of a building. The USLD media is a copper twisted pair that can be provisioned as a 2-wire or 4-wire facility. AT&T will make available the following subloop distribution offerings where facilities exist:

USLD – Voice Grade (USLD-VG)
Unbundled Copper Subloop (UCSL)
USLD – Intrabuilding Network Cable (USLD-INC (aka riser cable))

2.8.2.2 USLD-VG is a copper subloop facility from the cross-box in the field up to and including the point of demarcation at the customer's premises and may have load coils.

2.8.2.3 UCSL is a copper facility eighteen thousand (18,000) feet or less in length provided from the cross-box in the field up to and including the customer's point of demarcation. If available, this facility will not have any intervening equipment such as load coils between the customer and the cross-box.

2.8.2.3.1 If Intrado requests a UCSL and it is not available, Intrado may request the copper Subloop facility be modified pursuant to the ULM process to remove load coils and/or excessive bridged taps. If load coils and/or excessive bridged taps are removed, the facility will be classified as a UCSL.

2.8.2.4 USLD-INC is the distribution facility owned or controlled by AT&T inside a building or between buildings on the same property that is not separated by a public street or road. USLD-INC includes the facility from the cross-connect device in the building equipment room up to and including the point of demarcation at the customer's premises.

2.8.2.4.1 Upon request for USLD-INC from Intrado, AT&T will install a cross-connect panel in the building equipment room for the purpose of accessing USLD-INC pairs from a building equipment room. The cross-connect panel will function as a single point of interconnection (SPOI) for USLD-INC and will be accessible by multiple carriers as space permits. AT&T will place cross-connect blocks in twenty five (25) pair increments for Intrado's use on this cross-connect panel. Intrado will be responsible for connecting its facilities to the twenty five (25) pair cross-connect block(s).

2.8.2.5 For access to Voice Grade USLD and UCSL, Intrado shall install a cable to the AT&T cross-box pursuant to the terms and conditions for physical collocation for remote sites set forth in Attachment 4. This cable would be connected by an AT&T technician within the AT&T cross-box during the set-up process. Intrado's cable pairs can then be connected to AT&T's USL within the AT&T cross-box by the AT&T technician.

2.8.2.6 Through the SI process, AT&T will determine whether access to USLs at the location requested by Intrado is technically feasible and whether sufficient capacity exists in the cross-box. If existing capacity is sufficient to meet Intrado's request, then AT&T will perform the site set-up as described in the CLEC Information Package, located at AT&T's Interconnection Web site.

2.8.2.7 The site set-up must be completed before Intrado can order Subloop pairs. For the site set-up in an AT&T cross-connect box in the field, AT&T will perform the necessary work to splice Intrado's cable into the cross-connect box. For the site

set-up inside a building equipment room, AT&T will perform the necessary work to install the cross-connect panel and the connecting block(s) that will be used to provide access to the requested USLs.

2.8.2.8 Once the site set-up is complete, Intrado will request Subloop pairs through submission of a LSR form to the LCSC. OC is required with USL pair provisioning when Intrado requests reuse of an existing facility, and the OC charge shall be billed in addition to the USL pair rate. For expedite requests by Intrado for Subloop pairs, expedite charges will apply for intervals less than five (5) days.

2.8.2.9 USLs will be provided in accordance with AT&T's TR 73600 Unbundled Local Loop Technical Specifications.

2.8.3 Unbundled Network Terminating Wire (UNTW)

2.8.3.1 UNTW is unshielded twisted copper wiring that is used to extend circuits from an intra-building network cable terminal or from a building entrance terminal to an individual customer's point of demarcation. It is the final portion of the Loop that in multi-subscriber configurations represents the point at which the network branches out to serve individual subscribers.

2.8.3.2 This element will be provided in MDUs and/or Multi-Tenants Units (MTUs) where either Party owns wiring all the way to the customer's premises. Neither Party will provide this element in locations where the property owner provides its own wiring to the customer's premises, where a third party owns the wiring to the customer's premises.

2.8.3.3 Requirements

2.8.3.3.1 On a multi-unit premises, upon request of the other Party (Requesting Party), the Party owning the network terminating wire (Provisioning Party) will provide access to UNTW pairs on an Access Terminal that is suitable for use by multiple carriers at each Garden Terminal or Wiring Closet.

2.8.3.3.2 The Provisioning Party shall not be required to install new or additional NTW beyond existing NTW to provision the services of the Requesting Party.

2.8.3.3.3 In existing MDUs and/or MTUs in which AT&T does not own or control wiring (INC/NTW) to the customers premises, and Intrado does own or control such wiring, Intrado will install UNTW Access Terminals for AT&T under the same terms and conditions as AT&T provides UNTW Access Terminals to Intrado.

2.8.3.3.4 In situations in which AT&T activates a UNTW pair, AT&T will compensate Intrado for each pair activated commensurate to the price specified in Intrado's Agreement.

2.8.3.3.5 Upon receipt of the UNTW SI requesting access to the Provisioning Party's UNTW pairs at a multi-unit premises, representatives of both Parties will participate in a meeting at the site of the requested access. The purpose of the site visit will include discussion of the procedures for installation and location of the Access Terminals. By request of the Requesting Party, an Access Terminal will be installed either adjacent to each of the Provisioning Party's Garden Terminal or inside each Wiring Closet. The Requesting Party will deliver and connect its central office facilities to the UNTW pairs within the Access Terminal. The Requesting Party may access any available pair on an Access Terminal. A pair is available when a pair is not being utilized to provide service or where the customer has requested a change in its local service provider to the Requesting Party. Prior to connecting the Requesting Party's service on a pair previously used by the Provisioning Party, the Requesting Party is responsible for ensuring the customer is no longer using the Provisioning Party's service or another CLEC's service before accessing UNTW pairs.

2.8.3.3.6 Access Terminal installation intervals will be established on an individual case basis.

2.8.3.3.7 The Requesting Party is responsible for obtaining the property owner's permission for the Provisioning Party to install an Access Terminal(s) on behalf of the Requesting Party. The submission of the SI by the Requesting Party will serve as certification by the Requesting Party that such permission has been obtained. If the property owner objects to Access Terminal installations that are in progress or within thirty (30) days after completion and demands removal of Access Terminals, the Requesting Party will be responsible for costs associated with removing Access Terminals and restoring the property to its original state prior to Access Terminals being installed.

2.8.3.3.8 The Requesting Party shall indemnify and hold harmless the Provisioning Party against any claims of any kind that may arise out of the Requesting Party's failure to obtain the property owner's permission. The Requesting Party will be billed for nonrecurring and recurring charges for accessing UNTW pairs at the time the Requesting Party activates the pair(s). The Requesting Party will notify the Provisioning Party within five (5) business days of activating UNTW pairs using the LSR form.

2.8.3.3.9 If a trouble exists on a UNTW pair, the Requesting Party may use an alternate spare pair that serves that customer if a spare pair is available. In such cases, the Requesting Party will re-terminate its existing jumper from the defective pair to the spare pair. Alternatively, the Requesting Party will isolate and report troubles in the manner specified by the Provisioning Party. The Requesting Party must tag the UNTW pair that requires repair. If the Provisioning Party dispatches a technician on a reported trouble call and no UNTW trouble is found, the Provisioning Party

will charge Requesting Party for time spent on the dispatch and testing the UNTW pair(s).

2.8.3.3.10 If the Requesting Party initiates the Access Terminal installation and the Requesting Party has not activated at least ten percent (10%) of the capacity of the Access Terminal installed pursuant to the Requesting Party's request for an Access Terminal within six (6) months of installation of the Access Terminal, the Provisioning Party will bill the Requesting Party a nonrecurring charge equal to the actual cost of provisioning the Access Terminal.

2.8.3.3.11 If the Provisioning Party determines that the Requesting Party is using the UNTW pairs without reporting the activation of the pairs, the Requesting Party will be billed for the use of that pair back to the date the customer began receiving service from the Requesting Party at that location. Upon request, the Requesting Party will provide copies of its billing record to substantiate such date. If the Requesting Party fails to provide such records, then the Provisioning Party will bill the Requesting Party back to the date of the Access Terminal installation.

2.9 Loop Makeup

2.9.1 Description of Service

2.9.1.1 AT&T shall make available to Intrado LMU information with respect to Loops that are required to be unbundled under this Agreement so that Intrado can make an independent judgment about whether the Loop is capable of supporting the advanced services equipment Intrado intends to install and the services Intrado wishes to provide. LMU is a preordering transaction, distinct from Intrado ordering any other service(s). Loop Makeup Service Inquiries (LMUSI) and mechanized LMU queries for preordering LMU are likewise unique from other preordering functions with associated SIs as described in this Agreement.

2.9.1.2 AT&T will provide Intrado LMU information consisting of the composition of the Loop material (copper/fiber); the existence, location and type of equipment on the Loop, including but not limited to digital loop carrier or other remote concentration devices, feeder/distribution interfaces, bridged taps, load coils, pair-gain devices; the Loop length; the wire gauge and electrical parameters.

2.9.1.3 AT&T's LMU information is provided to Intrado as it exists either in AT&T's databases or in its hard copy facility records. AT&T does not guarantee accuracy or reliability of the LMU information provided.

2.9.1.4 AT&T's provisioning of LMU information to the requesting CLEC for facilities is contingent upon either AT&T or the requesting CLEC controlling the Loop(s) that serve the service location for which LMU information has been requested by the CLEC. The requesting CLEC is not authorized to receive LMU information on a

facility used or controlled by another CLEC unless AT&T receives a LOA from the voice CLEC (owner) or its authorized agent on the LMUSI submitted by the requesting CLEC.

2.9.1.5 Intrado may choose to use equipment that it deems will enable it to provide a certain type and level of service over a particular AT&T Loop as long as that equipment does not disrupt other services on the AT&T network. The determination shall be made solely by Intrado and AT&T shall not be liable in any way for the performance of the advanced data services provisioned over said Loop. The specific Loop type (e.g., ADSL, HDSL, or otherwise) ordered on the LSR must match the LMU of the Loop reserved taking into consideration any requisite line conditioning. The LMU data is provided for informational purposes only and does not guarantee Intrado's ability to provide advanced data services over the ordered Loop type. Furthermore, the LMU information for Loops other than copper-only Loops (e.g., ADSL, UCL-ND, etc.) that support xDSL services, is subject to change at any time due to modifications and/or upgrades to AT&T's network. Except as set forth in Section 2.9.1.6 below, copper-only Loops will not be subject to change due to modification and/or upgrades to AT&T's network and will remain on copper facilities until the Loop is disconnected by Intrado or the customer, or until AT&T retires the copper facilities via the FCC's and any applicable Commission's requirements. Intrado is fully responsible for any of its service configurations that may differ from AT&T's technical standard for the Loop type ordered.

2.9.1.6 If AT&T retires its copper facilities using 47 C.F.R § 51.325(a) requirements; or is required by a governmental agency or regulatory body to move or replace copper facilities as a maintenance procedure, AT&T will notify Intrado, according to the applicable network disclosure requirements. It will be Intrado's responsibility to move any service it may provide over such facilities to alternative facilities. If Intrado fails to move the service to alternative facilities by the date in the network disclosure notice, AT&T may terminate the service to complete the network change.

2.9.2 Submitting LMUSI

2.9.2.1 Intrado may obtain LMU information and reserve facilities by submitting a mechanized LMU query or a manual LMUSI according to the terms and conditions as described in the LMU CLEC Information Package, incorporated herein by reference as it may be amended from time to time. The CLEC Information Package is located at the "CLEC UNE Product" on AT&T's Interconnection Web site. After obtaining the Loop information from the mechanized LMU process, if Intrado needs further Loop information in order to determine Loop service capability, Intrado may initiate a separate Manual SI for a separate nonrecurring charge as set forth in Exhibit A.

2.9.2.2 All LSRs issued for reserved facilities shall reference the facility reservation number as provided by AT&T. Intrado will not be billed any additional LMU charges for the Loop ordered on such LSR. If, however, Intrado does not reserve facilities upon an initial LMUSI, Intrado's placement of an order for an advanced data service type facility will incur the appropriate billing charges to include SI and reservation per Exhibit A.

2.9.2.3 Where Intrado has reserved multiple Loop facilities on a single reservation, Intrado may not specify which facility shall be provisioned when submitting the LSR. For those occasions, AT&T will assign to Intrado, subject to availability, a facility that meets the AT&T technical standards of the AT&T type Loop as ordered by Intrado.

2.9.2.4 Charges for preordering manual LMUSI or mechanized LMU are separate from any charges associated with ordering other services from AT&T.

3 Line Splitting

3.1 Line splitting shall mean that a provider of data services (a Data LEC) and a provider of voice services (a Voice CLEC) to deliver voice and data service to customers over the same Loop. The Voice CLEC and Data LEC may be the same or different carriers. AT&T will provide Line Splitting over a Loop (UNE-L) purchased by Intrado pursuant to this Agreement.

3.2 Line Splitting – UNE-L. In the event Intrado provides its own switching or obtains switching from a third party, Intrado may engage in line splitting arrangements with another CLEC using a splitter, provided by Intrado, in a Collocation Space at the central office where the loop terminates into a distribution frame or its equivalent.

3.3 AT&T must make all necessary network modifications, including providing nondiscriminatory access to OSS necessary for pre-ordering, ordering, provisioning, maintenance and repair, and billing for Loops used in line splitting arrangements. The Parties may use the Change Control Process to address necessary OSS modifications.

3.4 Provisioning Line Splitting – UNE-L

3.4.1 The Voice CLEC provides the splitter when providing Line Splitting with UNE-L. When Intrado owns the splitter, Line Splitting requires the following: a loop from NID at the customer's location to the serving wire center and terminating into a distribution frame or its equivalent.

3.4.2 An unloaded 2-wire copper Loop must serve the customer. The meet point for the Voice CLEC and the Data LEC is the point of termination on the MDF for the Data LEC's cable and pairs.

3.4.3 To order Line Splitting utilizing UNE-L on a particular Loop, Intrado must have a DSLAM collocated in the central office that serves the customer of such Loop.

3.4.4 Intrado may purchase, install and maintain central office POTS splitters in its collocation arrangements. Intrado may use such splitters for access to its customers and to provide digital line subscriber services to its customers using the high frequency spectrum of the UNE-L. Existing Collocation rules and procedures and the terms and conditions relating to Collocation set forth in Attachment 4-Central Office shall apply.

3.5 Maintenance – Line Splitting – UNE-L

3.5.1 AT&T will be responsible for repairing voice troubles and the troubles with the physical loop between the NID at the customer's premises and the termination point.

3.5.2 Intrado shall indemnify, defend and hold harmless AT&T from and against any claims, losses, actions, causes of action, suits, demands, damages, injury, and costs including reasonable attorney fees, which arise out of actions related to the other service provider, except to the extent caused by AT&T's gross negligence or willful misconduct.

3.5.3 For the state of Alabama, the following rights are in addition to the general indemnification rights set forth above:

3.5.3.1 PROVIDED, HOWEVER, that all amounts advanced in respect of such claims, losses and costs shall be repaid to Intrado by AT&T if it shall ultimately be determined in a final judgment without further appeal by a court of appropriate jurisdiction that AT&T is not entitled to be indemnified for such claims, losses and costs because the Claims, Losses and Costs arose as a result of AT&T's gross negligence or willful misconduct.

3.5.3.2 AT&T will indemnify, defend and hold harmless Intrado from and against any Claims, Losses and Costs which arise out of actions related to the other service provider (i.e. CLEC party to the line splitting arrangement who is not Intrado brought against Intrado to the extent such Claim alleges that the cause of Claim, Loss and Cost was found to be the result of AT&T's gross negligence or willful misconduct.

3.5.3.3 PROVIDED, HOWEVER, that AT&T shall have no obligation to indemnify Intrado under this section unless Intrado provides AT&T with prompt written

notice of any such Claim; Intrado permits AT&T to assume and control the defense to such action, with counsel chosen by AT&T; and AT&T does not enter into any settlement or compromise of such Claim.

3.5.3.4 PROVIDED, HOWEVER, that all amounts advanced in respect of such Claims, Losses and Costs shall be repaid to AT&T by Intrado if it shall ultimately be determined in a final judgment without further appeal by a court of appropriate jurisdiction that Intrado is not entitled to be indemnified for such Claims, Losses and Costs because the Claims, Losses and Costs did not arises as a result of AT&T's gross negligence or willful misconduct.

3.5.3.5 Definitions:

3.5.3.5.1 "Claim" means any threatened, pending or completed action, suit or proceeding, or any inquiry or investigation that AT&T or Intrado in good faith believes might lead to the institution of any such action, suit or proceeding.

3.5.3.5.2 "Loss" means any and all damages, injuries, judgments, fines penalties, amounts paid or payable in settlement, deficiencies, and expenses (including all interest, assessments, and other charges paid or payable in connection with or respect of such Losses) incurred in connection with the Claim.

3.5.3.5.3 "Costs" means all reasonable attorney's fees and all other reasonable fees, expenses and obligations paid or incurred in connection with the Claim or related matters, including without limitation, investigating, defending, or participating (as a party, witness or otherwise) in (including on appeal), or preparing to defend or participate in any Claim.

3.6 Line Splitting – Loop and Port for the states of Georgia and North Carolina only

3.6.1 To the extent Intrado is using a commingled arrangement that consists of a Loop purchased pursuant to this Agreement and Local Switching provided by AT&T pursuant to Section 271, AT&T will permit Intrado to utilize Line Splitting. AT&T shall charge the applicable line splitting rates set forth in Exhibit A of this Agreement.

3.6.2 Intrado shall provide AT&T with a signed LOA between it and the third party CLEC (Data CLEC or Voice CLEC) with which it desires to provision Line Splitting services, where Intrado will not provide voice and data services.

3.6.3 Provisioning Line Splitting and Splitter Space – Loop and Port

3.6.3.1 The Data LEC, Voice CLEC, or a third party may provide the splitter. When Intrado or its authorized agent owns the splitter, Line Splitting requires the following: a non-designed analog Loop from the serving wire center to the NID at

the customer's location; a collocation cross-connection connecting the Loop to the collocation space; and a second collocation cross-connection from the collocation space connected to a voice port.

3.6.3.2 An unloaded 2-wire copper Loop must serve the customer. The meet point for the Voice CLEC and the Data CLEC is the point of termination on the MDF for the Data CLEC's cable and pairs.

3.6.4 CLEC Provided Splitter – Line Splitting – Loop and Port

3.6.4.1 Intrado or its authorized agent may purchase, install and maintain central office line splitters in its collocation arrangements. Intrado or its authorized agent may use such splitters for access to its customers and to provide digital line subscriber services to its customers using the High Frequency Spectrum. Existing collocation rules and procedures and the terms and conditions relating to collocation set forth in Attachment 4-Central Office shall apply.

3.6.4.2 Any splitters installed by Intrado or its authorized agent in its collocation arrangement shall comply with ANSI T1.413, Annex E, or any future ANSI splitter standards. Intrado or its authorized agent may install any splitters that AT&T deploys or permits to be deployed for itself or any AT&T affiliate.

3.6.5 Maintenance – Line Splitting – Loop and Port

3.6.5.1 AT&T will be responsible for repairing troubles with the physical Loop between the NID at the customer's premises and the termination point.

4 Unbundled Network Element Combinations

4.1 For purposes of this Section, references to "Currently Combined" Network Elements shall mean that the particular Network Elements requested by Intrado are in fact already combined by AT&T in the AT&T network. References to "Ordinarily Combined" Network Elements shall mean that the particular Network Elements requested by Intrado are not already combined by AT&T in the location requested by Intrado but are elements that are typically combined in AT&T's network. References to "Not Typically Combined" Network Elements shall mean that the particular Network Elements requested by Intrado are not elements that AT&T combines for its use in its network.

4.1.1 Except as otherwise set forth in this Agreement, upon request, AT&T shall perform the functions necessary to combine Network Elements that AT&T is required to provide under this Agreement in any manner, even if those elements are not ordinarily combined in AT&T's network, provided that such Combination is technically feasible and will not undermine the ability of other carriers to obtain access to Network Elements or to interconnect with AT&T's network.

4.1.2 To the extent Intrado requests a Combination for which AT&T does not have methods and procedures in place to provide such Combination, rates and/or methods or procedures for such Combination will be developed pursuant to the BFR process.

4.2 Rates

4.2.1 The rates for the Currently Combined Network Elements specifically set forth in Exhibit A shall be the rates associated with such Combinations. Where a Currently Combined Combination is not specifically set forth in Exhibit A, the rate for such Currently Combined Combination shall be the sum of the recurring rates for those individual Network Elements as set forth in Exhibit A and/or Exhibit B in addition to the applicable nonrecurring switch-as-is charge set forth in Exhibit A.

4.2.2 The rates for the Ordinarily Combined Network Elements specifically set forth in Exhibit A shall be the nonrecurring and recurring charges for those Combinations. Where an Ordinarily Combined Combination is not specifically set forth in Exhibit A, the rate for such Ordinarily Combined Combination shall be the sum of the recurring rates for those individual Network Elements as set forth in Exhibit A and/or Exhibit B and nonrecurring rates for those individual Network Elements as set forth in Exhibit A.

4.2.3 The rates for Not Typically Combined Combinations shall be developed pursuant to the BFR process upon request of Intrado.

4.3 Enhanced Extended Links (EELs)

4.3.1 EELs are combinations of Loops and Dedicated Transport as defined in this Attachment, together with any facilities, equipment, or functions necessary to combine those Network Elements. AT&T shall provide Intrado with EELs where the underlying Network Element are available and are required to be provided pursuant to this Agreement and in all instances where the requesting carrier meets the eligibility requirements, if applicable.

4.3.2 High-capacity EELs are (1) combinations of Loop and Dedicated Transport, (2) Dedicated Transport commingled with a wholesale loop, or (3) a loop commingled with wholesale transport at the DS1 and/or DS3 level as described in 47 C.F.R. § 51.318(b).

4.3.3 By placing an order for a high-capacity EEL, Intrado thereby certifies that the service eligibility criteria set forth herein are met for access to a converted high-capacity EEL, a new high-capacity EEL, or part of a high-capacity commingled EEL as a Network Element. AT&T shall have the right to audit Intrado's high-capacity EELs as specified below.

4.3.4 Service Eligibility Criteria

4.3.4.1 High capacity EELs must comply with the following service eligibility requirements. Intrado must certify for each high-capacity EEL that all of the following service eligibility criteria are met:

4.3.4.1.1 Intrado has received state certification to provide local voice service in the area being served;

4.3.4.2 For each combined circuit, including each DS1 circuit, each DS1 EEL, and each DS1-equivalent circuit on a DS3 EEL:

4.3.4.2.1 1) Each circuit to be provided to each customer will be assigned a local number prior to the provision of service over that circuit;

4.3.4.2.2 2) Each DS1-equivalent circuit on a DS3 EEL must have its own local number assignment so that each DS3 must have at least twenty-eight (28) local voice numbers assigned to it;

4.3.4.2.3 3) Each circuit to be provided to each customer will have 911 or E911 capability prior to provision of service over that circuit;

4.3.4.2.4 4) Each circuit to be provided to each customer will terminate in a collocation arrangement that meets the requirements of 47 C.F.R. § 51.318(c);

4.3.4.2.5 5) Each circuit to be provided to each customer will be served by an interconnection trunk over which Intrado will transmit the calling party's number in connection with calls exchanged over the trunk;

4.3.4.2.6 6) For each twenty-four (24) DS1 EELs or other facilities having equivalent capacity, Intrado will have at least one (1) active DS1 local service interconnection trunk over which Intrado will transmit the calling party's number in connection with calls exchanged over the trunk; and

4.3.4.2.7 7) Each circuit to be provided to each customer will be served by a switch capable of switching local voice traffic.

4.3.4.3 AT&T may, on an annual basis, audit Intrado's records in order to verify compliance with the qualifying service eligibility criteria. To invoke the audit, AT&T will send a Notice of Audit to Intrado. Such Notice of Audit will be delivered to Intrado no less than thirty (30) days prior to the date upon which AT&T seeks to commence an audit.

4.3.4.3.1 Such Notice of Audit to Intrado shall state AT&T's concern that Intrado is not complying with the service eligibility requirements as set forth above and a concise statement of the reasons therefor. AT&T is not required to provide

documentation, as distinct from a statement of concern, to support its basis for an audit, or seek the concurrence of the requesting carrier before selecting the location of the audit. AT&T may select the independent auditor without the prior approval of Intrado or the Commission. Challenges to the independence of the auditor may be filed with the Commission only after the audit has been concluded.

4.3.4.3.2 For the state of Alabama, Intrado may, however, challenge the legal qualifications of the auditor selected by filing an objection to that effect with the Commission within 10 days of receiving AT&T's Notice of Audit.

4.3.4.3.3 For the state of Louisiana, AT&T's notice to Intrado shall include a listing of the circuits for which AT&T alleges noncompliance, including all supporting documentation and a list of three auditors from which Intrado may choose one to conduct the audit.

4.3.4.4 The audit shall be conducted by a third party independent auditor, and the audit must be performed in accordance with the standards established by the American Institute for Certified Public Accountants (AICPA) which will require the auditor to perform an "examination engagement" and issue a report regarding Intrado's compliance with the high capacity EEL eligibility criteria. AICPA standards and other AICPA requirements will be used to determine the independence of an auditor. The independent auditor's report will conclude whether Intrado complied in all material respects with the applicable service eligibility criteria. Consistent with standard auditing practices, such audits require compliance testing designed by the independent auditor.

4.3.4.5 To the extent the independent auditor's report concludes that Intrado failed to comply with the service eligibility criteria, Intrado must true-up any difference in payments, convert all noncompliant circuits to the appropriate service, and make the correct payments on a going-forward basis. In the event the auditor's report concludes that Intrado did not comply in any material respect with the service eligibility criteria, Intrado shall reimburse AT&T for the cost of the independent auditor. To the extent the auditor's report concludes that Intrado did comply in all material respects with the service eligibility criteria, AT&T will reimburse Intrado for its reasonable and demonstrable costs associated with the audit. Intrado will maintain appropriate documentation to support its certifications. The Parties shall provide such reimbursement within thirty (30) days of receipt of a statement of such costs.

4.3.4.5.1 For the state of Alabama, Intrado will maintain appropriate documentation to support its certifications and may dispute any portion of the findings of an audit by petitioning the Commission for a review within twenty (20) days of receiving the reported findings of the auditor.

4.3.4.6 In the event Intrado converts special access services to Network Elements, Intrado shall be subject to the termination liability provisions in the applicable special access tariffs, if any.

5 Dedicated Transport and Dark Fiber Transport

5.1 Dedicated Transport. Dedicated Transport is defined as AT&T's transmission facilities between wire centers or switches owned by AT&T, or between wire centers or switches owned by AT&T and switches owned by Intrado, including but not limited to DS1, DS3 and OCn level services, as well as dark fiber, dedicated to Intrado. AT&T shall not be required to provide access to OCn level Dedicated Transport under any circumstances pursuant to this Agreement.

5.2 DS1 and DS3 Dedicated Transport Requirements

5.2.1 For purposes of this Section 5.2, a Business Line is as defined in 47 C.F.R. § 51.5.

5.2.2 Notwithstanding anything to the contrary in this Agreement, AT&T shall make available Dedicated Transport as described in this Agreement, except in any wire center meeting the criteria described below:

5.2.2.1 DS1 Dedicated Transport where both wire centers at the end points of the route contain thirty-eight thousand (38,000) or more Business Lines or four (4) or more fiber-based collocators.

5.2.2.2 DS3 Dedicated Transport where both wire centers at the end points of the route contain twenty-four thousand (24,000) or more Business Lines or three (3) or more fiber-based collocators.

5.2.2.3 The Master List of Unimpaired Wire Centers and AT&T's List of Unimpaired Wire Centers, as described in Section 1.8, sets forth the list of wire centers meeting the criteria set forth in Sections 5.2.2.1 and 5.2.2.2 above as of March 11, 2005.

5.2.2.4 Once a wire center meets or exceeds either of the thresholds set forth in Section 5.2.2.1 above, no future DS1 Dedicated Transport unbundling will be required between that wire center and any other wire center exceeding these same thresholds.

5.2.2.5 Once a wire center meets or exceeds either of the thresholds set forth in Section 5.2.2.2 above, no future DS3 Dedicated Transport will be required between that wire center and any other wire center meeting or exceeding these same thresholds.

5.2.2.6 Modifications and Updates to the Wire Center List and Subsequent Transition Periods

5.2.2.6.1 In the event AT&T identifies additional wire centers that meet the criteria set forth in Sections 5.2.2.1 or 5.2.2.2 above, but that were not included in the Master List of Unimpaired Wire Centers or AT&T's List of Unimpaired Wire Centers, AT&T shall include such additional wire centers in a CNL. Each such list of additional wire centers shall be considered a Subsequent Wire Center List. AT&T will follow any notification procedures set forth in applicable Commission orders.

5.2.2.6.2 Intrado shall have thirty (30) business days to dispute the additional wire centers listed on AT&T's CNL. Absent such dispute, effective thirty (30) business days after the date of an AT&T CNL providing a Subsequent Wire Center List, AT&T shall not be required to provide DS1 and DS3 Dedicated Transport, as applicable, in such additional wire center(s), except pursuant to the self-certification process as set forth in Section 1.8 of this Attachment.

5.2.2.6.3 For purposes of Section 5.2.2.6 above, AT&T shall make available DS1 and DS3 Dedicated Transport that were in service for Intrado in a wire center on the Subsequent Wire Center List as of the thirtieth (30th) business day after the date of AT&T's CNL identifying the Subsequent Wire Center List (Subsequent Embedded Base) until one hundred eighty (180) days after the thirtieth (30th) business day from the date of AT&T's CNL identifying the Subsequent Wire Center List (Subsequent Transition Period).

5.2.2.6.4 The rates set forth in Exhibit B shall apply to the Subsequent Embedded Base during the Subsequent Transition Period.

5.2.2.6.5 No later than one hundred eighty (180) days from AT&T's CNL identifying the Subsequent Wire Center List, Intrado shall submit an LSR(s) or spreadsheet(s) as applicable, identifying the Subsequent Embedded Base of circuits to be disconnected or converted to other AT&T services.

5.2.2.6.6 In the case of disconnection, the applicable disconnect charges set forth in this Agreement shall apply.

5.2.2.6.6.1 If Intrado fails to submit the LSR(s) or spreadsheet(s) for all of its Subsequent Embedded Base by one hundred eighty (180) days after the date of AT&T's CNL identifying the Subsequent Wire Center List, AT&T will identify Intrado's remaining Subsequent Embedded Base, if any, and will transition such circuits to the equivalent tariffed AT&T service(s), or in the case of Georgia, to the equivalent 271 service(s) set forth in Exhibit 1. In the states of Florida, Mississippi and South Carolina, those circuits identified and transitioned by AT&T shall be subject to the applicable disconnect charges as set forth in this Agreement and the full nonrecurring charges for installation of the equivalent tariffed AT&T service as

set forth in AT&T's tariffs. In the states of Alabama, Georgia and North Carolina, those circuits identified and transitioned by AT&T shall be subject to the applicable switch-as-is rates set forth in Exhibit A of Attachment 2. For the state of Louisiana, those circuits identified and transitioned by AT&T shall be subject to the applicable switch-as-is rates set forth in AT&T's tariffs.

5.2.2.6.7 For Subsequent Embedded Base circuits converted pursuant to Section 5.2.2.6.5 above or transitioned pursuant to Section 5.2.2.6.6.1 above, the applicable recurring tariff charges shall apply as of the earlier of the date each circuit is converted or transitioned, as applicable, or the first day after the end of the Subsequent Transition Period.

5.2.3 AT&T shall:

5.2.4 Provide Intrado exclusive use of Dedicated Transport to a particular customer or carrier;

5.2.5 Provide all technically feasible features, functions, and capabilities of Dedicated Transport as outlined within the technical requirements of this section;

5.2.6 Permit, to the extent technically feasible, Intrado to connect Dedicated Transport to equipment designated by Intrado, including but not limited to, Intrado's collocated facilities; and

5.2.7 Permit, to the extent technically feasible, Intrado to obtain the functionality provided by AT&T's digital cross-connect systems.

5.3 AT&T shall offer Dedicated Transport:

5.3.1 As capacity on a shared facility; and

5.3.2 As a circuit (i.e., DS0, DS1, DS3, STS-1) dedicated to Intrado.

5.4 Dedicated Transport may be provided over facilities such as optical fiber, copper twisted pair, and coaxial cable, and shall include transmission equipment such as line terminating equipment, amplifiers, and regenerators.

5.5 Intrado may obtain a maximum of twelve (12) unbundled DS3 Dedicated Transport circuits on each Route where DS3 Dedicated Transport is available as a Network Element, and a maximum of ten (10) unbundled DS1 Dedicated Transport circuits on each Route where there is no 251(c)(3) unbundling obligation for DS3 Dedicated Transport, but for which impairment exists for DS1 Dedicated Transport. For purposes of this Section 5, a "Route" is defined in 47 C.F.R. § 51.319 (e) as a transmission path between one of an incumbent LEC's wire centers or switches and another of the incumbent LECs wire centers or switches. A route between two (2) points (e.g. wire center or switch "A" and wire

center or switch "Z") may pass through one or more intermediate wire centers or switches (e.g. wire center or switch "X"). Transmission paths between the same end points (e.g. wire center or switch "A" and wire center or switch "Z") are the same "route", irrespective of whether they pass through the same intermediate wire centers or switches, if any.

5.6 Technical Requirements

5.6.1 AT&T shall offer DS0 equivalent interface transmission rates for DS0 or voice grade Dedicated Transport. For DS1 or DS3 circuits, Dedicated Transport shall at a minimum meet the performance, availability, jitter, and delay requirements specified for Customer Interface to Central Office (CI to CO) connections in the applicable industry standards.

5.6.2 AT&T shall offer the following interface transmission rates for Dedicated Transport:

5.6.2.1 DS0 Equivalent;

5.6.2.2 DS1;

5.6.2.3 DS3;

5.6.2.4 STS-1; and

5.6.2.5 SDH (Synchronous Digital Hierarchy) Standard interface rates are in accordance with International Telecommunications Union (ITU) Recommendation G.707 and Plesiochronous Digital Hierarchy (PDH) rates per ITU Recommendation G.704.

5.6.3 AT&T shall design Dedicated Transport according to its network infrastructure. Intrado shall specify the termination points for Dedicated Transport.

5.6.4 At a minimum, Dedicated Transport shall meet each of the requirements set forth in the applicable industry technical references and AT&T Technical References;

5.6.4.1 Telcordia TR-TSY-000191 Alarm Indication Signals Requirements and Objectives, Issue 1, May 1986.

5.6.4.2 AT&T's TR73501 LightGate®Service Interface and Performance Specifications, Issue D, June 1995.

5.6.4.3 AT&T's TR73525 MegaLink®Service, MegaLink Channel Service and MegaLink Plus Service Interface and Performance Specifications, Issue C, May 1996.

5.7 Unbundled Channelization (Multiplexing)

5.7.1 To the extent Intrado is purchasing DS1 or DS3 or STS-1 Dedicated Transport pursuant to this Agreement, Unbundled Channelization (UC) provides the optional multiplexing capability that will allow a DS1 (1.544 Mbps) or DS3 (44.736 Mbps) or STS-1 (51.84 Mbps) Network Elements to be multiplexed or channelized at an AT&T central office. Channelization can be accomplished through the use of a multiplexer or a digital cross-connect system at the discretion of AT&T. Once UC has been installed, Intrado may request channel activation on a channelized facility and AT&T shall connect the requested facilities via COCIs. The COCI must be compatible with the lower capacity facility and ordered with the lower capacity facility. This service is available as defined in NECA 4.

5.7.2 AT&T shall make available the following channelization systems and interfaces:

5.7.2.1 DS1 Channelization System: channelizes a DS1 signal into a maximum of twenty-four (24) DS0s. The following COCI are available: Voice Grade, Digital Data and ISDN.

5.7.2.2 DS3 Channelization System: channelizes a DS3 signal into a maximum of twenty-eight (28) DS1s. A DS1 COCI is available with this system.

5.7.2.3 STS-1 Channelization System: channelizes a STS-1 signal into a maximum of twenty-eight (28) DS1s. A DS1 COCI is available with this system.

5.7.3 Technical Requirements. In order to assure proper operation with AT&T provided central office multiplexing functionality, Intrado's channelization equipment must adhere strictly to form and protocol standards. Intrado must also adhere to such applicable industry standards for the multiplex channel bank, for voice frequency encoding, for various signaling schemes, and for sub rate digital access.

5.8 Dark Fiber Transport. Dark Fiber Transport is defined as Dedicated Transport that consists of unactivated optical interoffice transmission facilities without attached signal regeneration, multiplexing, aggregation or other electronics.

5.8.1 Dark Fiber Transport Requirements

5.8.1.1 For purposes of this Section 5.8, a Business Line is as defined in 47 C.F.R. § 51.5.

5.8.1.2 Notwithstanding anything to the contrary in this Agreement, AT&T shall make available Dark Fiber Transport as described in this Agreement, except in any wire center meeting the criteria described below:

5.8.1.2.1 Dark Fiber Transport where both wire centers at the end points of the route contain twenty-four thousand (24,000) or more Business Lines or three (3) or more fiber-based collocators.

5.8.1.3 The Master List of Unimpaired Wire Centers or AT&T's List of Unimpaired Wire Centers, as described in Section 1.8, sets forth the list of wire centers meeting the criteria set forth in Section 5.8.1.2.1 above as of March 11, 2005.

5.8.1.4 Once any wire center exceeds either of the thresholds set forth in Section 5.8.1.2.1 above, no future Dark Fiber Transport unbundling will be required in that wire center.

5.8.1.5 Modifications and Updates to the Wire Center List and Subsequent Transition Periods

5.8.1.5.1 In the event AT&T identifies additional wire centers that meet the criteria set forth in Section 5.8.1.2.1 above, but that were not included in the Master List of Unimpaired Wire Centers or AT&T's List of Unimpaired Wire Centers, AT&T shall include such additional wire centers in a CNL. Each such list of additional wire centers shall be considered a "Subsequent Wire Center List". AT&T will follow any notification procedures in applicable Commission orders.

5.8.1.5.2 Intrado shall have thirty (30) business days to dispute the additional wire centers listed on AT&T's CNL. Absent such dispute, effective thirty (30) business days after the date of an AT&T CNL providing a Subsequent Wire Center List, AT&T shall not be required to provide unbundled access to Dark Fiber Transport, as applicable, in such additional wire center(s), except pursuant to the self-certification process as set forth in Section 1.8 of this Attachment.

5.8.1.5.3 For purposes of Section 5.8.1.5 above, AT&T shall make available Dark Fiber Transport that was in service for Intrado in a wire center on the Subsequent Wire Center List as of the thirtieth (30) business day after the date of AT&T's CNL identifying the Subsequent Wire Center List (Subsequent Embedded Base) until one hundred eighty (180) days after the thirtieth (30th) business day from the date of AT&T's CNL identifying the Subsequent Wire Center List (Subsequent Transition Period).

5.8.1.5.4 The rates set forth in Exhibit B shall apply to the Subsequent Embedded Base during the Subsequent Transition Period.

5.8.1.5.5 No later than one hundred eighty (180) days from AT&T's CNL identifying the Subsequent Wire Center List, Intrado shall submit an LSR(s) or spreadsheet(s) as applicable, identifying the Subsequent Embedded Base of circuits to be disconnected or converted to other AT&T services.

5.8.1.5.6 In the case of disconnection, the applicable disconnect charges set forth in this Agreement shall apply.

5.8.1.5.6.1 If Intrado fails to submit the LSR(s) or spreadsheet(s) for all of its Subsequent Embedded Base by one hundred eighty (180) days after the date of AT&T's CNL identifying the Subsequent Wire Center List, AT&T will identify Intrado's remaining Subsequent Embedded Base, if any, and will transition such circuits to the equivalent tariffed AT&T service(s), or in the case of Georgia, to the equivalent 271 service set forth in Exhibit 1.

5.8.1.5.6.2 In the states of Florida, Mississippi and South Carolina, those circuits identified and transitioned by AT&T shall be subject to the applicable disconnect charges as set forth in this Agreement and the full nonrecurring charges for installation of the equivalent tariffed AT&T service as set forth in AT&T's tariffs. In the states of Alabama, Georgia and South Carolina, those circuits identified and transitioned by AT&T shall be subject to the applicable switch-as-is rates set forth in Exhibit A of Attachment 2. In the state of Louisiana, those circuits identified and transitioned by AT&T shall be subject to the full nonrecurring charges for installation of the equivalent tariffed AT&T service as set forth in AT&T's tariffs.

5.8.1.5.6.3 For Subsequent Embedded Base circuits converted pursuant to Section 5.8.1.5.5 above or transitioned pursuant to Section 5.8.1.5.6.1 above, the applicable recurring tariff charges shall apply as of the earlier of the date each circuit is converted or transitioned, as applicable, or the first day after the end of the Subsequent Transition Period.

5.9 Rearrangements

5.9.1 A request to move a working Intrado Dedicated Transport circuit or a Combination including Dedicated Transport from one connecting facility assignment (CFA) to another CFA in the same AT&T Central Office (Change in CFA), shall not constitute the establishment of new service. The applicable Rearrangement rates for the Change in CFA are set forth in Exhibit A.

5.9.2 A request to reterminate one end of a Dedicated Transport facility that is not a Change in CFA and thus results in retermination in a different AT&T Central Office (Retermination) shall constitute disconnection of existing service and the establishment of new service. Disconnect charges and full nonrecurring charges for establishment of service, as set forth in Exhibit A, shall apply.

5.9.3 Upon request of Intrado, AT&T shall project manage the Change in CFA or Retermination of Dedicated Transport and Combinations that include Dedicated Transport as described in Sections 5.9.1 and 5.9.2 above and Intrado may request OC-TS for such orders.

5.9.4 AT&T shall accept a LOA between Intrado and another carrier that will allow Intrado, in connection with a Change in CFA or Retermination, to connect Dedicated Transport or a Combination that includes Dedicated Transport, via a CFA, to the other carrier's collocation space or to another carrier's Multiplexer.

6 Automatic Location Identification/Data Management System (ALI/DMS)

6.1 911 and E911 Databases

6.1.1 AT&T shall provide Intrado with nondiscriminatory access to 911 and E911 databases on an unbundled basis, in accordance with 47 C.F.R. § 51.319 (f).

6.1.2 The ALI/DMS database contains end user information (including name, address, telephone information, and sometimes special information from the local service provider or end user) used to determine to which PSAP to route the call. The ALI/DMS database is used to provide enhanced routing flexibility for E911. Intrado will be required to provide the AT&T 911 database vendor daily service order updates to E911 database in accordance with Section 6.2.1 below.

6.2 Technical Requirements

6.2.1 AT&T's 911 database vendor shall provide Intrado the capability of providing updates to the ALI/DMS database through a specified electronic interface. Intrado shall contact AT&T's 911 database vendor directly to request interface. Intrado shall provide updates directly to AT&T's 911 database vendor on a daily basis. Updates shall be the responsibility of Intrado and AT&T shall not be liable for the transactions between Intrado and AT&T's 911 database vendor.

6.2.2 It is Intrado's responsibility to retrieve and confirm statistical data and to correct errors obtained from AT&T's 911 database vendor on a daily basis. All errors will be assigned a unique error code and the description of the error and the corrective action is described in the CLEC Users Guide for Facility Based Providers that is found on the AT&T Interconnection Web site.

6.2.3 Intrado shall conform to the AT&T standards as described in the CLEC Users Guide to E911 for Facilities Based Providers that is located on the AT&T Interconnection Web site.

6.2.4 Stranded Unlocks are defined as end user records in AT&T's ALI/DMS database that have not been migrated for over ninety (90) days to Intrado, as a new provider of local service to the end user. Stranded Unlocks are those end user records that have been "unlocked" by the previous local exchange carrier that provided service to the end user and are open for Intrado to assume responsibility for such records.

6.2.4.1 Based upon end user record ownership information available in the NPAC database, AT&T shall provide a Stranded Unlock annual report to Intrado that reflects all Stranded Unlocks that remain in the ALI/DMS database for over ninety (90) days. Intrado shall review the Stranded Unlock report, identify its end user records and request to either delete such records or migrate the records to Intrado within two (2) months following the date of the Stranded Unlock report provided by AT&T. Intrado shall reimburse AT&T for any charges AT&T's database vendor imposes on AT&T for the deletion of Intrado's records.

6.3 911 PBX Locate Service®. 911 PBX Locate Service is comprised of a database capability and a separate transport component.

6.3.1 Description of Product. The transport component provides a dedicated trunk path from a Private Branch Exchange (PBX) switch to the appropriate AT&T 911 tandem.

6.3.1.1 The database capability allows Intrado to offer an E911 service to its PBX end users that identifies to the PSAP the physical location of the Intrado PBX 911 end user station telephone number for the 911 call that is placed by the end user.

6.3.2 Intrado may order either the database capability or the transport component as desired or Intrado may order both components of the service.

6.3.3 911 PBX Locate Database Capability. Intrado's end user or Intrado's end user's database management agent (DMA) must provide the end user PBX station telephone numbers and corresponding address and location data to AT&T's 911 database vendor. The data will be loaded and maintained in AT&T's ALI database.

6.3.4 Ordering, provisioning, testing and maintenance shall be provided by Intrado pursuant to the 911 PBX Locate Marketing Service Description (MSD) that is located on the AT&T Interconnection Web site.

6.3.5 Intrado's end user, or Intrado's end user DMA must provide ongoing updates to AT&T's 911 database vendor within a commercially reasonable timeframe of all PBX station telephone number adds, moves and deletions. It will be the responsibility of Intrado to ensure that the end user or DMA maintain the data pertaining to each end user's extension managed by the 911 PBX Locate Service product. Intrado should not submit telephone number updates for specific PBX station telephone numbers that are submitted by Intrado's end user, or Intrado's end user DMA under the terms of 911 PBX Locate product.

6.3.5.1 Intrado must provision all PBX station numbers in the same LATA as the E911 tandem.

6.3.6 Intrado agrees to release, indemnify, defend and hold harmless AT&T from any and all loss, claims, demands, suits, or other action, or any liability whatsoever, whether suffered, made, instituted or asserted by Intrado's end user or by any other party or person, for any personal injury to or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by Intrado or others, or for any infringement or invasion of the right of privacy of any person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, location or use of PBX Locate Service features or by any services which are or may be furnished by AT&T in connection therewith, including but not limited to the identification of the telephone number, address or name associated with the telephone used by the party or parties accessing 911 services using 911 PBX Locate Service hereunder, except to the extent caused by AT&T's gross negligence or wilful misconduct. Intrado is responsible for assuring that its authorized end users comply with the provisions of these terms and that unauthorized persons do not gain access to or use the 911 PBX Locate Service through user names, passwords, or other identifiers assigned to Intrado's end user or DMA pursuant to these terms. Specifically, Intrado's end user or DMA must keep and protect from use by any unauthorized individual identifiers, passwords, and any other security token(s) and devices that are provided for access to this product.

6.3.7 Intrado may only use AT&T PBX Locate Service solely for the purpose of validating and correcting 911 related data for Intrado's end users' telephone numbers for which it has direct management authority.

6.3.8 911 PBX Locate Transport Component. The 911 PBX Locate Service transport component requires Intrado to order a CAMA type dedicated trunk from Intrado's end user premise to the appropriate AT&T 911 tandem pursuant to the following provisions.

6.3.8.1 Except as otherwise set forth below, a minimum of two (2) end user specific, dedicated 911 trunks are required between the Intrado's end user premise and the AT&T 911 tandem as described in AT&T's TR 73576 and in accordance with the 911 PBX Locate Marketing Service Description located on the AT&T Interconnection Web site. Intrado is responsible for connectivity between the end user's PBX and Intrado's switch or POP location. Intrado will then order 911 trunks from their switch or POP location to the AT&T 911 tandem. The dedicated trunks shall be, at a minimum, DS0 level trunks configured as part of a digital interface (delivered over a Intrado purchased DS1 facility that hands off at a DS1 or higher level digital or optical interface). Intrado is responsible for ensuring that the PBX switch is capable of sending the calling station's Direct Inward Dial (DID) telephone number to the AT&T 911 tandem in a specified Multi-frequency (MF) Address Signaling Protocol. If the PBX switch supports Primary Rate ISDN

(PRI) and the calling stations are DID numbers, then the 911 call can be transmitted using PRI, and there will be no requirement for the PBX Locate Transport component.

6.3.9 Ordering and Provisioning. Intrado will submit an Access Service Request (ASR) to AT&T to order a minimum of two (2) end user specific 911 trunks from its switch or POP location to the AT&T 911 tandem.

6.3.9.1 Testing and maintenance shall be provided by Intrado pursuant to the 911 PBX Locate Marketing Service description that is located on the AT&T Interconnection Web site.

6.3.10 Rates. Rates for the 911 PBX Locate Service database component are set forth in Exhibit A. Trunks and facilities for 911 PBX Locate transport component may be ordered by Intrado pursuant to the terms and conditions set forth in Attachment 3.

7 White Pages Listings

7.1 AT&T shall provide Intrado and its customers access to white pages directory listings under the following terms:

7.1.1 Listings. Intrado shall provide all new, changed and deleted listings on a timely basis and AT&T or its agent will include Intrado residential and business customer listings in the appropriate White Pages (residential and business) or alphabetical directories in the geographic areas covered by this Agreement. Directory listings will make no distinction between Intrado and AT&T customers. Intrado shall provide listing information in accordance with the procedures set forth in The AT&T Business Rules for Local Ordering found at AT&T's Interconnection Services Web site.

7.1.2 Unlisted/Non-Published Customers. Intrado will be required to provide to AT&T the names, addresses and telephone numbers of all Intrado customers who wish to be omitted from directories. Unlisted/Non-Published listings will be subject to the rates as set forth in AT&T's GSST and shall not be subject to wholesale discount.

7.1.3 Inclusion of Intrado Customers in Directory Assistance Database. AT&T will include and maintain Intrado customer listings in AT&T's DA databases. Intrado shall provide such Directory Assistance listings to AT&T at no charge.

7.1.4 Listing Information Confidentiality. AT&T will afford Intrado's directory listing information the same level of confidentiality that AT&T affords its own directory listing information.

7.1.5 Additional and Designer Listings. Additional and designer listings will be offered by AT&T at tariffed rates as set forth in AT&T's GSST and shall not be subject to the wholesale discount.

7.1.6 Rates. So long as Intrado provides listing information to AT&T as set forth in Section 7.1.2 above, AT&T shall provide to Intrado one (1) basic White Pages directory listing per Intrado customer at no charge other than applicable service order charges as set forth in AT&T's tariffs. Except in the case of a LSR submitted solely to port a number from AT&T, if such listing is requested on the initial LSR associated with the request for services, a single manual service order charge or electronic service order charge, as appropriate, as described in Attachment 6, will apply to both the request for service and the request for the directory listing. Where a subsequent LSR is placed solely to request a directory listing, or is placed to port a number and request a directory listing, separate service order charges as set forth in AT&T's tariffs shall apply, as well as the manual service order charge or the electronic service order charge, as appropriate, as described in Attachment 6.

7.2 Directories. AT&T or its agent shall make available White Pages directories to Intrado customer at no charge or as specified in a separate agreement between Intrado and AT&T's agent.

7.3 Procedures for submitting Intrado Subscriber Listing Information (SLI) are found in The AT&T Business Rules for Local Ordering found at AT&T's Interconnection Services Web site.

7.3.1 Intrado authorizes AT&T to release all Intrado SLI provided to AT&T by Intrado to qualifying third parties. Such Intrado SLI shall be intermingled with AT&T's own customer listings and listings of any other CLEC that has authorized a similar release of SLI.

7.3.2 No compensation shall be paid to Intrado for AT&T's receipt of Intrado SLI, or for the subsequent release to third parties of such SLI. In addition, to the extent AT&T incurs costs to modify its systems to enable the release of Intrado's SLI, or costs on an ongoing basis to administer the release of Intrado SLI, Intrado shall pay to AT&T its proportionate share of the reasonable costs associated therewith. At any time that costs may be incurred to administer the release of Intrado's SLI, Intrado will be notified. If Intrado does not wish to pay its proportionate share of these reasonable costs, Intrado may instruct AT&T that it does not wish to release its SLI to independent publishers, and Intrado shall amend this Agreement accordingly. Intrado will be liable for all costs incurred until the effective date of the agreement.

7.3.3 Neither AT&T nor any agent shall be liable for the content or accuracy of any SLI provided by Intrado under this Agreement. Intrado shall indemnify, except to the

extent caused by AT&T's gross negligence or willful misconduct, hold harmless and defend AT&T and its agents from and against any damages, losses, liabilities, demands, claims, suits, judgments, costs and expenses (including but not limited to reasonable attorneys' fees and expenses) arising from AT&T's tariff obligations or otherwise and resulting from or arising out of any third party's claim of inaccurate Intrado listings or use of the SLI provided pursuant to this Agreement. AT&T may forward to Intrado any complaints received by AT&T relating to the accuracy or quality of Intrado listings.

7.3.4 Listings and subsequent updates will be released consistent with AT&T system changes and/or update scheduling requirements.

Georgia 271 Requirements

1. This Exhibit sets forth terms and conditions for de-listed network elements that AT&T is required to offer pursuant to the Georgia Public Service Commission's Order in Docket No. 19341-U ("Order") to Intrado for Intrado's provision of Telecommunications Services in accordance with its obligations under Section 271 of the Act ("271").

1.1 To the extent DS1 and/or DS3 Loops, DS1 and/or DS3 Dedicated Transport and Multiplexing are unavailable as a UNE pursuant to this Agreement, these services will be made available by AT&T pursuant to Section 271 of the Act on the same terms and conditions set forth elsewhere in the Agreement, except as otherwise provided in this Exhibit 1, and at the rates set forth in Exhibit B to this Agreement. Notwithstanding the foregoing, the Parties agree that those provisions applicable to DS1 and DS3 Loops or DS1 and DS3 transport provided pursuant to Section 251 of the Act relating to transition of Embedded Base circuits, limitations on the number of circuits available at a particular location or Building, and limitations relating to use for mobile and long distance service shall not apply to the equivalent services available pursuant to this Exhibit 1.

1.2 For information regarding Ordering Guidelines and Processes for 271 elements in the state of Georgia, Intrado should refer to the Guides section of AT&T's Interconnection Web site.

2. 271 Dark Fiber Loops, 271 DS1 and DS3 Entrance Facilities, and 271 Dark Fiber Transport Facilities are unavailable pursuant to this Agreement and, but are available at the rates, terms, and conditions set forth in the applicable AT&T tariff.

2.1 Under no circumstance shall AT&T be required to (1) combine 271 elements with other 271 elements offered pursuant to this Exhibit, or (2) 271 elements combined with tariffed services or other wholesale services provided by AT&T. Additionally, AT&T shall not be required to commingle or combine 271 elements offered pursuant to this Exhibit with tariffed services. Further, under no circumstance shall AT&T be required to convert 271 elements offered pursuant to this Agreement to equivalent tariffed services, or to convert tariffed services to 271 elements offered pursuant to this Agreement.

3. Line Sharing

3.1 General. Line Sharing is defined as the process by which Intrado provides digital subscriber line service ("xDSL") over the same copper Loop that AT&T uses to provide retail voice service, with AT&T using the low frequency portion of the Loop and Intrado using the high frequency spectrum (as defined below) of the Loop.

3.2 Line Sharing arrangements in service as of October 1, 2003 will be billed at the rates set forth in the Parties' Amendment to the Agreement to implement the Georgia Public Service Commission's Letter Order dated March 2, 2006 in Docket No. 14361-U.

3.3 For Line Sharing arrangements placed in service between October 2, 2003, and October 1, 2004 the rates will be as set forth in the Parties' Amendment to the Agreement to implement the Georgia Public Service Commission's Letter Order dated March 2, 2006 in Docket No. 14361-U.

3.4 For Line Sharing arrangements placed on or after October 2, 2004 (whether under this Agreement only, or under this Agreement and a prior Agreement), the rates will be the full copper loop rate as set forth in the Parties' Amendment to the Agreement to implement the Georgia Public Service Commission's Letter Order dated March 2, 2006 in Docket No. 14361-U.

3.5 As of October 2, 2006, the rates for Line Sharing arrangements shall be as set forth in Exhibit B to this Amendment.

3.6 The High Frequency Spectrum is defined as the frequency range above the voiceband on a copper Loop facility carrying analog circuit-switched voiceband transmissions. Access to the High Frequency Spectrum is intended to allow Intrado the ability to provide xDSL data services to the End User for which AT&T provides voice services.

3.7 The High Frequency Spectrum shall be available for any version of xDSL complying with Spectrum Management Class 5 of ANSI TI.417, American National Standard for Telecommunications, Spectrum Management for Loop Transmission Systems. AT&T will continue to have access to the low frequency portion of the Loop spectrum (from 300 Hertz to at least 3000 Hertz, and potentially up to 3400 Hertz, depending on equipment and facilities) for the purposes of providing voice service. Intrado shall only use xDSL technology that is within the PSD mask for Spectrum Management Class 5 as found in the abovementioned document.

3.8 Access to the High Frequency Spectrum requires an unloaded, 2-wire copper Loop. An unloaded Loop is a copper Loop with no load coils, lowpass filters, range extenders, DAMLs, or similar devices and minimal bridged taps consistent with ANSI T1.413 and TI .601.

3.9 AT&T will provide Loop Modification to Intrado on an existing Loop for Line Sharing in accordance with procedures as specified in Attachment 2 of this Agreement. AT&T is not required to modify a Loop for access to the High Frequency spectrum if modification of that Loop significantly degrades AT&T's voice service. If Intrado requests that AT&T modify a Loop and such modification significantly degrades the voice services on the Loop, Intrado shall pay for the Loop to be restored to its original state.

3.10 Line Sharing shall only be available on Loops on which AT&T is also providing, and continues to provide, analog voice service directly to the End User. In the event the End User terminates its AT&T provided voice service for any reason, or in the event AT&T disconnects the End User's voice service pursuant to its tariffs or applicable law, and Intrado desires to continue providing xDSL service on such Loop, Intrado or the new voice provider, or both, shall be required to purchase a full stand-alone Loop. In those cases in which AT&T no longer provides voice service to the End User and Intrado purchases the full stand-alone Loop, Intrado may elect the type of Loop it will purchase. Intrado will pay the appropriate recurring and nonrecurring rates for such Loop as set forth in the Parties' Amendment to the Agreement to implement the Georgia Public Service Commission's Letter Order dated March 2, 2006 in Docket No. 14361-U. In the event Intrado purchases a voice grade Loop, Intrado acknowledges that such Loop may not remain xDSL compatible.

3.11 Only one CLEC shall be permitted access to the High Frequency Spectrum of any particular Loop.

3.12 Provisioning of Line Sharing and Splitter Space. AT&T will provide Intrado with access to the High Frequency Spectrum as follows:

3.12.1 To order High Frequency Spectrum on a particular Loop, Intrado must have a Digital Subscriber Line Access Multiplexer (DSLAM) collocated in the central office that serves the End User of such Loop.

3.12.2 Intrado may provide its own splitters or may order splitters in a central office once it has installed its DSLAM in that central office. AT&T will install splitters within thirty-six (36) calendar days of Intrado's submission of an error free Line Splitter Ordering Document (LSOD) to the AT&T Complex Resale Support Group.

3.12.3 Once a splitter is installed on behalf of Intrado in a central office in which Intrado is located, Intrado shall be entitled to order the High Frequency Spectrum on lines served out of that central office. AT&T will bill and Intrado shall pay the electronic or manual ordering charges, as set forth in Exhibit A of Attachment 2 of the Agreement, as applicable when Intrado orders High Frequency Spectrum for End User service.

3.12.4 Once AT&T has placed cross-connects on behalf of Intrado to provide Intrado access to the High Frequency Spectrum and chooses to rearrange its splitter or CLEC pairs, Intrado may order the rearrangement of its splitter or cable pairs via "Subsequent Activity". Subsequent Activity is any rearrangement of Intrado's cable pairs or splitter ports after AT&T has placed cross-connection to provide Intrado access to the High Frequency Spectrum. AT&T shall bill and Intrado shall pay the Subsequent Activity charges as set forth in Exhibit B of this Amendment.

3.13 AT&T Provided Splitter – Line Sharing. AT&T will select, purchase, install, and maintain a central office POTS splitter and provide Intrado access to data ports on the splitter. The splitter will route the High Frequency Spectrum on the circuit to Intrado's xDSL equipment in Intrado's collocation space. At least thirty (30) calendar days before making a change in splitter suppliers, AT&T will provide Intrado with a carrier notification letter, informing Intrado of change. Intrado shall purchase ports on the splitter in increments of eight (8), twenty-four (24), or ninety-six (96) ports.

3.14 AT&T will install the splitter in (i) a common area close to Intrado's collocation area, if possible; or (ii) in a AT&T relay rack as close to Intrado's DS0 termination point as possible. For purposes of this section, a common area is defined as an area in the central office in which both Parties have access to a common test access point. A Termination Point is defined as the point of termination for Intrado on the main distributing frame in the central office and is not the demarcation point set forth in Attachment 4 of this Agreement. AT&T will cross-connect the splitter data ports to a specified Intrado DS0 at such time that a Intrado End User's service is established.

3.15 CLEC Provided Splitter – Line Sharing. Intrado may at its option purchase, install and maintain central office POTS splitters in its collocation arrangements. Intrado may use such splitters to provide xDSL services to its End Users using the High Frequency Spectrum. Existing Collocation rules and procedures and the terms and conditions relating to Collocation set forth in Attachment 4-Central Office shall apply.

3.16 Any splitters installed by Intrado in its collocation arrangement shall comply with ANSI T1.413, Annex E, or any future ANSI splitter Standards. Intrado may install any splitters that AT&T deploys or permits to be deployed for itself or any AT&T affiliate.

3.17 Ordering – Line Sharing. Intrado shall use AT&T's LSOD to order splitters from AT&T and to activate and deactivate DS0 Collocation Connecting Facility Assignments (CFA) for use with High Frequency Spectrum.

3.18 AT&T's Local Ordering Handbook (LOH) will provide Intrado the LSR format to be used when ordering disconnections of the High Frequency Spectrum or Subsequent Activity.

3.19 AT&T will provision High Frequency Spectrum in compliance with AT&T's Products and Services Interval Guide available at AT&T's Interconnection Web site.

3.20 AT&T shall test the data portion of the Loop to ensure the continuity of the wiring for Intrado's data.

3.21 AT&T will provide Intrado access to Preordering LMU in accordance with the terms of this Agreement. AT&T shall bill and Intrado shall pay the rates for such services, as described in Exhibit B of this Amendment.

3.22 Maintenance and Repair - Line Sharing. Intrado shall have access for repair and maintenance purposes to any Loop for which it has access to the High Frequency Spectrum. Intrado may test from the collocation space, the Termination Point, or the NID. AT&T will be responsible for repairing voice services and the physical line between the NID at the End User's premises and the Termination Point. Intrado will be responsible for repairing its data services. Each Party will be responsible for maintaining its own equipment.

3.23 Intrado shall inform its End Users to direct data problems to Intrado, unless both voice and data services are impaired, in which event Intrado should direct the End Users to contact AT&T. Once a Party has isolated a trouble to the other Party's portion of the Loop, the Party isolating the trouble shall notify the End User that the trouble is on the other Party's portion of the Loop.

3.24 If Intrado reports a trouble on the High Frequency Spectrum of a Loop and no trouble actually exists on the AT&T portion, or AT&T isolates the trouble to the physical collocation arrangement belonging to Intrado, AT&T will charge Intrado for any dispatching and testing (both inside and

outside the CO) required by AT&T in order to confirm the working status. The rates charged for no trouble found (NTF) shall be as set forth in Exhibit B of this Amendment.

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm																
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																	
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.																
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLECs bill when it submits an LSR to AT&T.

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm															
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.															
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLECs bill when it submits an LSR to AT&T.															
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00						
	OSS - Manual Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMAN		11.90	0.00	1.83	0.00						
UNE SERVICE DATE ADVANCEMENT CHARGE

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm															
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.															
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLECs bill when it submits an LSR to AT&T.															
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm															
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.															
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLECs bill when it submits an LSR to AT&T.															
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00						
	OSS - Manual Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMAN		7.86	0.00	0.93	0.00						
UNE SERVICE DATE ADVANCEMENT CHARGE

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm															
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																	
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.															
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLEC's bill when it submits an LSR to AT&T.															
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00						
	OSS - Manual Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMAN		15.20	0.00	15.20	0.00						
UNE SERVICE DATE ADVANCEMENT CHARGE																	
	NOTE: The Expedite charge will be maintained commensurate with BellSouth's FCC No.1 Tariff, Section 5 as applicable.

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm															
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.															
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLECs bill when it submits an LSR to AT&T.															
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00						
	OSS - Manual Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMAN		15.75	0.00	1.97	0.00						
UNE SERVICE DATE ADVANCEMENT CHARGE																
	NOTE: The Expedite charge will be maintained commensurate with BellSouth's FCC No.1 Tariff, Section 5 as applicable.

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm																
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																	
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.																
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLEC's bill when it submits an LSR to AT&T.																
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00						
	OSS - Manual Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMAN		15.20	0.00	15.20	0.00						
UNE SERVICE DATE ADVANCEMENT CHARGE																	
	NOTE: The Expedite charge will be maintained commensurate with BellSouth's FCC No.1 Tariff, Section 5 as applicable.

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm															
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.															
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLEC's bill when it submits an LSR to AT&T.															
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00						
	OSS - Manual Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMAN		15.69	0.00	1.97	0.00

	The "Zone" shown in the sections for stand-alone loops or loops as part of a combination refers to Geographically Deaveraged UNE Zones. To view Geographically Deaveraged UNE Zone Designations by Central Office, refer to Internet Website: http://www.interconnection.bellsouth.com/become_a_clec/html/interconnection.htm															
OPERATIONS SUPPORT SYSTEMS (OSS) - "REGIONAL RATES"																
	NOTE: (1) CLEC should contact its contract negotiator if it prefers the "state specific" OSS charges as ordered by the State Commissions. The OSS charges currently contained in this rate exhibit are the AT&T "regional" service ordering charges. CLEC may elect either the state specific Commission ordered rates for the service ordering charges, or CLEC may elect the regional service ordering charge, however, CLEC can not obtain a mixture of the two regardless if CLEC has a interconnection contract established in each of the 9 states.															
	NOTE: (2) Any element that can be ordered electronically will be billed according to the SOMEC rate listed in this category. Please refer to AT&T's Local Ordering Handbook (LOH) to determine if a product can be ordered electronically. For those elements that cannot be ordered electronically at present per the LOH, the listed SOMEC rate in this category reflects the charge that would be billed to a CLEC once electronic ordering capabilities come on-line for that element. Otherwise, the manual ordering charge, SOMAN, will be applied to a CLECs bill when it submits an LSR to AT&T.															
	NOTE: (3) OSS - Manual Service Order Charge, Per Element - UNE Only **Please see applicable rate element for SOMAN charge**															
	OSS - Electronic Service Order Charge, Per Local Service Request (LSR) - UNE Only				SOMEC		3.50	0.00	3.50	0.00						
UNE SERVICE DATE ADVANCEMENT CHARGE																
	NOTE: The Expedite charge will be maintained commensurate with BellSouth's FCC No.1 Tariff, Section 5 as applicable.

NETWORK INTERCONNECTION

1 **General**

1.1 The Parties shall provide interconnection with each other's networks for the transmission and routing of telephone exchange service (Local Traffic), ISP-Bound Traffic, and exchange access (Switched Access Traffic) on the following terms:

2 **Definitions: (For the purpose of this Attachment)**

For purposes of this attachment only, the following terms shall have the definitions set forth below:

2.1 **Automatic Location Identification (ALI)** is a feature by which the address associated with the calling party's telephone number (ANI) is forwarded to the PSAP for display. Access to the ALI database is described in Attachment 2 to this Agreement.

2.2 **Automatic Number Identification (ANI)** corresponds to the seven-digit telephone number assigned by the serving local exchange carrier.

2.3 **AT&T Trunk Group** is defined as a one-way trunk group carrying AT&T originated traffic to be terminated by Intrado.

2.4 **911 Service** is as described in this Attachment.

2.5 **Call Termination** has the meaning set forth for "termination" in 47 C.F.R. § 51.701(d).

2.6 **Call Transport** has the meaning set forth for "transport" in 47 C.F.R. § 51.701(c).

2.7 **Call Transport and Termination** is used collectively to mean the switching and transport functions from the Interconnection Point to the last point of switching.

2.8 **Common (Shared) Transport** is defined as the transport of the originating Party's traffic by the terminating Party over the terminating Party's common (shared) facilities between (1) the terminating Party's tandem switch and end office switch, (2) between the terminating Party's tandem switches, and/or (3) between the terminating Party's host and remote end office switches. All switches referred herein must be entered into the The Telcordia® LERG™ Routing Guide (LERG).

2.9 **Dedicated Interoffice Facility** is defined as a switch transport facility between a Party's Serving Wire Center and the first point of switching within the LATA on the other Party's network.

2.10 **End Office Switching** is defined as the function that establishes a communications path between the trunk side and line side of the End Office switch.

2.11 **Fiber Meet** is an interconnection arrangement whereby the Parties physically interconnect their networks via an optical fiber interface at which one Party's facilities, provisioning, and maintenance responsibility begins and the other Party's responsibility ends.

2.12 **Final Trunk Group** is defined as the last choice trunk group between two (2) switches for which there is no alternate route.

2.13 **Integrated Services Digital Network User Part (ISUP)** is a message protocol to support call set-up and release for interoffice voice connections over SS7 signaling.

2.14 **Interconnection Point (IP)** is the physical telecommunications equipment interface that interconnects the networks of AT&T and Intrado for the exchange of telecommunications traffic between the Parties.

2.15 **IntraLATA Toll Traffic** is as defined in this Attachment.

2.16 **ISP-Bound Traffic** is as defined in this Attachment.

2.17 **Local Channel** is defined as a switched transport facility between a Party's Interconnection Point and the IP's Serving Wire Center.

2.18 **Local Traffic** is as defined in this Attachment.

2.19 **Public Safety Answering Point (PSAP)** is the answering location for 911 calls.

2.20 **Selective Routing (SR)** is a standard feature that routes an E911 call from the tandem to the designated PSAP based upon the address of the ANI of the calling party.

2.21 **Serving Wire Center (SWC)** is defined as the wire center owned by one Party from which the other Party would normally obtain dial tone for its IP.

2.22 **Signaling System 7 (SS7)/Common Channel Signaling 7 (CCS7)** is an out-of-band signaling system used to provide basic routing information, call set-up and other call termination functions. Signaling is removed from the voice channel and put on a separate data network.

2.23 **Tandem Switching** is defined as the function that establishes a communications path between two switching offices through a third switching office through the provision of trunk side to trunk side switching.

2.24 **Transit Traffic** is traffic originating on Intrado's network that is switched and/or transported by AT&T and delivered to a third party's network, or traffic originating on a third party's network that is switched and/or transported by AT&T and delivered to Intrado's network.

3 Network Interconnection

3.1 This Attachment pertains only to the provision of network interconnection where Intrado owns, leases from a third party or otherwise provides its own switch(es).

3.2 Network interconnection may be provided by the Parties at any technically feasible point within AT&T's network. Requests to AT&T for interconnection at points other than as set forth in this Attachment may be made through the Bona Fide Request/New Business Request (BFR/NBR) Process set forth in Attachment 11.

3.2.1 Each Party is responsible for providing, engineering and maintaining the network on its side of the IP. The IP must be located within AT&T's serving territory in the LATA in which traffic is originating. The IP determines the point at which the originating Party shall pay the terminating Party for the Call Transport and Termination of Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic. In selecting the IP, both Parties will act in good faith and select the point that is most efficient for both Parties.

3.2.2 Pursuant to the provisions of this Attachment, the location of the initial IP in a given LATA shall be established by mutual agreement of the Parties. Subject to the requirements for installing additional IPs, as set forth below, any IPs existing prior to the Effective Date of the Agreement will be accepted as initial IPs and will not require re-grooming. When the Parties mutually agree to utilize two-way interconnection trunk groups for the exchange of Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic between each other, the Parties shall mutually agree to the location of IP(s). If the Parties are unable to agree to a mutual initial IP, each Party, as originating Party, shall establish a single IP in the LATA for the delivery of its originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic to the other Party for Call Transport and Termination by the terminating Party.

3.2.3 Additional IP(s) in a LATA may be established by mutual agreement of the Parties. Notwithstanding the foregoing, additional IP(s) in a particular LATA shall be established, at the request of either Party, when the Local Traffic and ISP-Bound Traffic exceeds eight point nine (8.9) million minutes per month for three (3) consecutive months at the proposed location of the additional IP. AT&T will not request the establishment of an IP in an AT&T Central Office where physical or virtual collocation space is not available or where AT&T fiber connectivity is not available. When the Parties agree to utilize two-way interconnection trunk groups for the exchange of Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic the Parties must agree to the location of the IP(s).

3.3 Interconnection via Dedicated Facilities

3.3.1 Local Channel Facilities. As part of Call Transport and Termination, the originating Party may obtain Local Channel facilities from the terminating Party. The percentage of Local Channel facilities utilized for Local Traffic and ISP-Bound Traffic shall be determined based upon the application of the Percent

Local Facility (PLF) Factor as set forth in this Attachment. The charges applied to the percentage of Local Channel facilities used for Local Traffic and ISP-Bound Traffic as determined by the PLF factor are as set forth in Exhibit A. The remaining percentage of Local Channel facilities shall be billed at AT&T's intrastate Access Services Tariff or BellSouth's FCC No. 1 Tariff rates.

3.3.2 Dedicated Interoffice Facilities. As a part of Call Transport and Termination, the originating Party may obtain Dedicated Interoffice Facilities from the terminating Party. The percentage of Dedicated Interoffice Facilities utilized for Local Traffic and ISP-Bound Traffic shall be determined based upon the application of the PLF factor as set forth in this Attachment. The charges applied to the percentage of the Dedicated Interoffice Facilities used for Local Traffic and ISP-Bound Traffic as determined by the PLF factor are as set forth in Exhibit A. The remaining percentage of the Dedicated Interoffice Facilities shall be billed at AT&T's intrastate Access Services Tariff or BellSouth's FCC No. 1 Tariff rates.

3.4 Fiber Meet. Notwithstanding Sections 3.2.1, 3.2.2, and 3.2.3 above, if Intrado elects to establish interconnection with AT&T pursuant to a Fiber Meet Local Channel, Intrado and AT&T shall jointly engineer, operate and maintain a Synchronous Optical Network (SONET) transmission system by which they shall interconnect their transmission and routing of Local Traffic and ISP-Bound Traffic via a Local Channel at either the DS1 or DS3 level. The Parties shall work jointly to determine the specific transmission system. However, Intrado's SONET transmission system must be compatible with AT&T's equipment, and the Data Communications Channel (DCC) must be turned off.

3.4.1 Each Party, at its own expense, shall procure, install and maintain the agreed upon SONET transmission system in its network.

3.4.2 The Parties shall agree to a Fiber Meet point between the AT&T Serving Wire Center and the Intrado Serving Wire Center. The Parties shall deliver their fiber optic facilities to the Fiber Meet point with sufficient spare length to reach the fusion splice point for the Fiber Meet point. AT&T shall, at its own expense, provide and maintain the fusion splice point for the Fiber Meet. A building type CLLI code will be established for each Fiber Meet point. All orders for interconnection facilities from the Fiber Meet point shall indicate the Fiber Meet point as the originating point for the facility.

3.4.3 Upon verbal request by Intrado, AT&T shall allow Intrado access to the fusion splice point for the Fiber Meet point for maintenance purposes on Intrado's side of the Fiber Meet point.

3.4.4 Neither Party shall charge the other for its Local Channel portion of the Fiber Meet facility used exclusively for Local Traffic and ISP-Bound Traffic. The percentage of Local Channel facilities utilized for Local Traffic and ISP-Bound Traffic shall be determined based upon the application of the PLF factor as set forth in this Attachment. The charges applied to the percentage of Local Channel facilities

used for Local Traffic and ISP-Bound Traffic as determined by the PLF factor are as set forth in Exhibit A. The remaining percentage of Local Channel facilities shall be billed at AT&T's applicable access tariff rates. Charges for switched and special access services shall be billed in accordance with the applicable AT&T intrastate Access Services Tariff and or BellSouth's FCC No. 1 Tariff.

4 **Interconnection Trunk Group Architectures**

4.1 AT&T and Intrado shall establish interconnecting trunk groups and trunk group configurations between networks, including the use of one-way or two-way trunks in accordance with the following provisions set forth in this Attachment. For trunking purposes, traffic will be routed based on the digits dialed by the originating end user and in accordance with the LERG.

4.2 Intrado shall establish an interconnection trunk group(s) to at least one (1) AT&T access tandem within the LATA for the delivery of Intrado's originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic and for the receipt and delivery of Transit Traffic. To the extent Intrado desires to deliver Local Traffic, ISP-Bound Traffic, IntraLATA Toll Traffic and/or Transit Traffic to AT&T access tandems within the LATA, other than the tandems(s) to which Intrado has established interconnection trunk groups, Intrado shall pay the appropriate rates for Multiple Tandem Access, as described in this Attachment.

4.2.1 Notwithstanding the forgoing, Intrado shall establish an interconnection trunk group(s) to all AT&T access and local tandems in the LATA where Intrado has homed (i.e., assigned) its NPA/NXXs. Intrado shall home its NPA/NXXs on the AT&T tandems that serve the exchange rate center areas to which the NPA/NXXs are assigned. The specified exchange rate center assigned to each AT&T tandem is defined in the LERG. Intrado shall enter its NPA/NXX access and/or local tandem homing arrangements into the LERG.

4.3 Switched access traffic will be delivered to and from IXCs based on Intrado's NXX access tandem homing arrangement as specified by Intrado in the LERG.

4.4 Any Intrado interconnection request that (1) deviates from the interconnection trunk group architectures as described in this Agreement, (2) affects traffic delivered to Intrado from an AT&T switch, and (3) requires special AT&T switch translations and other network modifications will require Intrado to submit a BFR/NBR via the BFR/NBR Process as set forth in Attachment 11.

4.5 Recurring and nonrecurring rates associated with interconnecting trunk groups between AT&T and Intrado are set forth in Exhibit A. To the extent a rate associated with the interconnecting trunk group is not set forth in Exhibit A, the rate shall be as set forth in the appropriate AT&T intrastate Access Services Tariff or BellSouth's FCC No. 1 Tariff.

4.6 For two-way trunk groups that carry only both Parties' Local Traffic, the Parties shall be compensated at fifty percent (50%) of the nonrecurring and recurring rates for dedicated trunks and DS1 facilities. Intrado shall be responsible for ordering and paying for any two-way trunks carrying Transit Traffic.

4.7 All trunk groups will be provisioned as SS7 capable where technically feasible. If SS7 is not technically feasible, multi-frequency (MF) protocol signaling shall be used.

4.8 In cases where Intrado is also an IXC, the IXC's Feature Group D (FG D) trunk group(s) must remain separate from the local interconnection trunk group(s).

4.9 Each Party shall order interconnection trunks and trunk group including trunk and trunk group augmentations via the Access Service Request (ASR) process. A Firm Order Confirmation (FOC) shall be returned to the ordering Party, after receipt of a valid, error free ASR, within the timeframes set forth in each state's applicable Performance Measures. Notwithstanding the foregoing, blocking situations and projects shall be managed through AT&T's Carrier Interconnection Switching Center (CISC) Project Management Group and Intrado's equivalent trunking group, and FOCs for such orders shall be returned in the timeframes applicable to the project. A project is defined as (1) a new trunk group or (2) a request for more than one hundred ninety-two (192) trunks on a single or multiple group(s) in a given AT&T local calling area.

4.10 Interconnection Trunk Groups for Exchange of Local Traffic and Transit Traffic

4.10.1 Upon mutual agreement of the Parties in a joint planning meeting, the Parties shall exchange Local Traffic on two-way interconnection trunk group(s) with the quantity of trunks being mutually determined and the provisioning being jointly coordinated. Furthermore, the Parties shall agree upon the IP(s) for two-way interconnection trunk groups transporting both Parties' Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic. Intrado shall order such two-way trunks via the ASR process. AT&T will use the Trunk Group Service Request (TGSR) to request changes in trunking. Furthermore, the Parties shall jointly review trunk performance and forecasts in accordance with Section 6 below. The Parties' use of two-way interconnection trunk groups for the transport of Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic between the Parties does not preclude either Party from establishing additional one-way interconnection trunks for the delivery of its originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic to the other Party. Other trunk groups for operator services, directory assistance and intercept must be established pursuant to AT&T's intrastate Access Services Tariff and/or BellSouth's FCC No. 1 Tariff.

4.10.2 AT&T Access Tandem Interconnection. AT&T Access Tandem interconnection at a single Access Tandem provides access to those End Offices subtending that access tandem (Intratandem Access). Access Tandem interconnection is available for any of the following access tandem architectures:

4.10.2.1 Basic Architecture. In the basic architecture, Intrado's originating Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic and originating and terminating Transit Traffic is transported on a single two-way trunk group between Intrado and AT&T Access Tandem(s) within a LATA to provide Intratandem Access. This trunk group carries Transit Traffic between Intrado and ICOs, IXCs, other CLECs, CMRS providers that have a Meet Point Billing arrangement with AT&T, and other network providers with which Intrado desires to exchange traffic. This trunk group also carries Intrado originated Transit Traffic transiting a single AT&T Access Tandem destined to third party tandems such as an ICO tandem or other CLEC tandem. AT&T originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic is transported on a separate single one-way trunk group terminating to Intrado. The LERG contains current routing and tandem serving arrangements. The basic Architecture is illustrated in Exhibit B.

4.10.2.2 One-Way Trunk Group Architecture. In one-way trunk group architecture, the Parties interconnect using three (3) separate trunk groups. A one-way trunk group provides Intratandem Access for Intrado-originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic destined for AT&T end users. A second one-way trunk group carries AT&T-originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic destined for Intrado end users. A two-way trunk group provides Intratandem Access for Intrado's originating and terminating Transit Traffic. This trunk group carries Transit Traffic between Intrado and ICOs, IXCs, other CLECs, CMRS providers that have a Meet Point Billing arrangement with AT&T, and other network providers with which Intrado exchanges traffic. This trunk group also carries Intrado originated Transit Traffic transiting a single AT&T Access Tandem destined to third party tandems such as an ICO tandem or other CLEC tandem. AT&T originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic is transported on a separate single one-way trunk group terminating to Intrado. The LERG contains current routing and tandem serving arrangements. The one-way trunk group architecture is illustrated in Exhibit C.

4.10.2.3 Two-Way Trunk Group Architecture. The two-way trunk group Architecture establishes one (1) two-way trunk group to provide Intratandem Access for the exchange of Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic between Intrado and AT&T. In addition, a separate two-way transit trunk group must be established for Intrado's originating and terminating Transit Traffic. This trunk group carries Transit Traffic between Intrado and ICOs, IXCs, other CLECs, CMRS providers that have a Meet Point Billing arrangement with AT&T, and other network providers with which Intrado exchanges traffic. This trunk group also carries Intrado originated Transit Traffic transiting a single AT&T Access Tandem destined to third party tandems such as an ICO tandem or other CLEC tandem. AT&T originated traffic may, in order to prevent or remedy traffic blocking situations, be transported on a separate single one-way trunk group terminating to Intrado. However, where Intrado is responsive in a timely manner to AT&T's transport needs for its originated traffic, AT&T originating traffic will be placed on the two-way Local Traffic trunk group carrying ISP-Bound Traffic

and IntraLATA Toll Traffic. The LERG contains current routing and tandem serving arrangements. The two-way trunk group architecture is illustrated in Exhibit D.

4.10.2.4 Supergroup Architecture. In the supergroup architecture, the Parties' Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic and Intrado's Transit Traffic are exchanged on a single two-way trunk group between Intrado and AT&T to provide Intratandem Access to Intrado. This trunk group carries Transit Traffic between Intrado and ICOs, IXCs, other CLECs, CMRS providers that have a Meet Point Billing arrangement with AT&T, and other network providers with which Intrado desires to exchange traffic. This trunk group also carries Intrado originated Transit Traffic transiting a single AT&T Access Tandem destined to third party tandems such as an ICO tandem or other CLEC tandem. AT&T originated traffic may, in order to prevent or remedy traffic blocking situations, be transported on a separate single one-way trunk group terminating to Intrado. However, where Intrado is responsive in a timely manner to AT&T's transport needs for its originated traffic, AT&T originating traffic will be placed on the Supergroup. Other trunk groups for operator services, directory assistance, emergency services and intercept must be established pursuant to the applicable AT&T tariff if service is requested. The LERG contains current routing and tandem serving arrangements. The supergroup architecture is illustrated in Exhibit E.

4.10.2.5 Multiple Tandem Access (MTA) Interconnection

4.10.2.5.1 Where Intrado does not choose access tandem interconnection at every AT&T Access Tandem within a LATA, Intrado must utilize AT&T's MTA interconnection. To utilize MTA Intrado must establish an interconnection trunk group(s) at a minimum of one (1) AT&T Access Tandem within each LATA as required. AT&T will route Intrado's originated Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic for LATA wide transport and termination. Intrado must also establish an interconnection trunk group(s) at all AT&T Access Tandems where Intrado NXXs are homed as described in Section 4.2.1 above. If Intrado does not have NXXs homed at any particular AT&T Access Tandem within a LATA and elects not to establish an interconnection trunk group(s) at such AT&T Access Tandem, Intrado can order MTA in each AT&T Access Tandem within the LATA where it does have an interconnection trunk group(s) and AT&T will terminate Intrado's Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic to end users served through those AT&T Access Tandems where Intrado does not have an interconnection trunk group(s). MTA shall be provisioned in accordance with AT&T's Ordering Guidelines.

4.10.2.5.2 Intrado may also utilize MTA to route its originated Transit Traffic; provided, however, that MTA may not be utilized to route switched access traffic that transits the AT&T network to an IXC. Switched access traffic originated by or

terminated to Intrado will be delivered to and from IXCs based on Intrado's NXX access tandem homing arrangement as specified by Intrado in the LERG.

4.10.2.5.3 Compensation for MTA shall be at the applicable tandem switching and transport charges specified in Exhibit A and shall be billed in addition to any Call Transport and Termination charges.

4.10.2.5.4 To the extent Intrado does not purchase MTA in a LATA served by multiple Access Tandems, Intrado must establish an interconnection trunk group(s) to every Access Tandem in the LATA to serve the entire LATA. To the extent Intrado routes its traffic in such a way that utilizes AT&T's MTA service without properly ordering MTA, Intrado shall pay AT&T the associated MTA charges.

4.10.3 Local Tandem Interconnection

4.10.3.1 Local Tandem Interconnection arrangement allows Intrado to establish an interconnection trunk group(s) at AT&T local tandems for: (1) the delivery of Intrado-originated Local Traffic and ISP-Bound Traffic transported and terminated by AT&T to AT&T End Offices served by those AT&T local tandems, and (2) for local Transit Traffic transported by AT&T for third party network providers who have also established an interconnection trunk group(s) at those AT&T local tandems.

4.10.3.2 When a specified local calling area is served by more than one (1) AT&T local tandem, Intrado must designate a "home" local tandem for each of its assigned NPA/NXXs and establish trunk connections to such local tandems. Additionally, Intrado may choose to establish an interconnection trunk group(s) at the AT&T local tandems where it has no codes homing but is not required to do so. Intrado may deliver Local Traffic and ISP-Bound Traffic to a "home" AT&T local tandem that is destined for other AT&T or third party network provider end offices subtending other AT&T local tandems in the same local calling area where Intrado does not choose to establish an interconnection trunk group(s). It is Intrado's responsibility to enter its own NPA/NXX local tandem homing arrangements into the LERG either directly or via a vendor in order for other third party network providers to determine appropriate traffic routing to Intrado's codes. Likewise, Intrado shall obtain its routing information from the LERG.

4.10.3.3 Notwithstanding establishing an interconnection trunk group(s) to AT&T's local tandems, Intrado must also establish an interconnection trunk group(s) to AT&T Access Tandems within the LATA on which Intrado has NPA/NXXs homed for the delivery of Interexchange Carrier Switched Access and toll traffic, and traffic to Type 2A CMRS connections located at the Access Tandems. AT&T shall not switch SWA traffic through more than one AT&T access tandem. SWA, Type 2A CMRS or toll traffic routed to the local tandem in error will not be backhauled to the AT&T Access Tandem for completion. (Type 2A CMRS interconnection is defined in Section A35 of AT&T's GSST).

4.10.3.4 AT&T's provisioning of Local Tandem Interconnection assumes that Intrado has executed the necessary local interconnection agreements with the other third party network providers subtending those local tandems as required by the Act.

4.10.4 Direct End Office-to-End Office Interconnection

4.10.4.1 Direct End Office-to-End Office one-way or two-way interconnection trunk groups allow for the delivery of a Party's originating Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic to the terminating Party on a direct end office-to-end office basis.

4.10.4.2 The Parties shall utilize direct end office-to-end office trunk groups under any one (1) of the following conditions:

4.10.4.2.1 Tandem Exhaust. If a tandem through which the Parties are interconnected is unable to, or is forecasted to be unable to support additional traffic loads for any period of time, the Parties will mutually agree on an end office trunking plan that will alleviate the tandem capacity shortage and ensure completion of traffic between Intrado and AT&T.

4.10.4.2.2 Traffic Volume. To the extent either Party has the capability to measure the amount of traffic between Intrado's switch and an AT&T End Office and where such traffic exceeds or is forecasted to exceed a single DS1 of traffic per month, then the Parties shall install and retain direct end office trunking sufficient to handle such traffic volumes. Either Party will install additional capacity between such points when overflow traffic exceeds or is forecasted to exceed a single DS1 of traffic per month. In the case of one-way trunking, additional trunking shall only be required by the Party whose trunking has achieved the preceding usage threshold.

4.10.4.2.3 Mutual Agreement. The Parties may install direct end office trunking upon mutual agreement in the absence of conditions (1) or (2) above.

4.10.5 Transit Traffic Trunk Group

4.10.5.1 Transit Traffic trunks can either be two-way trunks or two (2) one-way trunks ordered by Intrado to deliver and receive Transit Traffic. Establishing Transit Traffic trunks at AT&T Access and Local Tandems provides Intratandem Access to the third parties also interconnected at those tandems. Intrado shall be responsible for all recurring and nonrecurring charges associated with Transit Traffic trunks and facilities.

4.10.5.2 Toll Free Traffic

4.10.5.2.1 If Intrado chooses AT&T to perform the Service Switching Point (SSP) Function (i.e., handle Toll Free database queries) from AT&T's switches, all Intrado originating Toll Free traffic will be routed over the Transit Traffic Trunk Group

and shall be delivered using GR-394 format. Carrier Code "0110" and Circuit Code (to be determined for each LATA) shall be used for all such calls.

4.10.5.2.2 Intrado may choose to perform its own Toll Free database queries from its switch. In such cases, Intrado will determine the nature (local/intraLATA/interLATA) of the Toll Free call (local/IntraLATA/InterLATA) based on the response from the database. If the call is an AT&T local or intraLATA Toll Free call, Intrado will route the post-query local or IntraLATA converted ten (10)-digit local number to AT&T over the local or intraLATA trunk group. If the call is a third party (ICO, IXC, CMRS or other CLEC) local or intraLATA Toll Free call, Intrado will route the post-query local or intraLATA converted ten (10)-digit local number to AT&T over the Transit Traffic Trunk Group and Intrado shall provide to AT&T a Toll Free billing record when appropriate. If the query reveals the call is an interLATA Toll Free call, Intrado will route the post-query interLATA Toll Free call (1) directly from its switch for carriers interconnected with its network or (2) over the Transit Traffic Trunk Group to carriers that are not directly connected to Intrado's network but that are connected to AT&T's Access Tandem.

4.10.5.2.3 All post-query Toll Free calls for which Intrado performs the SSP function, if delivered to AT&T, shall be delivered using GR-394 format for calls destined to IXCs, and GR-317 format for calls destined to end offices that directly subtend an AT&T Access Tandem within the LATA.

5 Network Design And Management For Interconnection

5.1 Network Management and Changes. The Parties will exchange toll-free maintenance contact numbers and escalation procedures. The Parties will provide public notice of network changes in accordance with applicable federal and state rules and regulations.

5.2 Interconnection Technical Standards. The interconnection of all networks will be based upon accepted industry/national guidelines for transmission standards and traffic blocking criteria. Interconnecting facilities shall conform, at a minimum, to the telecommunications industry standard of DS1 pursuant to Telcordia Standard No. GR-NWT-00499. Where Intrado chooses to utilize SS7 signaling, also known as CCS7, SS7 connectivity is required between the Intrado switch and the AT&T STP. AT&T will provide SS7 signaling using Common Channel Signaling Access Capability in accordance with the technical specifications set forth in the AT&T Guidelines to Technical Publication, GR-905-Core. Facilities of each Party shall provide the necessary on-hook, off-hook answer and disconnect supervision and shall provide calling number ID (Calling Party Number) when technically feasible.

5.3 Network Management Controls. Both Parties will work cooperatively to apply sound network management principles by invoking appropriate network management controls (e.g., call gapping) to alleviate or prevent network congestion.

6 Forecasting for Trunk Provisioning

6.1 Within six (6) months after execution of this Agreement, Intrado shall provide an initial interconnection trunk group forecast for each LATA in which it plans to provide service within AT&T's Southeast region. Upon receipt of Intrado's forecast, the Parties shall conduct a joint planning meeting to develop a joint interconnection trunk group forecast. Each forecast provided under this Section shall be deemed Confidential Information under the General Terms and Conditions.

6.1.1 At a minimum, the forecast shall include the projected quantity of Transit Trunks, Intrado-to-AT&T one-way trunks (Intrado Trunks), AT&T-to-Intrado one-way trunks (AT&T Trunk Groups) and/or two-way interconnection trunks, if the Parties have agreed to interconnect using two-way trunking to transport the Parties' Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic. The quantities shall be projected for a minimum of six (6) months and shall include an estimate of the current year plus the next two (2) years total forecasted quantities. The Parties shall mutually develop AT&T Trunk Groups and/or two-way interconnection trunk forecast quantities.

6.1.2 All forecasts shall include, at a minimum, Access Carrier Terminal Location (ACTL), trunk group type (e.g., local/intraLATA toll, Transit, Operator Services, 911, etc.), A location/Z location (CLLI codes for Intrado location and AT&T location where the trunks shall terminate), interface type (e.g., DS1), Direction of Signaling, Trunk Group Number, if known, (commonly referred to as the 2-6 code) and forecasted trunks in service each year (cumulative).

6.2 Once initial interconnection trunk forecasts have been developed, Intrado shall continue to provide interconnection trunk forecasts at mutually agreeable intervals. Intrado shall use its best efforts to make the forecasts as accurate as possible based on reasonable engineering criteria. The Parties shall continue to develop Reciprocal Trunk Group and/or two-way interconnection trunk forecasts as described in Section 6.1.1 above.

6.3 The submission and development of interconnection trunk forecasts shall not replace the ordering process for local interconnection trunks. Each Party shall exercise its best efforts to provide the quantity of interconnection trunks mutually forecasted. However, the provision of the forecasted quantity of interconnection trunks is subject to trunk terminations and facility capacity existing at the time the trunk order is submitted. Furthermore, the receipt and development of trunk forecasts does not imply any liability for failure to perform if capacity (trunk terminations or facilities) is not available for use at the forecasted time.

6.4 Trunk Utilization

6.4.1 For the AT&T Trunk Groups that are Final Trunk Groups (AT&T Final Trunk Groups), AT&T and Intrado shall monitor traffic on each AT&T Final Trunk Group that is ordered and installed. The Parties agree that the AT&T Final Trunk

Groups will be utilized at sixty percent (60%) of the time consistent busy hour utilization level within ninety (90) days of installation. The Parties agree that the AT&T Final Trunk Groups will be utilized at eighty percent (80%) of the time consistent busy hour utilization level within one hundred eighty (180) days of installation. Any AT&T Final Trunk Group not meeting the minimum thresholds set forth in this Section are defined as "under-utilized" trunks. Subject to Section 6.4.2 below, AT&T may disconnect any under-utilized AT&T Final Trunk Groups and Intrado shall refund to AT&T the associated nonrecurring and recurring trunk and facility charges paid by AT&T, if any.

6.4.2 AT&T's CISC will notify Intrado of any under-utilized AT&T Trunk Groups and the number of such trunk groups that AT&T wishes to disconnect. AT&T will provide supporting information either by email or facsimile to the designated Intrado interface. Intrado will provide concurrence with the disconnection in seven (7) business days or will provide specific information supporting why the trunks should not be disconnected. Such supporting information should include expected traffic volumes (including traffic volumes generated due to Local Number Portability) and the timeframes within which Intrado expects to need such trunks. AT&T's CISC Project Manager and Circuit Capacity Manager (CCM) will discuss the information with Intrado to determine if agreement can be reached on the number of AT&T Final Trunk Groups to be removed. If no agreement can be reached, AT&T will issue disconnect orders to Intrado. The due date of these orders will be four (4) weeks after Intrado was first notified in writing of the underutilization of the trunk groups.

6.4.3 To the extent that any interconnection trunk group is utilized at a time-consistent busy hour of eighty percent (80%) or greater, the Parties may review the trunk groups and, if necessary, shall negotiate in good faith for the installation of augmented facilities.

6.4.4 For the two-way trunk groups, AT&T and Intrado shall monitor traffic on each interconnection trunk group that is ordered and installed. The Parties agree that within ninety (90) days of the installation of the AT&T two-way trunk or trunks, the trunks will be utilized at 60 percent (60%) of the time consistent busy hour utilization level. The Parties agree that within one hundred eighty (180) days of the installation of a trunk or trunks, the trunks will be utilized at eighty percent (80%) of the time consistent busy hour utilization level. Any trunk or trunks not meeting the minimum thresholds set forth in this Section are defined as "under-utilized" trunks. AT&T will request the disconnection of any under-utilized two-way trunk(s) and Intrado shall refund to AT&T the associated nonrecurring and recurring trunk and facility charges paid by AT&T, if any.

6.4.4.1 AT&T's CISC will notify Intrado of any under-utilized two-way trunk groups and the number of trunks that AT&T wishes to disconnect. AT&T will provide supporting information either by email or facsimile to the designated Intrado interface. Intrado will provide concurrence with the disconnection in seven (7)

business days or will provide specific information supporting why the two-way trunks should not be disconnected. Such supporting information should include expected traffic volumes (including traffic volumes generated due to Local Number Portability) and the timeframes within which Intrado expects to need such trunks. AT&T's CISC Project Manager and CCM will discuss the information with Intrado to determine if agreement can be reached on the number of trunks to be removed. If no agreement can be reached, Intrado will issue disconnect orders to AT&T. The due date of these orders will be four (4) weeks after Intrado was first notified in writing of the under-utilization of the trunk groups.

6.4.4.2 To the extent that any interconnection trunk group is utilized at a time-consistent busy hour of eighty percent (80%) or greater, the Parties may review the trunk groups and, if necessary, shall negotiate in good faith for the installation of augmented facilities.

7 Local Dialing Parity

7.1 AT&T and Intrado shall provide local and toll dialing parity, as defined in FCC rules and regulations, with no unreasonable dialing delays. Dialing parity shall be provided for all originating Telecommunications Services that require dialing to route a call.

8 Interconnection Compensation

8.1 Compensation for Call Transport and Termination for Local Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic

8.1.1 For the purposes of this Attachment and for intercarrier compensation for Local Traffic exchanged between the Parties pursuant to this Attachment, Local Traffic is defined as any telephone call that originates from one Party's customer located in one exchange and terminates to the other Party's customer in either the same exchange, or other local calling area associated with the originating calling party's exchange as defined and specified in Section A3 of AT&T's GSST.

8.1.1.1 Additionally, Local Traffic includes any cross boundary, voice-to-voice intrastate, interLATA or interstate, interLATA calls established as a local call by the ruling regulatory body.

8.1.2 For purposes of this Attachment and for intercarrier compensation for ISP-Bound Traffic exchanged between the Parties, ISP-Bound Traffic is defined as calls to an information service provider or Internet Service Provider (ISP) that are dialed by using a local dialing pattern (seven (7) or ten (10) digits) by a calling party in one (1) exchange to an ISP server or modem in either the same exchange or other local calling area associated with the originating exchange as defined and specified in Section A3 of AT&T's GSST. ISP-Bound Traffic is not Local Traffic subject to reciprocal compensation, but instead is information access traffic subject to the FCC's jurisdiction.

8.1.3 Neither Party shall pay compensation to the other Party for per minute of use rate elements as set forth in Exhibit A associated with the Call Transport and Termination of Local Traffic or ISP-Bound Traffic.

8.1.4 The appropriate elemental rates set forth in Exhibit A shall apply for Transit Traffic as described in this Attachment and for MTA as described in this Attachment.

8.1.5 Neither Party shall represent Switched Access Traffic as Local Traffic or ISP-Bound Traffic for purposes of determining compensation for the call. If Intrado delivers Switched Access Traffic to AT&T for termination in violation of this Section, AT&T shall charge Intrado terminating switched access charges as set forth in AT&T's Intrastate Access Services Tariff and/or BellSouth's FCC No. 1 Tariff, as appropriate. Additionally, such delivery of traffic shall constitute improper use of AT&T facilities as set forth in Section 1.5.2 of Attachment 7 of this Agreement.

8.1.6 IntraLATA Toll Traffic is defined as all traffic, regardless of transport protocol method, that originates and terminates within a single LATA that is not Local Traffic or ISP-Bound traffic under this Attachment.

8.1.6.1 For terminating its intraLATA toll traffic on the other Party's network, the originating Party will pay the terminating Party AT&T's current intrastate or interstate, whichever is appropriate, terminating switched access tariff rates as set forth in AT&T's intrastate Access Services Tariffs and/or BellSouth's FCC No. 1 Tariff as filed and in effect with the FCC or appropriate Commission. The appropriate charges will be determined by the routing of the call. Additionally, if one (1) Party is the other Party's customer's presubscribed interexchange carrier or if one (1) Party's customer uses the other Party as an interexchange carrier on a 101XXXX basis, the originating party will charge the other Party the appropriate AT&T originating switched access tariff rates as set forth in AT&T's intrastate Access Services Tariff and/or BellSouth's FCC No. 1 Tariff as filed and in effect with the FCC or appropriate Commission.

8.1.7 If Intrado assigns NPA/NXXs to specific AT&T rate centers within the LATA and assigns numbers from those NPA/NXXs to Intrado customer physically located outside of that LATA, AT&T traffic originating from within the LATA where the NPA/NXXs are assigned and delivered to a Intrado customer physically located outside of such LATA, shall not be deemed Local Traffic. Further, Intrado agrees to identify such interLATA traffic to AT&T and to compensate AT&T for originating and transporting such interLATA traffic to Intrado at BellSouth's FCC No. 1 Tariff rates.

8.2 If Intrado does not identify such interLATA traffic to AT&T, AT&T will determine which whole Intrado NPA/NXXs on which to charge the applicable rates for originating network access service as reflected in AT&T's intrastate Access Services Tariff and/or BellSouth's FCC No. 1 Tariff. AT&T shall make

appropriate billing adjustments if Intrado can provide sufficient information for AT&T to determine whether or not said traffic is Local or ISP-Bound Traffic.

8.3 Jurisdictional Reporting

8.3.1 Percent Local Use (PLU). Each Party shall report to the other a PLU factor. The application of the PLU will determine the amount of local or ISP-Bound minutes to be billed to the other Party. Each Party shall update its PLU on the first of January, April, July and October of the year and shall send it to the other Party to be received no later than thirty (30) days after the first of each such month based on local and ISP-Bound usage for the past three (3) months ending the last day of December, March, June and September, respectively. Requirements associated with PLU calculation and reporting shall be as set forth in AT&T's Jurisdictional Factors Reporting Guide.

8.3.2 Percent Local Facility (PLF). Each Party shall report to the other a PLF factor. The application of the PLF will determine the portion of switched dedicated transport to be billed per the local jurisdiction rates. The PLF shall be applied to Multiplexing, Local Channel and Interoffice Channel Switched Dedicated Transport utilized in the provision of local interconnection trunks. Each Party shall update its PLF on the first of January, April, July and October of the year and shall send it to the other Party to be received no later than thirty (30) days after the first of each such month to be effective the first bill period the following month, respectively. Requirements associated with PLF calculation and reporting shall be as set forth in AT&T's Jurisdictional Factors Reporting Guide.

8.3.3 Percent Interstate Usage (PIU). Each Party shall report to the other the projected PIU factors, including but not limited to PIU associated with facilities (PIUE) and Terminating PIU (TPIU) factors. The application of the PIU will determine the respective interstate traffic percentages to be billed at BellSouth's FCC No. 1 Tariff rates. All jurisdictional report requirements, rules and regulations for Interexchange Carriers specified in AT&T's intrastate Access Services Tariff will apply to Intrado. After interstate and intrastate traffic percentages have been determined by use of PIU procedures, the PLU and PLF factors will be used for application and billing of local traffic and facilities. The intrastate toll traffic shall be billed at AT&T's intrastate Access Services Tariff rates. Each Party shall update its PIUs on the first of January, April, July and October of the year and shall send it to the other Party to be received no later than thirty (30) days after the first of each such month, for all services showing the percentages of use for the past three (3) months ending the last day of December, March, June and September. Additional requirements associated with PIU calculations and reporting shall be as set forth in AT&T's Jurisdictional Factors Reporting Guide.

8.3.4 Notwithstanding the provisions in Sections 8.3.1, 8.3.2, and 8.3.3 above, where AT&T has message recording technology that identifies the jurisdiction of traffic terminated as defined in this Agreement, such information shall, at AT&T's option,

be utilized to determine the appropriate jurisdictional reporting factors (i.e., PLU, PIU, and/or PLF), in lieu of those provided by Intrado. In the event that AT&T opts to utilize its own data to determine jurisdictional reporting factors, AT&T shall notify Intrado at least fifteen (15) days prior to the beginning of the calendar quarter in which AT&T will begin to utilize its own data.

8.3.5 Audits. On thirty (30) days written notice, Intrado must provide AT&T the ability and opportunity to conduct an annual audit to ensure the proper billing of traffic. Intrado shall retain records of call detail for a minimum of nine (9) months from which the PLU, PLF and/or PIU can be ascertained. The audit shall be conducted during normal business hours at an office designated by Intrado. Audit requests shall not be submitted more frequently than one (1) time per calendar year. Audits shall be performed by an independent auditor chosen by AT&T. The audited factor (PLF, PLU and/or PIU) shall be adjusted based upon the audit results and shall apply to the usage for the audited period through the time period when the audit is completed, to the usage for the quarter prior to the audit period, and to the usage for the two (2) quarters following the completion of the audit. If, as a result of an audit, Intrado is found to have overstated the PLF, PLU and/or PIU by twenty percentage points (20%) or more, Intrado shall reimburse AT&T for the cost of the audit.

8.4 Compensation for IntraLATA 8XX Traffic. Intrado shall pay the appropriate switched access charges set forth in the AT&T's intrastate Access Services tariff and/or BellSouth's FCC No. 1 Tariff. Intrado will pay AT&T the database query charge as set forth in the applicable AT&T intrastate Access Services Tariff and/or BellSouth's FCC No. 1 Tariff. Intrado will be responsible for any applicable Common Channel Signaling (SS7) charges.

8.4.1 Records for 8XX Billing. Where technically feasible, each Party will provide to the other Party the appropriate records, in accordance with industry standards, necessary for billing intraLATA 8XX providers. The records provided will be in a standard EMI format.

8.4.2 8XX Toll Free Dialing Ten Digit Screening Service (8XX TFD). AT&T's provision of 8XX TFD to Intrado requires interconnection from Intrado to AT&T's 8XX Signal Channel Point. Such interconnections shall be established pursuant to AT&T's Common Channel Signaling Interconnection Guidelines and Telcordia's CCS Network Interface Specification document, TR-TSV-000905. Intrado shall establish SS7 interconnection at the AT&T LSTPs serving the AT&T 8XX Signal Channel Points that Intrado desires to query. The terms and conditions for 8XX TFD are set out in the appropriate AT&T Access Services Tariff.

8.5 Mutual Provision of Switched Access Service

8.5.1 Switched Access Traffic. Switched Access Traffic is described as telephone calls requiring local transmission or switching services for the purpose of the origination

or termination of Telephone Toll Service. Switched Access Traffic includes, but is not limited to, the following types of traffic: Feature Group A, Feature Group B, Feature Group C, Feature Group D, toll free access (e.g., 8XX), 900 access and their successors. Additionally, any PSTN interexchange telecommunications traffic, regardless of transport protocol method, where the originating and terminating points, end-to-end points, are in different LATAs, or are in the same LATA and the Parties' Switched Access services are used for the origination or termination of the call, shall be considered Switched Access Traffic. Irrespective of transport protocol method or method of originating or terminating the call, a call that originates in one LATA and terminates in another LATA (i.e., the end-to-end points of the call) or a call in which the Parties' Switched Access Services are used for the origination or termination of the call, shall be considered Switched Access Traffic.

8.5.2 If an AT&T end user chooses Intrado as their presubscribed interexchange carrier, or if an AT&T end user uses Intrado as an interexchange carrier on a 101XXXX basis, AT&T will charge Intrado the appropriate AT&T tariff charges for originating switched access services.

8.5.3 Where the originating Party delivers a call to the terminating Party over switched access facilities, the originating Party will pay the terminating Party terminating, switched access charges as set forth in AT&T's intrastate Access Services Tariff and/or BellSouth's FCC No. 1 Tariff, as appropriate.

8.5.4 When Intrado's end office switch provides an access service connection to or from an IXC by a direct trunk group to the IXC utilizing AT&T facilities, each Party will provide its own access services to the IXC and bill on a multi-bill, multi-tariff meet-point basis. Each Party will bill its own access services rates to the IXC with the exception of the interconnection charge. The interconnection charge will be billed by Intrado as the Party providing the end office function. Each party will use the Multiple Exchange Carrier Access Billing (MECAB) guidelines to establish Meet Point Billing for all applicable traffic. The Parties shall utilize a thirty (30) day billing period.

8.5.4.1 In cases where Intrado has a unique hosted Revenue Accounting Office (RAO) code and Intrado's end office subtends the AT&T Access Tandem switch for receipt or delivery of switched access traffic and provides an access service connection to or from an IXC via AT&T's Access Tandem switch, AT&T, as the tandem company agrees to provide to Intrado, as the End Office Company, as defined in MECAB, at no charge, all the switched access detail usage data, recorded at the access tandem, within no more than sixty (60) days after the recording date. Each Party will notify the other when it is not feasible to meet these requirements. As business requirements change, data reporting requirements may be modified as necessary.

8.5.5 AT&T, as the tandem provider company, will retain for a minimum period of sixty (60) days, access message detail sufficient to recreate any data that is lost or damaged by the tandem provider company or any third party involved in processing or transporting data.

8.5.6 Intrado shall not deliver switched access traffic to AT&T for termination over any trunks and facilities other than Intrado ordered switched access trunks and facilities.

8.6 Transit Traffic

8.6.1 AT&T shall provide tandem switching and transport services for Intrado's Transit Traffic. Rates for local Transit Traffic and ISP-Bound Transit Traffic shall be the applicable rate elements for Tandem Switching, Common Transport and Tandem Intermediary Charge as set forth in Exhibit A. Rates for Switched Access Transit Traffic shall be the applicable charges as set forth in AT&T's intrastate Access Services Tariff and/or BellSouth's FCC No. 1 Tariff. Billing associated with all Transit Traffic shall be pursuant to MECAB guidelines. Traffic between Intrado and Wireless Type 1 third parties or Wireless Type 2A third parties that do not engage in Meet Point Billing with AT&T shall not be treated as Transit Traffic from a routing or billing perspective until such time as such traffic is identifiable as Transit Traffic.

8.6.2 The delivery of traffic that transits the AT&T network is excluded from any AT&T billing guarantees. AT&T agrees to deliver Transit Traffic to the terminating carrier; provided, however, that Intrado is solely responsible for negotiating and executing any appropriate contractual agreements with the terminating carrier for the exchange of Transit Traffic through the AT&T network. AT&T will not be liable for any compensation to the terminating carrier or to Intrado. In the event that the terminating third party carrier imposes on AT&T any charges or costs for the delivery of Transit Traffic, Intrado shall reimburse AT&T for such charges or costs.

8.7 For purposes of intercarrier compensation, AT&T will not be responsible for any compensation associated with the exchange of traffic between Intrado and a CLEC utilizing AT&T switching. Where technically feasible, AT&T will use commercially reasonable efforts to provide records to Intrado to identify those CLECs utilizing AT&T switching with whom Intrado has exchanged traffic. Such traffic shall not be considered Transit Traffic from a routing or billing perspective, but instead will be considered as traffic exchanged solely between Intrado and the CLEC utilizing AT&T switching.

8.7.1 Intrado is solely responsible for negotiating and executing any appropriate contractual agreements with the terminating carrier for the exchange of traffic with a CLEC utilizing AT&T switching. AT&T will not be liable for any compensation to the terminating carrier or to Intrado. In the event that the terminating third

party carrier imposes on AT&T any charges or costs for the delivery of such traffic, Intrado shall reimburse AT&T for all such charges or costs.

8.8 Intrado shall send all IntraLATA toll traffic to be terminated by an independent telephone company to the End User's IntraLATA toll provider and shall not send such traffic to AT&T as Transit Traffic. IntraLATA toll traffic shall be any traffic that originates outside of the terminating independent telephone company's local calling area.

9 Ordering Charges

9.1 The facilities purchased pursuant to this Attachment shall be ordered via the ASR process.

9.2 The rates, terms and conditions associated with submission and processing of ASRs are as set forth in BellSouth's FCC No. 1 Tariff, Section 5.

10 Basic 911 and E911 Interconnection

10.1 Basic 911 and E911 provides a caller access to the applicable emergency service bureau by dialing 911.

10.2 Basic 911 Interconnection. AT&T will provide to Intrado a list consisting of each municipality that subscribes to Basic 911 service. The list will also provide, if known, the E911 conversion date for each municipality and, for network routing purposes, a ten (10) digit directory number representing the appropriate emergency answering position for each municipality subscribing to 911. Intrado will be required to arrange to accept 911 calls from its end users in municipalities that subscribe to Basic 911 service and translate the 911 call to the appropriate ten (10) digit directory number as stated on the list provided by AT&T. Intrado will be required to route that call to the appropriate PSAP. When a municipality converts to E911 service, Intrado will be required to begin using E911 procedures.

10.3 E911 Interconnection. Intrado shall install a minimum of two (2) dedicated trunks originating from its SWC and terminating to the appropriate E911 tandem. The SWC must be in the same LATA as the E911 tandem. The dedicated trunks shall be, at a minimum, DS0 level trunks configured as part of a digital (one point five forty-four (1.544) Mb/s) interface (DS1 facility). The configuration shall use CAMA-type signaling with MF pulsing or SS7/ISUP signaling either of which shall deliver ANI with the voice portion of the call. If SS7/ISUP connectivity is used, Intrado shall follow the procedures as set forth in Appendix A of the CLEC Users Guide to E911 for Facility Based Providers that is located on the AT&T Interconnection Web site. If the user interface is digital, MF pulses as well as other AC signals shall be encoded per the u-255 Law convention. Intrado will be required to provide AT&T daily updates to the E911 database. Intrado will be required to forward 911 calls to the appropriate E911 tandem along with ANI based upon the current E911 end office to tandem homing arrangement as

provided by AT&T. If the E911 tandem trunks are not available, Intrado will be required to route the call to a designated seven (7) digit or ten (10) digit local number residing in the appropriate PSAP. This call will be transported over AT&T's interoffice network and will not carry the ANI of the calling party. Intrado shall be responsible for providing AT&T with complete and accurate data for submission to the 911/E911 database for the purpose of providing 911/E911 to its end users.

10.4 Trunks and facilities for 911 Interconnection may be ordered by Intrado from AT&T pursuant to the terms and conditions set forth in this Attachment.

10.5 The detailed practices and procedures for 911/E911 interconnection are contained in the E911 Local Exchange Carrier Guide For Facility-Based Providers that is located on the AT&T Interconnection Services Web site.

11 SS7 Network Interconnection

11.1 SS7 Signaling. Both Parties will utilize LEC-to-LEC SS7 Signaling, where available, in conjunction with all traffic in order to enable interoperability of CLASS features and functions except for call return. SS7 signaling parameters will be provided, including but not limited to ANI, originating line information (OLI) calling company category and charge number. Privacy indicators will be honored, and the Parties will exchange Transactional Capabilities Application Part (TCAP) messages to facilitate SS7 based features between the respective networks. Neither Party shall alter the SS7 parameters, or be a party to altering such parameters, or knowingly pass SS7 parameters that have been altered in order to circumvent appropriate interconnection charges. Nothing herein shall obligate or otherwise require AT&T to send SS7 messages or call-related database queries to Intrado's or any other third party's call-related database, unless otherwise agreed to by the Parties under a separate agreement.

11.2 Signaling Call Information. AT&T and Intrado will send and receive ten (10) digits for Local Traffic. Additionally, AT&T and Intrado will exchange the proper call information, (i.e., originated call company number and destination call company number, CIC, and OZZ) including all proper translations for routing between networks and any information necessary for billing.

11.3 SS7 Network Interconnection is the interconnection of Intrado LSTP switches or Intrado local or tandem switching systems with AT&T STP switches. This interconnection provides connectivity that enables the exchange of SS7 messages among AT&T switching systems and databases, Intrado local or tandem switching systems, and other third party switching systems directly connected to the AT&T SS7 network.

11.3.1 The connectivity provided by SS7 Network Interconnection shall fully support the functions of AT&T switching systems and databases and Intrado or other third party switching systems with A-link access to the AT&T SS7 network.

11.3.2 If traffic is routed based on dialed or translated digits between a Intrado local switching system and an AT&T or other third party local switching system, either directly or via an AT&T tandem switching system, then it is a requirement that the AT&T SS7 network convey via SS7 Network Interconnection the TCAP messages that are necessary to provide Call Management services (i.e., Automatic Callback, Automatic Recall, and Screening List Editing) between the Intrado LSTP switches and AT&T or other third party local switch.

11.3.3 SS7 Network Interconnection shall provide:

11.3.3.1 Signaling Data Link functions, as specified in ANSI T1.111.2;

11.3.3.2 Signaling Link functions, as specified in ANSI T1.111.3; and

11.3.3.3 Signaling Network Management functions, as specified in ANSI T1.111.4.

11.3.4 SS7 Network Interconnection shall provide all functions of the SCCP necessary for Class 0 (basic connectionless) service as specified in ANSI T1.112. This includes GTT and SCCP Management procedures as specified in ANSI T1.112.4. Where the destination signaling point is an AT&T switching system or DB, or is another third party local or tandem switching system directly connected to the AT&T SS7 network, SS7 Network Interconnection shall include final GTT of messages to the destination and SCCP Subsystem Management of the destination. Where the destination signaling point is a Intrado local or tandem switching system, SS7 Network Interconnection shall include intermediate GTT of messages to a gateway pair of Intrado LSTPs and shall not include SCCP Subsystem Management of the destination.

11.3.5 SS7 Network Interconnection shall provide all functions of the ISUP as specified in ANSI T1.113.

11.3.6 SS7 Network Interconnection shall provide all functions of the TCAP as specified in ANSI T1.114.

11.3.7 If Internetwork MRVT and SRVT become approved ANSI standards and available capabilities of AT&T STPs, SS7 Network Interconnection may provide these functions of the OMAP.

11.4 Interface Requirements. The following SS7 Network Interconnection interface options are available to connect Intrado or Intrado-designated local or tandem switching systems or signaling transfer point switches to the AT&T SS7 network:

11.4.1 A-link interface from Intrado local or tandem switching systems; and

11.4.2 B-link interface from Intrado STPs.

11.4.3 The Signaling Point of Interconnection for each link shall be located at a cross-connect element in the central office where the AT&T STP is located. There shall be a DS1 or higher rate transport interface at each of the signaling points of interconnection. Each signaling link shall appear as a DS0 channel within the DS1 or higher rate interface.

11.4.4 AT&T shall provide intraoffice diversity between the Signaling Point of Interconnection and the AT&T STP, so that no single failure of intraoffice facilities or equipment shall cause the failure of both B-links in a layer connecting to an AT&T STP.

11.4.5 The protocol interface requirements for SS7 Network Interconnection include the MTP, ISUP, SCCP, and TCAP. These protocol interfaces shall conform to the applicable industry standard technical references.

11.4.6 AT&T shall set message screening parameters to accept messages from Intrado local or tandem switching systems destined to any signaling point in the AT&T SS7 network with which the Intrado switching system has a valid signaling relationship.

11.5 Rates. The Parties shall institute a "bill and keep" compensation plan under which neither Party will charge the other Party for ISUP CCS7 signaling messages associated with Local Traffic. The portion of ISUP CCS7 signaling messages utilized for Local Traffic, which is subject to bill and keep in accordance with this section, shall be determined based upon the application of the applicable signaling factors set forth in AT&T's Jurisdictional Factors Reporting Guide. All other CCS7 signaling messages associated with Local Traffic will be billed at the rates set forth in Exhibit A. In addition, CCS7 facility charges, including charges for signaling ports and signaling links, utilized for Local Traffic will be billed at the rates set forth in Exhibit A. CCS7 signaling messages, signaling ports, and signaling links associated with interstate calls and with intrastate non-local calls, shall be billed in accordance with the applicable AT&T intrastate Access Services Tariff and BellSouth's FCC No. 1 Tariff for switched access services.

REQUEST: Please provide all documents that support your response to Interrogatory No. 27d.

RESPONSE: There are no responsive documents.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Referring to AT&T witness Neinast's direct testimony, page 51, lines 23-24, please provide the language that AT&T has proposed to Intrado to resolve Issue 9.

RESPONSE: The language in Appendix 911 Section 3.1 is resolved.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Referring to the direct testimony of AT&T witness Neinast, page 53, lines 14-17, please provide the language AT&T has proposed to Intrado to resolve this issue.

RESPONSE: The language that AT&T offers is from the 911 Appendix below in **bold underline**. Intrado's language is ***bold italics***:

9.1 ***Intentionally Omitted.*** **The terms and conditions of this Appendix represent a negotiated plan for providing access to 911 and E911 Databases, and provide trunking and call routing for purposes of 911 call completion to a Public Safety Answering Point (PSAP) as required by Section 251 of the Act.**

9.2 The Parties agree that the 911 System is provided herein is for the use of the E911 Customer, and recognize the authority of the E911 Customer to establish service specifications and grant final approval (or denial) of service configurations offered by AT&T-(STATE) and CLEC. **Each Party's specifications shall be documented in a state specific form, if applicable. If applicable CLEC shall complete its portion of a state specific form and submit it to AT&T-(STATE) or appropriate E911 Authority, not later than forty-five (45) days prior to the passing of live traffic. AT&T-(STATE) shall complete its portion of a state specific form and return it to CLEC not later than forty-five (45) days prior to the passing of live traffic.**

9.3 ***Intentionally Omitted.*** **The Parties must obtain documentation of approval of the completed state specific form from the appropriate E911 Customer(s) that have jurisdiction in the area(s) in which each Party's End Users are located. Each Party shall provide documentation of all requisite approval(s) to the other Party prior to use of the E911 connection for actual emergency calls.**

9.4 *Intentionally Omitted.* **Each Party has designated a representative who has the authority to complete any state specific forms to this Appendix when necessary to accommodate expansion of the geographic area of either Party into the jurisdiction of additional PSAP(s) or to increase the number of CAMA trunks. Each Party must obtain approval of each additional state specific form, as set forth in Section 9.2, and shall furnish documentation of all requisite approval(s) of each additional state specific form in accordance with Section 9.2.**

RESPONSE PROVIDED BY: Mark Neinast

APPENDIX NIM
(NETWORK INTERCONNECTION METHODS)

1. INTRODUCTION

1.1 This Appendix sets forth the terms and conditions that Network Interconnection Methods (NIM) are provided by the applicable AT&T Inc. (AT&T) owned Incumbent Local Exchange Carrier (ILEC) and Competitive Local Exchange Carrier (CLEC). This Appendix describes the physical architecture for interconnection of the Parties' facilities and equipment for the transmission and routing of Telephone Exchange Service traffic and Exchange Access traffic between the respective End Users of the Parties pursuant to Section 251(c)(2) of the Act other than 911/E911 Service traffic, which is governed by Appendix CESIM and Appendix CES; provided, however, Interconnection may not be used solely for the purpose of originating a Party's own interexchange traffic.

1.2 **AT&T Inc. (AT&T)** means the holding company which directly or indirectly owns the following ILECs: Illinois Bell Telephone Company d/b/a AT&T Illinois, Indiana Bell Telephone Company Incorporated d/b/a AT&T Indiana, Michigan Bell Telephone Company d/b/a AT&T Michigan, Nevada Bell Telephone Company d/b/a AT&T Nevada, The Ohio Bell Telephone Company d/b/a AT&T Ohio, Pacific Bell Telephone Company d/b/a AT&T California, The Southern New England Telephone Company d/b/a AT&T Connecticut, Southwestern Bell Telephone Company d/b/a AT&T Arkansas, AT&T Kansas, AT&T Missouri, AT&T Oklahoma and/or AT&T Texas and/or Wisconsin Bell, Inc. d/b/a AT&T Wisconsin.

1.3 Intentionally Omitted.

1.4 Intentionally Omitted.

1.5 Intentionally Omitted.

1.6 Intentionally Omitted.

1.7 Intentionally Omitted.

1.8 Intentionally Omitted.

1.9 Intentionally Omitted.

1.10 Intentionally Omitted.

1.11 Intentionally Omitted.

1.12 Intentionally Omitted.

1.13 Intentionally Omitted.

1.14 Intentionally Omitted.

1.15 Intentionally Omitted.

1.16 Intentionally Omitted.

1.17 Intentionally Omitted.

1.18 Intentionally Omitted.

1.19 Intentionally Omitted.

1.20 **AT&T OHIO** - As used herein, **AT&T OHIO** means The Ohio Bell Telephone Company d/b/a AT&T Ohio, the applicable AT&T-owned ILEC doing business in Ohio.

1.21 Intentionally Omitted.

1.22 Intentionally Omitted.

AT&T proposed language is bolded and underlined
Intrado Comm proposed language is italicized and bolded

1.23 Intentionally Omitted.

1.24 Intentionally Omitted.

1.25 AT&T-OHIO shall provide, for CLEC's facilities and equipment, Interconnection for the transmission and routing of telephone exchange service and exchange access, at a level of quality that is equal to that which AT&T-OHIO provides itself, a subsidiary, an affiliate, or any other party to which AT&T-OHIO provides Interconnection and on rates, terms and conditions that are just, reasonable and non-discriminatory.

1.26 **Network Interconnection Methods** (NIMs) include, but are not limited to, Physical Collocation; Virtual Collocation; Fiber Meet Point; and other technically feasible method of obtaining Interconnection which shall be incorporated into the Interconnection Agreement by amendment. One or more of these methods may be used to effect the Interconnection pursuant to Section 251(c)(2) of the Act.

2. NETWORK INTERCONNECTION ARCHITECTURE PLAN

2.1 AT&T-OHIO's network is partly comprised of End Office switches, Local Only Tandem Switches (**AT&T SOUTHWEST REGION 5-STATE** and **AT&T MIDWEST REGION 5-STATE**), Local/IntraLATA Tandem Switches, Local/Access Tandem Switches, and Access Tandem Switches. AT&T-OHIO's network architecture in any given local exchange area and/or LATA can vary markedly from another local exchange area/LATA. Using one or more of the NIMs herein, the Parties will agree to a physical architecture plan **for a specific Interconnection area**. A physical architecture plan will, at a minimum, include the location of CLEC's switch(es) and AT&T-OHIO's End Office switch(es) and/or Tandem switch(es) to be interconnected, the facilities that will connect the two networks **and which Party will provide (be financially responsible for) the Interconnection facilities. At the time of implementation in a given local exchange area or LATA the plan will be documented and signed by appropriate representatives of the Parties, indicating their mutual agreement to the physical architecture plan**.

2.2 Points of Interconnection (POIs): A Point of Interconnection (POI) is a ***technically feasible*** point on the AT&T-OHIO network **(End Office or Tandem building)** identified by CLEC where the Parties deliver **Section 251(b)(5)/IntraLATA Toll T**traffic to each other, and also serves as a demarcation point between the facilities that each Party is responsible to provide and the POIs designated pursuant to the Appendix CESIM or this Appendix NIM.

2.3 Each Party is responsible for the facilities to its side of the **negotiated** POI(s) and may utilize any method of Interconnection described in this Appendix. Each Party is responsible for the appropriate sizing, operation, and maintenance of the transport facility to the POI(s). The Parties agree to provide sufficient facilities for the trunk groups required in Appendix ITR for the exchange of traffic between CLEC and AT&T-OHIO.

2.4 Types of Points of Interconnection

2.4.1 A "Tandem Serving Area" or "TSA" is an AT&T-OHIO area defined by the sum of all local calling areas served by AT&T-OHIO End Offices that subtend an AT&T-OHIO tandem for Section 251(b)(5)/IntraLATA Toll Traffic as defined in the LERG.

2.4.2 The Parties will interconnect their network facilities at a minimum of one CLEC designated Point of Interconnection (POI) within AT&T-OHIO's network in the LATA where CLEC Offers Service.

2.4.3 A "Single POI" is a single Point of Interconnection within a LATA on AT&T-OHIO's network that is established to interconnect AT&T-OHIO's network and CLEC's network for the exchange of Section 251(b)(5)/IntraLATA Toll Traffic.

2.4.4 The Parties agree that CLEC has the right to choose a Single POI or multiple POIs.

2.4.5 When CLEC has established a Single POI (or multiple POIs) in a LATA, CLEC agrees to establish an additional POI:

(i) at an AT&T-OHIO TSA separate from the existing POI arrangement when traffic through the existing POI arrangement to that AT&T-OHIO TSA exceeds twenty-four (24) DS1s at peak over three (3) consecutive months, or

(ii) at an AT&T-OHIO End Office in a local calling area not served by an AT&T-OHIO tandem for Section 251(b)(5)/IntraLATA Toll Traffic when traffic through the existing POI arrangement to that local calling area exceeds twenty-four (24) DS1s at peak over three (3) consecutive months.

2.4.6 The additional POI(s) will be established within 90 days of notification that the threshold has been met.

2.5 Either Party must provide thirty (30) days written notice of any intent to change to the physical architecture plan.

2.6 CLEC is solely responsible for the facilities that carry OS/DA, Mass Calling and Meet Point Trunk Groups as specified in Appendix ITR.

2.7 Technical Interfaces

2.7.1 The Interconnection facilities provided by each Party shall be formatted using either Alternate Mark Inversion (AMI) line code with Superframe format framing or Bipolar 8 Zero Signaling (B8ZS) with Extended Superframe format framing or any mutually agreeable line coding and framing.

2.7.2 Electrical handoffs at the POI(s) will be at the DS1 or DS3 level. When a DS3 handoff is agreed to by the Parties, AT&T-OHIO will provide any multiplexing required for DS1 facilities or trunking at their end and CLEC will provide any DS1 multiplexing required for facilities or trunking at their end.

2.7.3 When the Parties demonstrate the need for Optical handoffs at the OC-n level, the Parties will meet to negotiate specific Optical handoff needs.

3. METHODS OF INTERCONNECTION

3.1 Physical Collocation

3.1.1 When CLEC provides its own facilities or uses the facilities of a third party to a AT&T-OHIO Tandem or End Office building and wishes to place its own transport terminating equipment at that location, CLEC may Interconnect using the provisions of Physical Collocation as set forth in Appendix Collocation.

3.2 Virtual Collocation

3.2.1 When CLEC provides its own facilities or uses the facilities of a third party to a AT&T-OHIO Tandem or End Office building and wishes for AT&T-OHIO to place transport terminating equipment at that location on CLEC's behalf, CLEC may Interconnect using the provisions of Virtual Collocation as set forth in Appendix Collocation. Virtual Collocation allows CLEC to choose the equipment vendor and does not require that CLEC be Physically Collocated.

3.3 Fiber Meet Point

3.3.1 Fiber Meet Point between AT&T-OHIO and CLEC can occur at any mutually agreeable and technically feasible point at an AT&T-OHIO Tandem, *or* End Office building *or other mutually agreeable meet point between the Parties' networks* within each local exchange area (AT&T SOUTHWEST REGION 5-STATE) or LATA (AT&T MIDWEST REGION 5-STATE, AT&T CONNECTICUT, and AT&T-2STATE).

3.3.1.1 When CLEC requests to interconnect at a Fiber Meet Point, CLEC and AT&T-OHIO will jointly provision the facilities that connect the two Parties' networks. AT&T-OHIO will be the "controlling carrier" for purposes of MECOD guidelines, as described in the joint implementation plan. Each Party

will provide fifty percent (50%) of the facilities to the Fiber Meet Point. Notwithstanding any provision in this Agreement to the contrary, when the Parties interconnect using a Fiber Meet Point, each Party will be financially responsible for the facilities on its side of the Fiber Meet Point and will not bill the other Party for any portion of those facilities. Intentionally Omitted

3.3.2 When the Parties agree to interconnect their networks pursuant to the Fiber Meet Point, a single point-to-point linear chain SONET system must be utilized. Only Local Interconnection Trunk Groups shall be provisioned over this jointly provided facility.

3.3.3 Neither Party will be allowed to access the Data Communications Channel ("DCC") of the other Party's Fiber Optic Terminal (FOT). The Fiber Meet Point will be designed so that each Party may, as far as is technically feasible, independently select the transmission, multiplexing, and fiber terminating equipment to be used on its side of the POI(s). The Parties will work cooperatively to achieve equipment and vendor compatibility of the FOT equipment.

3.3.4 Requirements for such interconnection specifications will be defined in joint engineering planning sessions between the Parties.

3.3.5 In addition to the semi-annual trunk forecast process, discussed in Appendix ITR, discussions to provide relief to existing facilities can be initiated by either Party. Actual system augmentations will be initiated only upon mutual agreement. Facilities will be planned for to accommodate the verified and mutually agreed upon trunk forecast for the Local Interconnection Trunk Group(s).

3.3.6 Both Parties will negotiate a project service date and corresponding work schedule to construct relief facilities prior to facilities exhaust.

3.3.7 CLEC will provide fiber cable to the last entrance (or AT&T-OHIO designated) manhole at the AT&T-OHIO Tandem or End Office building. AT&T-OHIO shall make all necessary preparations to receive and to allow and enable CLEC to deliver fiber optic facilities into that manhole. CLEC will provide a sufficient length of Fiber cable for AT&T-OHIO to pull through to the AT&T-OHIO cable vault. CLEC shall deliver and maintain such strands wholly at its own expense up to the POI. AT&T-OHIO shall take the fiber from the manhole and terminate it inside AT&T-OHIO's office at the cable vault at AT&T-OHIO's expense. In this case the POI shall be at the AT&T-OHIO designated manhole location.

3.3.8 Each Party shall provide its own source for the synchronized timing of its FOT equipment.

3.3.9 CLEC and AT&T-OHIO will mutually agree on the capacity of the FOT(s) to be utilized based on equivalent DS1s or DS3s. Each Party will also agree upon the optical frequency and wavelength necessary to implement the interconnection. The Parties will develop and agree upon methods for the capacity planning and management for these facilities, terms and conditions for over provisioning facilities, and the necessary processes to implement facilities as indicated in section 4 of this document.

3.4 Other Interconnection Methods

3.4.1 The Parties may mutually agree to other methods of obtaining Interconnection that are technically feasible which are incorporated into the Interconnection Agreement by amendment.

4. RESPONSIBILITIES OF THE PARTIES

4.1 ***Intentionally Omitted.*** **For each local interconnection within an AT&T-OHIO area, CLEC shall provide written notice to AT&T-OHIO of the need to establish interconnection in each local exchange area (AT&T SOUTHWEST REGION 5-STATE) or LATA (AT&T-2STATE, AT&T CONNECTICUT and AT&T MIDWEST REGION 5-STATE). CLEC shall provide all applicable network**

Information on forms acceptable to AT&T-OHIO (as set forth in AT&T's CLEC Handbook, published on the CLEC website).

4.2 Upon receipt of CLEC's notice to interconnect, tThe Parties shall schedule a meeting to document the network architecture (including trunking) as discussed in Section 2.1. The Interconnection activation date for an Interconnection shall be established based on then-existing force and load, the scope and complexity of the requested Interconnection and other relevant factors.

4.3 Either Party may add or remove additional switches. The Parties shall provide 120 *30* days written notice to establish such *additional* Interconnection *arrangements or re-arrangements of existing interconnections*; and the terms and conditions of this Agreement will apply to such Interconnection.

4.4 The Parties recognize that a facility handoff point must be agreed to that establishes the demarcation for maintenance and provisioning responsibilities for each Party on their side of the POI.

REQUEST: Please identify and provide a copy of any FCC orders that support AT&T's response to Interrogatory No. 40.

RESPONSE: AT&T Florida has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please identify and provide a copy of any documents that support AT&T's response to Interrogatory No. 41.

RESPONSE: AT&T Florida has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please identify and provide a copy of any documents that support AT&T's response to Interrogatory No. 43.

RESPONSE: See AT&T Florida's response to Item No. 9 of Staff's 2nd Request for Production of Documents.

RESPONSE PROVIDED BY: Mark Neinast

Respectfully submitted this 9th day of June, 2008.

DOCUMENTS REQUESTED

REQUEST: Please provide any documents that support AT&T's response to Interrogatory No. 73.

RESPONSE: The only document responsive to this request is the Telecommunications Act itself. In responding to Interrogatory No. 73, Ms. Pellerin also referenced AT&T's response to Interrogatory No. 52, in which she provided relevant quotes from the Act.

RESPONSE PROVIDED BY: P.H. Pellerin

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 87.

RESPONSE: AT&T has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 88.

RESPONSE: AT&T has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 90.

RESPONSE: AT&T has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 91.

RESPONSE: Documents responsive to this request are available at the FCC's public website; however, AT&T will provide Staff copies upon request.

The responsive documents include:

- First Report and Order, CC Docket No. 96-98, Released August 8, 1996
- Report and Order and Order on Remand and Further Notice of Proposed Rulemaking, CC Docket No. 01-338, Released August 21, 2003
- Order on Remand, WC Docket No. 04-313, Released February 4, 2005

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 92.

RESPONSE: AT&T has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 93.

RESPONSE: AT&T has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any FCC orders that support AT&T's response to Interrogatory No. 94.

RESPONSE: AT&T has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 95.

RESPONSE: AT&T has no documents responsive to this request.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 96.

RESPONSE: Please see AT&T's response to Item No. 20.

RESPONSE PROVIDED BY: Mark Neinast

REQUEST: Please provide a copy of any documents that support AT&T's response to Interrogatory No. 97.

RESPONSE: AT&T has no documents responsive to this request.

PROCEEDINGS

MS. TAN: And do we want to go ahead and lead right into Mr. Neinast?

MR. CARVER: He is available, so if you want to, that's fine.

MS. TAN: I'm comfortable with that.

Intrado, are you comfortable with that?

MS. KISER: Yes, we are ready to proceed. Thank you.

MS. TAN: Okay, hold on one moment. (Pause.)

And if I'm remembering correctly, we have already sworn in the witness. So, AT&T, can you state for the record that your witness has been administered the oath by a Notary Public at the beginning of this proceeding?

MR. CARVER: Yes, that's correct.

MS. TAN: Okay. And, once again, I'm going to ask everyone to agree to the stipulation that I will read into the record, it is that the stipulation that was sent to you by e-mail. Does Intrado or AT&T have an issue with this, the usual stipulations?

MR. CARVER: We have no objection to any of them.

MS. TAN: Intrado?

MS. KISER: No objection.

MS. TAN: Okay. I will now read it into the record.

It is stipulated that this deposition was taken pursuant to notice in accordance with applicable Florida Rules

of Civil Procedure; that counsel present stipulate that the witness is the person he identified himself as; that objections except as to the form of the question are reserved until hearing in this cause; and that reading and signing was not waived. It is also stipulated that any off-the-record conversations are with the consent of the deponent.

Thank you very much.

DIRECT EXAMINATION

BY MS. TAN:

Q Good afternoon, Mr. Neinast.

A Good afternoon.

Q My name is Lee Eng Tan, and I am an attorney with the Commission, and I will be taking your deposition today.

A Okay.

Q Have you ever appeared before this Commission before?

A No, I have not.

Q Okay. Well, in this deposition I will ask you questions and your answers will be recorded by Ms. Faurot, who is the court reporter here with us today. You will understand that you need to speak up and give oral answers that are clear.

A Okay.

Q And it is also very important that you understand the questions and give accurate answers. So if I ask you a question that you don't understand for any reason, please ask me to rephrase the question. Is that okay?

A That's fine, thank you.

Q Excellent. And, where possible, I would also request that you provide first a yes or no answer and then explain where necessary.

A Okay.

Q Let's go ahead and begin.

Would you please tell us your name?

A My name is Mark Neinast.

Q And who are you employed by?

A I am employed by AT&T.

Q And what is your current job title?

A Area Manager, Regulatory Relations.

Q And could you please give us a description of your job?

A I support the AT&T network in matters of interconnection, regulatory matters, arbitrations, disputes, negotiations with other carriers for the purposes of interconnection, and I support 911 services for AT&T ILEC organizations.

Q And how long have you held this position?

A For almost five years. It will be five years in October.

Q Excellent. Thank you very much. These next questions concern Issue 4 and its subparts. I'd like you to refer to Intrado's response to staff's Second Set of

Interrogatories Number 45. And go ahead and find that.

Are you there?

A I'm almost there. I'm trying to find it now.

Q Okay. No problem. And Number 45 is on Page 5.

A Bear with me just a minute. I thought I had a printout of it. Hold on one second.

Q No problem.

(Pause.)

A Item Number 45, you said?

Q That is correct. It is on Page 5.

A I'm there.

Q Okay. Intrado begins its response by asserting that it is in the public interest to require a minimum of 2 POIs for the mutual exchange of traffic between 911 networks. Intrado further asserts that this requirement is consistent with the 911 network recommendations of the FCC chartered Network Interoperability and Reliability Council's best practice. Can public interest play a role in Section 251(c) arbitrations?

A Well, you know, I mean, I think that can be partly a legal question, but I will speak from it from a network perspective, if that's okay.

Q And that would be perfect. Thank you very much.

A Thank you. I believe that in the interest of the public that a state commission has a duty to protect the public interest in that regard, and I think that certainly in the

regard of 911 emergency services traffic, I believe that these interests are best reviewed by this Commission to say, you know, what is pertinent or not.

You know, and I'm not the policy witness where Ms. Pellerin was speaking to the interest in Issue 1, whether it's a 251(c) agreement or not. But setting that aside, you know, the AT&T negotiations that we had looking at a 251 agreement, in normal CLEC traffic we do not dictate where the POIs are, how the POIs should be, how many, and so forth.

But in the 911 arena, I think it is probably a wise decision to have multiple POIs. Even though the AT&T language does not require it, I think it is very important to recognize that. So that's a long answer, but I think the answer is, yes, we agree that the Commission has a duty to do something in this regard.

Did I answer the question?

Q Yes.

Do you believe that POIs are under 251(c), or multiple POIs are under 251(c)?

A I think, generally speaking, you know, and speaking from an ILEC perspective, I think from an ILEC, typically an ILEC would prefer to have multiple POIs regardless of whether it was 911 traffic or not. Because with a single POI, there is a disproportionate cost shifting to an ILEC to have a single POI even in local exchange traffic. So I think that the

inference would be that multiple POIs creates a better distribution of traffic regardless of whether it is 911 traffic or not. Certainly for 911 traffic, and the diversity and redundancy aspect becomes a lot more critical, whereas I think even in my testimony, I forget what page, but I refer to a single point of interconnection is also a single point of failure. So even though you can aggregate traffic into a single POI and gain some economies, I think with 911 traffic the economy is lost if all the traffic fails.

Q Okay. Is requiring a minimum of two POIs for the mutual exchange of traffic between 911 networks an appropriate determination in a 251(c) arbitration?

A I think so. At least that's what AT&T recommends, and AT&T has recommended to Intrado that one of the issues is that the selected router location, which is the existing point of interconnection for all carriers that are utilizing the AT&T 911 service that's existing today, that should at least be the first POI. And then if Intrado is going to become the 911 provider, then a second POI should be established somewhere else on the network to create that redundancy between AT&T and Intrado.

Q Is AT&T's selective router part of the PSTN?

A Yes, it is.

Q And on Number 45, can you go down to the second paragraph and the second sentence?

A Yes.

Q Okay. Is Intrado correct when it asserts that the current AT&T interconnection agreement makes no provision for multiple POIs for 911 interconnection? And can you explain that, please.

A Okay. It does not make provisions to require Intrado to provide multiple POIs; however, the recommendation is that they should have multiple POIs, and there is no provision in there that disallows them from establishing multiple POIs. So the language is actually fairly silent to the concept of multiple POIs. Knowing what Intrado knows about 911 services, and as they quoted earlier with the ECIF (phonetic) practices and that, there should be a multiple POI arrangement in every interconnection that Intrado establishes if they are going to have a reliable 911 service. And the conversations that we have had with Intrado in negotiations, even though the language doesn't require it, the inference is there. And there is certainly nothing there to prevent them from that.

Q Okay. Is there a particular type of proceeding or agreement that is best suited to handle issues of network diversity?

A The NRIC has a series of best practices, and within those best practices there is a series of different ones and they range anywhere from having logical diversity to physical diversity, dual tandems, and so forth. Each one of those items

has different expense factors. And so I think when a company such as AT&T or any company, for that matter, implements those best practices they have to take into consideration the economics of it.

You know, I will give you an example. I will give you two examples, and it may help make sense. You have a metropolitan area, and within that major metropolitan area there is a large investment of fiber facilities where AT&T would utilize SONET rings and all types of backup capabilities. That is certainly economically feasible and it is done in every case.

However, in a rural area where you may have one single cable that runs between offices to a far end of the LATA, for example, there may not be any physical diversity. And in that case you would apply logical diversity where you may have different T-1 systems so that the trunks that were used for 911, if one electronic component were to fail, the entire system would not fail. However, if a backhoe operator were to cut the cable there would be a failure in that case. And those are two examples of one logical and the other physical diversity. And AT&T implements as much diversity as economically possible in all cases.

Q Okay. Let's go ahead and turn the page to Page 6, and look at Intrado's response to staff's Second Set of Interrogatories Number 46.

A Okay.

Q Go ahead and take a look at that and tell us if the response is accurate, and, if not, what is inaccurate?

A Are you referring to Item A, or B, or both?

Q Both.

A Just my first read of it now, it seems to be fairly accurate.

Q Okay. That's excellent; thank you very much.

Why don't we go ahead and turn to the next page, Page 7, and refer to Intrado's response to Number 47(b). And let me know when you are ready to talk about that.

A Okay. I'm ready when you are.

Q All right. Is Intrado correct when it asserts that a second stage of switching more than doubles the potential points of failure?

A No, absolutely not.

Q Why not?

A Well, they are assuming that a switch call path to another switch has a double chance of failure, which is not the case. In fact, most calls that are placed today involve multiple switches. A call from, say, Miami to New York City may involve half a dozen switches to complete the call, and there is certainly a low risk that that call will not complete to New York City. So what Mr. Hicks is introducing with this concept is that if a call has to be passed to another switch,

there is a drastic rate of failure because now we have to introduce another switch, and that is just simply not the case.

In fact, this is teeing up the class marking issue, and the class marking issue is they are trying to prove out the fact that if we use a selective router to process a 911 call then there's going to be high errors. In fact, that is just not the case. There are not high errors today. The system is one of the best systems that has been implemented to date, and we do not have just a rash of misrouted calls, and call failures, and people dying because they can't get through to 911. It's just not true.

Q Excellent. Thank you.

I'd like you to turn the page, and refer to Intrado's response to Staff's Second Set of Interrogatories Number 48. If you could take a look at that and let me know when you are ready.

A Okay, I'm ready.

Q Overall is this response accurate?

A I think it's accurate to the best I can tell without -- I mean, I read it for conceptual reading versus total accuracy. Let me read it just a little bit closer.

Q Okay.

A Yes, ma'am, I would say it is accurate.

Q Okay. Thank you very much. If you would turn to the next page, and if you could go ahead and familiarize yourself

with Intrado's Response to Number 49. And go ahead and let me know when you are ready.

A Okay. I'm ready.

Q Okay. Thank you. Is Intrado correct when it asserts that AT&T's 911 infrastructure is very switch centric because it is designed to reduce transport costs?

A Well, not exactly, no. AT&T uses quite a few more switches than, say, a CLEC or a VoIP provider, but you have to look at the actual use of the network and the customer base, and there are a lot of factors that go into it. If you look at a switch, a typical switch would have a certain amount of ports that can provide service to customers. And just like a shelf of inventory, if you will, once you exhaust the number of ports then you have to add more. So if you have a CLEC that has, you know, maybe they serve large business customers as there business model, and so they have a switch that serves -- one switch serves the state of Florida, and they have interconnections in different points of the state, but not necessarily all points of the state. They can run a very efficient switch and maybe even only have 20 customers.

However, if they were to provide residential service off of that same switch, that switch would become exhausted in a very short time frame, and then they would have to add another switch, and then another switch. And before you know it, they would be called switch centric as Mr. Hicks is

alluding to with AT&T.

We have a lot of -- we provide a lot of services to a lot of customers and each of those customers requires a switch port. And so, therefore, we distribute the switches closer to the customer base rather than having one centralized location, and they require shorter facilities because they are closer to the customer. So it's not exactly the way he depicted.

Q Thank you.

Is Intrado correct when it asserts that limiting the POI for interconnection for the purposes of E911 service competition to the incumbent's legacy 911 infrastructure will do nothing to offer more redundancy and flexibility?

A Can you repeat the question again, please. I'm sorry.

Q Sure.

Is Intrado correct when it asserts that limiting the POI for interconnection for the purposes of E911 service competition to the incumbent's legacy 911 infrastructure will do nothing to offer more redundancy and flexibility? It's the last sentence of the second paragraph.

A Yes. You know, I'm not exactly sure where he's trying to go with this, because the negotiations and everything that we have been dealing with to date has been for the sole purpose of 911 infrastructure. So is he saying that limiting the POI to the traffic that they want to, you know, pass

between us will do nothing, I don't know. It's a weird question. I mean, they are only negotiating 911 service to date. And so if we limit it to just that 911, if they take away the 911 service, then what else is there? That's where I guess I'm confused. Do you see what I'm saying?

Q Okay, that's fine.

A You know, limiting the POI for the purpose of what the POI was designed for to me doesn't make sense.

Q Okay, thank you. Let's go ahead and move on to Number 50. And go ahead and take a look at that and then let me know when you are ready.

A Okay, I'm ready.

Q Is Intrado correct when it asserts that meet point arrangements currently used by adjacent ILECs must be made available to competitive entrants?

A I haven't read that paragraph of the local competition order there. My understanding of reading Mr. Hick's testimony and the midspan meet that they are seeking is that the comparison is that the midspan between two ILECs is the halfway point between the two networks. And taken to the next step, I understand Intrado's network is in Colorado. So, therefore, the jump that I think he is asking us to take, that leap is that is it between Florida and Colorado to find that midspan meet point? I don't know. I don't think that that is required by AT&T to interconnect outside of their network.

Q Thank you. Go ahead and turn or refer to the lower part of the page in their response to Number 51.

A Okay.

Q Is Intrado correct when it asserts that when an ILEC chooses to sort 911 traffic destined for a competitive provider's selective routing system, like Intrado, using a second central office or tandem supports the principles of dedicated trunking and diversity -- hold on one moment, please.

(Pause.)

Q (Continuing) All right. Let me go ahead and repeat that.

A Certainly.

Q Is Intrado correct when it asserts that when an ILEC chooses to sort 911 traffic destined for a competitive provider selective routing system, like Intrado, using a second central office where such sorting does not constitute selective routing, is that correct?

A You know, I'm not exactly -- I don't know that that is necessarily correct based on just that one statement, because I think it has to be taken into context. I think Mr. Hicks is teeing up an issue with the class marking. In other words, if you have -- and this what is we told Mr. Hicks in negotiations: If you have an AT&T end office switch that is not split between PSAPs, AT&T intends to have a direct interconnection to Intrado's selective router and will not

select -- there is no need for AT&T to send that call to a selective router for any kind of sorting whatsoever. Do you see what I'm saying? So if the AT&T end office is wholly in the PSAP territory being served by Intrado, AT&T will not send that call through its selective router.

Q And does that have any potential impact on a customer dialing 911?

A Not at all, providing that Intrado routes the call to the correct PSAP.

Q Okay. Do you have a copy of Intrado's amended prehearing statement available?

A I believe so. I do.

Q If you could turn to Page 10, Issue 4(a).

A Okay.

Q Is Intrado proposing a physical interconnection arrangement that is similar to that used by ILECs today?

A With their midspan meet language, yes. They are proposing, similar to what I described awhile ago, where they would have a 50/50 arrangement with AT&T at a midspan meet point between the networks. Which it is, again, AT&T's position that that is outside of AT&T's network and should not be allowed. You know, we feel at least that that falls under the realm of 251(c) that Intrado should interconnect within AT&T's network.

Q Okay. Under Section 251(c) rules, does AT&T have the

right to tell Intrado it must interconnect at AT&T's selective router?

A I think in a normal situation, no. I think that this question almost gets back to the earlier concern as to whether the Commission should review this 911 traffic differently than local exchange and access traffic. And to the regard that this 911 traffic has a higher standard or criteria of network reliability and diversity, I think that that should be taken into consideration.

And, in fact, if you look at the network architecture that is in place today, not even just AT&T, but a lot of carriers that utilize the AT&T 911 service today have established diverse and redundant facilities to that selective router. And, therefore, to put that POI at any other location would force AT&T and any other carrier that had those diverse facilities to reroute the facilities to a new POI that would be served by Intrado to serve those PSAPs. And, therefore, the expenses would be incurred not just by AT&T, but by any carrier that had established that POI with the concept of diversity to that POI.

So I would say that from a network perspective and for reliability purposes that selective router location has an embedded level of redundancy and diversity that has been established been over the years through the recommendations of the NRIC and some of the FCC rules and orders. In fact, the

FCC recently issued an order to verify -- have every carrier verify their facilities for diversity and redundancy. And if we were to move that, then I think that would undermine some of the post-Katrina work that has gone on.

So I have got a large concern just beyond -- you know, with a normal 251(c), I would say the answer is, no, we shouldn't dictate. We would prefer it to be in an access tandem, because that has the highest level of facility availability; but in this case I think the select router location serves the industry and the public to have that diversity that is already built in.

Q Thank you.

If the Commission determines that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A If the AT&T language is accepted?

Q Yes, that is correct.

A I think that the consumer would continue to have a high degree of accuracy of 911 service and dependable 911 service.

Q And, conversely, if the Commission determines that Intrado's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A You know, I think initially, I think there could be

impacts to the general public, because anytime you move these circuits there is always the risk of human error in the rearrangement of circuits. And I think during that transitional period the rearrangement of those circuits has an impact, a potential impact for service degradation.

Eventually, if all of the diversity is built into a POI at a different location, you know, barring the fact that it is expensive and probably not the best use of resources, I think ultimately you could rebuild and get that diversity back at some other location. I'm just not sure that it is a good decision to do just based on it works now and it works well. I don't understand why it would be good.

Q Okay. My next set of questions concern Issue 7(a).

So does AT&T have terms and conditions that address separate implementation activities in other interconnection agreements?

A Okay. Yes. I didn't want to go from memory. Yes. In fact, we have got an appendix, the 911 amendment appendix has two paragraphs, I believe it is 2.1 and 2.3 that has disputed language. And the intention of the language that AT&T proposes in 2.1 is to provide for additional POIs or interconnections that Intrado may choose to implement. And then the language in 2.3, I believe it is, would allow for the addition of or even changing of switches, which there are two different levels of network rearrangements. One is for

facilities, the other is for a full-blown switch. And it looks to me that Intrado has tried to alter the Section 2.3 to accomplish what AT&T proposed to do in Section 2.1. And then in the meanwhile, they changed the 120-day notification interval to 30 days, which is certainly not enough time to implement a new switch.

Q Thank you. Can you please turn to your rebuttal testimony?

A Which page, please?

Q If you can look to Page 14, Lines 21 through 23.

A Page 14, 21 through 23?

Q That is correct.

A Okay.

Q Can you please explain how service outages might occur under Intrado's proposed language?

A Okay. In Section 5.3 where AT&T is requesting the 120-day notification interval, it has been my experience that when people come and try to rush that type of work, there's a very high chance of error, because people didn't have time to plan their work properly. And I have seen many of those projects not do real well when they try to rush them like that.

Typically, when you replace a switch or add a switch, there is a lot of testing that has to be performed. And if it is a switch replacement, they basically have to duplicate every aspect of the service from the old switch to the new switch.

So AT&T just does not believe that 30 days is an adequate amount of time to prepare for such a project.

Q Thank you.

Can you return to Intrado's responses to Staff's Interrogatories Number 56, and that would be Page 14, I believe.

A Okay, I'm there.

Q Okay. Does AT&T agree that the arrangements should be delineated in this agreement, not left to a later date and further negotiations?

A Just a moment, please.

Q Take your time.

A I don't believe that Mr. Hicks is correct in his depiction of this that these interconnections are being delineated to another date. In other words, the language is clear in Section 5.1 that says that they would establish another interconnection and then they would negotiate the terms of those separate interconnections. Basically, all it's really saying is that if a POI is going to be established at a new location, then the two parties' network engineers would meet to discuss where and how it's going to be done, and then they would issue orders. And the normal order interval is around 20 days, and there are established procedures on that. So I don't think it would require an interconnection agreement arbitration or negotiations team to establish a new trunk group

or a new facility to a different office. That's all that Section 5.1 is trying accomplish is that, you know, fill out the correct form so that we know which is Office A, which is Office Z, and we know where to tie the two points down.

Q Okay, thank you. If the Commission determines that AT&T's proposal for this issue is an appropriate one, what impact, if any, would it have on the ability of the consumer to reach 911?

A I'm sorry, can you repeat your question, please?

Q Sure. If the Commission determines that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of the consumer to reach 911?

A I think that the consumer would have a very -- would continue to have a very high chance of reaching 911 following AT&T's proposal.

Q And, conversely, if the Commission determines that Intrado's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of the consumer to reach 911?

A I think that Intrado's language, given the way it is laid out, could have a very negative impact on 911 service to our consumers.

Q Why or how?

A Well, for the reason I gave earlier, but I'll

reiterate them. If Intrado -- they start out, and I saw somewhere where they have three switches or servers that they are going to implement within their network, and as their network grows and they have to add a fourth, or a fifth, and maybe even redistribute the traffic load, and they give us 30-days notice for such activity, 30-days notice is not very much time to prepare for such a large undertaking.

And if they are going to rush it through, because the agreement says they only have to give 30 days, then I think that that is not enough time to prepare for such a large project. And errors can be made if the project is not well coordinated, communicated, and executed.

Q Thank you. My next set of questions I have concern Issue 8(a), and I would like for you to refer to your rebuttal testimony on Page 15. And if you could look at Lines 8 through 14.

A Okay.

Q And then just let me know when you are ready.

A I'm ready.

Q Are there any disputes other than the ones mentioned in this section of your testimony?

A For Section 8(a)? No. That is the only language in 8A that is under dispute right now.

Q Okay. And can you please define for me what a steering table is?

A A steering table is -- in the use of the ALI database, a steering table is a table that's used to take the ANI digits and to create the lookup to determine what is the first two inferences. Actually, there is a selective router database that uses its ALI database to determine which PSAP to route the calls to. And in the second iteration it uses the ALI database to determine what is the street address to send that street address to the PSAP for their use in dispatching emergency services. And that's that use of a steering table. There is also steering tables within a switch to steer a call, and that is also called switched translations.

Q Okay. Is a steering table used by AT&T alone when AT&T is the designated 911/E911 service provider?

A Yes. Whoever is the service provider would be the one using those steering tables.

Q And when AT&T is the designated 911/E911 service provider, would Intrado ever need to have access to the steering table?

A I can't find a reason to have that information shared. In fact, for each carrier that builds their steering tables, I have never heard of anyone sharing their network information with other carriers. It is typically considered proprietary information on how they build those software tables.

Q Okay. Can you please explain to me what is meant by

the term proprietary?

A You know, not being an attorney, using my lay interpretation, it would mean that it is private information that is not shared outside of a company except for certain circumstances where maybe -- and I'm trying to think of the word. I've drawn a blank, I'm sorry -- where they would sign some kind of nonconfidential agreement or something. It is basically private information for either competitive reasons or other things.

Q Okay, thank you.

If the Commission determines that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A I'm not sure how impacting it is that the consumer reach 911 or not. I feel, though, that from a corporate perspective for AT&T to be forced to share confidential information with another carrier, I think it would have some competitive impact. In other words, if Intrado does not know how to build these tables, and it is wanting to compete with AT&T, who does know how to build those tables, you know, I don't know that AT&T has an obligation to build those tables for Intrado in order to compete with AT&T, if that makes sense.

Q So if the Commission determines that Intrado's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability for the consumer

to reach 911?

A I don't know the answer to that question.

Q Okay. How is inter-selective routing transfer currently handled by AT&T?

A Today, if a PSAP approaches AT&T and requests to have inter-PSAP traffic, then we would sit with the PSAP and -- actually we would have to work with both PSAPs to find out what kind of variables need to be translated into the network to accomplish that task.

There's not as many of these PSAPs that want to transfer calls to other PSAPs as Intrado would allude to. There is just not that much of it out there. A lot of PSAPs don't want the calls from other PSAPs, and so you have to get the commitment from the PSAP that is going to receive the calls first that they even want them. So provided that you have those two PSAPs that agree that they want to exchange the traffic, then we would have to get all the parties together to determine how best to do it.

Q Can you describe the differences between the way E911 trunking and traffic routing arrangements are currently handled by AT&T and the Intrado Intelligent Emergency Network?

A From a practical standpoint, the routing of the traffic will perform in a very similar manner. In other words, a call today comes in from -- the originator originates the 911 call -- let me start over -- and the ANI digits are sent to the

selective router which does a database correlation to determine which PSAP to route to, and then the PSAP is handed the call.

So Intrado's next generation switch will not route the traffic any different than what AT&T's selective router does today. It's technologically neutral at that point. The main difference between what the next generation switch will provide is further down the road. Once a PSAP purchases CPE, the customer provided equipment, then at that point that equipment can utilize either data or video downloads on the back side of the call. The originating 911 customer is not going to be sending any of that traffic whether it uses Intrado's switch or AT&T's switch. So it's really on the back side from the 911 PSAP to maybe an emergency services person at the scene of an accident, for example.

Q Thank you. What, if any, network additions, rearrangements, or changes would AT&T have to implement to meet the desired interconnection arrangements proposed by Intrado?

A That is a very broad question. When we ask that question are we talking about to meet what Intrado is asking of AT&T? Because in order to do that, would that mean AT&T would implement class marking, would move its POI to another location? I'm not exactly sure how broad that question is.

Q I think what we are talking about is in terms of facilities, equipment, personnel. I mean, how significant would the changes be in order to accomplish that

interconnection arrangement?

A And I guess I'm just not sure I understand. If we implemented the architecture as AT&T proposes it where we can utilize a selective router location for at least one of the POIs, I understand that there will be multiple POIs, but let's say that there are two POIs in each LATA and one of those POIs being a selective router, then I think there would be significant resources to establish a second POI and install that diversity required that each of those POIs would require.

Then I think the actual service would have to be tested. Once it's installed, the order of events would be the facilities, then the trucking, then test, and then it would take quite awhile to perform all the tests. And then once you were satisfied that the tests were going to work, then they would rehome (phonetic) traffic. It would take a significant amount of resources to implement.

Q So would AT&T have to implement line attribute routing?

A If line attribute -- see, I assumed that there was no line attribute routing. If line attribute routing, it may take -- time-wise it make take a year or two to implement such a project as that, it is so huge and massive. And to date nobody has done that. You know, I hear in Intrado's testimony they refer to CLECs. A CLEC that implements a single switch that may have a single customer in a given calling area is not

the same as a legacy ILEC who has millions of customers, has economies of scale and mechanization. It would be very monumental and very prone to errors. I don't know what it would take. It would be a very large undertaking.

Q Okay. And can you tell me where does AT&T currently stand with next generation 911 provisioning capabilities in the State of Florida?

A We have been reviewing it, looking at it, and we are not yet at the stage of implementing anything. Right now we are involved with next generation technologies, but more on a consumer business side. I think our feel at this moment in time is that the reliability aspects need to mature a little bit more before it is implemented, and there are certain groups that want next generation technology, certain businesses and residences.

It is kind of like cellular, it was implemented in phases. And I think that the phases that next generation is going through, it will take some time before AT&T is actually in a position to implement a 911 network. Today we don't have a product that we are looking at implementing. We're working with the standards bodies and doing tests.

Q Hold on one second. Can you please turn to Mr. Hicks' rebuttal testimony at Page 15?

A Page 15. I'm there.

Q Here the witness discusses using the term designated

versus primary to address the party that has been chosen by the PSAP to be the provider of 911. And Ms. Pellerin suggested that you would be the best person to answer this question.

A Okay. The term designated is just a term that -- and I'm trying to read Mr. Hicks' question right now. Designated does mean who the PSAP has selected to be their 911 service provider. That is how -- AT&T would agree with that. That is the term designated.

In fact, the term primary and secondary is used to determine in the event that AT&T has a split wire center, which carrier would be the primary selective router or the secondary selective router based on the number of access lines served by the PSAP from that AT&T end office.

Q Has this been an active discussion between the parties as to which term to use?

A It was earlier on, but we came to an agreement, I think several months ago, that the term designated would refer to the carrier providing the 911 service for a given PSAP, and that primary and secondary would be used to determine in the split wire center which carrier would be the primary selective router or the secondary.

MS. TAN: Thank you. Mr. Neinast, staff has no further questions. At this time I think we can hand it over to Intrado for their questions.

MS. KISER: Okay. Could I just have a minute here?

MR. CARVER: Yes. Actually, we would like to take about five, if that is okay?

MS. TAN: That's fine. Let's go ahead and take five minutes. We will come back on at 3:50.

MS. KISER: All right. Thank you.

MS. TAN: 2:50.

(Recess.)

MR. CARVER: Okay. We are back.

MS. KISER: Intrado Communications has no questions for Mr. Neinast. Thank you.

MR. CARVER: I have one question on redirect.

CROSS EXAMINATION

BY MR. CARVER:

Q Mr. Neinast, in response to a question from Ms. Tan, I believe the question was whether the selective router was part of the PSTN, and you answered yes. Is that correct?

A That's correct.

Q Could you elaborate on that answer as to specifically how the selective router relates to the PSTN?

A Okay. The selective router is housed, if you will, within a Class 5 switch. It's actually a separate network that is built out. It uses the same switch, but it is actually separate translation, separate trunking, and it's considered a separate network for purposes of 911 routing.

MR. CARVER: Thank you. That's all I have.

MS. TAN: Okay. I believe we have your e-mail addresses. Does everybody wish to have these electronically, also?

MR. CARVER: Yes, please.

MS. KISER: Intrado Com does, as well. Thank you.

MS. TAN: Okay. I think that that would end this deposition for Mr. Neinast.

Mr. Neinast, thank you very much for participating today.

MISCELLANEOUS

STIPULATION	4
ERRATA SHEET	54
CERTIFICATE OF REPORTERS	55
CERTIFICATE OF OATH	56

P R O C E E D I N G S

MS. TAN: First what I'd like to do is the stipulation. Is everyone comfortable with the stipulation being read into the record?

MR. CARVER: AT&T is.

MS. TAN: And Intrado?

MS. KISER: Intrado is. Yes.

MS. TAN: Okay. Excellent. I'm going to go ahead and read the stipulation.

It is stipulated that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; that counsel present stipulate that the witness is the person he identified himself as; that objections, except as to the form of the question, are reserved until hearing in this cause; and that reading and signing was not waived. It is also stipulated that any off-the-record conversations are with the consent of the deponent.

Okay. AT&T, could you please have your Notary Public administer the oath to Ms. Pellerin.

PATRICIA H. PELLERIN

was called as a witness and, after being duly sworn by a notary present with the witness, testified as follows:

EXAMINATION

BY MS. TAN:

Q Okay. Thank you. Good morning, Ms. Pellerin. My

name is Lee Eng Tan. I am an attorney with the Commission and I will be taking your deposition today. Have you ever appeared before the -- have you ever been deposed before in this Commission?

A No.

Q Okay. Well, just to let you know, in this deposition I will ask you questions and your answers will be recorded by Ms. Boles, the court reporter here with us today. You understand that you will need to speak up and to give oral answers that are clear.

A Okay.

Q And today I will be asking you a series of questions. It is very important that you understand the questions and give accurate answers. So if I ask you a question that you don't understand for any reason, please let me know and I will rephrase the question.

A All right.

Q And where possible I would also request that you provide first a yes or no answer and then explain where necessary.

A I understand.

Q Excellent. Please tell us your name.

A Patricia H. Pellerin.

Q And who are you employed by?

A I'm employed by the Southern New England Telephone

Company, which is an affiliate of AT&T.

Q And what is your current job title?

A My title is Associate Director, Wholesale Regulatory Support.

Q And can you please give a description of your job?

A Basically I represent AT&T in various state and judicial proceedings regarding their wholesale products and their pricing with interconnection agreements with competitive local exchange carriers, and I also provide some support for negotiations of those agreements.

Q And how long have you held this position?

A Eight years.

Q Excellent. Okay. As a housekeeping matter, will you be making any changes to your Footnote A in your rebuttal testimony?

A Yes. Yes. I would like to delete the second sentence of that footnote.

MR. CARVER: And just for the record, we're talking about Footnote 8?

BY MS. TAN:

Q Footnote 8 in the rebuttal testimony?

A Yes.

Q Okay. Thank you.

Ms. Pellerin, can you provide a general overview of Issue 1 and what you believe the disputes are between the

parties on this issue and its subparts?

A Okay. There are obviously several, several issues encompassed in that big umbrella issue; the first one being the extent to which Intrado is actually entitled to a Section 251(c) interconnection agreement for the services they intend to offer and what those services are. Our understanding is that they intend to offer only emergency 911 type services and that they are not intending, at least any time in the foreseeable future, to be offering basic local exchange services to end users in the State of Florida.

There's also an issue regarding -- well, let me, let me rephrase that. We believe that what they intend to offer is not subject to Section 251(c). So that is a fundamental issue to be decided in Issue 1.

Then the issue goes on to ask about the pricing for that. And given that we believe that is not appropriate for an agreement, then that would kind of be the end of the story if the Commission found that it was not. To the extent that any of what Intrado intends to offer would be subject to Section 251(c), then the pricing aspect of that issue would come into play. And for the emergency services that we're talking about, we believe that the pricing should be essentially the same between the two parties and not that Intrado could charge us a commercial rate for the same service that we would offer to them at a TELRIC type rate.

Q Thank you. In deciding if a particular interconnection arrangement should be captured in an ICA as opposed to a commercial agreement, what should the Commission consider?

A The Commission needs to consider whether the service that Intrado intends to offer is telephone exchange service or exchange access because that is the criteria that's required for a Section 251(c) interconnection agreement.

Q Okay. So I'd like to refer you to Page 4 of your rebuttal testimony, Lines 20 through 21. So if you could go there. Go ahead and let me know when you're ready. And actually that would be Lines 20 through 21 carrying over to Line 1 on Page 5.

A Could you just read it to me so I'm sure that I'm in the right place, what you're talking about there?

Q Sure. Hold on one second.

Okay. What it says is that, "The FCC uses the term 'communication service,' however that term is not limited to the context of Section 251 of the Act, but also applies, for example, to Section 202 regarding interexchange service."

My question is here you state that it is your understanding as a layperson that a carrier must provide telephone exchange service and/or exchange access to qualify for a Section 251 agreement. Is that correct?

A Yes.

Q And is it your testimony that Intrado's 911 service is not a telephone exchange service?

A Yes.

Q And why is that?

A When you look at the definition of telephone exchange service -- and if you would bear with me for a minute while I pull that up.

Q No problem. Take your time.

A Telephone exchange service -- I thought I had it in front of me. While I'm looking for that, let me give you a little bit of the backdrop in terms of that.

First of all, as a layperson I'm certainly not qualified to represent a legal argument in terms of what is or is not telephone exchange service. And we have placed testimony basically in order to tee up the issue in the arbitration and effectively express AT&T's position, but the legal argument of it is intended to be in our brief. You'll have to bear with me for just another minute here.

Q Actually that's --

A Is that enough?

Q No. Go ahead and continue to answer the question, please.

A Okay. The Act defines telephone exchange service as service that's within a telephone exchange or a connected system of telephone exchanges within an exchange area or a

comparable service where a subscriber can originate and terminate a telecommunications service. 911 service is totally independent of exchange boundaries. It's based on municipal boundaries. And the subscriber of the local exchange service, the end user, has access to 911 as part of that local exchange service. But on the receiving end of that, which is where the PSAP is, there's no ability to originate and terminate service at the PSAP on the 911 network. They're only terminating. They can't pick up the phone and place a telephone call from that 911 PSAP service.

Q Okay. Do you believe AT&T's E911 service offering to be a telephone exchange service?

A No.

Q And why not?

A For the reasons I just described.

Q Okay. Thank you. Is it your testimony that Intrado's 911 service is a telecommunications service?

A I don't know.

MR. CARVER: Do you want to hear the question again?

THE WITNESS: I think she's asking me do I consider Intrado's 911 service to be a telecommunications service.

MR. CARVER: Right.

THE WITNESS: I think parts of it are telecommunications service. I don't know that the service as a total is because I think there's aspects of it that are

information service.

BY MS. TAN:

Q Okay. Can you go ahead and look on Page 5 of your direct testimony, Lines 9 through 13. And here you state that even if Intrado is generally entitled to a Section 251 agreement, that does not mean that each and every item Intrado requests must be made available pursuant to Section 251.

What do you mean by "generally entitled"?

A The fact that Intrado has a certification in the State of Florida to offer local exchange service. So if they were, if they were looking to offer basic local exchange service, then they would be entitled to a Section 251 agreement for that because of that select certification.

Q So if it is determined that Intrado is entitled to a Section 251 agreement, what items has Intrado requested that AT&T believes it has no obligation to make available pursuant to Section 251?

A Well, I talk in my testimony about three scenarios. Scenario one is the situation where AT&T serves the PSAP and Intrado has customers that are calling 911 to AT&T. To the extent that Intrado was offering dial tones as other CLECs do, we have routinely included that in our Section 251 agreements without ever considering whether there was an obligation to include it there. So like we've done with other CLECs, we have agreed to have language in the interconnection agreement for

that.

The second scenario is the situation where AT&T has an end user that's dialing 911 and the PSAP is served by Intrado. We do not believe that is Section 251(c).

And the third scenario is where we have interselective router connections for a connection between PSAPs that are served by, say, one by Intrado and one by AT&T, and we also don't believe that is Section 251(c).

Q Thank you. Are the rates, terms and conditions AT&T is proposing in this proceeding either for an interconnection agreement or a commercial agreement consistent with the rates, terms and conditions that AT&T would offer to other similarly situated competitive providers?

A Yes.

Q And is it correct that you do not believe that the FCC has made any specific pronouncement regarding whether the 911 network is a telecommunications or information service or something else for regulatory purposes?

A That's my understanding.

Q And does AT&T typically include the rates and charges it may pay for interconnection and services to competitive providers in 251(c) interconnection agreements?

A Generally I would say yes. We have the pricing for, for 911 interconnection for that scenario one that I described included in our generic pricing list.

Q Okay. What about in a commercial agreement?

A I suppose it would depend on what was included in that commercial agreement, what the service being offered was. When we are interconnecting with an adjacent ILEC, it's my understanding that neither party charges the other for that interconnection.

Q Okay. Do you believe that the Florida Public Service Commission should evaluate the rates proposed by Intrado Witness Hicks in his rebuttal testimony, TH-8?

A Is TH-8 Intrado's proposed prices for the port connection?

Q That is correct.

A Okay. To the extent that the Commission determines that what Intrado is offering is subject to Section 251(c) and we therefore have to have it in our Section 251(c) interconnection agreement, then I do believe it's appropriate for the Commission to consider the prices that they have proposed.

Q And how should we evaluate those? I mean, is there a standard?

A Well, I think because 911 is different and we are operating more in a co-carrier environment than as competitors at that point that there should be parity with the prices. Now Intrado provided us with that exhibit during negotiations and, as I indicated in my rebuttal testimony I believe, the header

of that document was essentially that it was a commercial agreement, which told me that's their standard commercial rates, not based necessarily on anything to do with, with cost. And they also did not explain to us how those rates would actually be applied. In testimony, Intrado said that those charges were comparable to what AT&T charged for both the port and an entrance facility, and I believe that to the extent that AT&T would not be obtaining entrance facility from Intrado that it's not appropriate to charge us for that.

So I think there's some open questions in terms of what those prices that Intrado has proposed actually mean and what they actually consist of and how they would be applied.

Q Okay. Can you go ahead and take a look at the rebuttal testimony for Intrado's witness Carey Spence-Lenns on Page 10. Do you have that available?

A I have. Just a moment.

Q Okay.

A This is the rebuttal of Carey Spence-Lenns on Page 10?

Q Yes. And beginning on Line 22 and continuing on to Page 11, if you want to take a quick look at that.

A Okay.

Q Here the witness disagrees with your assessment on mutual exchange of traffic. Are Witness Spence-Lenss' assertions accurate?

A I think she, I think she misconstrues it as she's talking about on the top of Page 11 in terms of mutual exchange not needing to be over the same trunks, and I've not taken the position that they would need to be over the same trunks. Certainly carriers have one-way interconnection trunks where they only handle traffic in one direction. The issue is more that the service that they're offering is not capable of mutual exchange of traffic because it cannot originate 911 calls back to us. So you don't have even the capability of traffic going in both directions regardless of the trunk configuration.

Q Okay. Thank you. You know, I'd like to take a look now at Issue 2. Could you please provide a brief overview of this issue and what you believe is in dispute?

A Sure. The basic issue is the underlying template for the interconnection agreement that the parties will ultimately execute. AT&T, prior to the merger with BellSouth, operated in a 13-state region and had a 13-state template interconnection agreement that was specifically crafted and designed for those particular 13 states, which had been comprised of one, two, three, four ILECs that had ultimately come together. And within those, that 13-state agreement there are specific terms and conditions that would apply, for example, only to the southwest region, which had formerly been Southwestern Bell, the technical issues there. There's different technical arrangements in different parts of the 13-state area, and all

of that is accommodated in the 13-state template, including specific regulations that have been set forth in various regions within the 13-state template.

BellSouth operated in the 9-state region with its own interconnection agreement that was designed and crafted specifically for the technical and operational and regulatory and policy environment that they had in the 9-state region.

When we entered negotiations with Intrado, we provided them with a 9-state template for negotiation for the 9-state region for those nine states and we provided them with a 13-state template for interconnection agreements in the 13 states.

There was a limited exchange of red lines of the 9-state agreement and my understanding is virtually nothing on the 13-state agreement. And then when Intrado filed for arbitration, they filed in four states, three 9-state region states and one up in a Ohio in the 13-state region, and simply changed the number 13 to the number 22 from that 13-state template and said, you know what, we like this agreement, this is the one that we want.

Well, that agreement doesn't accommodate all of the issues, the technical and operational and policy issues, in the, in the 9-state region because the 13-state agreement was never contemplated for use there.

So the fundamental issue with Issue 2 is does the

interconnection agreement with Intrado in Florida, is it properly based on a 9-state template that was designed for Florida or a 13-state template that was clearly not designed for Florida?

Q Okay. If you could turn to Page 24 of your direct testimony, and just let me know when you're there.

A I'm there.

Q Okay. You note that the, the 13-state template does not accommodate the particular characteristics present in Florida. Could you please give me some examples of these characteristics?

A Sure. One example that comes to mind is how intercarrier compensation is handled. In the 9-state region the switches don't have the capability of measuring actual usage that can be used for billing terminating calls, so they use factors. And the companies report the factors to each other in terms of how much is local and how much is, is toll so that the proper billing rates can be applied. That is different than most of the 13-state region. The 13-state agreement is designed for billing of actual usage. So there's, there's no language in the 13-state agreement that accommodates that factor type of billing for intercarrier comp. That's, that's one example.

There's other examples in terms of the way traffic is routed, whether -- the way interexchange and local traffic may

or may not be combined over the same trunk groups, some of those types of things. In terms of the unbundled network elements, there's a number of elements that are defined and available in Florida agreements that are not in the 13-state agreement. Resale type arrangements are, are rather different simply because the services that are offered in Florida are different than the services that are offered in the 13-state.

There's some variation in the general terms and conditions in the way the contract language is constructed. For example, there's, there's language in the 13-state agreement that addresses the policy of, I call it pay in dispute where if a carrier has a dispute, they need to pay regardless of the dispute. So they either pay us or they pay into an escrow account. And that, that, those provisions are not in the 9-state because they did not have that policy of pay in dispute.

So there's, there's a whole host of various things that we have not, frankly, we have not gone through the 13-state line by line to see what would have to be changed for 9-state and take the 9-state and see how well that would go together because that is a significant effort to do that. And we didn't believe that it was, number one, appropriate to make that effort, or, number two, that we were obligated to, absent an order to do that, given all the effort that's gone into accommodating legitimate reporting requests based on the merger

commitments that we made with our merger with BellSouth. Those have taken priority.

Q You touched on this briefly, but what is your understanding for why Intrado wants to use the 13-state template?

A My understanding is that because they believe the language in the 13-state template is crisper. They like it better.

Q Okay. And you have, you have identified ten issues in this arbitration that the parties resolved in negotiations in Ohio for use in the 13-state agreement. Is that correct?

A It was correct at the time that I wrote my rebuttal. It is now 11 because the parties have resolved the content dispute with Issue 25a.

Q Okay. And as I understand in your rebuttal testimony on Page 3, Lines 1 through 3, Intrado wants to retain these ten or I guess now 11 issues as open issues in this arbitration even though they were resolved in Ohio; is that correct?

A Yes.

Q Okay. And why do you believe that Intrado wants to do this?

A Based on my discussions with Intrado, it was essentially directly related to Issue 2. It was simply that they liked the 13-state language better. So we negotiated for this language in Ohio. They like it better. We offered, for

example, on the issue of term of the agreement, we agreed to do a three-year term with them in Florida. They were not willing to close the issue that was related to the term of the agreement because they wanted all the rest of the 13-state language to go along with it. So the issue was more than just three years or five years. It was the other, the other 13-state language that goes with it.

Same thing with some of the others. If the language didn't exist in the 9-state agreement or they didn't like the way it was in the 9-state agreement, for the most part it really isn't there, that they simply liked the 13-state language and so they wanted it.

Q In your rebuttal testimony on Page 3, if could you flip through, flip to that.

A Okay.

Q You note that the additional issues will not need to be addressed if the Florida Public Service Commission decides that the 9-state template is the appropriate starting point for negotiations. And in Footnote 2 on the page -- hold on one second. Hold on one moment, please.

(Pause.)

Footnote 2 states that, "With a decision in Issue 2 to utilize the 9-state template, Issues 13(b), 15, 25(a), 32, and 34(a) and (b) will not need to be addressed because Intrado's disputes are not present in the 9-state language (and

AT&T Florida will not introduce them). In addition, certain language disputes in Issues 3(b), 4(b), 4(c), 7(a) and (b), 9, 13(a) and 29(a) also do not exist in the 9-state template, further limiting the scope of issues the Commission must address."

Because -- so can you explain what you mean by "the disputes are not present in the 9-state language"?

A Sure. Let's -- well, we can use Issue 13(b) just as an example, and it would essentially apply to any of these. But the dispute in Section 13(b) relates to the improper delivery of switched access traffic over local interconnection trunks and our proposal of language that Intrado would assist us in stopping that traffic when it takes place.

There is no language in the 9-state interconnection agreement that has anything to do with assistance to staff improper switched access traffic over local interconnection trunks. The language is simply not there. So -- and AT&T is not proposing that it be put there. So with no language there, there's nothing there for Intrado to dispute because it's not there, and so there's nothing for the Commission to decide because there's nothing there. And the same is essentially true for those other issues.

Or in the case of the issue starting with 3(b), the particular sections that I identified on that revised Exhibit PHP-3 on Page 2, those particular sections don't exist in the

9-state agreement and so there would be nothing there for the Commission to decide.

Q So is it correct that no matter which agreement the Commission decides should be used as the appropriate starting point, either party may raise issues and suggest language that they would like to have included in the agreement?

A Well, I suppose it's an open question in terms of the 9-state agreement and the extent to which Intrado could then go and argue for changing or excluding particular language that was presented to them in negotiations and what -- frankly, I don't know what they would do with the 9-state agreement. It's our view that that is the appropriate agreement. And they certainly had ample opportunity to provide us their feedback on that agreement and, in fact, had started to do so before they filed for arbitration with the other agreement. They gave us no indication that they had an objection to the 9-state agreement until they filed for arbitration with something that said 22 states.

Q Okay. All right. So in Footnote 2 you also identified the additional eight issues, the 3(b), 4(b), 4(c), 7(a), (b), 9, 13(a) and 29 --

A Yes.

Q -- that you believe that the language disputes raised by Intrado do not exist in the 9-state template; is that correct?

A Not for those particular 13-state ICA sections that I include in that matrix in my exhibit. The issues themselves still exist for other contract provisions but not for these.

Well, let me just give you an example. Issue 13(a), there is some language in intercarrier compensation that refers specifically to local interconnection for wireline services, and Intrado objected to the use of the term "wireline." There is nothing in the 9-state agreement that looks anything like that or talks about wireline service. So that particular contract provision would not need to be addressed by the Commission with the 9-state agreement because there's no parallel language.

Q Isn't it correct that AT&T has taken steps to promote uniformity across its operating region such as your terminology on billing statements?

A We are taking those steps, yes.

Q Why, why not uniformity with respect to 911?

A Well, in terms of 911 itself, certainly Intrado is seeking something that no carrier or provider has ever sought from us before. They are asking for something unique. So there's no standard to deal with it because it's never come up before.

Q Okay. Let's go ahead and take a look at Page --

A I'm sorry. Could I just continue one, one step further and as to Issue 2?

Q Sure.

A We did agree to carve out 911 from all of the standard contract language, and we have a separate 911 appendix and a 911 network interconnection methods appendix that are independent of the 9-state/13-state issue. So we've carved out all the substantive 911 issues from the body of the contract and worked with them both for Ohio and with some slight differences for Florida because of their different certification in Florida versus Ohio. So there's really not an Issue 2 associated with 911, if that helps.

Q Thank you. Let's go ahead and take a look at Page 31 of your direct testimony, and we're looking at Lines 8 through 15.

A Okay.

Q As I understand your testimony, it is AT&T's position that the 13-state template is not appropriate for use in this arbitration because it is not the agreement the parties began negotiating from for Florida and would require AT&T time to analyze and identify language that must be changed for Florida. Is that about right?

A Yes.

Q And since December of 2007 when Intrado filed its arbitration proposing to use the 13-state template, has AT&T performed any analysis to identify the language that would need to be changed if it were to be used?

A The focus of the negotiations with Intrado was on the 911 issues and then the other language issues in terms of the 13-state and certainly from our position was focused on Ohio. And I apologize for not following your rules and answering no up front.

Q That's fine.

A We have not taken the time to analyze the 13-state agreement and see how it would need to be modified for Intrado in Florida.

Q Okay. So is there any other reason why Intrado is prohibited to choose to use the 13-state template other than it is not what AT&T wants to use?

A That I don't know. I don't, I don't know if there's, if there's a legal argument in favor of one over the other.

Q Okay.

MR. CARVER: Can I -- I'm sorry. Can I just ask for a clarification. When you say "prohibited," are you asking specifically about legal reasoning or technical issues or -- could you clarify, please?

MS. TAN: I think what we were looking at was both, whether, you know, was there -- as a layperson, you know, is she aware of any reason besides the reasons that she's already stated why, why Intrado would be prohibited from choosing to use a 13-state template?

THE WITNESS: Well, I guess I'm stumbling on the word

"prohibited."

BY MS. TAN:

Q How about -- what if I use the word "inappropriate"?

A Okay. Would you rephrase the question then just including that word so I can hear it all in context?

Q Sure. Is there any reason why it would be inappropriate for Intrado to choose to use the 13-state template other than it is not what AT&T wants to use?

A Well, it's a little bit more than just what AT&T wants to use. We believe it's inappropriate because the agreement was never designed for use in Florida. So as a practical matter, it doesn't make sense to use an agreement in one area that had, was designed with operation support systems and technical issues and, and all of that that went into that 13-state template and just simply apply it in Florida.

Q Okay. Thank you very much.

If you look at your rebuttal testimony on Page 9, Lines 16 through 18, you state that there are numerous provisions that would be different for the 9-state region. If AT&T has not specifically identified the differences between the 13-state and the 9-state templates, how do you know that there are numerous provisions that would be different?

A I have to apologize. I was looking at the wrong document. Can you point me to the proper document again, please?

Q Sure. Let's look at your rebuttal testimony on Page 9.

A Page 9. Okay. I'm sorry.

Q No problem.

A Okay. And you're asking what about the numerous provisions?

Q Basically if AT&T has not specifically identified the differences between the 13-state and the 9-state templates, how do you know that there are numerous provisions that would be different?

A Just by looking at a sampling of some of the technical issues that I happen to know about. I'm assuming that there's others that are related to the policies between the two different companies being BellSouth and AT&T prior to the merger because they were independent companies. And just from what I was seeing in looking at some of the 13-state issues that were coming up and taking a quick look to see if there was a parallel issue, if there was parallel language in the 9-state agreement, and I saw a number of cases where there was differences there, I made the conclusion that if there's differences there where there is language in dispute, there's probably issues elsewhere that we haven't explored.

Q Thank you. Let's go ahead and turn the page to, turn the page to Page 10 on your rebuttal testimony.

A Okay.

Q And in Lines 14 through 19 you state that AT&T will modify a 13-state interconnection agreement for a CLEC that actually asks AT&T to port an entire effective interconnection agreement to Florida.

A Yes.

Q So I guess first what I'd ask is what is porting?

A Porting is an obligation that we entered into with the merger with BellSouth where a CLEC was entitled to select a currently effective entire interconnection agreement in any of our states, and we use the term "port," but effectively carry that interconnection agreement into another state for application there. So you could take an interconnection agreement from an existing entire affected interconnection agreement in Florida and we would allow, pursuant to this merger commitment 7.1, a carrier to use that interconnection agreement in Wisconsin. In order to do that, we would then analyze that Florida interconnection agreement line by line to identify the particular changes that needed to be made for Wisconsin pursuant to the specific requirements of the merger commitment that were limited to things like technical feasibility and operational systems.

I don't have the merger commitment in front of me, but there was certain criteria like regulatory requirements that would need to be changed. There would be changes to tariff references and state regulations potentially, things

like that, in order to make that agreement operational and actually have it work in the State of Wisconsin.

Q Okay. Well, let's move away from Issue 2. And if you could please turn to Intrado's Witness Hicks, his rebuttal testimony.

A Okay.

Q And if you could turn to Page 15.

A I'm there.

Q And here the witness discusses using the term "designated" versus "primary" to address the party that has been chosen by the PSAP to be the provider of 911 service. What is AT&T's position on this issue?

A I could probably address that, but I think Mr. Neinast is the more appropriate respondent to that because I really don't talk about the issue of designated or primary in my testimony.

Q Okay. That's fine. These next few questions will concern Issue 15. You filed direct testimony on Issue 15 but you did not file rebuttal; is that correct?

A Yes.

Q Why not?

A I would have to go back and look at what Intrado filed with their direct testimony, but I didn't file rebuttal unless there was something worthy of rebutting.

Q Okay. Thank you. If you could please turn to your

direct testimony on Page 62, and looking at Lines 9 through 18.

A One moment. I'm sorry. Did you say my rebuttal testimony?

Q Direct, direct testimony.

A Okay. I'm sorry. I don't have a 62 for the other one. Okay. 9 through 18.

Q Page 62, Lines 9 through 18.

A Okay. I'm there. Thank you.

Q Are Sections 4.2.1 and 4.2.2 and 15.1 the only sections applicable to Issue 15?

A Let me just double-check something.

Q No problem. Please take your time.

A They were the only sections applicable, and since that time the parties have resolved Sections 4.2.2 and 15.1. So all that remains with Issue 15 is intercarrier comp Section 4.2.1.

Q Thank you. And if you could turn the page to Page 63 and look at Lines 3 through 22.

A All right.

Q Is this Section 4.2.1?

A Yes.

Q Okay. Okay. And if you could turn to the next page, to Page 64, and looking at Lines 9 through 13.

A Okay.

Q Can you give me a couple of examples of a retroactive

application of charges that would not be pursuant to an order?

A Well, the parties have resolved Issue, Section 15.1, so I'm not sure that's something that you need to consider. It's not still in dispute.

Q Okay. That would be -- that's fine.

Go ahead and turn to Intrado Witness Cynthia Clugy's direct testimony and looking at Page 4, Line 23, and continuing to Page 5, Line 2. And go ahead and let me know when you're there.

A I'm there.

Q Witness Clugy asserts that AT&T's language could allow AT&T to make retroactive compensation adjustments for traffic that is not affected by change of law. Is her assertion correct?

A I'm still here. I'm thinking.

Q No problem.

A I don't think so. But the issue around change of law -- I'm just -- I want to put that language in context. Just a moment.

Okay. The context of this section is related to ISP-bound traffic and the FCC's ISP order, remand order and related decisions. So as I'm looking at the rest of the language, I think the issue around intervening law -- and, again, I'm not, I'm not an attorney, so --

Q Strictly as a layperson.

A Yeah. The interconnection agreement has provisions for intervening law to the extent that the parties seek to take advantage, if you will, of a change in law and amend the interconnection agreement accordingly to include that intervening law.

So I think Intrado's use of the term "intervening law" might require something that goes beyond the interconnection agreement as it stands and would potentially require an amendment. Not knowing what that intervening law might be, it's kind of hard to speculate from this lay chair.

Q Is Issue 15 part of the 13-state template?

A Yes.

Q Okay. And why is it appropriate to apply a retroactive adjustment only to local calls?

A The way local calls are used in the context of this appendix, I think it is particular because it talks about Section 251(b)(5), exchange of traffic. And because the parties have availed themselves of the ISP remand order's rate for ISP-bound traffic the same as Section 251(b)(5) traffic, I think that's the context for the use of this term "local calls," which may be separate from the ISP traffic. So it can be a little bit confusing because of what the FCC did with lumping the ISP-bound traffic and the 251(b)(5) traffic together at the same rate. And not knowing what they were going to do next, any adjustments that might be made would be

for the local part of that traffic, not necessarily ISP-bound or Section 251(b)(5) but what's commonly known as local, which could include either.

Q Thank you. If the Commission determines that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of the consumer to reach 911?

A It would have no impact whatsoever.

Q And would that be the same for Intrado's, if the Commission determines that Intrado's proposal for this issue is the appropriate one?

A Yes.

Q Okay. The next question I have is for Issue 23, and Issue 23 is one of the ten issues you identify as being resolved in the 13-state agreement. And I'd like to refer to your response to staff Interrogatory 9. So if you can go ahead and get that for me.

A Okay. Just a moment.

Q No problem. Take your time.

A Okay.

Q As I understand, the language in dispute for Issue 23 was based on the 13-state template that was resolved between the parties in the context of negotiations in Ohio; is that right?

A Yes.

Q And how specifically was Issue 23 resolved in Ohio?

A Let me just take a quick look here and see what the issue was. If you'll just give me a moment, I'll pull up that contract language.

Q Please take your time.

A Okay. That language was related to charges when the carrier changed its company code. And as a result of that change in code there could be restenciling, reengineering, changing of locks and other work associated with collocation, and the parties agreed to language that those charges would be presented to Intrado and they would have the ability to approve those charges before the work was done so that they could avoid those charges by deciding not to change their company code, for example.

Q Does the 9-state template address recovery for performing specific administrative activities?

A I, I need a question. That's a little more specific than that, I think. I don't know what you mean.

Q Okay. You know what, we'll go ahead and disregard that question.

Let's go ahead and look at the same response to staff Interrogatory 9. You state that it would be inappropriate to import the 13-state language from Issue 23 into a 9-state agreement. Why is --

A Yes.

Q That if AT&T agreed to certain language in Ohio, why is that not going to be resolved here in Florida?

A The way I look at language that was resolved for the 13-state template in Ohio, I view that as no different than language that the parties agreed to initially in Ohio. So all of the, all of the 13-state language that the parties had no dispute, at the end of the day when we've negotiated resolution of areas where there was conflict, then the language becomes agreed-to language for the 13-state as though there was no dispute.

So I don't think it's appropriate to bring in pieces of the 13-state agreement simply because it was initially raised as a dispute when we're not bringing in all the rest of the 13-state agreement where there was no dispute. Either we use the 13-state template or we use the 9-state template. But I have a problem with just bringing in bits and pieces of the 13-state agreement where the parties resolved the dispute for Ohio.

Q Thank you. The next set of questions I have regard Issue 29 regarding the 9-state versus 13-state dispute. Issue 29(a) addresses the rounding practices that should apply for reciprocal compensation usage and airline usage, and Issue 29(b) addresses unspecific nonrecurring charges.

Is it your testimony that the use of the 9-state agreement resolves Issue 29(a) or only partially resolves that

issue?

A It only partially resolves it. It resolves the issue around reciprocal compensation usage rounding because in the 9-state region we bill based on factors, not on actual usage. So there's really no usage to round.

There is still a dispute regarding the rounding of facility mileage because there is a provision in the 9-state agreement that facility mileage is rounded to the next whole mile similarly to the way it's presented in the 13-state agreement.

Q AT&T's position in the Prehearing Order seems to indicate that the Issue 29(a) in total does not exist if the 9-state template is used. Can you bridge that discrepancy?

A Just a moment.

MR. CARVER: I have a copy of the Prehearing Order. I'm going to show that to the witness.

MS. TAN: Okay. Thank you.

MR. CARVER: Just a moment. Okay.

THE WITNESS: I think that there's an error in the prehearing statement. Let me just, let me just confirm something in my own notes here.

BY MS. TAN:

Q Okay. Thank you.

A There, there is still a dispute regarding, potentially a dispute regarding facility mileage rounding. It

appears in the 13-state pricing appendix. That does not exist in the 9-state agreement, but there is a provision there regarding the rounding. So if you look at my Exhibit, revised Exhibit PHP-2, which indicates those issues that still exist even with the 9-state template, you'll see that Issue 29(a) is there regarding facility mileage rounding. So there was an error in the prehearing statement.

Q Okay. What is your understanding of the dispute in Issue 29(b)? Is AT&T permitted to impose unspecified nonrecurring charges on Intrado Comm?

A I'm looking for the contract language that generated that issue. Just a moment.

Q Okay.

MS. KISER: Ms. Tan?

MS. TAN: Yes.

MS. KISER: If it would help, I can -- 29(b) or 29(a) of the interconnection agreement sections, if that would help Ms. Pellerin.

THE WITNESS: I've got it. Thank you.

MS. TAN: Hold on. Who was that talking?

MS. KISER: I'm sorry. It was Chérie Kiser on behalf of Intrado Communications.

MS. TAN: Oh, okay. Thank you.

THE WITNESS: Okay. The dispute in Issue 29(b), there's a couple of aspects to that regarding pricing, and part

of it is regarding what happens when AT&T inadvertently provisions a service that Intrado ordered that's not in the interconnection agreement. So they've ordered something that's not part of their agreement, we don't have an obligation to provide it, there aren't any prices in the agreement because the service is not there, but for whatever reason we provisioned it anyway. And so there's a dispute around how we would charge for that. We certainly think that it's appropriate that if the service exists in a tariff, then we would charge the tariff rate. If it wasn't in the tariff but it was in our current generic template, that we would charge the generic rate that we would charge to other carriers and that we would then not be obligated to continue provisioning that service until the agreement was amended to include it. So that's part of Issue 29(b).

There's also a part of Issue 29(b) regarding rates that are absent from the interconnection agreement. So the service is there but there's no rate. And the language that Intrado has proposed is that the parties would have to reach agreement on that rate and the Commission would have to approve that rate as well, and that's where the dispute is for that part of it.

BY MS. TAN:

Q Can you do me a favor and please look at the Prehearing Order and look at Issue 29(b). I'm sorry. 29(b).

And can you take a look at what AT&T has stated and tell me how that coincides with what you have just told us?

A It coincides with the second part of what I told you in terms of the pricing where they're included in the interconnection agreement but not -- the service is there but the price is not. That's what this Issue 29(b) statement goes to.

Q So if using the 9-state template, how does that resolve Issue 29(b)?

A Because the 13-state pricing attachment or appendix does not exist in the 9-state agreement, and there isn't any, any substantive language in the 9-state that would apply to my knowledge. Let me just confirm one more thing for you.

Q Okay. Thank you.

A Yeah. I think there's a little bit of confusion in terms of the phrase here "This issue does not exist if the 9-state template is used." The pricing appendix certainly is a 13-state document that does not exist. You will find Issue 29(b) on my revised Exhibit PHP-2 with those pricing sections referenced, and my header for Exhibit PHP-2 is that the 9-state template limits the arbitration to these issues because there is some language in the 9-state agreement regarding rates that are absent, the TBD (phonetic) type rates.

So I think the language might be different but the substance of the matter would still exist. So I apologize for

any confusion on that.

Q No problem. Thank you. Let's go back to staff's first set of interrogatories to AT&T and, let's see, response to Item 10.

A Okay.

Q Your response to Part B of this interrogatory states that the standard industry practice for rounding usage for carrier billing is to the next whole minute, but that AT&T's standard practice in the 9-state region is to use jurisdictional reporting factors. Is that correct?

A Yes.

Q And is it the practice of AT&T's 13-state region to use actual usage data or jurisdictional reporting factors to bill reciprocal compensation?

A In most states it is. There are one and possibly two states that use factors for reciprocal compensation, but generally they use actual usage. And it has to do with either switch recordings of the way the billing systems were designed in the original companies that ultimately made up AT&T.

Q Why shouldn't the 13-state region and the 9-state region have the same standard practice to bill reciprocal compensation?

A Well, as I stated earlier, the, the switches in the 9-state region are not currently capable of recording terminating usage with the level of detail that would permit

actual usage billing. And it is, my understanding is that it's an extensive undertaking to make a change to start using actual usage. That has not taken place.

Q Thank you. If you look at your response to 10(c), that there is no published industry standard regarding rounding of usage for carrier billing, how is there a standard industry practice if there is no published industry standard?

A On Part C I am actually providing the information regarding the standard, the industry standard regarding rounding mileage, which is different than usage.

Q Okay. Thank you very much. If you could look at Page 51 of your direct testimony, Lines 1 through 14.

A Okay.

Q You state that the impact to Intrado using jurisdictional factors rather than the actual usage for carrier billing would be negligible. How do you know that the impact would be negligible?

A Well, assuming hypothetically that we actually did bill based on usage in the 9-state, the language that we're talking about, the 13-state language, says that you bill on a trunk group basis. So all of the usage on the trunk group would be put together and then rounded as a group. So you're not rounding each call. You only round once for all of the usage over an entire trunk group. And the rate that we're charging is .0007 per minute. So when you're looking at a

sixth of a minute or six seconds, I should say, a tenth of a minute, then you're taking that down by another factor of ten. So I provide an example here in my testimony that if they had 100 trunk groups, which is a lot, now, again, we're not talking 911, we're talking basic local exchange service, local traffic, if they had 100 trunk groups rounding up one minute, we're only talking 7 cents a month. Now if 7 cents a month is a problem, then they're probably in the wrong business. And it would also apply to the traffic that AT&T delivers to Intrado. So there would be a certain amount of offset assuming that the parties are actually exchanging traffic. So I think it would be even less than that.

Q Thank you. If you just would scroll down the page a little bit. You state that AT&T's industry standard practice of rounding reciprocal compensation usage to the next whole minute is in effect with other carriers. What other carriers is this practice in effect?

A This is the arrangement that we have with all the carriers that we're interconnected with for local traffic.

Q Okay. If you could turn to Page 54 of your direct testimony, Lines 8 through 19.

A Okay.

Q You state that Intrado's proposed language in Pricing Section 1.10.1 would permit Intrado to object to prices even if the Commission had approved them. In Intrado's response to

staff Interrogatory 20, Intrado states that it would be appropriate to require that either the rates are mutually agreed to by both parties or the parties would accept the rates the Commission approves, would agree to the language where either the rates are agreed to by the parties or approved by the Commission. Does this satisfy AT&T's objection to Intrado's proposed language?

A I'll give you a qualified yes. I believe that was one of the interrogatories in staff's third set, and we're still preparing our response.

MR. CARVER: I'm sorry. Was that Intrado's response?

MS. TAN: Yes. That was Intrado's response.

THE WITNESS: So you will see our definitive response in the third set.

BY MS. TAN:

Q Okay. That's great. Thank you very much.

The next set of questions that I have are regarding Issue 13(a) and (b). Can you please describe the dispute between the parties with respect to Issue 13(a)?

A The parties have a disagreement in terms of the way certain terms are defined, and, again, we're talking non-911 traffic. The definitions of Section 251, besides (phonetic) traffic, ISP-bound traffic and switched access traffic. AT&T has proposed some pretty clear definitions in terms of what would constitute those types of traffic, where

Intrado has preferred a significantly more vague type of language.

Q Thank you. If you could please turn to Page 40 of your direct testimony. We're looking at Lines 22 through 24.

A Okay.

Q Here you state that AT&T's definition is consistent with the language previously adopted by the Ohio Commission and so should be adopted here in this arbitration; is that correct?

A That's what it says, yes.

Q And is this language part of a 13-state template?

A Yes, it is.

Q And does AT&T have no objection to using part of the 13-state template as it chooses?

A No. That's not, that's not correct.

Q Okay. How would you describe your decision to request that this language be adopted in Florida?

A The context of this, first of all, is assuming that you order a 13-state agreement, then we need to hammer out this language. To the extent that you go with a 9-state agreement, and I have an assumption that Intrado would object to the 9-state language that's at, that's parallel like, for example, the 9-state defines local traffic as opposed to Section 251(b)(5) traffic. And while the text is not exactly the same, there's, there are some similarities to the issue. So I really don't think that we're looking to pick and choose pieces out of

the 13-state agreement, but we're responding to specific language that Intrado raised in arbitration and we're defending that.

Q Okay. Thank you. If you could look at Page 16 of your rebuttal testimony and we're looking at Lines 5 through 14.

A Okay.

Q Okay. You state that Ms. Clugy testified that three years is a reasonable term for the interconnection agreement and that AT&T agreed and offered to modify the 9-state general terms and conditions. You also testified that Intrado Comm would not accept AT&T's Florida offer and insisted that all the 13-state terms and conditions be imported to Florida. Have AT&T Florida and Intrado Comm resolved Issue 18?

A Well, I thought we had, which is why in my direct testimony I indicated that the parties had resolved it. Intrado has indicated that they are not willing to accept that because of Issue 2, that they want all of the 13-state language, not, not just that they want a three-year term.

Q And is that the only issue at dispute for Issue 18?

A Yes. 18(a), yes.

Q 18(a)? Okay. All right. And did AT&T Florida's offer to Intrado include language that would modify only the language in the 9-state general terms and conditions that apply to the term of the interconnection agreement?

A Yes. We offered to change five years to three years.

Q Okay. And did AT&T, I mean, did Intrado offer AT&T any reasons for not accepting the proposed modified language regarding the term of the ICA?

A The only information that Intrado has given us on this whole issue in general is that they like the 13-state language better because it's crisper. They have not offered any specifics on any of the rest of it.

MS. TAN: All right. Well, thank you very much, Ms. Pellerin. At this time staff has no further questions. I'd like to suggest that we take a break for lunch to give our court reporter an opportunity to stop. Would anyone have a problem with a half an hour?

MS. KISER: No. That's fine with Intrado Communications.

MS. TAN: AT&T?

MR. CARVER: Yeah. That's fine with us.

MS. TAN: Okay. So let's pick back up around 1:30, and we will continue on, and then it'll be Intrado's questions.

(Recess taken.)

MS. TAN: What we are doing now is coming on with the deposition of Ms. Pellerin, and it is now time for Intrado to ask their questions.

MS. KISER: Okay. Thank you.

EXAMINATION

BY MS. KISER:

Q Good afternoon, Ms. Pellerin. Chérie Kiser on behalf of Intrado Communications.

At Pages 5 and 6 of your testimony where you talk about whether an interconnection agreement is necessary, can you tell us what portion of the market AT&T provides local exchange service to in its local service territory?

A No, I can't.

Q Do you know if you file any reports that provide that information with the Florida Public Service Commission?

A I don't know.

Q And do you know what portion of the market AT&T Wireless serves in Florida?

A No.

Q Do you know whether the customers that do receive service from AT&T, are those customers connected to the public switched telephone network?

A Certainly customers for local exchange service are.

Q Thank you.

And do the customers that receive local exchange service receive -- or do they have the ability to dial 911?

A As part of local exchange service, yes.

Q Turning to Pages 7 to 10, you discuss the essential elements of a sustainable business model. AT&T is a business, correct?

A Yes.

Q You also discuss on Page 7, Lines 13 through 19, market drivers for pricing services. Are you familiar with economic analysis that reflect how competitors price their services?

A Generally.

Q Are you familiar with the concept of price leaders?

A I'm familiar with the concept, for example, of a loss leader where a convenience store might sell milk at a really low price to get a customer in to buy their potato chips. Is that what you mean?

Q Well, no, I was referring to price leaders.

A Then, no, I don't know what you mean.

Q On Page 8, Line 16, is it AT&T's understanding that an interconnection arrangement with Intrado might require it to interconnect in Colorado?

A My reading of language that Intrado has proposed where Intrado had sole determination of where AT&T would interconnect with Intrado would permit Intrado to say, AT&T, you must interconnect with me at my location in Colorado.

Q Has Intrado Communications ever indicated that they would seek to have you interconnect in Colorado?

A Not to my knowledge, but the language that was proposed by Intrado that AT&T objects to could potentially require that.

Q Thank you. Page 10, Lines 2 through 5. Is it AT&T's position that the commercial agreements that you describe are 251(a) agreements?

A I have not stated that.

Q Are commercial agreements entered into pursuant between telecommunication carriers pursuant to 251(a)?

A I think that would be a legal question. I'm not sure. I haven't contemplated it.

Q The agreements that you refer to, these commercial agreements that you reference, are these agreements written or oral?

A I think that the correct answer to that is yes; I think we may have both.

Q You have both written agreements and oral agreements, commercial agreements?

A Yes.

Q On Page 13, you discuss a decision by the Virginia Corporation Commission, is that correct?

A Yes.

Q Do you know how many petitions for arbitration the Virginia Corporation has reviewed that have been filed since 1996?

A I don't know how many, no.

Q And are you aware that the Federal Communications Commission has agreed to preempt the Virginia Corporation

Commission and hear and review the petition for arbitration that you referenced?

A I am aware of that now, yes.

Q On Page 16, Lines 18 to 20, you discuss or indicate that when a caller dials 911, the call is routed through the E911 network to the proper PSAP, correct?

A Yes.

Q Does the end user's call originate on the public switched telephone network?

A Yes.

Q Okay. Turning to Page 17, Lines 1 through 6, and I believe that this issue also was discussed in response to questions from Ms. Tan. You indicate that PSAPs cannot place a call over the service that's provided to PSAPs for receiving 911 calls, correct?

A Yes.

Q Do you know if when the PSAP receives the 911 call whether it can answer the call and communicate with the caller that needs emergency services?

A Carry out a conversation?

Q Yes.

A Yes, they can.

Q Thank you. Page 24, Lines 1 through 13. Does the law require competitive local exchange carriers seeking interconnection pursuant to 251(c) to negotiate interconnection

arrangements based on AT&T template agreements?

A I'm not an attorney, and you're asking me what the law requires.

Q Okay. Thank you. In discussions or questions from Ms. Tan earlier you indicated that AT&T has developed a 22-state template agreement, is that correct?

A I don't recall saying that.

Q Oh, you didn't?

A No.

Q I guess I misunderstood you. You did discuss the use of a nine-state versus a thirteen-state, correct?

A Yes.

Q And I believe there was some discussion about the use -- Intrado's decision to use a nine state versus a thirteen state?

A Well, Intrado's decision to use thirteen rather than nine state, yes.

Q And are you aware that Intrado requested a 22-state template on three separate occasions from AT&T?

A I'm aware that Intrado sought to interconnect and negotiate an interconnection agreement with AT&T in 22 states. I'm not aware of a specific dialogue where Intrado might have said I want a 22-state template.

Q Are you aware of AT&T informing Intrado on August 2nd of 2007 that they have a 22-state agreement ready by September

of '07?

A I know that AT&T was working on a 22-state template, and I know that it was not available in the time frame that you are talking about. It might have been expected that it would have been available, but it wasn't.

Q So are you familiar with the August 30th communication to Intrado regarding a 22-state template being available October 1st of 2007?

A I might have seen something like that, I don't recall.

Q How about the communication on October 8th, 2007, to Intrado that it wouldn't be ready for a few more months?

A I don't recall seeing specific documents.

Q In questions from Ms. Tan, you also talked about merger commitments pursuant to the merger order between, I guess, BellSouth and AT&T.

A Yes.

Q Do you know when the FCC's order was issued imposing those merger commitments?

A Not exactly.

Q Subject to check, does March 6th of '07 sound about right?

A I really don't know.

MS. KISER: Okay. Thank you, Ms. Pellerin. I have no further questions.

MS. TAN: Okay.

MR. CARVER: I have no redirect.

MS. TAN: Okay. Well, I think at this time let's take care of how -- would everyone like copies, and how would they like them?

MR. CARVER: We would like an electronic copy, please.

MS. KISER: Intrado Communications would like an electronic copy also, please.

MS. TAN: Okay. Well, I think this concludes the deposition for Ms. Pellerin.

Ms. Pellerin, thank you very much for your time with us today.

THE WITNESS: You're welcome.

(Deposition concluded at 1:44 p.m.)

P R O C E E D I N G S

MS. TAN: My name is Lee Eng Tan. I'm with staff.

MS. KING: Laura King, Commission staff.

MR. VICKERY: Paul Vickery, Commission staff.

MS. LEE: Pat Lee, Commission staff.

MR. HIGGINS: Devlin Higgins, Commission staff.

MR. BARRETT: Michael Barrett, Commission staff.

MS. BLACK: Anita Black, Commission staff.

MS. OLLILA: Sue Ollila, Commission staff.

MR. TRUEBLOOD: Frank Trueblood, Commission staff.

MR. DOWDS: Dave Dowds, staff.

MS. FAUROT: Jane Faurot, court reporter, staff.

MS. TAN: Okay. Let's go ahead and start on the line with Intrado.

MS. KISER: Chérie Kiser on behalf of Intrado Communications, and with me is Ms. Cindy Clugy and Mr. Thomas Hicks.

MR. SELF: And this is Floyd Self also on behalf of Intrado.

MS. TAN: Okay. And AT&T?

MR. CARVER: Philip Carver on behalf of AT&T Florida, and also with me is Trish Pellerin.

MR. GURDIAN: Manny Gurdian with AT&T Florida.

MS. TAN: All right. And, for the record, have the parties read and agreed to the standard stipulation sheet?

MS. KISER: Intrado Communications has.

MR. CARVER: Yes, for AT&T.

MS. TAN: Okay. Let me go ahead and read it into the record.

It is stipulated that this deposition was taken pursuant to notice in accordance with applicable Florida rules and civil procedure; that counsel present stipulate that the witness is the person he identified himself as; that objections except as to the form of the question are reserved until hearing in this cause; and that reading and signing was not waived. It is also stipulated that any off-the-record conversations are with the consent of the deponent.

Intrado, could you please have your Notary Public administer the oath to Mr. Hicks.

(Witness sworn.)

MS. KISER: Ms. Tan?

MS. TAN: Yes.

MS. KISER: Is it okay if we move forward or just indicate that the oath is being administered for both proceedings at this time?

MS. TAN: Right, that's fine. Because what we will do is we just acknowledge it at the start of each witness for each docket.

MS. KISER: Okay. That would be great. Thank you.

was called as a witness and, after being duly sworn by the Notary Public, testified as follows:

DIRECT EXAMINATION

BY MS. TAN:

Q Good morning, Mr. Hicks.

A Good morning.

Q My name is Lee Eng Tan, and I'm an attorney here at the Commission, and I will be taking your deposition today.

Have you ever appeared before this Commission?

MS. KISER: Ms. Tan, I apologize for interrupting.

MS. TAN: No problem.

MS. KISER: Would it be possible to also swear in Ms. Clugy at this time?

MS. TAN: I'm sorry, I thought you did them both at the same time.

MS. KISER: No, she just administered it for Mr. Hicks.

MS. TAN: All right. Go ahead and do it for Ms. Clugy.

(Witness sworn.)

MS. KISER: Thank you. I appreciate it. I'm sorry.

MS. TAN: No problem. And that will be for both dockets, right, you will have different --

MS. KISER: Yes, we have both notarizations.

MS. TAN: Okay.

MS. KISER: We'll fax them over. Thank you.

MS. TAN: No problem.

BY MS. TAN:

Q All right. Mr. Hicks, have you ever appeared before this Commission?

A No, ma'am.

Q And have you been deposed?

A No.

Q All right. Well, in this deposition I will ask you questions and your answers will be recorded by Ms. Faurot, the court reporter here with us today. You understand that you need to speak up and give oral answers that are clear?

A Yes.

Q It is also very important that you understand the questions and give accurate answers. So if I ask you a question that you don't understand for any reason, please ask me to rephrase the question, okay?

A Thank you.

Q And where possible I would like to request that you provide first a yes or no answer and then explain where necessary.

A Okay, thank you.

Q Excellent. Would you please tell us your name?

A My name is Tom Hicks.

Q Okay. And who are you employed by?

A I am employed by Intrado Communications, Inc.

Q Okay. And what is your current job title?

A My current job title is Director of Carrier Relations.

Q And how long have you held this position?

A Approximately four years.

Q Excellent. Thank you. Can you tell me which services AT&T is currently providing to Intrado, Inc.?

A To my understanding they do have some services that -- I should say Intrado, Inc., but not Intrado Communications does have some agreements with AT&T and do provide some services.

Q Okay.

A I'm not certain I can attest to what all those services are.

Q That's okay. Of these services, or if you know, of these services currently being provided by Intrado, Inc. to AT&T, which services are Intrado Comm requesting in this proceeding?

A Intrado Comm is basically requesting interconnection for the purposes of providing competitive 911/E911 telecommunications exchange services, which is something that Intrado, Inc. does not provide.

Q Okay, excellent. Can you please provide a general overview of Issue 1 and what you believe the disputes are

between the parties on this issue and its subparts?

A Yes. Basically, as I just mentioned, Intrado Comm currently plans to provide competitive telecommunications exchange services to public safety answer points throughout the state of Florida, and, in fact, throughout the nation. Being in that position, we will be directly competing with the ILECs where they are currently the monopoly provider of those types of services, and, as such, we believe that 251(c) is the appropriate Act and the appropriate law to be followed that grants us the accesses that we need to provide our services.

As Mr. Neinast pointed out the other day, competitive E911 telecommunications exchange services were not contemplated when the Act was initially established, but there is little doubt that the FCC in their actions were intending to open monopoly markets to competition. And we believe that this particular venue is the appropriate venue to do that, to establish the interconnection.

Pursuant to the Act as a competitive provider, we believe we are entitled to the same or equivalent interconnection arrangements when are Intrado Comm serves as the wireline E911 network provider. We also believe that the interconnection provisions being sought are consistent with public safety and community expectations for providing and delivering services from any device anywhere at any time. In view of future emergency communication needs is far exceeding

the simple voice and data applications currently available in the legacy 911 environment. Thank you.

Q Thank you. So in deciding if a particular interconnection arrangement, term, or condition should be captured in an interconnection agreement under 251/252 of the Act, as opposed to a commercial agreement, what should the Commission consider?

A I'm not certain I understand the question, but can you perhaps -- can you restate that for me again, please?

Q Sure.

What we're asking for is what should the Commission consider if they are deciding a particular interconnection arrangement, term, or condition for an interconnection agreement as opposed to a commercial agreement?

A Well, several things, of course, impact whether we should be looking at a 251(c) agreement. Of course, first and foremost is that we are dealing with a telephone exchange service and telecommunications services which are regulated, and 911 has clearly been regulated for some point in time.

Secondly, it is a service that doesn't require the ability or where it does have a need for access to those PSTN for execution and for implementation of those services. So that being the case, and, further, you know, there is some belief -- or I shouldn't say belief, but basically the ILECs clearly have a superior bargaining position being the monopoly

provider of the network today. And we have a firm belief that 251(c) is all about access to the PSTN and opening those monopoly markets. Thank you.

Q Okay. Mr. Hicks, let me ask you about what role does the underlying technology that is used to provide the service, or the service itself, or who purchases the service, what role does that make in determining -- should the Commission determine those factors?

A IP technology, of course, is used by Intrado Telecommunications for its infrastructure. However, the technology being used should have no bearing on the classification of the 911/E911 services being offered. Classification of a service or of a provider's service should not be based on the technology, but on the nature of the service being delivered. And given that the Public Service Commission has jurisdiction over 911 and emergency communications, we firmly believe this is the appropriate venue.

Q Do you believe that the FCC has made any specific pronouncement regarding whether the 911 network is a telecommunications or information service or something else for regulatory purposes?

A I understand it has. I can't specifically cite the acts and the laws, because I'm not a lawyer.

Q In your direct testimony you discuss that the E911

consists of three integrated components, and that attempting to segregate any of the functions from the others would significantly diminish the viability and reliability of 911. For regulatory purposes, would segmenting these components diminish the reliability of the 911 service?

A Absolutely. Without it you cannot have the full impact of delivering immediate aid on calls to 911. It is recognized that there are multiple components and that is what is contained in my testimony. Without a doubt you need the network for the voice to traverse, as well as the telephone number, ANI, if you will, of the caller to the public safety agency so that they can use that information to index into databases. And those databases, of course, contain the location of the caller, for the most part that is what it is intended to include, and without that one cannot provide these services.

Emergency services would be entirely hampered without the ability of the end user to dial 911 and have access via the PSTN to the wireline 911 network. Further, without the selective routing component, one would not be able to deliver -- and without the selective routing databases associated with that component would not be able to deliver the call to the appropriate public safety agency responsible for response. And, of course, lastly, without the ability to display the location of the caller, the timeliness of the

response would be significantly impacted. Thank you.

Q Thank you. Can you please turn to Page 14 of your direct testimony.

A Yes, ma'am.

Q And just let me know when you are there.

A I'm there.

Q Here in your direct testimony you assert that to the extent applicable the terms and conditions governing the application of rates and charges be reciprocal. Could you explain what you mean by this and also explain the basis for your assertion?

A Can you identify, please, for me which lines you are looking at?

Q Sure. That would be Lines 1 through 3 on Page 14.

A Okay. I'm sorry.

Q No problem.

A Yes. What we are looking at here are broad terms and conditions beyond just 911, of course. And although I've pretty much indicated that -- I'm sorry, although I pretty much indicated that we intend to provide, currently intend to provide 911 as our core offering, clearly the 251 agreement goes well beyond that in the terms and conditions that govern the agreement. We are looking at other applications. Although we may not be offering those specific services at this time, those terms and conditions are important to us, so we believe

that we do need to have fair and reciprocal compensation statements in the agreement. And I'll end there at this point.

Q Okay, thanks. When Intrado Comm is chosen by a PSAP to provide 911 services in a particular area, it would need to interconnect or exchange traffic with all telecommunications -- hold on, let me start over again. I'm sorry.

When Intrado Comm is chosen by a PSAP to provide 911 services in a particular area, it would need to interconnect or exchange traffic with all telecommunications providers serving the area, is that correct?

A That is correct.

Q And would Intrado enter into some type of reciprocal agreement with those various carriers?

A Yes, we will in all cases. For those other carriers, wireless carriers, VoIP providers, we do have an agreement template that we worked up that we fully intend to negotiate with the appropriate carriers as well as with other CLECs. And, of course, they are not under the 251 rules, but they are basically a mirror.

Q Thank you.

A Let me correct myself. They are not under 251(c) rules. They are 251(a) type agreements.

Q Thank you. Could you please turn to Page 16 and look at Lines 12 through 16 of your direct testimony?

A Okay. What page was that, again, in my direct

testimony?

Q Page 16.

A Okay, thank you. I'm pulling that up. Please bear with me.

Q No problem.

A And lines?

Q Twelve through 16.

A Okay. Can you repeat your question, please? I'm sorry.

Q I haven't asked it yet.

A Oh, okay. I'm there. I'm at Page 16 of my direct testimony.

Q Okay. Here you discuss that the FCC's statement that an ILEC interconnection arrangement with another ILEC is evidence that a particular interconnection arrangement is technically feasible.

Did the FCC state that these technically feasible interconnection arrangements must be made available under 251(c)?

A If they are with an ILEC, I believe so.

Q And how would you these arrangements be priced or should be priced?

A I honestly don't know. Again, I'm not an attorney. I'm not certain how one should price those services for their interconnection costs.

Q Okay. I would like you to turn to Page 5 of your rebuttal.

A Okay.

Q And that would be Lines 3 through 7. And just let me know when you are there.

A What page, again, please?

Q Page 5.

A Page 5. Okay, I'm on Page 5.

Q Here you state that the FCC defines interconnection as the linking of two networks for the mutual exchange of traffic. Do you believe that all interconnection arrangements must be made available under 251(c)?

A Yes. Yes, I do.

Q Okay. I'd like to discuss your Rebuttal Exhibit TH-8. And here what I would like to ask is do you want the Florida Public Service Commission to evaluate the rates that you are proposing?

A If the Commission deems it appropriate, we have no problem with that. So I guess the answer is perhaps.

Q Okay, thanks. Can you switch back to your rebuttal testimony, and if you could move to Page 15, Lines 12 through 15. And just let me know when you are there.

A I'm there.

Q Okay. Here you discuss using the term designated versus primary to address the party that has been chosen by the

PSAP to be the provider of 911 services. According to statements made by AT&T's Witness Neinast during his deposition yesterday, he believes that this issue has been resolved and that the parties agree that the term designated will be used. Do you agree?

A That is my understanding, as well.

Q Okay.

A I think designated is appropriate. I mean, we could have used a different term like chosen, or what have you, but definitely designated is an appropriate term from my perspective.

Q Okay, thank you.

My next set of questions will be concerning Issue 4(a), and if you could please take out Intrado's response to staff's second set of interrogatories. And when you get there please move to Number 45. And that is your second set of interrogatories.

A Okay, I'm there.

Q Here the response asserts that it is in the public interest to require a minimum of two POIs for the mutual exchange of traffic between 911 networks. Intrado further asserts that the two POIs is consistent with the 911 network recommendation of the FCC chartered Network Reliability and Interoperability Council for best practice.

Can public interest play a role in Section 251(c)

arbitrations?

A Absolutely. You know, in this particular case, clearly the idea of having two points of interface into any network simply improves the reliability, and the primary intent of that is for the benefit of the public interest and the public ability to reach 911 services and to ensure the availability of those services.

Q So is requiring a minimum of two geographically diverse POIs for the mutual exchange of traffic between 911 networks an appropriate determination in a Section 251(c) arbitration?

A Yes. And Intrado, of course -- I want to clear up a little confusion, because I have heard the testimony of others in other depositions relative to where those POIs or where Intrado's points of interconnection would be. Clearly, Intrado has every intention of providing points of interconnection within the state of Florida. Not in Colorado, not outside the state, but within the state of Florida.

Along those same lines, I also want to comment that Intrado's network is a national network, and for providers that are not, that don't have their switching fabric within the state, there are alternatives for them to connect elsewhere in the nation with their interconnection rather than within the state and still be able to reach the appropriate 911 entity.

Q Okay. Can best practice as defined by the NRIC play

a part in Section 251(c) arbitrations, and if so, should it?

A I'm sorry?

Q Can best practice as defined by NRIC, or the National Reliability and Interoperability Council, play a part in Section 251 arbitrations?

A Yes, they can.

Q And should it?

A It most definitely should. You know, the best practices that were put together by industry, of which AT&T and others were a direct party to the creation of those best practices, basically did define how to establish reliable interconnections. And so citing those and complying with those where possible is, I believe, appropriately contained in 251 negotiations, 251(c) negotiations.

Q Okay, thank you.

Can you please refer to AT&T's response to Staff's Second Set of Interrogatories?

A Second set?

Q Second set. AT&T's Second Set of Interrogatories, Number 33.

A Thank you.

Q And at the end of this response, AT&T asserts that Section 251(c)(2)(B) clearly says that the requesting carrier, CLEC, must interconnect within the carrier's ILEC network, which is not what Intrado is asking to do. Intrado is

requesting to be treated as an ILEC when they are not an ILEC. There is no exchange area boundary. Do you agree with AT&T's response?

A No. I agree with their response that there are no exchange boundaries in the services that Intrado intends to provide. But I believe that Intrado Comm is entitled to and is seeking equivalent access provided -- that the ILEC provides to itself, its affiliates, or to other ILECs currently via oral agreements that they have in place. And I will go on to add to that that Mr. Neinast has pretty much implied and so have others that the selective router location serves as the point of interconnection for those types of arrangements. And in those ILEC-to-ILEC agreements, I understand, and, of course, since it is not documented it is hard to confirm, but I understand in many cases or instances the ILECs actually terminate at the selective router of other ILECs, or go to meet points for those interconnection to get their end users the ability to terminate 911 calls to the appropriate PSAP. Intrado's expectations are really no different than those that are employed in those scenarios.

Thank you.

Q Okay. If you could go ahead and turn to Number 36 in AT&T's Response to Staff's Second Set of Interrogatories.

A Okay.

Q Go ahead and take a minute or two to read the

response, and then just let me know when you are ready.

A Okay. I've reread it.

Q Okay. Can you tell me is AT&T correct in its response to (a)?

A Again, or I should say from my perspective they are not entirely correct in their responses. It appears they failed to understand that they do not have -- they are not the ALI and selective routing provider when they are not designated to provide those services and when those services have not been ordered from them by the public safety entity. So where the E911 controlling authority has subscribed to services from Intrado, Intrado is the one that will actually provide the ALI records, Intrado is the one that would provide the network and the interconnection to the public safety answer point. And they will -- they being the ILECs will not have an ALI database. They will have their own internal record systems, but they will not be the ALI database provider for those services. Nor will they be the selective router database provider, that will be Intrado Communications' role.

I also do not believe and do not agree that the line attribute routing, or what they term as class marking has to be a manual process. It has been demonstrated in other areas of the country that this process can be automated and has been automated for the execution of what they call class marking.

I would also like to make a distinction between class

marking and line attribute routing. Class marking primarily was performed using data and information that was not validated to a master street address guide provided by public safety. In many cases it was primarily -- the class mark routing was dependent upon the tax district which was not validated by any particular system. So, consequently, there was a potential for misrouting.

What Intrado has proposed through the line attribute routing functionality is that the data would be based on and predicated on the master street address guide, and where that subscriber fits into that guide, which is the same document and the same database that the ILECs have indicated they intend to use, or intend to basically access and create data routing tables in their selective router systems for. So it is the identical database that is being used in both applications. So I wanted to make that distinction. And, I'm sorry, it appears I might have moved into (b). So thank you.

Q Not a problem.

I guess my next question will be is AT&T correct in its response to (b), if you would like to add to what you have previously said?

A I think I pretty well covered that, and that is that it can be automated, number one. Number two, that line attribute routing is based upon accurate data tables that are also currently used by the ILECs in performing their existing

selective routing role, which is simply in most cases as I understand it a central office running a 911 application.

Thank you.

Q Can you specifically talk about AT&T's sentence where they say there will need to be trunk groups established for various traffic types, e.g., trunks for local and interLATA toll traffic separate from trunks for 911 traffic. How does that interrelate with line attribute routing?

A It doesn't have any bearing on line attribute routing. Trunks for 911 are dedicated to 911 today and they will be dedicated for 911 tomorrow. So the trunking application will not change in either environment, whether it is in Intrado Communications' environment or whether it is in the ILEC's environment. Trunks that are used for 911 will not also include toll or interexchange type traffic.

Q Okay. Is AT&T correct in its response to (c)?

A If the call is delivered, if a call is delivered to a point of interconnection on Intrado Comm's network, most definitely it needs to be selectively routed. And if I'm understanding the question right, yes, there is a selective routing function that has to be performed by the Intrado Comm network, but not by the respective ILEC.

The ILECs, where they are looking at -- and I will just comment, where they are looking at a primary/secondary arrangement, which is quite common in Florida as I understand

it, and in other parts of the country, as well, those configurations, basically the party that's doing the selective routing is the party that terminates the call to the public safety answering point. The party that is using their selective routing fabric to segregate the calls to send it to the appropriate selective router is basically just performing a sorting function, a call sorting function very similar to the function that we have asked for and recommend for line attribute routing. I don't know if I answered your question. Thank you.

Q Thank you. That's sufficient. One last question on this on this response.

Is AT&T correct in its response to (e)?

A Well, in their last sentence they make the comment that it makes sense that the party would use the same POI. Well, it makes sense for AT&T. It doesn't make sense for the rest of the industry, nor does it make sense for Intrado to use their POI. So, no, I don't believe they are correct.

From Intrado Comm's perspective, and maybe this isn't the appropriate place for this, but we have a perspective that the ILECs have deployed what we term a switch centric network. And, basically, they have more or less locked down their franchise areas by segregating those and putting selective routing switches in every LATA that they serve, and in some cases the same LATA.

And, quite frankly, to put dual tandems in one of the communities as it appears they have done in West Palm Beach simply doesn't make any sense. And in a hurricane prone area, to have the same city handling both -- you know, having both dual tandem routers sitting in the same community is kind of foolish from my perspective. And that is why Intrado Comm is basically the point in the network that is going to be regional in nature that will accommodate specifically states like Florida that have severe weather conditions and are at risk.

And I've got a comment, because I have heard it said in the past that inserting an additional stage of switching is not really inserting any additional risk. If that is true, then why would I ever deploy a dual tandem arrangement in the same community? The primary reason, the primary benefit of a dual tandem in the same community is purely because you anticipate there is a potential failure. So, I mean, it's kind of ridiculous to try to argue that there is no exposure by switching the call more than once.

So in answer to your question -- I'm sorry for the long answer -- but in answer to your question, no, I'm not in agreement with their response that it makes sense to put the point of interconnection in their LATAs. The LATAs really will have become less and less significant over time as public safety moves towards -- more and more moves towards national or towards next generation networks. And, of course, you know,

the infrastructure that Intrado is providing, although it is not next generation per the standards body, because there are no standards, it is as close to next generation as one can get today.

Thank you.

Q Thank you. If you could turn the page and refer to AT&T's response to Staff's Second Set of Interrogatories Number 37(a). If you just want to take a moment to refresh yourself on that, and go ahead and let me know when you are ready.

A Thank you. I'm ready.

Q If Intrado decides to interconnect at a point in AT&T's network other than the selective router, and is providing a service to a PSAP, will other carriers such as CLECs and CMRS providers need new facilities at Intrado's POI?

A No. I'm not certain. Can you restate that one more time, please?

Q Sure. If Intrado decides to interconnect at a point in AT&T's network other than the selective router and is providing service to a PSAP, will other carriers such as CLECs and CMRS providers need new facilities at Intrado's POI?

A No, they will not.

Q Why not?

A In essence, you know, I'm not certain I fully understand the question, but I will attempt to answer the best I can. You know, where we are talking about the

interconnection at POIs other than the ILEC's selective router, I think those are applications where we are sending services and transmitting services, transmitting calls to the ILEC, not where the ILEC is connecting to us. If the Commission decided that the POI for termination of ILEC traffic to Intrado was to be at the ILEC's location, that would still not enable the -- or would not require the other carriers to terminate at that same point.

As I indicated earlier, they can interconnect anywhere they want on our network and they might find it much more beneficial and reliable to connect directly to other POIs on our network. And, again, as far as the selective routers go, typically in Florida the selective routers are simplex, meaning there is only one selective router POI. That fails to accommodate the need to have diverse and redundant points of interconnection to our network. So it does not compliment or enable that capability.

So from Intrado's perspective, clearly we would expect each CLEC and each ILEC as well as every mobile provider, VoIP, what have you, to interconnect at points of interconnection on Intrado's network. Hopefully I have answered your question. Please ask me again if I did not.

Q No, that's good. Let me just follow up with would other carriers incur additional charges when Intrado is the 911 service provider?

A No. In fact, they may find some significant savings by being able to aggregate their traffic over one trunk group instead of having to go to ten separate trunk groups as they do in Florida today, or to go to two points of interconnection instead of ten. Initially -- you know, granted, initially there may be a requirement to have connections to both AT&T's selective router as well as to Intrado Comm's for the purpose of terminating calls to the appropriate public safety agency. But in the final analysis, they will most likely find it beneficial to terminate directly to Intrado's point of interconnection. And, further, over time will easily be able to do so using IP technologies for that point of interconnection instead of the TDM technology that is currently employed.

Q Thank you. If you could turn to the next page and look at AT&T's Response to Number 37(b).

A Yes.

Q Is AT&T correct when it asserts that carriers' efforts to aggregate traffic may have a negative impact on diversity?

A No. Aggregation has nothing to do with diversity. Diversity has to do with facility routes. I should say facility transport as well as, perhaps, switching fabric that are in separate geographic locations. Aggregation of traffic really has no bearing on diversity. And specifically that's

part of the rationale and the reasoning why Intrado Comm establishes a minimum of two and encourages all providers to interconnect to more than two, perhaps as many as three points of interconnection. The more diversity one has, the more reliable and resilient the network will be for them. Thank you.

Q Thank you. If you could turn to Staff Interrogatory Number 39, which I think is two pages from where you are now. If you could go ahead and review those responses for me and let me know when you are ready.

A Okay. Thank you.

MR. CARVER: Hello?

MS. TAN: Yes.

MR. CARVER: I'm sorry, I thought we lost you.

MS. TAN: You didn't lose me. Do we still have Intrado on the line?

THE WITNESS: Yes, we are. And I'm ready to respond to your questions, I hope.

BY MS. TAN:

Q Okay. In response to AT&T's Response to 39(a) --

A Okay.

Q -- do you believe that AT&T -- I mean, do you believe that the best place for the POI is at an end office or tandem building?

A I believe that -- for the purpose of 911, clearly,

you know, I think Intrado has a belief that -- and you asked me my belief. My belief is that the selective router is the appropriate location for 911 traffic, regardless who the provider is. In the case of Intrado Comm where we are the provider, that is why we have asked for that point of interconnection to be at our selective router access point, and which is really comparable and equal in quality to that currently employed by the ILECs.

The ILECs have every expectation that all carriers will come to and terminate traffic destined for PSAPs they serve at their selective router location, and that seems appropriate. It wouldn't be appropriate, though, necessarily to terminate toll traffic to that same location, because that may not be the toll office for that particular area.

So there may be multiple points within the network. But, ultimately, again, you know, it's common knowledge that the ILECs typically require all CLECs to interconnect at their 911 networks where they are the ILEC where they are providing selective router service. In the case where Intrado Comm comes into the environment and offers a service to a public safety, the ILEC is no longer the selective router provider. So, therefore, the appropriate place for termination of that traffic is at the Intrado Comm selective router access point, which, in essence, are our gateway switches within Florida. I'm hopeful that answers your question.

Q That's sufficient. Thank you very much.

If you will now turn to 39(c). My question is will Intrado have non-911 traffic?

A Perhaps at some point in time. Right now at this point in time our primary core business and our core offering at this point is the 911 service offering to public safety entities. At some point in time, given our current CLEC status, we may opt to offer other services, but right now that is not the primary focus of Intrado.

However, the potential to offer those services at a later point is part of the other reasons why we are seeking an entire 251(c) agreement, not a partial agreement. Thank you.

Q Okay. If you could now turn to Number 41. And go ahead and read that and then let me know when you are ready.

A Thank you. I believe I have read it.

Q Does Intrado agree that for the PSTN traffic reciprocal compensation is appropriate?

A Yes.

Q Okay. And in the second paragraph AT&T asserts that Intrado is clearly attempting to disallow AT&T Florida from being compensated for the cost of its facility transport. Is this correct?

A No.

Q Why not?

A I don't think we have taken any action that precludes

them from recovering that cost from whatever Commission-approved avenues that have been set up for them to do so.

Q Okay. If you can flip to Number 46.

A Thank you.

Q And look at the second paragraph.

A Yes.

Q Do you agree with AT&T's response?

A Okay. Can I have your question again, please?

Q Sure. Do you agree with AT&T's response?

A No, I don't. Firstly, where they indicate that the Intrado proposal omitted it entirely from the definition, it wasn't as if we were intending to take out the definition of POI altogether. It was my understanding that it is further defined in the terms and conditions sections of the agreement. Furthermore, in a competitive environment it is my understanding that each party becomes responsible for their own cost of interconnecting to the networks. Specifically, to the selective router location as is currently executed and performed in the legacy environment today.

Q Thank you.

Can you go ahead and turn to Number 50. And here AT&T asserts that Intrado's proposed language in Section 4.2.1 creates an obligation to interconnect on Intrado's network beyond what is required of AT&T by the Act. Do you

agree with that statement?

A I'm looking at that. Thank you. If I could have a moment.

Q Take your time.

A Okay. I have read it. And, no, I don't agree. Again, my understanding is that there are oral arrangements between ILECs that have the ability for them to connect to each others network or at points on each others network that are, again, undocumented, and that is the equivalent types of interconnection that we are seeking is parity with those types of interconnections. Thank you.

Q Thank you. Do you have a copy of AT&T's amended prehearing statement?

A Amended?

MS. KISER: Ms. Tan, it's actually included in the prehearing order, isn't it?

MS. TAN: Yes. You can use that, also.

MS. KISER: Yes.

THE WITNESS: Okay. I've got that, yes.

BY MS. TAN:

Q Okay. And if you could go ahead and look at Issue 4(c), and just let me know when you are ready.

A Okay, I'm ready.

Q Do you agree that the appropriate location for a midspan meet is at AT&T's selective router?

A No, I do not.

Q Why not?

A Well, again, Intrado Communications does not have a franchised area, and so it does not have the benefit of negotiating meet points like the ILECs do with each other. So from that perspective, you know, it's our belief that a meet point can be at any location between the parties' networks and does not need to be at the location specified by AT&T. That is our understanding. And, basically, we have offered language that reflects that position.

Q Thank you. If the Commission determines that Intrado's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A It basically should have none. Yes, it should have no bearing.

Q Okay. And, conversely, if the Commission determined that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A None.

Q Okay. I would like for you to go ahead and turn to your direct testimony.

A Okay.

Q And the next set of questions I will be asking you

will be in regards to Issue 6. And if you could turn to Page 33 and take a look at Lines 1 through 11. And let me know when you are ready.

A Sure.

Q Here you testified that AT&T's language requires Intrado Comm to provide trunk forecasts to AT&T and that there is no reason that the obligation should not apply equally to both parties. Has Intrado Comm and AT&T Florida agreed that the trunk forecasting requirements should be included in the interconnection agreement on a reciprocal basis?

A I've got to look at the issue.

Q Take your time.

A It's not resolved to my understanding. It certainly should be resolved, because most definitely both parties have an equivalent need to know what the future needs for interconnection will be so they can actually build and build-out that network in advance of the need. Failure to do so results in poor quality service. So both parties have an equivalent need for sharing forecasted trunk requirements.

Q Thank you. Do you have a copy of AT&T Witness Neinast's direct testimony?

A Yes, I do.

Q Go ahead and switch to that. And if you could please turn to Page 46.

A That was direct?

Q Yes, that is direct.

A Okay, I'm there.

Q Okay.

A And what line, I'm sorry?

Q Lines 12 through 15. And here he states that the dispute centers around the initial forecast that AT&T Florida requests from Intrado Comm. So what I'm am looking at here is states that the dispute centers around the initial forecast that AT&T Florida requests from Intrado Comm in ITR Section 6.1. Do you see that?

A Yes, I see where he said that.

Q And does Intrado Comm agree that the dispute centers around the initial forecasts that AT&T has requests from Intrado?

A Yes. It really involves several contract provisions, and I think I would have to go back through all the referenced agreement points to make a determination on that. Section 6.1, 8.6, and 8.6.1 of the ITR come into play here, so I would have to look at those. If you want, I can do that.

Q Yes, please.

(Pause.)

A From what I can gather, 6.1, Section 6.1 of the ITR, and this particular comment that's made here, to my understanding the dispute is centered on the fact that we are attempting to make it reciprocal. Although that is not what is

stated in Mr. Neinast's testimony, that's our understanding of what the issue is, is that AT&T did not want to provide forecasts to Intrado Comm. We have no problem in providing forecasts, initial and on-going, to AT&T where we have a need to purchase interconnection from them.

Q Thank you. So in Mr. Neinast's direct testimony on Page 46 he also testifies that AT&T has requested initial trunk forecasts from Intrado Comm because such forecasts are needed to size the trunk groups properly before adding new traffic. Do you agree that this is a valid reason for requesting initial trunk forecasts?

A Yes, absolutely. And I have an equivalent need where I am the network provider, but I think it is a parity that parties do exchange and operate reciprocally on this issue.

Thank you.

Q Okay. Why should AT&T be required to provide Intrado Comm its initial trunk forecasts in the interconnection agreement?

A Because the whole agreement is about interconnection, and without that there is a potential that there could be delays in rolling out the service offerings. So it's important that Intrado knows how to size trunk capacities within their switching network that will be requested by AT&T in advance of actually deploying the service.

Thank you.

Q Thank you.

Do you have Intrado's response to Staff's First Set of Interrogatories?

A Yes.

Q If you could look at Number 32?

A Okay.

Q Do you agree that Issue 6 addresses trunk forecasting, ordering, and service grading requirements for which Intrado Comm testified should be included in the interconnection agreement on a reciprocal basis?

A Yes, I do.

Q And does your response to Interrogatory 32 address the trunk forecasting requirement?

A I'll will have to take a look. Give me a moment, please.

Q Okay. Thank you.

A Yes, it does address the forecast.

Q Okay. And can you clarify and explain your answer then on trunk forecasting?

A Again, the intent of the forecast is to know how to size your network, and by having the forecasts you can more readily accommodate the interconnection needs for growth purposes, primarily, if you know what those forecasted traffic loads will be. Failure to properly size has a direct impact, and it's especially critical when we are dealing with the vital

service of 911 where you don't want to have any blockages at all if you can at all help it. You want to minimize the blockage to at least a PO1 grade of service.

Q And does your response to Interrogatory 32 address also the service grading requirement?

A Yes, it does. It identifies that Intrado's objective is to basically comply. And although I don't know what Florida Statutes call for, or rules, PO1 grade of service is pretty well standard throughout the industry for communications such as 911.

Thank you.

Q Thank you.

Does grade of service information that you mentioned in your response to this interrogatory apply to trunk forecasting in the service grading requirements listed in Issue 6?

A I'm sorry, I had you muted. I just gave my answer. I get to do it again. One should definitely take into consideration the grade of service when developing their forecasts. In fact, it's the primary driver of making the forecasts, and all trunk quantity should be tempered based upon the grade of service one is attempting to achieve. So, consequently, yes, it is important that the grade of service be a factor when making one's forecasts. I hope that answers your question.

Q That's good. Thank you very much.

The next set of questions I have will concern Issue 7(a). And the first question I have is did you file rebuttal testimony on this issue?

A I will have to look. I believe that was addressed -- 7(a) was addressed by Ms. Clugy.

Q Okay. Thank you very much.

A As part of her response in 7(b).

MR. CARVER: Before you ask your next question, let me ask something. This is Phil Carver with AT&T.

During these long pauses between the questions and answers, is Mr. Hicks muting the phone every time?

MS. KISER: No, he's not.

THE WITNESS: No, not every time. There are periods when I mute the phone primarily because we are shuffling a lot of papers. If that is a problem, I don't see a problem with leaving it on.

MR. CARVER: Yes, I would prefer that you do. Because I just want to be sure that we are getting Mr. Hicks' answers and not a collaborative answer.

THE WITNESS: That's fine.

MR. CARVER: Thank you.

BY MS. TAN:

Q If you could go ahead and -- do you have Witness Neinast's rebuttal testimony?

A Yes, we do.

Q If you could go ahead and look at Page 14, Lines 6 through 16. Are you ready?

A Yes, I am.

Q Is it still Intrado's position that 30 days written notice is appropriate for changes in switches?

A I believe that the difference here -- and the answer is yes and no. Clearly when we are talking about switches, and that is where the complexities comes in as well as growth adds, rearrangements. In some instances rearrangements are quite simple, and in other instances they are very complex. And depending on the scope of the changes, clearly one could say 120 days is definitely required. If we are talking about actually deploying an Intrado Comm selective routing system in a given area, clearly 120 days notice is probably going to be required.

In other situations, and that's where I think we had the greatest disagreement, is the language was too broad, and there may be situations where I'm simply rearranging a few circuits or installing what we call a gateway switch which should take far less than 120 days to execute those types of services. I think from my understanding of the issue is that the language is so broad as it's stated right now that it identifies 120 days for all situations, and we just believe that that is too lengthy of a period in many of the scenarios

that could apply here. Thank you.

Q Can we go ahead and look at your direct testimony.

A Yes, ma'am.

Q And if you could turn to Page 34?

A Okay.

Q And we are looking at Lines 17 through 19. And in this section of the testimony you assert that other than routine discussions between the parties' operational personnel, no further notice or action should be needed from Intrado Comm to implement the interconnection arrangements set forth in the agreement.

Can you please give us a couple of examples of routine discussions?

A I need to read the section a little bit. If you can give me a little time.

Q No problem.

A Yes. Where I'm looking at at this point, we are talking about -- when I talk about routine discussions, we are talking about projects or programs, project management conference calls as being routine discussions between operation personnel. So that's, I believe -- and primarily during periods of initial implementation or major projects, regroom, rehome, not for simple trunk additions.

Q So within those routine discussions, what kind of topics would be discussed?

A Well, typically one would talk about the quantity of trunks involved, where the trunks are serving or who those trunks will be serving. It could be involving exchange of -- I mean, if one was in a primary/secondary, it would clearly involve exchange of routing information. It could involve alternate routing and who is responsible for placing orders and things of that nature.

Q Would it also involve discussions regarding switches?

A It very well could, depending on -- again, I come back to the definition of switches. If you mean central offices, most definitely that would be a project. So it very well could be. If we are talking about, you know, gateway switches, you know, again, I'm not certain that those gateway switches would necessarily equate to a full project. It depends on whether you are putting those switches in for growth or to replace some other arrangement. Did that hopefully answer your question.

Q Yes, thank you.

What happens if Intrado's proposed language is approved and there is a disagreement between Intrado's and AT&T's operational personnel?

A In relation to what? Can you perhaps -- you mean if the agreement is approved, but there is not an agreement on these types of calls?

Q Actually, if there is a disagreement, will the

interconnection agreement have procedures in place to handle the disagreement?

A Yes. I believe the agreement does already contain some language for dispute resolution.

Q Okay. I'd like to go back to AT&T's responses to staff's second set of interrogatories, and I'd like to look at Number 43. So just let me know when you are there.

A AT&T's Responses to Second, did you say?

Q AT&T's Responses to Staff's Second Set of Interrogatories.

A And Issue 34?

Q 43.

A I'm sorry.

Q No problem.

A I'm there.

Q Do you agree with Mr. Neinast that establishing a new POI or facilities in a previously unserved LATA would be a major change?

A Yes, I would say that would constitute a major change. That is the equivalent of a rehome or a rehoming of connections, yes.

Q And is he correct when he asserts that without AT&T's Section 5.1 there would be no definitive rule to follow and each incident would require manual intervention and interpretation?

A I need to look at 5.1, please.

Q Take your time.

A I think the section is appropriate, and I would somewhat agree. In 5.1 there's a need -- and I'm looking at it now. I think part of the issue that we had with 5.1 wasn't that 5.1 shouldn't exist, but the issue was that there was an automatic expectation that Intrado Comm would always follow the CLEC handbook published on the CLEC website, and that level of commitment which -- you know, that document, as I understand it, could be changed at whim by AT&T. It is not part of the agreement. I think that was part of the issue.

So, I don't know if I answered your question, but I guess, yes, I would agree that we need a 5.1 type of a provision of notification, yes.

Q Okay. Is Mr. Neinast correct when he asserts that a new interconnection arrangement for a LATA requires the parties to meet and exchange data relating to POI location, the amount of traffic forecasted to be exchanged, and the type of trunk groups to be established?

A I think that, yes, most definitely there would be a need to have that kind of dialogue between each other and to meet and cooperatively work to resolution. I don't know that -- but from our perspective, clearly that does not have to be a formal interconnection agreement or a standalone agreement to move forward. I think it is one of information sharing that

occurs every day amongst providers.

Q And is he correct when he asserts that Intrado opposes any meeting between the parties' engineers to exchange and agree upon this type of information?

A Absolutely not.

Q If you could please turn to AT&T's Response to Number 44?

A Okay. I've got it in front of me.

Q And is Mr. Neinast correct when he asserts that it appears that Intrado was attempting to interpret 911 NIM Section 5.3 to address the addition of facilities or POIs?

A I'll have to look at 5.3.

Q No problem.

A Clearly, you know, one of the issues, again, becomes the time frame, the 30 and 120 days issue. And, again, I think the intent here was to give each party the authority over their network, to modify their network as they deem appropriate. And this particular section is primarily just dealing with notice. So the issue, once again here, was the time frame for how much notice has to be provided between the parties. And as I indicated before, that will depend on the scope of the change as far as how much advance notification each party needs.

Q Okay. In the second paragraph of the response to A, AT&T asserts that Intrado's language has the potential to create many short interval projects that could end in a major

911 outage. Is he correct in that statement?

A No, he is not. And that is part of the reason why you do have those calls and that dialogue occur and you work cooperatively with people. I don't believe that it has any bearing on or poses any risk by having projects that are short in nature, and that 30 days really should be sufficient for most projects.

During that 30-day interval that you have given that notification, part of the effort would be to schedule probably a call to sit down and jointly determine how long each party needs to be able to effectuate the actual changes that are necessary. Perhaps even to explore methodology for how you will execute the change or perform testing to ensure that you don't have any outage conditions. So, you know, to think that somebody is going be just crashing this stuff in is just totally wrong.

Q If the Commission determines that Intrado's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A It could have an impact from the standpoint of it could enable accelerated installation and deployment of services, especially if we are dealing with growth or even rearrangement. It has a significant impact if there are delays built into the process simply for the purpose of -- that are

unnecessary and perhaps extensive. And so that's why I say what we are dealing with here is notification, not necessarily the actual date of execution of changes or activities. Excuse me, I need to take a drink.

So, you know, from my perspective definitely it could have an impact on how quickly one is able to augment their networks or deploy their networks for the benefit of 911. Especially if there is a fixed lengthy time frame before those circuits could come into activation.

Thank you.

Q Thank you.

And if the Commission determines that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of the consumer to reach 911?

A It has the potential -- if it's an automatic fixed quantity of time, it does have the potential of impacting the 911 capacity because it could delay the activation of new circuits or new provisioning. So that's how I perceive it.

Q Okay. The next set of questions I have concerns Issue 8(a). And if you could go ahead and take a look at Mr. Neinast's rebuttal testimony and turn to Page 15, and we're looking at Lines 8 through 14.

A Page 15, 8 through 14?

Q That is correct.

A Okay. I'm reading it now. Looking at it, yes.

Q Okay. According to Mr. Neinast, in this section he asserts that there are two main disputes, and that the first dispute concerns the term ALI interoperability, and the second dispute is Intrado's proposed language in Section 3.4.5 that obligates AT&T Florida to work collaboratively to maintain steering tables in Intrado's network.

A Okay.

Q Do you agree that these are the main disputes between Intrado and AT&T?

A For 3.4.3 --

Q 3.4.5, I'm sorry.

A Okay, 3.4.5. I'm looking at it. Yes, I believe that that is the main dispute.

Q Are there any other disputes?

A Well, let me correct myself, okay. Because what he does indicate is that Intrado proposes an undefined, vague, and ambiguous term, ALI interoperability, in its testimony. I think that although it may not be defined in the NENA glossary or things of that nature, it was explored and it discussed what was intended by ALI interoperability. And basically that is the main dispute is that, you know, from Intrado's perspective there is the ability to work and have ALI systems work -- I should say interoperate with other ALI systems, as AT&T has done in Texas and to my belief and to understanding also in

California.

So, you know, I think it's pretty well known what that ALI interoperability should be, and I will be happy to define it if need be, or when you believe it appropriate.

Thank you.

Q Could you go ahead and define that for me?

A Okay. I figured that would be the next question. ALI interoperability from Intrado Communication's perspective is basically we have looked at two different scenarios with that. One is where a record during an ALI look-up, when a call comes in for public safety, one of the first things that happens is it utilizes the ANI to actually dip into the ALI database system and retrieve the caller's location information.

If for some reason that caller's information has to be transferred to another PSAP, who is served by a different ALI system and a different 911 network, the expectation was that there would be the ability to, when that call is transferred, also transfer the ANI of the caller, and then from the receiving PSAP be able to do a look-up and recognize that the record is not in their ALI database, but instead steer over to the other database party to retrieve the ALI information. That way on a call transfer in that scenario, basically there would be the ability to access the other party's ALI system even though they are served off of another network.

The other aspect of ALI interoperability which is

probably more critical to public safety today is the ability on call transfers that are transferred between selective router networks to be able to retrieve the ALI information of wireless and VoIP callers. And we may explore that later in our discussions, but basically that's where you are dealing with ALI steering tables. And what, in essence, happens is when the call is transferred today in the current environment between ILECs and between their respective 911 networks, the call is transferred with the ANI, or I should say with the pANI, pseudo-ANI number that is associated with the call, but the receiving party does not have a corresponding entry in their ALI steering table so no location information is available for that call that the party is transferred to.

Now, if the parties work cooperatively, and that's what Intrado is seeking, as basically, I believe, AT&T does in California, where you synchronize your steering tables in a cooperative manner, then when that call is transferred from one 911 network to another 911 network, the ALI is presented to the call-taker that the call is transferred to. And Intrado firmly believes that is a critical element of 911 and it definitely translates to saving lives, as everyone knows, by having location information presented.

And especially if that allocation information is from a wireless caller, which commonly -- it is very common for wireless calls, because of their jurisdictional or because of

their serving areas of their towers and their sectors, it's very common for those calls to have to be transferred to another 911 PSAP. And if they are served off of differing 911 networks, those PSAPs, then the potential is there for no ALI to be presented on that call.

Hopefully, everybody understands what Intrado Comm is meaning by that ALI interoperability. It is the operability of either having blanks or no record file steering to reach into another party's ALI system, or to the other provider's ALI system for no record found when no record is found in the existing 911 database. And it's also for the purpose and represents synchronization of ALI steering tables utilized for wireless and VoIP today and probably new technologies tomorrow.

Thank you.

Q So is ALI interoperability based in public interest or law?

A It's based predominately in public interest and public safety expectation. One could possibly say it is also involved in law where requirements are that wireless carriers provide Phase II on 911 calls and where those calls are transferred they are no longer able to provide the Phase II data. So to some extent it might be on law.

In some states, for example, in California the 911 program office has pretty much placed the requirement, to my understanding, on the ILECs to interoperate in that fashion for

wireless and for VoIP, or at least for VoIP. I'm not certain about wireless, but most definitely for VoIP. Nomadic VoIP I'm talking, of course.

Thank you.

Q Thank you.

If you can go back to Page 16 of Mr. Neinast's rebuttal testimony, and look at Line 9. He states that ALI interoperability is a non-standard protocol. Is that correct?

A There are industry -- no, he is not correct. There are industry standard protocols. Some of which his technology is probably not capable of supporting that are recent standards in the industry. Others he is capable of supporting. He currently can support E2 and E2 plus type interfaces, which are commonly used to any third-party provider and which could be utilized in this type of application when we are talking about the no record found.

When we are talking about ALI steering, the protocols have nothing to do with this factor at all. It is only where you have linkages between the systems that you have protocol differences that might come into play. Initially, Intrado suggested the use of PAM (phonetic) protocol. PAM protocol is not an industry standard, it is more of a de facto standard that was applied throughout the industry in various areas where they did have this capability. It's a standard -- I will again say it is not a standard, excuse me, but it is a protocol which

is eventually being discontinued.

However, Intrado Comm is agreeable to work with the ILECs, and that is why we say work cooperatively to come together and establish an appropriate protocol to effectuate the ability to do what Intrado is seeking to do here. So we've, in essence, taken out any language specifically stating a preferred protocol.

Q Thank you.

Can you go ahead and take a look at the prehearing order. And go ahead and look at Issue 8(a), and we are going to take a look at AT&T's position on this issue.

A Okay. I'm looking at it.

Q Okay. And AT&T's position asserts that steering tables are internal proprietary routing translations for which each carrier is responsible. Do you agree with AT&T's position?

A No, I do not.

Q And can you explain?

A Well, to my knowledge they are not proprietary at all. The pANI information that's loaded into steering tables actually in the current environment can be obtained from -- excuse me, they can be obtained from New Start (phonetic), who is the administrator for the national pANI administration. Now, they have not taken on the full task of wireless as yet, but they are moving and evolving into that direction. PANI

numbers, and that's what's going into these steering tables, basically, again, are assigned in many cases by the ILECs and in some cases by many of the VPC providers. They are involved in the provisioning and use of pANI numbers; pANI, again, being pseudo-ANI. They are basically just an index number. So I don't agree that the numbers are proprietary.

What is possibly proprietary is the information contained inside those tables that are unique to the switching requirements of that respective provider, and that's not the kind of information that would be typically shared, and even if it was it would be meaningless data. The reality is that the pANIs and not proprietary to the ILEC. They might be proprietary, if anything, to the carrier or to the business that acquired those pANIs.

Hopefully, that answers the question.

Q Yes. Did you say VPC?

A Yes, voice positioning centers. Voice positioning centers in some portions of the country are assigning their own pANI numbers where an ILEC does not typically assign them today. PANI numbers in most cases are nondialable numbers. They can be dialable and they have been for some wireless areas, but for the purpose of what we are talking about here, for the most part they are a pseudo-number, and it's used in the NXX, it would be either 511 or 211, and they are assigned by the ILECs. AT&T assigns theirs. Verizon assigns them.

Intrado, Inc. Assigns for several telephone companies directly themselves. I mean, they don't assign for them, but they are authorized to make assignments.

So it's not information that is proprietary to the ILEC from our perspective. And so I believe -- but, again, for the public benefit it only makes sense to do what we are proposing be done here. And, furthermore, it is already done throughout the state of California for VoIP. So it's a common practice in that area. And I'm not aware of any difficulties that the ILECs have had in doing this in a cooperative manner.

Thank you.

Q Thank you. In its last sentence of its position statement for Issue 8(a), AT&T states that it proposed to share information necessary to route between networks, but not within AT&T Florida's network. Is Intrado asking that AT&T share information within AT&T's network?

A I am not certain I understand Mr. Neinast's response here at all relative to that. Again, the information that is asking to be shared is the actual pANI numbers and the identity of the parties that -- the third-party database associated with those numbers that was provided to them by the third-party providers.

Q Thank you.

And if the Commission determined that Intrado's proposal for this issue is the appropriate one, what impact, if

any, would this decision have on the ability of a consumer to reach 911?

A A significant impact. Well, let me back up. In response to your question, it would have no impact on the ability to reach 911, but it could have a significant impact on public safety's ability to respond to that 911 call.

Q Okay. And if the Commission determined that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A Again, it would not have an impact on the consumer's ability to reach 911, but it will have an impact on the ability of public safety to respond to that 911 caller on receiving calls transferred to them from another 911 provider.

It should also be noted that in a competitive environment where a public safety entity chooses to step outside of the existing legacy 911 network, that without this capability they will lose some functionality to be able to continue to get the ALI on calls that are transferred to or from their PSAP, on wireless calls and VoIP calls that are transferred to and from their PSAP. Without the cooperation amongst the ILECs, they will lose feature functionality. That would be a significant loss to them. So it's important that this particular provision remains, otherwise PSAPs and the customer lose functionality.

Thank you.

MS. TAN: Thank you.

At this time why don't we go ahead and take a five-minute break.

MS. KISER: Thank you.

MS. TAN: And let's go ahead and pick up back up at 10:55. Thank you.

MS. KISER: Thank you.

(Recess.)

MS. TAN: Are we back on the line?

MS. KISER: Intrado Comm is here.

MR. CARVER: AT&T is here.

MS. TAN: Okay. All right.

BY MS. TAN:

Q Mr. Hicks, these next questions that I will have for you are going to be in regards to Issue 29(a) and 29(b).

A Okay.

Q Can you please provide a general overview of Issue 29 and what you believe the disputes are between the parties on this issue and its subparts?

A Okay. Let me look at it first. The issue from my understanding was that the language was too broad and vague, number one. And, number two, that we shouldn't need to pay for something we don't use. Although this won't have a significant impact, it won't have any impact, to be honest with you, on

rollout of 911. At some point in time, as I indicated earlier, Intrado Communications may wish to engage in other types of activities where this could have a lasting impact. So I hope that answers your question.

Q Thank you.

Could we go ahead and look at AT&T Witness Pellerin's rebuttal testimony. And if you could flip to Page 3 for me and look at Footnote 2.

A Yes, I'm looking at it.

Q In Footnote 2, Ms. Pellerin states that there is a language dispute in Issue 29(a) that does not exist in the nine-state template. Do you agree with that statement?

A To be honest with you, I don't know, because we chose not to utilize the nine-state template that AT&T provided. Basically, they provided us two networks, and it's my understanding we didn't have to use either one, but we found that the 13-state covered a much broader area of the country, thirteen instead of nine, and so we moved in that direction, and started negotiations utilizing that document.

And it was Intrado's expectations from the very beginning, as we have indicated before, and in your testimony that we had requested a 22-state, one agreement, footprint-wide and was told, of course, that wasn't available. So our hope and desire was to utilize one agreement, the 13-state agreement, and we felt that that was the most comprehensive and

basically the best document to work from. And apparently AT&T must think so, too, in at least thirteen states of the country. So that's my thoughts on the footnote.

Q Okay, thank you.

If you could go ahead and look at Ms. Pellerin's direct testimony, and when you get there go ahead and look at Pages 48 through 51.

A Okay, I'm there.

Q If you could look at Page 49.

A Okay.

Q And we are going to look at Footnote 40. And Footnote 40 states that the nine-state region comprised of the former BellSouth states bills intercarrier compensation based on factors rather than actual usage. If this is the normal practice for the nine-state region, why is this not acceptable to Intrado?

A Well, the bottom line is that hasn't been proposed. When we had our discussions on thirteen-state versus nine-state, you know, we reached out to AT&T and explained to them that we would be more than willing to take those portions of the nine states that they found to be critical and to be driven by either their operational aspects or by the actual state requirements of the state. We were more than agreeable to integrate those into the thirteen states. It is not uncommon to call out specific states within an agreement for

certain segments of the agreement.

Unfortunately, AT&T never responded with which sections of the nine-state were absolutely critical. It was just an all or none. And, of course, Intrado Communications found that as being, you know, having to start all over negotiating a separate agreement. In essence, we just deemed that as inappropriate and we believe that they, you know, should be working off of one agreement with us.

And so bottom line, we didn't put a lot of energy into analyzing their nine state. For all I know, if we were to accept that proposal, we would have had just as many issues, perhaps more issues if we had adopted the nine-state as the document for negotiating. So, you know, for the most part we moved forward with the thirteen-state. We know we are going to need that agreement in at least thirteen states, so that's where we are at. And as far as the methodologies, I would have thought that an ILEC ought to have consistent methods for how they calculate these types of rates and the rounding and so forth. I would think they would be consistent across their entire company and not have unique practices, you know, because of their internal system limitations.

Q Okay, thank you. Why don't we go ahead now and take a look at Intrado's response to Staff Interrogatories Number 16, and that is going be on Page 10.

A I'm sorry, did you say Issue 10?

Q No. Page 10, Number 16.

A We are there.

Q All right. And this interrogatory asks about Intrado's objections to AT&T's proposed language for pricing ordered services or products not contained in the interconnection agreement and for which there is no tariffed rate. If a product or service is ordered that is not contained in an interconnection agreement, do you agree that AT&T will reject that order?

A If they do not provide that service to -- either via tariff or via to other parties in the industry, is that what you mean?

Q No, if it's not contained in the interconnection agreement.

A I honestly don't know whether I would agree that they should be able to deny that request. If it's a service they provide to anybody else, it would seem that I ought to have an access to that equivalent service.

Q Can you take a look at Ms. Pellerin's direct and look at Page 52.

A Okay.

Q And go ahead and look at Lines 6 and 8. And would you agree or disagree with that statement?

A You know, I honestly don't know. I don't recall. Let me read this again. I'm not aware that they would reject

an order if it wasn't contained in the agreement. Again, I will come back to say that if they provide the services to others, I should have access to those services. I should say if they provide equivalent services that I'm requesting to other CLECs, it would seem appropriate to me that I should be able to get them even though those services are not called out specifically in the agreement.

Q Okay. Is it your position that if there is no tariffed rate, no rate can be charged until the Commission approves a rate under the Section 251/252 process?

A Can you repeat that one more time, please. I didn't fully understand.

Q Sure. Is it your position that if there is no tariffed rate, no rate can be charged until the Commission approves a rate under the Section 251/252 process?

A I would say that seems appropriate, but I honestly don't know for certain. I don't know how to respond to that.

Q And if the product or service being ordered is not subject to the 251/252 process, can they just --

A Okay. Can we back up to your earlier question. Was that in reference to services that are typically offered under a 251/252?

Q No, this is any product or service that you are requesting that is not included in the interconnection agreement.

A If it is tariffed, most definitely I should be able to have access to it. And especially if it's a non-251 type of service offering.

Q Available at the tariffed rate?

A I assume I would get that at tariffed rates, yes.

Q Okay, thank you. Let's go ahead and take a look at Intrado's response to Staff Interrogatory Number 20.

A Okay. I've got it in front of me.

Q Okay. This interrogatory addresses Intrado's proposed language in pricing Section 1.10.1. And your response is that it would be appropriate to require that either the rates are mutually agreed to by both parties or the parties accept the rates the Commission approves, is that correct?

A Yes.

Q And so, if so, is there any remaining dispute to the language in pricing Section 1.10.1?

A I don't have that in front of me. Give me a moment.

Q Go ahead.

A If I understand what's being stated, in my response to your last question I would say there is no dispute if they -- they being AT&T -- have reached agreement on the language that we submitted, which basically said that we would, you know, reach either a mutual agreement of a specified rate, or pursuant to the process that was provided by AT&T. So I don't believe there is any dispute here that I'm aware of.

I am not aware of any dispute relative to that particular language. It's identified as open, but I think it is because we have not received any formal response from AT&T to the language we proposed.

Q It's my understanding that there may be a dispute with the use of the word and as opposed to the word or in the pricing Section 1.10.1, that AT&T may have a dispute that if the parties have reached mutual agreement of the specified rate and the Commission has approved pursuant to the following process. Is there a question between the use of and or the use of or?

A That may have been the case. I'm looking at it. Can I take a moment and look at it?

We'll have to get back to you. Clearly there was a dispute over the and or, and that is not shown in the copy that I have here. I apologize for that. But we will have to take another look at this and respond at a later time, if possible.

Q Okay. How is interselective routing transfer currently handled by Intrado Comm?

A How is selective routing handled by Intrado Comm?

Q Interselective routing.

A Okay. Basically, of course, Intrado Comm has not, as yet, deployed its 911 services in Florida as yet. The expectation is that Intrado Comm would work with the ILECs to enable the ability to have interconnection trunking and

interselective router trunking established between the two selective routing fabrics, and that those trunks would be utilized and accessed when calls are transferred from a public safety answer point to another public safety answer point served by the other provider.

The expectation is that those would be SS-7 type interconnections where possible, and pretty much that's universal across Florida today where selective routing is provided. And, of course, the other aspect is that Intrado, again, is trying to gain support from the ILECs for the insertion of provisions for synchronizing steering tables which significantly impact the ability to transfer calls.

But, basically, both parties in the scenarios that I am talking about there is basically -- on call transfers there is basically two different modes of operation and methods of operation that could come into play. One is where the trunks -- one establishes trunks on a dedicated basis to the PSAP that's being transferred to, even though it traverses a selective routing fabric. The second aspect is where one establishes dial index plans, and I think there has been reference to that in other testimony. That is the preferred way because it makes more efficient use of the interselective router trunking.

And, in essence, in that scenario when a PSAP transfers a call, the appropriate route index digits are passed

with that call to the other selective router so it knows where to terminate the call, or so it knows which PSAP to terminate the call to.

Q Is Intrado Comm currently a stand-alone PSAP provider anywhere in the state of Florida?

A No, I don't believe so. Not that I am aware of. Intrado Comm is not, no. Excuse me.

Q Okay. And can we go ahead and look at Issue 3(b) in the prehearing order?

A Okay. I'm looking at it.

Q All right. And in this position statement there is a discussion for line attribute routing. Is Intrado currently using this technique in Florida?

A No.

Q No?

A No, it is not.

Q Okay. And do you believe that line attribute routing would cause AT&T to incur additional costs when directing calls to the PSAP that otherwise would have been switched by the AT&T selective router?

A If we are saying additional costs beyond costs they are incurring to route the calls via their selective router, then I'm not certain, because I don't know what it would cost them to execute line attribute routing within their internal provisioning systems. Clearly there would need to be some

investment on the part of the ILECs, in most cases, to enable line attribute routing. There would have to be some development work done on their internal provisioning platforms to integrate MSAGs into their address validation processes for front-end order entry, as well as for perhaps some minor table adjustments at the end office. So there would be some investment there, there is no denying that.

The question is whether it would be incremental to the investment they currently have in their selective routing fabric. I don't know how much savings they would realize by not having to go through their selective router. There's no way for me to know how much of an investment they currently have. So in answer to your question, yes, there would be some investment, but whether it results in an aggregate increased cost for the ILEC, I can't really say.

Q Okay. Is line attribute routing more efficient than selective routing?

A Yes.

Q And should line attribute routing be directed regardless of who is providing services to the PSAP?

A If the entire office is within the selective router provider's 911/wireline E911 network, there's really no requirement to do any line attribute routing, because that entire central office and all the end users served by that central office will be handled by that selective router, and

the selective router function is still a requirement.

However, if that selective router is served -- excuse me, if that end office is served by more than one selective router, then, yes, there is a requirement to do the line attribute routing within that particular end office to gain the efficiencies of direct routing to the appropriate selective router, and to gain the reliability that is achieved by eliminating an unnecessary stage of switching. I don't know if I have -- can you ask the question again? Did I answer it? I kind of rambled there, so I apologize.

Q I think that's sufficient. If selective routing is used by the ILEC, will the PSAP be required to pay for the selective routing?

A If the ILEC is designated as the 911 selective router for the PSAP, then indeed they should have the option to retrieve or to get compensated for performing that function. You know, Intrado does not deny that, that they should receive compensation where they are the designated provider by the public safety entity. Where they are not the designated provider and where Intrado Comm has been designated as the primary, or, excuse me, the designated provider of 911 services, then, no, I don't believe the ILECs should be entitled to any compensation for selective routing since they are not performing the selective routing function.

If you recall, the selective routing involves

termination of the call to the appropriate PSAP, and where Intrado Comm services that in that role, Intrado Comm is the one that will terminate the call to the PSAP. So, hopefully that answers your question.

Again, you know, I recognize that really the states have control over making those determinations on who gets compensated for what, and I fully understand and respect that. And maybe I had just better leave it at that point.

Q Okay. Can you hang on for one moment, please?

A Yes.

(Pause.)

Q Mr. Hicks?

A Yes, ma'am.

Q You stated that when there is more than one selective router that there is a requirement for line attribute routing. Can you tell me what the source is for that requirement?

A The source for making the determination for line attribute routing is the MSAG. The Master Street Address Guide contains a listing of house number, street name, community, ranges (phonetic), and the expectation has always been that most CLECs, ILECs, and all parties that are providing data to 911 utilize the Master Street Address Guide to purify their data that is being provided to the E911 system, the data management systems which distributes updates to both the ALI system and typically the selective router database.

So the source data for making the determination on which line attribute to assign to a specific line would be through integration of the MSAG into the line recent change provisioning process, and thus making an accurate determination and setting a line attribute in the end office that points to the appropriate selective routing network. And then based upon that, when that caller dials 911 the expectation would be that the appropriate outgoing trunk group out of that end office would be selected.

Q Okay. And how long would it take to implement line attribute routing?

A I honestly am uncertain on -- you know, they could implement it in a very short interval, but whether they could implement it in an automated fashion, I honestly don't know for certain. It would depend on each providers' current internal operation and support system capabilities.

Honestly, I'm knowledgable on that. I know of some ILECs that have done this in an automated fashion, but I honestly can't speak to AT&T and Embarq and how long it would take. Nor have they come forward with anything that identified or quantified how long it would take them to enable and to encode that into their systems, or how much it would cost them to do that. They just pretty much have indicated it would be expensive and it would take forever, you know.

MS. TAN: Okay. Thank you very much, Mr. Hicks.

At this time staff has no further questions and would turn over the deposition to AT&T.

Phil.

MS. KISER: Ms. Tan?

MS. TAN: Yes.

MS. KISER: The witness would just like a quick break here if that is okay. Two minutes.

MS. TAN: That's fine.

MS. KISER: All right. Thank you.

(Recess.)

MS. KISER: Okay. We are back.

MS. TAN: Phil, are you ready to do your questions?

MR. CARVER: Yes, I'm ready.

MS. TAN: Okay. Go ahead, please.

CROSS EXAMINATION

BY MR. CARVER:

Q Good morning, Mr. Hicks.

A Good morning.

Q My name is Phil Carver and I represent AT&T Florida. I want us to begin by following up on an answer that you gave at the very end of staff's examination. Did you say that you know of ILECs that have implemented line attribute routing on an automated basis?

A Yes.

Q What ILECs?

A Verizon had that functionality going the last I heard up until about two years ago. I don't know whether they still have end offices, but I know they did two years ago throughout the Texas area. I believe it was also in New Mexico and in Oklahoma they had some exchanges at one time.

In many cases they abandoned that function because, as I indicated previously, they used class marking not line attribute routing, which was -- and maybe I should have been clear on that when I made that comment, that others have used it. They have never used the line attribute routing which uses the MSAG as part of their provisioning efforts, so I apologize if I was unclear on that. What they used was class marking, which was an automated means of updating the end office line attributes associated with values in their provisioning platforms. To my knowledge that code and that capability still exist within Verizon.

Q And just to clarify, for Verizon you are talking about class marking not line attribute routing?

A That's affirmative, yes, sir.

Q Do you know of any ILEC anywhere in the United States that currently is using line attribute routing?

A No, sir, I don't.

Q Do you know of any ILEC anywhere in the United States that has ever used line attribute routing?

A No, sir.

Q And the class marking that Verizon used at one point, is that the only instance that you are aware of that an ILEC has ever used class marking?

A That I'm aware of, yes. There may have been others, just that those are the only ones I'm aware of.

Q And in that instance it was an automated rather than manual process?

A That is affirmative.

Q And I apologize, because I know you have answered this once, but briefly could you just tell me, again, the difference between class marking and line attribute routing?

A Class marking, at least in the manner in which it was deployed, and I will tell you that I have also commented and reached out to NENA on this very issue, as well, class marking was deployed using data and information that was not validated.

In the applications that I am aware of where it was done in an automated fashion, they utilized the taxing authority or what they called the tax district to make those distinctions on routing. And, in essence, that was the information they used to make the routing determinations. And, of course, what gave class marking a very ugly name was the mere fact that it did not use validated data, data that was provided by public safety to define where calls should be routed. So, consequently, calls were misrouted in some applications even though the tax districts that were applied

did end up in the call routing incorrectly.

Furthermore, it should be noted that those same tax districts which were not validated were also utilized for determining fee collection and remittance processes, which if they are inaccurate then clearly there was probably even some level of perhaps even withholding of fees from appropriate counties as a result of that process. So, again, that was the tax district value that we used.

In the line attribute routing, the expectation would be that a party should be utilizing the MSAG, which they should be using today anyhow. I mean, conceptually if data is not in an MSAG-approved format coming into the E911 system today, that causes delays in updating the ALI database. It also causes rework on the part of both the ILEC and whoever the 911 provider is increasing the cost of public safety, and, again, reducing the quality.

So MSAGs -- and I believe AT&T and other ILECs make MSAGs available at a reasonable price to other providers so that they do utilize that information with the intent of doing two things. One, to route the calls from those other providers to the appropriate selective router system, and, number two, to clean up that data, that address data and to make certain that the MSAG is valid before it gets delivered to the E911 system, the data management system.

And so, in answer to your question, I don't know,

there is a strong possibility that CLECs, which in many cases use the equivalent fabric of an ILEC, may be doing some of that today because they have to make the distinction on which -- if their switches serves more than one selective routing system, there is an expectation placed upon them that they will terminate calls to the appropriate selective router. So the only way to do that is by basically having the address validated and prevalidated to the Master Street Address Guide before they -- actually, before a caller generates a 911 call.

I don't know if that helps in the explanation or not.

Q Well, actually you went a little bit beyond my question, but let me just try to double back a little bit.

A Okay.

Q As part of your answer I think you said that CLECs may be using line attribute routing. Is it correct that you can't actually identify any CLEC that you know is using line attribute routing?

A That's correct.

Q Okay. Now, other than the source of information, would you say that otherwise class marking and line attribute routing is the same?

A They are very similar, perhaps equivalent, with the exception of the validation of the data.

Q Okay. So in order to implement them -- and, again, other than whatever measures are taken to validate data, would

the steps necessary to implement the two be the same?

A Not entirely, because actually the steps would be more extensive to implement line attribute routing because one would have to integrate the Master Street Address Guide into the provisioning processes for service order entry and input. And I believe, again, that many of the ILECs use some kind of a street guide to validate service orders today. So there would be a requirement in the line attribute routing method, there would be a need to sync up those street guides with the Master Street Address Guide. For class marking that is not a requirement because there is no consideration for validation of the data.

Q Okay. So then between the two, line attribute routing would be the more difficult or would require more labor to implement?

A Yes.

Q And if I understand your prior testimony, you have no idea how much that would cost?

A No. No, I have no idea how much it would cost.

Q Okay. And if I understand your position, regardless of that cost, whatever it is, you believe that in the context of this arbitration the Commission should order AT&T Florida to bear that cost, is that correct?

A No. Bottom line, I say that is the Commission's decision on what costs are acceptable and what aren't. Intrado

is not authorized to make those decisions. That's the Commission's decision.

Q Well, that is what I was asking you about, what you are asking the Commission to do. Let me go at it another way. Is Intrado volunteering to pay the cost of line attribute routing?

A No, sir.

Q Okay. So if you are serving the PSAP and AT&T has to adopt line attribute routing, and Intrado isn't ordered to pay that cost, then AT&T would have to pay the cost, wouldn't they?

A I don't know that there is a cost. No costs have been shared with us, so I don't know what the costs would be or if there is costs that would be incurred beyond what they are already being compensated for providing services.

Q Right. But my question is if there is a cost under your proposal AT&T Florida would have to bear that cost, whatever it is, is that correct?

A I don't know, no, sir. I don't know.

Q Well, under your proposal if AT&T Florida is not bearing the cost and Intrado is not volunteering to bear the cost, who else conceivably could bear the cost?

(Phone noise.)

Hello?

A Yes, I'm still here.

Q Okay. Somebody dropped off.

A Well, if one were to look at it in relation to what is done throughout the industry for other providers, most definitely their end users end up bearing the cost of interconnection to 911. And where those costs are approved by a Commission to be reimbursed from public safety or from other venues, then that would be the vehicle. But I'm not the regulator, so I don't know where the costs would be recovered from.

Q Okay. But just so we are clear, they would not be recovered from Intrado, would they?

A They would not be recovered from Intrado.

Q Moving to a slightly different area, the service that Intrado -- and just so we are clear, when I say Intrado, I'm talking about the entity that is involved in this arbitration.

A And I the same.

Q I don't want to get tangled up in Intrado versus Intrado Comm. So when I say Intrado, we will know what we are both talking about. The emergency services that Intrado plans to provide the PSAPs, utilizing what it obtains under the interconnection agreement, can a PSAP use that service to originate a call?

A I don't believe so.

Q Okay. And I probably should have asked you this question first, but just to back up, in terms of the services that you are going to provide to the PSAP, basically, you are

going to aggregate emergency calls and then deliver them to the PSAP, is that correct?

A We are going to selectively route calls to the PSAP that are aggregated at our selective router location.

I would like to correct my answer that I just gave you a moment ago about, no, they cannot make a call out. Do you mind if I make a change to that answer, because it was incorrect?

Q Okay.

A Yes. From Intrado's network there is the possibility to call out to another PSAP via interselective routing. So there is the potential for a PSAP that is served by Intrado to connect to another PSAP via the wireline E911 network.

Q So basically what you are talking about is a situation where a 911 call would come in, it would be delivered to the PSAP, and then the PSAP would transfer, basically, that call to another PSAP?

A That's affirmative. And that can be transferred either via the PSTN or via wireline E911 network interselective router trunks.

Q Okay. So let me back up. Assume that an emergency call is made, and the operator at the PSAP takes the call. They have the caller on the line and the caller is disconnected, so then they need to call the caller back. They wouldn't be able to do that with the service Intrado is

providing, would they?

A That's affirmative.

Q No, they would not be able to?

A No, they would not be able to make the call back to the disconnected party through the Intrado E911 wireline network.

Q Okay. In order to do that they would have to probably use -- well, I shouldn't say probably. They would have to use an administrative line that has local exchange service as that term is more traditionally defined, is that correct?

A That is my understanding, as well.

Q And Intrado does not propose to provide those types of lines to the PSAPs, do they?

A Intrado does not currently intend to provide those services to the PSAP, but at some point may in the future. At this point, no, you're right, we do not provide that service.

Q Okay. I want to talk a little bit about the POIs and the interconnection, just to follow up with some earlier questions. And just to make sure we are on the same page, when Intrado is the 911 provider, your position is, in that circumstance, AT&T should interconnect on Intrado's network, is that correct?

MS. KISER: Are you referring to a specific page of his testimony?

MR. CARVER: Yes. I was asking a general question, but I can give you a reference if it will help. If you look on Page 21 under Issue 4, the answer that begins on Lines 12 through 16.

MS. KISER: Of his direct?

THE WITNESS: Of what, my direct?

MR. CARVER: Yes, your direct testimony. It is on Page 21, and it is under Issue 4. And there is a question about what happens when Intrado Comm serves as a 911/E911 provider. That is what I'm referring to.

MS. KISER: Okay.

BY MR. CARVER:

Q Okay. Do you want me to repeat the question?

A Yes, please.

Q Okay. When Intrado is the designated 911/E911 service provider, in that instance your position is that AT&T should interconnect on Intrado's network, correct?

A Yes, sir.

Q Okay. Now, you told us earlier in the deposition that Intrado's network would not be in Colorado, or that we wouldn't be required to go to your network in Colorado. I believe you said that the network would be in Florida, is that correct?

A Yes, sir.

Q Where in Florida would it be?

A It would be in multiple regions within the state. You know, I think in my testimony I indicated that we are still evaluating specifically where we will place those points of access in the network. We would envision having perhaps some in the south and -- perhaps at least one point in the south and one point in the north portion of the state.

Q Okay. So let's say that the PSAP was in Pensacola. Would Intrado necessarily have network in Pensacola?

A I can't really speak to that, because I'm not the engineer that would make those determinations. Those determinations are made based on many factors that I'm not the one that makes that decision specifically where the devices will be placed. So I really have got to say I don't know where those devices will be homed at this point in time, but --

Q I'm sorry, go ahead. I didn't mean to cut you off.

A I'm just not aware of that.

Q Okay. But wherever they are, your position is that AT&T would have to transport its traffic to that location to interconnect, correct?

A That's affirmative.

Q Okay. So, hypothetically -- well, I shouldn't say hypothetically. I guess given the current state of your plans, it's possible that if the PSAP is in Pensacola then AT&T might have to haul its traffic all the way to Dade County in south Florida to interconnect to Intrado's network there. That is a

possibility, isn't it?

A Yes, sir.

Q Do you know how many miles that is?

A No, sir.

Q Okay. And to the extent at the central office, that the AT&T central office is in Pensacola, to the extent a CLEC it interconnected there, collocated -- well, let's say collocated there, and to the extent that CLEC serves customers in Pensacola, they would also need to transport their traffic all the way to the Intrado network in Dade County, also, wouldn't they?

A No, sir. They could have their choice of where they wished to interconnect, either in the state, out of the state, wherever they wished to interconnect on our national network.

Secondly, it wouldn't just be one location anyhow, because as we have indicated, we anticipate and expect parties to connect to multiple points, at least a minimum of two diverse -- geographically diverse points of interconnection.

Q Okay. Well, let's divide it up. This CLEC we are talking about -- the point I'm trying to get to is regardless of where your network is, and you have told us though right now you are not sure where it would be, but regardless of where it is, it would be incumbent upon that CLEC to transport their traffic to your network location for the purpose of interconnection, correct?

A That's affirmative, yes, sir.

Q And you said that it could be in other states, so you contemplate that they might cross state boundaries for the purpose of this interconnection?

A If it is to their advantage, if they find it to be more efficient for them to terminate to an out-of-state location that Intrado has a presence, that is a possibility. It is not a requirement for them to go out of state, it is an option. I mean, if one were to look at wireless providers, CLEC providers, in many cases their networks now are becoming more and more diverse to the point where they are spanning multiple states with their switching fabric. And so, consequently, they might find it beneficial to terminate to a point that is closer to them rather than the ten different locations they are currently required to connect to.

Q Let's go back from the CLEC to the ILEC. Let's talk about AT&T Florida. Under your proposal, that is the proposal that we would have to go to your network to interconnect --

A Yes.

Q I'm just thinking how to frame the question. Is it possible that AT&T Florida might have to cross a LATA boundary to get to your network?

A Yes.

Q Okay. And just to circle back. In terms that there will definitely be some network presence in Florida by Intrado,

is that something that today you could make a firm commitment?

A Absolutely.

Q But beyond that you can't commit as to the network being at any given point in Florida, at this time you just don't know, correct?

A At this time I just do not know specifically where they will place those devices.

Q And you don't know whether the devices, whether there will be one of them, or ten, or twenty, you don't have that information, either?

A No, but I know there will be a minimum of two geographically diverse locations. So that's the minimum.

MR. CARVER: I'm just checking my notes here. I think that's all I have.

That's all I have. Thank you, Mr. Hicks.

THE WITNESS: Thank you, sir.

MS. TAN: All right.

Intrado, Mr. Hicks is your witness for redirect.

MS. KISER: We have no redirect. Thank you.

MS. TAN: Okay. I believe that we have everyone's e-mail addresses. Would everyone like to have this transcript electronically?

MS. KISER: Yes, please.

MR. CARVER: Yes, for AT&T, please.

MS. TAN: Okay. Excellent. Well, then that would

conclude the deposition for Mr. Hicks in this docket. And now we will go ahead and get ready for Ms. Clugy in this docket, also. Do we want to take a quick five-minute break, or are we good?

MS. KISER: I guess we need five minutes, please.

MS. TAN: Okay. Well, go ahead and take five minutes and pick up at 12:00 o'clock.

MS. KISER: Thank you.

MS. TAN: All right. Is everyone on the line?

MS. KISER: Yes. Intrado Comm is here.

MS. TAN: And AT&T?

MR. CARVER: Yes, AT&T is here.

MS. TAN: Okay. For the record, have the parties read and agreed to the standard stipulation?

MS. KISER: Intrado has.

MR. CARVER: Yes, for AT&T.

MS. TAN: All right. I will go ahead and read it into the record. It is stipulated that this deposition was taken pursuant to notice in accordance with the applicable Florida Rules of Civil Procedure; the counsel present stipulate that the witness is the person he identified himself as; that objection except as to the form of question are reserved until hearing in this cause; and that reading and signing was not waived. It is also stipulated that any off-the-record conversations are with the consent of the deponent.

All right. Intrado, can you please state for the record that your witness has taken the certificate of oath?

MS. KISER: She has.

CYNTHIA CLUGY

was called as a witness and, after being duly sworn by the Notary Public, testified as follows:

DIRECT EXAMINATION

BY MS. TAN:

Q Good morning, Ms. Clugy.

A Good morning.

Q My name is Lee Eng Tan. I am an attorney with the Commission and I will be taking your deposition today.

Have you ever been deposed before?

A No.

Q Okay. Well, in this deposition I will ask you questions and your answers will be recorded by Ms. Faurot, the court reporter here with us today. You understand that you will need to speak up and give oral answers that are clear?

A Yes.

Q It is also very important that you understand the questions and give accurate answers. So if I ask a question that you don't understand for any reason, please ask me to rephrase the question. All right?

A Thank you, yes.

Q Okay. And also, where possible, I would request that you provide first a yes or no answer and then explain where necessary.

A Yes.

Q Excellent. Could you please tell us your name?

A My name Cynthia Clugy.

Q Okay. And who are you employed by?

A I am employed by Intrado, Inc.

Q Can you please give me your current job title?

A I am a contract consultant assisting in 251 interconnection negotiations.

Q And what is the description of your job, please?

A Primarily provide subject matter and technical support for the negotiation of 251 interconnection agreements and other 911 aspects.

Q Okay. And how long have you held this position?

A Currently, I have been contracting in the telecommunications industry for the last three years.

Q And how long has your contract run been with Intrado so far?

A I have been with them for approximately 12 months.

Q And do you know which services AT&T is currently providing to Intrado, Inc.?

A No, I'm not familiar with what services AT&T is providing to Intrado, Inc.

Q Okay. I'm going to go ahead and ask you some questions on Issue 6. And if we could take a look at your rebuttal testimony, and if you could turn to Page 2.

A Okay. I'm on Page 2.

Q Okay. You testified that as co-carriers, Intrado Comm's ordering processes should be included in the interconnection agreement, just like AT&T's ordering processes, because each party will be purchasing services from the other.

And, therefore, each party should be aware of the process to order services and facilities from the other party.

Are you aware of any state commission decisions that support your assertion that the ordering processes for co-carriers should be included in a 251(c) agreement?

A No, I'm not aware of any specific commission orders to that effect.

Q Okay. Are you aware of any FCC decisions that support your assertion that the ordering processes for co-carriers such as Intrado Comm and AT&T Florida should be included in a 251(c) agreement?

A No, I'm not aware of any specific FCC orders.

Q Okay. If we go ahead and stick on Page Number 2 and look at Lines 16 through 21.

A Okay.

Q Here you have testified that Intrado Comm will ultimately be providing web-based access to all telecommunications service providers in order to order services from Intrado Comm.

A Yes.

Q What ordering process will apply to all telecommunications service providers mentioned in your testimony?

A Those telecommunications service providers that have end user subscribers within regions served by Intrado Comm

PSAPs will need to order interconnection to the Intrado gateways, and they will have to terminate traffic to those gateways. And so to order the termination for that traffic, every carrier will need to go into the Intrado ordering system and fill out what is referred to in the industry equivalency as an access service request.

Q Okay. And is this process for the telecommunications service providers to order services from Intrado Comm the same as the process for AT&T Florida to order services from Intrado Comm?

A Conceptually, yes. Specific details, no, but the idea of going to a web-based interface with certain industry standard information to place an order for terminating a circuit, conceptually, yes, it's the same.

Q Okay. And does Intrado Comm's ordering processes allow other carriers, other telecommunications service providers to order services and facilities from Intrado Comm without both parties ordering processes being specified in a Section 251(c) agreement?

A Well, in an agreement with a non-ILEC, that would be part of 251(a), because that is a CLEC-to-CLEC arrangement. But to answer your question, yes, those terms and conditions would be put into a 251(a) agreement that Intrado would negotiate with another CLEC.

Q Thank you.

And apart from your explanation that you provided in your rebuttal testimony on Page 2, does Intrado Comm have any other explanation why the process for AT&T to order services from Intrado should be included in the interconnection agreement between the parties?

A Yes. The interconnection agreement between AT&T and Intrado will be a 251(c) agreement between an ILEC and a CLEC. However, the nature of that interconnection, i.e., the interconnection of 911 networks, will also require AT&T to pass traffic to Intrado. And in order for them to pass that traffic, they, too, would need to order termination to the Intrado network. And since the terms and agreement governing that relationship are 251(c), it's necessary to include that ordering process for AT&T to access Intrado's system within that agreement.

Q Okay. And how would other carriers, other telecommunications service providers, order services and facilities from Intrado Comm if those carriers don't have an interconnection agreement with Intrado?

A If it's another CLEC or another telecommunications service provider that is not an ILEC, then Intrado is going to negotiate agreements with each and every entity that must pass traffic to Intrado, and part of that agreement would be terms and conditions for placing an order for access to the Intrado network.

Q And is the process for AT&T to order services from Intrado Comm different from the processes other carriers are expected to follow?

A No.

Q And is it the industry practice for co-carriers, such as Intrado Comm and AT&T Florida, to include both parties ordering in the parties' interconnection agreement?

A Well, it would seem standard practice to me. However, based on what has happened, and I have come to hear in this case, there are certain co-carrier arrangements between AT&T and other franchise incumbents where they have set forth terms and conditions for interconnection, but I do not believe that they have specified those ordering processes. So I would tell you that it probably exists, but it is not documented because the agreements themselves are not substantiated.

Q Thank you. My next set of questions are going to be regarding Issue 13(a) and (b), and my first question would be can you please provide a general overview of Issue 13 and what you believe the disputes are between the parties on this issue and its subparts?

A Okay. So you said both 13(a) and 13(b), is that correct?

Q That is correct.

A First of all, let me preface this with I am not an attorney. But based on my interpretation of the AT&T language,

the language in the AT&T interconnection agreement is a construct of AT&T's interpretation of federal law as to what traffic gets intercarrier compensation treatment. And I believe that AT&T's interpretation of federal law, Intrado does not agree with. So for that reason, we have interjected as applicable law, because we do not agree with how AT&T has defined traffic eligible for intercarrier compensation. I believe that addresses 13(a).

In regards to 13(b), our interpretation is that AT&T is wishing us to invoke call blocking of misrouted traffic. We as, well as the FCC, believe that to be an inappropriate way to treat misrouted traffic, and as such we don't want to concur with that, especially in an arrangement for 911 phone calls.

Q Okay, thank you. Do you have the prehearing order available?

A Yes, ma'am.

Q And can you go ahead and look at AT&T's stated position on Issue 13(a), which is on Page 20?

A Yes, ma'am. Hold on just a moment, I'm looking at that, please.

Q No problem.

A Okay.

Q All right. AT&T states that this issue does not exist if the nine-state template is used. Would you agree with this statement?

A No. I believe that the circumstances that give rise to the language would still occur and be there. The fact that the nine-state agreement is silent to that circumstance does not obviate the need for addressing the circumstance, and that's why we prefer the thirteen-state language. Because what I'm saying is that the circumstance is still there. The fact that it is not addressed in the nine-state agreement does not make the circumstance go away.

Q Okay. And if you could please take a look at AT&T Witness Pellerin's rebuttal testimony, and look at Page 18, Lines 1 through 15.

A I'm getting them.

Q No problem.

A Page 8, Lines 15 through 17 is what you said?

Q Page 18, Lines 1 through 15.

A Okay. I'm looking at her testimony.

Q Okay. And here the witness asserts that beginning on Line 5 that you are incorrect in stating that AT&T's definition is inconsistent with the law. And she goes on to assert that the FCC reaffirmed in the ISP remand order that Section 251(b)(5), reciprocal compensation only applies to the traffic that originates and terminates in the same local exchange.

Doesn't the limitation to traffic that originates and terminates in the same local exchange mean local traffic?

A I do not know. Again, we are getting into

interpretations of law. And Ms. Pellerin, like myself, we are not an attorney. And I believe that her testimony as well as the Intrado position only highlights the fact that this is something that is subject to interpretation of law.

Q Okay. And what is exchange access traffic?

A Exchange access traffic is traffic that is within a prescribed calling area.

Q Okay. And what is information access traffic?

A I don't know the term specifically, but I would infer that it is traffic exchanged with an Internet service provider. I don't know.

Q Okay, that's fine. Can you go ahead and look at Intrado's response to Staff Interrogatory Number 9(a)?

A Which set?

Q That would be the first set, yes, please. Thank you.

And here you state that the definition of switched access traffic is at issue in 13(a), as well as other terms and conditions governing switched access traffic. Other than eliminating misrouted access traffic in the IC 16.2, what other terms and conditions governing switched access traffic are at issue?

A Let me look at this just a moment. I'm trying to locate it in the agreement. Please bear with me.

Q Okay, thank you.

A So what the difference is as far as in dispute, AT&T

has put a very finite definition of what that traffic is, which, again, we believe is still subject to legal interpretation. Intrado believes that because this is a living agreement and subsequent rulings can impact those definitions of what the traffic may be, we believe that applicable law is probably better suited because, number one, it is an interpretation of the law which is subject to change with subsequent orders.

And, therefore, if we have such finite precise language, it would have the potential to be in conflict with those subsequent interpretations. So we believe that applicable law does address the appropriate application of intercarrier compensation without having to, perhaps, necessitate going back and revisiting the language on subsequent legal rulings for switched access traffic.

Q Okay. Can you go ahead and move to Pellerin's direct testimony for AT&T, and if you could look at Page 40, Lines 22 through 24.

A Page 40.

Q And what she is stating is that the language that she is proposing to define Section 251(b)(5) traffic is consistent with the language previously adopted by the Public Utility Commission in Ohio. Do you agree with her statement?

A I really don't know.

Q Okay. Go ahead and turn to Page 43 of --

A Ms. Pellerin's testimony?

Q Yes, please. And we are going to be looking at Lines 5 through 12. And here Ms. Pellerin states that the proposed definition for switched access traffic is consistent with the language previously adopted by the Public Utilities Commission in Ohio.

Do you agree with her statement here?

A I don't know what was agreed upon in Ohio, so I can't tell you one way or the other.

Q All right. With respect to Issue 13B, Intrado and AT&T have agreed to work together to identify misrouted access traffic, is that correct?

A Yes.

Q Okay. Why don't you go ahead and turn to Intrado's response to Staff Interrogatory 8(g).

A Just a moment.

Q No problem. That would be the first set.

A Yes, ma'am. What was the letter, again?

Q Actually, go ahead and look at 9(g).

A Okay.

Q And this interrogatory asks how the parties should cooperate to eliminate misrouted access traffic and what steps should be required to remedy the misrouting condition, is that correct?

A Yes.

Q And your response is that the parties will work together to identify phantom traffic or misrouted access traffic in accordance with the requirements of the FCC and any terms and conditions contained in the interconnection agreement. What is phantom traffic?

A Phantom traffic to me is one that you can't -- it's traffic that is inappropriately crossing the network. It should be going over other trunk groups. It's traversing the wrong trunk groups and, therefore, it is not being appropriately billed for origination and termination.

Q Okay, thank you. And can you describe the FCC requirements with respect to phantom traffic or misrouted traffic?

A I cannot give you them precisely, no.

Q Okay. But could you speak to how these requirements serve to remedy misrouted traffic?

A I'm going to speak generally here. The issue is you don't want -- you want to make sure the traffic is routed correctly for application of intercarrier compensation. If traffic is being misrouted, then you look at the call processing of those misrouted calls and you try to identify the source and resolve it. As I said in my answer, it's very specific to the particular instance.

Q Okay, thank you. Let's go ahead and go back to Ms. Pellerin's direct testimony, and if you could flip to Page

59, and we'll be looking at Lines 13 through 29. And it will carry over to the next page until Line 9.

A Okay.

Q Go ahead and take a look at that and when you are ready please let me know.

A Let me look at it just a moment.

Q Thank you.

A Okay. I have read it. Your question?

Q As I understand the bold language that is not underlined, that is Intrado's proposed language, and the bold underlined language is AT&T's, is that correct?

A Yes.

Q And does AT&T's proposed language provide that the parties will jointly file a complaint with the applicable commission if the misrouted traffic is not removed within a 60-day notice period?

A Yes, that's what I read it to say.

Q Okay. And what is your understanding of what applicable commission references?

A I would say that if there was any particular ruling with the Florida PSC or the FCC with regard to phantom traffic.

Q And does Intrado dispute this specific language?

A I believe the thing that we most are concerned with would be the right to block such traffic. That is probably our most serious concern. We have no problem working

collaboratively addressing with law the blocking of traffic.

Q Okay. Hold on one second, please. This next set of questions I'm going to be asking you will be on Issue 15.

A Okay.

Q And in the previous deposition, did you hear Mr. Hicks say that he thought you might have filed rebuttal testimony on Issue 7(a)?

A 7(b) I filed rebuttal testimony on.

Q So 7(a) was filed in 7(b), is that correct?

A Yes. I believe I filed rebuttal on 7(b). I'm looking at my rebuttal testimony now, but 7(b)is resolved.

Q But did you file any on 7(a)? I may have misheard you.

A I'm sorry, I filed testimony on 7(b). Not rebuttal testimony, but direct testimony on 7(b). I did not file testimony on 7(a).

Q Okay, thank you. My next questions will now be on Issue 15. On Issue 15, you filed direct testimony, but you did not file rebuttal, is that correct?

A Let me look at Issue 15, please.

Q No problem.

A I am trying to see if I filed rebuttal on it. No, I did not file rebuttal on 15, just direct testimony, you are correct.

Q And can you explain why you did not file rebuttal

testimony on this issue?

A I believe that our position was appropriately addressed in the direct testimony.

Q Thank you. Can you please turn to your direct testimony on Page 4?

A Yes.

Q Why did you combine Issues 7(b) and 15 in your testimony?

A I would believe that on the surface they both conceptually deal with the same thing, the application of -- what happens to the agreement with changes in applicable law, and that's why they were contained in my testimony. However, they are each a little bit different as far as the sections of the interconnection agreement they address. 15(a) specifically addresses application of charges and the intercarrier compensation portion; and 7(b), which was resolved, was a little bit more overarching and it addressed terms and conditions of the agreement as opposed to specific intercarrier compensation.

Does that answer your question?

Q Yes, it does. With Issue 7(b) being settled, what sentences in your direct testimony are relevant only to Issue 7(b)? And if you can take a look at your many direct testimony and kind of tell us line-by-line in that section, that would be helpful?

A Yes, ma'am, I will. Let me look at this real quickly, please.

Q Thank you.

A I'm looking at my testimony on Page 4, starting with Line 21.

Q Okay.

A And that addresses, I believe, the intercarrier compensation changes in applicable law.

Q And that is for Issue 15?

A I believe so, yes, ma'am. Because 15 was specifically with the intercarrier compensation Section 4.2.1. And I believe that the language in that section addressed the traffic that would be subject to retroactive billing.

Q Okay. And looking at that language right there, can you please explain which language is broad?

A Let me pull the contract language. Just a moment. I want to be able to have it in front of me.

Q Okay, no problem. Thank you.

A Looking at the way the language was put forth by AT&T, to us it was very broad in that it says, and I quote, "As local calls within the meaning of this appendix," which in the context of this appendix it could be all local calls. However, any subsequent rulings with regards to the ability to retroactively bill charges may only be applicable to a subset of those calls. And the way that AT&T has posited it, it would

be applicable to anything defined as a local call.

So Intrado believes that it is probably in our best interest to have the application of retroactive charges apply to only those calls that were in the law that allowed it, as opposed to all local calls as defined by the agreement.

Q And does Intrado object to the inclusion of local calls?

A Yes, we do. We believe that it should be -- when you are applying retroactive charges that should be in alignment with what the applicable ruling is, not a broad definition of local calls.

Q Okay. And how does Intrado define local calls?

A The agreement defines it.

Q Okay. Let's go ahead and move to the top of Page 5 of your direct testimony.

A Yes, ma'am.

Q And what are a couple of examples of retroactive compensation adjustments for traffic that is not affected by a change of law?

A I cannot cite you a specific one.

Q Okay. So let's go ahead and stay on that page, but look to Line 3.

A Yes, ma'am.

Q Can you please define intervening law?

A I would say any law, ruling, regulation that comes in

after the agreement has been negotiated is how I would define it.

Q Okay. And then can you also just explain what you mean by consistent with intervening law?

A Any law, rule, or regulation that comes after the negotiation of the agreement would have to be consistent with that specific ruling.

Q Okay. And what is the language that Intrado has proposed?

A For Section 4.2.1?

Q Yes.

A I believe our language says we have just said to which intervening law applies, period.

Q Okay. And if you could look to Lines 4 and 6?

A Of my testimony?

Q Yes, please, on the same page.

A Yes, ma'am.

Q If you could, please explain what you mean by permitted by any order adopting a change in law. Are you referring to an FCC or FPSC order, or a court order?

A I believe all three of them. When I say intervening law, I mean it in a broad sense of any entity that has authority to make rules and regulations regarding telecommunications.

Q Okay, thank you. What are some examples of

retroactive adjustment that would apply under a law or order?

A Really, I can't think of one. I can't give you a specific example. I'm trying to process, but I can't articulate a specific one.

Q Okay, thank you.

A I'm sure attorneys could. I'm not familiar with specific orders is why I hesitate to answer your question.

Q Okay. Let's go ahead and look at AT&T Witness Pellerin's direct testimony. If you could turn to Page 62, Lines 9 through 18.

A Nine through 18.

Q That is correct.

A Okay.

Q Do you agree that Sections 4.2.1, 4.2.2, and 15.1 are the only sections applicable to Issue 15?

A I would tell you that at this point 4.2.1 is the only one that is still currently in dispute. 4.2. and 15.1 have been resolved.

Q Okay, thank you.

If you could now turn to Page 64. Actually, let's go ahead and forget that question.

If the Commission determines that Intrado's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A I would say absolutely none, with perhaps the exception of blocking calls, which I don't think either party would realistically do for 911.

Q Okay. And if the Commission determines that AT&T's proposal for this issue is the appropriate one, what impact, if any, would this decision have on the ability of a consumer to reach 911?

A Other than if AT&T got the blocking, people could be blocked, so that would be the only thing.

Q Okay, thank you. My next set of questions are going to be on Issue 23.

A Okay.

Q And can you please provide a general overview of Issue 23 and what you believe the disputes are between the parties on this issue and its subparts?

A Yes, ma'am. Just give me a moment while I look at the associated information.

Q No problem.

A I'm familiar with it. I believe this had to do -- yes, I'm familiar with it.

Q Okay. And can you give me a general overview?

A Looking at this, if AT&T was having to do certain administrative things, and the thing that jumps out to me is perhaps relabeling, restenciling (phonetic) for collocation agreements, AT&T should be permitted to recover its costs, but

the concern with Intrado was that it was sort of open-ended in that Intrado wanted to have at least an idea of what those costs would be prior to AT&T engaging in those administrative activities to determine if what AT&T was going to charge was fair and just for those administrative activities.

Q Okay, thank you. According to AT&T's position in the prehearing order, this issue does not exist if the nine-state template is used.

A Yes, ma'am.

Q Do you agree that this is the case?

A The issue would exist, the ability to address it in contract language would not.

Q And what do you mean by that?

A Well, I believe that the nine-state agreement was silent to these administrative activities, but that wouldn't change the fact that these administrative activities would still have to occur. And so Intrado, believing that the thirteen-state agreement was more comprehensive in addressing this particular instance, chose to use the thirteen-state language to cover that.

Q So are you saying that if the Commission were to go forward with the nine-state agreement, that that language would need to be placed into the nine state agreement?

A Yes, ma'am, that's exactly what I'm saying.

Q Okay. And AT&T also states in its position that

there is no contract language in dispute even if the thirteen-state agreement is used. Would you agree with this?

A Yes. It is not in dispute any longer because I believe AT&T had agreed to give us a quote for those activities prior to them starting the work, and so that's why that issue was resolved.

Q Do you know exactly what the language was that was resolved in this issue?

A I would have to look at my copy of the draft. I believe it's in the general terms and conditions, 6.3.2. I can give you the specific cite momentarily.

Q Thank you.

(Pause.)

A I'm sorry, we're having some issues locating it. I remember reading it where they added that it would be a quote, and I believe Ms. Pellerin attested to that fact yesterday, as well. The actual section --

Q Do you want to go ahead and provide it is a late-filed exhibit?

A If we could, yes, ma'am. Because as I recall, Ms. Pellerin attested to this yesterday, and also concurred that it was an agreement. And we will be glad to look for the specific section and let you know where we added the language. But, if my memory serves me correctly, the added language addressed the fact that AT&T would provide a price quote prior to doing the

activity.

MS. TAN: Okay. Let's go ahead and have that as a late-filed exhibit. And what would the title be for that document?

MS. KISER: It would be Issue 23, contract language resolving the issue, I guess.

MS. TAN: Do you want to say Ohio in there? Is this the Ohio language?

MS. KISER: That I don't know. I wouldn't put Ohio. I would just say contract language resolving Issue 23.

MS. TAN: Okay; that's fine.

(Late-filed Exhibit 1 marked for identification.)

BY MS. TAN:

Q Let's go ahead and have you look at Intrado's response to Staff Interrogatory Number 12, and we are going to be looking at the part of the response that is concerning Issue 23 on Page 9.

A Okay. Let me get that up. Just a moment.

Q Okay. Are you there?

A Yes.

Q All right. In your response to this interrogatory, you state that AT&T has indicated that it would be willing to implement similar language in Florida to the extent certain issues are addressed in the Florida interconnection agreement.

What do you mean by that statement?

A What I mean is these administrative activities would likely occur whether it be Florida, Ohio, Alabama, Wisconsin. And because Intrado is rolling out their product nationwide, we would like to have a common understanding that should we encounter administrative costs that AT&T would incur, we understand that is's handled the same way irrespective of the state that the issue occurs.

Q So if AT&T has indicated that it would be willing to implement similar language in Florida, what is the concern here?

A Well, we would like to have the same language used throughout every state that we have an interconnection agreement with AT&T. So if they are going to incorporate it into Florida, we're fine; but to us the most expeditious way to incorporate that language is to use the language that was used in the thirteen-state Ohio agreement, because it is the exact same.

Q And what is the similar language?

A That gets back to us trying to find it.

MS. KISER: We will provide it to you.

MS. TAN: Okay. That's the same information? All right.

MS. KISER: Yes, it is the same filing.

MS. TAN: Okay. At this time this ends the questions that staff has for Ms. Clugy. Thank you very much.

AT&T, are you ready to ask your questions?

MR. CARVER: I have no questions.

MS. TAN: Okay. And does Intrado have any redirect of Ms. Clugy?

MS. KISER: No, no redirect.

MS. TAN: Okay. Let's go ahead and establish a date for the late-filed exhibit. Could you do that by Friday?

MS. KISER: Yes, we could provide that by Friday.

MS. TAN: Okay. And I am, again, going to assume that everyone would like this electronically. And unless you have radically changed your e-mail in the last little bit, I think everyone's e-mail remains the same.

MR. CARVER: Yes, please.

MS. KISER: Yes.

(The deposition concluded at 12:45 p.m.)

Contract Language for Issue 23

Below is the contract language that is associated with Issue 23. Intrado Communications Inc. ("Intrado Comm") and BellSouth Telecommunications, Inc. d/b/a AT&T Florida ("AT&T") have agreed on the following language for inclusion in the Parties' Ohio interconnection agreement. There are no disputes with respect to the "content" of the language. AT&T, however, has refused to incorporate this language into the Parties' Florida interconnection agreement based on AT&T's claim that the 9-state agreement does not include similar language.

GTC 6.3.2

> For any CLEC Company Code Change, CLEC must submit a service order changing the OCN/ACNA for each End User record and/or a service order for each circuit ID number, as applicable. CLEC shall pay the appropriate charges for each service order submitted to accomplish a CLEC Company Code Change; such charges are contained in the Appendix Pricing, Schedule of Prices. In addition, CLEC shall pay any and all previously approved charges required for re-stenciling, re-engineering, changing locks and any other work necessary with respect to Collocation, as determined on an individual case basis.

At a session of the PUBLIC SERVICE COMMISSION OF WEST VIRGINIA in the City of Charleston on the 20th day of November, 2007.

CASE NO. 04-0102-T-GI

FRONTIER COMMUNICATIONS OF WEST VIRGINIA; VERIZON WEST VIRGINIA INC.; ARMSTRONG TELEPHONE COMPANY; ARMSTRONG TELEPHONE COMPANY- NORTHERN DIVISION; HARDY TELECOMMUNICATIONS INC.; SPRUCE KNOB SENECA ROCKS TELEPHONE INC.; WAR TELECOMMUNICATIONS COMPANY; and WEST SIDE TELECOMMUNICATIONS

General investigation into the provision of Data Base Management Services and into who pays the costs of such services.

COMMISSION ORDER

INTRODUCTION

This Order approves Verizon West Virginia, Inc.'s (Verizon-WV) revised tariff filing proposing to provide enhanced 911 data base management services statewide (DBMS), waives the necessity of filing a full *Tariff Rule* 42 Exhibit in support of its proposed tariff, approves Verizon-WV's proposed tariff filing after revision, clarifies that enhanced 911 DBMS are a competitive service offering, allows for the provision of statewide, averaged E911 rates, and requires Verizon-WV to make an unbundled rate offering - all in the interest of public safety and welfare.

BACKGROUND

Factual Background

Enhanced 911 (E911) services allow the transmission of the name, telephone number and physical location of the person making an emergency call to a public safety answering point (PSAP), commonly known as a "911 Call Center."

Verizon-WV has offered E911 services in a bundled package containing all components of E911 services at uniform rates throughout its service territory since 1994. Initially, Verizon-WV's E911 monthly rate was $85 per thousand ($85/1000) access lines. This rate was adopted by

DOCUMENT NUMBER-DATE
03154 APR 21 80
FPSC-COMMISSION CLERK

Citizens Telecommunications Company of West Virginia, Inc., dba Frontier Communications of West Virginia (Frontier) in its West Virginia service territory. In 2001, Verizon-WV increased its monthly E911 rate to $110 per thousand ($110/1000) access lines to pay for the upgrade of facilities necessary to handle wireless calls. Once again, Frontier adopted Verizon-WV's rate. Verizon-WV currently provides E911 service to 42 PSAPs operating in 45 West Virginia counties and Frontier provides E911 service to 10 PSAPs in the State's remaining counties. Frontier's service territory is predominantly rural and includes Hardy, Mercer, Jefferson, Calhoun, Tucker, Grant, Hampshire, Pleasants, Wayne, and Webster Counties.

With the passage of the Telecom Act in 1996, the Federal Communications Commission (FCC) established two phases to allow E911 information to be transmitted to PSAPs for wireless calls. During Phase I, equipment is to be upgraded to provide for the transmission of the wireless caller's telephone number (Automatic Numbering Information or ANI). During Phase II, the physical location of the wireless caller is to be identified (Automatic Location Information or ALI). All counties served by Verizon-WV are Phase I and II compliant.

PSAPs in those counties served by Frontier have been paying the same higher rate as Verizon-WV; however, they have not been receiving the same service. With the exception of Mercer County, no Frontier county can identify the name, number or location of calls from wireless phones. The same is true for calls to PSAPs from customers of competitive local exchange carriers (CLECs) and calls from customers using Voice over Internet Protocol (VoIP). PSAPs in the Frontier counties currently lack access to E911 DBMS and selective routing facilities that are necessary to provide full E911 service.

Procedural Background

On January 28, 2004, the Staff of the Commission (Staff) filed a petition to initiate a general investigation into the provision of DBMS for E911 services. The petition was filed as a result of a settlement reached in Case No. 03-1188-T-T, *Citizens Telecommunications Company of West Virginia dba Frontier Communications of West Virginia.*

In the 2003 *Citizens* case, Frontier, an incumbent local exchange carrier (ILEC), filed a tariff seeking Commission approval to establish a monthly rate of $210 per thousand ($210/1000) access lines for managing the DBMS used for E911 services, including the provision of ANI and ALI services. As the *Citizens* case proceeded, the parties disagreed on what the law required, on who should bear DBMS costs, and on whether an ILEC is the only entity that could reasonably provide DBMS. The parties recommended that the Commission initiate a general investigation to explore the issues from a statewide perspective, considering the effect of multiple CLECs, wireless carriers, and other telecommunications providers on the ability of the PSAPs to provide DBMS.

Task Force Recommendations, Initial Interventions and Related Filings

On June 1, 2004, the Commission granted the Staff's petition for a general investigation and ordered the filing of a proposed procedural schedule.

On June 16, 2004, the West Virginia E911 Council (E911 Council) filed a petition to intervene in this proceeding. On July 1, 2004, Washington/Baltimore Cellular Limited Partnership dba Cingular Wireless, LLC (Cingular) filed a petition to intervene. Also on July 1, 2004, Staff filed its Further Staff Memorandum.

On August 10, 2004, the Commission issued a Procedural Order establishing a procedural schedule in this proceeding. On September 27, 2004, Staff requested that the established procedural schedule be suspended and that a Task Force be established to investigate the issues and make recommendations to the Commission. On October 12, 2004, the Commission issued an order establishing the Task Force and requiring that the Task Force file a final report on or before March 31, 2005.

After two extensions of time, the Task Force, comprised of telecommunications carriers, PSAPs, and Staff, filed its Final Report, including a proposed Verizon-WV E911 Tariff on January 6, 2006. Essentially, the Task Force Report recommended that: (1) the Commission direct a full financial analysis of the proposed Verizon-WV's E911 DBMS tariff rates and of the cost information supplied to Verizon-WV by the independent ILECs; (2) a public hearing be held no later than April 2006 to review the audit results and to take comments of interested parties; (3) public notice of the hearing be provided to all ILECs, CLECs, West Virginia wireless carriers and county commissions; (4) Verizon-WV be granted the authority to serve outside its normal service area; and (5) the independent ILECs be required to modify their tariffs regarding the provision of E911 service.

By Order entered on February 7, 2006, the Commission directed Staff to conduct a complete financial analysis of the proposed Verizon-WV E911 DBMS tariff rates and the cost information supplied to Verizon-WV by the independent ILECs. Staff was ordered to file its report and recommendations on or before April 4, 2006. On March 31, 2006, Staff filed motions to extend the due date of Staff's Financial Report and to approve the Verizon E911 Tariff as emergency interim rates, subject to refund. At that time, Staff had initiated the financial analysis as ordered. Additional information was required by Staff and discovery had been initiated to obtain the data necessary for Staff to complete its Report.

On April 3, 2006, Verizon-WV filed a response in opposition to Staff's recommendation that the proposed Verizon-WV E911 DBMS tariff be approved immediately on an emergency interim basis, subject to refund. The Commission, by Order entered on April 7, 2006, deferred ruling on Staff's motion for approval of Verizon-WV's proposed E911 DBMS Tariff on an emergency interim rate basis, but extended the deadline for the filing of Staff's Financial Report to June 5, 2006. On April 10, 2006, Verizon-WV filed a more detailed opposition to Staff's motion for approval of interim rates. Verizon-WV challenged the jurisdiction of the Commission to order it

to provide E911 DBMS outside its service territory. Verizon-WV also argued that it would not be financially responsible for assuming the cost of implementing such a statewide E911 DBMS offering without assurances of final approval.

On April 10, 2006, Metro Emergency Operations Center of Kanawha County (Kanawha Metro) also filed a petition to intervene in this proceeding, and on April 14, 2006, Kanawha Metro filed a response in opposition to the Staff motion for interim rates. In support of its opposition, Kanawha Metro argued that: (1) Verizon-WV's proposed tariff would violate the statutory right of each West Virginia county to implement its own E911 service; and (2) the plan was discriminatory in that it was not based primarily upon the costs of providing E911 DBMS and would create a subsidy flow from some counties to others.

On April 11, 2006, Frontier filed a response in opposition to the Staff motion for interim rate approval and asserted that it would be inappropriate to require major reconfiguration of the existing E911 network prior to final approval of all associated rates and charges.

On May 22, 2006, the County Commission of Jefferson County, West Virginia (Jefferson County) petitioned to intervene. Jefferson County requested that the Commission approve the proposed Verizon-WV E911 DBMS tariff prior to December 21, 2006. Jefferson County asserted that Motorola's technical support for Jefferson County's Customer Premise Equipment (CPE) would end at 11:59 p.m., on December 31, 2006. Because of the age of the Jefferson County CPE, the equipment regularly malfunctions. Jefferson County argued that it is essential for the Commission to provide both interim and final relief at the earliest possible date.

On June 8, 2006, Staff again requested that it be granted an extension of time to file the Staff Financial Report. Staff asserted that discovery was still proceeding and that not all of the information necessary for the Staff Report had been received. On June 19, 2006, the Commission entered an Order: (1) denying the motion of Staff to implement emergency interim rates; (2) granting the motions of Kanawha Metro and Jefferson County to intervene; and (3) extending the due date of the Staff Financial Report until August 4, 2006.

On June 21, 2006, the Commission received a letter from the County Commission of Tucker County, West Virginia (Tucker County). The letter stated that in 2005, Tucker County had purchased E911 equipment, but could not provide E911 services to its residents because of limitations in the service provided by Frontier. Tucker County objected to having to pay the same rate for E911 services as the counties in which E911 DBMS are available. Tucker County urged the Commission to act expeditiously.

On August 4, 2006, Staff filed its Financial Report and recommendation. An error in this Report was corrected by a subsequent filing on August 8, 2006. The Report presented E911 DBMS rates for both Verizon-WV and Frontier. Staff asserted that both sets of rates were cost-based. Frontier's cost-based rate per month was higher than the Verizon-WV rate of $210/1000 access lines because Frontier had included certain cost elements not included by Verizon-WV in its rate determination. Although Verizon-WV agreed that the cost elements included by Frontier

were proper, Verizon-WV stated that it would honor its rate as submitted and analyzed by Staff. Although other telephone utilities had submitted tariff rates, Staff indicated that these rates were not cost-based, and Staff recommended that the other telephone utilities use the lower cost-based rates, unless good cause could be shown for using the higher tariff rates. On August 18, 2006, Verizon confirmed by letter that it was committed to the rates as submitted, but only in the context of a settlement of this proceeding.

On November 1, 2006, Staff filed its Fourth Final Joint Staff Memorandum, noting that none of the remaining ILEC's had filed cost evidence in support of their higher E911 DBMS rates and charges. Staff recommended that (1) Verizon-WV immediately update its previously filed E911 DBMS tariff to reflect the rates finally agreed upon through negotiations and (2) the Commission order all ILEC's to file updated E911 DBMS tariffs.

On November 3, 2006, the Commission entered an Order requiring each of the remaining ILECs to either accept the Frontier E911 DBMS tariff rates as their own or to submit their own cost-based rates. Staff was ordered to work with Jefferson County to ameliorate the impact of the loss of technical support if possible. Finally, this matter was set for hearing to be held on January 18, 2007. The Commission ordered public notice of the hearing through a statewide Class I legal publication.

On November 13, 2006, Verizon-WV responded to the Staff Fourth Final Joint Staff Memorandum. Verizon-WV stated its agreement in principle with the Staff recommendations. Verizon asked that it be allowed until December 14, 2006, to file updated E911 DBMS tariff rates, acknowledging that the Commission had entered an order on November 3, 2006, requiring the remaining ILECs to file their own cost-based rates by December 4, 2006, or accept the Frontier rates as their own.

Only Hardy Telecommunications, Inc., and West Side Communications responded to the Commission Order of November 3, 2006. Both ILECs stated that they would accept the Frontier cost-based E911 DBMS rates as their own.

On December 22, 2006, Verizon-WV filed its revised tariff, noting that the rates are based on the assumption that the non-responding ILECs would accept the Frontier rates as their own.

Continuance of the Hearing and Subsequent Efforts to Set a Procedural Schedule

On December 28, 2006, Kanawha Metro filed a motion to continue the hearing scheduled for January 18, 2007. In support of its motion, Kanawha Metro stated that additional time was necessary in order to have a forensic accountant review the cost data submitted in support of the Verizon-WV E911 DBMS proposed tariff rates. Kanawha Metro also indicated that the State 911 Conference was scheduled during the week of the hearing. On January 8, 2007, the Commission granted the Kanawha Metro motion and ordered that public notice of the continuance be made by statewide publication.

On January 10, 2007, the Commission received a letter from the E911 Council indicating that at a special meeting held on January 5, 2007, the E911 Council had unanimously approved a motion to approve the Verizon-WV proposed E911 DBMS tariff on a statewide basis. The motion also argued against continuing the January 18, 2007, hearing. The E911 Council emphasized the emergency nature of the action by indicating that both Mercer and Jefferson Counties needed to update their CPE and would not have emergency maintenance service on their systems after December 31, 2006. The E911 Council also voiced concern that it would take Verizon-WV six to nine months to establish a fully operational system after all final approvals are received.

Similarly, on January 11, 2007, Jefferson County filed its opposition to the continuance of the January 18, 2007 hearing date, arguing that it would actually be more convenient to hold the hearings when the State 911 conference is in session because many parties would be in Charleston. Jefferson County also asserted that any further delay of a case that was already three years old would be detrimental to those counties without E911 service. Jefferson County moved the Commission to rescind its Order dated January 8, 2007, and allow the hearing to take place as previously scheduled. On January 17, 2007, the Commission denied the E911 Council request to hold the January 18, 2007 hearing as previously scheduled. By that same order, the Commission denied the Jefferson County motion to rescind the January 8, 2007 Order.

On January 22, 2007, Kanawha Metro filed a letter by counsel suggesting that the Commission consider the time required for Kanawha Metro to review responses to data requests when rescheduling the hearing date.

On February 12, 2007, Staff, the E911 Council, Jefferson County, Verizon-WV and Frontier filed a joint motion requesting that the Commission establish a new procedural schedule. The week of March 5, 2007 was suggested as a new hearing date. Kanawha Metro opposed that joint motion. Kanawha Metro stated that it had received cost information from Frontier on February 5, 2007, and that meaningful review would require more time than the joint motion would provide.

On March 5, 2007, the Commission entered a Procedural Order which denied the procedural schedule as presented in the February 12, 2007 joint motion. All parties were directed to confer and file a joint proposal for a mutually agreeable procedural schedule.

Kanawha Metro Motion to Dismiss and Responses Thereto

On March 9, 2007, Kanawha Metro filed a motion to dismiss this proceeding for lack of subject matter jurisdiction. Kanawha Metro argued that *W. Va. Code* § 7-1-3cc granted the authority to create enhanced 911 systems to the counties of the State of West Virginia. Kanawha Metro asserted that the Commission was exceeding its jurisdiction by creating a statewide E911 system through the approval of tariff rates and charges for telephone utilities.

Staff filed a response in opposition to the Kanawha Metro motion to dismiss on March 13, 2007. Staff argued that *W. Va. Code* § 24-6-3(a) requires that the Commission develop, adopt and periodically review a comprehensive plan establishing the technical and operational standards to

Public Service Comn
of West Virgini
Charleston

be followed in establishing and maintaining emergency telephone systems and enhanced emergency telephone systems. County E911 systems must be consistent with the comprehensive plan. If disputes arise among the counties, the Commission is obligated statutorily to centralize any multiple enhanced emergency telephone systems. The Staff also argued that the jurisdiction of the Commission to regulate services and rates of public utilities is clear under controlling authority.

Verizon-WV responded to the Kanawha Metro motion to dismiss for lack of jurisdiction on March 16, 2007. On March 20, 2007, Frontier filed a response in opposition to that same motion.

The Kanawha Metro Motion to Enjoin Ex Parte Communications and the Staff Response

On March 13, 2007, Staff received correspondence from Jimmy Gianato, Director of the West Virginia Division of Homeland Security and Emergency Management, asking that the correspondence be forwarded to the Chairman of the Commission. Mr. Gianato encouraged the Commission to schedule a hearing in this matter at the earliest possible date. This correspondence was docketed in this proceeding as part of the official case file by Staff on March 14, 2007. On March 19, 2007, Kanawha Metro filed a motion for an order enjoining the parties and interested entities/individuals from attempting to communicate *ex parte* with the Commission. Staff opposed the motion as unnecessary, arguing that the protections sought by Kanawha Metro were already afforded by law.

Proposed Hearing Schedules, Additional Filings and Intrado's Petition to Intervene

On March 22, 2007, Kanawha Metro filed a Reply to the Response of Staff and Verizon-WV. Kanawha Metro requested an immediate hearing or ruling on the issue of jurisdiction.

On March 26, 2007, Verizon, the E911 Council, Jefferson County, Frontier, the Consumer Advocate Division of the West Virginia Public Service Commission (CAD) and Cingular filed a jointly proposed procedural schedule. On March 26, 2007, Washington/Baltimore Cellular Limited Partnership dba Cingular Wireless LLC also filed a request that its name as a petitioner to intervene be changed to New Cingular Wireless PCS (New Cingular).

On March 27, 2007, Kanawha Metro filed a proposed procedural schedule that sought to have this matter set for hearing during the week of June 25-30, 2007. This proposed schedule was amended by a filing received on March 28, 2007.

On April 2, 2007, Intrado Communications, Inc.(Intrado) filed a petition to intervene in this proceeding.

Verizon-WV filed a letter with an attached e-mail message on April 2, 2007, to supplement the record regarding the jointly proposed procedural schedule.

On April 12, 2007, Kanawha Metro filed a motion in support of the Intrado intervention, and on April 13, 2007, Kanawha Metro filed a motion to stay this proceeding pending resolution of its

outstanding motion to dismiss. On April 13, 2007, Verizon-WV filed a letter stating that it had no objection to the intervention of Intrado.

Verizon-WV also filed a response on April 23, 2007, to the Kanawha Metro motions to further delay the proceeding.

Revised Verizon Cost Study

On April 4, 2007, Verizon-WV made a revised cost study available to all parties who had signed a proprietary agreement. According to Verizon-WV, the revised study contained certain changes including: (1) corrected mileage calculations and channel termination costs on certain circuit costs; (2) annuity factors applied to net present value expenses in several cost components; (3) power and engineered, furnished and installed (EF&I) factors applied for several cost components; and (4) installation services investments added to certain cost components. The new cost study supported a rate of $196.14 per thousand ($196.14/1000) access lines, but Verizon again stated that it would continue to honor its commitment to the initially proposed rate of $182 per thousand ($182/1000) access lines and its agreement to phase in the proposed increase.

April 24, 2007 Procedural Schedule

By Order entered on April 24, 2007, the Commission entered an order: (1) setting a procedural schedule; (2) dismissing the Kanawha Metro motion to enjoin ex parte communication as unnecessary; (3) granting the Intrado motion to intervene; and (4) denying the Kanawha Metro motion to stay. The following procedural deadlines were established and statewide public notice as a Class I legal advertisement was required:

Pre-filed direct testimony	To be filed on or before May 31, 2007
Pre-filed rebuttal testimony	To be filed on or before June 11, 2007
Hearing	To be held on June 21-22, 2007
Initial Briefs	To be filed on or before July 20, 2007
Reply Briefs	To be filed on or before July 30, 2007

Because the Commission concluded that a factual hearing would assist it in ruling on the jurisdictional issue, the Commission deferred ruling upon the Kanawha Metro motion to dismiss until after the hearing.

Pre-hearing Motions, Filings and Orders

New Cingular filed a motion on May 29, 2007, for additional time within which to file rebuttal testimony. New Cingular's counsel was scheduled to be out of the United States from June 1, 2007 until June 11, 2007. Additional time beyond June 11, 2007, would be required to review the prepared direct testimony and to prepare rebuttal, if necessary.

On May 31, 2007, Verizon-WV, Frontier, the E911 Council, Kanawha Metro, Intrado, Jefferson County, and Staff filed prepared direct testimony in support of their respective positions.

Verizon-WV prepared direct testimony in panel format. Cingular and CAD filed letters stating that they would not file prepared direct and reserved the right to cross-examine and to file rebuttal testimony.

On May 31, 2007, Verizon-WV filed a motion for a protective order, seeking protection of certain pre-filed direct testimony as proprietary in nature. As required by Commission practice, Verizon filed both public and proprietary versions of its prepared direct testimony. Verizon relied upon the trade secrets exception of the West Virginia Freedom of Information Act, *W. Va. Code* § 29B-1-1, et seq. (WVFOIA), stating that the information provided and identified as proprietary in nature was known to few individuals and that disclosure of the information to competitors would give those competitors a business advantage and harm Verizon-WV.

On June 4, 2007, Intrado filed a letter stating that it had no objection to the additional time requested by Cingular to prepare rebuttal testimony, and on June 7, 2007, Frontier filed a response to the Verizon motion for a protective order.

By Order entered on June 8, 2007, the Commission extended the time deadline for all parties to pre-file rebuttal testimony to June 15, 2007.

On June 11, 2007, Kanawha Metro filed a motion to strike the prepared direct testimony of Verizon-WV on the basis that the testimony in panel format hampered cross-examination. Kanawha Metro requested that Verizon-WV either identify each respondent in its prepared direct testimony or that the testimony be stricken.

The Mercer County Communications Center (Mercer County) filed a letter with the Commission on June 11, 2007. In the letter, Mercer County discussed the Jefferson County petition to intervene and explained that most of the statements made by Jefferson County were true for Mercer County and any other E911 centers using Motorola CPE in counties served by Frontier. Mercer County listed many of the difficulties it had encountered in providing E911 service and expressed concern about further delays in this proceeding. On June 11, 2007, the CAD filed a motion for additional time to respond to the Verizon-WV motion for protective order.

Verizon-WV responded on June 13, 2007, to the Kanawha Metro motion to strike the Verizon-WV prepared direct testimony in panel format. Verizon-WV pointed out that this form of presentation of prepared testimony had been approved by the Commission on multiple occasions since 1998 and requested that it be allowed to proceed using the panel format. Verizon-WV had updated its testimony on June 13, 2007 to identify which of its panel witnesses were sponsoring which portions of its pre-filed direct testimony.

On June 15, 2007, Verizon-WV, Frontier, Kanawha Metro, and Staff filed prepared rebuttal testimony.

The Kanawha Metro motion to strike the testimony of Verizon-WV was denied by Commission order on June 15, 2007. Recognizing that the Commission has previously permitted the use of panel testimony in order to expedite complex hearings, the Commission allowed Verizon-WV to proceed with its panel presentation.

On June 15, 2007, the Commission also granted the CAD motion for an extension of time to file a response to the Verizon May 31, 2007 motion for a protective order. CAD was given until June 19, 2007, to file a response and CAD filed its response in opposition to the Verizon-WV motion for a protective order on June 19, 2007.

On June 15, 2007, CAD filed a letter indicating that CAD had opted not to file rebuttal testimony, and reserving the right to cross-examine at the hearing. On that same date, Frontier informed the Commission by letter that it would not file rebuttal testimony for Randall J. Brockman. On June 15, 2007, Cingular also filed a letter indicating that it would not file rebuttal testimony and reserving the right to cross-examine and present testimony at the hearing.

Evidentiary Hearing

On June 21 and June 22, 2007, the Commission held the hearing as scheduled in the Howard M. Cunningham Hearing Room in the Public Service Commission in Charleston, West Virginia. At the hearing, Intrado filed a motion for *pro hac vice* admission of Rebecca Ballesteros to appear as counsel to Intrado. The Commission granted the motion. Verizon, Frontier, Cingular, the E911 Council, Kanawha Metro, Intrado, Jefferson County, CAD, and Staff appeared by counsel. Seven representatives of the public appeared at the hearing to voice their concerns about the current state of E911 service in West Virginia. They appeared on behalf of seven county PSAPs, including Preston, Summers, Ritchie/Doddridge, Logan, Webster, Tucker and Cabell Counties. Testimony was taken and evidence introduced, at the close of which this matter was submitted for a decision pending completion of a briefing schedule.

Post-hearing Filings and Orders

On June 28, 2007, Verizon-WV filed a motion for interim relief. Verizon-WV sought to maintain the status quo pending final resolution of this matter by seeking the Commission authorization for Verizon to continue charging monthly $110/1000 line rate for E911 DBMS. Verizon-WV's $110 rate was scheduled to drop to $85 on July 1, 2007, in accordance with the Commission Final Order in Case No. 01-1117-T-T, *Verizon West Virginia Inc.*, September 13, 2001. Verizon-WV had refrained from assessing the E911 rate to CLECs and wireless telecommunications providers until this case is finally resolved. Even with the additional revenue from the CLECs and wireless telecommunications providers, the Verizon-WV rate would need to increase to over $170/1000 lines. Verizon-WV indicated that it would be difficult to implement the required billing system changes to first reduce the rate from $110 to $85, then to increase it to a much higher rate within a short period of time. Verizon-WV thus sought authorization to continue to charge the $110/1000 line rate as currently being billed until this case is finally resolved.

Public Service Comm
of West Virgini
Charleston

On July 2, 2007, Frontier also filed a motion for interim relief. Despite higher underlying costs, Frontier has been adopting the Verizon-WV rates for the provision of E911 DBMS. For the same reasons provided by Verizon in support of its motion for interim relief, Frontier moved the Commission to authorize Frontier to maintain the status quo insofar as E911 charges are concerned, pending final resolution of this case.

On July 2, 2007, the Commission entered an order approving the Verizon-WV June 28, 2007 motion for interim relief. Verizon-WV was authorized to continue charging monthly $110/1000 lines for E911 DBMS until the final resolution of this proceeding. The Commission also amended the briefing schedule to extend the time for filing initial briefs until July 26, 2007, with reply briefs due on August 6, 2007. On July 3, 2007, the Commission granted Frontier interim relief on its rates for the same reasons as it granted the Verizon-WV motion for interim relief.

Verizon-WV filed a motion to extend the briefing schedule on July 20, 2007. The motion was granted by Commission Order entered on July 24, 2007. It was ordered that post-hearing Initial Briefs would be filed on August 9, 2007, and post-hearing Reply Briefs would be filed on August 20, 2007.

Post-hearing Initial Briefs, including proposed Commission Orders, were filed by Commission Staff, Verizon-WV, Frontier, Intrado, Kanawha Metro, Jefferson County, and CAD. Post-hearing Reply Briefs were filed by Verizon-WV, Frontier, Intrado, Kanawha Metro, and CAD.

For discussion purposes, references to the exhibits will be by exhibit identification number made at the hearing, such as VZ Exh. 1, p. 1. All references to the transcript will be reflected as follows: Tr. Vol. . pp.

DISCUSSION

As part of this proceeding the Commission reviewed the pre-filed and direct and rebuttal testimonies, observed the witnesses presented during the two-day evidentiary hearing, and read the initial and reply post-hearing briefs.

Currently, in West Virginia counties outside the Verizon-WV service area, if a PSAP receives an emergency call from a CLEC, wireless, or VoIP customer, the only information received is that similar to Caller ID information. If the call is lost, there is no number to call back. Further, the location of the caller is unknown and valuable time is lost in responding to the caller (if a response can be made at all).

With full Phase I and II E911 functionality, county PSAPs will automatically receive information about the number from which each 911 call is made, the number to call back in case the call is disconnected or additional information is needed, and the location of the caller. The public safety, security and health benefits of fully enhanced E911 services are enormous to citizens currently living without such service. These benefits, however, also extend to all citizens of the State and to tourists as they travel throughout West Virginia.

The lives and property of West Virginia residents and visitors are substantially more at risk when located in the Counties of Mercer, Jefferson, Calhoun, Tucker, Grant, Hampshire, Pleasants, Wayne, Webster and McDowell as the result of the unavailability of E911 DBMS.

Preliminary Matter (1):

Whether the Commission should grant the Kanawha Metro motion to dismiss for lack of subject matter jurisdiction over this proceeding?

In its Motion to Dismiss for Lack of Subject Matter Jurisdiction, filed March 9, 2007, Kanawha Metro argues that the Commission lacks subject matter jurisdiction to create and implement an E911 system because under *W. Va. Code* § 7-1-3cc only a county commission has that authority. Kanawha Metro also argues that the Commission lacks the authority to compel any county to participate in an E911 system without its agreement.

W. Va. Code § 7-1-3cc in relevant part states:

> In addition to possessing the authority to establish an emergency telephone system pursuant to section four [§ 24-6-4], article six, chapter twenty-four of this code, a county commission or the county commissions of two or more counties may, instead, establish an enhanced emergency telephone system or convert an existing system to an enhanced emergency system. The establishment of such a system shall be subject to the provisions of article six [§§ 24-6-1 et seq.] of said chapter. The county commission may adopt rules after receiving recommendations from the West Virginia Enhanced 911 Council concerning the operation of all county emergency communications centers or emergency telephone systems centers in the state[.]

The statute is clear that a county commission or a group of county commissions may establish an E911 emergency telephone system or convert an existing system to an enhanced system, but *must* comply with the statutory requirements of *W. Va. Code* §§ 24-6-1, et seq., as specified in *W. Va. Code* §7-1-3cc.

W. Va. Code § 24-6-3(a) requires that the Commission develop a comprehensive enhanced 911 plan. In relevant part, the *Code* provision states: "The public service commission shall develop, review a comprehensive plan establishing the technical and operational standards to be followed in establishing and maintaining emergency telephone systems and enhanced emergency telephone systems." Additionally, the Commission must review the construction and switching replacement projections of each operating telephone company . See *W. Va. Code* § 24-6-3(c).

Once a comprehensive plan is adopted by the Commission, county governments have the discretion to establish an emergency telephone system within their jurisdictions. However, the county plan must be consistent with the comprehensive plan. While there is no statutory mandate that there be a single system, the systems should be centralized. See *W. Va. Code* § 24-6-4. Subsequently, however, if a conflict arises among county commissions, among telephone

companies, between a telephone company or companies and a county commission or commissions, or between the department of public safety [West Virginia State Police] and any of the foregoing entities concerning an enhanced 911 system or systems, the Commission has been given the statutory duty by the Legislature to resolve those conflicts. Among the statutory remedies provided to the Commission is the authority to centralize any multiple enhanced emergency telephone systems. See *W. Va. Code* §24-6-7.

The statutory authority of the Commission to adopt and periodically review a comprehensive plan for establishing and maintaining emergency and enhanced emergency telephone systems is in addition to the authority of the Commission to regulate services and rates of public utilities. The general powers of the Commission to approve tariffs and rates under *W. Va. Code* § 24-2-3 extend to the tariffs and rates for E911 services provided by telecommunications carriers. See, *W. Va. Code* §§ 24-1-1(a), 24-2-2(a), 24-2-4a, 24-2-4b, and 24-2-4c.

In its motion to dismiss, Kanawha Metro challenges the Commission authority to compel county participation in an E911 system. The Commission authority to review and consider the Verizon-WV proposed statewide rates for E911 service does not diminish the opportunity for other providers to offer E911 service in the State. Section 253(a) of the Telecommunications Act of 1996 specifically states:

> (a) IN GENERAL.—No State or local statute, or regulation, or other State or local legal requirement, may prohibit or have the effect of prohibiting the ability of any entity to provide any interstate or intrastate telecommunications service.

Accordingly, all competitors remain free under federal law to enter the market to offer competing services.

Considering the evolution of this proceeding, the Commission has: (1) considered a proposed tariff filing by a regulated telecommunications provider; (2) created a task force and designated its responsibilities, all of which fall within the statutory mandate that the Commission adopt and periodically review a comprehensive plan establishing the technical and operational standards to be followed in establishing and maintaining emergency telephone systems and enhanced emergency telephone systems; (3) been advised concerning the reasonableness of the Verizon-proposed statewide DBMS rates and charges; and (4) considered these and other related issues in an extensive and well presented hearing by the parties.

The Commission finds that it has not only the authority, but the duty to establish, review, and update the comprehensive enhanced 911 plan and to review all utility rates and charges. Further, in exercising its statutory authority, the Commission is not compelling county participation in a statewide E911 system, as Kanawha Metro maintains in its motion to dismiss and Proposed Findings of Fact and Conclusions of Law. See, Kanawha Metro Proposed Finding of Fact 5. The Verizon-WV proposed E911 service is, in fact, not mandatory and not exclusive. The Kanawha Metro Motion to Dismiss for Lack of Subject Matter Jurisdiction is denied.

Issues:

1. Whether the Commission should reject the Verizon-WV proposed statewide, phased-in tariff on the grounds that Verizon-WV did not file a Tariff Rule 42 Exhibit?

Kanawha Metro and Intrado claim that although cost data supporting the proposed E911 rate was filed with the Commission in this proceeding, Verizon-WV did not comply with *Rule* 42 of the Commission *Rules for the Construction and Filing of Tariffs,* 150 *C.S.R.* 2 *(Tariff Rules)* in that total company financial data included in a *Tariff Rule* 42 Exhibit was not filed as part of the proposed tariff change. Tr. Vol. II, p. 286. They also argue that Verizon-WV did not apply for or receive a waiver of such filing requirements. Tr. Vol II, p. 375.

The telecommunications industry, however, has not been regulated on a rate-base/rate-of-return basis for nearly two decades. Tr. Vol II, pp. 372-373. Consequently, telecommunications carriers routinely make filings without including full *Rule* 42 Exhibits, pursuant to the Commission *Tariff Rules. Id.* As Staff witness Dannie Walker explained at hearing, Verizon-WV has not had a general rate case in West Virginia since 1984. Tr. Vol. II, pp. 372-373; *C & P Telephone Co. of W. Va.,* Case No. 84-747-T-42T, Final Order (Sept. 6, 1985).

Since that time and because of the tremendous changes within the telecommunications industry, the Commission has regulated Verizon-WV and other telecommunications providers in West Virginia by a series of incentive regulation plans, commonly known as alternative rate plans. Alternative rate plans allow for a relaxation of traditional rate-base/rate-of-return regulation in telecommunications. The State Legislature specifically endorsed this regulatory approach in 1990 when it adopted *W. Va. Code* § 24-2-3c, allowing the Commission to cease regulation of "workably competitive" telecommunications services. Subsection (e) of that statute states "[n]othing in this section limits the commission's power to continue to engage in incentive or other innovative forms of rate-making in connection with its regulation of those services which it has not determined to be subject to workable competition."

During the course of this proceeding, Verizon-WV, CAD and Staff in fact were negotiating in a different Commission proceeding, a joint petition for review and approval of a Market Transition Plan ("MTP"), an alternative rate plan governing the Verizon-WV services and rates through 2010. On December 15, 2006, the parties filed the joint petition, which the Commission thereafter approved. See, Verizon West Virginia, Inc., Case No. 06-1935-T-PC, Commission Order (Dec. 21, 2006).

Under Paragraph 4(a)(I) of the MTP, the Commission allowed Verizon-WV to raise E911 rates to the level to be determined by the Commission in this proceeding. The same paragraph also provided for the four-step phase in of the Verizon-WV E911 rates. On page 2 of the December 21, 2006 Order approving the MTP Joint Stipulation, the Commission stated that any rate changes contemplated by the MTP would not become effective until after proper notice and future order of the Commission. Verizon-WV filed a copy of the required notice with the Commission on February 13, 2007. That notice read in pertinent part:

The MTP includes rate caps on basic and discretionary services. Allowed rate changes under the rate caps include:

> Subject to phase-in provisions specified in the MTP, Verizon WV may (1) introduce a new pricing structure for Enhanced 911 services in accordance with any order that may be entered by the Commission in Case No. 04-0102-T-GI or related case concerning the provision of Enhanced 911 database management services, or (2) to request by appropriate filing with the Commission that the rates and charges for Enhanced 911 services be increased, if necessary, to a level that is sufficient to recover the costs of providing such services.

Following the publication of the required notice and review of the proposed rate changes, on March 26, 2007, the Commission entered an Order approving the rate changes proposed in the MTP. *Verizon West Virginia Inc.*, Case No. 06-1935-T-PC, Commission Order (Mar. 26, 2007).

The record clearly shows that Kanawha Metro and Intrado have been afforded actual notice of the Verizon-WV proposed E911 rate changes as witnessed by their intervention and participation in this case. The same is true of the West Virginia E911 Council and numerous other county PSAPs that actually intervened or appeared as part of this proceeding. In addition, Kanawha County and other county PSAPs have had constructive notice of the same E911 rate changes through publication of the notice in Case No. 06-1935-T-PC. All parties willing to review cost data, subject to a confidentiality agreement, have had an opportunity to review that data and to file testimony rebutting the filings submitted by Verizon-WV. Kanawha Metro and Intrado have fully availed themselves of this opportunity.

The Verizon-WV tariff proposal and proposed rates have been properly noticed to the public, and submitted by Verizon-WV as required by the Commission in this proceeding. The review of the proposed tariff change for E911 service in this case is consistent with the MTP approved by the Commission on March 26, 2007. The Commission concludes that *Tariff Rule* 42 does not create a procedural impediment preventing the review by the Commission of the Verizon-WV proposed rates for E911 service in this case.

The Commission may waive *Tariff Rule* 42 filings and frequently does so for good cause shown.[1] *Tariff Rule 42*. Good cause exists because for many years, Verizon-WV has transitioned in the telecommunications market through a series of Commission approved plans in Case Nos.

2. Whether Verizon-WV proposed E911 tariff is reasonable with respect to cost?

Verizon-WV used a total service long-run incremental cost study, a forward-looking cost methodology, to develop proposed rates. For the past twenty years, the telecommunications industry has used forward-looking cost methodologies to develop prices for such services as 911, basic exchange service, vertical services, and data services. Tr. I, p. 94 The FCC requires the use of forward-looking costs for pricing unbundled network elements. Tr. II, p. 79.

Forward-looking cost study methodologies price a service based upon the total costs to provide a service, completely revising the entire pricing without reference to how those services previously were priced. In contrast, the Kanawha Metro cost analysis begins with complete acceptance of the historical rates and services Verizon-WV currently provides, and then attempts to identify those additional costs that Verizon-WV will incur to provide service outside of its existing incumbent service area. Metro Exh. 4, p. 4.

The bases of the Kanawha County claim are various critiques of the Verizon-WV cost study presented by the Kanawha Metro witness Morgan Winfree. However, each of these critiques was rebutted by the Verizon-WV witness. VZ Exh. R [Coates]. In addition, Kanawha Metro has never presented its position on what an appropriate rate should be.

The Verizon-WV tariff is reasonable when compared to its current tariff. Its proposed monthly rate for E911 service of $182/1000 access lines averages out to approximately a 65% increase over the current rate of $110/1000 access lines, although the actual increase varies by county. Under the terms of the Verizon-WV current tariff, however, the $110/1000 line rate can be applied to all access lines: ILEC, wireless, and CLEC, but Verizon-WV has only been billing for ILEC lines. Tr. Vol. I, p. 66. If Verizon-WV applied the current tariff as written, the bills for certain PSAPs would more than double because there are now more wireless phones in West Virginia than land line phones. *Id.* This would result in an effective rate per land line double the current rate.

The Verizon-WV proposed E911 rate was developed by including wireless costs. As a result, bills to PSAPs will only be based on the number of land lines served by each PSAP, as clarified by Verizon-WV at hearing. Tr. Vol. II, pp. 50-52. Footnote 4 on page 14 of the proposed tariff sets forth the method by which PSAPs will be billed for E911 service each month. Verizon-WV Exh. 1. Under the original language of footnote 4, the number of land line and wireless calls or lines in each county are assumed to be equal during the initial billing period. However, in subsequent years, footnote 4 stated that billing would be in proportion to the ratio of wire-line calls to wireless calls. Tr. Vol. II, p. 45. At hearing, Verizon-WV agreed to modify the language of footnote 4 to maintain the assumed equal ratio of land line and wireless calls for billing purposes. Tr. Vol. II, pp. 50-52. Thus, billing under the proposed tariff will be based solely on the number of land lines, including CLEC lines, served by each PSAP. Tr. Vol. I, p. 69. This stands in contrast to the current tariff that

allows billing of all lines. *Id.*, pp. 66; 74. When compared in this way, the effective rate per land line under the current tariff and the proposed tariff is almost identical, supporting the overall reasonableness of the Verizon-WV proposed rates.

Completely resetting the Verizon-WV prices, rather than building upon historical rates as Kanawha Metro advocates, is appropriate for several reasons. First, the Verizon-WV rates have not been adjusted since 2001. Tr. Vol. II, p. 40. Second, Verizon-WV began providing DBMS to PSAPs within its service area, including Kanawha Metro, without adjusting rates to reflect the additional service. Tr. Vol. II, pp. 92; 212-213. Third, the Verizon-WV service area under the plan will be increased significantly and its costs will change. Tr. Vol. I, pp. 72; 169-170; 176; Tr. Vol. II, p. 116; Frontier Exh.1, p. 10. Fourth, Verizon-WV has not been assessing all of the charges that are provided in its current tariff. Tr. Vol. I, pp.70-71. Taken together, these factors favor completely revisiting the Verizon-WV rates. Using its cost methodology, Kanawha Metro would omit any correction of rates for the additional DBMS it has been receiving and continues to receive without charge and would omit any correction for tariff charges that Verizon-WV has not been assessing.

3. ***Whether approval of the Verizon-WV statewide averaged E911 tariff would unduly discriminate against Kanawha-Metro or any other PSAP?***

The Verizon-WV proposed tariff will charge PSAPs $182/1000 access lines monthly for the provision of E911 service throughout the State by averaging all of its costs for E911service across the entire State. Kanawha Metro already receives E911 DBMS from Verizon-WV. In fact, Kanawha County Commissioner Kent Carper diligently worked with the Verizon-WV predecessor, C & P Telephone Company, over twenty years ago to develop an E911 system for Kanawha County which was the first in the State and one of the first in the Eastern United States. Tr. Vol II, p. 322. At that time, the State of West Virginia did not assist in paying for E911 so the Kanawha County Commission and the City of Charleston subsidized the Kanawha County 911 system in the amount of $500,000 and $1 million per year, respectively. The amounts subsidized by the City and the County were in addition to the amount the citizens of Kanawha County contributed by supporting every requested increase necessary to build the system. Tr. Vol. II, pp. 320, 323-324.

Kanawha Metro has worked hard and spent dearly to develop E911 service for county citizens and maintains that it derives no additional benefit from the provision of E911 DBMS to the ten Frontier counties. Metro Exh. 1, p. 7. Kanawha County houses two major Verizon-WV switching centers and is opposed to subsidizing the more rural, less populated counties that are located at greater distances from the Verizon-WV switching centers. *Id.*

The Verizon-WV averaging of its costs across the State is a continuation of the current E911 tariff that has used statewide averaged rates since 1994. Tr. Vol. I, p. 59. This Commission has historically supported statewide and utility-wide rates for decades as a reasonable, non-discriminatory and equitable cost-based way to price service offerings:

> The Commission is of the opinion that the Company's STP [single tariff pricing] proposal results in a just, reasonable, sufficient and non-discriminatory rate for all of the customers of WVWC [West Virginia Water Company]. Each customer will pay the same rate for a like and contemporaneous service made under the same or substantially similar circumstances and conditions. ... A STP methodology... does not result in undue discrimination or favoritism between persons and between locations for a like and contemporaneous ...service.

(Emphasis in original).

West Virginia Water Company, Case No. 81-126-W-42A, "Order Approving Single Tariff Pricing" (May 26, 1982); app. den. 70 ARPSCWV 480 (Sept. 21, 1982). See also, Pendleton County PSD, Case No. 94-1123-PWD-CN, Commission Order (Jan. 9, 1996).

Understandably, for the reasons set forth above, Kanawha Metro opposes the Verizon-WV proposed tariff. In today's computer and technology era, it is conceivable (but not practical) to price service individually. The question is whether that would be more equitable or efficient (or more accurate for that matter). It has long been the case that rates are averaged across a service area of a regulated carrier. All customers pay the same rate for the same class of telephone service from the same carrier, regardless of the cost to serve an individual customer. Tr. Vol. II, pp 160-161; 180; 337; Frontier Exh. 3, p. 5; Frontier Exh.1, p. 9. Just as the Verizon-WV rates for E911 services currently are averaged within its service area, it proposes that E911rates be the same throughout a newly-certificated E911 service area. Tr. Vol. I, p. 201. See also Frontier Exhibit 1, p. 9.

The record does not support overturning this long-standing regulatory principle or overturning the Commission policy of averaging rates for E911 service that has existed since 911 rates were first established in *General Investigation into the Practices of and Rates Charged by Certain Local Exchange Carriers with Respect to Emergency Telephone Systems service,* Case No. 93-0764-T-GI, Commission Order (Dec. 21, 1993). Tr. Vol. II, pp. 357-358; Frontier Exh. 2, pp. 2-3.

While Chapter 24 of the *W. Va. Code* is replete with prohibitions against undue discrimination, none of the statutory provisions preclude any and all discrimination, *per se.* See *W. Va. Code* §§ 24-1-1(a)(4); 24-2-2(a); 24-2-3; 24-2-4b(b); and 24-2-7(a). The approval of statewide or averaged rates to assure equal accessibility to essential E911 DBMS rates by all West Virginia PSAPs will not create undue discrimination against those county PSAPs who currently receive E911 DBMS.

4. Whether E911 rates should be bundled?

The Verizon-WV E911 tariff rate in West Virginia has been bundled since 1994. This means that there is a single rate for the entire E911 service. PSAPs cannot purchase individual pieces of

the E911 service on an a la carte basis. Intrado objects to the lack of unbundled rate elements in the proposed tariff as being anti-competitive.

Although Verizon-WV stated that it could unbundle its rates, it has resisted doing so because the PSAPs had requested the bundled rate. Tr. Vol. I, p. 160. Verizon offers unbundled E911 tariffs in other states. In fact, Verizon-WV witness Christopher Coates said that he could not compare rates in West Virginia to other Verizon states because those states had *unbundled* rate elements. *Id.*, pp.101-102. At hearing, Staff testified to the rates from the Verizon E911 tariff in Maryland that offered a bundled rate, but also had unbundled rate elements for selective routing and ANI services. Tr. Vol. II, pp. 340-341.

Verizon-WV has offered to make the separate components of E911 services available in a timely manner. Proposed Order of Verizon-West Virginia, p.111, Verizon-WV Findings of Fact 27-28. Additionally, Verizon-WV has modified its original proposal to make clear that counties could opt out, in whole or in part, from E911 service with Verizon-WV. VZ Exh. R, p. 4; Tr. Vol. I, p. 215.

The Commission will approve the Verizon-WV bundled averaged E911 tariff. Contrary to the concerns of Intrado, the Verizon-WV proposed tariff allows for competitive entry by other providers of E911 services. Nothing in the plan makes Verizon-WV the exclusive provider of E911 services. Instead, the rates Verizon-WV developed are based on the assumption that all counties in West Virginia participate in the plan and that Verizon-WV provides service to all counties in the State. If either of those assumptions does not accurately reflect how the plan is implemented, rates could change. Tr. I, pp. 21; 83; 209-211.

The Commission will also require Verizon-WV to supplement its E911 tariff with unbundled rate elements for selective routing and ANI/ALI services. Supporting cost information should also be filed with the unbundled rate elements. This will provide a foundation for competitive E911 future offerings in the State and provide more purchasing options to PSAPs, either individually or collectively.

5. Whether the Verizon-WV proposed offset of implementation costs with Market Transition Plan public benefit grant funds in order to phase in its rates would be anti-competitive?

The Verizon-WV Commission-approved MTP is an alternative regulation plan that balances competing interests and viewpoints with a goal of benefitting the public interest by ensuring reasonable rates. See, e.g., Citizens Telecommunications Company of West Virginia dba Frontier Communications of West Virginia, Commission Order, Case No. 05-0040-T-PC, Attachment ¶¶ 11, 13 (May 4, 2005). Under Section 4 of the MTP, E911 services are classified as Category I services, the prices of which are normally set for the duration of the plan but were specifically

exempted because of the pendency of this proceeding. Verizon-WV agreed to phase in its proposed E911rates over four steps if the rates were approved as part of the resolution of this proceeding. Verizon West Virginia, Inc., Case No. 06-1935-T-PC, Commission Order (March 26, 2007).

The MTP includes a public benefits expenditure provision. Under Section 15 of the MTP, Verizon-WV is required to make annual grants totaling $1.7 million to the State, local agencies, or community-based non-profit groups for public benefits. However, Section 15 also states that if the phase in of E911 rates is approved, Verizon-WV can offset its annual public benefits' commitment by the amount of revenue forgone as a result of the phase in. *Id.*

The rate phase in would result in a monthly rate for E911 service of $128 per thousand ($128/1000) lines the first year; $146 the second; $164 the third; and $182/1000 lines the fourth year. Tr. Vol. I, p. 87. Verizon-WV has not sought a flash cut to the existing rate; on the contrary, with the rate phase in, Verizon-WV will receive approximately $900,000 less the first year than under full rates. Consequently, pursuant to the MTP, the Verizon-WV public benefits' commitment would be offset by $900,000 the first year, and lesser amounts the next two years. Tr. Vol. I, p. 89.

Intrado claims that the phase in of the Verizon new E911 rate is anti-competitive since the rates during the phase in will be below the costs indicated by the Verizon cost study. Proposed Commission Order Prepared by Intrado Communications, Inc., pp. 16-19. Intrado complains that the final rate of $182/1000 lines is too low, and therefore, anti-competitive. *Id.*, p. 3. Kanawha Metro complains that the proposed rate is too high and the rate increase of 65% or more is too large. Tr. Vol. II, pp. 285-286. Each of these concerns is defensible. A price set too low will stifle competition; a price set too high will impose unreasonable burdens on PSAPs and the public. The Commission is called to perform a balancing role in reconciling these two seemingly opposing interests. See W. Va. Code § 24-1-1(b).

The phase in of the new rate called for in the Verizon-WV MTP is an appropriate way for the Commission to strike this balance. PSAPs will see moderate predictable increases in the rate for E911 services over the next three years. At the same time, the rate will become increasingly higher with the passage of time, providing Intrado opportunities to make inroads with different county PSAPs, and ultimately the State as a whole. In this manner, rate impacts on customers can be mitigated, and market forces can be introduced into another area of telecommunications.

Parties to this proceeding have suggested that instead of phasing in the rate, that equivalent grants should be given to PSAPs so that they can make their own purchasing decisions or that the Commission should direct Verizon-WV to place the funds into a general fund administered by a third party. Intrado Exh. 1, p. 24. The Commission declines to do so. The MTP was a negotiated settlement in Case No. 06-1935-T-PC among the parties to that case. Changing the public benefit fund portion of the MTP affects other terms which likely would have been different had the parties known that public benefit funds would not be used to phase in E911 rates. Moreover, the MTP is

a Commission-approved plan that will use public benefit funds to facilitate the phase in of the Verizon-WV new E911 rates, and thereby provide a direct benefit to each and every PSAP in the State. The Commission finds that there is no sufficient basis for disturbing the MTP in this proceeding.

Staff argues that it would be unfair to the counties to eliminate the phase in of the Verizon E911 DBMS rates as long as there is no competition for the provision of E911 DBMS. See Initial Brief of Staff, Proposed Conclusion of Law 21, p. 35-36. Staff also argues that it would be anti-competitive for Verizon-WV to use its MTP technology grant funds to phase in its rates if there were a competitor in the market. See Initial Brief of Staff, Proposed Conclusion of Law 20, p. 35. The Commission notes that the Verizon-WV MTP governs its rates and services through 2010 only. See Verizon West Virginia, Inc., Case No. 06-1935-T-PC, Commission Order (Dec. 21, 2006).

As is obvious by the participation of Intrado in this case, other providers may offer competitive E911 services, and PSAPs are free to purchase E911 service from whichever provider best suits their needs. In fact, on March 28, 2007, Intrado was issued a certificate by the Commission to provide such statewide E911 services. See, Intrado Communications Inc., Case No. 06-1892-T-CN, Recommended Decision (March 8, 2007; final March 28, 2007). Intrado testified at hearing that it could offer a monthly rate of $231/1000 lines for E911 service. Tr. Vol II, p. 219, but has not yet made an appropriate tariff filing with the Commission proposing the rates, standards, terms and conditions for the E911 services that Intrado intends to offer in West Virginia.

Preliminary Matter (2):

Whether the Commission should grant the Verizon-WV motion for protective treatment?

On May 31, 2007, Verizon-WV filed a motion seeking protective treatment of certain exhibits attached to its direct testimony and portions of testimony referencing information contained in those exhibits. The exhibits in question were: (1) Exhibit 2, which Verizon-WV identifies as "Highly Proprietary" and describes as a "Diagram of Current Network and Proposed Network"; (2) Exhibit 5, described as the Verizon-WV "Price Change Breakdown Overview" and identified as "Proprietary"; and (3) Exhibit 6, which Verizon-WV describes as its "Cost Study" and claims is "Highly Proprietary." See VZ Exh. DP, Table of Exhibits. Portions of the Verizon-WV prepared direct testimony referencing information contained in these exhibits were also redacted. See VZ Exh. DP, pp. 14 (related to VZ Exh. 5); *Id.*, pp.19-25; 27 (related to VZ Exh. 2 and/or VZ Exh. 6).

Verizon-WV claims the information that was the subject of its motion for protective order is exempt from disclosure under the West Virginia Freedom of Information Act's ("WVFOIA") exemptions for "trade secrets" and/or Homeland Security-related information. See W. Va. Code §§ 29B-1-4(a)(1), (10), (13) and (15).

Frontier seeks to withhold certain information designated as "proprietary" in the prepared direct testimony of Randall Brockmann and in certain exhibits relating to the cost of the Frontier facilities used in the preparation of the Verizon-WV cost study. Frontier, however, did not file a motion for protective order regarding such information. Nor did Frontier make a motion for protective treatment during the hearing in this proceeding. Tr. Vol. I, pp. 35; 37.

As it is possible for the Commission to issue this Order without including any of the proprietary information, the Commission concludes that there is no need to rule upon the requests for protected treatment at this time as the Commission is addressing the protection of sensitive information dispositively in Case No. 07-0558-T-GI, *General Investigation into Procedures for the Protection of Confidential Information in Commission Proceedings*. The Commission shall direct its Executive Secretary to maintain the information separate and apart from the rest of the file. If there is a request filed with the Commission in the future to make such information public, the Commission shall require the entity seeking protective treatment to argue its request for protective treatment at that time.

FINDINGS OF FACT

1. Enhanced 911 (E911) services allow the transmission of the name, telephone number and physical location of the person making an emergency call to a PSAP.

2. Verizon-West Virginia, Inc. (Verizon-WV) has offered E911 services in a bundled package containing all components of E911 services at uniform rates throughout its service territory since 1994. Tr. Vol. I, pp. 57-59.

3. Verizon-WV currently provides E911 service to 42 PSAPs operating in 45 West Virginia counties and Frontier provides E911 service to 10 PSAPs in the State's remaining counties. The service territory of Frontier is predominantly rural and includes Hardy Mercer, Jefferson, Calhoun, Tucker, Grant, Hampshire, Pleasants, Wayne, and Webster Counties. Verizon's Initial Brief at p. 112.

4. Initially, the Verizon-WV E911 monthly rate was $85/1000 access lines. This rate was adopted by *Citizens Telecommunications Company of West Virginia, Inc., dba Frontier Communications of West Virginia* (Frontier) in its West Virginia service territory. Tr. Vol. I, pp. 243-244, 247; Tr. Vol. II, pp. 24, 96; Tr. Vol. II, pp. 95-96.

5. In 2001, Verizon-WV increased its monthly E911 rate to $110/1000 access lines to pay for the upgrade of facilities necessary to handle wireless calls. Frontier also adopted that Verizon-WV rate. Tr. Vol. II, pp. 24, 96; Tr. Vol. II, pp. 93, 123.

6. PSAPs in those counties served by Frontier have been paying the same higher rate as Verizon-WV, however they have not been receiving the same service. Tr. Vol. I, pp. 55, 61; Tr. Vol. II, p. 123.

7. With the exception of Mercer County, no Frontier county can identify the name, number or location of calls from wireless phones. The same is true for calls to PSAPs from customers of competitive local exchange carriers (CLECs) and calls from customers using Voice over Internet Protocol (VoIP).

8. PSAPs in the Frontier counties currently lack access to E911 DBMS and selective routing facilities that are necessary to provide full E911 service.

9. A Task Force established by the Commission and comprised of telecommunications carriers, PSAPs, and Staff, filed its Final Report into DBMS for E911 services, including a proposed Verizon-WV E911 Tariff on January 6, 2006.

10. The Task Force recommended that: (1) the Commission direct a full financial analysis of the proposed Verizon-WV E911 DBMS tariff rates and of the cost information supplied to Verizon-WV by the independent ILECs; (2) a public hearing be held no later than April 2006 for review of the audit results and to take comments of interested parties; (3) public notice of the hearing be provided to all ILECs, CLECs, West Virginia wireless carriers and county commissions; (4) Verizon-WV be granted the authority to serve outside its normal service area; and (5) the independent ILECs be required to modify their tariffs regarding the provision of E911 service.

11. On January 6, 2006, the Task Force filed its Final Report. The Final Report included a proposed Verizon tariff establishing a statewide monthly rate of $198/1000 access lines to be charged by Verizon as the single E911 DBMS provider in West Virginia. See VZ. Exh. 1; Staff Exh. 1, pp. 4-8.

12. By Order entered on February 7, 2006, the Commission directed the Staff to review the financial analysis underlying the $198/1000 monthly rate of access lines and the cost information provided to Verizon by the ILECs. See Case No. 04-0102-T-GI, Commission Order, p. 7.

13. Subsequently, Verizon filed a cost study supporting an increase from its current monthly rate of $110/1000 access lines to a monthly rate of $182/1000 access lines. Tr. Vol. I, p. 60.

14. Verizon filed a Total Service Long Run Incremental Cost (TSLRIC) model, which used different cost components than its prior analyses. This study generated an E911 DBMS

monthly cost of $196.14/1000 access lines. However, Verizon continued to offer the service for the previously proposed $182 per month per thousand access lines. Tr. Vol. I, pp. 92-93.

15. Telecommunications carriers routinely make filings without including *Rule* 42 Exhibits, pursuant to the Commission *Rules for the Construction and Filing of Tariffs, 150 C.S.R.* 2. *Id.*

16. Verizon-WV did not file the company financial data included in a *Tariff Rule* 42 Exhibit under the *Rules for the Construction and Filing of Tariffs,* 150 *C.S.R.* 2 as part of its proposed tariff. Tr. Vol. II, p. 286. Nor did Verizon-WV apply for or receive a waiver of such filing. Tr. Vol II, p. 375.

17. Verizon-WV has not had a general rate case in West Virginia since 1984. Tr. Vol. II, pp. 372-373; *C & P Telephone Co. of W. Va.,* Case No. 84-747-T-42T, Final Order (Sept. 6, 1985).

18. On December 15, 2006, Verizon-WV, CAD and Staff filed a joint petition for review and approval of a Market Transition Plan ("MTP"), an alternative rate plan governing the Verizon-WV services and rates through 2010, which the Commission approved on December 21, 2006. Verizon West Virginia, Inc., Case No. 06-1935-T-PC, Commission Order (Dec. 21, 2006).

19. Under Paragraph 4(a)(I) of the MTP, the Commission allowed Verizon-WV to raise E911 rates to the level to be determined by the Commission in this proceeding. The same paragraph also provided for the four-step phase in of the Verizon-WV E911 rates. *Id.*

20. On page 2 of the December 21, 2007 Order approving the MTP Joint Stipulation, the Commission stated that any rate changes contemplated by the MTP would not become effective until after proper notice and future order of the Commission. Verizon-WV filed a copy of the required notice with the Commission on February 13, 2007. *Id.*

21. Following the publication of the required notice and review of the proposed rate changes, on March 26, 2007, the Commission entered an Order approving the rate changes proposed in the MTP. *Verizon West Virginia Inc.,* Case No. 06-1935-T-PC, Commission Order (Mar. 26, 2007).

22. For the past 20 years, the telecommunications industry has used forward-looking cost methodologies to develop prices for such services as 911, basic exchange service, vertical services, and data services. Tr. Vol. I, p. 94

23. Verizon-WV used a total service long-run incremental cost study, a forward-looking cost methodology, to develop proposed rates in this case. Tr. Vol. I, pp. 93-94.

24. Forward-looking cost study methodologies price a service based upon the total costs to provide a service, completely revising the entire pricing without reference to how those services previously were priced.

25. Kanawha Metro has never presented its position on what an appropriate rate should be.

26. Verizon-WV's proposed monthly rate for E911 service of $182/1000 access lines averages approximately a 65% increase over the current rate of $110/1000 access lines, although the actual increase varies by county.

27. The Verizon-WV current tariff can be applied to all access lines: ILEC, wireless, and CLEC, but Verizon-WV has only been billing for ILEC lines. Tr. Vol. I, p. 66.

28. If Verizon-WV applied the current tariff as written, the bills for certain PSAPs would more than double because there are now more wireless phones in West Virginia than land line phones. *Id.*

29. Verizon-WV has been providing DBMS to PSAPs within its service area, including Kanawha Metro, without adjusting rates to reflect the additional service. Tr. Vol. II, pp. 92; 212-213.

30. The Verizon-WV proposed E911 rate was developed by including wireless costs. As a result, bills to PSAPs will only be based on the number of land lines served by each PSAP. Tr. Vol. II, pp. 50-52.

31. The Verizon-WV proposed tariff sets forth the method by which PSAPs will be billed for E911 service each month. Verizon-WV Exh. 1, n. 4.

32. The Verizon-WV tariff will maintain the assumed equal ratio of land line and wireless calls for billing purposes. Tr. Vol. II, pp. 50-52. Billing under the proposed tariff will be based solely on the number of land lines, including CLEC lines, served by each PSAP. Tr. Vol. I, p. 69.

33. The Verizon-WV tariff proposes to charge PSAPs $182/1000 access lines monthly for the provision of E911 by averaging all of its costs for E911 service across the entire State.

34. Verizon-WV's averaging of its costs across the State is a continuation of the current E911 tariff that has used statewide averaged rates since 1994. Tr. Vol. I, p. 59.

35. The Commission has historically supported statewide and utility-wide rates, which are common in the telecommunications industry. Tr. Vol. II, p.335, See also, West Virginia Water Company, Case No. 81-126-W-42A, "Order Approving Single Tariff Pricing" (May 26, 1982).

36. The Verizon-WV E911 tariff rate in West Virginia has been bundled since 1994 and there is a single rate for the entire E911 service. PSAPs cannot purchase individual pieces of the E911 service on an a la carte basis.

37. Verizon-WV can unbundle its rates but has resisted doing so because the PSAPs had requested the bundled rate. Tr. Vol. I, p. 160.

38. Verizon offers unbundled E911 tariffs in other states.

39. Verizon-WV has offered to make the separate components of E911 services available in a timely manner. Proposed Order of Verizon-West Virginia, p.111, Verizon-WV Findings of Fact 27-28.

40. Additionally, Verizon-WV has modified its original proposal to make clear that counties could opt out, in whole or in part, from E911 service with Verizon-WV. VZ Exh. R, p. 4; Tr. Vol. I, p. 215.

41. Nothing in its proposed tariff makes Verizon-WV the exclusive provider of E911 services. The rates Verizon-WV developed are based on the assumption that all counties in West Virginia participate in the plan and that Verizon-WV provides service to all counties in the State. If either of those assumptions does not accurately reflect how the plan is implemented, rates could change. Tr. I, pp. 21; 83; 209-211.

42. The Verizon-WV Commission-approved MTP is an alternative regulation plan that balances competing interests and viewpoints with a goal of benefitting the public interest by ensuring reasonable rates. See, e.g., Citizens Telecommunications Company of West Virginia dba Frontier Communications of West Virginia, Commission Order, Case No. 05-0040-T-PC, Attachment ¶¶ 11, 13 (May 4, 2005).

43. Under Section 4 of the MTP, E911 services are classified as Category I services, the prices of which are normally set for the duration of the plan, but were specifically exempted because

of the pendency of this proceeding. Verizon-WV agreed to phase in its proposed E911rates over four steps if the rates were approved as part of the resolution of this proceeding. *Verizon West Virginia, Inc.*, Case No. 06-1935-T-PC, Commission Order (March 26, 2007).

44. The MTP includes a public benefits expenditure provision. Under Section 15 of the MTP, Verizon-WV is required to make annual grants totaling $1.7 million to the State, local agencies, or community-based non-profit groups for public benefits. Section 15 also states that if the phase in of E911 rates is approved, Verizon-WV can offset its annual public benefits' commitment by the amount of revenue forgone as a result of the phase in. *Id.*

45. The rate phase in would result in a monthly rate for E911 service of $128/1000 lines the first year; $146 the second; $164 the third; and $182/1000 lines the fourth year. Tr. Vol. I, p. 87. Verizon-WV will receive approximately $900,000 less the first year than under full rates and lesser amounts the next two years.

46. Pursuant to the MTP Verizon-WV's public benefits' commitment would be offset by $900,000 the first year, and lesser amounts the next two years. Tr. Vol. I, p. 89.

47. On May 31, 2007, Verizon-WV filed a motion seeking protective treatment of certain exhibits attached to its direct testimony and portions of testimony referencing information contained in those exhibits.

48. The exhibits in question were: (1) Exhibit 2, which Verizon-WV identifies as "Highly Proprietary" and describes as a "Diagram of Current Network and Proposed Network"; (2) Exhibit 5, described as the Verizon-WV "Price Change Breakdown Overview" and identified as "Proprietary"; and (3) Exhibit 6, which Verizon-WV describes as its "Cost Study" and claims is "Highly Proprietary." See VZ Exh. DP, Table of Exhibits. Portions of the Verizon-WV prepared direct testimony referencing information contained in these exhibits were also redacted. See VZ Exh. DP, pp. 14 (related to VZ Exh. 5); *Id.*, pp.19-25; 27 (related to VZ Exh. 2 and/or VZ Exh. 6).

49. Verizon-WV claims that the information that is the subject of its Motion for Protective Order was exempt from disclosure under the West Virginia Freedom of Information Act's ("WVFOIA") exemptions for "trade secrets" and/or Homeland Security-related information. See W. Va. Code §§29B-1-4(a)(1), (10), (13) and (15).

50. Frontier seeks to withhold certain information designated as "proprietary" in the prepared direct testimony of Randall Brockmann and in certain exhibits relating to the cost of the Frontier facilities used in the preparation of the Verizon-WV cost study.

51. Frontier did not file a motion for protective order regarding such information, nor did Frontier-WV make a motion for protective treatment during the hearing in this proceeding. Tr. Vol. I, pp. 35; 37.

CONCLUSIONS OF LAW

1. *W. Va. Code* § 24-6-3 requires the Commission to "develop, adopt and periodically review a comprehensive plan establishing the technical and operational standards to be followed in establishing and maintaining emergency telephone systems and enhanced emergency telephone systems." County E911 systems must be consistent with the Commission comprehensive plan. *W. Va. Code* § 24-6-4(a). In addition, the Commission general powers to approve tariffs and rates of under *W. Va. Code* § 24-2-3 extend to the tariffs and rates for E911 services provided by telecommunications carriers.

2. The Commission finds that it has not only the authority, but the duty to establish, review, and update the comprehensive enhanced 911 plan and to review all utility rates and charges. Further, in exercising its statutory authority, the Commission is not compelling county participation in a statewide E911 system, as Kanawha Metro maintains in its Motion to Dismiss and Proposed Findings of Fact and Conclusions of Law. The Commission instead is approving the rates, terms and conditions for a service offered by a public utility subject to the Commission jurisdiction. Therefore, it is reasonable to deny the Kanawha Metro Motion to Dismiss for Lack of Subject Matter Jurisdiction.

3. The Verizon-WV tariff proposal and proposed rates have been properly noticed to the public and submitted by Verizon-WV as required by the Commission in this proceeding. The review of the proposed tariff change for E911 service in this case is consistent with the MTP approved by the Commission on March 26, 2007. *Tariff Rule* 42 of the Commission *Rules for the Construction and Filing of Tariffs*, 150 *W. Va. C.S.R.* 2 does not create a procedural impediment preventing the Commission review of the Verizon-WV proposed rates for E911 service in this case.

4. *Rule* 42 filing requirements are frequently waived by the Public Service Commission for good cause shown. See *Liberty Gap Wind Force, LLC* Case No. 05-1740-E-CS, June 22, 2007; *West Virginia-American Water Company and the Regional Development Authority of Charleston - Kanawha County*, Case No. 06-1858-W-CN-PC, March 15, 2007; *City of Cameron*, Case No. 06-1487-W-CN, January 23, 2007; *Cave Road Utilities, Inc.*, Case No. 06-1823-WS-ACN-PW, January 22, 2007; *Town of Farmington*, Case No. 06-1491-W-CN, January 10, 2007; *Monongahela Power Company and the Potomac Edison Company each doing business as Allegheny Power, Monongahela Power Company and the Potomac Edison Company each doing business as Allegheny Power*, consolidated Case Nos. 05-0402-E-CN and 05-0750-E-PC, April 7, 2006.

5. The Public Service Commission grants Verizon-WV a waiver of its *Rule* 42 Exhibit requirements. This waiver is granted because; (1) the submitted cost model is sufficient to determine the reasonableness of the proposed rate, (2) Verizon-WV is no longer rate-base/rate-of-return regulated, (3) the preparation of a *Tariff Rule* 42 Exhibit would prolong a final resolution of a threat which requires an expedient resolution, and (4) the expense of the preparation of a *Rule* 42 Exhibit would unnecessarily and substantially increase the cost of E911 DBMS in West Virginia. This waiver is granted in accordance with the provisions of Rule 1.6 of the Commission *Rules for the Construction and Filing of Tariffs*, 150 *W. Va. C.S.R.* 2.

6. The cost model submitted by Verizon-WV is sufficient to justify the proposed rate.

7. Completely resetting the Verizon-WV prices, rather than building upon historical rates as Kanawha Metro advocates, is appropriate. Using its cost methodology, Kanawha Metro would omit any correction of rates for the additional DBMS it has been receiving and continues to receive without charge and would omit any correction for tariff charges that Verizon has not been assessing.

8. Verizon-WV should, within ten days, file a revised tariff offering the proposed rate of $182/1000 access lines with the Commission. The revision should remove all references to the exclusive provision of E911 DBMS by Verizon and modify Footnote 4 of the proposed tariff, as agreed to by Verizon-WV in testimony at hearing, to maintain the assumed 50/50 ratio of land line and wireless calls for billing purposes until a subsequent new tariff is filed by Verizon-WV. See Footnote 4, Verizon's Miscellaneous Service Arrangements Tariff, P.S.C. W. Va. No. 211, Section 14, 2nd Revised Page 14, Canceling 1st Revised Page 14, marked at hearing as VZ Ex. 1.

9. This Commission has historically supported statewide and utility-wide rates for decades as a reasonable, non-discriminatory and equitable way to price service offerings on a cost-based methodology:

> The Commission is of the opinion that the Company's STP [single tariff pricing] proposal results in a just, reasonable, sufficient and non-discriminatory rate for all of the customers of WVWC [West Virginia Water Company]. Each customer will pay the same rate for a like and contemporaneous service made under the same or substantially similar circumstances and conditions. ... A STP methodology... does not result in undue discrimination or favoritism between persons and between locations for a like and contemporaneous ...service.

(Emphasis in original).

West Virginia Water Company, Case No. 81-126-W-42A, "Order Approving Single Tariff Pricing" (May 26, 1982); app. den. 70 ARPSCWV 480 (Sept. 21, 1982). See also, Pendleton County PSD, Case No. 94-1123-PWD-CN, Commission Order (Jan. 9, 1996).

10. The record does not support overturning this long-standing regulatory principle or overturning the Commission policy of averaging rates for E911 service that has existed since 911 rates were first established in *General Investigation into the Practices of and Rates Charged by Certain Local Exchange Carriers with Respect to Emergency Telephone Systems service*, Case No. 93-0764-T-GI, Commission Order (Dec. 21, 1993).

11. Although Chapter 24 of the *W. Va. Code* is replete with prohibitions against **undue** discrimination, none of the statutory provisions preclude any discrimination, *per se.* See *W. Va. Code* §§ 24-1-1(a)(4); 24-2-2(a); 24-2-3; 24-2-4b(b); and 24-2-7(a). The approval of statewide or postalized rates to assure equal accessibility to essential E911 DBMS rates by all West Virginia PSAPs will not create **undue** discrimination against those county PSAPs who currently receive E911 DBMS.

12. The Commission will approve the Verizon-WV bundled averaged E911 tariff. The Verizon-WV proposed tariff allows for competitive entry by other providers of E911 services. Nothing in the plan makes Verizon-WV the exclusive provider of E911 services. Instead, the rates Verizon-WV developed are based on the assumption that all counties in West Virginia participate in the plan and that Verizon-WV provides service to all counties in the State. If either of those assumptions does not accurately reflect how the plan is implemented, rates may change.

13. The Commission will also require Verizon-WV to supplement its E911 tariff Verizon-WV supplement its E911 tariff by filing proposed unbundled rate elements the individual components of E911 DBMS. Supporting cost information should also be filed with the unbundled rate elements. This will provide a foundation for competitive E911 future offerings in the State and provide more purchasing options to PSAPs, either individually or collectively, and will promote new technological development.

14. The Commission is called to perform its role in reconciling two seemingly opposing interests regarding the reasonableness of E911 service and competition in the marketplace. See, W. Va. Code § 24-1-1(b). The phase in of the new rate called for in the Verizon-WV MTP is an appropriate way for the Commission to strike this balance. PSAPs will see moderate predictable increases in the rate for E911 services over the next three years. At the same time the rate will become increasingly higher with the passage of time, providing Intrado opportunities to make inroads with different county PSAPs, and ultimately the State as a whole. In this manner, rate impacts on customers can be mitigated, and market forces can be introduced into another area of telecommunications.

15. As it is possible for the Commission to issue this Order without including any of the proprietary information, the Commission concludes that there is no need to rule upon the requests for protected treatment at this time as the Commission is addressing the protection of sensitive information dispositively in Case No. 07-0558-T-GI, *General Investigation into Procedures for the Protection of Confidential Information in Commission Proceedings*.

ORDER

IT IS THEREFORE ORDERED that the Kanawha Metro Motion to Dismiss for Lack of Subject Matter Jurisdiction is denied.

IT IS FURTHER ORDERED that the Verizon-WV bundled averaged E911 tariff is approved, subject to the condition that within ten days Verizon-WV revise its E911 tariff filing to remove all references to the exclusive provision of E911 DBMS by Verizon-WV and to modify Footnote 4 of the proposed tariff, as agreed to by Verizon-WV in testimony at hearing, so that the assumed 50/50 ratio of land line and wireless calls for billing purposes is maintained until a subsequent new tariff is filed by Verizon-WV.

IT IS FURTHER ORDERED that the requirements to file a complete *Rule* 42 are waived.

IT IS FURTHER ORDERED that Verizon-WV supplement its E911 tariff by filing proposed unbundled rate elements for selective routing and ANI/ALI services with supporting cost information within 120 days.

IT IS FURTHER ORDERED that Verizon-WV may use public benefit funds to facilitate the phase in of the Verizon-WV new E911 rates as set forth in the Verizon-WV Market Transition Plan.

IT IS FURTHER ORDERED that the Executive Secretary will continue to maintain the documents for which the parties requested protected treatment separate and apart from the remainder of the file and in a protected manner.

IT IS FURTHER ORDERED that upon entry of this order this case shall be removed from the Commission's docket of open cases.

IT IS FURTHER ORDERED that the Commission's Executive Secretary serve a copy of this order upon all parties of record by United States First Class Mail and upon Commission Staff by hand delivery.

A True Copy, Teste:

Sandra Squire
Executive Secretary

I.D. # CSL-2

BEFORE

THE PUBLIC UTILITIES COMMISSION OF OHIO

In the Matter of the Application of Intrado Communications, Inc. to Provide Competitive Local Exchange Services in the State of Ohio.	)))	Case No. 07-1199-TP-ACE

FINDING AND ORDER

The Commission finds:

(1) On November 19, 2007, as amended on December 7, 2007, and January 28, 2008, Intrado Communications, Inc. (Intrado) filed an application seeking certification in the state of Ohio as a competitive local exchange carrier (CLEC) for the purpose of provisioning telecommunications services that facilitate, enhance, and advance the provision of emergency services for end users of wireline and wireless carriers and voice over Internet protocol (VoIP) providers. Intrado submits that it will offer its telecommunications services throughout the state of Ohio to a federal, state, or municipal or other local government unit legally authorized to subscribe to the service and which has public safety responsibility by law to respond to telephone calls from the public for emergency services, including police and fire. The applicant avers that its offerings in Ohio will provide public safety answering points (PSAPs) with competitive alternative options to their current 9-1-1 incumbent-based legacy systems that do not exist today. In particular, Intrado states that its next-generation solution will provide PSAPs with the capabilities to process, route, and deliver wireline, wireless, and VoIP calls allowing for more relevant information to be sent to first responders.

Intrado explains that its services permit calls originated by personal communications devices that dial 9-1-1 or another emergency number to be received by a PSAP. The company describes how its services support interconnection to other telecommunications service providers for the purpose of receiving emergency calls originated in their networks. Specifically, these services include 9-1-1 call routing services which use a call management system to perform the selective routing of an emergency call to the appropriate PSAP or to hand the call off to a different 9-1-1 service provider for call completion to the appropriate PSAP. Inasmuch as its services allow for access and usage of 9-1-1

DOCUMENT NUMBER-DATE
03155 APR 21 08
FPSC-COMMISSION CLERK

services through the transporting of 9-1-1 and emergency call traffic to its subscribers, Intrado opines that it is engaged in the provision of Tier 1 noncore service.

As part of its service provisioning, Intrado describes that it requires the use of numbering resources in the state of Ohio. In particular, these numbering resources pertain to the use of pseudo automatic number identification (pANI) resources for the purpose of instructing switches where to route wireless and VoIP 9-1-1 calls. Intrado avers that prior to seeking such numbering resources it should be certified as a CLEC for the purpose of providing Tier 1 noncore services.

(2) Pursuant to the attorney examiner's Entry of December 18, 2007, AT&T Ohio, Cincinnati Bell Telephone Company, LLC (Cincinnati Bell),[1] and the Ohio Telecom Association (OTA) were granted intervention in this proceeding.

(3) AT&T Ohio questions why Intrado should be allowed to provide a limited service absent the broader obligations of other telecommunications carriers in the state of Ohio. Specifically, AT&T Ohio avers that Intrado is seeking a CLEC certificate for the purpose of interconnection while not intending to offer basic local exchange service as required by the Commission's rules. AT&T Ohio submits that, pursuant to Section 4905.041, Revised Code, Intrado's application for certification should be denied in light of the fact that the company does not qualify as a local exchange carrier consistent with federal law (AT&T Ohio Motion for Intervention at 3).

Further, AT&T Ohio asserts that Intrado's application is contrary to the Commission's long-standing policy requiring that 9-1-1 services be priced "at cost." Specifically, AT&T Ohio highlights the fact that Intrado's tariff provides for a "return" on certain charges (AT&T Ohio Reply Memorandum, December 18, 2007, at 2, referencing Intrado's proposed Tariff No. 1, Section 6, Original Pages 1 and 2).

(4) Cincinnati Bell objects to Intrado seeking certification as a CLEC despite the fact that it will not be offering dial tone or any other aspect of local exchange service other than 9-1-1 services to

[1] On December 4, 2007, Cincinnati Bell also filed objections in opposition to Intrado's application and a request for a suspension.

PSAPs. Cincinnati Bell opines that Intrado is seeking certification as a CLEC so that it can avail itself of interconnection and access to unbundled network elements (UNEs), despite the fact that it has no plans to actually operate as a CLEC. Cincinnati Bell also believes that Intrado is seeking to change the routing of certain 9-1-1 traffic and the relationship between Cincinnati Bell and other carriers and PSAPs in Cincinnati Bell's service area (Cincinnati Bell Motion for Intervention at 3).

(5) Similar to AT&T Ohio and Cincinnati Bell, OTA believes that Intrado is seeking to obtain the rights and privileges of interconnection, access to UNEs, and collocation, despite the fact that the applicant is not entitled to them pursuant to Ohio law inasmuch as Intrado does not provide all of the elements of basic local exchange service (OTA Motion to Intervene at 4). OTA opines that if Intrado is successful in gaining CLEC certification, OTA's members will be adversely affected and unlawfully burdened by other similarly situated providers (*Id.* at 2).

(6) Intrado considers the motions of AT&T Ohio, Cincinnati Bell, and OTA to be an attempt to create a barrier to entry for itself and other competitive 9-1-1 service providers to compete in Ohio for the purpose of serving the needs of the public safety community (Intrado Memorandum Contra at 1).

Specifically, Intrado dismisses the objections raised in response to its certification application inasmuch as it considers the identified issues and concerns to be either without merit or irrelevant to the issue of Intrado's fiscal, technical, or managerial qualifications as they relate to certification (*Id.* at). Intrado considers the stated objections to be nothing more than an attempt by the ILECs to protect their own turf from the services that Intrado believes are supported by the public safety community (*Id.* at 3). Additionally, Intrado believes that such services are supported by Section 253 of the Telecommunications Act of 1996 (1996 Act).

To the extent that there are technical issues relative to the offering of its advanced 9-1-1 services, Intrado believes that these issues are more appropriate in the context of interconnection negotiations, and should not be addressed in this certification proceeding. Intrado asserts that it services constitute telephone exchange service as defined in the 1996 Act inasmuch as it provides the routing, transmission, and transport of traditional

and nontraditional emergency call traffic to the appropriate PSAP. Therefore, Intrado avers that it is a telephone company subject to the Commission's jurisdiction in accordance with Section 4905.03(A)(2), Revised Code. As a result of its service offerings, Intrado asserts that it provides significant value to the public safety community, as well as residents of the state.

(7) Upon a review of Intrado's application for certification, the Commission determines that, although Intrado is seeking to be designated as a CLEC, based on the company's described services it is more appropriate to establish a new designation known as an "competitive emergency services telecommunications carrier" and to designate the applicant as such, rather than as a CLEC.

The Commission determines that competitive emergency services telecommunications carriers are telecommunications carriers pursuant to 47 U.S.C. 153. In reaching this determination, the Commission notes that, pursuant to Section 153(44) of the 1996 Act, a telecommunications carrier is:

> [A]ny provider of telecommunications services, except that such term does not include aggregators of telecommunications services (as defined in Section 226). A telecommunications carrier shall be treated as a common carrier under this Act only to the extent that it is engaged in telecommunications services . . . .

Section 153(51) of the 1996 Act defines telecommunications service as:

> [T]he offering of telecommunications for a fee directly to the public or to such classes of users as to be effectively available directly to the public, regardless of the facilities used.

Section 153(48) defines telecommunications as:

> [T]he transmission between or among points specified by the user of information of the user's choosing, without change in the form or content of the information as sent and received.

Applying these definitions to Intrado's proposed service offering, it is clear that Intrado is engaged in the provisioning of tele-

communications due to its transmission of 9-1-1 end user information from the end user's location to the PSAP. This offering is a telecommunications service in light of the fact that it will be contracted for by one or more Ohio counties for a fee, the effect of which is the availability of enhanced 9-1-1 service directly to the public.

Additionally, the Commission determines that emergency service telecommunications carriers are telephone companies pursuant to Section 4905.03, Revised Code and Rule 4901:1-7-01(S), O.A.C., and public utilities pursuant to Section 4905.02(B), Revised Code, inasmuch as they are engaged in the transmission of a telephonic message in their capacity of maintaining the selective router and directing 9-1-1 traffic to the appropriate PSAP. Accordingly, competitive emergency services telecommunications carriers are entitled to all rights and obligations of a telecommunications carrier pursuant to Sections 251 and 252 of the 1996 Act.

In establishing the competitive emergency services telecommunications carrier designation, the Commission distinguishes between a CLEC that is engaged in the business of provisioning basic local exchange service to end user subscribers who have either affirmatively selected the carrier or have other alternative providers available, and a company such as Intrado, which intends to serve the needs of the public safety community as a "competitive 9-1-1 service provider" (Intrado Memorandum Contra, December 11, 2007, at 1), but with whom the end user has no relationship. In support of this distinction, the Commission notes that Intrado's services involve the routing, transmission, and transport of traditional and nontraditional emergency call traffic to the appropriate PSAP or to allow for the handoff to a different 9-1-1 service provider, such as an ILEC, for call completion to the appropriate PSAP (Application, Ex. 3). Therefore, while Intrado is a telecommunications carrier engaged in the provision of telephone exchange service pursuant to Section 251 of the 1996 Act, its telephone exchange activities are restricted in scope and, thus, do not extend to the level of a CLEC.

The Commission notes that as a telecommunications carrier, the applicant has requested interconnection with the following Ohio ILECs pursuant to Section 251 of the 1996 Act: AT&T Ohio,

CenturyTel of Ohio, Cincinnati Bell Telephone Company, United Telephone Company of Ohio dba Embarq, Verizon North, and Windstream (Application, Ex. 19). Therefore, ILECs are obligated to negotiate with Intrado in good faith specific to the terms of interconnection. Additionally, pursuant to its designation as an emergency services telecommunications carrier, Intrado is entitled to access of pANI resources. Intrado shall obtain and utilize such pANI resources in an efficient manner consistent with the FCC's number optimization rules in 47 C.F.R. §52. The Commission directs Intrado to make available to the Commission's staff, upon request, information concerning Intrado's application for and/or utilization of pANI resources.

The Commission highlights the importance of regulating competitive emergency services telecommunications carriers in light of the significant public interest surrounding the provisioning of 9-1-1 service. As discussed in Intrado's application, its next-generation technology will provide PSAPs with the enhanced capability to process, route, and deliver wireline, wireless, and VoIP calls, enabling more relevant information to be sent to emergency personnel (Application, Ex. 5, at 3). By certifying competitive competitive emergency services telecommunications carriers, the Commission recognizes that it is providing PSAPs with competitive alternatives (e.g., Intrado) to the ILEC's traditional processing of 9-1-1 traffic. PSAPs will now have the opportunity to contract with entities that provide the most advanced 9-1-1 service available. This competitive environment will encourage the further development of 9-1-1 technology.

(8) In reaching the determination that Intrado should be certified as a competitive emergency services telecommunications carrier, the Commission has engaged in a comprehensive analysis of the company's compliance of the requirements of Rule 4901:1-6-10, O.A.C., including a demonstration of its technical, financial, and managerial capabilities.

A review of the record reflects that Intrado is certified to provide telecommunications services in more than 35 states (Application, Ex. 3, at 3). The company represents that along with its affiliate Intrado Inc., it owns and operates the largest 9-1-1 network in the world and that Intrado Inc. has operated 9-1-1 databases on behalf of three of the major ILECs for a number of years, and a

nationwide near real-time messaging network in support of wireless E9-1-1 for over 49 wireless carriers (*Id.*). Intrado describes its support for the industry's migration to Next Generation 9-1-1 services as evidenced by its active support and alignment with the United States Department of Transportation's Next Generation 9-1-1 Initiative (*Id.*, Ex. 5, at 3). According to the company, its expertise and commitment to E9-1-1 network security is reflected by its active participation in the Network Reliability and Interoperability Council (*Id.*, Ex. 3, at 3). In fact, Intrado submits that it is a secured and private IP-managed network. Intrado's systems that are accessible through the Internet, including the subscriber record management data exchange portal, database management interface toll, and metrics tool, are protected by a secure access process that requires authentication through a unique user name, unique user password, and a code randomly generated at time of access via a secure ID token. Further, firewalls and network infrastructure are always configured with network intrusion detection in place to warn dedicated network security personnel of abnormal traffic patterns as well as providing the needed forensics to follow up on any attempted attack. The record also demonstrates that Intrado's officers and directors have vast technical experience in the 9-1-1 industry (*Id.*, Ex. 3). Additionally, the financial information submitted for Intrado's parent corporation reflects that Intrado has sufficient funding sources from its ultimate parent corporation to support its operations in the state of Ohio (*Id.*, Ex. 10).

(9) Intrado acknowledges and agrees to abide by the requirements set forth in Rule 4901:1-5-13, O.A.C., which pertain to the emergency and outage operations impacting 9-1-1 service. Consistent with the intent of this rule, the Commission is particularly concerned that 9-1-1 service not be interrupted due to a business determination on behalf of the applicant or a county that Intrado no longer serve in the capacity of an competitive emergency services telecommunications carrier. Therefore, Intrado must obtain Commission approval pursuant to an order prior to discontinuing or disconnecting service in a specific county or throughout the entire state of Ohio. In other words, all such requests should be filed as nonautomatic approval abandonment cases. Additionally, the Commission directs that Intrado and the ILEC providing wireline emergency 9-1-1 service shall

operate in a cooperative manner to ensure that emergency 9-1-1 calls continue unimpeded between end users and PSAPs.

(10) The Commission recognizes that, pursuant to Rule 4901:1-6-01(B)(3), O.A.C., basic local exchange service includes access to and usage of 9-1-1 services, where such services are available. Due to the fact that the provision of emergency services is a component of basic local service, it shall be considered as a Tier 1 core service consistent with Rule 4901:1-6-04, O.A.C. Therefore, with the exception of those case types specifically addressed in Findings (11) and (16), all applications related to the provision of emergency services shall be filed and processed in accordance with the automatic approval time frames provided for in the Commission's rules applicable to the competitive provider provision of Tier 1 core services.

Certification of competitive emergency services telecommunications carriers should occur on a countywide basis in order to ensure that all PSAPs in a given county are served by the same competitive emergency services telecommunications carrier for the purpose of provisioning seamless 9-1-1 service. In addition, the 9-1-1 systems in Ohio are planned, structured, and established on a countywide-basis. Therefore, competitive emergency services telecommunications carriers should not serve individual PSAPs but, instead, the entire countywide 9-1-1 system.

(11) Pursuant to its application, Intrado is certified, at this time, as an competitive emergency services telecommunications carrier in all 88 counties in the state of Ohio. The company's tariff should be routinely updated to reflect the counties in which it is actually provisioning service.

Intrado, or any other competitive emergency services telecommunications carrier, may not operate as 9-1-1 system service provider in a countywide system until such time as the county has amended its 9-1-1 plan to identify that carrier as the 9-1-1 carrier of choice for the designated telecommunications (e.g., wireline, wireless, VoIP etc.). The ILEC shall continue to act as the 9-1-1 system service provider for those types of telecommunication services not designated to the competitive emergency services telecommunications carrier by the county. Any competitive emergency services telecommunications carrier

authorized to act as a countywide system service provider must carry all calls throughout the county for such types of telecommunications services designated by the county. In addition to the ILEC, there may be no more than one competitive emergency services telecommunications carrier designated by the county per countywide 9-1-1 system.

Once the countywide 9-1-1 plan has been amended and the competitive emergency services telecommunications carrier is designated to operate within the specified countys, the competitive emergency services telecommunications carrier shall file both the amended plan and an amended tariff listing both the county which has chosen it to provide 9-1-1 service and the telecommunication services designated by the county to be carried by the competitive emergency services telecommunications carrier.

(12) In order to promote the notion of seamless 9-1-1 service, each designated competitive emergency services telecommunications carrier shall interconnect with each adjacent countywide 9-1-1 system to ensure transferability across county lines. In addition, each competitive emergency services telecommunications carrier is required to ensure call/data transferability between Internet protocol (IP) enabled PSAPs and non-IP PSAPs within the countywide 9-1-1 systems it serves, and to other adjacent countywide 9-1-1 systems, including those utilizing non-IP networks which are served by another 9-1-1 system service providers.

(13) Intrado also seeks to establish rules, and regulations governing its competitive emergency services telecommunications carrier offerings. After inspecting the applicant's proposed tariff, as amended on December 7, 2007, and January 28, 2008, the Commission finds the tariff to be in compliance with the Commission's rules and orders relevant to the service offerings proposed by the applicant. Accordingly, the Commission concludes that the tariff should be approved. While approving Intrado's tariff, the Commission notes that the tariff reflects that the services will be offered on an individual contract basis. The tariff itself is limited standard language regarding the rules and regulations pertaining to the service offering.

While AT&T Ohio is correct in its contention that the Commission previously expressed the intent that the price of 9-1-1 and related services shall be limited to the additional cost to provide the service, this limitation was in reference to the offering of traditional 9-1-1 services offered by the ILEC. Enhanced 9-1-1 services, such as those proposed by Intrado, were not contemplated at the time of the Commission's prior 9-1-1 pricing decision. See, *In the Matter of the Adoption of Guidelines Governing the Disclosure or Use of the Emergency 9-1-1 Database in Accordance with House Bill No. 244*, Case No. 94-1965-TP-ORD, Finding and Order, June 6, 1996, at 13.

(14) All contracts between Intrado and individual Ohio counties for the provision of enhanced emergency services should, within 30-days of their execution, be submitted to the 9-1-1 Coordinator for the state of Ohio, 180 East Broad Street, Columbus, Ohio 43215-3793.

(15) To the extent that Intrado ultimately seeks to engage in the provision of additional services that results in the company acting as a CLEC, the applicant should file for approval to amend its certificate to provide such services. Upon the filing of the application, the Commission will assess the company's designated status.

(16) Finally, the Commission has previously determined that the provisioning of outbound emergency notification messaging is not competitive due to the fact that the 9-1-1 database is compiled and held in "public trust and not able to be released to any outside third party. As a result, all tariffs filed by Intrado for the provisioning of outbound emergency notification messaging should be held at cost and will be considered on a nonautomatic basis. See Case No. 06-915-TP-ORD, *In the Matter of the Implementation of Rules Concerning Wireless Enhanced 9-1-1 Pursuant to H.B. 361*, Entry on Rehearing, January 17, 2007, at 8. Intrado is directed to amend its tariff to include outbound emergency notification messaging once the service is requested from any county it serves.

It is, therefore,

ORDERED, That Intrado is granted certification as an competitive emergency services telecommunications carrier in accordance with the above findings and shall be issued Certificate No. 90-8000. It is, further,

ORDERED, That Intrado's tariff filed on November 19, 2007, as amended on December 7, 2007, and January 28, 2008, is hereby approved. The earliest effective date of the approved tariff shall be the date upon which Intrado has filed with the Commission three copies of the approved tariff in the TRF docket No. 90-8000-TP-TRF. The tariff shall be effective for services rendered on or after such effective date. It is, further,

ORDERED, That Intrado must update its tariff to reflect its counties of operation consistent with Finding (11). It is, further,

ORDERED, That Intrado amend its tariff to incorporate outbound emergency notification messaging consistent with Finding (16). It is, further,

ORDERED, That all contracts between Intrado and an Ohio county should be informally submitted to the Commission staff in accordance with Finding (14). It is, further,

ORDERED, That Intrado must obtain Commission approval pursuant to an Order prior to discontinuing or disconnecting service. It is, further,

ORDERED, That Intrado cannot commence operations in a particular county until such time that it has filed the applicable countywide 9-1-1 plan adopting Intrado as its 9-1-1 system service provider, filed its amended tariff updating the counties it is serving, and submitted the applicable contract to the Commission staff. Additionally, Intrado must have approved interconnection agreement(s) for the counties it seeks to serve. It is, further,

ORDERED, That the ILEC shall continue to act as the 9-1-1 system service provider for those types of telecommunications services not designated to Intrado by the county. It is, further,

ORDERED, That a copy of this Finding and Order be served upon all parties and interested persons of record.

REPORT OF INVESTIGATION

TO: The Commission

FROM: Marianne Townsend

DATE: January 30, 2008

SUBJECT: Intrado Communications, Inc.
Case No. 07-1199-TP-ACE

SUMMARY:

Staff is recommending that Intrado Communications, Inc. ("Applicant") be granted a new designation certification as an "Emergency Service Telecommunications Carrier" (ESTC) in the state of Ohio.

PROCESS:

On November 19, 2007, and amended on December 07, 2007 and January 28, 2008, the Applicant filed an application with the Commission seeking to be certified as a Competitive Local Exchange Carrier (CLEC) in the state of Ohio, pursuant to the Commission's Case No. 06-1345-TP-ORD, *In the Matter of the Review of Chapter 4901:1-6 O.A.C*, also known as the Retail Rules, as codified in 4901:1-6-10 of the Ohio Administrative Code (O.A.C.). Absent full or partial suspension, applicants seeking certification as a telephone company will be approved in accordance with the thirty-day automatic approval process described in Rule 4901:1-6-08 of the O.A.C. On December 4, 2007, Cincinnati Bell Telephone Company (CBT), AT&T Ohio (AT&T) and the Ohio Telecom Association (OTA) filed Motions to Intervene, written statements as to why the application should not be granted and request for suspension in this case. On December 18, 2007, by Attorney Examiner Entry, the Motions to Intervene were granted and the application was suspended in order to give the Commission Staff additional time to conclude its investigation.

DETAILED REPORT:

In this filing, the Applicant is seeking authority as a CLEC and is proposing to provide telecommunication services that facilitate, enhance and advance the provision of emergency services for end users of wireline, wireless, and Voice over Internet Protocol (VoIP) providers. The Applicant further proposes to offer its telecommunications services throughout the state of Ohio to a federal, state, or municipal or other local government unit legally authorized to subscribe to the service and which has public safety responsibility by law to respond to telephone calls from the public for emergency services, including police, and fire. The Applicant is not proposing to offer traditional basic local exchange services (BLES) but is proposing to offer a component of BLES (i.e. E9-1-1).

The Applicant states that its offerings in Ohio will provide public safety answering points (PSAPs) with competitive and enhanced options to its current 9-1-1 incumbent-based legacy systems that do not exist today. Furthermore, the Applicant states that its next-generation solution will provide PSAPs with the capabilities to process, route and deliver wireline, wireless, and VoIP calls allowing for more relevant information to be sent to first responders.

The Applicant has requested interconnection arrangements with AT&T, CenturyTel, CBT, and United Telephone, dba Embarq, Verizon North and Windstream.

ISSUES

1. Does the Applicant have the proper managerial, technical and financial ability to provide an emergency telecommunication service in Ohio?

2. Public Policy on Emergency Service Telecommunications Carrier" (ESTC)
   - Service Territory
   - Call delivery

3. Regulatory Framework
   - Tier 1 Core
   - Disconnect/Abandonment of Service
   - Outbound emergency notification messaging
   - pANI Resources and Number Optimization

RULES

- *4901:1-6-10 Ohio Administrative Code, Telephone Company Certification*

- *4901:1-6-01(B) (3) Definitions, "Basic local exchange service"...Access to and usage of 9-1-1 services...*

- *4901:1-6-04(1)(a)(i) Tier 1 core services...Basic local exchange service*

- *Case No. 06-915-TP-ORD, In the Matter of the Implementation of Rules Concerning Wireless Enhanced 9-1-1 Pursuant to H.B. 361, Entry on Rehearing, January 17, 2007*

- *4905.03(A) (2) Revised Code, Public Utility Company Definition*

A) *Any person, firm, co-partnership, voluntary association, joint-stock association, company, or corporation, wherever organized or incorporated, is:*

(2) A telephone company, when engaged in the business of transmitting telephonic messages to, from, through, or in this state and as such is a common carrier;

- Sections 251 and 252 of the Telecommunication Act of 1996

ANALYSIS

1. **Does the Applicant have the proper managerial, technical and financial ability to provide an emergency telecommunication service in Ohio?**

Staff believes that, as demonstrated in the exhibits to the application and upon its own review and in part acquired from additional data requests, the Applicant has extensive managerial, technical and financial ability to provide telecommunications services; specifically, competitive enhanced 9-1-1 services in Ohio. The Applicant is currently an underlying 9-1-1 network and database provider to several large ILEC's in the state of Ohio. In other words, the applicant manages the ILEC's customer information in the automatic location information database ("ALI") and utilizing that information selectively routes the 9-1-1 call to the proper public safety answering point ("PSAP").

Financial

The Applicant is a Delaware corporation located in Longmont, Colorado and is wholly owned by West Corporation (West), a public consortium founded in 1986 and headquartered in Omaha, Nebraska. In April of 2006, West purchased the Applicant's immediate parent, Intrado, Inc., which held assets of approximately $539 million including goodwill. Staff questioned the Applicant's financials noting that there was a significant amount of "goodwill" in relation to its total asset base. The goodwill was booked as a result of the company acquiring several companies over the past two years at prices greater than the book value of the assets of those companies. While this is a common accounting practice Staff was concerned because the goodwill and assets acquired in these transactions were ultimately financed with additional debt.

Due to this recent increase in debt Staff carefully analyzed the company's most recent operating cash flows and interest expense. Staff believes the calculated Earnings Before Interest Taxes Depreciation and Amortization (EBITDA) interest coverage ratio of 1.64 is more than adequate to make interest payments and continue to invest in the operations of the company.

Based on this thorough review, Staff believes that the Applicant will be a financially viable telecommunications carrier in Ohio.

Managerial

Through its managerial review, Staff discovered that the Applicant has earned a well respected reputation in the industry through both its products and services, and active and high level involvement in each of the national 9-1-1 associations. Most recently, the Applicant developed a proposed set of 9-1-1 service standards, which it has circulated throughout the 9-1-1 industry. The Applicant believes that these standards will serve as a foundation for delivering reliable and redundant emergency telecommunication services.

The Applicant states and Staff has verified that the Applicant has received authority to provide the exact services it seeks to provide as a competitive local exchange and interexchange service provider in approximately 35 states.

Technical
The Applicant states that since the 1990s, it has provided the core of the nations' 9-1-1 ALI and selective routing infrastructure and that each year, its services and systems support over 200 million 9-1-1 calls, including calls from wireline, wireless, VoIP and other alternative communication technologies.

Staff independently reviewed maintenance and emergency planning documents. These plans were designed to address power interruptions to network elements, responses to service interruptions, pandemic flu events and other homeland security scenarios. Staff found these documents to be thorough and well prepared. In addition, Staff reviewed the network design and functionality of the Applicant's proposed service called "The Intelligent Emergency Network" and found it to be robust due to its enhanced IP framework which will allow for real-time data delivery and diverse routing over alternate voice and or data paths to reduce the potential for service failure.

In reviewing whether the Applicants' bonafide requests for interconnection to the ILEC, specifically CBT, they are seeking collocation facilities, specifically for DS1 connections over DSO level facilities to the ILEC tandems employing SS7 signaling; the applicant is also seeking UNE loops for the provision of local exchange service to PSAPs from the ILECs end offices; and the use of numbering resources pertaining to the use of pseudo automatic number identification (pANI) resources for the purpose of instructing switches where to route wireless and VoIP 9-1-1 calls. Staff questioned the applicant as to how they intended to use the DSO/DS1 circuits for PSTN or IP traffic and if they intended to resell the UNE loops. The applicant responded that while the DSO/DS1 connections could be used for either form of traffic, it currently intends to use them for traditional PSTN based connections between their 9-1-1 routing service and the CBT selective routing tandem. The applicant further stated that it did not intend to resell UNE loops.

Staff finds that the Applicant's rationale associated with the use of interconnection facilities supports its request to be a telecommunications carrier under Sections 251 and 252 of the Telecommunications Act of 1996 and entitled to all rights and obligations under such Act.

2. Public Policy on Emergency Service Telecommunications Carrier" (ESTC)

Upon further review of the applicant's proposed application seeking authority to be a CLEC; and in light of the significant public interest surrounding the provisioning of the applicant's described services, specifically of 9-1-1 service, Staff believes that the Commission should establish a new designation known as an "emergency service telecommunications carrier" and to designate the applicant as such, rather than as a CLEC. Within the scope of this ESTC designation, Staff recommends the following criteria:

Service Territory
The applicant is proposing that it be granted statewide authority, however, due to the fact that the 9-1-1 systems in Ohio are planned, structured, and established on a countywide basis, Staff finds that within the scope of this new ESTC designation, the certification should occur on a countywide basis in order to ensure that all PSAPs in a given county are served by the same emergency service telecommunications carrier for purposes of provisioning seamless 9-1-1

service. Therefore, ESTCs should not serve individual PSAPs but, instead, the entire countywide 9-1-1 system and it would be more appropriate to certify the applicant in all 88 counties.

Call Delivery
In order to promote seamless 9-1-1 services as the applicant proposes, Staff recommends that the ESTC be required to interconnect with each adjacent countywide 9-1-1 system to ensure transferability across county lines. In addition, each ESTC is required to ensure call/data transferability between Internet Protocol (IP) enabled PSAPs and non-IP PSAPs within the countywide 9-1-1 systems it serves, and to other adjacent countywide 9-1-1 systems, including those utilizing non-IP networks which are served by another 9-1-1 system service provider.

Also, Staff finds that the applicant should also be required to carry all calls throughout the county for such types of telecommunications services designated by the county.

3. Regulatory Framework

The Applicant proposes to offer its services and pricing on an individual contract basis. Staff recommends that all contracts provisioning for enhanced emergency services, between the applicant and any Ohio county should be submitted to the Ohio 9-1-1 coordinator within 30 days of their execution.

Tier I Core
Due to the fact that the provision of emergency services is an essential component of basic local service with public interest and safety ramifications, Staff points out that these services are considered Tier 1 Core and not Tier 1 non-core as proposed by the Applicant. Therefore, as an Emergency Service Telecommunications Carrier the Applicant will be governed by the Commission's Telecommunications Rules, as its service pertain to Tier 1 Core E9-1-1 services. Further, except where otherwise ordered and as noted below, subsequent filings and requests should follow the process and procedures depicted in the Commission's Retail Rules and where applicable the Commission's MTSS and Carrier Rules.

Specifically, Staff felt it necessary to set up certain requirements because of the potential impact to public safety. Those requirements are as follows:

Disconnects and/or Abandonments of Service
In the proposed application, the Applicant agrees to abide by the requirements set forth in the minimum telephone service standards (MTSS) which pertains to emergency and outage operations impacting 9-1-1 service. Staff finds that consistent with this rule, are concerned that 9-1-1 service not be interrupted due to a business determination on behalf of the applicant or a county that the applicant no longer wishes to serve in the capacity of an ESTC, Staff finds that the applicant must obtain Commission approval prior to discontinuing or disconnecting service in a specific county or throughout the entire state of Ohio. All such requests should be filed as non-automatic approval abandonment cases.

Outbound emergency notification messaging
Staff notes that although the Applicant is not currently offering "outbound emergency notification messaging" service or also known as "Reverse 9-1-1". Staff expects the applicant to

file a tariff on this service once the service is requested from any county it serves. With respect to this particular service, the Commission previously determined that the provisioning of this service is not competitive due to the fact that the 9-1-1 database is compiled and held in "public trust" and not able to be released to any outside third party. As a result all tariffs filed by the Applicant for this service should be held at cost and will be considered on a non-automatic basis.

pANI Resources and Number Optimization

Pursuant to its designation as an emergency services telecommunications provider, the Applicant is entitled to access of pANI resources. Staff expects that such pANI resources will be obtained and utilized by the Applicant in an efficient manner consistent with the FCC's number optimization rules in 47 C.F.R §52. The Staff recommends that the Commission directs Applicant to make available to the Commission's Staff, upon request, information concerning the Applicant's application for and/or utilization of pANI resources.

CONCLUSION & STAFF RECOMMENDATION:

Staff has thoroughly reviewed this application and found that, as amended on December 7, 2007 and January 28, 2008, it is in compliance with Commission Rules and Regulations. Therefore, Staff recommends that this application be approved as discussed above via Commission Finding and Order.

"DRAFT-This document was created only for the purpose stated within. It is for staff discussion only and does not reflect the view of the Commission."

BEFORE

THE PUBLIC UTILITIES COMMISSION OF OHIO

In the Matter of the Application of Intrado Communications Inc. to Provide Competitive Local Exchange Services in the State of Ohio.	))))	Case No. 07-1199-TP-ACE

ENTRY ON REHEARING

The Commission finds:

(1) Pursuant to its February 5, 2008, Finding and Order, as clarified on February 13, 2008, the Commission determined that Intrado Communications Inc. (Intrado) is a telephone company pursuant to Section 4905.03, Revised Code, and Rule 4901:1-7-01(S), Ohio Administrative Code (O.A.C.), and a public utility pursuant to Section 4905.02(B), Revised Code, and certified Intrado to provide competitive emergency telecommunications services in Ohio.

(2) On March 6, 2008, applications for rehearing were filed by AT&T Ohio, Cincinnati Bell Telephone Company LLC (Cincinnati Bell), and the Ohio Telecom Association (OTA). AT&T Ohio, Cincinnati Bell, and OTA (hereafter collectively intervenors) were granted intervention in this proceeding pursuant to an attorney examiner's entry issued December 18, 2007.

(3) On March 14, 2008, Intrado filed a memorandum contra the applications for rehearing.

(4) Section 4903.10, Revised Code, states that any party to a Commission proceeding may apply for rehearing with respect to any matters determined by the Commission within 30 days of the entry of the order upon the Commission's journal.

(5) AT&T Ohio alleges that the Commission's Finding and Order effectively establishes new rules without following the required steps for rulemaking under Ohio law and without affording interested parties due process. Specifically, AT&T Ohio asserts that, by creating the emergency services telecommunications carrier designation, the Commission established an entirely new category of certified carrier along with de facto rules without any prior notice and absent any opportunity for public

FPSC-COMMISSION CLERK

comments or the stating of objections (AT&T Ohio Application for Rehearing at 2, 7). AT&T Ohio submits that Section 111.15, Revised Code, requires the Commission to follow a series of detailed, specific requirements when considering and establishing rules (e.g., advanced filing with the Joint Committee on Agency Rule Review) (*Id.* at 3, 6). AT&T Ohio avers that the requisite notice and filing requirements are intended to prohibit an agency from adopting industry-wide rules in an adjudicatory proceeding unless the potentially affected parties are afforded a full opportunity to be heard. AT&T Ohio submits that when adopting certification standards in the past, the Commission has always used the rulemaking process and permitted public notice and comment on the proposed rules (*Id.* at 4).

AT&T Ohio considers the Commission's actions in this proceeding to constitute rules inasmuch as Section 111.15(A)(1), Revised Code, defines a rule as "any rule, regulation, bylaw, or standard having a general or uniform operation, adopted by an agency under the authority of the laws governing the agency; any appendix to a rule; and any internal management rule" (*Id.* at 5). AT&T Ohio opines that the Commission's Finding and Order in this proceeding constitutes rules inasmuch as the order extends beyond the limited consideration of Intrado's application and establishes an entirely new framework of presumptions, rights, and obligations for the regulation of all competitive emergency services telecommunications carriers on a going forward basis (*Id.* at 5-7).

AT&T Ohio also believes that the Commission's Finding and Order establishes rules governing incumbent local exchange carriers (ILECs) inasmuch as it requires ILEC interconnection with emergency services telecommunications carriers and sets forth the obligation that ILECs work cooperatively with Intrado to ensure that 9-1-1 calls are completed from end users to public safety answering points (PSAPs). AT&T Ohio asserts that, while the Commission's Finding and Order establishes rules applicable to ILECs, it fails to address generic implementation issues (e.g., compensation) that could have been addressed in the context of a notice and comment period for a rulemaking (*Id.*).

Additionally, AT&T Ohio asserts that it would be inappropriate to apply retroactively the obligations of the Commission's Finding and Order to the parties in this proceeding. Referencing

Retail Wholesale & Department Store Union v. NLRB, 466 F.2d 380, 390 (D.C. Cir. 1972), AT&T Ohio claims that, in determining whether an agency has abused its discretion by retroactively applying a rule announced through adjudication, courts have generally considered the following factors:

(a) whether the particular case is one of first impression,

(b) whether the new rule represents an abrupt departure from well established practice or merely attempts to fill a void in an unsettled area of law,

(c) the extent to which the party against whom the new rule is applied relied on the former rule,

(d) the degree of the burden which a retroactive order imposes on a party, and

(e) the statutory interest in applying a new rule despite the reliance of a party on the old standard.

(*Id.* at 4).

Based on these factors, AT&T Ohio asserts that the Commission abused its discretion by applying its decision retroactively, to the detriment of the company. AT&T Ohio explains that there was no indication that the Commission would deviate from its existing rules and create a completely new category of telecommunications carrier. AT&T Ohio also opines that the Commission's decision appears to subject the company to the significant burden of making its network available to a new category of telecommunications carrier (*Id.* at 7, 8).

(6) OTA also objects to the Commission's establishment of the classification of competitive emergency services telecommunications carriers and the associated rules in the context of the Commission's Finding and Order addressing Intrado's application for certification as a competitive local exchange company. OTA contends that no party was given notice of the Commission's intention to consider this new carrier designation and no party was given the opportunity to provide comment.

OTA submits that the Commission failed to comply with Section 111.15, Revised Code, which provides for the legislative review of Commission rules by the Joint Committee on Agency Rule Review and for the central filing and publication of rules by the Secretary of State. OTA asserts that the Commission's directives regarding competitive emergency services telecommunications carriers are subject to Section 111.15, Revised Code, and should be available in the Ohio Administrative Code in order to properly notify the public regarding the new obligations (OTA Application for Rehearing at 11-12).

OTA asserts that the Commission has no authority to establish, *sua sponte*, a classification of emergency service telecommunications carriers absent due process, which would include notice and the opportunity to be heard concerning both the classification and the associated regulatory framework. In support of its position, OTA references that Section 4927.03(A), Revised Code, requires that the Commission afford the public and any affected telephone company the opportunity for comment. OTA states that the Commission's alleged failure to provide notice and an opportunity to be heard are violations of both Ohio law and constitutional guarantees of procedural due process. Additionally, OTA considers the approach taken by the Commission in this proceeding to be inconsistent with the Commission's approach in every other classification established pursuant to the aforementioned statute (*Id.* at 7-10).

(7) Similar to AT&T Ohio and OTA, Cincinnati Bell contends that the Commission erred by creating a new classification (competitive emergency services telecommunications carrier) and establishing corresponding rules absent notice or opportunity for comment by the intervenors. Cincinnati Bell submits that no rules previously existed for competitive emergency services telecommunications carriers. In establishing rules for these entities, Cincinnati Bell asserts that the Commission failed to follow the statutorily required rulemaking process which provides for the opportunity of public notice and comment (Cincinnati Bell Application for Rehearing at 4).

(8) Intrado contends that, because AT&T Ohio, OTA, and Cincinnati Bell were all granted intervention and the Commission considered their arguments seeking dismissal of the certification application, it is inappropriate for these entities to now argue

that they were denied due process. Intrado opines that the Commission has more than satisfied the requirements of due process as required by Section 4927.03, Revised Code, and provided for a greater participatory process than the Ohio Supreme Court deemed sufficient (Intrado Memorandum Contra at 7 citing *Discount Cellular Inc. v. Pub. Util. Comm.*, 112 Ohio St. 3d at 360, 368, 369 [2007]). Furthermore, Intrado points out that the Commission's ruling that Intrado is not a competitive local exchange carrier (CLEC) is precisely what the intervenors argued for in their motions. Thus, to now posit that the intervenors were denied due process, says Intrado, is ludicrous.

Inasmuch as the Commission permitted the intervenors to participate in this case, Intrado believes that the Commission was not required to initiate a formal rulemaking in order to assure due process (*Id.* at 8). In support of its position, Intrado states that, in *Discount Cellular*, the Ohio Supreme Court determined that there is no constitutional right to notice and hearing in utility-related matters if no statutory right to a hearing exists (*Id.* at 9).

Intrado considers the arguments raised by AT&T Ohio and OTA to be misleading and inaccurate inasmuch as it believes that Section 4927.03, Revised Code, grants the Commission the power to establish, by order, alternative regulatory requirements including different classifications, procedures, terms, and conditions without regard to Section 111.15, Revised Code (*Id.* at 2). In support of its position, Intrado states that in *Discount Cellular*, the Ohio Supreme Court determined that the Commission had properly exercised its statutory authority under Section 4927.03(A)(1), Revised Code, and had not engaged in rulemaking subject to the requirements of Section 111.15, Revised Code (*Id. at 6*).

Intrado submits that the Commission properly determined that the establishment of the alternative regulatory classification (competitive emergency services telecommunications carrier) was in the public interest consistent with Section 4927.03(A)(1), Revised Code, and would provide PSAPs with competitive, reasonably available alternatives. Further, Intrado opines that the associated procedures, terms, and conditions that competitive emergency services telecommunications carriers are

required to comply with are reasonable and do not create any undue economic, competitive, or market advantage to Intrado (*Id.* at 7).

Additionally, Intrado opines that, consistent with Section 4927.02(A)(4), Revised Code, the Commission, in its Finding and Order, specifically considered the state's policy objective of promoting diversity and options in the supply of the public telecommunications services when the Commission authorized Intrado to provide competitive emergency telecommunication services in Ohio (*Id.* at 4).

(9) With respect to AT&T Ohio's, OTA's, and Cincinnati Bell's arguments regarding due process violations and the failure of the Commission to comply with Section 111.15, Revised Code, rulemaking requirements, the applications for rehearing are denied. Despite the intervenors' arguments to the contrary, we conclude that the Finding and Order appropriately considered Intrado's request for certification and, upon determining that the company was not a competitive local exchange carrier (CLEC) but still under our jurisdiction, we established what type of a carrier Intrado actually is. Such a determination is certainly within the Commission's general supervisory powers and is not tantamount to a rulemaking endeavor. Specifically, the Commission has the ability to determine whether a particular applicant falls under the jurisdiction of the Commission and the attending regulatory rights and obligations of such an entity in the context of a request for a certificate to operate in this state. Moreover, given constant advancements in technology, it is not unusual for the Commission to have to consider in certification cases whether and to what extent new and unique telecommunications service offerings fit into our regulatory framework (See, for example, Case No. 93-1370-TP-ACE, *Time Warner AxS of Western Ohio, LP*, Finding and Order issued December 9, 1993). To require the Commission to conduct a rulemaking every time a telephone company proposes a new and unique telecommunications service option would frustrate both the policy of the state to encourage innovation in the telecommunications industry as well as the policy to promote diversity and options in the supply of public telecommunications services and equipment throughout the state (Section 4927.02, Revised Code). We further point out that, with respect to this certification analysis, the Commission not

only considered the viewpoints filed by the intervenors in Intrado's CLEC certification application, but that the Commission also agreed with many of their stated arguments.

While it appears that the intervenors advocate that the Commission's analysis should simply begin and end with the issue of whether Intrado is a CLEC, the intervenors fail to recognize that simply because an applicant is not a CLEC does not signify that it is also not a telephone company subject to the Commission's jurisdiction pursuant to Sections 4905.02, 4905.03(A)(2), and 4905.04, Revised Code. Therefore, upon determining that Intrado is a telephone company that does not fit neatly into the existing carrier classifications, the Commission took the next logical and necessary step of determining the appropriate classification for the telephone company in order to determine the appropriate regulatory framework to apply to Intrado. Intrado requested certification as a CLEC for the purposes of providing Tier 1 noncore services. The Commission determined that Intrado, although providing a component of basic local exchange service, was not a traditional provider of basic local exchange service in the sense that its telephone exchange activities are restricted in scope to competitive emergency telecommunications services. Thus, rather than placing Intrado into a regulatory classification in which it did not neatly fit, we categorized Intrado as an emergency services telecommunications carrier and concluded that the existing regulatory framework for Tier 1 core service should apply.

The Commission asserts that this determination is entirely consistent with the Commission's existing rules. In particular, the Commission highlights the fact that Chapter 4901:1-6, O.A.C., sets forth the regulatory framework for all providers of competitive telecommunications services, not just CLECs (See Rule 4901:1-6-02, O.A.C.). Also, Rule 4901:1-6-06, O.A.C., sets forth the application process which must be followed by any telephone company desiring to offer telecommunications services in the state of Ohio. It was under this process that the Commission considered Intrado's application for certification, and it was the existing rules in Chapters 4901:1-5, 4901:1-6, and 4901:1-7, O.A.C., which we applied to Intrado's operating authority, once we determined what kind of telephone company Intrado is. Therefore, the Commission established no new rules as a result of our Finding and Order in this proceeding.

In our Finding and Order, we established specific additional conditions for Intrado's operating authority, due to the high level of public interest in ensuring uninterrupted 9-1-1 service to the public. AT&T Ohio maintains that the Commission clearly intended these findings to apply generally and uniformly to all emergency services telecommunications carriers and, therefore, by definition, they constitute new rules (AT&T Ohio Application for Rehearing at 5). The Commission grants AT&T Ohio's request for rehearing on this ground. The Commission agrees with AT&T Ohio that it would be improper to apply the determinations made in this case generally and uniformly to any future applicant for a certificate to provide competitive emergency telecommunications services. Thus, to the extent that our findings appeared to apply to all providers of the type of competitive emergency telecommunications services proposed by Intrado, we clarify that our findings are limited to the unique business plan and operation of Intrado, as set forth in its application in this case. The specific requirements we imposed on Intrado in its certification case apply only to Intrado, and are a condition of it receiving a certificate to operate in Ohio. Should other applicants request similar authority in the future, the Commission will consider those requests based on the individual facts and merits of any such applications and will allow interested persons an opportunity to intervene and express their views regarding the applications in those cases.

(10) As another ground for rehearing, AT&T Ohio asserts that the Commission's Finding and Order unlawfully creates discriminatory pricing in violation of Ohio's statutes (AT&T Ohio Application for Rehearing at 9). Specifically, AT&T Ohio points out that while the Commission has now determined that competitive emergency services telecommunications carriers can provide 9-1-1 services on an individual contract basis (Intrado Order at ¶13), the Commission previously stated in *In the Matter of the Adoption of Guidelines Governing the Disclosure or Use of the Emergency 9-1-1 Database in Accordance With House Bill No. 344*, Case No. 94-1965-TP-ORD (94-1965), Finding and Order, June 6, 1996, at 13, that "[t]o allow market pricing for 9-1-1 database service . . .would essentially allow LECs to profit from State and subscriber-funded investment" (*Id.* at 9, 10). AT&T Ohio asserts that if Intrado is providing the same or similar emergency services to that of another carrier, the same pricing standards should apply to both entities. AT&T Ohio submits that to do

otherwise would be a violation of Section 4927.02(A)(7), Revised Code (AT&T Ohio Application for Rehearing at 10).

(11) Similar to AT&T Ohio, OTA contends that the Commission's Finding and Order unlawfully and unreasonably discriminates between ILECs and competitive emergency services telecommunications providers regarding the pricing of emergency services and unreasonably imposes costs for which recovery is ordered. In support of its petition, OTA represents that, consistent with the policy set forth in 94-1965, Finding and Order, June 6, 1996, at 13, ILECs in Ohio have developed, filed, and implemented tariffs for 9-1-1 services that are based on the incremental costs alone (OTA Application for Rehearing at 15). In contrast, OTA submits that, pursuant to the Commission's Finding and Order in this proceeding, competitive emergency services telecommunications carriers are allowed to recover whatever the market will bear. OTA avers that such an outcome violates Section 4927.02(A)(7), Revised Code, which reflects that it is the policy of the state of Ohio to "not unduly favor or advantage any provider and not unduly disadvantage providers of competing and functionally equivalent services." Additionally, OTA objects to the Commission imposing costs on ILECs for the purpose of assisting in the migration of 9-1-1 traffic to a competitive emergency services telecommunications carrier while not providing a cost recovery mechanism subsequent to the migration of traffic (*Id.* at 16).

(12) In response to AT&T Ohio's and OTA's arguments that the Commission's Finding and Order results in discriminatory pricing standards relative to the pricing constraints applicable to ILECs, Intrado responds that the pricing structure set forth in 94-1965 was intended to address how traditional 9-1-1 services should be tariffed according to incumbent regulatory requirements and was not intended to apply to all new competitive services. In support of the Commission's decision to allow Intrado to offer service to counties pursuant to contract, Intrado references Section 4927.03(B), Revised Code, and asserts that the Commission may prescribe different classifications for different telephone companies and the services they provide (Intrado Memorandum Contra at 17).

Intrado submits that the Commission has continuously set forth different regulatory structures for ILECs, CLECs, and other

telecommunications providers. With respect to 9-1-1 service, Intrado believes that the disparity in regulatory treatment is appropriate in light of the fact that ILECs are providing service over ubiquitous legacy facilities, while Intrado does not have the benefit of embedded legacy facilities and a legacy cost structure (*Id.* at 18). In particular, Intrado submits that most of the ILEC facilities used to provide the traditional 9-1-1 services have been in place for many years and that the ILECs have likely recovered the cost of these facilities in full (*Id.* at 19). Intrado states that the pricing requirements implemented by the Commission in 94-1965 were applied to prohibit ILECs from "profit(ing) from State and subscriber-funded investment" (*Id.* at 17). Contrastingly, Intrado represents that it is financing this new technology, without ratepayer funding (*Id.* at 19). Thus, argues Intrado, it is only appropriate and reasonable that the Commission made a distinction in the pricing structure applicable to Intrado.

(13) In regard to AT&T Ohio's and OTA's arguments that the Commission's Finding and Order results in discriminatory pricing standards relative to the pricing constraints applicable to ILECs, the applications for rehearing are denied. Contrary to AT&T Ohio's and OTA's contention that the Commission's Finding and Order results in discriminatory pricing, the Commission determines that the arguments raised do not engage in a comparison of similar services. Specifically, whereas the Finding and Order in 94-1965 was limited in scope to the disclosure of the legacy 9-1-1 database information by the ILECs, the Finding and Order in this case addresses the pricing of an enhanced, next generation 9-1-1 system, which incorporates new costs not previously contemplated by the Commission and not currently being recovered by State and subscriber-funded investment. Based on the facts of this case, we believe that it is appropriate to allow Intrado a pricing structure for its proposed service different from the legacy service. To the extent that any ILEC seeks to similarly provision enhanced, next generation 9-1-1 service, the Commission would consider in the context of such application, the appropriateness of affording the same pricing flexibility as Intrado for those costs not already accounted for under its legacy 9-1-1 costs.

(14) As further grounds for rehearing, AT&T Ohio submits that the Commission unnecessarily decided issues not relevant to the issue of certification. Specifically, AT&T Ohio states that there

was no reason for the Commission to address the issue of the applicability of Sections 251 and 252 of the Telecommunications Act of 1996 (1996 Act) or Intrado's eligibility for pseudo automatic number identification (pANI) resources when the only issue before it was to determine whether Intrado was entitled to certification pursuant to Ohio law (AT&T Ohio Application for Rehearing at 11, 12). AT&T Ohio submits that the issue of the applicability of Sections 251 and 252 is more appropriate in the context of Intrado's pending arbitration cases with AT&T Ohio and Embarq (*Id.*). To the extent that the Commission's Finding and Order is also intended to unequivocally give Section 251 and Section 252 rights to other competitive emergency services telecommunications carriers, AT&T Ohio believes that such treatment is inappropriate in light of the fact that each individual competitive emergency services telecommunications carrier may have its own business plan and network architecture and may not offer services that are functionally equivalent to that offered by Intrado (*Id.* at 12-14).

At a minimum, AT&T Ohio seeks clarification that, pursuant to the Commission's Order, Intrado or any future competitive emergency services telecommunications carrier is not automatically granted greater rights than an actual CLEC or any other carrier under Sections 251 or 252 of the 1996 Act. For example, AT&T Ohio submits that, pursuant to the 1996 Act, interconnection is only available to a requesting carrier if it is used to provide exchange access or local exchange service and only if it is used for the mutual exchange of traffic. AT&T Ohio opines that decisions regarding the reasonableness of individual company requests for interconnection should occur on an individual case-specific basis in the context of a Section 252 proceeding (*Id.* at 13).

(15) Similar to AT&T Ohio, OTA asserts that the Commission's framework misconstrues the law and erroneously confers rights on Intrado to which it is not entitled. Specifically, OTA states that Intrado is not entitled to interconnection under either state or federal law (OTA Application for Rehearing at 10). First, OTA opines that the Commission should not have addressed this issue at all inasmuch as no party raised it for consideration (*Id.* at 13). Next, OTA submits that Intrado is not entitled to Section 251 interconnection due to the fact that the company is not engaged in the routing of telephone exchange service as defined

by 47 U.S.C. 153(47) or involved in the provisioning of exchange access (*Id.* at 13, 14). OTA also avers that the Commission may not lawfully extend interconnection rights as a matter of state law. In support of this position, OTA notes that Section 4905.041, *Revised Code*, provides that:

> (a) The public utilities commission shall not establish any requirements for the unbundling of network elements, for the resale of telecommunications services, or for network interconnection that exceed or are inconsistent with or prohibited by federal law, including federal regulations.
>
> (b) The commission shall not establish pricing for such unbundled elements, resale, or interconnection that is inconsistent with or prohibited by federal law, including federal regulations, and shall comply with federal law, including federal regulations, in establishing such pricing.

(*Id.* at 14, 15).

(16) Cincinnati Bell also asserts that the Commission erred in declaring that competitive emergency services telecommunications carriers are entitled to all rights and obligations of a telecommunications carrier pursuant to Sections 251 and 252 of the 1996 Act. In support of its position, Cincinnati Bell asserts that this issue was irrelevant to the certification issue pending before the Commission in this proceeding. In particular, Cincinnati Bell states that it is not necessary to resolve these federal law issues when determining whether Intrado is qualified as a CLEC under Ohio law and that Intrado's status under Ohio law is not determinative of its rights under Sections 251 and 252 of the 1996 Act (Cincinnati Bell *Application for* Rehearing at 5, 6). Similar to AT&T Ohio, Cincinnati Bell asserts that it is inappropriate for the Commission to have determined that all companies designated as competitive emergency services telecommunications carriers are automatically entitled to all rights and obligations under those sections. Rather, Cincinnati Bell believes that it would have been more appropriate for the Commission to determine that such issues should be addressed in the individual arbitration proceedings (*Id.* at 6, 7).

(17) Intrado submits that it is a telephone company pursuant to Section 4905.03(A)(2), Revised Code, and that, consistent with Section 4905.041, Revised Code, the Commission must afford Intrado with the same rights and benefits under Ohio law that it enjoys under federal law, including the granting of the same interconnection rights as Ohio CLECs (Intrado Memorandum Contra at 3). Additionally, Intrado believes that telephone exchange service is not limited to voice communications provided over the public circuit-switched network (*Id.* at 11 citing *Federal-State Joint Board on Universal Service*, 13 FCC Rcd 11830 [1998]). Intrado states that its services have the same qualities as other telephone exchange services recognized by the Federal Communications Commission (FCC) including the communicating of information within a local area and the intercommunication among subscribers within a local exchange area (*Id.* at 9, *10* citing *Deployment of Wireline Services Offering Advanced Telecommunications Capability*, 15 FCC Rcd 385 [1999]).

Intrado believes that the Commission was well within its statutory authority to determine the company's interconnection rights pursuant to Sections 251 and 252 of the 1996 Act. In support of its position, Intrado asserts that Section 252 specifically designates state commissions as the proper entity to address issues concerning interconnection (*Id.* at 16). Further, Intrado avers that the Commission is not required to limit its discussion of interconnection issues solely in the context of interconnection agreement disputes or arbitration. Intrado believes that it was particularly appropriate for the Commission to address the issue of interconnection rights in light of the fact that AT&T Ohio and OTA, in this proceeding, had raised issues relating to Intrado's rights under Sections 251 and 252 (*Id.*).

(18) With respect to the arguments raised by the intervenors regarding the determination that Intrado is entitled to interconnection pursuant to Sections 251 and 252, the Commission finds that the applications for rehearing should be granted in part and denied in part. As discussed *supra*, the Commission certainly has the ability to determine whether a particular applicant falls under its jurisdiction and to set forth the attending regulatory rights and obligations of such an entity. Issues such as whether Intrado, as a telephone company, is generally subject to Sections 251 and 252 are encompassed within these attending regulatory obligations. Thus, the

Commission's determination that Intrado is a telephone company pursuant to Section 4905.03, Revised Code, and Rule 4901:1-7-01(S), O.A.C., for purposes of Chapter 4901:1-7, O.A.C., and Sections 251 and 252 was proper and appropriate. However, consistent with our conclusion above, we grant rehearing to clarify that the Commission makes no determination in this proceeding as to the general applicability of Chapter 4901:1-7, O.A.C., and Sections 251 and 252 to other providers of competitive emergency telecommunications services. Our findings in this case are limited to the business plan and operation of Intrado, as set forth in its application in this case. Should other applicants request similar authority as Intrado in the future, the Commission will consider those requests based on the individual facts and merits of any such applications and will allow interested persons an opportunity to intervene and express their views in the context of those cases.

Furthermore, the Commission clarifies that we are not deciding in this case the issues pending in Intrado's arbitration proceedings. While the Commission recognizes its determinations that (a) Intrado is entitled to the rights and obligations of a telecommunications carrier pursuant to Sections 251 and 252 of the 1996 Act, (b) ILECs are obligated to negotiate with Intrado in good faith and (c) Intrado is entitled to access pANI resources (Finding and Order at 5, 6), these determinations address ONLY the fundamental question as to Intrado's right, as a telephone company under Rule 4901:1-7-01(S), O.A.C., to request AN interconnection agreement pursuant to Chapter 4901:1-7, O.A.C., and Sections 251 and 252 of the 1996 Act. Our decision does not address the appropriateness and scope of any specific request for interconnection. Such decisions are to be addressed in the context of Intrado's ongoing arbitration proceedings, based on the case-specific facts of Intrado's actual proposal.

(19) AT&T Ohio asserts that Intrado is not a telecommunications carrier pursuant to federal law inasmuch as it does not provide telecommunications as defined by 47 U.S.C. 153(43). In support of its position, AT&T Ohio states that 47 U.S.C. 153(43) requires that a telecommunications carrier provide "the transmission, between or among points specified by the user, of information of the user's choosing without change in the form or content of the information as sent and received." Since Intrado's customer is

the county PSAP, and not the end user, AT&T Ohio contends that Intrado is not engaged in the provision of telecommunications. Additionally, AT&T Ohio submits that the FCC has held that E911 services are not telecommunications services and, instead, are information services (AT&T Ohio Application for Rehearing at 14 citing *In the Matter of Bell Operating Companies, Petitions for Forbearance From the Application of Section 272 of the Communications Act of 1934, as Amended, to Certain Activities*, 13 FCC Rcd. 2627, ¶17 [1998]).

(20) Intrado submits that the Commission properly determined that the company is a telecommunications carrier offering telephone exchange service. Specifically, Intrado argues that its service provides PSAPs and municipalities with transmission between or among points specified by the user (the PSAP or municipality) of information of the user's choosing without change in the form or content of the information as sent and received. Intrado explains that when the PSAP receives an emergency call it directs the call to the appropriate entity without a change in the form or content of the communication (Intrado Memorandum Contra at 12).

In response to AT&T Ohio's claim that E9-1-1 services are information services, rather than telecommunications services, Intrado states that the FCC has distinguished between a separately-stated, separately-priced storage and retrieval function being offered as an information service on a stand-alone basis to an end user and an automatic location identification database function being offered for the management, control, or operation of telecommunication systems or telecommunications services by a carrier to provide an integrated comprehensive 9-1-1 service (*Id.* at 13 citing *Bell Operating Companies: Petitions for Forbearing from the Application of Section 272 of the Communications Act of 1934, as Amended, to Certain Activities*, 13 FCC Rcd 2627, ¶¶17, 18 [1998]). In light of the fact that its services are marketed to end users (municipalities and PSAPs) as a single integrated offering, Intrado asserts that the Commission has properly classified its services as a telecommunications service (*Id.* at 13).

Additionally, Intrado asserts that the PSAPs and the municipalities that it serves are the end users of such services just as PSAPs or municipalities that purchase services from the ILECs at retail rates via a retail tariff are considered as holding

end user status. Intrado highlights that the FCC has determined that "wholesale" means a service or product that is an input to a further sale to an end user, while a retail transaction is for the customer's own personal use or consumption (*Id.* citing *Federal-State Joint Board on Universal Service*, 13 FCC Rcd 5318, ¶298 [1997]).

(21) In regard to AT&T Ohio's argument that the Commission incorrectly determined that Intrado is a telecommunications carrier pursuant to federal law, AT&T Ohio's application for rehearing should be denied. As we stated above, we found that Intrado is a telephone company pursuant to Section 4905.03, Revised Code, and Rule 4901:1-7-01(S), O.A.C. Under Chapter 4901:1-7, O.A.C., "telephone company" includes the definition of "telecommunications carrier" incorporated in 47 U.S.C. 153(44), and the obligations found in Chapter 4901:1-7, O.A.C., including interconnection, are generally applicable to telephone companies as defined by Section 4905.03, Revised Code.

(22) Finally, Cincinnati Bell questions the intent of the Commission's requirement that a provider of competitive emergency telecommunications services must carry all calls throughout the county for the designated types of telecommunications services (Cincinnati Bell Application for Rehearing at 7 citing Finding and Order at ¶11). Specifically, Cincinnati Bell states that if it were the intent to create exclusivity for types of telecommunications traffic, such a conclusion is unreasonable and unlawful. Cincinnati Bell submits that it is beyond the jurisdiction of the Commission to dictate how counties will provision 9-1-1 services. Additionally, Cincinnati Bell believes that just because a county may authorize a particular competitive emergency services telecommunications carrier, there is no reason why a county cannot authorize multiple 9-1-1 providers, even for the same class of service (*Id.* at 8).

Similarly, Cincinnati Bell contends that a given wireless carrier should not be forced to redirect all of its traffic to the competitive emergency services telecommunications carrier if it is content to continue using the existing connections (*Id.*). Cincinnati Bell also points out that ILEC telephone boundaries extend beyond county boundaries. Therefore, Cincinnati Bell believes it would be inequitable to force a wireless provider to interconnect with a competitive emergency services telecommunications carrier for a

county's 9-1-1 service, while continuing to have to interconnect with the ILEC for the provision of 9-1-1 service in other counties. In support of its position, Cincinnati Bell asserts that the Commission's determination will actually result in less, rather than more competition for the provisioning of emergency services (*Id.* at 9, 10).

(23) In response to Cincinnati Bell's contention that the Commission erred in its determination that the county-designated competitive emergency services telecommunications carrier will be the exclusive provider of 9-1-1 service in the county, Intrado points out that competitive emergency services telecommunications carriers will still compete with the ILEC to provide 9-1-1 services (Intrado Memorandum Contra at 19). Intrado also asserts that Cincinnati Bell lacks standing to raise its arguments in light of the fact that, to the extent that there is an aggrieved entity, it would be a county or another competitive emergency services telecommunications carrier,, and not Cincinnati Bell (*Id.* at 20).

(24) With respect to the Commission's requirement that Intrado must carry all calls throughout the county for the designated types of telecommunications services, the Commission finds that the application for rehearing should be denied. First, the Commission agrees with Intrado and finds that Cincinnati Bell lacks standing with respect to this assignment of error inasmuch as Cincinnati Bell does not argue that the Commission's order invades its rights or aggrieves its interests. Second, we note that the ILEC's right to provide 9-1-1 services remains intact, although there will now be a competitor for these services. Additionally, the Commission emphasizes that the requirement that there be no more than one additional competitive emergency services telecommunications carrier designated by the county for specific types of traffic is necessary and limited in scope at this point in time in order to ensure that the public interest is protected and the chance of a 9-1-1 system error is reduced. The Commission will continue to monitor the development of the competitive emergency services telecommunications market and will take whatever future action that it deems necessary.

It is, therefore,

07-1199-TP-ACE

ORDERED, That the applications for rehearing are granted in part and denied in part consistent with the above findings. It is, further,

ORDERED, That the Commission's February 5, 2008, Finding and Order is clarified in accordance with the above findings. It is, further,

ORDERED, That to the extent not specifically addressed herein, all other arguments raised in the applications for rehearing are denied. It is, further,

ORDERED, That a copy of this Entry on Rehearing be served upon all parties and interested persons of record.

1.0 *APPLICATION AND REFERENCE*

1.1 APPLICATION OF PRICE LIST

1.1.1 This Price List contains the regulations, terms, conditions, and maximum rates and charges applicable to intrastate exchange and network services and equipment furnished by Intrado Communications Inc.., hereinafter referred to as ICI or the Company. (T)

1.1.2 The Company's services are available to Business Customers, Public Agencies. Local Exchange Carriers, Wireless Service Providers and Telematics Service providers.

1.1.3 The Company's Florida service territory is statewide.

1.1.4 Service is available where facilities permit.

1.2 EXPLANATION OF ABBREVIATIONS

AMA	Automatic Message Accounting
ANI	Automatic Number Identification
ALI	Automatic Location Identification
ASCII	American Standard Code for Information Interexchange
Bps	Bits per second
CAMA	Centralized Automated Message Accounting
CCITT	The International Telegraph and Telephone Consultative Committee
CCSA	Common Control Switching Arrangement
CNCC	Customer Network Control Center
CO	Central Office
Cont'd	Continued
cps	Cycles per second
CRT	Cathode Ray Tube
dB	Decibel

SS 7	Signaling System 7
SRA	Selective Routing Arrangement

1.3 PRICE LIST FORMAT

1.3.1 LOCATION OF MATERIAL

1.3.1.1 Section 1 provides the following sections in this Price List.
- Subject Index – an alphabetical listing to find the desired section.
- Table of Contents – a numerical listing to find the desires section and page.

1.3.1.2 Each individual section in the Price List provides a Subject Index for the material located within that section.

1.3.1.3 Obsolete Service Offerings
Obsolete service offerings are identified in the Price List by adding 100 to the current section number, i.e., obsolete items from Section 5, will be found in Section 105. This section is then filed behind Section 5.

1.3.2 OUTLINE STRUCTURE

Paragraph Numbering Sequence - There are various levels of alphanumeric coding. Each level of coding is subservient to its next higher level. The following is an example of the numbering sequence suggested for use in Price Lists.

2.1
2.1.1.
2.1.1.1.1.
2.1.1.1.1.1.

1.3.3 SHEET NUMBERING

Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the Price List. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

1.3.4 SHEET REVISION NUMBERS

Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Commission. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14

1.3.5 RATE TABLES

Within rate tables, four types of entries are allowed:

- Rate Amount

The rate amount indicates the dollar value associated with the service.

- A dash "-"

The dash indicates that there is no rate for the service or that a rate amount is not applicable under the specific column header.

- A footnote designator "[1]"

The footnote designator indicates that further information is contained in a footnote.

- ICB

The acronym "ICB" indicates that the product/service is rated on an individual case basis.

1.3.6 CHECK SHEETS

Check Sheets: When a Price List filing is made with the Florida Public Service Commission, an undated check sheet accompanies the Price List filing. The check sheet lists the sheets contained in the Price List, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on the check sheet if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The Price List user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the Florida Public Service Commission.

1.4 EXPLANATION OF CHANGE SYMBOLS

SYMBOL	EXPLANATION
(D)	To signify discontinued material
(I)	To signify rate increase
(M)	To signify material moved from or to another part of the Price List with no change, unless there is another change symbol present
(N)	To signify new material
(R)	To signify rate reduction
(T)	To signify a change in text or regulation but no change in rate or charge

1.5 TRADEMARKS, SERVICE MARKS AND TRADE NAMES

9-1-1 SafetyNet℠ Service Mark of Intrado Communications Inc. (T)

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING

2.1. DEFINITION OF TERMS

9-1-1
A three-digit telephone number used to report an emergency situation requiring a response by a public agency such as a fire department or police department.

9-1-1 Failure or Outage
A situation in which 9-1-1 calls cannot be transported from the end user to the Public Safety Answering Point (PSAP) responsible for answering the 9-1-1 emergency calls.

Access Line
An arrangement from a local exchange telephone company or other common carrier, using either dedicated or switched access, which connects a Customer's location to ICI's location or switching center. (T)

Authorized User
A person, firm, or corporation which is authorized by the Customer or joint user to be connected to the service of the Customer or joint user, respectively. An authorized user must be specifically named in the application for service.

Automatic Numbering Identification (ANI)
A type of signaling provided by a local exchange telephone company that automatically identifies the local exchange line from which a call originates.

Automatic Location Identification (ALI)
The automatic display, on equipment at the PSAP, of the location of the caller's telephone number, the address for the telephone, including non-listed and non-published numbers and addresses, and other information about the caller's location.

Basic Emergency Service
A telecommunications service permitting the use of the basic local exchange network and the three-digit number 9-1-1 for reporting police, fire, medical, or other emergency situations to a PSAP and referral to a public agency. Basic emergency service does not include discretionary equipment purchased by, or contracted for, governing bodies but not essential to the provision of 9-1-1 or E9-1-1 service.

Basic Local Exchange Carrier
Any person holding a Certificate of Public Convenience and Necessity issued pursuant to the Rules Regulating the Authority to Offer Local Exchange Telecommunications Services of the Commission to provide basic local exchange
service whether as a facility-based carrier or as a reseller.

Basic Local Exchange Service or Basic Service
The telecommunications service that provides a local dial tone line and local usage necessary to place or receive a call within an exchange area and any other services or features that may be added by the Commission.

Bit
The smallest unit of information in the binary system of notation.

Building
A structure occupied by one or more Customers.

Campus
A group of two or more buildings or spaces located on a single owned continuous or contiguous property.

Central Office (CO)
A switching unit providing telecommunication services to the general public, designed for terminating and interconnecting lines and trunks. More than one CO may be located in a building.

Central Office Line
See "Exchange Access Line."

Certified Telecommunications Provider
Providers of telecommunications local exchange service who are certified with the Florida Public Service Commission as a Local Exchange Services Provider.

Common Carrier
An authorized company or entity providing telecommunications services to the public.

Company
Refers to Intrado Communications Inc. (T)

(D)

Customer
A person, firm, corporation, or governmental agency responsible for paying the telecommunication bills and for complying with the rules and regulations of the Company.

Dedicated
A facility or equipment system or subsystem set aside for the sole use of a specific Customer.

Demarcation Point
The point of interconnection between the Company's regulated telecommunications facilities and terminal equipment, protective apparatus or wiring at the premise. The demarcation point location will be within twelve inches (12) of the protector, or when there is no protector, within twelve inches (12) (or as close as practicable) of the point at which the cable/wire enters the Customer premises.

Duplex Service
Service which provides for simultaneous transmission in both directions.

E9-1-1 Features
The ANI, ALI database and selective routing capabilities and all other components of an E9-1-1 system, not including the transport and switching facilities.

E9-1-1 Facilities
The facilities provided by the basic emergency service provider that interconnect to the wireless providers, certificated basic local exchange carriers, and other services that are used to transport E9-1-1 and other emergency calls to the PSAP. The facilities may include the use of E9-1-1 tandem switches or direct trunking of E9-1-1 calls to the PSAPs.

E9-1-1 Tandem or 9-1-1 Selective Routing Tandem
The switch that receives E9-1-1 calls from the originating local exchange central offices and wireless providers, employs the ANI information associated with such calls from the originating central office, determines the correct destination of the call, and forwards the call and the ANI information to that destination.

E9-1-1 Trunks
The facilities that connect from the central office serving the individual telephone that originates a 9-1-1 call to the E9-1-1 tandem and connect the tandem to the PSAP. These may include, but are not limited to, point-to-point private line facilities. Common or shared facilities also may be used subject to the provisions of these rules.

Emergency Communications Network (ECN)
A telephone network consisting of automated and manual call processing steps used to aggregate, transport and deliver emergency calling information to the appropriate 9-1-1 Selective Routing Tandem or PSAP.

Emergency Telephone Service
A telephone system using the three-digit number 9-1-1 to report police, fire, medical or other emergency situations.

End User
The term "End User" denotes any Customer of an intrastate telecommunications service that is not a carrier.

Enhanced 9-1-1 (E9-1-1)
An emergency telephone service that includes ANI, ALI (including non-listed and non-published numbers and addresses), and (optionally) selective routing, to facilitate public safety response.

Entrance Facilities
Those facilities from the property line to the point at which the cable enters the premises and terminates at the protector.

Facilities
Central office equipment, supplemental equipment, apparatus, wiring, cables (outside plant) and other material and mechanisms necessary to or furnished in connection with the services of the Company.

Fiber Optic Cable
A thin filament of glass with a protective coating through which a light beam carrying communications signals may be transmitted by means of multiple internal reflections to a receiver, which translates the message.

Geographic Area
The area such as a city, county, municipality, multiple counties, or other areas defined by a governing body or other governmental entity for the purpose of providing public agency response to 9-1-1 calls.

Governing Body
A board of county commissioners of a county or the city council or other governing body of a city, city and county, or town or the board of directors of a special district.

Holiday
New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, or Christmas Day.

Individual Case Basis (ICB)
A service arrangement in which the regulations, rates, charges and other terms and conditions are developed based on the specific circumstances of the case.

Inside Wire
Wiring located on the building owner's/Customer's side of the demarcation point. Such wiring is deregulated. Installation and maintenance of Inside Wiring is the responsibility of the Customer or premises owner.

Local Access and Transport Area (LATA)
A geographical area established by the U.S. District Court for the District of Columbia in Civil Action No. 82-0192, within which a local exchange company provides communications services.

Local Exchange Service
The furnishing of telecommunications services by a Local Exchange Provider to a Customer within an exchange for local calling. This service also provides access to and from the telecommunication network for long distance calling. The Company is not responsible for the provision of local exchange service to its Customers.

Master Street Address Guide (MSAG)
The file of street names and ranges defining emergency service agencies particular to a telephone number.

Maintenance of Service
Maintenance of Service (Trouble Isolation) denotes an occurrence of a visit to a Customer's premises in connection with a service difficulty when it is determined that the difficulty is due to a condition in Customer-provided facilities, terminal equipment, a communication system or for Customer-maintained premises wire. When a Maintenance of Service visit is made, Premises Work Charges will apply.

Mbps
Megabits, denotes millions of bits per second.

Minimum Point of Entry
The closest practicable point to where regulated facilities of the Company cross a property line or enter a building.

National Emergency Number Association (NENA)
An international not-for-profit organization whose purpose is to lead, assist, and provide for the development, availability, implementation and enhancement of a universal emergency telephone number or system common to all jurisdictions through research, planning, publications, training and education.

Network Control Signaling
Transmission of signals used in the telecommunications system which perform functions such as supervision (control, status, and charging signals), address signaling (e.g., dialing), calling and called number identification, audible tone signals (call process signals indicating reorder or busy conditions, alerting tones) to control the operating of switching equipment in the system.

Network Facilities
All Company facilities from the central office up to and including the Standard Network Interface at the demarcation point.

Non-listed service
Telephone numbers that are not published in the telephone directory but are available through directory assistance.

Non-published service
Telephone numbers that are neither published in the telephone directory nor available through directory assistance.

Nonrecurring Charge
A charge associated with a given service or item of equipment which applies on a per service and/or a per item basis each time the service or item of equipment is provided or changed.

Pseudo Automatic Number Identification (pANI)
The pseudo number associated with Non Call Path Associated wireless 9-1-1 call delivery and used for query into routing databases.

Person
Any individual, firm, partnership, copartnership, limited partnership, joint venture, association, cooperative organization, limited liability corporation, corporation (municipal or private and whether organized for profit or not), governmental agency, state, county, political subdivision, state department, commission, board, or bureau,

fraternal organization, nonprofit organization, estate, trust, business or common law trust, receiver, assignee for the benefit of creditors, trustee, or trustee in bankruptcy or any other service user.

Premises
See "Same Premises."

Premises Work Charge
A time-sensitive one-time charge that applies to Customer requested work done by the Company on the Customer's side of the Network Interface.

Private Branch Exchange (PBX)
An arrangement which comprises manual and/or automatic common equipment, wiring and station apparatus, and which provides for interconnection of main station lines associated with an attendant position and/or common equipment located on the Customer's premises or extended to another premises of the same Customer.

PBX Service
This service provides for centralized processing of exchange access by stations through groups of Central Office trunks, WATS lines, etc., or with other communication systems through voice circuits connected to the common equipment. Interconnection between stations through the common equipment is an inherent feature of the service.

Protector
An electrical device located in a central office, a Customer premises or any where along the telecommunications facility path. This device protects both the Company's and the Customer's property and facilities from high voltages and surges in current.

Public Agency
Any city, city and county, town, county, municipal corporation, public district, or public authority located in whole or in part within this state which provides or has the authority to provide fire fighting, law enforcement, ambulance, emergency medical, or other emergency services.

Public Safety Answering Point (PSAP)
A facility equipped and staffed to receive 9-1-1 calls from the basic emergency service provider. PSAPs operate under the direction of the governing body and are responsible to direct the disposition of 9-1-1 calls.

Reseller of Basic Local Exchange Service (Resellers)
For the purpose of this Price List, a reseller of basic local exchange service is providing basic local exchange service.

Routing
The central office programming required to transport a 9-1-1 call to the correct 9-1-1 Tandem.

Same Premises
All the space in the same building in which a Customer has the right of occupancy to the exclusion of others or shares the right of occupancy with others; and all space in different buildings on continuous property, provided such buildings are occupied solely by one Customer. Foyers, hallways, and other space provided for the common use of all occupants of a building are considered the premises of the operator of the buildings.

Shared facility
A facility or equipment system or subsystem which can be used simultaneously by several Customers.

Selective Routing
The capability of routing an E9-1-1 call to a designated PSAP based upon the seven-digit or ten-digit telephone number of the subscriber dialing 9-1-1.

Standard Network Interface (SNI)
A standard Federal Communications Commission (FCC) registration jack or its equivalent, which is provided, installed, owned and maintained by the Company at the Customer's premises. The SNI is placed at the point on the Customer's premises where all premises services are connected to the telecommunication's network via Company or Customer owned facilities/wire.

Supporting Structure
Consisting, of, but not limited to, pipes, conduits, risers, poles, trenches, backboards, plenum spaces, etc., as required for the physical placement, protection and support of telecommunications facilities. These structures are furnished, installed and maintained at the expense of the premises owner for use by the Company in terminating regulated facilities.

TDD/Text Phone
A telecommunications device for use by deaf persons that employs graphic communication in the transmission of coded signals through a wire or radio communication system.

Telecommunications Device for the Deaf (TDD)/Text Phone Emergency Access
Provides 9-1-1 access to individuals that use TDDs and computer modems.

Telecommunications Service Priority (TSP)
Denotes the regulatory, administrative, and operational system developed by the federal government to ensure priority provisioning and/or restoration of National Security Emergency Preparedness (NSEP) telecommunications services. The FCC defines NSEP telecommunications services as those services which are used to maintain a state of readiness or to respond to and manage any event or crisis, which causes or could cause harm to the population, damage to or loss of property, or degrades or threatens the NSEP posture of the United States.

Telecommunications Relay Services
These services provides the ability for hearing- or speech-impaired individuals to communicate, by wire or radio, with a hearing individual in a manner that is functionally equivalent to communication by an individual without a hearing or speech impairment. This definition includes telecommunication relay services that enable two-way communications between an individual who uses a TDD or other non-voice terminal device and an individual who does not use such a device.

Telematics
Personal safety devices utilizing a combination of electronic sensors, wireless communications technologies, and location determination technologies to signal or notify Telematics service providers when assistance is required. While Telematics devices are used for non-emergency purposes such as roadside assist or concierge services, navigation assistance, and vehicle tracking, the services described herein are specifically designed to facilitate the delivery of emergency Telematics calls to the appropriate responding agencies where facilities permit.

Wire Center
The building which houses the local switching equipment (central offices) from which exchange and private line services are furnished and where cable facilities are terminated which furnish telephone service within a designated wire center serving area.

Wire Center Serving Area
The area of the exchange served by a single wire center.

2.2. ESTABLISHING AND FURNISHING SERVICE

These regulations are added to those pertaining to specific service items in other sections. Any change in rates, charges or regulations approved by appropriate governmental authority modifies all service terms and conditions unless otherwise specified in writing pursuant to an ICB agreement, the following terms and conditions will apply to the services.

2.2.1. APPLICATION FOR SERVICE

2.2.1.1. Applications for establishment of service must be made to the Company in writing. These applications become contracts upon approval by the Company and the customer or the establishment of the service, and shall be subject at all times to the lawful rates, charges and regulations of the Company.

2.2.1.2. Requests from Customers for additional service or equipment must be made in writing and, upon approval of installation of the service, become a part of the original contract, except that each additional item is subject to the appropriate Price List rates, charges and initial contract period, if any.

2.2.1.3. Any change in rates, charges or regulations authorized by the legally constituted authorities will act as a modification of all contracts to that extent without further notice.

2.2.2. REFUSAL

The Company reserves the right to refuse an application for service made by a present or former Customer who is indebted to the Company for service previously furnished, until the indebtedness is satisfied.

2.2.3. CANCELLATIONS AND DEFERMENTS

When the Company advises a Customer that ordered services are available on the requested due date, and the Customer is unable or unwilling to accept service at that time, the facilities will be held available for the Customer for a 30 business day grace period. If after 30 business days the Customer has still not accepted service, regular monthly billing for the ordered services may begin, or the facilities will be released for other service order activity, and cancellation charges (non-recurring charges that would have applied had the service been installed) may be applied. These cancellation and deferment provisions apply to requests for all Company services.

2.2.4. USE OF SERVICE

2.2.4.1. Customer service will be furnished to business Customers for:

- The Customer;
- The Customer's employees and representatives;
- Customers who share the Company's service;
- Joint users of Company provided services.

2.2.4.2. ICI's services may be used for any lawful purpose consistent with the transmission and switching parameters of the telecommunications facilities utilized in the provision of ICI's services. (T) (T)

2.2.4.3. ICI's services are available for use twenty-four (24) hours per day, seven (7) days per week. (T)

2.2.5. OBLIGATION TO FURNISH SERVICE

2.2.5.1. The Company's obligation to furnish service or to continue to furnish service is dependent on its ability to obtain, retain, and maintain with just and reasonable earnings, suitable rights and facilities, and to provide for the installation of those facilities required to the furnishing and maintenance of that service. At the option of the Company, in managing its facilities, certain regular service restrictions may be temporarily imposed at locations where new or additional facilities being constructed are not readily available to meet service demands.

2.2.5.2. The Company shall not be required to furnish, or continue to furnish, facilities or service where the circumstances are such that the proposed use of the facilities or service would tend to adversely affect the Company's plant, property or service.

2.2.5.3. The Company reserves the right to refuse an application for service made by a present or former customer who is indebted to the Company for service previously rendered pursuant to this Price List until the indebtedness is satisfied.

2.2.5.4. When connections are requested and facilities to provide the required connections at the CO normally designated to serve the premises of the Customer are inadequate, facilities may be furnished from another CO to provide the requested interconnection. Under such circumstances additional monthly rates and installation charges will apply.

2.2.5.5. The customer shall be responsible for making arrangements or obtaining permission for safe and reasonable access for Company employees or agents of the Company to enter the premises of the customer or any joint user or customer of the customer at any reasonable hour for the purpose of inspecting, repairing, testing or removing any part of the Company's facilities.

2.2.6. LIMITED COMMUNICATION

The Company reserves the right to limit use of its services when emergency conditions arise that cause a shortage of facilities.

2.2.7. RESALE/SHARING OF SERVICE

Service on Customers' premises furnished by the Company shall not be used for performing any part of the work of transmitting, delivering, or collecting any message where any toll or consideration has been or is to be paid any party other than the Company, without written consent of the Company.

2.3. TERMINATION OF SERVICE – COMPANY INITIATED

The Company may terminate service, with notice, due to:

2.3.1. Nonpayment

2.3.1.1. The Company may, by notice in writing to the Customer, in accordance with paragraph 2.6.2.9, suspend or terminate the service for nonpayment of any sum due the Company.

2.3.1.2. Exception: The Company may not use its purchase of a Customer's indebtedness, i.e., the accounts receivable from another telecommunications service provider as a basis to deny or discontinue providing its services to that Customer.

2.3.2. Abandonment
In the event of the abandonment of the service, the Company may terminate its service.

2.3.3. Abuse
Use of service that interferes with another Customer's service or that is used for any purpose other than its express intended purpose, or if a Customer or user causes or permits any signals or voltages to be transmitted over ICI's network in such a manner as to cause a hazard or to interfere with services to other ICI Customers. (T) (T)

2.3.4. Fraud
Abuse or fraudulent use of service includes the use of facilities of the Company to transmit a message or locate a person otherwise to give or obtain information, without the payment of a toll charge. The Company reserves the right to discontinue or refuse service because of fraudulent use of its service.

2.3.5. Unlawful Use of Service
The service is furnished subject to the condition that it will not be used for an unlawful purpose. Upon request of an order from a court, acting within its jurisdiction, advising that such service is being used or will be used in violation of law, service will be discontinued.

2.3.6. Violation of Price List
Any other violation of the regulations of the Company or this Price List, the Company may in its sole discretion, without notice, either suspend service or terminate the service without suspension.

2.4. SPECIAL SERVICES

2.4.1. General

2.4.1.1. The rates and charges quoted in the Price Lists of the Company contemplate the use of service arrangements, equipment and facilities in quantities and types regularly furnished by the Company. Where equipment, facilities, or service arrangements are requested which are not provided for in the Company's applicable Price Lists, monthly rates and one-time charges, such as nonrecurring and construction charges, will apply based on the circumstances in each case.

2.4.1.2. These special equipment and service items will be provided whenever, in the judgment of the Company, there is a valid reason for providing the service requested. In such cases, the Company reserves the right to require an initial contract period commensurate with relevant circumstances.

2.4.1.3. The rates and charges specified contemplate that work will be performed during regular working hours and that work once begun will not be interrupted by the Customer. If, at the request of the Customer, work is performed outside of regular working hours, either to meet the Customer's convenience or because the time allowed is insufficient to permit completion during regular hours or if the Customer interrupts work which has begun, the Customer may be required to pay any additional costs incurred.

2.4.1.4. The rates and charges quoted in the Price Lists of the Company contemplate the use of standard procedures and practices for furnishing service, equipment and facilities. Where the Customer requests special procedures or practices, such as expedited material handling or shortened installation intervals through the use of overtime, etc., additional rates and charges will apply based on the circumstances in each case. These special practices or procedures will be provided at the discretion of the Company, depending upon each individual case.

2.5. TERMINATION OF SERVICE – CUSTOMER INITIATED

2.5.1. Initial Contract Period

2.5.1.1. An initial contract period of one year will apply unless otherwise specified.

2.5.1.2. Where service is disconnected and subsequently reestablished at the same location for the same or a different Customer, a new initial contract period will apply, whether or not the equipment has been removed.

2.5.1.3. Where the provision of service requires unusual costs or involves special assemblies of equipment, or where the provision of service requires construction of facilities for possible short term use, the Company reserves the right to require an initial contract period longer than one year in addition to any construction charge that may be applicable.

2.5.2. Charges for Termination of Service

2.5.2.1. Nonrecurring charges do not apply to disconnect service unless otherwise specified.

2.5.2.2. After the expiration of the initial contract period, service may be terminated upon reasonable advance notice to the Company and payment of all charges due to the date of termination of the services.

2.5.2.3. Prior to the expiration of the initial contract period, service may be terminated upon reasonable advance notice to the Company and upon payment of the termination charges hereinafter provided, in addition to all charges for the period service has been rendered.

2.5.3. Service Involving Unusual Cost

Where the provision of service requires construction of facilities for possible short term use, or involves unusual costs or special assemblies of equipment, the initial contract period and termination charge base will be determined by the Company in each individual case.

2.5.4. Termination Liability

Services provided via service agreements will be subject to Termination Liability.

2.5.4.1. Definitions

Minimum Service Period
When services are provided under a service agreement, a Minimum Service Period may be established. This would be the period of time that the 100% factor of the Termination Liability Charge would apply.

2.5.4.2. Complete Disconnect
If the Customer chooses to completely discontinue service, at any time during the term of the agreement, a termination charge will apply. The termination charge will be determined on an individual case basis.

2.6. PAYMENT FOR SERVICE

2.6.1. CUSTOMER RESPONSIBILITY

The Customer is responsible for payment of all charges for facilities and services furnished the Customer, including charges for services originated, or charges accepted, at such facilities.

2.6.2. PAYMENT OF BILLS

2.6.2.1. Customers will either be billed directly by the Company or its intermediary, or charges will be included in the Customer's regular bill pursuant to billing and collection agreements established by the Company or its intermediary with the applicable customer.

2.6.2.2. Unless otherwise specified, all charges for Company-provided services, equipment and facilities, exclusive of usage or transaction sensitive charges, start the day after service is installed, continue through the day service is disconnected and are payable monthly in advance. Charges for usage or transaction related services are payable monthly except the Company reserves the right to require payment of such charges at more frequent intervals.

2.6.2.3. When service does not begin on the first day of the month, or end on the last day of the month, the charge for the fraction of the month in which service was furnished will be calculated on a pro rata basis. For this purpose, every month is considered to have 30 days.

2.6.2.4. In the event a Customer is indebted to the Company for charges and services previously rendered in Florida, or for service under one or more accounts at the same location, and the Customer does not pay the charges or satisfy such indebtedness, the Company may charge and bill such indebtedness against other accounts of this Customer.

2.6.2.5. In the event that payment from a Customer is less than the total amount of all charges owing to the Company and the Customer does not specifically designate the manner in which he wishes to apply said payment, then the Company may apply all or any part of the payments received to such accounts or indebtedness in any manner that the Company deems appropriate.

2.6.2.6. Except as otherwise specified, where the rate to be charged for a particular service is determined by applying a percentage of similar factor to a quoted rate, and such computation results in a fraction, the charge for the service shall be computed to the nearest cent, a half cent being increased to the next higher cent.

2.6.2.7. The furnishing of services, equipment and facilities and any indebtedness resulting therewith shall not result in a lien, mortgage or other security interest in any real or personal property of the Customer, unless such indebtedness has been reduced to judgment.

2.6.2.8. Service may be discontinued or refused to a Customer for the nonpayment of any sum for service furnished in the State of Florida or for the provision of facilities which also have been provided in Florida.

2.6.2.9. Unless otherwise specified, in the event it becomes necessary for service to be discontinued to a Customer for nonpayment, a written notice of at least seven days (measured from the date of mailing) will be given to the Customer advising the Customer of the amount due and the date by which the same must be paid. If the Customer fails to pay or make suitable arrangements for payment by said due date, the Company may suspend the service or discontinue the service and remove any or all equipment from the Customer's premises.

2.6.2.10. Payment of bills for service may be made by any means mutually acceptable to the Customer and the Company. Payment that is not honored or paid by the payer's designated financial institution will be considered as nonpayment. A returned payment charge is applicable to the account for each occasion that a payment is returned to the Company for reason of insufficient funds or closed account.

	Maximum Charge
• Returned Payment Charge	$20

2.6.2.11. Customers may have the following options as to the method of paying bills for Company provided service(s):

- At any Company payment depository location;
- At the office of any authorized payment agent of the Company;
- If by U.S. Mail, by check or money order only;
- Through an agent of the Customer;
- By any means acceptable to financial institutions and the Company.

2.6.2.12. Payments received by the Company on or before the due and payable date on the Customer's bill will be considered timely, provided the following billing information is remitted with payment:

- Customer's name;
- Customer's telephone number
- Customer's address;
- Customer's Account Code (if applicable);
- Customer's account type;
- Amount of payment;
- Other information as required by the service agreement.

2.6.2.13. Payments received by the Company after the due and payable date on the Customer's bill, but at least one day before the termination date on the suspension notice, may result in discontinuance of the Customer's service unless the following billing information is remitted with the payment:

- All of the items enumerated in 2.6.2.12., and
- The final payment date before discontinuance for nonpayment.

2.6.2.14. The Company will not be responsible if a Customer's service is discontinued after payment has been remitted, unless the payment is timely, as set forth in 2.6.2.12. or, if the payment is not timely, the requirements of 2.6.2.13. have not been met.

2.7. LATE PAYMENT CHARGES

2.7.1. A maximum late payment charge of 1.5% per month applies to all billed balances that are not paid by the billing date shown on the next bill unless the balance is $45.00 or less.

2.7.2. Collection procedures, temporary disconnection of service, and the requirements for deposit are unaffected by the application of a late charge. The late payment charge does not extend the time for payment or otherwise enlarge or change the rights of a Customer. Notice of intention to pay late will not avoid this charge.

2.7.3. The late payment charge does not apply to the following:

- Bills mailed more than ten days after bill date.
- Final bills.
- One time miscellaneous bills.
- Billed amounts under dispute that are resolved to the Company's satisfaction in the Customer's favor.

2.7.4. The Company is entitled to recover from the customer the Company's cost of collection including reasonable attorney fees.

2.8. ADJUSTMENT OF CHARGES

2.8.1. Interruptions

2.8.1.1. For the purpose of applying this provision, the word "interruption" shall mean the inability to complete calls either incoming or outgoing or both. Interruption does not include, and no credit allowance shall be given for, service difficulties such as busy circuits or other network and/or switching capacity shortages or as further defined.

2.8.1.2. *The credit allowance will not apply where service is interrupted by the negligence or willful* act of the Customer or the failure of facilities provided by the Customer, or where the Company, pursuant to the terms of the Price List, suspends or terminates service because of unlawful or improper use of the facilities or services, or any other reason covered by the Price List or as further defined.

2.8.1.3. No credit allowance shall be made for interruptions in service due to electric power failure where, by the provisions of this Price List or as further defined, the Customer is responsible for providing electric power.

2.8.1.4. Should any such error, mistake, omission, interruption, failure, delay, defect or malfunction of equipment or facilities result in an interruption or failure of jurisdictional service to a Customer for more than eight hours during a continuous 24-hour period after being reported by the Customer or discovered by the Company, whichever occurs first, an appropriate adjustment shall be made automatically by the Company to the Customer's bill. The adjustment, unless further defined, shall be a credit allowance on the monthly bill of 1/30 of the Price List monthly rate for all jurisdictional services and facilities affected by such interruption or failure for each occurrence of more than eight hours in a continuous 24-hour time period after notice by the Customer or discovery by the Company, whichever occurs first. Credit allowances in any billing period shall not exceed the total charges for that period for the services and facilities that are affected by the interruption or failure.

2.8.1.5. In addition and not by way of limitation, in the event that there is a delay in installation of service, if any service date is promised, or any failure to service or properly maintain the items of service as provided for herein concerning maintenance or any failure to repair or replace the items of service as provided in 2.8.1.4., then the refunds provided in 2.8.1.4. shall be the exclusive remedy against the Company.

2.8.1.6. Under all circumstances set forth above, the Company shall not be liable to the Customer or any other persons for special, incidental, punitive or consequential damages, losses, expenses, or costs, if any.

2.9. LIABILITY OF THE COMPANY

2.9.1. SERVICE LIABILITIES

THE COMPANY MAKES NO WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED EITHER IN FACT OR BY OPERATION OF LAW, STATUTORY OR OTHERWISE, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, EXCEPT THOSE EXPRESSLY SET FORTH HEREIN.

In view of the fact that the Customer has exclusive control of their communications over the facilities furnished them by the Company, and of the other uses for which facilities may be furnished them by the Company, and because of unavoidable errors incidental to the services and to the use of such facilities of the Company, the services and facilities furnished by the Company are subject to the following terms, conditions and limitations.

2.9.2. Limitations

2.9.2.1. Except as otherwise provided herein, no liability for direct, incidental punitive or consequential damages shall attach to the Company, its officers, directors, agents, servants or employees, for damages or costs arising from errors, mistakes, omissions, interruptions, failures, delays, or defects or malfunctions of equipment or facilities, in the course of establishing, furnishing, maintaining, rearranging, moving, terminating, or changing the service(s) or facilities (including the obtaining or furnishing of information in respect thereof or with respect to the Customer or users of the service or facilities) in the absence of willful and wanton conduct, whether a claim for such liability is premised upon breach of contract, breach of warranty, fulfillment of warranty, negligence, strict liability, misrepresentation, fraud, or any other theories of liability.

2.9.2.2. The sole and exclusive remedy against the Company for an interruption or failure of service resulting from errors, mistakes, omissions, interruptions, failures, delays, or defects or malfunctions of equipment or facilities shall be as follows: The Company shall repair or replace any item of its facilities or defective part thereof at its expense. The Company shall have the option to decide whether to repair or to replace its facilities.

2.9.3. Transmission

2.9.3.1. The Company does not transmit messages but offers the use of its facilities, when available, for communications between parties, each of whom is present at a telephone or communications device.

2.9.3.2. The 9-1-1 emergency telephone number quickly summons emergency service in a crisis. When persons dial "9-1-1" to report an emergency, the telephone number (including non-published numbers) and address may be automatically displayed on a viewing screen located at the 9-1-1 answering centers and the call may also be recorded. The display of the calling number and address enables the emergency agency to quickly locate the caller if the call is disrupted by the crisis.

2.9.3.3. The 9-1-1 caller forfeits the privacy afforded by non-listed and non-published service to the extent that the telephone number, the address and name associated with the originating station location are furnished to the PSAP. Telephone subscribers (published and non-published) consent to the storage and retention of the subscriber name, telephone number and address in the database management systems and also consent to access of this information by Public Agencies for the sole purpose of responding to emergency calls.

2.9.3.4. The Customer indemnifies and saves the Company harmless against claims for libel, slander, or infringement of copyright or trade secrets from the material transmitted over the Company's facilities; against claims for infringement of patents arising from combining with, or using in connection with, facilities of the Company, apparatus and systems of the Customer, and against all other claims arising out of any act or omission of the Customer in connection with facilities provided by the Company.

2.9.4. Connections with other telecommunications providers

When the facilities or services of other companies are used in establishing connections to points or services provided to Customers not reached by the Company's facilities, the Company is not liable for any act or omission of the other company or companies and their agents, servants, or employees.

2.9.5. Defacement of Premises

The Company shall not be liable for any defacement of, or damage to, Customer's premises resulting from the existence of the Company's instruments, apparatus, or wiring, on such premises, or caused by the installation or removal, when such defacement or damage is not the result of the negligence of the Company.

2.9.6. 9-1-1

The Company shall not incur any liability, direct or indirect, to any person who dials or attempts to dial the digits "9-1-1" or to any other person affected by the dialing of the digits "9-1-1."

2.10. **MAINTENANCE AND REPAIR**

2.10.1. All ordinary expense of maintenance and repair in connection with services provided by the Company is borne by the Company unless otherwise specified.

2.10.2. Nonrecurring charges do not apply to repair services.

2.11. **DATABASE ERRORS OR OMISSIONS**

2.11.1. Notwithstanding any other provisions herein, the Company expressly denies any representation or warranty that database records, data, or other information created, utilized or furnished hereunder will be furnished without interruption or free of errors or omissions. In no event shall the Company, its officers, directors, agents, servants, or employees, be liable for direct, incidental, punitive, or consequential damages for damages, injuries or costs arising from any such interruptions, errors, or omissions, whether a claim for such liability is premised upon breach of contract, breach of warranty, fulfillment of warranty, negligence, strict liability, misrepresentation, fraud, or any other theories of liability.

2.12. RESPONSIBILITIES OF THE CUSTOMER

2.12.1. LOST OR DAMAGED EQUIPMENT

2.12.1.1. In the case of damage to, or destruction of, any of the Company's equipment, instruments, apparatus, accessories or wiring due to the negligence or willful act of the Customer and not due to ordinary wear and tear, the Customer will be held responsible for the cost of restoring the equipment, instruments, apparatus, accessories or wiring to its original condition, or of replacing the equipment, instruments, apparatus, accessories or wiring destroyed.

2.12.1.2. The Customer is required to reimburse the Company for loss, through theft of equipment, instruments, apparatus, accessories or wiring furnished to the Customer.

2.13. BUILDING SPACE AND ELECTRIC POWER SUPPLY

2.13.1. All operations at the Customer's premises will be performed at the expense of the Customer and will be required to conform to whatever rules and regulations the Company may adopt as necessary in order to maintain a proper standard of service.

2.13.2. The Customer is required to provide adequate building space, lighting and atmospheric control for the proper installation, operation and maintenance of the equipment and facilities placed by the Company on his premises.

2.13.3. When Company equipment, installed on the Customer's premises, requires power for its operation, the Customer is required to provide such power. The Customer is required to provide adequate commercial power, wiring, electrical outlets, and environmentally appropriate conditions necessary for the proper operation of the Company's equipment on the Customer's premises.

2.13.4. The Customer is responsible for arranging access to its premises at times mutually agreeable to the Company and the Customer when required for the Company's personnel to install, repair, maintain, program, inspect or remove equipment with the provision of ICI's services. (T)

2.13.5. The Customer shall ensure that the equipment and/or system is properly interfaced with Company facilities or services, that the signals emitted into ICI's network are of the proper mode, bandwidth, power, and signal level for the intended use of the Customer and in compliance with the criteria set forth in this Price List and that the signals do not damage equipment, injure personnel, or degrade service to other Customers. If the Federal Communications Commission or some other appropriate certifying body certifies terminal equipment as being technically acceptable for direct electrical connection with interstate communications service, the Company will permit such equipment to be connected with its channels without use of protective interface devices. If the Customer fails to maintain the equipment and/or the system properly, with resulting imminent harm to Company equipment, personnel, or the quality of service to other Customers, the Company may, upon written notice, require the use of protective equipment at the Customer's expense. If this fails to produce satisfactory quality and safety, the Company may, upon five (5) days written notice via first class U.S. mail, terminate the Customer's service. (T)

2.14. **SPECIAL TAXES, FEES, CHARGES**

2.14.1. Rate schedules of the Company in Florida do not include any municipal, license, franchise, or occupation tax, costs of furnishing service without charge, or similar taxes or impositions on the Company.

2.14.2. The amount paid by the Company to a municipality as a cost of doing business within that municipality under a franchise, or pursuant to a license or occupation tax levied by the municipality, will be added to the bill for service to the Company's Customers within such municipality for the privilege of employment within the municipality shall be so surcharged.

2.14.3. A monthly surcharge to recover the additional expense related to any municipal, license, franchise, or occupation tax, costs of furnishing service without charge, or similar taxes will be added to Customer bills for all recurring and nonrecurring rates and charges for all intrastate service except returned check charges and late payment charges.

2.14.4. Introduction, cancellation, or modification of a surcharge will be effective on the date of the Customer's first bill rendered after the effective date of the change.

2.15. Promotional Offerings

2.15.1. Nonrecurring Charges

During specific promotional periods not to exceed 90 days, the offer may be made to reduce nonrecurring charges on a non-discriminatory basis. Each such offer shall be briefly described in a sequentially numbered informational letter to the Commission on seven days notice.

2.15.2. Recurring Rates and Charges

For the purpose of encouraging Customers to try different telecommunications services, the Company may offer promotional programs. The purpose of these programs is to waive or reduce recurring rates or charges to introduce present or potential Customers to Intrado Communications Inc. product(s) or *service(s) not currently being received by the Customer.* (T)
The Company may also offer incentives or other benefits to Customers to encourage the purchase or retention of any such service or product. Any such offers will be made on a non-discriminatory basis but are subject to service and facility availability and are subject to Commission rule requirements and state statutes.

3. THIS SECTION IS RESERVED FOR FUTURE USE

4. THIS SECTION IS RESERVED FOR FUTURE USE

5. Emergency Services (N)(D)

5.1 Intelligent Emergency Network Service

Intelligent Emergency Network Services are telecommunications services that permit a Public Safety Answering Point (PSAP) to receive emergency calls placed by dialing the number 9-1-1 and/or emergency calls originated by personal communications devices.

Intelligent Emergency Network Services support interconnection to other telecommunications service providers for the purpose of receiving emergency calls originated in their networks. Intelligent Emergency Network Services include 9-1-1 call routing and transfer services which use a call management system to either directly perform the selective routing of an emergency call to the appropriate PSAP, or may be used to hand-off the call to a separate 9-1-1 Service Provider (possibly a legacy 9-1-1 selective router) for call completion to the appropriate PSAP. Intelligent Emergency Network Services provides further services of call bridging and post call activity reporting.

Intelligent Emergency Network 9-1-1 Routing includes a comprehensive data management and delivery service, ALI Management Services. ALI Management Services provide PSAPs more control over ALI data management with highly accurate data and superior reporting. ALI Management was developed specifically to allow Customers to optimize their 9-1-1 operations. ALI Management Services offers superior features such as "drill down" metric reporting capabilities for wireline, wireless, and VoIP 9-1-1 calls. The solution includes an easy to use web interface for data queries and MSAG management.

Intelligent Emergency Network Services are offered subject to the availability of facilities. The Customer is the Governing Authority that orders service and is responsible for the payment of charges and compliance with the terms and conditions of this tariff.

Intelligent Emergency Network Services may have further Customers for the purpose of interconnection who are a Local Exchange Carrier (LEC), Wireless Services Provider (WSP), a Telematics-type service provider, VoIP Service Provider (VSP) or any other originating communications provider (voice and/or data) requiring aggregation and termination of calls and/or data information to the 9-1-1 network for the purpose of obtaining or delivering emergency services.

Intelligent Emergency Network Services are only available under contract with a minimum term agreement of one year. (N)(D)

5. Emergency Services, (Cont'd.) (N)(D)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.1 9-1-1 Routing Service

9-1-1 Routing is a public safety grade, specialized managed network for processing 9-1-1 calls that allows the PSAP to accommodate new technologies while simultaneously enabling more control over 9-1-1 call routing operations. Intrado's solution utilizes a fully redundant, secure network. Facilities and nodes are geographically diverse and are equipped with physically redundant data communications and power equipment that allow for continuous operation and high reliability. 9-1-1 Routing delivers emergency calls from both traditional and non-traditional voice networks. In addition to processing traditional TDM voice traffic, 9-1-1 Routing also provides IP based call processing capabilities.

Intrado 9-1-1 Routing Service facilitates interoperability and allows for specialized management of different call types. The Customer can designate, capture, and report on specific instructions for handling each call type:

Wireline: Supports traditional wireline emergency calls originating from an end office, central office and/or enterprise private branch exchange (PBX) over standard based Centralized Automatic Message Accounting (CAMA), both analog and digital interfaces, SS7 and PRI interfaces.

Wireless: Supports delivery of wireless 9-1-1 calls to assigned PSAPs. Carriers having the capability to provide wireless handset ANI, cell site and sector and/or longitudinal and latitudinal (x,y) coordinates in the appropriate format, may connect directly to the 9-1-1 Routing Service.

VoIP: Supports delivery of VoIP emergency calls originating from a VoIP Service Provider. VoIP Service Providers capable of providing calls and data in the appropriate format can connect directly to the 9-1-1 Routing Service. (N)(D)

5. Emergency Services, (Cont'd.) (N)(D)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.2 9-1-1 Routing Service Features

A. Automatic Number Identification (ANI)

Automatic Number Identification (ANI) is the feature by which the telephone number or other related routing (pANI) number associated with an inbound 9-1-1 caller is received by Intelligent Emergency Network 9-1-1 Routing and passed on to the proper PSAP. The ANI is also used to determine the proper PSAP to receive the inbound call.

B. 9-1-1 Routing Options

Selective Routing
The routing of a 9-1-1 call to the proper PSAP based upon the location of the caller. Selective Routing is typically accomplished by mapping the ANI to an ESN that has been derived based on the caller's location. The ESN maps to a specific routing rule that identifies the PSAP and possible alternative destinations.

Trunk Only Routing
Inbound trunks, typically from a given Telecommunications Carrier, can be designated to route all calls to a given destination, usually a specific PSAP. If Trunk Only Routing is not specified the system will attempt to perform Selective Routing.

Default Routing
When an incoming 9-1-1 call cannot be selectively routed due to the reception of an ANI number that is either not stored in the selective router data base, unintelligible ANI or when no ANI number is passed, a predetermined call route will be chosen and the caller will be terminated to the PSAP based upon the incoming trunk facility the call is passed over.

PSAP Abandonment Routing
If a situation arises where a PSAP must be closed or evacuated, this feature provides specific routing instructions for delivery of calls to recovery locations. (N)(D)

5. Emergency Services, (Cont'd.) (N)(D)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.2 9-1-1 Routing Service Features, (Cont'd.)

C. 9-1-1 Transfer Options

Fixed Transfer
Fixed transfer is a feature which enables a PSAP call taker to transfer a 9-1-1 call to a secondary destination (possibly another PSAP) by dialing a pre-assigned speed dial code or by use of a single button on an approved Customer telephone system which dials the appropriate code.

Selective Call Transfer
Selective Call Transfer is a feature enabling a PSAP call taker to transfer an incoming 9-1-1 call to another agency by dialing a pre-assigned speed dial code associated with police, fire or medical agencies or by use of a single button on an approved Customer telephone system which dials the appropriate code. The specific transfer destination is determined by the caller's originating location as specified by the ESN.

Manual Transfer
A PSAP call taker may transfer an incoming call manually by depressing the hook switch of the associated telephone or the "add" button on approved Customer telephone system, and dialing either an appropriate seven or 10-digit telephone number.

Alternate Routing
The Overflow Call Disposition transfer feature enables the ability for callers to be terminated either to a previously designated alternate call center, a prerecorded message or to a busy tone when all PSAP trunks are busy.

D. Call Event Logging

The Call Event Logging feature delivers reporting information containing the ANI received from a 9-1-1 call, the identity of the incoming trunk the Selective Router received the call over, the identity of the outgoing PSAP trunk the call is terminated to, and the date and time the call was delivered to its target destination, transferred and/or disconnected. (N)(D)

5. Emergency Services, (Cont'd.) (N)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.3 ALI Management Service

A. **MSAG Management**
Intrado provides a data management and administration tool that automates the viewing and communication of updates, insertions, and deletions to the MSAG database.

B. **MSAG Build Services**
Intrado acts as the facilitator with the addressing authority in the creation and maintenance of the MSAG utilizing recognized National Emergency Number Association (NENA) standards.

C. **English Language Translation (ELT) Management**
ELT information provides the names of fire, EMS and police jurisdictions associated with each ESN so that it may be delivered with the ALI to the PSAPs at the time of the E9-1-1 call. The requests are validated for accuracy and either updated into the database, or referred back to the PSAP for resolution. Upon completion of the transaction, notification is provided to the Customer

D. **Subscriber Record Management**
Subscriber Record Management is the collection of service order records from Telephone Service Providers (TSPs), validation of those records against the MSAG, and storage of the records for the generation of the ALI database.

E. **ALI Database Updates**
After processing and validating subscriber record updates, Intrado posts ALI records for call routing and for retrieval and display by the PSAP during 9-1-1 calls.

F. **ANI/ALI Discrepancy Resolution**
An ANI/ALI discrepancy occurs when an ALI record delivered to a PSAP does not match the information of the caller. Intrado will investigate ANI/ALI discrepancy reports and refer each discrepancy to the respective TSP for resolution. (N)

5. Emergency Services, (Cont'd.) (N)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.3 *ALI Management Services, (Cont'd.)*

G. **Misroute Resolution**
An ANI/ALI misroute occurs when a 9-1-1 call is delivered to the incorrect PSAP. Intrado investigates ANI/ALI misroute reports and refers each misroute report to the TSP for resolution.

H. **No Record Found (NRF) Resolution**
An NRF occurs when the ANI provided does not exist in the ALI database and/or when NRF is displayed at the PSAP. Intrado will resolve or refer each NRF to the respective TSP for resolution.

I. **Local Number Portability (LNP) Processing**
Intrado supports LNP, which allows subscribers to switch from one TSP to another without changing their phone numbers.

J. **ALI Delivery**
ALI Delivery provides location information via the ALI Data Access Connections to a PSAP during a 9-1-1 call.

K. **Data Support of Wireless and VoIP E9-1-1**
Intrado's database management systems support both Phase I and Phase II wireless and VoIP E9-1-1 call processing. This includes the E2 interface used by wireless service providers to communicate 9-1-1 caller location information to the ALI database.

L. **ALI Metrics Reporting**
Intrado provides access to reports that provide details on data transactions, the number of records processed, and the number of errors. (N)

5. Emergency Services, (Cont'd.) (N)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.4 9-1-1 Exchange Access

9-1-1 Exchange Access provides one way call delivery trunks from the 9-1-1 Routing Service to the PSAP. The 9-1-1 Exchange Access trunks are conditioned to allow delivery of ANI to the PSAP. They also allow signaling from the PSAP to the 9-1-1 Routing Service to invoke special features of the 9-1-1 Routing Service, such as transfer, speed dialing, etc.

5.1.5 ALI Data Access Connections

ALI Data Access Connections provide the PSAP network access to the ALI Database for ALI Delivery.

5.1.6 Diverse Facility Routing

Where facilities exist and a Customer wishes to subscribe to such services, Intrado will arrange for diverse routing over alternate voice and/or data paths to reduce the potential for service failure as a result of an interruption of transport facilities.

Diverse routing is supplied to the extent made possible as determined by the availability of current facilities. Diversity at Customer locations and additions to existing facilities to obtain diversity, where feasible within E9-1-1 network and as determined by the respective facility provider, will be based upon the costs incurred by the respective facility provider and will be supplied upon Customer request. (N)

5. *Emergency Services, (Cont'd.)* (N)

5.2 Intelligent Emergency Network 9-1-1 Routing Rules & Regulations

5.2.1 The Intelligent Emergency Network Service Customer may be a municipality, other federal, state or local governmental unit, an authorized agent of one or more municipalities or other federal, state or local governmental units to whom authority has been lawfully delegated. The Customer must be legally authorized to subscribe to the service and have public safety responsibility by law to respond to telephone calls from the public for emergency police, fire or other emergency services within the served territory.

5.2.2 Intelligent Emergency Network Service is provided by the Company where facilities and operating conditions permit.

5.2.3 Intelligent Emergency Network Service is not intended to replace the local telephone service of the various public safety agencies which may participate in the use of this service.

5.2.4 Application for Intelligent Emergency Network Service must be executed in writing by the Customer. If execution is by an agent, satisfactory evidence of the appointment must be provided in writing to the Company. At least one local law enforcement agency must be included among the participating agencies.

5.2.5 Intelligent Emergency Network Service is provided solely for the benefit of the Customer operating the PSAP as an aid in handling assistance calls in connection with fire, police and other emergencies. The provision of Intelligent Emergency Network Service by the Company shall not be interpreted, construed, or regarded, either expressly or implied, as being for the benefit of or creating any relationship with or any Company obligation direct or indirect, to any third person or legal entity other than the Customer.

5.2.6 The Company does not undertake to answer and/or forward 9-1-1 or other emergency calls, but furnishes the use of its facilities to enable the Customer's personnel to respond to such calls. (N)

5. *Emergency Services, (Cont'd.)* (N)

5.2 Intelligent Emergency Network 9-1-1 Routing Rules & Regulations, (Cont'd.)

5.2.7 The rates charged for Intelligent Emergency Network Service do not contemplate the inspection or constant monitoring of facilities to discover errors, defects and malfunctions in the service, nor does the Company undertake such responsibility. The Customer shall make such operational tests as, in the judgment of the Customer, are required to determine whether the system is functioning properly for its use. The Customer shall promptly notify the Company in the event the system is not functioning properly.

5.2.8 The Company's liability for any loss or damage arising from errors, interruptions, defects, failures, or malfunctions of this service or any part thereof shall not exceed an amount equivalent to the pro rata charges for the service affected during the period of time that the service was fully or partially inoperative.

5.2.9 The Customer must furnish the Company its agreement to the following terms and conditions.

A. That all 9-1-1 or other emergency calls will be answered on a 24-hour day, seven-day week basis.

B. That the Customer has responsibility for dispatching the appropriate emergency services, or will undertake to transfer all emergency calls received to the governmental agency with responsibility for dispatching such services, to the extent that such services are reasonably available.

C. That the Customer will develop an appropriate method for responding to calls for nonparticipating agencies which may be directed to their PSAP by calling parties.

D. That the Customer will subscribe to local exchange service at the PSAP location for administrative purposes, for placing outgoing calls, and for receiving other calls. (N)

5. Emergency Services, (Cont'd.) (N)

5.2 **Intelligent Emergency Network 9-1-1 Routing Rules & Regulations, (Cont'd.)**

5.2.10 When the ALI Management Service is provided, the Customer is responsible to:

A. Provide information regarding the jurisdictional boundaries associated with all involved public safety agencies.

B. Support the creation of a master address file for use in validating subscriber address information and application of appropriate jurisdictional responsibility.

C. Define the unique combinations of public safety agencies (police, fire, medical, etc) responsible for providing emergency response services in any specific geographic location.

5.2.11 When the 9-1-1 Routing feature is provided, the Customer is responsible for identifying primary and secondary PSAPs associated with the unique combinations noted in 5.2.10.C. above and providing the access or telephone numbers required to support the selective transfer feature of 9-1-1 Routing Service.

5.2.12 After establishment of service, it is the Customer's responsibility to continue to verify the accuracy of the routing information contained in the master address file, and to advise the Company of any changes in street names, establishment of new streets, closing and abandonment of streets, changes in police, fire, emergency medical or other appropriate agencies' jurisdiction over any address, annexations and other changes in municipal and county boundaries, incorporation of new cities or any other matter that will affect the routing of 9-1-1 calls to the proper PSAP. (N)

5. Emergency Services, (Cont'd.) (N)

5.2 Intelligent Emergency Network 9-1-1 Routing Rules & Regulations, (Cont'd.)

5.2.13 The following terms define the Customer's responsibilities with respect to any information provided by the Company to the Customer as part of ALI Management Service:

A. Such information shall be used by the Customer solely for the purpose of aiding the Customer in more accurately identifying, updating and/or verifying the addresses of subscribers within the Customer's serving areas in connection with the Customer's provision of emergency response services.

B. Customer shall strictly limit access to the information to those authorized employees of the Customer with a need to know and those employees actually engaged in the provision of emergency assistance services.

C. Customer shall use due care in providing for the security and confidentiality of the information.

D. Customer shall make no copies of the information except as may be essential for the verification of emergency assistance services.

5.2.14 Each Customer agrees to release, indemnify, defend and hold harmless the Company from any and all loss, claims, demands, suits, and other action, or any liability whatsoever, whether suffered, made, instituted or asserted by the Customer or by any other party or person: (1) for any personal injury to or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by the Customer or others, and which arises out of the negligence or other wrongful act of the Company, the Customer, its user agencies or municipalities or employees or agents of any one of them, or (2) for any infringement or invasion of the right of privacy of any person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, location or use of Intelligent Emergency Network Service features and the equipment associated therewith, including, but not limited to, the identification of the telephone number, address, or name associated with the telephone number used by the party or parties accessing Intelligent Emergency Network Service hereunder, or (3) arising out of any act or omission of the Customer, in the course of using services provided pursuant to this Tariff. (N)

5. Emergency Services, (Cont'd.) (N)

5.3 Intelligent Emergency Network Service Rates and Charges

	Nonrecurring Charge	Monthly Charge
9-1-1 Routing Service	ICB	ICB
ALI Management Services	ICB	ICB
9-1-1 Exchange Access Trunks	ICB	ICB
ALI Data Access Connections	ICB	ICB
Diverse Facility Routing	ICB	ICB

Note:
1. Additional charges may be rendered by other local exchange carriers in connection with the provisioning of E911 service to the Customer.
2. 9-1-1 Routing Service is only available in conjunction with ALI Management Services.
3. ICB pricing to be determined based upon unique service configuration requirements for each customer including, but not limited to, term of agreement, volume of subscribers served, and proximity of customer to company facilities. (N)

2nd Revised Sheet 5 (T)
Cancels 1st Revised Sheet 5

1.0 **APPLICATION AND REFERENCE, (CONT'D.)** (T)

1.3 **PRICE LIST FORMAT**

1.3.1 LOCATION OF MATERIAL

1.3.1.1 Section 1 provides the following sections in this Price List.
- Subject Index – an alphabetical listing to find the desired section.
- Table of Contents – a numerical listing to find the desires section and page.

1.3.1.2 Each individual section in the Price List provides a Subject Index for the material located within that section.

1.3.1.3 Obsolete Service Offerings
Obsolete service offerings are identified in the Price List by adding 100 to the current section number, i.e., obsolete items from Section 5, will be found in Section 105. This section is then filed behind Section 5.

1.3.2 OUTLINE STRUCTURE

Paragraph Numbering Sequence - There are various levels of alphanumeric coding. Each level of coding is subservient to its next higher level. The following is an example of the numbering sequence suggested for use in Price Lists.

2.1
2.1.1.
2.1.1.1.1.
2.1.1.1.1.1.

1.3.3 SHEET NUMBERING

Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the Price List. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

1.3.4 SHEET REVISION NUMBERS

Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Commission. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14

Cancels 1st Revised Sheet 6

1.0 APPLICATION AND REFERENCE, (CONT'D.) (T)

1.3 PRICE LIST FORMAT, (CONT'D.) (T)

1.3.5 RATE TABLES

Within rate tables, four types of entries are allowed:

- Rate Amount

The rate amount indicates the dollar value associated with the service.

- A dash "-"

The dash indicates that there is no rate for the service or that a rate amount is not applicable under the specific column header.

- A footnote designator "[1]"

The footnote designator indicates that further information is contained in a footnote.

- ICB

The acronym "ICB" indicates that the product/service is rated on an individual case basis.

1.3.6 CHECK SHEETS

Check Sheets: When a Price List filing is made with the Florida Public Service Commission, an undated check sheet accompanies the Price List filing. The check sheet lists the sheets contained in the Price List, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on the check sheet if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The Price List user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the Florida Public Service Commission.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING

2.1 DEFINITION OF TERMS

9-1-1
A local exchange service using a three-digit telephone number used to report an emergency situation requiring a response by a public agency such as a fire department or police department. (T)

9-1-1 Failure or Outage
A situation in which 9-1-1 calls cannot be transported to the Public Safety Answering Point (PSAP) responsible for answering the 9-1-1 emergency calls. (T)

Access Line
An arrangement from a local exchange telephone company or other common carrier, using either dedicated or switched access, which connects a Customer's location to Company's location or switching center. (T)

Authorized User
A person, firm, or corporation that is authorized by the Customer or joint user to be connected to the service of the Customer or joint user, respectively. An Authorized User must be specifically named in the application for service. (T)

Automatic Numbering Identification (ANI)
A type of signaling provided by a local exchange telephone company that automatically identifies the local exchange line from which a call originates.

Automatic Location Identification (ALI)
The automatic display, on equipment at the PSAP, of the location of the caller's telephone number, the address for the telephone, including non-listed and non-published numbers and addresses, and other information about the caller's location.

Emergency Service
A telecommunications service that permits the use of the local exchange network and the three-digit number 9-1-1 for reporting police, fire, medical, or other emergency situations to a PSAP and referral to a public agency. Emergency service does not include discretionary equipment purchased by, or contracted for, that is not essential to the provision of 9-1-1 or E9-1-1 service. (T) (T) (T) (T)

(T)

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.1 DEFINITION OF TERMS (CONT'D.) (T)

(D)
(D)

Basic Local Exchange Service or Basic Service
The telecommunications service that provides a local dial tone line and local usage necessary to place or receive a call within an exchange area and any other services or features that may be added by the Commission.

Bit
The smallest unit of information in the binary system of notation.

Building
A structure occupied by one or more Customers.

Campus
A group of two or more buildings or spaces located on a single owned continuous or contiguous property.

Central Office (CO)
A switching unit providing telecommunication services to the general public, designed for terminating and interconnecting lines and trunks. More than one CO may be located in a building.

Central Office Line
See "Exchange Access Line."

Certified Telecommunications Provider
Providers of telecommunications local exchange service who are certified with the Florida Public Service Commission as a Local Exchange Services Provider.

Commission (N)
Florida Public Service Commission. (N)

Common Carrier
An authorized company or entity providing telecommunications services to the public.

Company
Refers to Intrado Communications Inc.

Cancels 1st Revised Sheet 11

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.1 DEFINITION OF TERMS (CONT'D.) (T)

Customer
A person, partnership, firm, municipality, cooperative organization, corporation, or governmental agency furnished communications service by the Company under the provisions and regulations of this price list and who is responsible for paying the communication service bills and for complying with the rules and regulations of the Company. (T)

Dedicated
A facility or equipment system or subsystem set aside for the sole use of a specific Customer.

Demarcation Point
The point of interconnection between the Company's regulated telecommunications facilities and terminal equipment, protective apparatus or wiring at the premise. The demarcation point location will be within twelve inches (12) of the protector, or when there is no protector, within twelve inches (12) (or as close as practicable) of the point at which the cable/wire enters the Customer premises.

Duplex Service
Service that provides for simultaneous transmission in both directions. (T)

E9-1-1 Features
The ANI, ALI database and selective routing capabilities and all other components of an E9-1-1 system, not including the transport and switching facilities.

E9-1-1 Facilities
The facilities provided by the basic emergency service provider that interconnect to the wireless providers, certificated local exchange carriers, and other services that are used to transport E9-1-1 and other emergency calls to the PSAP. The facilities may include the use of E9-1-1 tandem switches or direct trunking of E9-1-1 calls to the PSAPs. (T)

E9-1-1 Tandem or 9-1-1 Selective Routing Tandem
The switch that provides the routing and switching of 9-1-1 calls. The E9-1-1 Tandem controls delivery of the call with ANI to the PSAP and provides selective routing, speed calling, selective transfer, fixed transfer, and certain maintenance functions for each PSAP. (T)

E9-1-1 Selective Router Trunk (N)
A trunk from a Selective Router capable of transmitting the ANI associated with an End User call to 911. The E9-1-1 Selective Router Trunk may be between a Selective Router and a PSAP or between Selective Routers. The latter configuration may also be known as an inter-Selective Router Trunk. (N)

(T)

ISSUED: July 8, 2008 EFFECTIVE: July 9, 2008 (T)

Senior Vice President, Regulatory Affairs
1601 Dry Creek Drive
Longmont, Colorado 80503

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.1 DEFINITION OF TERMS (CONT'D.) (T)

E9-1-1 Trunks
The trunks that connect from the end office serving the individual telephone that originates a 9-1-1 call to the E9-1-1 Selective Router. (T) (T)

(D) | | (D)

Emergency Telephone Service
A telephone system using the three-digit number 9-1-1 to report police, fire, medical or other emergency situations.

End User
The term "End User" means the Person that subscribes to (subscriber of record) and/or uses the Telecommunications Services provided by the Company. (T) (T)

Enhanced 9-1-1 (E9-1-1)
An emergency telephone service that includes ANI, ALI (including non-listed and non-published numbers and addresses), and selective routing, to facilitate public safety response. (T)

Entrance Facilities
Those facilities from the property line to the point at which the cable enters the premises and terminates at the protector.

Facilities
Central office equipment, supplemental equipment, apparatus, wiring, cables (outside plant) and other material and mechanisms necessary to or furnished in connection with the services of the Company.

Fiber Optic Cable
A thin filament of glass with a protective coating through which a light beam carrying communications signals may be transmitted by means of multiple internal reflections to a receiver, which translates the message.

Geographic Area
The area such as a city, county, municipality, multiple counties, or other areas defined by a governing body or other governmental entity for the purpose of providing public agency response to 9-1-1 calls.

Intrado Communications Inc.

Florida Price List No. 1
1st Revised Sheet 13.1
Cancels Original Sheet 13.1

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.)

2.1 DEFINITION OF TERMS (CONT'D.)

Local Exchange Service (M)
Refers to local service that allows a subscriber to complete calls through facilities provided for intercommunications to other telephones within a specified area without payment of toll charges. This service also provides access to and from the telecommunication network for long distance calling. (T)

Master Street Address Guide (MSAG)
A database of street names and house number ranges within their associated communities that defines Emergency Service Zones (ESZs) and their associated Emergency Service Numbers (ESNs) to enable proper routing of E911 calls (T)

Maintenance of Service
Maintenance of Service (Trouble Isolation) denotes an occurrence of a visit to a Customer's premises in connection with a service difficulty when it is determined that the difficulty is due to a condition in Customer-provided facilities, terminal equipment, a communication system or for Customer-maintained premises wire. When a Maintenance of Service visit is made, Premises Work Charges will apply.

Mbps (M)
Megabits, denotes millions of bits per second.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.1 DEFINITION OF TERMS (CONT'D.) (T)

Minimum Point of Entry
The closest practicable point to where regulated facilities of the Company cross a property line or enter a building.

National Emergency Number Association (NENA)
An international not-for-profit organization whose purpose is to lead, assist, and provide for the development, availability, implementation and enhancement of a universal emergency telephone number or system common to all jurisdictions through research, planning, publications, training and education.

Network Control Signaling
Transmission of signals used in the telecommunications system which perform functions such as supervision (control, status, and charging signals), address signaling (e.g., dialing), calling and called number identification, audible tone signals (call process signals indicating reorder or busy conditions, alerting tones) to control the operating of switching equipment in the system.

Network Facilities
All Company facilities from the central office up to and including the Standard Network Interface at the demarcation point.

Non-listed service
Telephone numbers that are not published in the telephone directory but are available through directory assistance.

Non-published service
Telephone numbers that are neither published in the telephone directory nor available through directory assistance.

Nonrecurring Charge
A charge associated with a given service or item of equipment which applies on a per service and/or a per item basis each time the service or item of equipment is provided or changed.

Pseudo Automatic Number Identification (pANI)
Refers to a number, which may be used in lieu of ANI, for query into routing databases for the delivery to PSAPs and corresponding ALI of E911 calls. (T) (T)

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.1 DEFINITION OF TERMS (CONT'D.) (T)

Person (M)
Any individual, firm, partnership, copartnership, limited partnership, joint venture, association, cooperative organization, limited liability corporation, corporation (municipal or private and whether organized for profit or not), governmental agency, state, county, political subdivision, state department, commission, board, or bureau, fraternal organization, nonprofit organization, estate, trust, business or common law trust, receiver, assignee for the benefit of creditors, trustee, or trustee in bankruptcy or any other service user. (M)

Premises
See "Same Premises."

Premises Work Charge
A time-sensitive one-time charge that applies to Customer requested work done by the Company on the Customer's side of the Network Interface.

Private Branch Exchange (PBX) (T)
An arrangement that comprises manual and/or automatic common equipment, wiring and station apparatus, and which provides for interconnection of main station lines associated with an attendant position and/or common equipment located on the Customer's premises or extended to another premises of the same Customer.

PBX Service
This service provides for centralized processing of exchange access by stations through groups of Central Office trunks, WATS lines, etc., or with other communication systems through voice circuits connected to the common equipment. Interconnection between stations through the common equipment is an inherent feature of the service.

Protector
An electrical device located in a central office, a Customer premises or any where along the telecommunications facility path. This device protects both the Company's and the Customer's property and facilities from high voltages and surges in current.

Public Agency
Any city, city and county, town, county, municipal corporation, public district, or public authority located in whole or in part within this state which provides or has the authority to provide fire fighting, law enforcement, ambulance, emergency medical, or other emergency services.

Public Safety Answering Point (PSAP)
A facility equipped and staffed to receive 9-1-1 calls from the basic emergency service provider. PSAPs operate under the direction of the governing body and are responsible to direct the disposition of 9-1-1 calls.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.1 DEFINITION OF TERMS (CONT'D.) (T)

Reseller of Local Exchange Service (Resellers) (T)
For the purpose of this Price List, a reseller of basic local exchange service is providing basic local exchange service.

Routing
The central office programming required to transport a 9-1-1 call to the correct 9-1-1 Tandem.

Same Premises
All the space in the same building in which a Customer has the right of occupancy to the exclusion of others or shares the right of occupancy with others; and all space in different buildings on continuous property, provided such buildings are occupied solely by one Customer. Foyers, hallways, and other space provided for the common use of all occupants of a building are considered the premises of the operator of the buildings.

Shared facility
A facility or equipment system or subsystem which can be used simultaneously by several Customers.

Selective Routing
The capability of routing an E9-1-1 call to a designated PSAP based upon the seven-digit or ten-digit telephone number of the subscriber dialing 9-1-1.

Standard Network Interface (SNI)
A standard Federal Communications Commission (FCC) registration jack or its equivalent, which is provided, installed, owned and maintained by the Company at the Customer's premises. The SNI is placed at the point on the Customer's premises where all premises services are connected to the telecommunication's network via Company or Customer owned facilities/wire.

Supporting Structure
Consisting, of, but not limited to, pipes, conduits, risers, poles, trenches, backboards, plenum spaces, etc., as required for the physical placement, protection and support of telecommunications facilities. These structures are furnished, installed and maintained at the expense of the premises owner for use by the Company in terminating regulated facilities.

TDD/Text Phone
A telecommunications device for use by the hearing or speech impaired that employs graphic communication in the transmission of coded signals through a wire or radio communication system. (T)

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.1 DEFINITION OF TERMS (CONT'D.) (T)

Telecommunications Device for the Deaf (TDD)/Text Phone Emergency Access
Provides 9-1-1 access to individuals that use TDDs and computer modems.

Telecommunications Service Priority (TSP)
Denotes the regulatory, administrative, and operational system developed by the federal government to ensure priority provisioning and/or restoration of National Security Emergency Preparedness (NSEP) telecommunications services. The FCC defines NSEP telecommunications services as those services which are used to maintain a state of readiness or to respond to and manage any event or crisis, which causes or could cause harm to the population, damage to or loss of property, or degrades or threatens the NSEP posture of the United States.

Telecommunications Relay Services
These services provides the ability for hearing- or speech-impaired individuals to communicate, by wire or radio, with a hearing individual in a manner that is functionally equivalent to communication by an individual without a hearing or speech impairment. This definition includes telecommunication relay services that enable two-way communications between an individual who uses a TDD or other non-voice terminal device and an individual who does not use such a device.

(D)
|
|
|
|
|
|
(D)

Wire Center
The building which houses the local switching equipment (central offices) from which exchange and private line services are furnished and where cable facilities are terminated which furnish telephone service within a designated wire center serving area.

Wire Center Serving Area
The area of the exchange served by a single wire center.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.2 ESTABLISHING AND FURNISHING SERVICE

These regulations are added to those pertaining to specific service items in other sections. Any change in rates, charges or regulations approved by appropriate governmental authority modifies all service terms and conditions unless otherwise specified in writing pursuant to an ICB agreement, the following terms and conditions will apply to the services.

2.2.1. APPLICATION FOR SERVICE

2.2.1.1. Applications for establishment of service must be made to the Company in writing. These applications become contracts upon approval by the Company and the customer or the establishment of the service, and shall be subject at all times to the lawful rates, charges and regulations of the Company.

2.2.1.2. Requests from Customers for additional service or equipment must be made in writing and, upon approval of installation of the service, become a part of the original contract, except that each additional item is subject to the appropriate Price List rates, charges and initial contract period, if any.

2.2.1.3. Any change in rates, charges or regulations authorized by the legally constituted authorities will act as a modification of all contracts to that extent without further notice.

2.2.2. REFUSAL

The Company reserves the right to refuse an application for service made by a present or former Customer who is indebted to the Company for service previously furnished, until the indebtedness is satisfied.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.2 ESTABLISHING AND FURNISHING SERVICE (CONT'D.) (T)

2.2.3. CANCELLATIONS AND DEFERMENTS

When the Company advises a Customer that ordered services are available on the requested due date, and the Customer is unable or unwilling to accept service at that time, the facilities will be held available for the Customer for a 30 business day grace period. If after 30 business days the Customer has still not accepted service, regular monthly billing for the ordered services may begin, or the facilities will be released for other service order activity, and cancellation charges (non-recurring charges that would have applied had the service been installed) may be applied. These cancellation and deferment provisions apply to requests for all Company services.

2.2.4. USE OF SERVICE

2.2.4.1. Customer service will be furnished to business Customers for:

- The Customer;
- The Customer's employees and representatives;
- Customers who share the Company's service;
- Joint users of Company provided services.

2.2.4.2. Intrado Communications' services may be used for any lawful purpose consistent with the transmission and switching parameters of the telecommunications facilities utilized in the provision of the Company's services. (T) (T)

2.2.4.3. The Company's services are available for use twenty-four (24) hours per day, seven (7) days per week. (T)

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.2 ESTABLISHING AND FURNISHING SERVICE (CONT'D.) (T)

2.2.5. OBLIGATION TO FURNISH SERVICE

2.2.5.1. The Company's obligation to furnish service or to continue to furnish service is dependent on its ability to obtain, retain, and maintain with just and reasonable earnings, suitable rights and facilities, and to provide for the installation of those facilities required to the furnishing and maintenance of that service. At the option of the Company, in managing its facilities, certain regular service restrictions may be temporarily imposed at locations where new or additional facilities being constructed are not readily available to meet service demands.

2.2.5.2. The Company shall not be required to furnish, or continue to furnish, facilities or service where the circumstances are such that the proposed use of the facilities or service would tend to adversely affect the Company's plant, property or service.

2.2.5.3. The Company reserves the right to refuse an application for service made by a present or former customer who is indebted to the Company for service previously rendered pursuant to this Price List until the indebtedness is satisfied.

2.2.5.4. When connections are requested and facilities to provide the required connections at the CO normally designated to serve the premises of the Customer are inadequate, facilities may be furnished from another CO to provide the requested interconnection. Under such circumstances additional monthly rates and installation charges will apply.

2.2.5.5. The customer shall be responsible for making arrangements or obtaining permission for safe and reasonable access for Company employees or agents of the Company to enter the premises of the customer or any joint user or customer of the customer at any reasonable hour for the purpose of inspecting, repairing, testing or removing any part of the Company's facilities.

2.2.6. LIMITED COMMUNICATION

The Company reserves the right to limit use of its services when emergency conditions arise that cause a shortage of facilities.

2.2.7. RESALE/SHARING OF SERVICE

Service on Customers' premises furnished by the Company shall not be used for performing any part of the work of transmitting, delivering, or collecting any message where any toll or consideration has been or is to be paid any party other than the Company, without written consent of the Company.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.3. TERMINATION OF SERVICE – COMPANY INITIATED

The Company may terminate service, with notice, due to:

2.3.1. Nonpayment

2.3.1.1. The Company may, by notice in writing to the Customer, in accordance with paragraph 2.6.2.9, suspend or terminate the service for nonpayment of any sum due the Company.

2.3.1.2. Exception: The Company may not use its purchase of a Customer's indebtedness, i.e., the accounts receivable from another telecommunications service provider as a basis to deny or discontinue providing its services to that Customer.

2.3.2. Abandonment
In the event of the abandonment of the service, the Company may terminate its service.

2.3.3. Abuse
Use of service that interferes with another Customer's service or that is used for any purpose other than its express intended purpose, or if a Customer or End User causes or permits any signals or voltages to be transmitted over the Company's network in such a manner as to cause a hazard or to interfere with services to other Intrado Communications Customers (T) | (T)

2.3.4. Fraud
Abuse or fraudulent use of service includes the use of facilities of the Company to transmit a message or locate a person otherwise to give or obtain information, without the payment of a toll charge. The Company reserves the right to discontinue or refuse service because of fraudulent use of its service.

2.3.5. Unlawful Use of Service
The service is furnished subject to the condition that it will not be used for an unlawful purpose. Upon request of an order from a court, acting within its jurisdiction, advising that such service is being used or will be used in violation of law, service will be discontinued.

2.3.6. Violation of Price List
Any other violation of the regulations of the Company or this Price List, the Company may in its sole discretion, without notice, either suspend service or terminate the service without suspension.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.4. SPECIAL SERVICES

2.4.1. General

2.4.1.1. The rates and charges quoted in the Price Lists of the Company contemplate the use of service arrangements, equipment and facilities in quantities and types regularly furnished by the Company. Where equipment, facilities, or service arrangements are requested which are not provided for in the Company's applicable Price Lists, monthly rates and one-time charges, such as nonrecurring and construction charges, will apply based on the circumstances in each case.

2.4.1.2. These special equipment and service items will be provided whenever, in the judgment of the Company, there is a valid reason for providing the service requested. In such cases, the Company reserves the right to require an initial contract period commensurate with relevant circumstances.

2.4.1.3. The rates and charges specified contemplate that work will be performed during regular working hours, 9:00AM – 5:00PM, Monday – Friday except Holidays, and that work once begun will not be interrupted by the Customer. If, at the request of the Customer, work is performed outside of regular working hours, either to meet the Customer's convenience or because the time allowed is insufficient to permit completion during regular hours or if the Customer interrupts work which has begun, the Customer may be required to pay any additional costs incurred. (T)

2.4.1.4. The rates and charges quoted in the Price Lists of the Company contemplate the use of standard procedures and practices for furnishing service, equipment and facilities. Where the Customer requests special procedures or practices, such as expedited material handling or shortened installation intervals through the use of overtime, etc., additional rates and charges will apply based on the circumstances in each case. These special practices or procedures will be provided at the discretion of the Company, depending upon each individual case.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.5. TERMINATION OF SERVICE – CUSTOMER INITIATED

2.5.1. Initial Contract Period

2.5.1.1. An initial contract period of one year will apply unless otherwise specified.

2.5.1.2. Where service is disconnected and subsequently reestablished at the same location for the same or a different Customer, a new initial contract period will apply, whether or not the equipment has been removed.

2.5.1.3. Where the provision of service requires unusual costs or involves special assemblies of equipment, or where the provision of service requires construction of facilities for possible short term use, the Company reserves the right to require an initial contract period longer than one year in addition to any construction charge that may be applicable.

2.5.2. Charges for Termination of Service

2.5.2.1. Nonrecurring charges do not apply to disconnect service unless otherwise specified.

2.5.2.2. After the expiration of the initial contract period, service may be terminated upon reasonable advance notice to the Company and payment of all charges due to the date of termination of the services.

2.5.2.3. Prior to the expiration of the initial contract period, service may be terminated upon reasonable advance notice to the Company and upon payment of the termination charges hereinafter provided, in addition to all charges for the period service has been rendered.

2.5.3. Service Involving Unusual Cost

Where the provision of service requires construction of facilities for possible short term use, or involves unusual costs or special assemblies of equipment, the initial contract period and termination charge base will be determined by the Company in each individual case.

2.5.4. Termination Liability

Services provided via service agreements will be subject to Termination Liability.

2.5 TERMINATION OF SERVICE – CUSTOMER INITIATED (CONT'D.) (T)

2.5.4 Termination Liability (Cont'd.) (T)

2.5.4.1. Definitions

Minimum Service Period
When services are provided under a service agreement, a Minimum Service Period may be established. This would be the period of time that the 100% factor of the Termination Liability Charge would apply.

2.5.4.2. Complete Disconnect
If the Customer chooses to completely discontinue service, at any time during the term of the agreement, a termination charge will apply. The termination charge will be determined on an individual case basis.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.6. PAYMENT FOR SERVICE

2.6.1. CUSTOMER RESPONSIBILITY

The Customer is responsible for payment of all charges for facilities and services furnished the Customer, including charges for services originated, or charges accepted, at such facilities.

2.6.2. PAYMENT OF BILLS

2.6.2.1. Customers will either be billed directly by the Company or its intermediary, or charges will be included in the Customer's regular bill pursuant to billing and collection agreements established by the Company or its intermediary with the applicable customer.

2.6.2.2. Unless otherwise specified, all charges for Company-provided services, equipment and facilities, exclusive of usage or transaction sensitive charges, start the day after service is installed, continue through the day service is disconnected and are payable monthly in advance. Charges for usage or transaction related services are payable monthly except the Company reserves the right to require payment of such charges at more frequent intervals.

2.6.2.3. When service does not begin on the first day of the month, or end on the last day of the month, the charge for the fraction of the month in which service was furnished will be calculated on a pro rata basis. For this purpose, every month is considered to have 30 days.

2.6.2.4. In the event a Customer is indebted to the Company for charges and services previously rendered in Florida, or for service under one or more accounts at the same location, and the Customer does not pay the charges or satisfy such indebtedness, the Company may charge and bill such indebtedness against other accounts of this Customer.

2.6.2.5. In the event that payment from a Customer is less than the total amount of all charges owing to the Company and the Customer does not specifically designate the manner in which he wishes to apply said payment, then the Company may apply all or any part of the payments received to such accounts or indebtedness in any manner that the Company deems appropriate.

2nd Revised Sheet 27 (T)
Cancels 1st Revised Sheet 27

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.6.2 PAYMENT FOR SERVICE (CONT'D.) (T)

2.6.2.6. Except as otherwise specified, where the rate to be charged for a particular service is determined by applying a percentage of similar factor to a quoted rate, and such computation results in a fraction, the charge for the service shall be computed to the nearest cent, a half cent being increased to the next higher cent.

2.6.2.7. The furnishing of services, equipment and facilities and any indebtedness resulting therewith shall not result in a lien, mortgage or other security interest in any real or personal property of the Customer, unless such indebtedness has been reduced to judgment.

2.6.2.8. Service may be discontinued or refused to a Customer for the nonpayment of any sum for service furnished in the State of Florida or for the provision of facilities which also have been provided in Florida.

2.6.2.9. Unless otherwise specified, in the event it becomes necessary for service to be discontinued to a Customer for nonpayment, a written notice of at least seven days (measured from the date of mailing) will be given to the Customer advising the Customer of the amount due and the date by which the same must be paid. If the Customer fails to pay or make suitable arrangements for payment by said due date, the Company may suspend the service or discontinue the service and remove any or all equipment from the Customer's premises.

2.6.2.10. Payment of bills for service may be made by any means mutually acceptable to the Customer and the Company. Payment that is not honored or paid by the payer's designated financial institution will be considered as nonpayment. A returned payment charge is applicable to the account for each occasion that a payment is returned to the Company for reason of insufficient funds or closed account.

	Maximum Charge
• Returned Payment Charge	$20

2.6.2.11. Customers may have the following options as to the method of paying bills for Company provided service(s):

(D)
(D)

- If by U.S. Mail, by check or money order only;
- Through an agent of the Customer;
- By any means acceptable to financial institutions and the Company.

2.6.2 PAYMENT FOR SERVICE (CONT'D.) (T)

2.6.2.12. Payments received by the Company on or before the due and payable date on the Customer's bill will be considered timely, provided the following billing information is remitted with payment:

- Customer's name;
- Customer's telephone number
- Customer's address;
- Customer's Account Code (if applicable);
- Customer's account type;
- Amount of payment;
- Other information as required by the service agreement.

2.6.2.13. Payments received by the Company after the due and payable date on the Customer's bill, but at least one day before the termination date on the suspension notice, may result in discontinuance of the Customer's service unless the following billing information is remitted with the payment:

- All of the items enumerated in 2.6.2.12., and
- The final payment date before discontinuance for nonpayment.

2.6.2.14. The Company will not be responsible if a Customer's service is discontinued after payment has been remitted, unless the payment is timely, as set forth in 2.6.2.12. or, if the payment is not timely, the requirements of 2.6.2.13. have not been met.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.7. LATE PAYMENT CHARGES

2.7.1. A maximum late payment charge of 1.5% per month applies to all billed balances that are not paid by the billing date shown on the next bill unless the balance is $45.00 or less.

2.7.2. Collection procedures, temporary disconnection of service, and the requirements for deposit are unaffected by the application of a late charge. The late payment charge does not extend the time for payment or otherwise enlarge or change the rights of a Customer. Notice of intention to pay late will not avoid this charge.

2.7.3. The late payment charge does not apply to the following:

- Bills mailed more than ten days after bill date.
- Final bills.
- One time miscellaneous bills.
- Billed amounts under dispute that are resolved to the Company's satisfaction in the Customer's favor.

2.7.4. The Company is entitled to recover from the customer the Company's cost of collection including reasonable attorney fees.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.8. ADJUSTMENT OF CHARGES

2.8.1. Interruptions

2.8.1.1. For the purpose of applying this provision, the word "interruption" shall mean the inability to complete calls either incoming or outgoing or both. Interruption does not include, and no credit allowance shall be given for, service difficulties such as busy circuits or other network and/or switching capacity shortages or as further defined.

2.8.1.2. The credit allowance will not apply where service is interrupted by the negligence or willful act of the Customer or the failure of facilities provided by the Customer, or where the Company, pursuant to the terms of the Price List, suspends or terminates service because of unlawful or improper use of the facilities or services, or any other reason covered by the Price List or as further defined.

2.8.1.3. No credit allowance shall be made for interruptions in service due to electric power failure where, by the provisions of this Price List or as further defined, the Customer is responsible for providing electric power.

2.8.1.4. Should any such error, mistake, omission, interruption, failure, delay, defect or malfunction of equipment or facilities result in an interruption or failure of jurisdictional service to a Customer for more than eight hours during a continuous 24-hour period after being reported by the Customer or discovered by the Company, whichever occurs first, an appropriate adjustment shall be made automatically by the Company to the Customer's bill. The adjustment, unless further defined, shall be a credit allowance on the monthly bill of 1/30 of the Price List monthly rate for all jurisdictional services and facilities affected by such interruption or failure for each occurrence of more than eight hours in a continuous 24-hour time period after notice by the Customer or discovery by the Company, whichever occurs first. Credit allowances in any billing period shall not exceed the total charges for that period for the services and facilities that are affected by the interruption or failure.

2.8.1.5. In addition and not by way of limitation, in the event that there is a delay in installation of service, if any service date is promised, or any failure to service or properly maintain the items of service as provided for herein concerning maintenance or any failure to repair or replace the items of service as provided in 2.8.1.4., then the refunds provided in 2.8.1.4. shall be the exclusive remedy against the Company.

2.8.1.6. Under all circumstances set forth above, the Company shall not be liable to the Customer or any other persons for special, incidental, punitive or consequential damages, losses, expenses, or costs, if any.

(T)
(T)

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.9. LIABILITY OF THE COMPANY

2.9.1. SERVICE LIABILITIES

THE COMPANY MAKES NO WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED EITHER IN FACT OR BY OPERATION OF LAW, STATUTORY OR OTHERWISE, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, EXCEPT THOSE EXPRESSLY SET FORTH HEREIN.

In view of the fact that the Customer has exclusive control of their communications over the facilities furnished them by the Company, and of the other uses for which facilities may be furnished them by the Company, and because of unavoidable errors incidental to the services and to the use of such facilities of the Company, the services and facilities furnished by the Company are subject to the following terms, conditions and limitations.

2.9.2. Limitations

2.9.2.1. Except as otherwise provided herein, no liability for direct, incidental punitive or consequential damages shall attach to the Company, its officers, directors, agents, servants or employees, for damages or costs arising from errors, mistakes, omissions, interruptions, failures, delays, or defects or malfunctions of equipment or facilities, in the course of establishing, furnishing, maintaining, rearranging, moving, terminating, or changing the service(s) or facilities (including the obtaining or furnishing of information in respect thereof or with respect to the Customer or End Users of the service or facilities) in the absence of willful and wanton conduct, whether a claim for such liability is premised upon breach of contract, breach of warranty, fulfillment of warranty, negligence, strict liability, misrepresentation, fraud, or any other theories of liability. (T)

2.9.2.2. The sole and exclusive remedy against the Company for an interruption or failure of service resulting from errors, mistakes, omissions, interruptions, failures, delays, or defects or malfunctions of equipment or facilities shall be as follows: The Company shall repair or replace any item of its facilities or defective part thereof at its expense. The Company shall have the option to decide whether to repair or to replace its facilities.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.9 LIABILITY OF THE COMPANY (CONT'D.) (T)

2.9.3. Transmission

2.9.3.1. The Company does not transmit messages but offers the use of its facilities, when available, for communications between parties, each of whom is present at a telephone or communications device.

2.9.3.2. The 9-1-1 emergency telephone number quickly summons emergency service in a crisis. When persons dial "9-1-1" to report an emergency, the telephone number (including non-published numbers) and address may be automatically displayed on a viewing screen located at the 9-1-1 answering centers and the call may also be recorded. The display of the calling number and address enables the emergency agency to quickly locate the caller if the call is disrupted by the crisis.

2.9.3.3. The 9-1-1 caller forfeits the privacy afforded by non-listed and non-published service to the extent that the telephone number, the address and name associated with the originating station location are furnished to the PSAP. Telephone subscribers (published and non-published) consent to the storage and retention of the subscriber name, telephone number and address in the database management systems and also consent to access of this information by Public Agencies for the sole purpose of responding to emergency calls.

2.9.3.4. The Customer indemnifies and saves the Company harmless against claims for libel, slander, or infringement of copyright or trade secrets from the material transmitted over the Company's facilities; against claims for infringement of patents arising from combining with, or using in connection with, facilities of the Company, apparatus and systems of the Customer, and against all other claims arising out of any act or omission of the Customer in connection with facilities provided by the Company.

2.9.4. Connections with other telecommunications providers

When the facilities or services of other companies are used in establishing connections to points or services provided to Customers not reached by the Company's facilities, the Company is not liable for any act or omission of the other company or companies and their agents, servants, or employees.

2.9.5. Defacement of Premises

The Company shall not be liable for any defacement of, or damage to, Customer's premises resulting from the existence of the Company's instruments, apparatus, or wiring, on such premises, or caused by the installation or removal, when such defacement or damage is not the result of the negligence of the Company. 2.11. DATABASE ERRORS OR OMISSIONS

2.11.1. Notwithstanding any other provisions herein, the Company expressly denies any representation or warranty that database records, data, or other information created, utilized or furnished hereunder will be furnished without interruption or free of errors or omissions. In no event shall the Company, its officers, directors, agents, servants, or employees, be liable for direct, incidental, punitive, or consequential damages for damages, injuries or costs arising from any such interruptions, errors, or omissions, whether a claim for such liability is premised upon breach of contract, breach of warranty, fulfillment of warranty, negligence, strict liability, misrepresentation, fraud, or any other theories of liability.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.12. RESPONSIBILITIES OF THE CUSTOMER

2.12.1. LOST OR DAMAGED EQUIPMENT

2.12.1.1. In the case of damage to, or destruction of, any of the Company's equipment, instruments, apparatus, accessories or wiring due to the negligence or willful act of the Customer and not due to ordinary wear and tear, the Customer will be held responsible for the cost of restoring the equipment, instruments, apparatus, accessories or wiring to its original condition, or of replacing the equipment, instruments, apparatus, accessories or wiring destroyed.

2.12.1.2. The Customer is required to reimburse the Company for loss, through theft of equipment, instruments, apparatus, accessories or wiring furnished to the Customer.

2. GENERAL REGULATIONS – CONDITIONS OF OFFERING (CONT'D.) (T)

2.13. BUILDING SPACE AND ELECTRIC POWER SUPPLY

2.13.1. All operations at the Customer's premises will be performed at the expense of the Customer and will be required to conform to whatever rules and regulations the Company may adopt as necessary in order to maintain a proper standard of service.

2.13.2. The Customer is required to provide adequate building space, lighting and atmospheric control for the proper installation, operation and maintenance of the equipment and facilities placed by the Company on his premises.

2.13.3. When Company equipment, installed on the Customer's premises, requires power for its operation, the Customer is required to provide such power. The Customer is required to provide adequate commercial power, wiring, electrical outlets, and environmentally appropriate conditions necessary for the proper operation of the Company's equipment on the Customer's premises.

2.13.4. The Customer is responsible for arranging access to its premises at times mutually agreeable to the Company and the Customer when required for the Company's personnel to install, repair, maintain, program, inspect or remove equipment with the provision of the Company's services. (T)

2.13.5. The Customer shall ensure that the equipment and/or system is properly interfaced with Company facilities or services, that the signals emitted into the Company's network are (T) of the proper mode, bandwidth, power, and signal level for the intended use of the Customer and in compliance with the criteria set forth in this Price List and that the signals do not damage equipment, injure personnel, or degrade service to other Customers. If the Federal Communications Commission or some other appropriate certifying body certifies terminal equipment as being technically acceptable for direct electrical connection with interstate communications service, the Company will permit such equipment to be connected with its channels without use of protective interface devices. If the Customer fails to maintain the equipment and/or the system properly, with resulting imminent harm to Company equipment, personnel, or the quality of service to other Customers, the Company may, upon written notice, require the use of protective equipment at the Customer's expense. If this fails to produce satisfactory quality and safety, the Company may, upon five (5) days written notice via first class U.S. mail, terminate the Customer's service.

2.14. SPECIAL TAXES, FEES, CHARGES

2.14.1. Rate schedules of the Company in Florida do not include any municipal, license, franchise, or occupation tax, costs of furnishing service without charge, or similar taxes or impositions on the Company.

2.14.2. The amount paid by the Company to a municipality as a cost of doing business within that municipality under a franchise, or pursuant to a license or occupation tax levied by the municipality, will be added to the bill for service to the Company's Customers within such municipality for the privilege of employment within the municipality shall be so surcharged.

2.14.3. A monthly surcharge to recover the additional expense related to any municipal, license, franchise, or occupation tax, costs of furnishing service without charge, or similar taxes will be added to Customer bills for all recurring and nonrecurring rates and charges for all intrastate service except returned check charges and late payment charges.

2.14.4. Introduction, cancellation, or modification of a surcharge will be effective on the date of the Customer's first bill rendered after the effective date of the change.

2.15. Promotional Offerings

2.15.1. Nonrecurring Charges

During specific promotional periods not to exceed 90 days, the offer may be made to reduce nonrecurring charges on a non-discriminatory basis. Each such offer shall be briefly described in a sequentially numbered informational letter to the Commission on seven days notice.

2.15.2. Recurring Rates and Charges

For the purpose of encouraging Customers to try different telecommunications services, the Company may offer promotional programs. The purpose of these programs is to waive or reduce recurring rates or charges to introduce present or potential Customers to Intrado Communications' product(s) or service(s) not currently being received by the Customer. (T)
The Company may also offer incentives or other benefits to Customers to encourage the purchase or retention of any such service or product. Any such offers will be made on a non-discriminatory basis but are subject to service and facility availability and are subject to Commission rule requirements and state statutes.

5. Emergency Services

5.1 Intelligent Emergency Network® Service (T)

Intelligent Emergency Network Services are telecommunications services that permit a Public Safety Answering Point (PSAP) to receive emergency calls placed by dialing the number 9-1-1 and/or emergency calls originated by personal communications devices.

Intelligent Emergency Network Services support interconnection to other telecommunications service providers for the purpose of receiving emergency calls originated in their networks. Intelligent Emergency Network Services include 9-1-1 call routing and transfer services that use a call management system to either directly perform (T)
the selective routing of an emergency call to the appropriate PSAP, or may be used to hand-off the call to a separate 9-1-1 Service Provider (possibly a legacy 9-1-1 selective router) for call completion to the appropriate PSAP. Intelligent Emergency Network Services also provide call bridging and post call activity reporting. (T)

Intelligent Emergency Network 9-1-1 Routing includes a comprehensive data management and delivery service, ALI Management Services. ALI Management Services provide PSAPs more control over ALI data management with highly accurate data and superior reporting. ALI Management allows Customers to optimize their 9-1-1 (T)
operations. ALI Management Services offers superior features such as "drill down" metric reporting capabilities for wireline, wireless, and VoIP 9-1-1 calls. The solution includes a web interface for data queries and MSAG management. (T)

Intelligent Emergency Network Services are offered subject to the availability of facilities. The Customer is the Governing Authority that orders service and is responsible for the payment of charges and compliance with the terms and conditions of this Price (T)
List.

(D)

5. **Emergency Services, (Cont'd.)**

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.1 9-1-1 Routing Service

9-1-1 Routing is a public safety grade, specialized managed network for processing 9-1-1 calls that allows the PSAP to accommodate new technologies while simultaneously enabling more control over 9-1-1 call routing operations. The Company's solution utilizes a redundant, secure network. Facilities and (T)
nodes are geographically diverse and are equipped with physically redundant data communications and power equipment that allow for continuous operation and reliability. 9-1-1 Routing delivers emergency calls from both traditional and non-traditional voice networks. In addition to processing traditional TDM voice traffic, 9-1-1 Routing also provides Internet Protocol based call processing (T)
capabilities.

Intrado Communications' 9-1-1 Routing Service facilitates interoperability and (T)
allows for specialized management of different call types. The Customer can designate, capture, and report on specific instructions for handling each call type:

Wireline: Supports traditional wireline emergency calls originating from an end office, central office and/or enterprise private branch exchange (PBX) over standard based Centralized Automatic Message Accounting (CAMA), both analog and digital interfaces, SS7 and PRI interfaces.

Wireless: Supports delivery of wireless 9-1-1 calls to assigned PSAPs. Carriers having the capability to provide wireless handset ANI, cell site and sector and/or longitudinal and latitudinal (x,y) coordinates in the appropriate format, may connect directly to the 9-1-1 Routing Service.

VoIP: Supports delivery of voice over Internet protocol (VoIP) emergency calls (T)
originating from a VoIP Service Provider. VoIP Service Providers capable of providing calls and data in the appropriate format can connect directly to the 9-1-1 Routing Service.

Craig W. Donaldson
Senior Vice President, Regulatory Affairs
1601 Dry Creek Drive
Longmont, Colorado 80503

5. **Emergency Services, (Cont'd.)**

5.1 **Intelligent Emergency Network Service, (Cont'd.)**

5.1.2 **9-1-1 Routing Service Features**

A. Automatic Number Identification (ANI)

Automatic Number Identification (ANI) is the feature by which the telephone number or other related routing (pANI) number associated with an inbound 9-1-1 caller is received by Intelligent Emergency Network 9-1-1 Routing and passed on to the proper PSAP. The ANI is also used to determine the proper PSAP to receive the inbound call.

B. 9-1-1 Routing Options

Selective Routing
The routing of a 9-1-1 call to the proper PSAP based upon the location of the caller. Selective Routing is typically accomplished by mapping the ANI to an ESN that has been derived based on the caller's location. The ESN maps to a specific routing rule that identifies the PSAP and possible alternative destinations.

Trunk Only Routing
Inbound trunks, typically from a given Telecommunications Carrier, can be designated to route all calls to a given destination, usually a specific PSAP. If Trunk Only Routing is not specified the system will attempt to perform Selective Routing.

Default Routing
When an incoming 9-1-1 call cannot be selectively routed due to the reception of an ANI number that is either not stored in the selective router data base, unintelligible ANI or when no ANI number is passed, a predetermined call route will be chosen and the caller will be terminated to the PSAP based upon the incoming trunk facility the call is passed over.

PSAP Abandonment Routing
If a situation arises where a PSAP must be closed or evacuated, this feature provides specific routing instructions for delivery of calls to recovery locations.

Craig W. Donaldson
Senior Vice President, Regulatory Affairs
1601 Dry Creek Drive
Longmont, Colorado 80503

5. Emergency Services, (Cont'd.)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.2 9-1-1 Routing Service Features, (Cont'd.)

C. 9-1-1 Transfer Options

Fixed Transfer
Fixed transfer is a feature which enables a PSAP call taker to transfer a 9-1-1 call to a secondary destination (possibly another PSAP) by dialing a pre-assigned speed dial code or by use of a single button on an approved Customer telephone system that dials the appropriate code. (T)

Selective Call Transfer
Selective Call Transfer is a feature enabling a PSAP call taker to transfer an incoming 9-1-1 call to another agency by dialing a pre-assigned speed dial code associated with police, fire or medical agencies or by use of a single button on an approved Customer telephone system that dials the appropriate code. The specific transfer destination is determined by the caller's originating location as specified by the ESN. (T)

Manual Transfer
A PSAP call taker may transfer an incoming call manually by depressing the hook switch of the associated telephone or the "add" button on approved Customer telephone system, and dialing either an appropriate seven or 10-digit telephone number.

Alternate Routing
The Overflow Call Disposition transfer feature enables the ability for callers to be terminated either to a previously designated alternate call center, a prerecorded message or to a busy tone when all PSAP trunks are busy.

D. Call Event Logging

The Call Event Logging feature delivers reporting information containing the ANI received from a 9-1-1 call, the identity of the incoming trunk the Selective Router received the call over, the identity of the outgoing PSAP trunk the call is terminated to, and the date and time the call was delivered to its target destination, transferred and/or disconnected.

Craig W. Donaldson
Senior Vice President, Regulatory Affairs
1601 Dry Creek Drive
Longmont, Colorado 80503

5. **Emergency Services, (Cont'd.)**

5.1 **Intelligent Emergency Network Service, (Cont'd.)**

5.1.3 **ALI Management Service**

A. **MSAG Management**
The Company provides a data management and administration tool that automates the viewing and communication of updates, insertions, and deletions to the MSAG database. (T)

B. **MSAG Build Services**
Intrado Communications acts as the facilitator with the addressing authority in the creation and maintenance of the MSAG utilizing recognized National Emergency Number Association (NENA) standards. (T)

C. **English Language Translation (ELT) Management**
ELT information provides the names of fire, EMS and police jurisdictions associated with each ESN so that it may be delivered with the ALI to the PSAPs at the time of the E9-1-1 call. The requests are validated for accuracy and either updated into the database, or referred back to the PSAP for resolution. Upon completion of the transaction, notification is provided to the Customer

D. **Subscriber Record Management**
Subscriber Record Management is the collection of service order records from Telephone Service Providers (TSPs), validation of those records against the MSAG, and storage of the records for the generation of the ALI database.

E. **ALI Database Updates**
After processing and validating subscriber record updates, the Company posts ALI records for call routing and for retrieval and display by the PSAP during 9-1-1 calls. (T)

F. **ANI/ALI Discrepancy Resolution**
An ANI/ALI discrepancy occurs when an ALI record delivered to a PSAP does not match the information of the caller. Intrado Communications will investigate ANI/ALI discrepancy reports and refer each discrepancy to the respective TSP for resolution. (T)

Craig W. Donaldson
Senior Vice President, Regulatory Affairs
1601 Dry Creek Drive
Longmont, Colorado 80503

(T)

5. **Emergency Services, (Cont'd.)**

5.1 **Intelligent Emergency Network Service, (Cont'd.)**

5.1.3 **ALI Management Services, (Cont'd.)**

G. **Misroute Resolution**
An ANI/ALI misroute occurs when a 9-1-1 call is delivered to the incorrect PSAP. The Company investigates ANI/ALI misroute reports and refers each misroute report to the TSP for resolution. (T)

H. **No Record Found (NRF) Resolution**
An NRF occurs when the ANI provided does not exist in the ALI database and/or when NRF is displayed at the PSAP. The Company will resolve or refer each NRF to the respective TSP for resolution. (T)

I. **Local Number Portability (LNP) Processing**
Intrado Communications supports LNP, which allows subscribers to switch from one TSP to another without changing their phone numbers. (T)

J. **ALI Delivery**
ALI Delivery provides location information via the ALI Data Access Connections to a PSAP during a 9-1-1 call.

K. **Data Support of Wireless and VoIP E9-1-1**
Intrado Communications' database management systems support both Phase I and Phase II wireless and VoIP E9-1-1 call processing. This includes the E2 interface used by wireless service providers to communicate 9-1-1 caller location information to the ALI database. (T)

L. **ALI Metrics Reporting**
The Company provides access to reports that provide details on data transactions, the number of records processed, and the number of errors. (T)

Craig W. Donaldson
Senior Vice President, Regulatory Affairs
1601 Dry Creek Drive
Longmont, Colorado 80503 (T)

5. Emergency Services, (Cont'd.)

5.1 Intelligent Emergency Network Service, (Cont'd.)

5.1.4 9-1-1 Exchange Access

9-1-1 Exchange Access provides one way call delivery trunks from the 9-1-1 Routing Service to the PSAP. The 9-1-1 Exchange Access trunks are conditioned to allow delivery of ANI to the PSAP. They also allow signaling from the PSAP to the 9-1-1 Routing Service to invoke special features of the 9-1-1 Routing Service, such as transfer, speed dialing, etc.

5.1.5 ALI Data Access Connections

ALI Data Access Connections provide the PSAP network access to the ALI Database for ALI Delivery.

5.1.6 Diverse Facility Routing

Where facilities exist and a Customer wishes to subscribe to such services, the Company will arrange for diverse routing over alternate voice and/or data paths to reduce the potential for service failure as a result of an interruption of transport facilities. (T)

Diverse routing is supplied to the extent made possible as determined by the availability of current facilities. Diversity at Customer locations and additions to existing facilities to obtain diversity, where feasible within E9-1-1 network and as determined by the respective facility provider, will be based upon the costs incurred by the respective facility provider and will be supplied upon Customer request.

5. **Emergency Services, (Cont'd.)**

5.2 Intelligent Emergency Network 9-1-1 Routing Rules & Regulations

5.2.1 The Intelligent Emergency Network Service Customer may be a municipality, other federal, state or local governmental unit, an authorized agent of one or more municipalities or other federal, state or local governmental units to whom authority has been lawfully delegated. The Customer must be legally authorized to subscribe to the service and have public safety responsibility by law to respond to telephone calls from the public for emergency police, fire or other emergency services within the served territory.

5.2.2 Intelligent Emergency Network Service is provided by the Company where facilities and operating conditions permit.

5.2.3 Intelligent Emergency Network Service is not intended as a total replacement for the local telephone service of the various public safety agencies which may participate in the use of this service. The Customer must subscribe to additional local exchange services for purposes of placing administrative outgoing calls and for receiving other calls. (T) (T) | (T)

5.2.4 Application for Intelligent Emergency Network Service must be executed in writing by the Customer. If execution is by an agent, satisfactory evidence of the appointment must be provided in writing to the Company. At least one local law enforcement agency must be included among the participating agencies.

5.2.5 Intelligent Emergency Network Service is provided solely for the benefit of the Customer operating the PSAP as an aid in handling assistance calls in connection with fire, police and other emergencies. The provision of Intelligent Emergency Network Service by the Company shall not be interpreted, construed, or regarded, either expressly or implied, as being for the benefit of or creating any relationship with or any Company obligation direct or indirect, to any third person or legal entity other than the Customer.

5.2.6 The Company does not undertake to answer and/or forward 9-1-1 or other emergency calls, but furnishes the use of its facilities to enable the Customer's personnel to respond to such calls.

5. **Emergency Services, (Cont'd.)**

5.2 Intelligent Emergency Network 9-1-1 Routing Rules & Regulations, (Cont'd.)

5.2.7 The rates charged for Intelligent Emergency Network Service do not contemplate the inspection or constant monitoring of facilities to discover errors, defects and malfunctions in the service, nor does the Company undertake such responsibility. The Customer shall make such operational tests as, in the judgment of the Customer, are required to determine whether the system is functioning properly for its use. The Customer shall promptly notify the Company in the event the system is not functioning properly.

5.2.8 The Company's liability for any loss or damage arising from errors, interruptions, defects, failures, or malfunctions of this service or any part thereof shall not exceed an amount equivalent to the pro rata charges for the service affected during the period of time that the service was fully or partially inoperative.

5.2.9 The Customer must furnish the Company its agreement to the following terms and conditions.

A. That all 9-1-1 or other emergency calls will be answered on a 24-hour day, seven-day week basis.

B. That the Customer has responsibility for dispatching the appropriate emergency services, or will undertake to transfer all emergency calls received to the governmental agency with responsibility for dispatching such services, to the extent that such services are reasonably available.

C. That the Customer will develop an appropriate method for responding to calls for nonparticipating agencies which may be directed to their PSAP by calling parties.

D. That the Customer will subscribe to local exchange service at the PSAP location for administrative purposes, for placing outgoing calls, and for receiving other calls.

5. Emergency Services, (Cont'd.)

5.2 Intelligent Emergency Network 9-1-1 Routing Rules & Regulations, (Cont'd.)

5.2.10 When the ALI Management Service is provided, the Customer is responsible to:

A. Provide information regarding the jurisdictional boundaries associated with all involved public safety agencies.

B. Support the creation of a master address file for use in validating subscriber address information and application of appropriate jurisdictional responsibility.

C. Define the unique combinations of public safety agencies (police, fire, medical, etc) responsible for providing emergency response services in any specific geographic location.

5.2.11 When the 9-1-1 Routing feature is provided, the Customer is responsible for identifying primary and secondary PSAPs associated with the unique combinations noted in 5.2.10.C. above and providing the access or telephone numbers required to support the selective transfer feature of 9-1-1 Routing Service.

5.2.12 After establishment of service, it is the Customer's responsibility to continue to verify the accuracy of the routing information contained in the master address file, and to advise the Company of any changes in street names, establishment of new streets, closing and abandonment of streets, changes in police, fire, emergency medical or other appropriate agencies' jurisdiction over any address, annexations and other changes in municipal and county boundaries, incorporation of new cities or any other matter that will affect the routing of 9-1-1 calls to the proper PSAP.

(T)

5. **Emergency Services, (Cont'd.)**

5.2 **Intelligent Emergency Network 9-1-1 Routing Rules & Regulations, (Cont'd.)**

5.2.13 The following terms define the Customer's responsibilities with respect to any information provided by the Company to the Customer as part of ALI Management Service:

A. Such information shall be used by the Customer solely for the purpose of aiding the Customer in more accurately identifying, updating and/or verifying the addresses of subscribers within the Customer's serving areas in connection with the Customer's provision of emergency response services.

B. Customer shall strictly limit access to the information to those authorized employees of the Customer with a need to know and those employees actually engaged in the provision of emergency assistance services.

C. Customer shall use due care in providing for the security and confidentiality of the information.

D. Customer shall make no copies of the information except as may be essential for the verification of emergency assistance services.

5.2.14 Each Customer agrees to release, indemnify, defend and hold harmless the Company from any and all loss, claims, demands, suits, and other action, or any liability whatsoever, whether suffered, made, instituted or asserted by the Customer or by any other party or person: (1) for any personal injury to or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by the Customer or others, and which arises out of the negligence or other wrongful act of the Company, the Customer, its user agencies or municipalities or employees or agents of any one of them, or (2) for any infringement or invasion of the right of privacy of any person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, location or use of Intelligent Emergency Network Service features and the equipment associated therewith, including, but not limited to, the identification of the telephone number, address, or name associated with the telephone number used by the party or parties accessing Intelligent Emergency Network Service hereunder, or (3) arising out of any act or omission of the Customer, in the course of using services provided pursuant to this Price List. Re: Docket No. 080089, Intrado Petition for Declaratory Statement

Dear Ms. Cole:

On February 8, 2008, Intrado Communications Inc. ("Intrado") filed its petition for declaratory statement requesting that the Florida Public Service Commission ("Commission") address whether Intrado or a 911 Public Safety Answering Point ("PSAP") would bear any obligation to an incumbent local exchange telecommunications carrier ("ILEC") to pay an ILEC's 911 tariff charges when the PSAP has selected Intrado to provide the PSAP with its 911 services. On March 14, 2008, Intrado filed its amended petition substantively raising the same issue as the February 8th petition, but rephrasing the specific questions this Commission should address. As the Communications Bureau Chief/E-911 Coordinator for Alachua County, I strongly urge the Commission to consider the issues raised by Intrado and find that an ILEC many not charge Intrado and/or the PSAP for any ILEC 911 tariff charges, untariffed charges, or bundled charges for terminated 911 services.

Since the first deployment of emergency 911 services in the 1960s, the technology to receive and respond to 911-dialed calls has evolved from a wireline ILEC telephone network perspective. Today, traditional landline telephone callers rely upon a system that can effectively route calls to the appropriate PSAP and provide location data that is highly accurate and secure.

Over the last ten years, the demands upon the 911 system have grown and changed significantly because of the widespread use of wireless telephones and the increasing acceptance of new calling technologies such voice over Internet protocol ("VoIP"). While the Federal Communications Commission ("FCC") has mandated certain technological obligations on the wireless and VoIP carriers, it has been up to the local PSAPs to deploy the necessary equipment that can receive and process these calls. Our county government, along with additional funding opportunities made available through the Florida Legislature, has committed significant resources to be able to handle these non-traditional, non-ILEC network calls, but it is going to take the deployment of next generation network services to enable PSAPs to be able to receive, process, and respond to these callers.

The issue with wireless and VoIP calls is especially acute. Under the best of circumstances location accuracy is far less accurate than if the call originated at a traditional landline phone. In addition, consumers increasingly desire the ability to text message a PSAP or to send real time photographs

FPSC-COMMISSION CLERK
08 APR 21 AM 8:03
DOCUMENT NUMBER-DATE

and video during an emergency situation, but PSAPs are unable to receive these messages using ILEC network services.

Outside the wireless and VoIP environment, PSAPs face other challenges. During a hurricane, for example, the ability to seamlessly transfer an entire 911 center's calls to another 911 center would enable people to continue to reach first responders. In addition, it is not uncommon during a single event, such as a major traffic accident or other large event, for a 911 center to become overloaded with calls associated with that event, which may result in callers elsewhere in the county with other needs being blocked. The ability to "on the fly" reconfigure the 911 network to reroute calls originating from a specific geographic area that is overloading the system so that other callers can get through would be a life saving benefit to everyone. The network services that would enable this functionality can only be done through the deployment of next generation network services.

While as stewards of the 911 system, PSAP administrators have been moving forward with plans to deploy next generation network services such as are being offered by Intrado, we are constrained by some of the information we are receiving from the ILECs regarding alleged continuing obligations once the ILEC is no longer the network services provider. For example, as is related in Intrado's petition for declaratory statement, we have been told that if we choose Intrado as our network services carrier that Intrado and/or the PSAP may still be subject to certain ILEC tariff charges, or that the ILEC may create new tariff or other rate elements, or that other services we receive may be bundled with services we no longer receive resulting in the payment for unnecessary services.

To be sure, I want to be clear that we do not have any issue with ILEC charges associated with services or rates for which there is a continuing legal duty, nor are we contesting any previously contractual obligations for early termination or liquidated damages. These types of contractual obligations are not the subject of the declaratory statement request.

The consumers of Florida require a more robust emergency 911 system that serves all callers, whether from a traditional landline phone, a wireless phone, or over a VoIP network. Only through the deployment of next generation 911 services such as are being offered by Intrado will our county be able to receive and effectively serve 911 callers. However, in order to make this technology transition, we must be free from any legacy ILEC charges other than those for which we have clear, specific obligations.

I strongly urge you to issue the requested declaratory statement. Feel free to contact me if there are any questions or the Commission needs additional information from us. Thank you for your consideration.

Re: *Docket No. 080089, Intrado Petition for Declaratory Statement*

Dear Ms. Cole,

On February 8, 2008, Intrado Communications Inc. ("Intrado") filed its petition for declaratory statement requesting that the Florida Public Service Commission ("Commission") address whether Intrado or a 911 Public Safety Answering Point ("PSAP") would bear any obligation to an incumbent local exchange telecommunications carrier ("ILEC") to pay an ILEC's 911 tariff charges when the PSAP has selected Intrado to provide the PSAP with its 911 services. On March 14, 2008, Intrado filed its amended petition substantively raising the same issue as the February 8th petition, but rephrasing the specific questions this Commission should address. As the E911 Administrator for the Charlotte County PSAP, I strongly urge the Commission to consider the issues raised by Intrado and find that an ILEC many not charge Intrado and/or the PSAP for any ILEC 911 tariff charges, *untariffed* charges, or bundled charges for terminated 911 services.

Since the first deployment of emergency 911 services in the 1960s, the technology to receive and respond to 911-dialed calls has evolved from a wireline ILEC telephone network perspective. Today, traditional landline telephone callers rely upon a system that can effectively route calls to the appropriate PSAP and provide location data that is highly accurate and secure.

Over the last ten years, the demands upon the 911 system have grown and changed significantly because of the widespread use of wireless telephones and the increasing acceptance of new calling technologies such voice over Internet protocol ("VoIP"). While the Federal Communications Commission ("FCC") has mandated certain technological obligations on the wireless and VoIP carriers, it has been up to the local PSAPs to deploy the necessary equipment that can receive and process these calls. Our county government, along with additional funding opportunities made available through the Florida Legislature, has committed significant resources to be able to handle these non-traditional, non-ILEC network calls, but it is going to take the deployment of next generation network services to enable PSAPs to be able to receive, process, and respond to these callers.

The issue with wireless and VoIP calls is especially acute. Under the best of circumstances location accuracy is far less accurate than if the call originated at a traditional landline phone. In addition, consumers increasingly desire the ability to text message a PSAP or to send real time photographs and video during an emergency situation, but PSAPs are unable to receive these messages using ILEC network services.

Outside the wireless and VoIP environment, PSAPs face other challenges. During a hurricane, for example, the ability to seamlessly transfer an entire 911 center's calls to another 911 center would enable people to continue to reach first responders. In addition, it is not uncommon during a single event, such as a major traffic accident or other large event, for a 911 center to become overloaded with calls associated with that event, which may result in callers elsewhere in the county with other needs being blocked. The ability to "on the fly" reconfigure the 911 network to reroute calls originating from a specific geographic area that is overloading the system so that other callers can get through would be a life saving benefit to everyone. The network services that would enable this functionality can only be done through the deployment of next generation network services.

While as stewards of the 911 system, PSAP administrators have been moving forward with plans to deploy next generation network services such as are being offered by Intrado, we are constrained by some of the information we are receiving from the ILECs regarding alleged continuing obligations once the ILEC is no longer the network services provider. For example, as is related in Intrado's petition for declaratory statement, we have been told that if we choose Intrado as our network services carrier that Intrado and/or the PSAP may still be subject to certain ILEC tariff charges, or that the ILEC may create new tariff or other rate elements, or that other services we receive may be bundled with services we no longer receive resulting in the payment for unnecessary services.

To be sure, I want to be clear that we do not have any issue with ILEC charges associated with services or rates for which there is a continuing legal duty, nor are we contesting any previously contractual for early termination or liquidated damages. These types of contractual obligations are not the subject of the declaratory statement request.

The consumers of Florida require a more robust emergency 911 system that serves all callers, whether from a traditional landline phone, a wireless phone, or over a VoIP network. Re: Docket No. 080089, Intrado Petition for Declaratory Statement

Dear Ms. Cole:

On February 8, 2008, Intrado Communications Inc. ("Intrado") filed its petition for declaratory statement requesting that the Florida Public Service Commission ("Commission") address whether Intrado or a 911 Public Safety Answering Point ("PSAP") would bear any obligation to an incumbent local exchange telecommunications carrier ("ILEC") to pay an ILEC's 911 tariff charges when the PSAP has selected Intrado to provide the PSAP with its 911 services. On March 14, 2008, Intrado filed its amended petition substantively raising the same issue as the February 8th petition, but rephrasing the specific questions this Commission should address. As the E-911 Manager and the E-911 Coordinator for Martin County Primary Public Safety Answering Point.(PSAP), I strongly urge the Commission to consider the issues raised by Intrado and find that an ILEC many not charge Intrado and/or the PSAP for any ILEC 911 tariff charges, untariffed charges, or bundled charges for terminated 911 services.

Since the first deployment of emergency 911 services in the 1960s, the technology to receive and respond to 911-dialed calls has evolved from a wireline ILEC telephone network perspective. Today, traditional landline telephone callers rely upon a system that can effectively route calls to the appropriate PSAP and provide location data that is highly accurate and secure.

Over the last ten years, the demands upon the 911 system have grown and changed significantly because of the widespread use of wireless telephones and the increasing acceptance of new calling technologies such voice over Internet protocol ("VoIP"). While the Federal Communications Commission ("FCC") has mandated certain technological obligations on the wireless and VoIP carriers, it has been up to the local PSAPs to deploy the necessary equipment that can receive and process these calls. Our county government, along with additional funding opportunities made available through the Florida Legislature, has committed significant resources to be able to handle these non-traditional, non-ILEC network calls, but it is going to take the deployment of next generation network services to enable PSAPs to be able to receive, process, and respond to these callers.

The issue with wireless and VoIP calls is especially acute. Under the best of circumstances location accuracy is far less accurate than if the call originated at a traditional landline phone. In addition, consumers increasingly desire the ability to text message a PSAP or to send real time photographs and video during an emergency situation, but PSAPs are unable to receive these messages using ILEC network services.

Outside the wireless and VoIP environment, PSAPs face other challenges. During a hurricane, for example, the ability to seamlessly transfer an entire 911 center's calls to another 911 center would enable people to continue to reach first responders. In addition, it is not uncommon during a single event, such as a major traffic accident or other large event, for a 911 center to become overloaded with calls associated with that event, which may result in callers elsewhere in the county with other needs being blocked. The ability to "on the fly" reconfigure the 911 network to reroute calls originating from a specific geographic area that is overloading the system so that other callers can get through would be a life saving benefit to everyone. The network services that would enable this functionality can only be done through the deployment of next generation network services.

While as stewards of the 911 system, PSAP administrators have been moving forward with plans to deploy next generation network services such as are being offered by Intrado, we are constrained by some of the information we are receiving from the ILECs regarding alleged continuing obligations once the ILEC is no longer the network services provider. For example, as is related in Intrado's petition for declaratory statement, we have been told that if we choose Intrado as our network services carrier that Intrado and/or the PSAP may still be subject to certain ILEC tariff charges, or that the ILEC may create new tariff or other rate elements, or that other services we receive may be bundled with services we no longer receive resulting in the payment for unnecessary services.

To be sure, I want to be clear that we do not have any issue with ILEC charges associated with services or rates for which there is a continuing legal duty, nor are we contesting any previously contractual for early termination or liquidated damages. These types of contractual obligations are not the subject of the declaratory statement request.

The consumers of Florida require a more robust emergency 911 system that serves all callers, whether from a traditional landline phone, a wireless phone, or over a VoIP network. Only through the deployment of next generation 911 services such as are being offered by Intrado will our county be able to receive and effectively serve 911 callers. However, in order to make this technology transition, we must be free from any legacy ILEC charges other than those for which those we have clear, specific obligations.

I strongly urge you to issue the requested declaratory statement. Feel free to contact me if there are any questions or the Commission needs additional information from us. Thank you for your consideration.

Re: Docket No. 080089, Intrado Petition for Declaratory Statement

Dear Ms. Cole,

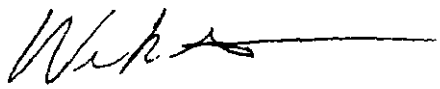
On February 8, 2008, Intrado Communications Inc. ("Intrado") filed its petition for declaratory statement requesting that the Florida Public Service Commission ("Commission") address whether Intrado or a 911 Public Safety Answering Point ("PSAP") would bear any obligation to an incumbent local exchange telecommunications carrier ("ILEC") to pay an ILEC's 911 tariff charges when the PSAP has selected Intrado to provide the PSAP with its 911 services. On March 14, 2008, Intrado filed its amended petition substantively raising the same issue as the February 8th petition, but rephrasing the specific questions this Commission should address. As the 911 Coordinator for the Sarasota County Florida, I strongly urge the Commission to consider the issues raised by Intrado and find that an ILEC many not charge Intrado and/or the PSAP for any ILEC 911 tariff charges, untariffed charges, or bundled charges for terminated 911 services.

Since the first deployment of emergency 911 services in the 1960s, the technology to receive and respond to 911-dialed calls has evolved from a wireline ILEC telephone network perspective. Today, traditional landline telephone callers rely upon a system that can effectively route calls to the appropriate PSAP and provide location data that is highly accurate and secure.

Over the last ten years, the demands upon the 911 system have grown and changed significantly because of the widespread use of wireless telephones and the increasing acceptance of new calling technologies such voice over Internet protocol ("VoIP"). While the Federal Communications Commission ("FCC") has mandated certain technological obligations on the wireless and VoIP carriers, it has been up to the local PSAPs to deploy the necessary equipment that can receive and process these calls. Our county government, along with additional funding opportunities made available through the Florida Legislature, has committed significant resources to be able to handle these non-traditional, non-ILEC network calls, but it is going to take the deployment of next generation network services to enable PSAPs to be able to receive, process, and respond to these callers.

The issue with wireless and VoIP calls is especially acute. Under the best of circumstances location accuracy is far less accurate than if the call originated at a traditional landline phone. In addition, consumers increasingly desire the ability to text message a PSAP or to send real time photographs and video during an emergency situation, but PSAPs are unable to receive these messages using ILEC network services.

Outside the wireless and VoIP environment, PSAPs face other challenges. During a hurricane, for example, the ability to seamlessly transfer an entire 911 center's calls to another 911 center would enable people to continue to reach first responders. In addition, it is not uncommon during a single event, such as a major traffic accident or other large event, for a 911 center to become overloaded with calls associated with that event, which may result in callers elsewhere in the county with other needs being blocked. The ability to "on the fly" reconfigure the 911 network to reroute calls originating from a specific geographic area that is overloading the system so that other callers can get through would be a life saving benefit to everyone. The network services that would enable this functionality can only be done through the deployment of next generation network services.



While as stewards of the 911 system, PSAP administrators have been moving forward with plans to deploy next generation network services such as are being offered by Intrado, we are constrained by some of the information we are receiving from the ILECs regarding alleged continuing obligations once the ILEC is no longer the network services provider. For example, as is related in Intrado's petition for declaratory statement, we have been told that if we choose Intrado as our network services carrier that Intrado and/or the PSAP may still be subject to certain ILEC tariff charges, or that the ILEC may create new tariff or other rate elements, or that other services we receive may be bundled with services we no longer receive resulting in the payment for unnecessary services.

To be sure, I want to be clear that we do not have any issue with ILEC charges associated with services or rates for which there is a continuing legal duty, nor are we contesting any previously contractual for early termination or liquidated damages. These types of contractual obligations are not the subject of the declaratory statement request.

The consumers of Florida require a more robust emergency 911 system that serves all callers, whether from a traditional landline phone, a wireless phone, or over a VoIP network. Only through the deployment of next generation 911 services such as are being offered by Intrado will our county be able to receive and effectively serve 911 callers. However, in order to make this technology transition, we must be free from any legacy ILEC charges other than those for which those we have clear, specific obligations.

I strongly urge you to issue the requested declaratory statement. Feel free to contact me if there are any questions or the Commission needs additional information from us. Thank you for your consideration.

Emergency 911 Service
_____/

Docket No. 080089-TP
Filed March 14, 2008

AMENDED PETITION FOR DECLARATORY STATEMENT

Intrado Communications Inc. ("Intrado"), pursuant to Section 120.565, Florida Statutes, and Rules 28-105.002 and 28-106.202, Florida Administrative Code, hereby files this Amended Petition for a Declaratory Statement from the Florida Public Service Commission ("Commission"). This Amended Petition seeks a declaration regarding whether Intrado or a 911 Public Safety Answering Point ("PSAP") would bear any obligation to an incumbent local exchange telecommunications carrier ("ILEC") to pay an ILEC's 911 tariff charges when the PSAP has selected Intrado to provide the PSAP with its 911 services. In support of its Petition, Intrado states as follows:

I. Introduction

1. Petitioner's name and address are:

Intrado Communications, Inc.
1601 Dry Creek Drive
Longmont, CO 80503-6493

2. All notices, Orders or documents regarding this Petition should be directed to:

5. The first entity that answers the 911-dialed call is the PSAP, which is usually the county sheriff's office, the city police department, the fire department, or other local government entity that is charged with answering the 911 calls and dispatching first responders to deliver emergency assistance when necessary. Historically, the PSAPs have purchased the various local exchange telecommunications network services required to get the 911-dialed call to the PSAP's location from the serving ILEC pursuant to an ILEC 911 services tariff as well as unregulated customer premises equipment ("CPE") from the ILEC or another CPE provider.

6. Intrado has developed and is now offering to the PSAPs of Florida and throughout the country its E911 Intelligent Emergency Network® local exchange telecommunications services and equipment as a competitive alternative to ILEC bundled offerings. Intrado has the ability to provide E911 service for land line, wireless, and VoIP calling party end users, and ensuring that E911 calls are routed to the correct 911 call center regardless of device, protocol, or location. Indeed, for nearly 30 years Intrado has designed and deployed public safety infrastructure, systems, and services that have been relied upon and incorporated into the E911 connectivity and services offered by ILEC, CLEC, wireless, VoIP, and other carriers to their respective end users. Intrado now has the ability to provide E911 network service directly to the PSAPs at a competitive rate that includes both traditional E911 services as well as new and enhanced services and functionality, including text, imaging, and video capabilities along with greater interoperability and communications capability between and among emergency responders and the PSAPs.

7. In order for Intrado to be able to offer its E911 services to PSAPs, Intrado must interconnect and exchange local exchange telecommunications traffic with ILECs. Accordingly, Intrado is currently negotiating with various ILECs for such interconnection services and traffic

10. Intrado was in the process of negotiating with one PSAP when its negotiations were abruptly terminated by the PSAP. It was represented to Intrado that this negotiation was terminated because of the uncertainty as to whether the PSAP would continue to be charged, directly or indirectly through Intrado, the ILEC's 911 tariff charges or new charges. For example, it has been suggested that an ILEC and/or the PSAP may seek unwarranted cost recovery by Intrado to rehome circuits. The effect of those representations was to cause the PSAP to believe it would be billed by both the ILEC and Intrado for certain services, thus making Intrado's service offering uncompetitive.

11. What matters at this juncture is not what may have been represented or assumed from reading the ILEC tariffs. Rather, all that is needed in the marketplace at this time is a statement by this Commission as to the respective rights and responsibilities of Intrado, the PSAP, and the ILEC once the PSAP has terminated the ILEC's 911 service, and neither Intrado nor the PSAP are customers of the LEC's 911 tariff services. Accordingly, in order to ensure an effectively competitive market for E911 services, Intrado and the PSAPs are in need of a declaratory statement to resolve questions or doubts as to how the statutes, rules, orders, and tariffs discussed herein may apply to Intrado's particular circumstances.

III. The Declaratory Statement Request

12. A petition seeking a declaratory statement is appropriate when there is a need for "resolving a controversy or answering questions or doubts concerning the applicability of statutory provisions, rules, or orders over which the agency has authority." Section 120.565(1), Florida

[3] Intrado notes that any successful change in providers from an ILEC's 911 services to Intrado's IEN E911 services will require a transition period and coordination between all of the affected parties. Intrado recognizes that during such a transition an ILEC may rightfully charge the PSAP for certain 911 tariffed services until such time as the ILEC's services to the PSAP are fully terminated. Intrado believes that the affected parties will cooperatively plan and implement such a transition in a competent and professional manner, working to ensure that at all times the integrity of the 911 call delivery system is fully operational. The calling public seeking emergency assistance deserves nothing less.

service furnished by the Company."[6] There is no disputing that a PSAP is a customer or subscriber. The BellSouth tariff, for example, provides that BellSouth will provide 911 services "[w]hen requested by local government authorities"[7] and that an "[a]pplication for E911 service must be executed in writing by each customer."[8] The Verizon tariff has similar language.[9]

15. The ILEC tariffs generally have language regarding post-termination obligations to pay for pre-termination services. This declaratory statement does not concern these types of post-termination obligations since they reflect services previously consumed but not paid for. These are obligations created by the customer.

16. This question of the provision of directly competitive local exchange telecommunications network 911 services appears to be a case of first impression. However, the BellSouth tariff does provide some language that at least recognizes that BellSouth may not always be the 911 provider to the PSAP. The tariff provides that "[s]ervice may be terminated at any time upon reasonable notice from the subscriber to the Company,"[10] but that "[w]hen an order for 911 service and facilities . . . [is] cancelled in whole or in part" the subscriber must reimburse BellSouth for expenses incurred *before* notice of cancellation is received.[11]

17. With respect to Intrado's relationship to an ILEC, under both federal and state law a CLEC such as Intrado is entitled to enter into an interconnection agreement with an ILEC for the exchange of traffic and other services and network functionality. Any person or entity choosing to

[6] The Windstream Florida and Embarq Florida local exchange tariffs have this exact same wording. *See* Windstream Florida, Inc., General Subscriber Services Tariff, Section 1, Original Page 19; Embarq Florida, Inc. General Exchange Tariff, Section A1, First Revised Sheet 10.

[7] BellSouth Telecommunications, Inc. Florida, General Subscriber Service Tariff, Section A24, Original Page 1.

[8] BellSouth Telecommunications, Inc. Florida, General Subscriber Service Tariff, Section A24, Original Page 4.

[9] *See generally*, Verizon Florida Inc., General Services Tariff, Section A24.

[10] BellSouth Telecommunications, Inc. Florida, General Subscriber Service Tariff, Section A2, Original Page 13.

[11] BellSouth Telecommunications, Inc. Florida, General Subscriber Service Tariff, Section A24.1.2.Q, Original Page 4 (emphasis supplied)

19. *The application of tariff charges to services that have been terminated and which are* provided competitively discriminates against competitive providers and is unlawful. Such actions create a barrier to entry and have a chilling effect on competition in violation of Section 364.01, Florida Statutes. Indeed, the threat or uncertainty associated with the application of such unjustified charges precludes PSAPs, local Florida government agencies, from purchasing new services or further enhancements to their existing services such as Intrado is now offering. To the extent terminated services are continued to be charged for by the ILEC also results in rates that are not fair, just, and reasonable in violation of Florida and federal law.

20. Intrado is substantially affected by the current regulatory uncertainty regarding the potential application of ILEC 911 tariff charges, untariffed charges, or unfairly unbundled charges to Intrado and/or the PSAPs.[13] Until this uncertainty is resolved, Intrado and other competitive 911 providers are unable to effectively compete to offer PSAPs their E911 advanced services to the detriment of the calling public seeking emergency assistance. Such uncertainty, if left unresolved, would condone anticompetitive behavior and adversely affect Intrado's rights as a certificated CLEC in Florida. The Commission has clear jurisdiction to prevent such behavior pursuant to Section 364.01(4)(g), Florida Statutes.

21. The statutes, rules or orders on which the declaratory judgment is sought include the following:

a. Alltel Florida, Inc., General Subscriber Services Tariff, Section 24.

b. Alltel Florida, Inc., General Subscriber Services Tariff, Section 1.

c. BellSouth Telecommunications, Inc. Florida, General Subscriber Service

[13] Bundled ILEC retail tariffs would require the PSAPs to pay twice for the service. For example, a PSAP selecting Intrado's ALI service could continue to be subject to ILE ALI charges because some ILEC tariffs bundled ALI with other services. See, e.g., Public Service Commission of West Virginia Case No. 04-0102-T-GI, Frontier, et al, General

b. Once a PSAP has selected Intrado to be its local exchange telecommunications network provider of 911 services, does Intrado or its customer have to pay an ILEC for post termination 911 services not currently in the ILEC's tariff?

c. Once a PSAP has selected Intrado to be its local exchange telecommunications network provider of 911 services, does Intrado or its customer have to pay an ILEC for bundled post-termination 911 charges with other charges that may be charged to Intrado and/or the PSAP?

24. For the reasons set forth herein, Intrado requests that the Florida Public Service Commission issue a Declaratory Statement:

a. Establishing that Intrado and/or the PSAP is not required to pay for any tariffed ILEC 911 local exchange telecommunications network services previously provided to the PSAP unless Intrado or the customer specifically orders such services.

b. Establishing that Intrado and/or the PSAP is not required to pay for any terminated ILEC 911 services through new tariffed or non-tariffed rates.

c. Establishing that Intrado and/or the PSAP is not required to pay for any ILEC bundled services in such a manner as to require Intrado and/or the PSAP to pay for any terminated 911 services or otherwise for any 911 services not actually requested or consumed.

THEREFORE, Intrado Communications, Inc. respectfully requests that the Florida Public Service Commission grant the declaratory statement requested herein and declare that Intrado and/or the PSAP is not required to pay for any ILEC 911 tariff charges, untariffed charges, or bundled charges for terminated 911 services as set forth herein.

NENA Launches Next Generation (NG) 9-1-1 Transition Planning Effort

Arlington, VA – For nearly six years, NENA has actively worked to develop concepts, requirements, and technical definitions for the next generation of 9-1-1 systems and services. To further NENA's overarching goal of ensuring a coordinated and managed approach to the nationwide implementation of NG9-1-1, NENA is pleased to announce the formation of a joint Technical and Operations working group focused on the development of a NG9-1-1 System and PSAP Transition Plan. This effort is an additional component of an overall NG9-1-1 Project Plan that NENA is in the early stages of initiating which will provide a detailed roadmap of present and future activities toward the transition to a NG9-1-1 system and the subsequent operation of that system (or system of systems). The overall project plan is intended to cover phased replacement of today's E9-1-1 system with an inter-networked, IP based NG9-1-1, with greatly expanded capabilities for emergency call/message handling, multimedia emergency communications, and data acquisition, management and sharing.

NG 9-1-1 Activity Relationships

NENA's work on the next generation of E9-1-1 began in 2000 with the establishment of the "9-1-1 Future Path Plan" by NENA's Technical Committee, which conceptualized the objectives for what has come to be known as NG9-1-1. In 2003, the NENA Technical Committee undertook development of requirements and architectural design for major portions of NG9-1-1. This initial work is nearing completion and is planned to be published in the near future. Additionally, NENA's 9-1-1 Center Operations Committee began its ongoing related work in 2003 on PSAP operations issues pertaining to NG9-1-1. In 2004, due to concerns about dealing with non-technical issues that, if unresolved, would impede development and implementation, a recommendation was made to initiate a program to address topics such as funding, public policy, jurisdiction, location identification, standards, trials, interoperability, and education. The result was the creation of the NENA NG E9-1-1 Partner Program, implemented in 2005, and continuing in 2006 and beyond.

During the same period, NENA developed content used in the NRIC working groups, and as part of an NTIA funded Texas A&M testing and trial activity. The US Department of Transportation is also on the verge of beginning work on a NG9-1-1 Initiative which will include coordinated development and proof of concept trial activities in 2007-2008. NENA is also working with multiple national and international standards bodies to integrate NENA requirements and design into the universe of IP communications development, within which NG9-1-1 systems will have to operate.

This multi-faceted NENA approach is targeted toward significant NG9-1-1 transition and implementation in the US and Canada starting in 2008-2009 (see above timeline). The forthcoming NENA NG9-1-1 Project Plan will provide a more detailed analysis of needed activities and the timeframes within which they should be completed in an effort to effectively and efficiently implement NG9-1-1.

###

About the National Emergency Number Association

NENA is *The Voice of 9-1-1*™. Now celebrating its 25th year, NENA was established to promote implementation and awareness of 9-1-1 as North America's universal emergency number. NENA has grown to become the leading professional non-profit organization dedicated solely to 9-1-1 emergency communications issues. NENA serves its more than 7,000 members in 46 chapters across the U.S. and Canada through policy advocacy, establishment of technical and operational standards, certification programs and a broad spectrum of educational offerings. ATIS ESIF Releases Suite of IP-based Emergency Services Standards

December 4, 2006, Washington – ATIS today announced the availability of its newly developed suite of IP-based Emergency Services Network Interface (ESNI) standards that will enable the expansion of E9-1-1 services and functionality within the Next Generation Network (NGN).

The ESNI suite of standards includes an overall emergency services framework for the ESNI applications and protocols such as the Emergency Information Services Interface (EISI) that provide access to emergency services within or external to the Emergency Services Network (ESNet). The ESNI standards suite also includes the Emergency Services Messaging Interface (ESMI), released in September 2005, which provides managed interconnections between next generation public service answering points (PSAPs) and the ESNet.

The current protocol and network architecture between the PSAP and the ESNet that provide Automatic Location Identification (ALI) are largely unchanged since the introduction of modern emergency calling services in the 1970s, presenting significant barriers to introducing new features and advanced emergency services. The future ESNet consists of multiple standard protocols to support responses from various emergency events -- including basic call management, location information delivery, and enhanced emergency services. The ESNI framework and protocol suite will enable flexibility, additional emergency services and more advanced interaction models on the ESNet that will enhance the reliability and survivability of national emergency services and will allow for management and distribution of enriched data types such as graphics, images, and video. A typical scenario enabled by an ESNet that utilizes the ESNI protocols would be a national weather notification service that can deliver weather alarms by geographic area, graphically, and real-time to PSAPs.

The ESNI standards suite is currently made up of four documents from ATIS: the *Emergency Services Network Interfaces Framework* (ATIS-0500008), an ATIS Technical Report that defines the framework and structure of the ESNI; two Draft American National Standards for Trial Use for the Emergency Information Service

DOCUMENT NUMBER-DATE

Interface (EISI) that address the EISI ALI service delivery (ATIS-PP-0500006.200X) and the EISI network implementation with web services (ATIS-PP-0500007.200X); and the Draft American National Standard for Trial Use, *Emergency Services Messaging Interface (EMSI)* (ATIS-PP-0500002.200X), which was published in September 2005.

About ATIS

ATIS is a technical planning and standards development organization that is committed to rapidly developing and promoting technical and operations standards for the communications and related information technologies industry worldwide using a pragmatic, flexible and open approach. Participants from more than 350 communications companies are active in ATIS' 23 industry committees and Incubator Solutions Program. www.atis.org

A24. EMERGENCY REPORTING SERVICES[1] (N)

A24.1 Universal Emergency Number Service - 911

A24.1.1 General (Basic and Enhanced 911)

A. When requested by local government authorities, and subject to the availability of facilities, the Company will provide a universal emergency number 911 for use of Public Safety Answering Points (PSAPs) engaged in assisting local governments in the protection and safety of the general public.

B. Two types of service are offered, basic 911 and Enhanced 911 Service (E911). Selection of the appropriate service to serve various customers will be made by the Company and the customer and will be based on a thorough analysis of customer needs at each location and on availability of facilities in each area.

C. Rates and charges for the E911 Service Feature offerings as shown in A24.1.4.D.3.a. of this Tariff are based on costs for municipal and/or countywide E911 Systems and are offered on a tiered pricing structure, based on the number of access lines located within the political boundaries served by the customer, except in the case of E911 Systems which may encompass two or more counties. In this case, each county (or subsystem) will be considered as a separate entity for purposes of determining the appropriate pricing tier. E911 Systems which are essentially municipal and/or countywide but have minor overlapping into another county due to community of interest reasons are considered covered by one pricing tier.

D. Terminal equipment may be provided by the Company or customer for 911 Service. If provided by the Company, where not specifically itemized in this Tariff, said equipment, including rearrangements, moves or changes will be provided at rates and charges based upon costs.

E. Deferred Payment

Payment of nonrecurring charges for 911 Service may be deferred subject to the conditions specified in this paragraph.

1. The charges to be deferred must be among the following types:
   a. Installation
   b. Service Establishment
   c. Feature Establishment
2. The customer must select a payment period longer than one month but no more than eighteen months.
3. The total amount of nonrecurring charges as defined in 1. preceding may be deferred.
4. The minimum amount deferrable per 911 installation is $5,000.00.
5. Interest on deferred amounts will be calculated at the rate set forth in the deferred payment agreement executed by the customer. The maximum interest rate to be charged is twenty-two percent (22%). The interest rate to be charged on deferred payments will be raised or lowered periodically by the Company. If, in the judgment of the Company, the maximum interest rate allowed by law is insufficient to cover the costs of providing the deferred payment option, the Company will suspend the availability of said option until such time as the costs of providing said option can be recovered through the application of a lawful interest rate. Suspension of the deferred payment option will not affect customers who have executed a deferred payment agreement prior to the effective date of such suspension.
6. The deferred charges (including calculated interest) will be prorated on a monthly basis over the selected deferral period length.
7. All deferred charges must be paid in full when the customer:

Note 1: Text is shown as new due to reissue of all Tariff Sections. No changes in rates or regulations were made with this filing.

A24. EMERGENCY REPORTING SERVICES

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.1 General (Basic and Enhanced 911) (Cont'd)

E. Deferred Payment (Cont'd)

7. All deferred charges must be paid in full when the customer: (Cont'd)
   a. Disconnects service, for the system, prior to expiration of the selected deferral period.
   b. Fails to pay a monthly amount hereunder within 30 days of its due date.
8. The customer may prepay the total outstanding deferred charges at any time during the selected deferral period. Customer will be given a credit for the amount of unearned interest. The customer may not prepay less than the total of the outstanding deferred charges.

A24.1.2 Rules and Regulations

A. 911 service is provided by the Company where facility and operating conditions permit.

B. This offering is limited to the use of central office number 911 as the universal emergency telephone number. Only one 911 service will be provided within any governmental agency's locality.

C. The 911 emergency telephone number is not intended to replace the telephone service of the various public safety agencies which may participate in the use of this number. The customer must subscribe for additional local exchange service at the PSAPs for administrative purposes for placing of outgoing calls and for receiving other emergency calls, including any which might be relayed by Company operators.

D. The service is furnished to municipalities and other governmental agencies only for the purpose of receiving reports of emergencies by the public. Residential customers whose telephone services have been temporarily denied for non-payment will continue to have access to 911 Service (outgoing service only).

E. ***Basic*** *911* Service is classified as Business Exchange Service and is arranged for one-way incoming service to the appropriate PSAP. (T)

F. E911 Service is provided solely for the benefit of the customer operating the PSAP. The provision of E911 Service by the Company shall not be interpreted, construed, or regarded, either expressly or implied, as being for the benefit of or creating any Company obligation toward any third person or legal entity other than the customer.

G. The Company does not undertake to answer and forward 911 calls, but furnishes the use of its facilities to enable the customer's personnel to respond to such calls on the customer's premises.

H. Temporary suspension of service is not provided for any part of the 911 Service.

I. The rates charged for 911 Service do not contemplate the constant monitoring or inspection of facilities to discover errors, defects and malfunctions in the service, nor does the Company undertake such responsibility. The customer shall make such operational tests as, in the judgment of the customer, are required to determine whether the system is functioning properly for its use. The customer shall promptly notify the Company in the event the system is not functioning properly. (T)

A24. EMERGENCY REPORTING SERVICES

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.2 Rules and Regulations (Cont'd)

J. The Company's entire liability to any person for interruption or failure of 911 Service or E911 Service shall be limited to the terms set forth as follows. The Company shall not be liable for damages resulting from or in connection with 911 Service or E911 Service or identification of the telephone number, address, or name associated with any person accessing such services, unless the Company acted with malicious purpose or in a manner exhibiting wanton and willful disregard of human rights, safety or property in providing such services. The Company shall not be liable to any person or entity for any damages whatsoever resulting from or in connection with the provision of access to E-911 Service during the temporary denial of a residential subscriber service for non-payment.

K. This service is offered solely as an aid in handling assistance calls in connection with fire, police and other emergencies and does not create any relationship or obligation, direct or indirect, to any person other than the customer contracting for 911 service.

L. When the use of service or facilities furnished by the Company is interrupted due to any cause other than the negligence or willful act of the subscriber or the failure of the facilities provided by the subscriber, a pro rata adjustment of the fixed monthly charges involved may be allowed as set forth in this section of this Tariff. Where allowances on monthly charges for Service Features of E911 Service are involved, only those Service Features which are affected by the interrupted service shall be considered; and, further, only those access lines on the interrupted portion of a service shall be considered in determining the number of access lines affected.

M. Each customer agrees to release, indemnify, defend and hold harmless the Company from any and all loss, claims, demands, suits or other action, or any liability whatsoever, whether suffered, made, instituted or asserted by the Customer or by any other party or person, for any personal injury to or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by the Customer or others, or for any infringement or invasion of the right of privacy of any person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, location or use of 911 service features and the equipment associated therewith or by any services which are or may be furnished by the Company in connection therewith, including but not limited to the identification of the telephone number, address or name associated with the telephone used by the party or parties accessing 911 services hereunder, and which arise out of the negligence or other wrongful act of the Company, the Customer, its user agencies or municipalities or employees or agents of any one of them.

N. It will be the intent of the Company to provide facilities designed to provide a call blocking probability of one call per hundred during normal busy hours for 911 Service.

O. Company serving boundaries and political subdivision boundaries may not coincide. ***In a Basic 911 configuration*** if a central office serves telephones located both within and outside the customer's public safety jurisdiction, it is the obligation of the customer to make arrangements to handle all 911 calls that originate from telephones served by these central offices. (T)

P. Any terminal equipment or PSAP equipment used in connection with E911 Service, whether such equipment is provided by the Company or the customer, shall be configured so that it is unable to extract any information from the Data Management System other than information relating to a number (identified through the Automatic Number identification feature as the source) of an in progress 911 call.

A24. EMERGENCY REPORTING SERVICES[1] (N)

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.2 Rules and Regulations (Cont'd)

Q. When an order for 911 service and facilities or requests for additions, rearrangements, relocations or modifications of service and equipment are cancelled in whole or in part, the customer is required to reimburse the Company for all expenses incurred in handling the requests before notice of cancellation is received. Such charges, however, are not to exceed all charges which would apply if the work involved in complying with the request had been completed.

R. Application for E911 service must be executed in writing by each customer (a municipality, a local government authority or their duly appointed agent). If application for service is made by an agent, the Company must be provided in writing with satisfactory proof of appointment of the agent by the customer. A negotiated date will be agreed upon with the customer. Should the customer choose to delay the original cut date by more than three months and the system is available for cut, installation charges may be charged effective with the originally scheduled date. Further, the cut date will be renegotiated so as not to interrupt other scheduled cutovers. At least one local law enforcement agency must be included among the participating agencies in any 911 offering.

S. The customer must furnish the Company, in writing, with its agreement to the following terms and conditions:

1. That at least one PSAP will be provided and staffed on a 24-hour, seven days per week basis.
2. That the customer accepts responsibility for dispatching, or having others dispatch police, fire, ambulance or other emergency services as required, to the extent as such services are reasonably available.
3. That the customer will develop an appropriate method for responding to calls for nonparticipating agencies which may be directed to the 911 PSAP by calling parties.
4. That the customer will subscribe to, or provide, telephone equipment with a capacity adequate to handle the number of incoming 911 lines recommended by the Company to be installed. (Applies to E911 Service only.)

T. When the Selective Routing feature is provided, the customer is responsible for identifying primary and secondary PSAP locations as well as the unique combinations of police, fire and ambulance or any other appropriate agencies responsible for providing emergency service in the E911 serving area. An Emergency Service Number (ESN) will be provided for each unique combination by the Company. The customer will associate these ESNs with street address ranges or other mutually agreed upon routing criteria in the E911 serving area. These ESNs will be carried in the Data Management System (DMS) to permit routing of 911 calls to the primary and secondary PSAPs responsible for handling of calls from each telephone in the E911 serving area. The Company may assist the customer through the provision of information from its records concerning the names, telephone numbers and service addresses of subscribers within the customer's E911 serving area. The following terms define the customer's responsibility in providing this information to the Company:

1. Initial and subsequent ESN assignments by street name, address range and area or other mutually agreed upon routing criteria shall be furnished by the customer to the Company by a mutually agreed upon date prior to the effective date of service.
2. After establishment of service, it is the customer's responsibility to continue to verify the accuracy of the routing information contained in the master address file, and to advise the Company of any changes in street names, establishment of new streets, changes in address numbers used on existing streets, closing and abandonment of streets, changes in police, fire, ambulance or other appropriate agencies' jurisdiction over any address, annexations and other changes in municipal and county boundaries, incorporation of new cities or any other matter that will affect the routing of E911 calls to the proper PSAP.

Note 1: Text is shown as new due to reissue of all Tariff Sections. No changes in rates or regulations were made with this filing.

Docket No. 070736-TP
Exhibit ___ (CSL-9)
AT&T Florida Tariff
5 of 32

A24. EMERGENCY REPORTING SERVICES[1] (N)

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.2 Rules and Regulations (Cont'd)

T. (Cont'd)

3. The Company will provide to the customer on request a complete written copy of the master address file to permit customer to verify accuracy of the police, fire, and ambulance PSAP routing designations.
4. Changes, deletions and additions which the customer desires to have made in the master address file should be submitted on an "as occurred" basis.
5. The Company will furnish a written copy to the customer for verification showing each change, deletion and addition to the master address file.

U. E911 information consisting of the names, addresses and telephone numbers of subscribers whose listings are not published in directories or listed in Directory Assistance Offices may be disclosed in connection with E911 Service whether such service is provided by the Company or any other person. The subscriber waives any privacy interests in his telephone number, name, and address in connection with E911 Service.

V. Emergency Service Numbers (ESNs) are only available as part of the Selective Routing feature. Single and Multi-PSAP customers who desire to use ESNs for administrative purposes may do so as long as they subscribe to Selective Routing. Administrative ESNs can only be used to identify a unique set of responding agencies. For the purposes of this Tariff, a responding agency is defined as a municipality's police, fire, emergency medical service or other appropriate agency. ESNs will not be assigned to specific police precincts, fire stations, emergency medical zones, etc.

W. The customer is responsible for preparing a map with a complete list of road names and another map that identifies jurisdictional boundaries. This includes the naming and/or renumbering of streets and the assignment of numbers for previously unnumbered property. This information is then merged with Company records to form the initial Master Street Address Guide (MSAG). The customer is provided prints of the MSAG for verification and correction purposes at various intervals in the creation process. The Company may assist the customer through the provision of information from its records concerning the name, telephone numbers and service addresses of subscribers within the customer's E911 serving area.

X. The following terms define the customer's responsibilities with respect to any information provided by the Company to the customer concerning the Company's subscribers and/or with respect to geographical information or maps:

1. Such information shall be used by the customer solely for the purpose of aiding the customer in more accurately identifying, updating and/or verifying the addresses of subscribers within the customer's E911 serving areas in connection with the customer's provision of E911 services.
2. Customer shall strictly limit access to the information to those authorized employees of the customer with a need to know and those employees actually engaged in the provision of emergency assistance services.
3. Customer shall use due care in providing for the security and confidentiality of the information.
4. Customer shall make no copies of the information except as may be essential for the verification of emergency assistance services.
5. As soon as customer has completed using the information for the purposes authorized in the Tariff or upon the request of the Company, customer shall return all information and all copies of information to the Company or certify that the information has been destroyed.

Note 1: Text is shown as new due to reissue of all Tariff Sections. No changes in rates or regulations were made with this filing.

A24. EMERGENCY REPORTING SERVICES (T)

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.2 Rules and Regulations (Cont'd)

Y. General Regulations located in Section A2. of this Tariff will also apply to this service offering.

Z. Where a 911 call is placed by the calling party via interconnection with an interexchange carrier, the Company cannot guarantee the completion of said 911 call, the quality of the call or any features that may otherwise be provided with 911 Service.

AA. The Company will bill "911" local option fees in accordance with Chapter 365, Florida Statutes, as amended. Each customer imposing a "911" local option fee agrees to release, indemnify, defend and hold harmless the Company from any and all loss, claims, demands, suits or other action, or any liability whatsoever, whether suffered, made, instituted or asserted by the customer or by any other party or person, arising out of the Company's good faith complaince with the instructions of the customer concerning the imposition, billing, collection or remittance of the "911" fee, whether or not the act of complying with the customer's instructions is deemed to be negligent.

AB. Basic 911 cannot be provisioned with any Caller ID service arrangements. (N)

A24.1.3 Reserved for Future Use

A24.1.4 Enhanced Universal Emergency Number Service-E911

A. General

1. Enhanced Universal Emergency Number Service, also referred to as Enhanced 911 Service or E911, is a telephone exchange communication service whereby a Public Safety Answering Point (PSAP) designated by the customer may receive telephone calls dialed to the telephone number 911. E911 Service includes lines and equipment necessary for the answering, transferring and dispatching of public emergency telephone calls by persons within the serving area who dial 911.
2. The E911 customer may be a municipality or other county or local governmental unit, or an authorized agent of one or more municipalities or other county or local governmental units to whom authority has been lawfully delegated. The customer must be legally authorized to subscribe to the service and have public safety responsibility by law to respond to telephone calls from the public for emergency police, fire and other emergency services within the telephone central office areas arranged for 911 calling.

B. Definition of Terms

1. *Additional E911 Exchange Line*

   A line terminating at a PSAP that is in addition to those engineered that may be ordered by the customer as an optional feature.

2. Alternate Routing (AR)

   A feature provided to allow E911 calls to be routed to a designated alternate location if (l) all E911 exchange lines to the primary PSAP (see definition of PSAP below) are busy, or (2) the primary PSAP closes down for a period (night service). This is a standard feature of E911 Service.

3. Automatic Location Identification (ALI)

A24. EMERGENCY REPORTING SERVICES

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.4 Enhanced Universal Emergency Number Service-E911 (Cont'd)

B. Definition of Terms (Cont'd)

3. Automatic Location Identification (ALI) (Cont'd)

   A feature by which the name and address associated with the calling party's telephone number (identified by ANI as defined below) is forwarded to the PSAP for display. Multiple access lines with the same ANI will be identified with the address associated with that ANI. No ALI data is provided when a call is sent to Default Routing (DR). In the case of 911 calls from subscribers of Wireless Carriers that are interconnected to BellSouth's 911 Control Office and primary and/or secondary PSAPs equipped with data communications links to BellSouth's ALI database, these Wireless 911 calls will be delivered with a version of the ALI feature that includes certain carrier identification, cell tower or antenna array descriptive data as agreed to by the customer and the Wireless Carrier, and the wireless subscriber's call-back number. This information is consistent with the requirements of FCC Order 94-102 for Phase I Wireless 911 interconnection. The customer is required to make any changes in the MSAG needed to accommodate the Wireless Carrier's loading of their respective Pseudo-ANI (P-ANI) records into BellSouth's 911 database management system when P-ANI records are associated with towers and/or antennas located in the customer's jurisdiction.

4. Automatic Number Identification (ANI)

   A feature by which the calling party's telephone number is forwarded to the E911 Control Office and to the PSAP's *ANI/ALI controller.*

5. Centralized Automated Message Accounting (CAMA) MF Signaling (N)

   A signaling protocol for sending 8 digits of ANI from the 911 Tandem to the PSAP. (N)

6. Data Management System (DMS) (T)

   A system of manual procedures and computer programs used to create, store and update the data required to provide the Selective Routing (SR) and ALI features.

7. Default Routing (DR) (T)

   A feature activated when an incoming *E911 call* cannot be selectively routed due to an *ANI failure,* garbled digits or other causes. Such incoming calls are routed from the E911 Control Office to a default PSAP. Each incoming E911 facility group to the Control Office is assigned to a designated default PSAP. This is a standard feature of E911 Service when the service is equipped with selective routing. No ANI/ALI data is provided when a call is sent to Default Routing.

8. Emergency Service Number (ESN)

   A number that defines the set of emergency services (e.g. police, fire, emergency medical) within a particular district or zone. An ESN is associated with the primary PSAP and possibly one or more secondary PSAPs.

9. End Office

   The Central Office(s) in the E911 System from which E911 calls are originated.

10. Enhanced 911 (E911) Control Office

    The office providing tandem switching capability for E911 calls. It controls switching of ANI information to the PSAP and also provides the SR feature, standard Speed Calling features, call transfer capability and certain maintenance functions for each PSAP.

11. Enhanced 911 Service Area

    The geographic area in which the customer will respond to all E911 calls and dispatch appropriate emergency assistance.

12. Enhanced MF Signaling (EMFS) (N)

    A signaling protocol for sending 10 or 20 digits of ANI from the 911 Tandem to the PSAP. EMF Signaling is required when five or more area codes are served by a single 911 tandem. (N)

All BellSouth marks contained herein and as set forth in the trademarks and servicemarks section of this Tariff are owned by BellSouth Intellectual Property Corporation.

A24. EMERGENCY REPORTING SERVICES
A24.1 UNIVERSAL EMERGENCY NUMBER SERVICE - 911 (CONT'D)

A24.1.4 Enhanced Universal Emergency Number Service-E911 (Cont'd)

B. Definition of Terms (Cont'd)

13. Forced Disconnect

A function of the E911 Central Office trunk circuit which enables the PSAP attendant to release a connection even though the calling party has not hung up. This feature prevents the jamming of the E911 exchange lines and is a standard feature of E911 Service.

14. Manual Transfer (T)

A feature that enables the PSAP attendant to transfer an incoming call by dialing either a 7-digit or 10-digit telephone number or a 2-digit Speed Calling Code. Manual Transfer is associated with the E911 trunk and is a standard feature of E911 Service.

15. Master Street Address Guide (MSAG) (T)

A listing of all streets and house number ranges within a 911 service area. The streets and address ranges are assigned selective routing codes, or emergency service numbers (ESNs), to enable proper routing of 911 calls.

(M)

16. Public Safety Answering Point (PSAP) (T)

An answering location for 911 calls originating in a given area. A PSAP may be designated as Primary or Secondary, which refers to the order in which calls are directed for answering. Primary PSAPs respond first; Secondary PSAPs receive calls (voice and data) on a transfer basis via the tandem only and generally serve as a centralized answering location for a particular type of emergency call. Remote PSAPs receive ANI and ALI (data only) information on a transfer basis via a private line from Primary or Secondary PSAPs. Additional private line rates will apply to each PSAP requiring dedicated line remote operation. PSAPs are staffed by employees of agencies such as police, fire or emergency medical or by employees of a common bureau serving a group of such entities.

17. Selective Routing (SR) (T)

A feature that routes an E911 call from a Central Office to the designated primary PSAP based upon the identified number of the calling party and associated ESN.

Material previously appearing on this page now appears on page(s) 24.1 of this section.

All BellSouth marks contained herein and as set forth in the trademarks and servicemarks section of this Tariff are owned by BellSouth Intellectual Property Corporation.

A24. EMERGENCY REPORTING SERVICES

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.4 Enhanced Universal Emergency Number Service-E911 (Cont'd)

B. Definition of Terms (Cont'd)

18. Serving Central Office (T)

The Central Office from which a PSAP, either primary or secondary, is served.

19. Universal Emergency Number Service (T)

A telephone exchange communication service for receiving telephone calls placed by persons in need of assistance who dial the number 911. Such calls are answered at PSAPs established and operated by the customer. The lines and equipment specified in this Tariff section that are associated with the service arrangement for the answering, transferring and dispatching of public emergency telephone calls are included.

20. Universal Emergency Number Service Customer (T)

A municipality or other county or local governmental unit or an authorized agent of one or more municipalities or other county or local governmental units to whom authority has been lawfully delegated within a defined geographic area to respond to public emergency telephone calls, at the minimum for police and fire service.

21. *Wire Center* (T)

The term "Wire Center" denotes the local telephone dial switching office serving subscribers in a well defined area.

22. Wireless Carrier (T)

A person or entity who provides Commercial Mobile Radio Service (CMRS). The term wireless carrier includes service provided by any wireless, real-time, two-way voice communication device, including radio-telephone communications used in cellular service, personal communication service (PCS), or the functional or competitive equivalent. The term does not include service providers whose customers do not have access to 911 or a 911-like service.

C. Service Features

1. E911 Service is available in four service feature offerings:

   a. Automatic Number Identification (ANI)

      Charges are based on the total number of access lines served by the local switching offices equipped for ANI only.

   b. Automatic Number Identification and Selective Routing (ANI/SR)[1]

      Note 1: When SR is introduced different features may be applied to the SR subsets without being applied to the total access lines served by the local switching office. Thus, where two jurisdictions are served by a local switching office each jurisdiction may select a different feature combination as long as SR is one of the features.

All BellSouth marks contained herein and as set forth in the trademarks and servicemarks section of this Tariff are owned by BellSouth Intellectual Property Corporation.

A24. EMERGENCY REPORTING SERVICES (T)

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.4 Enhanced Universal Emergency Number Service-E911 (Cont'd)

C. Service Features (Cont'd)

1. E911 Service is available in four service feature offerings: (Cont'd)

   b. Automatic Number Identification and Selective Routing (ANI/SR)[1] (Cont'd)

   Charges are based on the total number of access lines to which both ANI and SR applies.

   c. Automatic Number Identification and Automatic Location Identification (ANI/ALI)

   Charges are based on the total number of access lines served by the local switching office equipped for ANI and ALI but not SR.

   d. Automatic Number Identification, Automatic Location Identification and Selective Routing (ANI/ALI/SR)[1]

   Charges are based on the total number of access lines to which ANI, ALI and SR apply.

   e. **(DELETED)** (D)

2. The following standard features are included with each of the service offerings:

   a. Forced Disconnect

   b. Default Routing

   c. Alternate Routing (Night Service)[2]

   d. Speed Calling

   e. Central Office Transfer Arrangements

D. Rates and Charges

1. Service Ordering Charge

   a. A Service Ordering Charge will be applied on a per service order basis as covered in Section A4. of this Tariff. *Premises visit charges are not applicable with E911.*

2. Messages

   a. The calling party is not charged for calls placed to the 911 number.

Note 1: When SR is introduced different features may be applied to the SR subsets without being applied to the total access lines served by the local switching office. Thus, where two *jurisdictions are served by a local switching office each jurisdiction may select a different* feature combination as long as SR is one of the features.

Note 2: Night service is implemented by employing a private line circuit between the E911 control office and the PSAP. This circuit will be billed at rates specified in the Private Line Service Tariff. Night service is only available where facilities exist.

A24. EMERGENCY REPORTING SERVICES (T)

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.4 Enhanced Universal Emergency Number Service-E911 (Cont'd)

D. Rates and Charges (Cont'd)

2. Messages (Cont'd)

b. Charges for applicable local and/or toll messages transferred over exchange facilities from a PSAP are billed to that PSAP as covered in other sections of this Tariff based on rates applicable from the Central Office serving the PSAP initiating the transfer to the point of termination of the transfer.

3. Service Features

a. The following features are provided on a tiered structure based on the total number of access lines located within the boundaries of a customer's E911 System, including ***Bell and non-Bell*** access lines. Rates and charges will be applicable for the following Tiers:[1] (T)

Tier I - 1,000 to 20,000 Access Lines

Tier II - 21,000 to 40,000 Access Lines

Tier III - 41,000 to 100,000 Access Lines

Tier IV - Greater than 100,000 Access Lines

The following features are provided for application with access lines within the Company's serving jurisdiction and for access lines within ***an independent*** local exchange company's serving jurisdiction when that company agrees to accept rates provided in this Tariff.[1] (T)

(1) Automatic Number Identification[2]

		Nonrecurring Charge	Monthly Rate	USOC
(a)	Tier I, per 1000 Access Lines	$835.00	$63.00	9UK1X
(b)	Tier II, per 1000 Access Lines	835.00	63.00	9UK2X
(c)	Tier III, per 1000 Access Lines	500.00	47.00	9UK3X
(d)	Tier IV, per 1000 Access Lines	280.00	21.00	9UK4X

(2) Combined Automatic Number Identification and Selective Routing[2] (T)

(a)	Tier I, per 1000 Access Lines	2,195.00	135.00	9UN1X
(b)	Tier II, per 1000 Access Lines	2,195.00	135.00	9UN2X

Note 1: For selection of the appropriate tier or tiers for an E911 System, A24.1.1.C. of this Tariff also applies.

Note 2: Rounded to nearest 1000 access lines per service feature per company (excluding all types of WATS terminations). This count is based upon the number of access lines in service at the time service is established. *This count will be adjusted **annually** to update customer billing. For* each service feature, where the count of access lines has been adjusted upward, only monthly recurring rates apply for each 1000 access lines so adjusted (after rounding).

4. The following features are provided on a non-tiered structure based on the total number of access lines in wire centers serving the 911 System or Systems.

a. Miscellaneous

(1) Additional (optional) E911 Exchange Line terminating at PSAP

(a)	Each	**105.00**	**14.25**	**E8K**	
(2)	Enhanced Multi-Frequency Signaling (EMFS)[3]				(N)
(a)	Per PSAP	-	-	**XTAMF**	(N)

5. (Obsoleted, See Section A124).

Note 1: For selection of the appropriate tier or tiers for an E911 System, A24.1.1.C. of this Tariff also applies.

Note 2: Rounded to nearest 1000 access lines per service feature (excluding all types of WATS terminations). This count is based upon the number of access lines in service at the time service is established. The count will be adjusted annually to update customer billing. All non-Bell lines, including wireless pseudo-ANI records (P-ANIs), will be grouped together and rounded to the nearest 1,000 access lines for billing purposes. For each service feature, where the count of access lines has been adjusted upward only monthly recurring rates apply for each 1000 access lines so adjusted (after rounding). For purposes of counting access lines for wireless carriers, the quantity of P-ANI records will be used in lieu of access lines.

Note 3: Enhanced Multi-Frequency Signaling (EMFS) is required per PSAP on all tandem to PSAP trunk groups when five or more NPAs (area codes) are resident in one of the 911 tandems serving the PSAP. EMFS delivers ten digits of ANI that includes the 3 digit NPA and the 7 *digit telephone number.* (N)

All BellSouth marks contained herein and as set forth in the trademarks and servicemarks section of this Tariff are owned by BellSouth Intellectual Property Corporation.

A24.1.5 Wireless E911 Phase 2

A. Description of Service

Wireless E911 Phase 2 is only available in combination with Enhanced Universal Emergency Number Service – E911 as pecified in A24.1.4. and is subject to the regulations specified therein.

In accordance with the FCC's Report and Order 94-102, *W*ireless E911 Phase 2 provides PSAPs with the wireless E911 caller's location and callback number (CBN) information, as specified by the FCC. The FCC has adopted specific handset-based and network-based location accuracy and reliability solutions' standards for the Wireless Service Providers (WSPs). (T)

B. General Regulations

1. The Company is not responsible for the location determination technology, the accuracy of the location determination technology, or the investigation or maintenance of said technologies. Only the data required and specified by the FCC in its Report and Order 94-102 will be delivered by the Company to the PSAP. This required data includes the cell site or sector location, the callback number, and the longitude/latitude of the caller. Each customer agrees that delivery, or lack of delivery, of additional data elements which may be provided by the WSP will not be the responsibility of the Company and the Company assumes no responsibility or liability for such information.

2. PSAPs must have all required elements of Wireless E911 Phase 1, utilizing p-ANI routing and cell site/sector location based information, in place before implementing Phase 2. In addition, the following requirements must be met ***for*** Phase 2 implementation: (T)

a. ***PSAPs must order both the BellSouth Extended ALI Display Format and the ALI Database Upgrade for Wireless Phase 2 to accommodate the x/y data provided by Wireless E911 Phase 2 Service.*** See rates in F. following. (C)

b. WSPs must have Position Determining Entity (PDE) and a Mobile Position Center (MPC)***/Gateway Mobile Location Center (GMLC)*** in their network. (C)

c. WSPs must have obtained a***n E2*** interface to BellSouth's ALI database ***that complies with the latest issue of BellSouth Technical Reference 73610. This interface will be used by the WSP*** to provide the Phase 2 data. (C)

A24. EMERGENCY REPORTING SERVICES

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.5 Wireless E911 Phase 2 (Cont'd)

C. Definition of Terms

1. Callback Number (CBN)

   The wireless caller's 10-digit handset telephone number. The CBN is used by the PSAP to reestablish a call in the event the call was prematurely disconnected.

2. E2 Interface

   A reference point for a data path that exists between an MPC/GMLC and an ESME (the ALI database). The data that traverses the E2 interface is made up of an Emergency Services Position Request and the response. The E2 interface is not provided by and is not the responsibility of the Company.

3. Emergency Services Message Entity (ESME)

   An entity in the emergency services network which serves as the point of interface to an MSC for common channel emergency services messaging. ESME is another term for the ALI database.

4. Enhanced MF Signaling (EMFS) (N)

   A signaling protocol for sending 10 or 20 digits of ANI from the 911 Tandem to the PSAP. EMF Signaling is required when an interconnecting Wireless Service provider selects Phase 2 NCAS mode without WLS911. (N)

5. Mobile Position Center (MPC) (T)

   The interface between the wireless network and the BellSouth ALI databases. The MPC serves as the wireless network entity which retrieves, forwards, stores, and controls position data within the wireless location network. The MPC is not provided by and is not the responsibility of the Company. Global System for Mobile (GSM) communication Gateway Mobile Location Centers (GMLCs) will be treated as MPCs by the Company.

6. Mobile Switching Center (MSC) (T)

   The wireless equivalent of a Central Office, which provides switching functions for wireless calls. The MSC is not provided by and is not the responsibility of the Company.

7. Phase 2 NCAS (T)

   In this mode the p-ANI and the CBN both are sent to the Selective Router. The trunk between the Selective Router and the PSAP must support transport of at least two 10-digit numbers.

8. Position Determining Entity (PDE) (T)

   The PDE determines the geographic location of a wireless handset when the wireless caller places a 911 call or while the call is in process. The PDE is not provided by and is not the responsibility of the Company.

9. Pseudo-ANI (P-ANI) (M)(T)

   A pseudo, non-dialable telephone number assigned to a cell site or a sector of a cell site to provide location identification for wireless E911 calls. (M)

10. WLS911 (T)

    The BellSouth solution that sends either eight or ten digits of ANI to the PSAP and dynamically updates the static cell site or sector information with the CBN as provided by the WSP. This solution when used in conjunction with a WSP's E2 interface allows WSPs to comply with the FCC's order without requiring PSAPs to upgrade their PSAP equipment to utilize Enhanced MF signaling.

11. Wireless Service Provider (WSP) (T)

    A person or entity that provides Commercial Mobile Radio Service (CMRS). The term wireless includes service provided by any wireless real-time, two-way voice communication device, including radio-telephone communications used in cellular telephone service, personal communication service (PCS), or functional or competitive equivalent. The term does not include service providers whose customers do not have access to 911 or 911-like services.

12. Wireline Compatibility Mode (T)

    Occurs when the WSP sends only p-ANI to the BellSouth E911 tandem and the PSAP receives eight or ten digits of ANI.

13. X,Y Coordinates (T)

    The longitude and latitude of the 911 wireless caller's location. (M)

A24. EMERGENCY REPORTING SERVICES

A24.1 Universal Emergency Number Service - 911 (Cont'd)

A24.1.5 Wireless E911 Phase 2 (Cont'd)

D. Enhanced MF (M)

Enhanced MF (EMF) is a new signaling protocol from the 911 Tandem to the PSAP. Enhanced MF accommodates either ten or 20 digits of ANI. Enhanced MF is not a requirement of Wireless Phase 2 implementation but EMF must be used by PSAPs when an interconnecting Wireless Service Provider chooses the Phase 2 NCAS Mode (as defined in J-STD-036 Annex D, Table D.1.2. and/or D.2.), without WLS911. If an interconnecting WSP chooses a Phase 2 NCAS solution without WLS911, the PSAP's equipment must be 20-digit Enhanced MF capable as described in BellSouth's Technical Reference # 73528. The PSAP must request the Company convert them to EMF signaling when preparing to accept Phase 2 calls from a WSP utilizing Phase 2 NCAS without WLS911. Once a PSAP has been converted to 20 digit EMF Signaling the functionality of WLS911 is disabled for all WSPs serving that PSAP. (M)(T)

E. Wireless E911 Phase 2 Service

This service is comprised of two components, Extended ALI Display Format and ALI Database Upgrade for Wireless Phase 2. Both components are required for implementation of this service.

1. Extended ALI Display Format

The PSAP's Automatic Location Identification (ALI) display format must be changed to the BellSouth Extended ALI Display Format to accommodate the longitude and latitude, or x,y coordinates. The provision and delivery of the x,y information to the PSAP requires an E2 interface between the ALI database and the WSP's Mobile Position Center (MPC)/Gateway Mobile Location Center (GMLC). The provisioning of the E2 interface is the responsibility of the WSP.

2. ALI Database Upgrade for Wireless Phase 2

The ALI Database Upgrade for Wireless Phase 2 enables the PSAP to query and retrieve wireless caller location information from the Company's Automatic Location Identification (ALI) database. Location information may include cell site sector location, longitude and latitude of the wireless caller's location, and the wireless caller's callback number (CBN). This upgrade will enable the necessary interfaces, software, and databases to permit the wireless caller's location information to be populated in the Company's ALI database and/or retrieved when queried by the customer's PSAP equipment.

F. Rates and Charges

		Nonrecurring Charge	Monthly Rate	USOC	
(1)	Enhanced MF signaling, per PSAP	$-	$-	*XTAMF*	(C)
(2)	Extended ALI Display Format, per PSAP	2,200.00	-	XTAL2	(T)
(3)	ALI Database Upgrade for Wireless Phase 2, per PSAP	-	190.00	XTAP2

A24. EMERGENCY REPORTING SERVICES

A24.2 *BellSouth* 9-1-1 PinPoint Service (T)

A24.2.1 General

A. 9-1-1 PinPoint *S*ervice allows a Private Branch Exchange (PBX) switch located on a customer's premises to be trunked directly into an E911 tandem office, delivering the telephone number and location of the PBX end user to the appropriate Public Safety Answering Point (PSAP). (T)

B. 9-1-1 PinPoint *S*ervice is available with BellSouth Primary Rate ISDN (PRI) or ***9-1-1*** PinPoint ***Service*** Local Channels as described in this section. ***9-1-1*** PinPoint ***Service*** Local Channels are not required if using BellSouth PRI service. (T)

A24.2.2 Regulations

A. 9-1-1 PinPoint *S*ervice is furnished subject to the availability of facilities. (T)

B. Automatic Number Identification (ANI) which is passed to the Company E911 tandem office by the PBX switch is read, processed and utilized in the manner as if it is provided by any other serving end office in the Company's E911 system.

C. The emergency agency serving the area may also be involved to update the Master Street Address Guide (MSAG) and to determine the method in which emergency calls from 9-1-1 PinPoint *S*ervice locations will be handled. (T)

D. The following specifications must be met when provisioning this service:

1. Subscribers to 9-1-1 PinPoint *S*ervice must meet all BellSouth technical specifications. (T)
2. The PBX switch must be able to transmit ANI using multi-frequency signals. This may require the retro-fitting of existing PBX switches with interfaces which will work with the Company's E911 system.
3. The PBX switch owner/operator must supply the Company with the initial telephone number-to-address data as well as periodic updates.
4. 9-1-1 PinPoint Service is configured on a "per account" basis. All telephone numbers on a BellSouth Direct Inward Dial (DID) or Primary Rate ISDN (PRI) account equipped with 9-1-1 PinPoint Service must be provisioned with 9-1-1 PinPoint Service. The Customer cannot randomly select which telephone numbers on an account will have the Service. (N)
5. Users of 9-1-1 PinPoint *S*ervice are prohibited from provisioning PBX station numbers outside the boundary of the E9-1-1 tandem serving the physical address of the main PBX location. 9-1-1 calls from any telephone numbers provisioned outside the boundary of the serving E9-1-1 tandem would be routed to an incorrect PSAP with no location information. An alternative arrangement could involve PRI terminations from multiple central offices to accommodate a wider geographic area. In that configuration, no PBX station numbers can be provisioned at addresses outside the boundary of the tandem serving the PRI host. The subscribing 9-1-1 PinPoint *S*ervice customer is responsible for ensuring that 9-1-1 PinPoint *S*ervice is provisioned in a compliant configuration that will ensure that 9-1-1 calls are routed correctly with the correct location information. (T)
6. The PBX switch must employ BellSouth Direct Inward Dial (DID) or BellSouth PRI station numbers. If the PBX is serving subscribers with multiple NPAs, a unique PBX trunk group will be needed for each NPA (whether it be ***9-1-1*** PinPoint Local Channels or PRI). ***9-1-1 PinPoint Service is not available on Centrex or "Centrex-like" station numbers.*** (C)
7. It will be the responsibility of the vendor or PBX operator to maintain the data pertaining to each extension operating under such system. (T)

E. The PBX switch owner/operator must install a minimum of two private E911 local channels (except for PRI) with the following specifications:

1. This voice grade local channel provides for a communications path between the demarcation point at the customer premises and the serving E911 tandem.
2. The PBX switch owner/operator is responsible for determining that ***his*** terminal equipment is compatible with this local channel.
3. Supervision on this 9-1-1 PinPoint service *L*ocal *C*hannel will be loop reverse battery. The battery source is located in the Company's network and will be a nominal -48V(-42.75V to -56.5V dc). (T)
4. The PBX will signal an off hook (or seizure) by providing a loop closure across tip and ring with a maximum resistance of 670 ohms. The Company's serving E911 tandem office will instruct the PBX to forward the called digits "911" or "11" with a momentary battery reversal (wink). The E911 tandem will instruct the PBX to send the calling station's number (ANI) information with a battery reversal (off hook).
5. Additional regulations may be applicable as described in Section B3. of the Company's Private Line Service Tariff.
7. Required network interfaces are located in Section A14. of this Tariff.

A24.2.2 Regulations (Cont'd)

F. Service charges, as specified in Section A4. of this Tariff, are applicable. (M)

G. General Regulations located in Section A2. of this Tariff will also apply to this service offering. (M)

H. This service is offered solely as an aid in handling assistance calls in connection with fire, police and other emergencies and does not create any relationship or obligation, direct or indirect, to any person other than the customer contracting for 9-1-1 PinPoint *S*ervice. The provision of 9-1-1 PinPoint *S*ervice by the Company shall not be interpreted, construed, or regarded, either expressly or implied, as being for the benefit of or creating any Company obligation toward any third person or legal entity other than the customer. (T)

I. The rates charged for 9-1-1 PinPoint *S*ervice do not contemplate the constant monitoring or inspection of facilities to discover errors, defects and malfunctions in the service, nor does the Company undertake such responsibility. The customer shall make such operational tests as, in the judgement of the customer, are required to determine whether the service is functioning properly for its use. The customer shall promptly notify the Company in the event the service is not functioning properly. (T)

J. The Company's entire liability to any person for the interruption or failure of 9-1-1 PinPoint *S*ervice shall be limited to the terms set forth in this Section and other Sections of this Tariff. The Company shall neither be liable for damages resulting from or in connection with its provision of 9-1-1 PinPoint *S*ervice to any customer subscribing to 9-1-1 PinPoint *S*ervice or any person accessing or using 9-1-1 PinPoint *S*ervice and nor shall the Company be liable for its provision of any telephone number, address, or name to any entity providing 911 *S*ervice or to a public safety answering point, unless the Company acted with malicious purpose or in the manner exhibiting wanton and willful disregard of safety or property in providing such services. (T)

K. Each customer agrees to release, indemnify, defend and hold harmless the Company from any and all loss, claims, demands, suits, or other action, or any liability whatsoever, whether suffered, made, instituted or asserted by the Customer or by any other party or person, for any personal injury to or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by the Customer or others, or for any infringement or invasion of the right of privacy of any person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, location or use of 9-1-1 PinPoint *S*ervice features and the equipment associated therewith, or by any services which are or may be furnished by the Company in connection therewith, including but not limited to the identification of the telephone number, address or name associated with the telephone used by the party or parties accessing 911 services using 9-1-1 PinPoint *S*ervice hereunder, and which arise out of the negligence or other wrongful act of the Company, the Customer, its user agencies or municipalities or employees or agents of any one of them. (T)

L. Each Customer is responsible for assuring that its authorized users comply with the provisions of these terms and the tariffs and that unauthorized persons do not gain access to or use the Services through user names, passwords, or other identifiers assigned to the Customer pursuant to these terms. Specifically, each Customer must keep user IDs, passwords, and any security token(s) that may be provided secure from use by any unauthorized individual. The Customer shall also not use the Services in any way that would be or would assist any third party to be in violation of any law or these terms. Each Customer shall comply with all applicable laws, rules, and regulations in connection with the Services. Finally, the Customer shall provide such information and assistance as are reasonably requested by BellSouth for purposes of facilitating BellSouth's provision of Services to the Customer. (N)

A24. EMERGENCY REPORTING SERVICES (T)

A24.2 *BellSouth* 9-1-1 PinPoint Service (Cont'd) (T)

A24.2.3 Payment Schedules (T)

A. General (T)

9-1-1 PinPoint *S*ervice is offered for a 60 month contract period at the rates and charges indicated in this sub-section. 9-1-1 PinPoint *S*ervice disconnected prior to 60 months will be subject to cancellation charges. (T)

B. Transfer of Contract

Service may be transferred to a new subscriber at the same location upon prior written concurrence by the new subscriber as specified in Section A2. of this Tariff.

C. Deferred Payment

Nonrecurring charges may be deferred or installment billed as specified in Section A2. of this Tariff.

D. Prepayment

Recurring charges may be prepaid as specified in Section A2. of this Tariff.

E. Cancellation Charges

Cancellation charges will be applied where service is removed prior to the expiration of the 60 month contract period.

F. Moves of Service

1. When the PBX owner/operator moves 9-1-1 PinPoint *S*ervice: (T)
   a. Cancellation charges do not apply
   b. 60 month rates in effect will continue uninterrupted
   c. 9-1-1 PinPoint *S*ervice nonrecurring charges do not apply. (T)
   d. 9-1-1 PinPoint *S*ervice local channel charges apply as appropriate. (T)

A24.2.4 Rates and Charges

A. *9-1-1 PinPoint Service* (T)

1. Installation Charge, Per Customer

		Nonrecurring Charge	Monthly Rate	USOC
(a)	Up to 1,000 station records, per customer	$3,600.00	$-	E8YN1
(b)	1,001 to 4,000 station records, per customer	4,800.00	-	E8YN2

I.D. # CSL-10

DOT/tcg 8/24/2001

BEFORE THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA

In the Matter of the Petition of SCC Communications Corp. for Arbitration Pursuant to Section 252(b) of the Telecommunications Act of 1996 to Establish an Interconnection Agreement with SBC Communications Inc.	Application 00-12-025 (Filed December 20, 2000)

FINAL ARBITRATOR'S REPORT

I. Background

On December 20, 2000, SCC Communications Corporation (SCC)[1] filed a petition for arbitration of an interconnection agreement (ICA or agreement) with SBC Communications Inc. (SBC) pursuant to Section 252(b) of the Telecommunications Act of 1996 (Act) and the Commission's Arbitration Rules set forth in Resolution ALJ-181.[2]

On March 27, 2000, SCC requested that SBC enter into negotiations for an ICA in Texas. SCC later decided to pursue a multi-state interconnection agreement with SBC, which would include interconnection with SBC's

[1] At the hearing on this matter, SCC disclosed that it has since changed its name to Intrado. To avoid confusion, I will continue to refer to the applicant by the name of SCC under which it filed the application.

[2] Resolution ALJ-181, adopted October 5, 2000, sets forth "Revised Rules Governing Filings Made Pursuant to the Telecommunications Act of 1996."

DOCUMENT NUMBER-DATE
03160 APR 21 08
FPSC-COMMISSION CLERK

subsidiary, Pacific Bell Telephone Company (Pacific) in California.[3] The parties continued to engage in negotiations from March 2000 to December 2000, and agreed to extend the deadline for filing a petition of arbitration.[4] I find that SCC's application and request for arbitration was timely filed.

In its filings in this petition for arbitration, SCC states that it provides competitive telecommunications services in 19 states and the District of Columbia, and it has applications pending to provide telecommunications services in 13 other states, including California.[5] SCC states that its services facilitate, enhance, and advance the provision of emergency services by aggregating and transporting traditional and non-traditional emergency call traffic from end users of wireline, wireless, and telematics[6] service providers.

---

[3] In its motion and response, Pacific notes that it, and not its parent company SBC, is the appropriate party with which a requesting telecommunications carrier may seek interconnection in the state of California. Consequently, the arbitrator's report will hereinafter refer to Pacific rather than SBC.

[4] Attachment 29 of the Application (A.) 00-12-025 contains a memorandum of understanding between the parties that extends the deadline for filing for arbitration to December 5, 2000. SCC's petition for arbitration was submitted to the Commission on December 4, 2000 but was not formally accepted until December 20, 2000 because SCC was required to file a certificate of public convenience and necessity (CPCN) application in order to request arbitration in California per Commission rules. SCC's CPCN application was filed on December 15, 2000.

[5] In A.00-12-016, SCC requests a CPCN to provide facilities-based and resold local exchange services in California. That application is currently pending.

[6] According to SCC, "telematics" devices combine electronic sensors, wireless communications technologies, and/or location determination technologies. Typically, these devices are supported by a call center operated by a telematics service provider that provides concierge type services such as driving directions, reservations and roadside assistance. (See Direct Testimony of Cynthia Clugy (Exhibit 1), pg. 13-14.) Telematics service providers include On Star and AAA Response. (SCC Brief, 7/5/01, pg. 4.)

SCC delivers 9-1-1 calls and other emergency call traffic to incumbent local exchange carriers' Selective Routing Tandems for transport to the appropriate Public Safety Answering Point (PSAP).

SCC does not currently have an ICA with Pacific. The petition for arbitration lists numerous unresolved issues arising during the negotiations between SCC and Pacific.

On December 27, 2000, Pacific filed a motion to dismiss the petition for lack of jurisdiction. Pacific claims that SCC is not a "telecommunications carrier" as set forth in Section 153(44) of the Act, and is therefore not entitled to invoke a state utility commission's jurisdiction to arbitrate interconnection agreements. SCC responded in opposition to this motion on January 9, 2001. Pacific filed a reply to SCC's opposition on January 16, 2001.

According to the Commission's arbitration rules, a response to the petition for arbitration is due 25 days after the filing of the arbitration request. The assigned arbitrator, ALJ Jones, suspended the filing of a response to SCC's petition for arbitration until the Commission acted on Pacific's motion to dismiss. On January 17, 2001, the petition for arbitration was reassigned from ALJ Jones to ALJ Duda. At the same time, the parties requested a continuance of the matter for several weeks so they could engage in settlement discussions.

Because the parties were not able to resolve all of their disputed issues, ALJ Duda proceeded to review the case and issued a ruling on April 25, 2001 denying Pacific's motion for dismissal. The ruling stated that if SCC's contentions regarding the nature of its service offerings could be supported by evidence submitted at an arbitration hearing, then SCC would be considered a

"telecommunications carrier" under the Act and could request interconnection. The ruling also set a further schedule for the arbitration.[7]

SCC filed testimony in support of its arbitration request on May 8, 2001. Pacific filed a response and its testimony on June 4, 2001. The response indicated that despite their continued disagreement over whether SCC is a "telecommunications carrier" entitled to interconnection, the parties had continued to negotiate their other unresolved issues and had reached resolution on each of the substantive issues raised in the arbitration request. Thus, the threshold issue of jurisdiction raised by Pacific's motion to dismiss is the only issue remaining for decision in this arbitration. Despite disagreement on the threshold issue, Pacific attached to its response the parties' proposed ICA should the Commission conclude that SCC is a telecommunications carrier entitled to request interconnection.[8]

An initial arbitration meeting was held on June 11, 2001 and an arbitration hearing was held on June 27, 2001. Parties filed briefs on July 5, 2001 and reply briefs on July 10, 2001.

II. Pacific's Position

In its motion to dismiss, Pacific states that only "telecommunications carriers" may seek arbitration under the Act. Pacific provides the following definitions from the Telecommunications Act of 1996 (1996 Act) regarding what constitutes a "telecommunications carrier:"

---

[7] The parties stipulated to extend the time period for the Commission to resolve this arbitration through September 20, 2001.

[8] On June 26, 2001, Pacific amended its response with a corrected copy of the parties' proposed agreement.

The term "telecommunications" means the transmission, between or among points specified by the user, of information of the user's choosing, without change in the form or content of the information as sent and received.[9]

The term "telecommunications carrier" means any provider of telecommunications services, except that such term does not include aggregators[10] of telecommunications services (as defined in section 226 of this title).[11]

The term "telecommunications service" means the offering of telecommunications for a fee directly to the public, or to such classes of users as to be effectively available directly to the public, regardless of the facilities used.[12]

The term "telephone exchange service" means (A) service within a telephone exchange, or within a connected system of telephone exchanges within the same exchange area operated to furnish to subscribers intercommunicating service of the character ordinarily furnished by a single exchange, and which is covered by the exchange service charge, or (B) comparable service provided through a system of switches, transmission equipment, or other facilities (or combination thereof) by which a subscriber can originate and terminate a telecommunications service.[13]

---

[9] 47 U.S.C. §153(43).

[10] 47 U.S.C. §226 (Section 226) states in relevant part that "the term 'aggregator' means any person that, in the ordinary course of its operations, makes telephones available to the public or to transient users of its premises, for interstate telephone calls using a provider of operator services."

[11] 47 U.S.C. §153(44).

[12] 47 U.S.C. §153(46).

[13] 47 U.S.C. §153(47).

Pacific argues throughout its filings that SCC is not a competitive carrier in the local exchange market, but rather a provider of database services for the selective routing of 9-1-1 calls. First, Pacific asserts that SCC's services do not meet the definition of "telecommunications" in Section 153(43). Pacific claims that SCC does not provide a telecommunications service because the functions it performs, namely creating and updating selective routing data and providing "Automatic Location Information" (ALI),[14] are defined by the FCC as "adjunct services." Morever, Pacific claims that SCC's services are not telecommunications because the user does not specify the point of transmission and SCC changes the form and content of the information sent. Pacific contends that since SCC's Coordinate Routing Database (CRDB) routes calls to the appropriate PSAP, the points of transmission are not specified by the user as required in the definition of "telecommunications." In addition, Pacific claims that SCC adds dynamic location information to the 9-1-1 call and thus changes the form or content of the information sent.

Second, Pacific claims that SCC is not providing a "telecommunications service" as defined in Section 153(46) because it does not directly serve the public. Pacific argues that service to wireline and wireless service providers, telematics providers, and governmental agencies does not constitute service directly to "the public" because these entities are not end-users. Pacific argues that the person actually making the emergency call has no relationship with, and pays nothing to, SCC. Further, Pacific contends that SCC's tariff does not quote any specific price but merely notes that prices will be set on an "individual case

[14] ALI is subscriber information that is transmitted to the PSAP over a dedicated data circuit, in a separate transmission from the voice portion of a 9-1-1 call.

basis." Pacific claims that service under customer-specific contracts means SCC is not offering service indiscriminately to the public.

In Pacific's view, SCC sells wholesale services to other carriers and service providers who are not the end users. Therefore, it is not serving the public directly. Pacific supports this contention by asserting that the FCC made a similar finding that a carrier was not a telecommunications carrier because it provided wholesale services.[15] Pacific also claims that holdings of the FCC order it cites were affirmed on appeal to the D.C. Circuit of the United States Court of Appeals.[16]

Third, Pacific claims that SCC cannot request arbitration because it is not seeking interconnection. Interconnection is, by definition, "for the transmission and routing of telephone exchange service and exchange access."[17] According to Pacific, SCC provides selective routing information services but not telephone exchange service as defined in Section 153(47). Pacific notes that the FCC defines interconnection as the "linking of two networks for the mutual exchange of traffic."[18] Pacific claims that SCC is incapable of originating or terminating traffic that can be exchanged with Pacific, hence there is no mutual exchange of traffic between Pacific's network and SCC's. In Pacific's view, SCC does not originate calls because it does not provide the dial tone to the caller and SCC does not terminate any calls because Pacific terminates the call to the PSAP. Further,

[17] See 47 U.S.C. §251(c)(2).

[18] 47 CFR 51.5.

SCC's customers cannot exchange calls with one another because SCC does not have assigned NPA-NXX numbers.[19]

Fourth, Pacific contends that SCC is a "go between" entity that simply aggregates 9-1-1 calls from other service providers and delivers them to Pacific's 9-1-1 Selective Routing Tandem. In Pacific's view, SCC is merely a vendor of services to the telecommunications industry that contracts with carriers and other service providers to perform one of their obligations. To support this contention, Pacific provides statements that SCC has made in other jurisdictions that it is not a telecommunications carrier. Specifically, Pacific's motion to dismiss cites a SCC brief filed before the Texas Public Utility Commission in 1999 that stated, "SCC is not a telecommunications carrier."[20] At hearing, Pacific submitted as evidence a document of the Montana Public Service Commission (PSC) that contains the statement that "SCC is not a local exchange provider and is not requesting authorization to provide local exchange service."[21] Pacific also notes that SCC has told Pacific's parent, SBC, that SCC's SafetyNet service is not in competition with SBC.[22]

In summary, Pacific states that only "telecommunications carriers" are entitled to arbitration under the Act and that SCC has not established that it

---

[19] "NPA-NXX" refers to the six-digit area code/central office code designation for identifying numbering resources for routing and billing purposes under the North American Numbering Plan. The "NPA" is a three-digit code (also known as an "area code") identifying a "numbering plan area" and the NXX refers to the three-digit central office code that identifies blocks of 10,000 line numbers by rate center.

[20] See Pacific's Motion to Dismiss Petition for Arbitration, December 27, 2000, pg. 10.

[21] See Exhibit 101.

[22] See Exhibit C-2, Attachment F.

meets the definition of a telecommunications carrier. In Pacific's view, therefore, SCC is not entitled to obtain interconnection at prices based on cost.[23] While SCC claims it requires interconnection with Pacific to provide its end users with emergency services, Pacific argues that the fact that SCC will need to have a connection with Pacific's network does not automatically qualify SCC as a telecommunications carrier. According to Pacific, SCC can obtain the services it needs through Pacific's tariffed offerings or special contracts. Pacific states that it continues to negotiate with SCC concerning its request for services from Pacific and it intends to serve SCC as it would any other customer, through tariffs or negotiated contracts.

III. SCC's Position

SCC claims that Pacific lacks a full understanding of SCC's services and that its "9-1-1 SafetyNet" (SafetyNet)[24] service qualifies as "telecommunications" under the definitions in the 1996 Act. According to SCC, it offers several distinct services. One of SCC's services performs selective routing database management, which handles call routing data for delivery of 9-1-1 calls. SafetyNet, on the other hand, is a separate service that SCC characterizes as a telecommunications service.[25]

---

[23] Interconnection Agreements set prices based on "total element long run incremental cost," or TELRIC.

[24] SCC clarifies that while it currently "offers" SafetyNet, it needs interconnection before it can physically provide the service in California and other states. (Hearing Transcript (Tr.) at 50.)

[25] SCC explains that selective routing is a subset of SafetyNet because SafetyNet uses a selective routing database to route a 9-1-1 call over SCC's network. (Tr. at 48-49.)

Under SafetyNet, SCC aggregates and transports 9-1-1 and emergency calls from SCC's customers to Pacific's 9-1-1 Selective Routing Tandem for ultimate transmission to the PSAP. SCC transports the caller's voice as well as data including Automatic Number Identification (ANI) and Automatic Location Information (ALI).[26] To transport the voice and data portions of these calls, SCC's Emergency Call Network consists of switches, transport, SS7 links, call management hardware and software, and trunking terminations at Pacific's Selective Routing Tandems.[27] SCC contends that although it can provide selective routing database management services without interconnection to Pacific, it needs interconnection with Pacific in order to provide its SafetyNet service.

In contrast to Pacific's arguments, SCC alleges that it meets the definitions provided in the 1996 Act to qualify it as a telecommunications carrier. First, SCC claims that it meets the requirements of Section 153(43) to provide transmission between or among points specified by the user, of information of the user's choosing, without change in the form or content of the information. SCC maintains that end users specify the points of transmission for their emergency calls by dialing the 9-1-1 digits. SCC claims it then aggregates and transports the voice and data elements of the 9-1-1 call without altering the form or content of the information.

Second, SCC contends that it is a telecommunications carrier under Section 153(46) because it offers its service "for a fee directly ...to the public."

---

[26] The ALI is transmitted in a separate transmission initiated by the PSAP when it receives the voice portion of a 9-1-1 call and ANI.

[27] Exhibit 1, pg. 10-11.

The "public" SCC contends it serves includes governments and municipalities,[28] telematics service providers, and Private Branch Exchange (PBX) customers.[29] SCC considers telematics service providers and PBX customers as business end users. SCC also considers government entities to form a subsection of the public. SCC disagrees that individual customer contracts constitute price discrimination and notes that Pacific routinely offers service based on customer specific contracts. SCC does not see a problem with end users not paying SCC for service since 9-1-1 calls are always free to end users.

According to SCC, sales to wireline and wireless carriers on a common carrier basis constitute sales to the public despite Pacific's arguments that service must be directly to end users and that wholesale service cannot be a telecommunications service. SCC rebuts Pacific on this point by stating that a provider of telecommunications on a common carrier basis is a telecommunications carrier, and that the definition of "common carrier" can include wholesale services to other carriers.[30] SCC states that it meets the applicable test for common carriage, as set forth in National Association of

---

[28] SCC describes that it has made proposals involving 9-1-1 SafetyNet to the State of California and the State of New Hampshire, and that it offers services to state and local government entities wishing to procure competitive 9-1-1 services. (See Exhibit 1, pg. 13.)

[29] Exhibit 1, pg. 12.

[30] SCC cites the same case that Pacific relies on, namely Virgin Islands. SCC claims that this case specifically rejects a wholesale/retail distinction as a basis for determining whether a provider of telecommunications is a telecommunications carrier under the Act. SCC also claims that the decision holds that a telecommunications carrier is essentially the same as a common carrier (Virgin Islands, 198 F.3d at 929).

Regulatory Utility Commissioners v. FCC,[31] because it makes capacity available to the public indiscriminately. The fact that SCC provides common carrier service to other carriers on a wholesale basis does not mean it is not a telecommunications carrier.[32] SCC provided its proposed California tariffs and tariffs from another state as evidence that it does not discriminate in offering its services and that service is provided for a fee.[33]

Third, SCC claims that it is requesting interconnection because it provides "telephone exchange service," as defined in Section 153(47). SCC asserts that it transports 9-1-1 calls "within a telephone exchange," through the use of its transport and switching facilities. In SCC's view, SafetyNet is comparable to telephone exchange service because it allows SCC's subscribers (whether they are wireline or wireless carriers, telematics providers, or PBX customers) to originate and terminate 9-1-1 calls for their end users.[34] SCC states that it terminates 9-1-1 calls just as any other competitive local carrier (CLC) operating in Pacific's territory terminates such traffic. SCC states that where Pacific is the incumbent 9-1-1 services provider, all carriers must terminate 9-1-1 calls at Pacific's selective routing tandems because Pacific owns and controls the selective routing tandems and the trunking from these tandems to the PSAPs.[35]

---

[31] 525 F.2d 630 (D.C. Cir. 1976) (herinafter NARUC I).

[32] See SCC Reply Brief, July 10, 2001, pg. 8-9.

[33] See Exhibit 1, Parts P and Q.

[34] See Exhibit 1, pg. 17-18. In addition, SCC claims that it facilitates the origination of 9-1-1 calls in the same way that Pacific does when it switches and transports 9-1-1 calls that originate and terminate outside of Pacific's wire center. (See SCC Reply Brief, pg. 17; Tr. at 55.)

[35] Tr. at 45.

SCC also asserts that 9-1-1 calls are inherently local in nature, that is "within a telephone exchange" or "the same exchange area," since traffic almost always terminates at a PSAP that is geographically proximate to the originating caller. SCC provides network diagrams showing that it provides service over its own network comprised of transmission and switching equipment, SS7 links, call management hardware and software, and trunking terminations.[36] SCC claims that all of these features satisfy the definition of "telephone exchange service."

[36] See Exhibit C-2, Part A, and Exhibit 1, pg. 10-11.

Further, SCC maintains that SafetyNet meets the definition of telephone exchange service because it allows end users to intercommunicate just like any other caller who dials 9-1-1. SCC states that its service establishes a continuous open communications path that permits the calling and called parties to interact. Although SCC does not provide traditional "dial up" exchange service, SCC claims that the FCC has held that non-traditional means of communicating information within a local area can also qualify as telephone exchange service.[37] Thus, SCC contends that its service meets the definition of telephone exchange service.

SCC states that briefs it filed in Texas in 1999 are not relevant because the nature of SCC service offerings has changed since the briefs were filed. Regarding statements to the Montana PSC that it is not a local exchange provider, SCC testified at hearing that it would have been more accurate for it to have stated, "SCC is not seeking to provide local dial tone."[38]

[37] SCC cites Deployment of Wireline Services Offering Advanced Telecommunications Capability, Memorandum Opinion and Order, CC Docket No. 98-147 (rel. Aug. 7, 1998), at paragraph 41.

[38] Tr. at 26.

SCC disputes Pacific's statement that SCC could obtain service from Pacific's tariffs. SCC claims that database management services, certain transport facilities, and hardware to support ALI steering[39] are all required for its services and are not generally available in Pacific's special access tariff.[40]

SCC asserts that Pacific is collaterally estopped from relitigating issues argued and decided in a prior proceeding. SCC requests the Commission take official notice of a recent arbitration decision of the Illinois Commerce Commission (ICC), in which the ICC concluded that SCC is a telecommunications carrier under the Act. SCC claims that the ICC rejected jurisdictional arguments of Ameritech Illinois that are virtually identical to those raised by Pacific in this arbitration proceeding.

Finally, SCC contends that Pacific's opposition to signing an interconnection agreement with SCC is merely a "thinly-veiled effort to stifle competition."[41] SCC explains that SCC and Pacific have submitted competing proposals to provide the State of California with a statewide wireless 9-1-1 network and SCC will not be able to provide its service without interconnection with Pacific.

IV. Discussion

Based on the testimony and evidence presented, I find that SCC does provide "telecommunications services" and is, therefore, a "telecommunications

---

[39] Witness Clugy testified that "ALI steering" is the ability, using bidirectional protocols, for the ALI node of Pacific to make an inquiry to the ALI node of SCC, to get a dynamically created ALI record for delivery to the PSAP. (Tr. at 40.)

[40] Tr. at 40-42, and 90.

[41] SCC Opening Brief, pg. 16.

carrier" entitled to interconnection with Pacific. SCC's Emergency Communications Network allows a wireline, wireless, or telematics services provider to connect emergency call traffic to the appropriate selective routing tandem and deliver a voice call with the accompanying data to the 9-1-1 selective routing tandem.

SCC Provides Telecommunications Service

First, SCC service meets the definition of "telecommunications" because the point of transmission for a 9-1-1 call under SafetyNet is specified by the end-user when the 9-1-1 digits are dialed. I do not agree with Pacific that SCC alters the form or content of the 9-1-1 call. SCC does not change the form or content of the voice message or the ANI that accompanies the 9-1-1 call merely by sending additional ALI information over a dedicated data circuit.

Second, SCC offers its services for a fee either directly to the public or to "such classes of users as to be effectively available directly to the public."[42] I agree that SCC has shown through the tariffs it submitted as evidence that it serves the public directly because it offers service to telematics service providers, PBX operators, and government entities. These entities are all end users and unquestionably, "the public." I agree with SCC that telematics providers are essentially business customers. According to the testimony of SCC's witness Clugy, a telematics end user can press an emergency button on the telematics device to initiate a call to the telematics provider. The telematics provider then sets up through its PBX a call, over SCC dedicated trunks, to the SCC switch for delivery to the appropriate 9-1-1 selective router for delivery to a PSAP.[43] I

---

[42] 47 U.S.C. §153(46).

[43] Tr. at 34-35.

disagree with Pacific that prices set on an individual customer basis prove SCC does not offer service indiscriminately. SCC's tariffs refer to individual contract prices because SCC cannot set prices for its services until it secures interconnection with Pacific. There is no evidence that SCC will treat like customers differently and indeed, Pacific offers customer specific contracts in its own tariffs. I also find that SCC offers its services for a fee since SafetyNet subscribers pay for the services, even though the ultimate end users do not pay for 9-1-1 calls.

I disagree with Pacific's assertion that SCC is not directly serving the public because it is providing wholesale services to other carriers. While I find that both parties have somewhat mischaracterized Virgin Islands to support their views, I agree with SCC's analysis that Virgin Islands rejected the wholesale/retail distinction as a basis for determining whether a carrier is a common carrier and whether a service is "effectively available" to the public. Instead, that order affirmed the FCC's use of the NARUC I test to determine if a provider is a common carrier. I also conclude that Virgin Islands supports SCC's contention that a wholesale provider can still be a common carrier. I agree with SCC's analysis that it is a common carrier under the test set forth in NARUC I because it offers service indiscriminately as shown in its proposed tariffs. Therefore, I disagree with Pacific's assertion that SCC does not serve the public because if offers wholesale service.

SCC is Seeking Interconnection for Telephone Exchange Service

I find that SCC can seek interconnection because it meets the definition of "telephone exchange service." SCC meets this definition because it enables subscribers to "intercommunicate" within a telephone exchange. Using SCC's SafetyNet service, end users of SCC's subscribers are able to originate emergency calls and conduct two-way voice communication with a person at the PSAP.

Essentially, carriers that employ SCC's SafetyNet service originate 9-1-1 calls for their end users and SCC enables its carrier customers to originate these calls. For telematics customers and PBX customers, SCC originates emergency calls. In all of these scenarios, SCC uses its own facilities to carry the traffic from the origination point to Pacific's selective router for termination at the PSAP. SCC enables its customers to terminate 9-1-1 calls just as any other CLCs terminate such calls. This fulfills the requirement to allow origination and termination of calls as set forth in the definition of "telephone exchange service."

I disagree with Pacific that SCC is not a carrier because it does not provide dial tone and because it does not have assigned NPA NXX's. While SCC admitted it does not provide dial tone to end users, SCC's SafetyNet service allows intercommunication over its facilities even though SCC is not the dial tone provider. I find that this entails telephone exchange service for the subset of calls, namely 9-1-1 emergency calls, that SCC handles through its network of switches and transmission equipment. In addition, the definitions in the 1996 Act of "telecommunications" and "telecommunications carrier" do not include a requirement that a carrier have its own NPA NXX's or provide dial-tone.

I do not agree with Pacific that SCC's services are merely "adjunct services." While SCC may perform certain functions that the FCC has defined as adjunct, this is only one of the services that SCC offers. SCC's SafetyNet service entails transportation of 9-1-1 calls over SCC's facilities in order to allow subscribers to originate and terminate 9-1-1 calls. Again, this constitutes a "comparable service" to telephone exchange service as defined in part B of Section 153(47).

I do not agree with Pacific that SCC is an "aggregator" as defined in Section 226. SCC does not fit that definition because it is not making telephones available to the public or transient users of its premises for interstate calls using a

provider of operator services.

I find there is no issue with statements that SCC has made in the past in other jurisdictions, namely Texas and Montana. SCC has justified that its service has changed since its 1999 Texas filings claiming it was not a telecommunications carrier. Further, SCC has adequately clarified the meaning of its statements to the Montana PSC.

Regarding SCC's claims that Pacific is collaterally estopped from relitigating the jurisdictional issue, Pacific responds that the doctrine of collateral estoppel does not apply to an administrative agency's determination of a jurisdictional issue. Pacific does not provide any support for this contention. Nevertheless, I agree with Pacific that it is not collaterally estopped from litigating the issue of whether SCC is a telecommunications carrier in California simply because a similar arbitration was decided in SCC's favor by the ICC. SCC argues that collateral estoppel applies when the issue sought to be precluded is identical to the issue decided in a former proceeding. I have reviewed the ICC arbitration decision and while it decides the issue of whether SCC is a telecommunications carrier in Illinois, I cannot conclude that the facts underlying the ICC's determination are identical to the facts presented here. It is possible that the testimony regarding SCC's service offerings in California constitutes a different set of underlying facts on which this Commission will decide this arbitration. Therefore, I do not agree that Pacific is collaterally estopped from raising its jurisdictional arguments before this Commission. In addition, I will not take official notice of the ICC's arbitration decision issued on March 21, 2001.

SCC also charges that Pacific is thwarting SCC's interconnection efforts purely to stifle competition in 9-1-1 services. I note that SCC's accusations are not supported by any evidence. Indeed, Pacific presented evidence of SCC's own statements to SBC that its service was not in competition with SBC.

Furthermore, SCC's contentions regarding Pacific's motives do not answer the factual and legal question of whether SCC is a telecommunications carrier entitled to interconnection under the act. Therefore, I will not address these accusations because they are beyond the scope of this arbitration.

In summary, while SCC does not intend to offer traditional dial-up telephone services in California, and offers only one portion of what constitutes local exchange service, namely 9-1-1 calls, the fact that it does not offer all the services normally thought of as local exchange does not mean that it is not offering a telecommunications service. The language of the 1996 Act does not limit the definition of telephone exchange services in the manner in which Pacific contends. Providing a 9-1-1 connection, for another carrier or for other customers, is a telecommunications service. SCC offers a service that transports a 9-1-1 call and therefore SCC transmits information of the user's choosing, between or among points specified by the user, as set forth in Section 153(43). SCC facilitates intercommunication among subscribers, within the meaning of Section 153(47), because by transporting the 9-1-1 call to the appropriate PSAP, SCC enables an end user to talk to someone at the PSAP and vice versa. Therefore, SCC is a telecommunications carrier and is entitled to request arbitration of an ICA with Pacific.

V. Comments on Arbitrator's Report

The Draft Arbitrator's Report in this matter was mailed to allow comments by the parties as provided by Rule 3.19 of the Commissions Arbitration Rules. Comments were filed by Pacific and SCC on August 9, 2001. Pacific's comments reiterated its contention that SCC does not offer service indiscriminately and does not originate calls. There were no substantive changes made in response to comments.

ORDER

IT IS ORDERED that:

1. Within 7 days of adoption of the Final Arbitrator's Report, the parties shall file and serve:

   a. An entire Interconnection Agreement, for Commission approval, that conforms to the decisions of the Final Arbitrator's Report.

   b. A statement which (a) identifies the criteria in the Act and the Commission's Rules (e.g., Rule 4.2.1, Rule 2.18, and 4.2.3 of Resolution ALJ-181) by which the negotiated and arbitrated portions of the Agreement must be tested; (b) states whether the negotiated and arbitrated portions pass or fail those tests; and (c) states whether or not the Agreement should be approved or rejected by the Commission.

Dated August 24, 2001, at San Francisco, California.

/s/ DOROTHY J. DUDA
Dorothy J. Duda, Arbitrator
Administrative Law Judge

STATE OF ILLINOIS

ILLINOIS COMMERCE COMMISSION

SCC Communications Corp.	:	
	:	
Petition of SCC Communications Corp. for review of an Arbitrated Interconnection Agreement.	:	**01-0308**

ORDER

By the Commission:

I. PROCEDURAL HISTORY

This docket arises from an arbitration proceeding involving SCC Communications Corp. ("SCC") and Illinois Bell Telephone Company d/b/a Ameritech Illinois ("Ameritech Illinois"). On March 21, 2001, the Commission issued an arbitration decision in *In the Matter of the Petition of SCC Communications Corp. for Arbitration Pursuant to Section 252(b) of the Telecommunications Act of 1996 to Establish an Interconnection Agreement with SBC Communications Inc.*, Docket No. 00-0769 (March 21, 2001) ("Arbitration Decision").) On April 9, 2001, pursuant to Section 252(e) of the Telecommunications Act of 1996 ("Act"), SCC initiated this docket by filing with the Commission a unilaterally proposed interconnection agreement consistent with its interpretation of the Arbitration Decision and a petition for review of that agreement ("Original Petition"). Also on April 9, 2001, Ameritech Illinois filed a motion in Docket No. 00-0769 requesting a two-week extension of the filing deadline set forth in the Arbitration Decision (until April 23, 2001).

On April 25, 2001, the parties filed the signed Agreement ("Agreement") in this docket, along with a Joint Petition for Review of an Arbitrated Interconnection Agreement ("Joint Petition"). On May 8, 2001 Ameritech Illinois filed a motion in Docket No. 00-0769 requesting a nunc pro tunc extension of the filing deadline set forth in the Arbitration Decision, from April 23 until April 25, 2001. In the Joint Petition, the parties represent that the Agreement consists of: (1) terms and conditions upon which the parties agreed without the aid of arbitration; and (2) terms and conditions that the parties believe faithfully reflect the Commission's determinations in the Arbitration Decision. The parties asked the Commission to review the Agreement pursuant to section 252(e) of the Act.

DOCUMENT NUMBER-DATE
03161 APR 21 01
FPSC-COMMISSION CLERK

Pursuant to notice given in accordance with the law and the rules and regulations of the Commission, on April 18, 2001, this matter came before duly authorized Hearing Examiners of the Commission for a pre-decisional conference at the Commission's offices in Chicago, Illinois. The parties were represented by counsel at the hearing. At the hearing, the Hearing Examiner adopted a procedural schedule.

Pursuant to notice given in accordance with the law and the rules and regulations of the Commission, on April 27, 2001, this matter came before duly authorized Hearing Examiners of the Commission for a status conference at the Commission's offices in Chicago, Illinois. The parties were represented by counsel at the hearing. At the hearing, SCC agreed to withdraw without prejudice its Original Petition and related comments, and Ameritech Illinois agreed to withdraw without prejudice its previously filed motion to strike SCC's comments. The parties subsequently withdrew those documents. Also at the hearing, the Hearing Examiner modified the procedural schedule to permit the parties until May 4, 2001 to file comments regarding the Agreement. SCC filed comments on May 4, 2001. Ameritech Illinois had previously filed comments on April 26, 2001. Staff also filed comments on May 4, 2001, regarding the agreement.

II. AMERITECH'S POSITION

The purpose of this proceeding is to determine whether or not the arbitrated portions of the agreement should be approved by the Commission. Pursuant to 83 Ill. Adm. Code 762.110, Ameritech filed comments opposing the approval of the agreement.

Ameritech's comments reiterate arguments it made during the arbitration process which were rejected by the Commission. Ameritech argues first, that SCC is not a telecommunications carrier entitled to interconnection under the 1996 Act. Ameritech also argues that: 1) the rules and procedures for advanced services should be set out in a separate DSL Appendix to the agreement; 2) that pricing for 911 related servicews should be determined by special access tariffs or the Bona Fide Request Process rather unbundled access; 3) that the language that unbundled access to network elements shall be provided "as required by applicable law" is vague and redundant.

III. SCC'S POSITION

SCC contends that Agreement as determined by the Commission comports with the requirements of the Act and the associated regulations prescribed by the FCC. It asserts that the Agreement complies with the Arbitration Decision; thus, it also complies with the requirements of the Act and the FCC's regulations. SCC also asserts that the Agreement is not discriminatory and consistent with the public interest, convenience, and necessity.

IV. STAFF'S POSITION

Staff supported the Agreement in its Comments. Staff argued that the Agreement as filed comported with the Commission's determinations in Docket No. 00-0769. Staff also opposed Ameritech's arguments that the Agreement should not be adopted on the basis that SCC is not a telecommunications carrier. The Commission already considered that question and ruled against Ameritech in Docket No. 00-0769.

V. COMMISSION'S ANALYSIS AND CONCLUSION

Interconnection agreements entered into under the Act must meet the standards set forth in Section 252(e)(2). Specifically, arbitrated portions of an interconnection agreement must be approved unless they "[do] not meet the requirements of section 251, including the regulations prescribed by the [Federal Communications] Commission pursuant to section 251, or the [pricing] standards set forth in subsection (d) of section 252," and the negotiated portions of an interconnection agreement must be approved unless the Commission finds that the they are discriminatory or inconsistent with the public interest, convenience, and necessity.

The Commission finds that the Agreement meets the requirements of Section 251 and 252 of the Act and the associated regulations prescribed by the FCC. The Commission finds that the Agreement is not discriminatory and is consistent with the public interest, convenience, and necessity. The Commission, therefore, finds that the Agreement satisfies the Act's requirements and the regulations of the FCC and this Commission.

Ameritech Illinois' comments ask the Commission to reject the interconnection agreement filed by SCC. Ameritech Illinois bases its comments on arguments raised numerous times in motions and in its briefs in Docket No. 00-0769. The Commission rejected those arguments in that Docket where they were properly raised. We reject them again here. Those arguments are not within the scope of the determinations under Section 252 (e) (2) and Section 251 that the Commission must make in this proceeding.

VI. Findings and Ordering Paragraphs

The Commission, having considered the entire record herein, is of the opinion and finds that:

(1) SCC and Ameritech Illinois are telecommunications carriers as defined in Section 13-202 of the Public Utilities Act (220 ILCS 5/1-101 *et seq.*), that provide telecommunications services as defined in Section 13-203 of the Public Utilities Act;

(2) the Commission has jurisdiction of the parties hereto and the subject matter hereof;

(3) the facts recited and conclusions reached in the prefatory portion of this Order are supported by the record and are hereby adopted as findings of fact and law;

(4) the arbitrated portions of the interconnection agreement submitted by the parties comply with the requirements of section 251 of the Act and the associated regulations prescribed by the FCC;

(5) the negotiated portions of the interconnection agreement submitted by the parties do not discriminate against a telecommunications carrier not a party to the interconnection agreement and are not contrary to the public interest, convenience, and necessity.

(6) in order to assure that the Agreement is in the public interest, Ameritech Illinois should implement the Agreement by filing a verified statement with the Chief Clerk of the Commission, within five (5) days of approval by the Commission, that the approved agreement is the same as the Agreement filed in this docket with the verified petition. The Chief Clerk shall place the Agreement on the Commission's web site under Interconnection Agreements;

(7) Ameritech Illinois should also place replacement sheets in its tariffs at the following location: Ill.C.C. No. 21 Section 19.15;

(8) approval of the Agreement does not have any precedential effect on any future negotiated agreements or Commission Orders.

IT IS THEREFORE ORDERED by the Illinois Commerce Commission that the arbitrated portions of the interconnection agreement between SCC Communications Corp. and Illinois Bell Telephone Company d/b/a Ameritech Illinois are approved pursuant to Section 252(e) of the Telecommunications Act of 1996.

IT IS FURTHER ORDERED that the negotiated portions of the interconnection agreement between SCC Communications Corp. and Illinois Bell Telephone Company d/b/a Ameritech Illinois are approved pursuant to Section 252(e) of the Telecommunications Act of 1996.

IT IS FURTHER ORDERED that the Chief Clerk of the Commission is directed to make a docket entry in Docket 00-0769 stating that the Commission has granted Ameritech's May 8, 2001 Motion for Extension of the Filing Deadline set forth in the Arbitration Decision in this Order.

IT IS FURTHER ORDERED that Ameritech Illinois shall comply with findings (6) and (7) of this Order within five days of the date of this Order.

IT IS FURTHER ORDERED that this Order is final; it is not subject to the Administrative Review Law.

By Order of the Commission this 23rd day of May, 2001.

Chairman

19th Updated, Improved and Expanded Edition

by Harry Newton

E Block Carrier A 10 MHz PCS carrier serving a Basic Trading Area in the frequency block 1885 — 1890 MHz paired with 1965 — 1970 MHz.

E Channel E stands for echo. It is the 16 Kbps ISDN basic rate channel echoing contents of DCEs to DTEs. Used in bidding for access to multipoint link.

E Link Extended Link. A Signaling System 7 (SS7) connection. This protocol controls all transfers between COs in North America. A SS7 signaling link used to connect a Signaling End Point (SEP) to an STP pair not considered its home STP pair.

E Mail Electronic Mail.

E Mail Gateway A LAN application that fetches messages from one electronic mail system, translates them to the format of another electronic mail system, and then sends them to the "post office" of that other system. The post office is the public entry point — the place you put mail you want the other system to receive.

E Port A expansion port on a switch. It is used to link multiple switches together into a Fibre Channel fabric. See Fibre Channel.

E Purse Electronic purse. An electronic monetary transaction card being proposed by several government agencies.

E Rate From Network World, December 15, 1997: "E Rate is the program President Clinton and Vice President Gore are referring to when they say they want every classroom connected to the Internet by the year 2000. It grants elementary and secondary schools a discount on carrier services, including not only Internet access but also a raft of other offerings."

E-1 The European equivalent of the North American 1.544 million bits per second (Mbps) T-1, except that E-1 carries information at the rate of 2.048 million bits per second. This is the rate used by European CEPT carriers to transmit 30 64 Kbps digital channels for voice or data calls, plus a 64 kilobits per second (Kbps) channel for signaling, and a 64 Kbps channel for framing (synchronization) and maintenance. CEPT stands for the Conference of European Postal and Telecommunication Administrations. Since robbed-bit signaling is not used (as it is for T-1 in North America) all 8 bits per channel are used to code the waveshape sample. See E1, E2, E3, and T-1.

E-2 Interim data signal that carries four multiplexed E-1 signals. Effective data rate is 8.448 million bits per second (Mbps). See E1, E3 and T-1.

E-3 CEPT signal which carries 16 CEPT E-1s and overhead. Effective data rate is 34.368 million bits per second (Mbps).

E-911 See the next two definitions.

E-911 Control Office In the US emergency services telephone network, the E-911 Control Office is the central office that provides the tandem switching of 911 calls. Each E-911 public safety answering point (PSAP) connects to one or more E-911 Control Offices. The E-911 Control Offices delivers 911 voice calls, with Automatic Number Identification, to the PSAP and provides normal and emergency-specific switching functions. The specialized switch at the E-911 Control Office is known as an E-911 Tandem or Selective Router.

E-911 Service Enhanced 911 service. Dial 911 in most major cities and you'll be connected with an emergency service run typically by a combination of the local police and local fire departments. 911 service becomes enhanced 911 emergency reporting service when there is a minimum of two special features added to it. E-911 provides ANI (Automatic Number identification) and ALI (Automatic Location Information) to the 911 operator. Picture: A call comes in. Someone is dying. The 911 operator's screen comes alive as his phone rings. The number calling is on the screen. The caller is dying and needs an ambulance. The operator punches a button or two and his screen immediately indicates the location of the ambulance dispatch center nearest the caller. The operator contacts the dispatch center, another button may dispatch a fax of a map of how to get there to the ambulance and an ambulance gets there in short order and saves a live. (Remember, this is a book, not the real world.) See also CESID and PSAP for a full explanation of how the caller's location is sent. See E-911 Control Office.

E-BCCH Extended-Broadcast Control Channel. A logical channel element of the BCCH signaling and control channel used in digital cellular networks employing TDMA (Time Division Multiple Access), as defined by IS-136. See also BCCH, IS-136 and TDMA.

E-Band See E Band.

E-Bend A smooth change in the direction of the axis of a waveguide, throughout which the axis remains in a plane parallel to the direction of electric E-field (transverse) polarization.

E-Check An Ecommerce term for an electronic check. The E-check is a demand for payment which is sent electronically over a network from the buyer to the seller. The e-check subsequently is sent from the seller to the seller's bank, and then to the buyer's bank. See also E-Commerce.

E-Commerce Electronic Commerce. Buying and selling over the public Internet, the public Web and corporate Internets. I prefer ecommerce to e-commerce. But you see it spelled both ways. Predictions for the amount of ecommerce should not be underestimated. See the Internet.

E-DSS1 E-DSS1 is the European shorthand way of saying Euro-ISDN.

E-IDE Enhanced IDE. An enhancement to the original IDE disk drive found on many PCs. E-IDE raises the storage capacity limit from 504 megabytes to 8,033 megabytes and the data transfer rate from up to 3 megabytes per second to up to 16.6 megabytes per second. See also Enhanced IDE.

E-Interface The network interface between the Cellular Digital Packet Data (CDPD) networks and other external networks.

E-Mail Electronic Mail. Also spelled email, which is this dictionary's preferred spelling.

E-Nose Electronic nose, gas chromatograph detection systems. These can detect and analyze target samples for a wide variety of applications as in security control, environmental protection control, food and drug safety control.

E-OTD Enhanced Observed Time Difference is a new technology that could be used in mobile phones for location based services. The E-OTD positioning method, generally relies upon measuring the time at which signals from the Base Transceiver Station (BTS) arrive at two geographically dispersed locations — the mobile phone/station (MS) itself and a fixed measuring point known as the Location Measurement Unit (LMU) whose location is known. The position of the MS (also called a cell phone) is determined by comparing the time differences between the two sets of timing measurements. To obtain accurate triangulation, OTD measurements are needed from at least three geographically distinct BTSs. Based on the measured values, the location of the MS can be calculated either in the network or in the MS itself, if all the needed information is available in the MS. The terms "MS-assisted" applies to the former method and "MS-based" to the latter. The MS performs measurements without the need for any additional hardware. To obtain accurate triangulation, OTD measurements are needed from at least three geographically distinct BTSs. Based on the measured values, the location of the MS can be calculated either in the network or in the MS itself, if all the needed information is available in the MS. The terms "MS-assisted" applies to the former method and "MS-based" to the latter. See Location Services.

E-Rate Electronic Rate. A special discounted rate for Internet access for schools and libraries, e-rate was established as part of the Telecommunications Act of 1996. Technically known as the Schools and Libraries Universal Service Program, e-rate is funded through a portion of the special surcharges of up to five percent on every telephone bill. The carriers remit a portion of those surcharges to the Universal Service Fund, which is administered by the Universal Service Administrative Company (USAC), a not-for-profit corporation established and operated by the National Exchange Carriers Association (NECA). USAC distributes the designated funds to the Schools and Libraries Corporation (SLC) and to the Rural Health Care Corporation (RHCC), which now are divisions of USAC. The SLD (Schools and Libraries Division) get up to $2.25 billion per year, and the RHCD (Rural Health Care Division) up to $400 million per year, with the funds parceled out after the usual ton of paperwork is submitted and dissected. E-rate subsidies are for internal wiring, telecommunications services, and Internet access.

E-Signatures As it sounds, e-signatures are signatures that are recorded and transmitted digitally. They have advantages over actual signatures in that 30 physical aspects of a signature are recorded in an e-signature, making it harder to forge.

E-Stamp Electronic Stamp. Developed by E-Stamp Inc., and planned for trial by the USPS (U.S. Postal Service), the E-Stamp is a means for buying postage over the Internet. In support of a corporate Intranet post office, the system comprises PC software, a small security device which attaches to a user's printer port, and 1,024-bit encryption software for purposes of security. Think of it as a PC-based postage meter which can be refreshed over the Internet.

E-Tail A squeezing of electronic and retail. Really awful. I prefer ecommerce. See Ecommerce and E-tailer.

E-Tailer A company that does most of its retailing, consumer-to-consumer business over the Internet. Such companies include priceline.com, ltd.com, 1-800-flowers.com, ebay and expedia.com.

E-TDMA Extended Time Division Multiple Access. A proposed, new, standard for cellular. Other standards are TDMA (Time Division Multiple Access), CDMA (Code Division

NENA STANDARDS

NOTICE

This NENA STANDARD is published by National Emergency Number Association (NENA) as a guide for the designers and manufacturers of systems that are used for the purpose of processing emergency calls. It is not intended to provide complete design specifications or parameters nor to assure the quality of performance of such equipment.

NENA reserves the right to revise this NENA STANDARD for any reason including, but not limited to, conformity with criteria or standards promulgated by various agencies, utilization of advances in the state of the technical and operational arts or to reflect changes in the design of equipment or services described herein.

It is possible that certain advances in technology or operations will precede these revisions. Therefore, this NENA STANDARD should not be the only source of information used. NENA members are advised to contact their Telecommunications Carrier representative to ensure compatibility with the 9-1-1 network.

Patents may cover the specifications, techniques or network interface/system characteristics disclosed herein. No license expressed or implied is hereby granted. This document is not to be construed as a suggestion to any manufacturer to modify or change any of its products, nor does this document represent any commitment by NENA or any affiliate thereof to purchase any product whether or not it provides the described characteristics.

This document has been prepared solely for the voluntary use of all entities involved with E9-1-1 products and services; i.e., service system providers, network interface and system vendors, participating telephone companies, PSAPs, Telecommunicators, etc.

By using this document, the user agrees that NENA will have no liability for any consequential, incidental, special, or punitive damages arising from use of the document.

NENA has developed this document. Suggestions for change to this document may be submitted to:

This document has been developed by the National Emergency Number Association (NENA) Technical and Operations Committee Chairs.

The following industry experts and their companies are recognized for their contributions in development of this document.

Technical Committee Members:	Company/Jurisdiction
Roger Hixson – Technical Issues Director	NENA
Billy Ragsdale – Technical Committee Chair	Independent
Tom Breen – Technical Committee Vice Chair	AT&T
Bob Gojanovich – Technical Advisor	HBF Group
Anand Akundi – Network Chair	Telcordia Technologies
John Garner – Network Vice Chair	AT&T Mobility
Tony Busam – NonTraditional Chair	RCC Consultants, Inc
Dave Irwin – NonTraditional Vice Chair	Washington Military Department, Emergency Management Division
Delaine Arnold – Data Chair	Independent Consultant
Kim Leigh – Data Vice Chair	Qwest Communications
Mike Vislocky –Customer Premise Equipment Chair	Network Orange
Dave Hayes – Customer Premise Equipment Vice Chair	Verizon
Nate Wilcox-VoIP-Packet Chair	microData Inc.
Roger Marshall – VoIP-Packet Vice Chair	TeleCommunications Systems (TCS)
David Jones – NGTPC Technical Co-Chair	L. Robert Kimball and Associates
Robert Sherry – NGTPC Technical Co-Vice Chair	Intrado

Operations Committee Members:	Company/Jurisdiction
Rick Jones – Operations Issues Director	NENA
Steve O'Conor – Operations Committee Chair	Brevard Co, FL
Pete Eggimann – Operations Committee Vice Chair	Metropolitan Emergency Services Board, MN
Dick Wells – Educational Advisory Board Representative	R.K.Wells & Associates Inc.
Richard Ray – Accessibility Chair	City of Los Angeles
Donna Platt – Accessibility Vice Chair	Hearing, Speech & Deafness Center (WA)
Christy Williams – Public Education Chair	North Central TX COG

1 Executive Overview

1.1 Purpose and Scope of Document

This "NENA Master Glossary of 9-1-1 Terminology" document is a guide for readers of NENA publications and tool for members of the NENA committees that prepare them. It defines the terms, acronyms and definitions associated with the 9-1-1 industry. Intended users of this document are any person needing NENA's definition/description of a 9-1-1 related term.

1.2 Benefits

Use of this "NENA Master Glossary of 9-1-1 Terminology" will:

- provide a consistent definition for all definitions and acronyms identified with NENA Standards documents produced by the NENA Committees
- reduce the work required to establish definitions for consistently utilized terms and acronyms

1.3 Reason for Issue

This document is issued to provide a NENA perspective for Terms, Acronyms and Definitions associated with the 9-1-1 industry.

1.4 Reason for Reissue

NENA reserves the right to modify this document. Whenever it is reissued, the reason(s) will be provided in this paragraph.

March 1998, Version 1, Original

October 2002, Version 2; Updated to include new terms utilized within NENA standards documents and to adjust existing definitions to comply with technology improvements.

February 2003, Version 3; Updated to include new terms utilized in revised 02-011 standard document and new 06-002, 06-003 standard documents.

October 2004, Version 4; Updated to include new/revised terms utilized in the following documents:

- 03-501 Network Quality Assurance;
- 03-502 Trunking for Private Switch 9-1-1 Service; Future 9-1-1 Models TID;
- 05-001 Implementation of the Wireless Emergency Service Protocol E2 Interface;
- 05-501 SS7 guidelines for MSC to Selective Router Connectivity;
- 07-501 E9-1-1 and Emerging Technologies.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1
TERMINOLOGY
PAGE 6 OF 91

February 2005, Version 5; Updated to reflect Operations Committees input and use of this document as well as Technical Committees.

November 2005, Version 6; Updated to include terms and acronyms utilized in the following documents:

- 03-503 SS7 Guidelines for Wireline and VoIP Emergency Services Gateway Interconnection to 9-1-1 Selective Routers TID;
- 03-504 PSAP Callback to all 9-1-1 Callers, Combating Wireless E9-1-1 Fraud and Mobile Emergency Services (E9-1-1M) TID,
- 52-002 Managers Guide to Title II: Direct Access,
- 53-002 Mutual Aid Standard/Model Recommendation,
- 54-501 Human Resources Sub-Committee Resource List OID,
- 56-502 Minimum Standards for Emergency Telephone Notification Systems,
- 56-502 Milepost OID.

April 2006, Version 7; This update changes the document number for the NENA Master Glossary of 9-1-1 Terminology **from 01-002 to 00-001.** The number change moves the document to the General Administrative section of NENA Standards utilized for standards that are applicable to all Committees.

Update includes terms and acronyms utilized in the following documents:

- 08-001, Interim VoIP Architecture for Enhanced 9-1-1 Services (i2)
- 52-003, Call Taker Proficiency and Quality Assurance
- 02-502, Company ID Registration Service

November 2006, Version 8; Updated to include terms and acronyms utilized in the following documents:

- 02-501, Wireless (Pre-XML) Static and Dynamic ALI Data Content
- 03-503, Technical Information Document on Rate Center Consolidation
- 08-001, Interim VoIP Architecture for Enhanced 9-1-1 Services (i2) Definitions
- 08-504, VoIP Standards Development Organizations
- 54-002, Hearing Standards for Public Safety Telecommunicators
- 56-005, Call Answering Standard/Model Recommendation
- 56-503, Wide Area/Statewide Emergency Notification Systems

DOCKET NO. 070736-TP

- 56-504, VoIP E9-1-1 Deployment and Operational Guidelines
- 58-502, VoIP Funding and Regulatory Issues

March 30, 2007 Version 9; Updated to include terms and acronyms utilized in the following documents:

- 02-013, NENA Data Standards for the Provisioning & Maintenance of MSAG Files to VDBs & ERDBs
- 02-503, NENA Technical Information Document on XML Namespaces
- 03-002, NENA Standard for the Implementation of Enhanced MF Signaling, E9-1-1 Tandem to PSAP
- 03-505, NENA Technical Information Document on Rate Center Consolidation Technical Information Document
- 04-005 NENA ALI Query Service Standard
- 08-505, NENA VoIP Recommended Method(s) for Location Determination to Support IP-Based Emergency Services Technical Information Document
- 08-751, NENA i3 Technical Requirements Document
- 08-752, NENA Technical Requirements Document for Location Information to Support IP – Based Emergency Services
- 53-501, NENA Hazard and Vulnerability Analysis Operation Information Document
- 53-502, NENA Resources Analysis Operations Information Document

June 5, 2007 Version 10; Updated to include terms and acronyms utilized in the following documents:

- General 9-1-1 & VoIP terms and definitions
- 03-506, NENA E9-1-1 Voice Circuits Requirements Document
- 04-002, NENA PSAP Master Clock Standard
- 07-504, NENA Automatic Collision Notification and Vehicle Telematics Technical Information Document
- 53-503, NENA PSAP Survivability Operations Information Document
- 56-505, Guidelines for Handling Call Regarding Missing and Exploited Children Operations Information Document

1.5 References

NENA Standards are registered by the NENA Executive Office and assigned an identifying number in accordance with the following numbering plan:

NENA-xx-yyy

Where "xx" represents the categories:

xx 00 represents General Administrative Documents

xx 01-25 represents Technical Committee Documents

01 for Technical Standards Administration

02 for Technical Data Documents

03 for Technical Network Documents

04 for Technical PSAP-CPE Documents

05 for Technical Wireless Documents

06 for Technical ALEC and Private Switch Documents

07 for Technical Non Traditional Communication Documents

08 for Technical VoIP/Packet Documents

yyy 501-599 represents Technical Information Documents

yyy 750-999 represents Technical Reference Documents

xx 51-99 represents Operations Committee Documents

51 for Operations Standards Administration

52 for Operations Accessibility Documents

53 for Operations Contingency Planning Documents

54 for Operations Human Resources Documents

55 for Operations Public Education Documents

56 for Operations Standard Operating Procedures Documents

57 for Operations PSAP Service Integration (formerly Wireless Implementation Documents)

58 for Operations VoIP Operations Documents

2 Terms/Definitions

Term	*Definition*
1A2	A designation for Key Telephone Systems which utilize an "A" lead for control.
3GPP	The 3rd Generation Partnership Project (3GPP) is a collaboration agreement that was established in December 1998. The collaboration agreement brings together a number of telecommunications standards bodies which are known as "Organizational Partners".
9-1-1	A three-digit telephone number to facilitate the reporting of an emergency requiring response by a public safety agency.
9-1-1 Administrator	The administrative jurisdiction of a particular 9-1-1 system. This could be a county/parish or city government, a special 9-1-1 or Emergency Communications District, a Council of Governments, an individual PSAP or other similar body.
9-1-1 Service Area	The geographic area that has been granted authority by a state or local governmental body to provide 9-1-1 service.
9-1-1 System	The set of network, data base and CPE components required to provide 9-1-1 service.
9-1-1 Tandem	(see Enhanced 9-1-1 Control Office)
"A" Lead Control	A wire used to control the Key Telephone Unit in a 1A2 type Key Telephone System. In some E9-1-1 systems it is used to identify the position connected to the trunk.
Abandoned Call	A call placed to 9-1-1 in which the caller disconnects before the call can be answered by the Public Safety Answering Point (PSAP) attendant.
Access Infrastructure Provider (AIP)	The entity providing physical communications access to the subscriber. This access may be provided over telco wire, CATV cable, wireless or other media. Usually, this term is applied to purveyors of broadband internet access but is not exclusive to them.
Access Line	The connection between a customer premises network interface and the Local Exchange Carrier that provides access to the Public Switched Telephone Network (PSTN).
Access Location Entity (ALE)	A network entity or function that provides network measurements to a LIS allowing the LIS to correlate a device with a physical location.
Access Provider	An access provider is any organization that arranges for an individual or an organization to have access to the Internet.
Acoustic Coupler	The rubber cups, which hold the telephone handset on the TTY.

One Nation 9-1-1
DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 11 OF 91

Term	Definition
Administrative (ESN)	A 3-5 digit number that represents an ESZ. It is stored in the MSAG and is returned from an ALI query. The Administrative ESN facilitates dispatching of the proper emergency service agency(ies). An Administrative ESN is assigned to each MSAG range to associate the physical addresses to an ESZ. It is used to display English Language Translations (ELT) and may be used by CPE to transfer calls to the correct responder. An Administrative ESN may not be the same as a routing ESN (Refer to Routing ESN)
Advanced Mobile Phone Service (AMPS)	The analog radio interface utilized in cellular telephone systems.
Alarm Dry Contacts	A set of relay contacts which are caused to either open or close when an alarm condition occurs. (Ref. NENA 04-001)
ALI Retrieval	A request for ALI record from the PSAP to the ALI data base.
ALI Retrieval Rate	The number of requests for ALI that are not duplicated within a two (2) minute time frame.
All Circuits Busy (ACB)	A telephone line state that informs the caller that all available telephone lines are in use.
Alliance for Telecommunications Industry Solutions (ATIS)	A U.S.-based organization that is committed to rapidly developing and promoting technical and operations standards for the communications and related information technologies industry worldwide using a pragmatic, flexible and open approach. Please refer to: http://www.atis.org/
Alternate Address Record	An Alternate Address record may be the Postal equivalent to the MSAG or it may be any other alternate address required (i.e. an alias street name – John Carpenter Freeway vs. Highway 121).
Alternate Emergency Access Number (AEAN)	A 10-digit unlisted number, answered on a 24/7 basis, used to receive VoIP calls until these calls can be delivered to the selective router serving the PSAP. After E9-1-1 implementation, these lines should only be used for specific routing circumstances (as defined in NENA VoIP Deployment and Operational Guidelines OID, 56-504, section 3.7.3 Default, Overflow and Alternate Routing). It can also be utilized to receive misrouted calls from other PSAPs not within the selective routing service area, operator-assisted emergency calls, default-routed wireless calls, calls routed to the PSAP via private call centers, and calls relayed from telecommunications relay services. Caller identification should be included as an option.
Alternate ISDN PSAP	(see Alternate Public Safety Answering Point)
Alternate Number	Used in Interim Number Portability (INP), the caller's original telephone number which is call forwarded to the new carrier's telephone number. Also known as Call Forward Number.
Alternate PSAP	A PSAP designated to receive calls when the primary PSAP is unable to do so.

Term	Definition
Alternate Routing	The capability of routing 9-1-1 calls to a designated alternate location(s) if all 9-1-1 trunks are busy or out of service. May be activated upon request or automatically, if detectable, when 9-1-1 equipment fails or the PSAP itself is disabled.
Alternative Local Exchange Carrier (ALEC)	(See Local Exchange Carrier (LEC))
Alternative Methods of Notification	Having the ability to locate the emergency caller and initiate emergency response. The adequacy of alternative methods of notification and responding to emergencies would be determined by appropriate governmental authorities operating pursuant to applicable legal requirements.
Alternative Methods to Support Enhanced 9-1-1	Methods used by a MLTS Operator to permit a 9-1-1 emergency response team reasonable opportunity to quickly locate a caller as alternatives to the MLTS signaling needed to produce the automatic display of caller location information on the video terminal of the call-taker.
American National Standards Institute (ANSI)	Entity that coordinates the development and use of voluntary consensus standards in the United States and represents the needs and views of U.S. stakeholders in standardization forums around the globe. Please refer to: http://www.ansi.org/
American Sign Language	Language expressed through hands and body movements to express concepts rather than complete sentences. The grammatical structure is different than standard English.
American Standard Code for Information Interchange (ASCII)	A standard for defining codes for information exchange between equipment produced by different manufacturers. A code that follows the American Standard Code for Information Interchange.
Americans with Disability Act (ADA)	Federal Legislation passed into law July 26, 1990, that prohibits discrimination on the basis of disability.
Amplitude Modulated	The encoding of a carrier wave by variation of its amplitude in accordance with an input signal.
Analog Telephone Adapter (ATA)	An analog telephone adaptor (ATA) is a device used to connect a standard telephone to a computer or network so that the user can make calls over the Internet.
Angle of Arrival (AOA)	A terrestrial Location Determination Technology (LDT) that computes a transmitter's location based upon the angle at which the transmitter's radio signal strikes multiple receivers.
Answering Position	(see Attendant Position)

Term	Definition
Answering Position Unit (APU)	A term used to define call-taking equipment.
Answering Positioning Unit (APU)	Answering Position Unit used to define call taking equipment.
Application Layer Security	Providing security to application layer protocols (HTTP, FTP, SMTP for example) through one of many methods that may include end-to-end privacy (PKE etc), message integrity, non repudiation, proof of submission etc
ArcNet	Multiplexed switching technology used to transport small fixed packets called "cells".
ASL Gloss	The reference to "ASL gloss" is when American Sign language is communicated through typing – as on a TTY – and many of the visual elements crucial to clear communications are lost.
Association of Radio Industries and Businesses (ARIB)	The objectives of ARIB are to conduct investigation, research & development and consultation of utilization of radio waves from the view of developing radio industries, and to promote realization and popularization of new radio systems in the field of telecommunications and broadcasting.
Asymmetrical Digital Subscriber Line (ADSL)	A Digital Subscriber Line, that transmits and receives at different speeds.(See Digital Subscriber Line)
Asynchronous Transfer Mode (ATM)	A link layer protocol that uses very small frames (53 bytes) and predetermined routes, which allows for efficient switching.
Asynchronous Transfer Mode (ATM) Adaptation Layer-AAL1, 2, 5	Used within an ATM network to convert the data from an end-user application into a form that fits into ATM cells [*the number relates to the applicable layer*]
Attendant Position	The Customer Premises Equipment (CPE) at which calls are answered and responded to by the Telecommunicator.
Authentication Process	The process of verifying the claimed identity of a session requester. Mutual authentication is important to ensure that both the originator of the session and the recipient of the request are both satisfied with the credential information being provided. Authentication mechanisms are needed in the i2 solution to ensure that only trusted entities with existing relationships will be provided access to E9-1-1 data and services.
Auto-Re-Addressing	Feature that allows for delivery of a voice call to the jack where the caller's device is currently connected after moving.

Term	Definition
Automatic Alarm and Automatic Alerting Device	Any automated device which will access the 9-1-1 system for emergency services upon activation and does not provide for two-way communication. (Many states prohibit the dialing of 9-1-1 by an automated device.)
Automatic Call Distributor (ACD)	Equipment that automatically distributes incoming calls to available PSAP attendants in the order the calls are received, or queues calls until an attendant becomes available.
Automatic Collision Notification (I)	The process of identifying that a motor vehicle has been involved in a collision, collecting data from sensors in the vehicle, and communicating that data to a Call Center or PSAP.
Automatic Location Identification (ALI)	The automatic display at the PSAP of the caller's telephone number, the address/location of the telephone and supplementary emergency services information of the location from which a call originates.
Automatic Location Identification (ALI) Call Retrieval	A process of counting ALI data base queries not duplicated within a two (2) minute time frame.
Automatic Location Identification (ALI) Customer Retrieval	A process of counting ALI data base queries not duplicated within a twenty-four (24) hour time frame.
Automatic Location Identification (ALI) Data Base	The set of ALI records residing on a computer system.
Automatic Location Identification (ALI) Discrepancy	An ALI Discrepancy is defined as a record being retrieved from ALI during an actual E9-1-1 call with incorrect address. For example, the house number or directional is wrong for the caller.
Automatic Location Identification (ALI) Multiplexer	A CPE component which performs the function of communicating with the ALI data base. An ALI Multiplexer typically works in conjunction with an ANI controller.
Automatic Location Identification (ALI) Operator	Operates the Automatic Location Identification infrastructure used to provide caller information associated with a pANI offered in a query from a PSAP.
Automatic Location Identification (ALI) Queries	The act of querying/retrieving the automatic display at the PSAP of the address/location of the telephone and supplementary emergency service information related to the caller's telephone number.
Automatic Location Identification (ALI) Retrieval	The process of querying the 9-1-1 data base for ALI records.
Automatic Number Identification (ANI)	Telephone number associated with the access line from which a call originates.

Term	Definition
Automatic Number Identification (ANI) Controller	A stand-alone CPE component which provides the ANI decoding and function key control for 9-1-1 service.
Automatic Number Identification Information Digits (ANI II Digits)	Digits in the Enhanced MF Signaling protocol that indicate to the PSAP CPE ANI display device whether the display should remain steady or flash, or if the call is a test call.
Automatic Vehicle Location (AVL)	A means for determining the geographic location of a vehicle and transmitting this information to a point where it can be used.
Average Busy Hour	The 1-hour period during the week statistically shown over time to be the hour in which the most telephone calls are received.
Average Sector Radius Range	The average true sector radius under average operating conditions. Radius at which cell tower's polygon of coverage influence ends and another begins.
Backup Public Safety Answering Point (PSAP)	Typically a disaster recovery answering point which serves as a backup to the primary PSAP and is not co-located with the primary PSAP.
Basic 9-1-1	An emergency telephone system which automatically connects 9-1-1 callers to a designated answering point. Call routing is determined by originating central office only. Basic 9-1-1 may or may not support ANI and/or ALI.
Basic Rate Interface (BRI)	Interface by which ISDN terminals access the local switch that provides full-duplex ISDN basic rate access. The BRI is composed of two 64-kbps clear B channels for information (voice or data) transfer in either circuit or packet mode and one 16-kbps clear D channel for packet data information transfer and signaling communication with the Telco Switch.
Baseline MSAG	MSAG file that is a snapshot image which represents a complete, up-to-date set of MSAG data at the point in time it was created.
Baud Rate	A measure of signaling speed in data communications that specifies the maximum number of signaling elements that can be transmitted each second.
Baudot Code	A five-bit encoding scheme developed for Telex transmission that represents text, numerals, punctuation and control signals. It is the standard transmission signaling scheme used by TTY (TDD) devices. (per EIA PN-1663)
Bell Operating Company (BOC)	Individual local telephone companies which were part of the Bell System prior to divestiture of AT&T.
Binary Coded Decimal (BCD)	A coding system in which each decimal digit from 0 to 9 is represented by four binary (0 or 1) digits. (Ref. NENA 04-002)
Broadband Remote Access Server (BRAS)	A server that routes traffic to and from the digital subscriber line access multiplexers (DSLAM) on an Internet service providers (ISP) network.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 16 OF 91

Term	Definition
Building Unit Identifier (BUI)	A room number or equivalent designation of a portion of a structure/building.
Business Day	A 24 hour period of time beginning at midnight which is established by the Data Base Management System Providers' and/or Service Providers' hours of operation. Business days do not normally include Saturday and Sunday or any Provider's recognized holidays.
Busy Hour	The hour each day with the greatest call volume.
Busy Line Interrupt (BLI)	Ability of an operator in special circumstances or emergency situations to interrupt a conversation, if necessary at the request of a PSAP
Busy Line Verification (BLV)	An operator service whereby the operator checks a line to see if it is busy, off-hook, or whether some trouble has caused a false busy signal
Busy Tone	An audible signal indicating a call cannot be completed because the called access line is busy. The tone is applied 60 times per minute.
Cable Modem Termination System (CMTS)	The node used to control cable modems in a cable network system.
Cable TV/Telephony	Service that use hybrid coaxial/fiber network device to deliver voice grade communications.
Call Associated Signaling (CAS)	Allows for the device position or location information to be delivered to the emergency services network in the call signaling as part of the call setup information. With CAS, the originating network pushes the position information to an Emergency Services Network Entity (ESNE).
Call Back	The capability to recontact the calling party
Call Back Number	A number used by the PSAP to re-contact the location from which the 9-1-1 call was placed. The number may or may not be the number of the station used to originate the 9-1-1call.
Call Check	(see Recall Recorder)
Call Delivery	The capability to route a 9-1-1 call to the designated selective router for ultimate delivery to the designated PSAP for the caller's ANI/KEY.
Call Detail Logging	The process of recording incoming call data. Also known as ANI printout. (Ref. NENA 04-001)
Call Detail Record (CDR)	The data information sent to the ALI computer by a remote identifying device (PBX, Call Position Identifier, ...) (From 03-007)
CallPath Associated Signaling (CAS)	A method for delivery of wireless 9-1-1 calls in which the Mobile Directory Number and other call associated data are passed from the Mobile Switching Center to the PSAP via the voice path.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 17 OF 91

Term	Definition
Call Progress Signals	Audible cues to advise 9-1-1 callers of the status of their call. (e.g. Busy Tone, Reorder Tone)
Call Relay	Forwarding of pertinent information by a PSAP attendant to the appropriate response agency (Not to be confused with Telephone Relay Service).
Call Routing	The capability to selectively route the 9-1-1 call to the appropriate PSAP.
Call Sequencer	A unit which monitors incoming calls at a PSAP and indicates to the answering positions, which of the incoming calls has been unanswered the longest.
Call Server	The term Call Server in the Interim VoIP Architecture For Enhanced 9-1-1 Services standard is used to refer to the entity in a private or public IP domain that provides service to endpoints in an emergency caller's home domain and that interworks with the SIP servers and other elements in the IP domain used to support emergency services call routing in the i2 solution. The Call Server may use SIP or some other VoIP signaling protocol within its own serving domain.
Call Set-up Time	The amount of time between when a caller dials the last one (1) in 9-1-1 and the call is presented to the appropriate PSAP.
Call Taker Position	(see Attendant Position)
Call Transfer	The capability to redirect a call to another party.
Callback Number	An identifier for an emergency caller that can be used by the PSAP to reach an emergency caller subsequent to the release of an emergency call. In the i2 solution, the Callback Number is an E.164 number, but may be represented in VoIP signaling by a uniform resource identifier (URI), for example.
Caller Hold	The capability of the PSAP to maintain control of a 9-1-1 caller's access line, even if the caller hangs up.
Calling Line Identification (CLID)	Signaling parameter that identifies the telephone number of the party placing a call.
Calling Party Hold	The capability of the PSAP to maintain control of a 9-1-1 caller's access line, even if the caller hangs up.
Calling Party's Number (CPN)	Typically a call back number associated with a wireless telephone. The CPN may also be the MDN, MIN, a temporary call back number, a tracking number or ID number and may not support call back in all cases.
Canadian Radio-television and Telecommunications Commission (CRTC)	Supervises and regulates broadcasting and telecommunications systems in Canada.
Carrier Frequency	The frequency of the unmodulated IRIG B or E signal.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 18 OF 91

Term	Definition
Case Number	Tracking number used to reference recorded incidents and events. Related nomenclature: Call Number, Report Number, Incident number, Report number.
Cathode Ray Tube (CRT)	Video monitor used for displaying information.
Cell	The wireless telecommunications (Cellular or PCS) antenna serving a specific geographic area.
Cell face	(see Cell Sector)
Cell Sector	One face of a cell antenna (typically 3-sided) that operates independently of the other sectors.
Cell Site	The location of a cell and related equipment.
Cellular Priority Access Service (CPAS)	A uniform nationwide method of providing priority access to authorized wireless subscribers in the event of an emergency.
Central Office (CO)	The Local Exchange Carrier facility where access lines are connected to switching equipment for connection to the Public Switched Telephone Network.
Central Office (CO) Transfer	A service provided by the Central Office that allows an established call to be transferred to another location.
Central Processing Unit (CPU)	The part of a computer which performs the logical, computational and decision making functions.
Centralized Automated Message Accounting (CAMA)	A type of in-band analog transmission protocol that transmits telephone number via multi-frequency encoding. Originally designed for billing purposes.
Centrex	A business telephone service offered by some Local Exchange Carriers that provides PBX type features over access lines.
Centrex-based Internet Protocol (CTX-IP)	Telco voice service that provides Internet protocol based private automatic branch exchange or PABX-like features on all lines sued by a single customer; the switching equipment is located at the central office and is operated and maintained by the Telco.
Channel Associated Signaling (CAS)	An option for the signaling channel (time slot 16) of an E1 interface; ITU G.704. Used on digital interfaces for signaling.
China Communications Standards Association (CCSA)	A nationally unified communications standards organization that can adapt the growing market, keep pace with global industry and accord with Chinese situations.
Circuit Route	The physical path between two terminal locations.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 19 OF 91

Term	*Definition*
Circuit-Switched Networks	Circuit-switched is a type of network in which a physical path is obtained for and dedicated to a single connection between two end-points in the network for the duration of the connection. Ordinary voice phone service is circuit-switched.
Civic Address	Any city-style address that includes a house number and a street name is considered a Civic Address. Civic Addresses include a community name that may or may not be recognized by the USPS or be MSAG valid. Civic Addresses may be used as Postal address if recognized by the USPS. Civic Addresses may be used as MSAG addresses if they are an exact match to the MSAG address. A rural route delivery address or FPO or APO address is not considered a Civic Address. See Civic Location.
Civic Location	A set of elements that describe detailed street address information. See Civic Address.
Civic To MSAG Translation	Translations consist of processes, tables or rules that can be used to: • Translate a Civic Address from/to an MSAG-format address. • Translate a Postal Address from/to an MSAG-format address. • Translate Landmark from/to an MSAG-format address (e.g. Empire State Building ---→ 350 5TH AVE). A civic address may need to be translated so that the data is consistent to the format within the existing PSAP equipment and processes (i.e., CAD, mapping, CPE).
Class of Service	A designation of the type of telephone service, e.g. residential, business, centrex, coin, PBX, wireless.
Client ID	An identifier for an instance of a Location Object (Geo Location, Civic Location or both) that is stored in a LIS.
Code Division Multiple Access (CDMA)	A digital radio interface utilized by some North American PCS carriers.

Term	Definition
CODEC (Coder/DECoder or Compression/DECompression)	In communications engineering, the term *codec* is used in reference to integrated circuits, or chips that perform data conversion. In this context, the term is an acronym for "coder/decoder." This type of codec combines analog-to-digital conversion and digital-to-analog conversion functions in a single chip. In personal and business computing applications, the most common use for such a device is in a modem. The term *codec* is also an acronym that stands for "compression/decompression." A codec is an algorithm, or specialized computer program, that reduces the number of bytes consumed by large files and programs. In order to minimize the amount of storage space required for a complicated file, such as a video, compression is used. Compression works by eliminating redundancies in data. Compression can be done for any kind of file, including text, programs, images, audio, video, and virtual reality (VR). Compression can reduce the size of a file by a factor of 100 or more in some cases. For example, a 15-megabyte video might be reduced to 150 kilobytes. The uncompressed file would be far too large to download from the Web in a reasonable length of time, but the compressed file could usually be downloaded in a few seconds. For viewing, a *decompression* algorithm, which "undoes" the compression, would have to be used.
Commercial Call Center	A privately operated call center, which answers emergency and/or non-emergency calls.
Common Language Location Identifier (CLLI)	An 11-character code assigned to a central office to designate the physical location and area served. Characters 1-4 designate the rate center location, characters 5-6 designate the state code, characters 7-8 identify the central office, and characters 9-11 specify the equipment type.
Communications Impaired	A person who is deaf, hearing impaired, or speech impaired that requires use of assistive telecommunications technology.
Communications Service Provider (CSP)	An entity that provides the services and signaling to support communication services for one or more endpoints. These services might include any combination of voice, video and/or data communications between users, or services provided by the CSP to an end user. The CSP may or may not be the provider of the access or transport network.
Company Identifier (ID) 1	A 3-5 character identifier, that distinguishes the entity providing voice service (e.g., Wireline, Wireless, VoIP, PBX, etc.) to the end user. The company identifier registry is maintained by NENA in a nationally accessible data base.
Company Identifier (ID) 2	(see Data Provider)

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 21 OF 91

Term	Definition
Competitive Data Base Provider	A company that offers telephone subscriber data base services in competition to an Incumbent Local Exchange Carrier (ILEC). This company is usually an unregulated entity.
Competitive Local Exchange Carrier (CLEC)	(see Local Exchange Carrier (LEC))
Completion	Date and time stamp when Data Base Management System Provider's Data Rep has corrected and updated all ALI data bases.
Completion Date	Applies to the Service Provider's service order process date that does the physical disconnection of dial tone by the Donor Company and the physical connection of dial tone by the Recipient Company to an end user. The expectation is that the completion date should be the due date on the service order.
Computer Aided Dispatch (CAD)	A computer based system, which aids PSAP telecommunicators by automating selected dispatching and record keeping activities.
Computer Telephone Integration (CTI)	Integrating telephone function into a computing device.
Conference Transfer	The capability to bridge a third party onto an existing call. Also known as three-way calling.
Confidence/ Uncertainty	Confidence: The mathematically derived statistical estimate indicating how sure the measuring system is that the wireless Phase 2 location data estimate is accurate, within the bounds defined by the Uncertainty value. This is expressed as a percentage, such as 90%, or 45% etc. The specific value is not representative of the accuracy of the PDE locating system. Uncertainty: The mathematically derived statistical estimate, expressed in meters, indicating the size of the area used in the calculation of Confidence. The specific value IS NOT representative of the accuracy of the PDE locating system. NOTE: Because of the differences in the way that location vendors have implemented their technologies, the resulting Confidence & Uncertainty values cannot be viewed consistently across multiple carriers. Example (not indicative of any particular company): Wireless Service Provider "A" sends the following C&U 90%, 115 meters Wireless Service Provider "B" sends the following C&U 80%, 115 meters
Consolidated PSAP	A facility where one or more Public Safety Agencies choose to operate as a single 9-1-1 entity.

Term	Definition
Constant Bit Rate (CBR)	A service class, where the bit rate is fixed, i.e., the traffic is not burst. Examples are voice and uncompressed video.
Contaminated Number Pooling	The practice of recovering full NPA-NXX's or thousands blocks of NPA-NXX's from Local Exchange Carriers who do not utilize the majority of numbers within the NXX block of 10,000 numbers. The unused numbers are assigned to other LECs. The numbers utilized within the pooled 1,000 blocks must be ported back to the LEC who is the Service Provider for the active numbers.
Contingency Routing Number (CRN)	A 24x7 PSAP emergency number, or a routing number associated with a national or default call center.
Continuity of Operations	The ability to continue operations during and after a major disaster.
Coordinate Based Routing	The process of using a Coordinate Routing Data Base (CRDB) to perform selective routing on a 9-1-1 call based on the X, Y coordinates from which the call originated. The X, Y coordinates respectively represent the longitude & latitude of a position. The CRDB provides a translation between a given position expressed in X, Y coordinates, to an Emergency Services Zone, by determining the ESZ in which the coordinates are located.
Credential Authority	An authority responsible for supporting the infrastructure to assign and revoke electronic digital certificates to i2 network entities.
Currency	Being fully trained, tested and up-to-date regarding a specific assignment. A measure of readiness.
Customer Comments	Supplementary information useful in dispatching, provided in conjunction with ALI displays.
Customer Premises Equipment (CPE)	Communications or terminal equipment located in the customer's facilities – Terminal equipment at a PSAP.
Cutover	The activation of a new telephone call processing or switching system.
Data Base	An organized collection of information, typically stored in computer systems, comprised of fields, records (data) and indexes. In 9-1-1, such data bases include MSAG, telephone number/ESN, and telephone customer records.
Data Base Management System (DBMS)	A system of manual procedures and computer programs used to create, store and update the data required to provide Selective Routing and/or Automatic Location Identification for E9-1-1 systems.
Data Base Management System Provider	Entity providing Selective Routing (SR) and/or Automatic Location Identification (ALI) data services.
Data Bit	A binary digit, either a zero (0) or a one (1).

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1
TERMINOLOGY
PAGE 23 OF 91

Term	Definition
Data Bit Free Run	A binary digit, either zero (0) or a one (1). The operating condition of a clock in which the location oscillator is not locked to an external synchronization reference, and is using no storage techniques to sustain its operating frequency.
Data Communications Equipment (DCE)	The designation for RS-232 and EIA/TIA-574 serial communication devices such as modems. Data Communications Equipment (DCE) typically connects to Data Terminal Equipment (DTE).
Data Exchange	The process of exchanging 9-1-1 data between Service Providers and the Data Base Management System Provider.
Datagram	Nate Wilcox: "a self-contained, independent entity of data carrying sufficient information to be routed from the source to the destination computer without reliance on earlier exchanges between this source and destination computer and the transporting network."
Data Over Cable Service Interface Specifications (DOCSIS)	The name given to the specifications for residential cable Internet Access
Data Processing Day	The day in which processing of a given service order update occurs.
Data Provider	A 3-5 character identifier, that distinguishes the source of the ALI record information (e.g., service provider/reseller/private switch owner). A.K.A. Company Identifier (ID) 2.
Data Terminal Equipment (DTE)	The designation for RS-232 and EIA/TIA-574 serial terminal devices such as data terminals or PCs. Data Terminal Equipment (DTE) typically connects to Data Communications Equipment (DCE).
Deaf	Partially or completely lacking in the sense of hearing. When referencing the Deaf community, this refers to people who use American Sign Language as a primary means of communication.
Deaf-Blind	A term used to describe a person in whom hearing loss and vision impairment combine to interfere with his/her ability to function effectively in life. S/he may have either total or partial loss of both senses, or one or the other.
Decaying	Directions from positive to negative, relative to the starting points, whose transient amplitudes decay with time in a ringwave pattern. These transients are typically caused by sources internal to the PSAP (motor, lighting and inductive loads, etc.) (Ref. NENA 04-001)

Term	Definition
Decibel	A unit for expressing the relative intensity of sounds on a scale from zero for the average least perceptible sound (near total silence) to about 130 for the average pain level. A sound 10 times more powerful than 0dB is 10 dB. A sound 100 times more powerful than near total silence is 20 dB. A sound 1,000 times more powerful than near total silence is 30 dB. In normal, non-laboratory situations an average human ear can only detect a change of at least 3 db.
Dedicated Trunk	A telephone circuit used for a single purpose; such as transmission of 9-1-1 calls.
Defuult Routing	The capability to route a 9-1-1 call to a designated (default) PSAP when the incoming 9-1-1 call cannot be selectively routed due to an ANI/KEY failure or other cause.
Definitive Civic Address	In the context of location information to support IP based emergency services: An address that can be resolved into a local MSAG valid address, will yield a route to the correct PSAP when used to route an emergency call, and is bound to a specific VoIP end-point.
Delay	Anything that is done to delay transmission of the packets such as protocol conversion, queuing, etc.
Delegate Credential Authorities	A delegate credential authority issues certificates, which are derived from Valid Emergency Services Authority (VESA) certification. It is responsible for issuing certificates to the operators of network entities that utilize VESA certificates for the exchange of authenticated data on the i2-defined interfaces. Examples of delegate credential authorities may be PSAP operators, state emergency authorities, or regional 9-1-1 service providers.
Delta MSAG	The Delta MSAG is a file of incremental changes to the MSAG. The changes are applied in the order that they are presented, to either the last updated version of the MSAG or a current Baseline of the MSAG, whichever is more recent.
Department of Justice (DOJ)	A branch of the Federal Government legislated to oversee compliance of Title II of the ADA.
Derived Voice Lines	The VoDSL voice lines are derived from the data potion of the ADSL line. The phone numbers associated with the derived lines are assigned out of the Class 5 switch that the VoDSL Gateway connects to.
Dial Tone First	The provision of dial tone to enable a caller to originate and complete 9-1-1 calls from public telephones without inserting a coin or any other device. Also known as coin-free dialing.
Digital Subscriber Line (DSL)	A "last mile" solution that uses existing telephony infrastructure to deliver high speed broadband access. DSL standards are administered by the DSL Forum (http://dslforum.org/).

Term	Definition
Digital Subscriber Line Access Multiplexer (DSLAM)	Terminates an ADSL line at the central office.
Direct [and equal] Access	The ability to TTY calls without relying on an outside relay service or third party services.
Direct Connect	A method of connecting a TTY directly into the phone line. When using direct connect, you can dial directly from the keyboard and use auto-answer features.
Direct Dispatch	The performance of 9-1-1 call answering and dispatching by personnel at the primary PSAP.
Direct Inward Dialing (DID)	The ability for a caller outside a company to call an internal extension without having to pass through a switchboard operator or attendant at the MLTS.
Directory Number (DN)	A dialable 10-digit telephone number associated with a telephone subscriber or call destination.
Disaster	Any event which can cause a significant disruption to emergency calling capability.
Disaster Recovery	A specific set of procedures designed to reduce the damaging consequences of unexpected events resulting in the loss of 9-1-1 capabilities.
Discrepancies	A Service Provider term used to describe subscriber records that do not match the MSAG and are referred to an error file or report for resolution.
Discrete Multi Tone (DMT)	The transmission medium for ADSL.
Disk Operating System (DOS)	A personal computer operating system which manages the computer's resources.
Diverse Routing	The practice of routing circuits along different physical paths in order to prevent total loss of 9-1-1 service in the event of a facility failure.
Domain Name Server (DNS)	Computing device having a first octet of 172-190.
Domain Name System (DNS)	A globally distributed database for the resolution of host names to numeric IP addresses.
Donor Company	The Service Provider currently responsible for an end user's telephone service prior to the migration of the telephone number to another Service Provider.
Dual Tone Multi-Frequency (DTMF)	The transmission of a selected number or symbol (*, #) via the generation of a specific pair of tones when that number's or symbol's button on a push button telephone is pressed. Also known as Touch-Tone ™. The tones are audible and transmitted within the voice band.

Term	Definition
Dynamic Host Configuration Protocol (DHCP)	A widely used configuration protocol that allows a host to acquire configuration information from a visited network and, in particular, an IP address.
Dynamic Host Configuration Protocol Server (DHCP)	The Dynamic Host Configuration Protocol (DHCP) is a set of rules used by a communications device (such as a computer, router or networking adapter) to allow the device to request and obtain an Internet address from a server which has a list of addresses available for assignment.
Dynamic Host Control Protocol	Assignment of an IP address to a client from a host that is only viable during any one established session.
E.164 number	E.164 is an international numbering plan for public telephone systems in which each assigned number contains a country code (CC), a national destination code (NDC), and a subscriber number (SN). There can be up to 15 digits in an E.164 number. The E.164 plan was originally developed by the International Telecommunication Union (ITU).
Echo	Return of transmitted data.
Electronic Industry Association (EIA)	U.S. trade organization that issues its own standards and contributes to the American National Standards Institute.
Electronic Key Telephone System (E-Key)	A multi-line telephone system which utilizes stored program control technology instead of KSU's and KTU's.
Electro-Luminescent Display (ELD)	A type of video display which creates images of graphics or text by direct conversion of electrical energy into light. An alternative to the Cathode Ray Tube (CRT).
Electronic Industry Association (EIA)	A trade organization of manufacturers that sets standards for use of its member companies conducts education programs and lobbies in Washington for its members' collective prosperity. Also associated with the Telecommunications Industry Association (TIA).
Emergency Alert Systems (EAS)	Radio or television based broadcast of emergency event information.
Emergency Call	A telephone request for public safety agency emergency services which requires immediate action to save a life, to report a fire or to stop a crime. May include other situations as determined locally.
Emergency Location Identification Number (ELIN)	A valid North American Numbering Plan format telephone number, assigned to the MLTS Operator by the appropriate authority that is used to route the call to a PSAP and is used to retrieve the ALI for the PSAP. The ELIN may be the same number as the ANI. The North American Numbering Plan number may in some cases not be a dialable number.

Term	*Definition*
Emergency Medical Service (EMS)	Fire, hospital, poison control, etc. response centers.
Emergency Message (EM) Circuits	The special service circuits used to carry 9-1-1 calls to the PSAP.
Emergency Notification Systems (ENS)	General category for any systems used to notify persons of an emergency. May include changeable message signs, sirens, telephone and other media.
Emergency Response Location (ERL)	A location to which a 9-1-1 emergency response team may be dispatched. The location should be specific enough to provide a reasonable opportunity for the emergency response team to quickly locate a caller anywhere within it.
Emergency Ring Back	The capability of a PSAP attendant to ring the telephone on a held circuit. Requires Calling Party Hold. Also known as re-ring. (A Basic 9-1-1 feature)
Emergency Routing Data Base (ERDB)	The ERDB contains routing information associated with each Emergency Service Zone (ESZ) in a serving area. It supports the boundary definitions for ESZs and the mapping of civic address or geo-spatial coordinate location information to a particular ESZ.
Emergency Routing Data Base (ERDB) Operator	An operator that supports the real time routing server (ERDB) that can resolve location information to emergency service zone route at the request of a VPC.
Emergency Service Central Office Number (ESCO)	The information delivered to the PSAP when there is an ANI failure between the end office and the 9-1-1 Control Office. When ANI is not available, the 9-1-1 call is default routed and the ANI display at the PSAP will be "911-0TTT" (or 911-TTTT) with TTT identifying the incoming trunk group.
Emergency Service Number (ESN)	A 3-5 digit number that represents one or more ESZs. An ESN is defined as one of two types: Administrative ESN and Routing ESN (Refer to definitions elsewhere in this document.)
Emergency Service Number (ESN)/ Emergency Service Zone (ESZ)	An ESN is a three to five digit number representing a unique combination of emergency service agencies (Law Enforcement, Fire, and Emergency Medical Service) designated to serve a specific range of addresses within a particular geographical area, or Emergency Service Zone (ESZ). The ESN facilitates selective routing and selective transfer, if required, to the appropriate PSAP and the dispatching of the proper service agency (ies).
Emergency Service Zone (ESZ)	A geographical area that represents a unique combination of emergency service agencies (e.g., Law Enforcement, Fire and Emergency Medical Service) that are within a specified 9-1-1 governing authority's jurisdiction. An ESZ can be represented by an Emergency Service Number (ESN) to identify the ESZ. (Refer to ESN)

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 28 OF 91

Term	*Definition*
Emergency Service Zone Routing Data Base (ERDB)	The ERDB contains routing information associated with each Emergency Service Zone (ESZ) in a serving area. It supports the boundary definitions for ESZs and the mapping of civic address or geo-spatial coordinate location information to a particular ESZ.
Emergency Service Zone Routing Data Base (ERDB) Operator	The entity that operates the ERDB serving a defined geographic area.
Emergency Services Gateway (ESGW)	The Emergency Services Gateway (ESGW) is the signaling and media interworking point between the IP domain and conventional trunks to the E9-1-1 SR that use either Multi-Frequency [MF] or Signaling System #7 [SS7] signaling. The ESGW uses the routing information provided in the received call setup signaling to select the appropriate trunk (group) and proceeds to signal call setup toward the SR using the ESQK to represent the Calling Party Number/Automatic Number Identification (ANI) information.
Emergency Services Gateway (ESGW) Operator	Operates emergency service gateway(s).
Emergency Services Interconnection Forum (ESIF)	An open, technical/operational forum, under the auspices of the Alliance For Telecommunications Industry Solutions, with the voluntary participation of interested parties to identify and resolve recognized 9-1-1 interconnection issues. The interest of all members will be served by observing the principles of openness, fairness, consensus, and due process. ESIF will liaise with standards and governmental organizations to apprise them of its deliberations and decisions. Discussions will be focused on the FCC's Wireless Phase I and II mandates, and into other areas of emergency services interconnection." Please refer to: http://www.atis.org/esif/index.asp
Emergency Services Query Key (ESQK)	The ESQK identifies a call instance at a VPC, and is associated with a particular SR/ESN combination. The ESQK is delivered to the E9-1-1 SR and as the calling number/ANI for the call to the PSAP. The ESQK is used by the SR as the key to the Selective Routing data associated with the call. The ESQK is delivered by the SR to the PSAP as the calling number/ANI for the call, and is subsequently used by the PSAP to request ALI information for the call. The ALI database includes the ESQK in location requests sent to the VPC. The ESQK is used by the VPC as a key to look up the location object and other call information associated with an emergency call instance. The ESQK is expected to be a ten-digit North American Numbering Plan Number.

Term	Definition
Emergency Services Routing Digit (ESRD)	Either a 10-digit North American Numbering plan or non-NANPA number that uniquely identifies a base station, cell site, or sector that is used to route wireless emergency calls through the network. The ESRD may also be used to retrieve the associated ALI data with the call. These numbers can be dialable or non-dialable.
Emergency Services Routing Key (ESRK)	Either a 10-digit North American Numbering plan or non-NANPA number that uniquely identifies a wireless emergency call, is used to route the call through the network, and used to retrieve the associated ALI data. These numbers can be dialable or non-dialable.
Emergency Services Routing Number (ESRN)	The ESRN is used by the Call Server/Routing Proxy to route an emergency call to the correct ESGW, and by the ESGW to select the desired path to the appropriate SR for the call. The ESRN is expected to be a ten-digit North American Numbering Plan Number.
Emergency Service (ES) Trunks	Message trunks capable of providing ANI, connecting the serving central office of the 9-1-1 calling party and the designated E9-1-1 Control Office.
Emergency Stand Alone (ESA)	A feature within a remote switching unit (RSU) which allows for independent operation of the remote whenever the links between the host and remote are disabled. Based on translations the features are downloaded from the host to the remote prior to the failure.
Emergency Telecommunications (EMTEL)	The concept of EMTEL addresses a broad spectrum of aspects related to the provisioning of telecommunications services in emergency situations. Emergency situations may range from a narrow perspective of an individual being in a state of personal emergency (with need to make an emergency call due to sudden illness, traffic accident, outbreak of fire in the home...) to a very broad perspective of serious disruptions to the functioning of society (viz. disaster situations due to events or processes such as earthquakes, floods, large scale terrorist attacks, etc.). The concept also covers the telecommunications needs of society's dedicated resources for ensuring public safety; including police forces, fire fighting units, ambulance services and other health and medical services, as well as civil defense services. The telecommunications needs of such services have until now been satisfied by dedicated networks and equipment, often different for different services, but with modern technology it is possible to increasingly integrate such services with the public telecommunications services. Terrestrial and satellite radio/TV broadcasting and Internet services provide means for dissemination of information to the general public, in particular in hazardous and disaster situations. Telecommunications means may also be increasingly used as parts of various community functions such as health services (e.g. remote patient monitoring to reduce need for hospitalization).

Term	Definition
Emergency Telephone Notification Systems (ETNS)	Specific category for a system that uses the telephone – in conjunction with other elements – including computer based hardware and software to notify persons of an emergency.
Emerging Technologies	New technologies and network to deliver communications.
End Office	(see Central Office (CO)).
End User	The 9-1-1 caller.
End User Move Indicator (EUMI)	A field in the Local Service Request (LSR) form that indicates the end user (subscriber) is changing Service Address during the porting process.
English Language Translation (ELT)	An ELT is an alphanumeric description of the primary Law Enforcement, Fire and Emergency Medical Service agencies associated with a given Emergency Services Zone/Number. The ELT (also known as an "agency file" or "tell tale" in some systems) includes the name of the first-responder agency, and may include their station number (for dispatch purposes) and telephone number. Examples: • ESN 123 translates to: <County> Sheriff, <County> Fire, <County> EMS • ESN 130 translates to <City> Police, <City> Fire Station 57, <County> EMS • ESN 135 translates to <City> Police 6th Precinct, <City> Fire Station 22, <City> EMS (Where the element "<County>" or "<City>" is replaced with the actual County or City name.) Some 9-1-1 systems support more than three agencies. In those cases, the ELT may contain additional listings for Advanced Life Support (Paramedics and Mobile Intensive Care Units), Medevac helicopter services, State or Marine Police, etc.
Enhanced 9-1-1 (E9-1-1)	An emergency telephone system which includes network switching, data base and CPE elements capable of providing Selective Routing, Selective Transfer, Fixed Transfer, caller routing and location information, and ALI.
Enhanced 9-1-1 (E9-1-1) Control Office	The Central Office that provides the tandem switching of 9-1-1calls. It controls delivery of the voice call with ANI to the PSAP and provides Selective Routing, Speed Calling, Selective Transfer, Fixed Transfer, and certain maintenance functions for each PSAP. Also known as 9-1-1 Selective Routing Tandem or Selective Router.

Term	Definition
Enhanced 9-1-1 System Service Provider (E9-1-1SSP)	An E9-1-1 System Service Provider (E9-1-1SSP) provides systems and support necessary to enable 9-1-1 calling for one or more Public Safety Answering Points (PSAPs) in a specific geographic area. It is typically, but not always, an Incumbent Local Exchange Carrier (ILEC). This includes: • A method of interconnection for all telecommunications providers including but not limited to the wireline, wireless, and VoIP carriers • A method and mechanism for routing a 9-1-1 call to the Public Safety Answering Point (PSAP) with no degradation in service regardless of the technology used to originate the call • A method to provide accurate location information for an emergency caller to a PSAP and if required, to other emergency response agencies • Installation of PSAP call handling equipment and training of PSAP personnel when contracted to do so • Coordinating with PSAP authorities and other telecommunications entities for troubleshooting and on issues involving contingency planning, disaster mitigation and recovery
Enhanced 9-1-1 (E9-1-1) Tandem Office	(see Enhanced 9-1-1 Control Office)
Enhanced Data rates for GSM Evolution (EDGE)	EDGE is a digital mobile phone technology which acts as a bolt-on enhancement to 2G and 2.5G General Packet Radio Service (GPRS) networks.
Enterprise Network	A large network connecting major points in a company or other organizations not part of the public telecommunications infrastructure.
Environmental Services Research Institute (ESRI)	Software developer of geographical information system (GIS) software and technology.
Essex	(see Centrex)
Ethernet	A popular local area data communication network, which accepts transmissions from computers and terminals.
European Telecommunications Standards Institute (ETSI)	ETSI is an independent, non-profit organization, whose mission is to produce telecommunications standards for today and for the future. Based in Sophia Antipolis (France), ETSI is officially responsible for standardization of Information and Communication Technologies (ICT) within Europe. These technologies include telecommunications, broadcasting and related areas such as intelligent transportation and medical electronics.
Exchange	A defined area, served by one or more telephone central offices, within which a Local Exchange Carrier furnishes service.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 32 OF 91

Term	Definition
Exempt Lines	Access lines not subject to 9-1-1 charges.
Failed Migrate Record	A Function of Change (M) migrate transaction record sent to the E9-1-1 DBMS by the Recipient Company which fails to process because the DBMS E9-1-1 record is still locked.
Family abduction	A family abduction occurs when, in violation of a custody order, a decree, or other legitimate custodial rights, a member of the child's family, or someone acting on behalf of a family member, takes or fails to return a child.
Fast Busy	(see Reorder Tone)
Fast Busy Tone	Also, Recorder Tone. An audible tone of 120 interrupts per minute (IPM) returned to the calling party to indicate the call cannot be processed through the network. (57-001)
Feature Group D (FGD)	An MF signaling protocol, originally developed to support equal access to long distance services, capable of carrying one or two ten-digit telephone numbers.
File Transfer Protocol (FTP)	A widely accepted, and readily available, means of communication, designed specifically to move data files between computer systems over an IP network.
Fixed Transfer	The capability of a PSAP attendant to transfer a 9-1-1 call to a pre-determined location by activating a single button.
Fixed/Static	Refers to an IP end-point that cannot move, is always in same location and always accesses a network from the same point.
Footprint	The geographic area covered by a particular wireless cell or cell sector.
Forced Disconnect	The capability of a PSAP attendant to disconnect a 9-1-1 call even if the calling party remains off-hook. Used to prevent overloading of 9-1-1 trunks.
Foreign Exchange Service (FX)	A telephone line switched in an exchange or central office other than the exchange or central office area in which the telephone is located.
Frame Relay	A dedicated digital transport service that routes information via switched packets. It is defined in ANSI data link level T 1.618.
Free Run	The operating condition of a clock in which the local oscillator is not locked to an external synchronization reference, and is using no storage techniques to sustain its operating frequency. (Ref. NENA 04-002)

Term	Definition
Frequency division duplex (FDD)	FDD is the application of frequency-division multiple access (access technology that is used by radio systems to share the radio spectrum) to separate outward and return signals. The uplink and downlink sub-bands are said to be separated by the "frequency offset". Frequency division duplex is much more efficient in the case of symmetric traffic. In this case TDD tends to waste bandwidth during switchover from transmit to receive, has greater inherent latency, and may require more complex, more power-hungry circuitry. Another advantage of FDD is that it makes radio planning easier and more efficient since base stations do not "hear" each other (as they transmit and receive in different sub-bands) and therefore will normally not interfere each other. With TDD systems, care must be taken to keep guard bands between neighboring base stations (which decreases spectral efficiency) or to synchronize base stations so they will transmit and receive at the same time (which increases network complexity and therefore cost, and reduces bandwidth allocation flexibility as all base stations and sectors will be forced to use the same uplink/downlink ratio)
Gateway	The Point at which a circuit-switched call is encoded and repackaged into IP packets – Equipment that provides interconnection between two networks with different communications protocols; two examples are packet assembler/disassemblers and protocol converters. Gateways operate at the 4th through 7th layers of the Open Systems Interconnection model.
Gateway Mobile Location Center (GMLC/MLC)	The GMLC serves as the point of interface to the GSM wireless network for the Emergency Services Network. The GMLC serves as the entity which retrieves, forwards, stores and controls position data within the location network. It receives Position Information from the wireless network, forwards it to the Emergency Service Network upon request and coordinates requests for position update.
General Packet Radio Service (GPRS)	GPRS is a mobile data service available to users of GSM mobile phones. It is often described as "2.5G", that is, a technology between the second (2G) and third (3G) generations of mobile telephony. It provides moderate speed data transfer, by using unused TDMA channels in the GSM network. Originally there was some thought to extend GPRS to cover other standards, but instead those networks are being converted to use the GSM standard, so that is the only kind of network where GPRS is in use. GPRS is integrated into GSM standards releases starting with Release 97 and onwards. First it was standardized by ETSI but now that effort has been handed onto the 3GPP.
Generic Digit Parameter (GDP)	Identifies the type of address to be presented in calls set up or additional numeric data relevant to supplementary services such as LNP or E9-1-1.

Term	Definition
Geographic Number Portability (GNP)	A form of telephone number portability, where a telephone number may be ported outside its originally assigned rate center (e.g., across LATA boundaries, or to another state). This is different from Local Number Portability (LNP) where the telephone number must be reused within the same rate center.
Geographic Information System (GIS)	A computer software system that enables one to visualize geographic aspects of a body of data. It contains the ability to translate implicit geographic data (such as a street address) into an explicit map location. It has the ability to query and analyze data in order to receive the results in the form of a map. It also can be used to graphically display coordinates on a map i.e. Latitude/Longitude from a wireless 9-1-1 call.
Geo Location	Latitude, longitude, elevation, and the datum which identifies the coordinate system used. For the i2 solution it is expected that geo location information will be formatted using the World Geodetic System 1984 (WGS84) datum.
Global Positioning System (GPS)	A satellite based Location Determination Technology (LDT).
GR303	A Telcordia standard for communicating from a central office to a remote line module.
Grade of Service	The probability (P), expressed as a decimal fraction, of a telephone call being blocked. P.01 is the grade of service reflecting the probability that one call out of one hundred during the average busy hour will be blocked. P.01 is the minimum recommended Grade of Service for 9-1-1 trunk groups.
Global Standard for Mobile Communications (GSM)	International standard digital radio interface utilized by some North American PCS carriers.
Groupe Speciale Mobile (GSM)	Global System for Mobile Communications. The predominant digital telephone service technology outside the United States, with some services within the United States. The radio interface is either in the 9—MHZ or 1.8GHZ band.
H.323	Specified in International Telecommunications Union-Telecommunications (ITU-T) specification H.323, the specification for transmitting multimedia (voice, video, and data) across a network, and is used in some VoIP architectures.
Hard of Hearing	The term "hard of hearing" refers to those who have some hearing, are able to use it for communication purposes, and who reasonably comfortable doing so. A hard of hearing person, in audiological terms, may have a mild to moderate hearing loss.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 35 OF 91

Term	*Definition*
Health Insurance Portability and Accountability Act (HIPAA)	Federal regulation protecting patients from unauthorized disclosure of medical information.
Hearing Carry Over (HCO)	A method which utilizes both voice and text communications on the same call, allowing a person who is speech impaired to listen to the other party's conversation and respond by typing via a TTY or other means of text communications.
Hertz	Hertz (abbreviated Hz) is a unit of frequency (of change in state or cycle in a sound wave, alternating current, or other cyclical waveform) of one cycle per second. It replaces the earlier term; cycle per second (cps). In acoustic sound, the range of average human hearing is from 20 Hz to roughly 20 kHz (20 thousand Hertz). The pitch of middle C on a piano is 263 Hz.
High Bit Rate Digital Subscriber Line (HDSL)	A bi-directional T1 or DS1 service for the local loop, but restricted to being served from Carrier Service Area, probably at less than two miles from the subscriber.
Highway Call Box	A telephone enclosed in a box and placed along a highway that allows a motorist to summon emergency and non-emergency assistance.
Host Mobility	Powerful IP new routing capability that allows a device to move to another host network and still be identified.
Host Switch	An end office with an internal controller or intelligent process used to complete calls. A host switch controls the function of a remote switch unit (RSU) via a central "control" or "processor" resident within the host switch.
Idle Circuit Tone Application	A feature which applies a distinctive tone toward the PSAP attendant to distinguish between calls that have been abandoned before the attendant answers, and calls where the caller is unable or unwilling to speak.
Implementation and Coordination Office (ICO)	National 9-1-1 Implementation and Coordination Office, previously known as the National 9-1-1 Program Office, currently jointly operated by NHTSA and the National Telecommunication Information Administration which was created and funded by the ENHANCE 9-1-1 Act of 2004. (http://www.e-911ico.gov)
Impulse Transient	A high energy unidirectional voltage or current impulse resembling a "spike" which is typically caused by sources external to the PSAP (lightning, grid switching, etc.). (Ref. NENA 04-001)
Incident Commander	Title that identifies the individual responsible for a specific incident or event.
Incumbent Local Exchange Carrier (ILEC)	A telephone company that had the initial telephone company franchise in an area.

Term	Definition
Instant Call Recorder	A device that allows the user to instantly playback all (or portions of) a call for service to clarify or validate what was heard by the operator to what was said by the caller. Also called and Instant Recall recorder.
Instant Playback Recorder	(see Recall Recorder)
Institute of Electrical and Electronic Engineers (IEEE)	A publishing and standards making body responsible for many telecom and computing standards.
Integrated Access Device (IAD)	Replaces the standard DSL modem at the customer premises. Typically has a built-in standard DMT based DSL modem, an Ethernet Interface for the PC or any other data device and anywhere from 4 to 12 analog ports for phones.
Integrated Services Digital Network (ISDN)	International standard for a public communication network to handle circuit-switched digital voice, circuit-switched data, and packet-switched data.
Integrated Service Digital Network Digital Subscriber Line (ISDL)	A digital interface providing multiple channels for simultaneous functions between the network and CPE
Integrated Services Digital Network User Part (ISUP)	A message protocol to support call set up and release for interoffice voice call connections over SS7 Signaling.
Integrated TTY	Integrated TTY refers to TTY functionality that has been integrated within a computer work station. This may be found within the 9-1-1 telephony system or interfaced in a CAD (computer aided dispatch) system.
Intelligent Network	A telecommunications network that has functions and controls distributed at various nodes on and off the network, enabling great flexibility in transport. This is an SS7 network that includes components such as SSP (Signal Switching Point), STP (Signal Transfer Point), and SCP (Service Control Point or Switch Control Point – depending on the reference you read).
Intelligent Transport System (ITS)	Multi-disciplined plan, under the jurisdiction of the U.S. Dept. of Transportation, to improve traffic flow.
Intelligent Workstation (IWS)	Computer based 9-1-1 answering position equipment that includes computer telephony integration.
Interactive Voice Response (IVR)	A computer system accessible by registered users utilized to identify the Service Provider and 24 X 7 access number for telephone numbers which have been ported or pooled.
Inter-center testing	This is a testing mechanism by which call takers make test calls to other PSAP's to test their proficiency.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 37 OF 91

Term	Definition
Interim Number Portability (INP)	The practice of moving a customer to a new carrier using a new telephone number, with the old telephone number forwarded to the new telephone number.
Inter-local Services Agreement	An agreement among governmental jurisdictions or privately owned systems, or both, within a specified area to share 9-1-1 system costs, maintenance responsibilities, and other considerations.
Inter-Range-Instrumentation Group (IRIG)	This group, in 1959, proposed a series of time code formats now known as IRIG or NASA time codes. (Ref. NENA 04-002)
Inter-Tandem Transfer	The capability of transferring a call over the 9-1-1 network from a PSAP served by one 9-1-1 tandem to a PSAP served by a different 9-1-1 tandem.
Internal Clock	A time-of-day reference source for timing information in equipment or systems. (Ref. NENA 04-002)
International Multimedia Teleconferencing Consortium (IMTC)	VoIP Forum
International Telecommunications Union – Telecommunications (ITU-T)	International standards body for all communications services.
International Telecommunications Union – Development (ITU-D)	The ITU-D is responsible for creating policies, regulation and providing training programs and financial strategies in developing countries. The mission of the ITU-D is to facilitate and enhance telecommunication development worldwide by offering, organizing and coordinating technical cooperation and assistance activities.
International Telecommunications Union – Radiocommunications (ITU-R)	The ITU-R plays a vital role in the management of the radio-frequency spectrum and satellite orbits, finite natural resources which are increasingly in demand from a large number of services such as fixed, mobile, broadcasting, amateur, space research, meteorology, global positioning systems, environmental monitoring and, last but not least, those communication services that ensure safety of life at sea and in the skies.

Term	Definition
Internet Architecture Board (IAB)	The IAB is the committee charged with oversight of the technical and engineering development of the Internet by the Internet Society (ISOC). It oversees a number of Task Forces, of which the most important are the Internet Engineering Task Force (IETF) and the Internet Research Task Force (IRTF). The body which eventually became the IAB was originally formed by the United States Department of Defense's Defense Advanced Research Projects Agency under the name Internet Configuration Control Board in 1979; it eventually became the Internet Advisory Board in September, 1984, and then the Internet Activities Board in May, 1986 (the name was changed, while keeping the same acronym). It finally became the *Internet Architecture Board*, under ISOC, in January, 1992, as part of the Internet's transition from a U.S.-government entity to an international, public entity.
Internet Assigned Numbers Authority (IANA)	IANA is the entity that oversees global IP address allocation; DNS root zone management, and other Internet protocol assignments.
Internet Corporation Assigned Names and Numbers (ICANN)	Emerging authority for public domain addresses and URL's.
Internet Engineering Steering Group (IESG)	The IESG is a body composed of the Internet Engineering Task Force Chair and Area Directors.
Internet Engineering Task Force (IETF)	Lead standard setting authority for internet protocols.
Internet Protocol (IP)	The method by which data is sent from one computer to another on the Internet or other networks.
Internet Protocol Access Network (IP Access Network)	The network in which the first IP address is assigned to an end-point. For residential networks the creation and supply of an access network may require the co-operation of several different providers. For example an ISP may lease lines and DSLAM capacity from an existing telephony provider, in such a circumstance both entities are required in the providing of an access network.
Internet Protocol Address (IP Address)	A 32-bit address assigned to hosts using TCP/IP. An IP address belongs to one of five classes (A, B, C, D, or E) and is written as 4 octets separated by periods (dotted decimal format). Each address consists of a network number, an optional sub network number, and a host number. The network and sub network numbers together are used for routing, while the host number is used to address an individual host within the network or sub network.

NENA MASTER GLOSSARY OF 9-1-1
TERMINOLOGY
PAGE 39 OF 91

Term	Definition
Internet Protocol-Coordination Ad-Hoc Committee (IP-COAD)	One of the major challenges facing VoIP services is the lack of technical standards in place that allow customers to initialize calls to the proper 9-1-1 call center in an emergency. To respond to these VoIP challenges, ATIS' Emergency Services Interconnection Forum (ESIF) recently launched a new "IP Coordination Ad Hoc Committee" to contribute to the planning, development, and architectural design of an overall IP-based Enhanced 9-1-1 (E9-1-1) system.
Internet Protocol Private Branch Exchange (IPBX (or IP PBX)	An IP PBX is a private branch exchange (telephone switching system within an enterprise) that switches calls between VoIP (Voice over Internet Protocol or IP) users on local lines while allowing all users to share a certain number of external phone lines. The typical IP PBX can also switch calls between a VoIP user and a traditional telephone user, or between two traditional telephone users in the same way that a conventional PBX does. The abbreviation may appear in various texts as IP-PBX, IP/PBX, or IPPBX.
Internet Protocol Security (IPSec)	IPSec is the next-generation network layer crypto platform. IPSec can be found on routers, firewalls, and client desktops
Internet Protocol Telephony (IP Telephony)	A general term for the technologies that use the IP's packet-switched connections to exchange voice, fax, and other forms of information that have traditionally been carried over the dedicated Circuit-Switched (CS) connections of the PSTN. The IP address may change each time the user logs on.
Internet Service Provider (ISP)	Company that provides Internet access to other companies and individuals
Internet Society (ISOC)	ISOC is a professional membership society with more than 100 organizations and over 20,000 individual members in over 180 countries. It provides leadership in addressing issues that confront the future of the Internet, and is the organization home for the groups responsible for Internet infrastructure standards, including the Internet Engineering Task Force (IETF) and the Internet Architecture Board (IAB).
Internet Telephone Service Provider (ITSP)	An ITSP offers an Internet data service for making telephone calls using Voice over Internet Protocol technology. Most ITSPs use SIP or H.323 (although H.323 use is declining) for transmitting telephone calls as IP data packets. Customers may use old plain telephones with an analog telephone adaptor (ATA) providing RJ-11 to Ethernet connection.
Internet Telephony Service Provider (ITSP)	A Company providing Internet based telephony services
International Telecommunications Union (ITU)	The telecommunications agency of the United Nations established to provide worldwide standard communications practices and procedures. Formerly CCITT
Interoperability	The capability for disparate systems to work together.

Term	Definition
Interworking	Concept where systems or components from different origins or companies, running on different hardware and operating systems, working together to perform some tasks using common standard network procedure or protocol.
Intra-center testing	This is a testing mechanism by which call takers make test calls from position to position within the Center utilizing the internal telephony system.
ISDN PSAP	(see Public Safety Answering Point)
Jack (RJ-11)	Standard 4-wire connector for phone lines.
Jitter	Packets arriving at a non consistent rate due to a type of distortion caused by the variation of a signal from its reference that can cause data transmission errors, particularly at high speeds.
Jurisdiction	A government agency that has contracted for Enhanced 9-1-1 service. This may be a county, a city, a COG, or a 9-1-1 Area.
Jurisdictional Address	An MSAG valid address for the physical location of a subscriber access line, which has been assigned by the jurisdiction's local addressing authority; i.e., planning department, zoning department, etc. and is used for 9-1-1 emergency dispatching purposes.
Key Pulse (KP)	An MF signaling tone (digit)
Key Service Unit (KSU)	Equipment which provides ringing, lamp voltages, conference, etc. for multi-line key telephone sets.
Key Telephone System (KTS)	A multi-line telephone system comprised of multi-line telephone sets, KTU's and KSU's. Also a type of Multi-line Telephone System designed to provide shared access to several outside lines through buttons, or keys, typically offering identified access lines with direct line appearance or termination on a given telephone set.
Key Telephone Unit (KTU)	A unit mounted in a KSU, required per line, providing key telephone control functions. E.g. hold, lamp, common ringing.
Landline	Colloquial term for the Public Switched Telephone Network access via an actual copper or fiber optic transmission line that travels underground or on telephone poles. Used to differentiate the "wireless" connectivity of a cellular or PCS system.
Landmark Location	Landmark locations can be Civic Addresses but are generally the names of buildings or other commonly known recognized places (e.g., The Empire State Building, The Alamo, etc.) or the name by which a prominent feature is publicly known.

Term	Definition
Last Routing Option (LRO)	The LRO is sent by the VPC to the Call Server/Routing Proxy and provides the Call Server/Routing Proxy with a "last chance" destination for the call. The LRO may be the Contingency Routing Number (CRN), which is a 24x7 PSAP emergency number, or it may contain a routing number associated with a national or default call center. The content of the LRO will depend on the condition that resulted in the providing of the LRO. Ultimately the usage of LRO routing data for call delivery is based on logic internal to the Call Server/Routing Proxy.
LATA Switching Systems Generic Requirements (LSSGR)	A set of Telcordia (formerly Bellcore) specifications defining the requirements of LATA switching systems.
Layer-2 Tunneling Protocol (L2TP)	Allows Point to Point Protocol (PPP) sessions to be tunneled over IP and ATM networks
Light Emitting Diode (LED)	Lamps used for display of information. Commonly used on telephone sets to indicate line status.
Line Digital to Trunk (PSAP) (LDT)	A type of Multi Frequency (MF) trunk interface that requires the PSAP equipment to dip the ALI data base.
Liquid Crystal Display (LCD)	A type of video display that creates images of graphics or text by aligning liquid crystals so that they reflect light. An alternative to the Cathode Ray Tube (CRT).
Local Access and Transport Area (LATA)	The geographical areas within which a local telephone company offers telecommunications services.
Local Area Network (LAN)	A transmission network encompassing a limited area, such as a single building or several buildings in close proximity.
Local Exchange Carrier (LEC)	A Telecommunications Carrier (TC) under the state/local Public Utilities Act that provide local exchange telecommunications services. Also known as Incumbent Local Exchange Carriers (ILECs), Alternate Local Exchange Carriers (ALECs), Competitive Local Exchange Carriers (CLECs), Competitive Access Providers (CAPs), Certified Local Exchange Carriers (CLECs), and Local Service Providers (LSPs).
Local Exchange Routing Guide (LERG)	A data base which defines inter-exchange call routing in the North American Public Switched Telephone Network. It associates NPA/NXX's with their appropriate network elements.
Local Loop	A physical facility between a customer's network interface and the local serving central office. The most common form of local loop is a pair of wires.

Term	Definition
Local Notification	A system capability whereby a call to 9-1-1 from a MLTS extension is directed through the 9-1-1 Network to a Public Safety Answering Point and simultaneously to a switchboard operator, attendant, or designated personnel where assistance can be provided to the Public Safety Answering Point to locate the caller and/or to assist in directing response. For Local Notification, the call back number shall be a phone number that can be dialed from the PSTN, which will be answered by the switchboard operator, attendant or designated personnel. Local Notification must include the capability for the switch board operator, attendant or designated personnel to identify the location of telephone lines that have dialed 9-1-1.
Local Number Portability (LNP)	A process by which a telephone number may be reassigned from one Local Exchange Carrier to another.
Local Number Portability Administration Center (NPAC) Data Base	The eight (8) regional Number Portability Administration Center Data Bases which contain current Service Provider switching specific information about TNs involved in porting activity.
Local Operational MSAG	A Local Operational MSAG is maintained in a format other than the recommended standard set forth in NENA 02-010 and 02-011. This format may consist of variances to the standard MSAG such as unparsed and concatenated fields for directional, street name, and suffix. (See Standard MSAG and MSAG Address)
Local Service Management System (LSMS) Data Base	The LSP owned network data base which holds down-loaded ported number information. The NPAC SMS (service management system) downloads information to the LSMS; the LSMS supplies porting data to the SCP (service control point) used for the routing of telephone calls.
Location	In the context of location information to support IP based emergency services: The physical position of VoIP end-point expressed in either civic or geodetic form.
Location Acquisition	In the context of location information to support IP based emergency services: Refers to the way in which a network determined location is provided to the network entity responsible for inserting the location information into the context of an emergency call. Location information may be pushed to the network entity by the LIS, or pulled by the network entity from the LIS. The network entity may be the target, or it may be some other routing node such as a proxy or call-server.
Location-aware	In the context of location information to support IP based emergency services: Used to describe IP endpoint devices that are location-capable and that have acquired location information, either with network assistance or by self-determination.

Term	Definition
Location By-Reference	An identifier that when referenced in the correct manner by an authenticated and authorized entity will yield the location of an IP end-point. An example of a location reference is a URI.
Location By-Value	In the context of location information to support IP based emergency services: A PIDF-LO containing the location of an IP end-point that can be attributed to a specific point in time.
Location-capable	Used to describe IP devices that are capable of requesting, acquiring, and storing location information as well as including this information in a PIDF-LO when originating an emergency call.
Location Conveyance	Refers to the act of transporting location information with an emergency call.
Location Data Security	A process to ensure that a relatively high degree of security for correctness of information, integrity, and authorization of access, authenticity/secrecy, and accuracy of information. The intent of the NENA i2 solution is to provide functional equivalency to the existing network services in an IP-based environment, and this includes ensuring that the location information is valid and secure.
Location Dependability	In the context of location information to support IP based emergency services: Reflects the level of trust that a receiving node has in the quality and authenticity of the location information being provided.
Location Determination	In the context of location information to support IP based emergency services: Act of using measurements taken from the access network to calculate or otherwise discover the physical location of a device.
Location Determination Technology (LDT)	A system which computes the x and y coordinates of a wireless 9-1-1 caller.
Location Estimate	In the context of location information to support IP based emergency services: The approximate physical position of an IP end-point expressed in either civic or geodetic form usually accompanied by a degree of uncertainty. The degree of uncertainty may be expressed by a reduction in precision. For civic locations this equates to the number of fields specified while for geodetic locations it equates to the definition of an area or volume specified as a shape.
Location-incapable	Used to describe IP devices that are not capable of requesting, acquiring, or storing location information. This includes most current IP devices.
Location Information Element (LIE)	A protocol container for either or both of: • one Location Key (LK) • one Presence Information Data Format (PIDF) document

One Nation 9-1-1 One Number

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1
TERMINOLOGY
PAGE 44 OF 91

Term	Definition
Location Information Server (LIS)	LIS serves as a repository for location information. Location information is in the form of civic address or geo-spatial location attributes correlated with a particular physical location. The LIS is configured with mappings between individual location information and a logical representation of the physical locations with which they are associated. This set of associations is called a "wiremap."
Location Information Server (LIS) Operator	Operates the LIS associated with the IP access network used by the callers.
Location Information Server Identifier (LIS-ID)	An identifier for the LIS in which the location object (LO) is stored.
Location Key (LK)	An object that uniquely identifies an instance of a LO that is stored/managed by a LIS on behalf of a VoIP endpoint. The Location Key must contain: • **LIS-ID** – an identifier for the LIS in which the LO is stored. • **Client ID** – an identifier for an instance of a LO (Geo Location, Civic Location or both) that is stored in a LIS.
Location Object (LO)	The LO is used to refer to the current position of a VoIP endpoint that originates an emergency call. The LO is expected to be formatted as a Presence Information Document Format – Location Object (PIDF-LO) as defined by the IETF in draft-ietf-geopriv-pidf-lo-03[8]. The PIDF-LO may be: • **Geo location** – latitude, longitude, elevation, and the datum which identifies the coordinate system used. For the i2 solution it is expected that geo location information will be formatted using the World Geodetic System 1984 (WGS84) datum. • **Civic location** – a set of elements that describe detailed street address information.
Location Recipient	In the context of location information to support IP based emergency services: A location recipient is the consumer of location information. This may be the target, the PSAP, the VPC or any other node that uses location information when it is provided.
Location-unaware	Used to describe IP devices that are location-capable but that have not been able to successfully acquire location information, either with network assistance or by self-determination.
Location Validation	Refers to the action of ensuring that a civic address can be used to discern a route to a PSAP.

Term	Definition
Logging Recorder	A voice-band audio recorder which records to and plays from a permanent storage media such as tape or disk. Logging recorders are typically multi-channel so as to simultaneously record from several sources.
Login	The process of identifying and authenticating oneself to a computer, ACD or E9-1-1 attendant position system.
Loopback	A type of diagnostic test in which a transmitted signal is returned to the transmitting device and then compared to the original signal.
Lost otherwise missing	A child's whereabouts are unknown to the child's caretaker and this causes the caretaker to be alarmed for at least 1 hour and try to locate the child, under one of two conditions: (1) the child was trying to get home or make contact with the caretaker but was unable to do so because the child was lost, stranded, or injured; or (2) the child was too young to know how to return home or make contact with the caretaker.
Main Station	(see Access Line)
Management Information System (MIS)	A program that collects, stores and collates data into reports enabling interpretation and evaluation of performance, trends, traffic capacities, etc.
Manual Transfer	The capability of a PSAP attendant to transfer a 9-1-1 call to another location by manually dialing the destination number or speed dialing code.
Master Clock	An accurate timing device that generates synchronization signals to control other clocks or equipment. (Ref. NENA 04-002)
Master Street Address Guide (MSAG)	A data base of street names and house number ranges within their associated communities defining Emergency Service Zones (ESZs) and their associated Emergency Service Numbers (ESNs) to enable proper routing of 9-1-1 calls.
Master Street Address Guide (MSAG) Address	Address recognized by Public Safety for the dispatch of emergency first responders. It is an absolute and unique address in that variants for directions, street spelling, street suffixes, and community names are not allowed. It is preferred that MSAG Addresses be in Civic Address format. The community name associated with this address format is assigned by the Addressing Authority in cooperation with the 9-1-1 Administrator and may or may not be the same as the community name assigned by the USPS. MSAG addresses are used to route 9-1-1 calls and for ALI display. NOTE: MSAG Address data format is not standardized throughout the country. This is generally attributed to legacy system limitations that have been continued as operational practices on the part of 9-1-1 administrative entities. This fact gives rise to the need for two subtending MSAG definitions. (See Standard MSAG and Local Operational MSAG.)

Term	*Definition*
Master Street Address Guide (MSAG) Administrator	The organizational entity responsible for maintaining a specific set of MSAG data in order to keep it relevant and up-to-date. The MSAG Administrator is the final authority on MSAG accuracy and works with the appropriate 9-1-1 Administrator to maintain integrity of the data.
Master Street Address Guide (MSAG) Consumer	Identifies appropriate organizational entities that have an accepted need for the MSAG in order to support E9-1-1 (e.g., DBMSPS, SPs, Wireless, VDBs, ERDBs, VSPs).
Master Street Address Guide (MSAG) Discrepancy	An MSAG Discrepancy is defined as a record being retrieved from ALI during an actual E9-1-1 call with incorrect information because an MSAG field was incorrect. For example, incorrect ESN assignment or transposition of numbers, incorrect house number ranges, odd/even indicator.
Master Street Address Guide (MSAG) Error	An MSAG error is defined as a hard error from DBMS service order processing or a manual update that failed to meet the MSAG specifications.
Master Street Address Guide (MSAG) FTP Client	Describes the system which connects to the MSAG FTP Server in order to retrieve MSAG data files. Throughout this document the MSAG FTP Client will referred to as the "FTP client".
Master Street Address Guide (MSAG) FTP Interface	Utilizes the SFTP protocol that has been implemented on one or more managed file servers, which enables the transfer of MSAG data files to authorized MSAG consumers.
Master Street Address Guide (MSAG) FTP Server	The system that the MSAG Source organization uses for distributing MSAG data files to necessary recipients. MSAG data files may be distributed on several servers with each server responsible for enforcing user authentication processes for any MSAG FTP Client system. Throughout this document the MSAG FTP Server will referred to as the "FTP server".
Master Street Address Guide (MSAG) Operator	Typically the Database Management System Provider (DBMSP). Works in conjunction with 9-1-1 Administrator to provide and maintain the database equipment and infrastructure that supports the access and retrieval of the MSAG data by authorized parties
Master Street Address Guide (MSAG) Source	Represents a recognized supplier of MSAG files, which may be the MSAG Administrator, or an authorized MSAG Operator. The MSAG Source is typically the E9-1-1 System Service Provider, but may be the 9-1-1 Administrator's MSAG Administrator.
Mechanical Dialer	(see Automatic Alarm and Automatic Alerting Device)

Term	Definition
Media Gateway Control Protocol (MGCP)	In computing, MGCP is a protocol used within a Voice over IP system. MGCP is an internal protocol used within a distributed system that can appear to the outside world as a single VoIP gateway. This system is composed of a Call Agent, at least one "media gateway" (MG) that performs the conversion of media signals between circuits and packets, and at least one "signaling gateway" (SG) when connected to the PSTN. MGCP is a client-server protocol, used by telephony providers in order to have more control over subscribers, contrary to the Session Initiation Protocol (SIP) or H.323 that are peer-to-peer protocols. However, MGCP and SIP can be combined in some cases.
Message Encryption	Message encryption is a process of disguising a message in such a way as to hide its substance.
Message Integrity	Message integrity mechanisms provide protection against unauthorized message modifications.
Micro-Cell	Commonly used to describe PCS cells due to their much smaller footprint compared to a Cellular cell.
Migrate	The term used to describe the inward transaction the Recipient Company submits to the 9-1-1 Data Base Management System Provider that signifies movement of telephone service from a Donor Service Provider.
Millisecond (ms)	One-thousandth of a second (0.001 s)
Misroute	An E9-1-1 call routed to an incorrect PSAP due to a network discrepancy; i.e., wrong ESN in selective routing data base, incorrect switch translations.
Mobile	In the context of location information to support IP based emergency services: A user is said to be mobile if they are able to change access points while preserving all existing sessions and services regardless of who is providing the access network, and their location may be definitively represented by a geographic co-ordinates but only indicatively represented by a civic address.
Mobile Competence Centre (MCC)	The Mobile Competence Centre (MCC) provides support to the 3rd Generation Partnership Project (3GPP), as well as to ETSI's Technical Committee projects. MCC combines voluntary resources with funded resources, all of which are located at the ETSI Headquarters in Sophia Antipolis, southern France. Some experts have been provided by the 3GPP Partners; the remaining team members are paid for from the MCC budget.
Mobile Directory Number (MDN)	The telephone number dialed to reach a wireless telephone.
Mobile Identified Number (MIN)	A 34-bit binary number that a wireless handset transmits to identify itself to the wireless network.

Term	Definition
Mobile Position Center (MPC)	The MPC serves as the point of interface to the ANSI wireless network for the Emergency Services Network. The MPC serves as the entity which retrieves, forwards, stores and controls position data within the location network. It can select the PDE(s) to use in position determination and forwards the position to the requesting entity or stores it for subsequent retrieval. In the case of a PDE with autonomous determination capability, the MPC receives and stores the position estimation for subsequent retrieval. The MPC may restrict access to position information (e.g., require that the MS be engaged in an emergency service call or only release position information to authorized nodes.)
Mobile Station (MS)	The Mobile Station is the end user making the emergency services call. In Phase 2 it is up to the location terminology in the wireless network to locate the Mobile Subscriber's handset so that the Position Information may be passed to the Emergency Services Network.
Mobile Switching Center (MSC)	The wireless equivalent of a Central Office, which provides switching functions from wireless calls.
Mobile Switching Center Trunk Alternate Route	The routing condition that occurs when all trunks from the MSC to SR are *out of service* and calls need to be routed to the PSAP. The scenario represents an MSC to SR trunk *failure* condition versus an all trunks *busy* condition. (57-001)
Mobile Switching Center Default Route	The routing condition that occurs when a) a wireless 9-1-1 call arrives at an MSC with insufficient data to allow normal routing to the correct PSAP, or b) all dedicated MSC to SR trunks, primary and secondary routes, are out of service (i.e., trunk *failure* condition).(57-001)
Mobile Switching Center Trunk Overflow	The routing condition that occurs when all trunks from the MSC to the SR are busy with calls and additional calls need to be routed to the PSAP. Wireless call volume exceeds available MSC to SR trunk capacity. (57-001)
Mobile Switching Office (MSO)	(see Mobile Switching Center (MSC))
Modem	An interface device which allows digital data signals to be transmitted over analog telephone lines.
Multi-Frequency (MF)	A type of in-band signaling used on analog interoffice and 9-1-1 trunks.
Multi-Line Telephone System (MLTS)	A system comprised of common control unit(s), telephone sets, and control hardware and software. This includes network and premises based systems. i.e., Centrex and PBX, Hybrid, and Key Telephone Systems owned or leased by governmental agencies and non-profit entities, as well as for profit businesses.
Multi-Line Telephone System (MLTS) Operator	The entity that either owns, or leases/rents from a third party, and operates a MLTS through which a caller/person may place a 9-1-1 call through the public switched network.

Term	Definition
MultiMedia Telecommunications Association (MMTA)	MMTA focuses on the convergence of communications and computing. Providing an open forum for the development of global markets, MMTA strives to ensure a high level of competency and creativity in the delivery of new technology-based solutions to the business community. In the fall of 2000, MMTA was integrated into TIA.
Multi-Protocol Label Switching (MPLS)	A mechanism that allows network administrators to perform a measure of traffic engineering within their networks.
Multi Protocol Over ATM (MPOA)	A specification that enables ATM services to be integrated with existing local-area networks (LANs) that use Ethernet, token-ring or TCP/IP protocols. The goal of MPOA is to allow different LANs to send packets to each other via an ATM backbone.
Namespace Name	The full-form name of a namespace. For example, "*Library Of Congress Catalogue Number*" or "urn:*oasis names:tc:emergency:cap:1.1*" (the XML namespace name assigned to the OASIS Common Alerting Protocol schema definitions).
Namespace Qualifier	A short-form synonym of a namespace name. It is used together with an object identity to make explicit the defining (parent) namespace of the identity. We will then say that the identity is *namespace-qualified.* For example, LCCN is used for the "*Library Of Congress Catalogue Number*" namespace.
Namespace Prefix	The equivalent of *namespace qualifier* in XML – a short-form synonym for a *namespace URI.*
Namespace Uniform Resource Identifier (URI)	The XML specific *namespace name.*
National Emergency Number Association(NENA)	The National Emergency Number Association is a not-for-profit corporation established in 1982 to further the goal of "One Nation-One Number." NENA is a networking source and promotes research, planning and training. NENA strives to educate, set standards and provide certification programs, legislative representation and technical assistance for implementing and managing 9-1-1 systems.
Nationally Recognized Testing Laboratory (NRTL)	Any of several testing laboratories recognized in the United States in accordance with industry and municipal standards.
Network Access Identifier (NAI)	An identifier commonly used to tie a user to a specific realm.
Network Access Server (NAS)	A device that controls access to a network or to an ISP. It is an access gateway between an external communications network and an internal network.

DOCKET NO. 070736-TP

NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 50 OF 91

Term	Definition
Network Address Translation (NAT)	In computer networking, the process of **network address translation (NAT,** also known as **network masquerading** or **IP-masquerading**) involves re-writing the source and/or destination addresses of IP packets as they pass through a router or firewall. Most systems using NAT do so in order to enable multiple hosts on a private network to access the Internet using a single public IP address.
Network Element Security	Describes methods for securing any layer 3 device in an IP network – including routers and some switches. This includes both physical and IT related security practices.
Network Layers Model	The OSI, or Open System Interconnection, model defines a networking framework for implementing protocols in seven layers. Control is passed from one layer to the next, starting at the application layer in one station, and proceeding to the bottom layer, over the channel to the next station and back up the hierarchy. In ascending order the layers are: physical, data link, network, transport, session, presentation, and application.
Network Layer Security	This is security deployed by layer 3 devices that prevent attacks aimed at terminating network services. This includes firewalls, ACL's and other network related devices and techniques for threat mitigation.
Network Location Determination	In the context of location information to support IP based emergency services: Refers to the mechanism and data that a network entity can use to ascertain the whereabouts of a terminal in the access network such that the location can be specified in a valid PIDF-LO.
Network Reliability Council (NRC)	A study group made up of experts in the field of networks as they relate to Public Safety Systems charged with assessing the reliability of the network and to make recommendations concerning service quality.
Network Time Protocol (NTP)	A powerful utility for synchronizing system clocks over a TCP/IP network.
Next Generation 9-1-1 (NG9-1-1)	NG9-1-1 is the next evolutionary step in the development of the 9-1-1 emergency communications system known as E9-1-1 since the 1970s. NG9-1-1 is a system comprised of managed IP-based networks and elements that augment present-day E9-1-1 features and functions and add new capabilities. NG9-1-1 will eventually replace the present E9-1-1 system. NG9-1-1 is designed to provide access to emergency services from all sources, and to provide multimedia data capabilities for PSAPs and other emergency service organizations. NOTE: It is recognized that there will be a multi-year transition to NG9-1-1 beginning as early as 2007. See the NENA list of FAQs related to NG9-1-1 for more details.

EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 51 OF 91

Term	Definition
No Record Found (NRF)	A condition where no ALI information is available for display at the PSAP.
Nomadic	In the context of location information to support IP based emergency services: A user is said to be nomadic if they are constrained within an access network such that their location can be represented as a definitive civic address for that network attachment. The user may move from one network attachment to another but cannot maintain a session during that move. If the user is able to move outside the definitive civic address without losing network attachment then the user is considered to be mobile, not nomadic.
Nomadic VoIP Call	Call generated by a VoIP user other than their originally provisioned fixed location using the terminal equipment from that location (i.e.: VoIP handset, laptop, VoIP terminal, PC).
Non-blocking	A switching network designed to complete all call attempts.
Non Call-Path Associated Signaling (NCAS)	A method for delivery of wireless 9-1-1 calls in which the Mobile Directory Number and other call associated data are passed from the Mobile Switching Center to the PSAP outside the voice path.
Non-family Abduction	A non-family perpetrator takes a child by the use of physical force or threat of bodily harm or detains a child for at least 1 hour in an isolated place.
Non-Selective Routing	The routing of 9-1-1 calls based on the NXX or trunk group.
North American Numbering Plan	Use of 10 digit dialing in the format of a 3 digit NPA followed by 3 digit NXX and 4 digit line number. NPA-NXX-XXXX.
North American Numbering Plan Administration	The agency that tracks assignment of Area Codes and Central Office Codes.
Not In Service (NIS)	A telephone line state that informs the caller that the number dialed is no longer in service.
NPAC – Interactive Voice Response (IVR) System	Porting data is available throughout the U.S. from the NPAC data base via IVR access. Throughout the 02-011 document, referral to access porting data, DOES NOT MEAN IVR ACCESS.
Numbering Plan Area (NPA)	An established three-digit area code for a particular calling area where the first position is any number 2 through 9 and the last two (2) positions are 0 through 9.
Number Pooling	The current practice of assigning blocks of telephone numbers to Local Exchange Carriers in blocks of 1,000 instead of a full NPA-NXX with 10,000 telephone numbers.
Numbering Plan Digit (NPD)	A component of the traditional 8-digit 9-1-1 signaling protocol between the Enhanced 9-1-1 Control Office and the PSAP CPE. Identifies 1 of 4 possible area codes.

Term	Definition
Numbering Plan Digits (NPD)	Part of the North American telephone numbering scheme. This is also known as the Area Code or Numbering Plan Area (NPA).
NXX	A three-digit code in which N is any digit 2 through 9 and X is any digit 0 through 9. Typically used in describing the "Exchange Code" fields of a North American Numbering Plan telephone number. The full numbering system is in the format of "Area Code" + "Exchange Code" + "Line Number" or NPA-NXX-XXXX. A central office will have one or more area and exchange codes.
NYNEX Information Publication (NIP)	Information published by the NYNEX telephone company (now part of Bell Atlantic).
On-Time-Point	The leading edge of a pulse which occurs coincident with the beginning of a second. (Ref. NENA 04-002)
Open Systems Interconnection (OSI)	A 7-layer hierarchical reference model structure developed by the International Standards Organization for defining, specifying, and relating communications protocols; not a standard or a protocol; Layer Description – (7) Application Provides interface with network users, (6) Presentation Performs format and code conversion, (5) Session Manages connections for application programs, (4) Transport Ensures end-to-end delivery, (3) Network Handles network addressing and routing, (2) Data Link Performs local addressing and error detection and (1) Physical Includes physical signaling and interfaces
Order of Authority	A formal order by the state or local authority which authorizes public agencies or public safety agencies to provide 9-1-1 service in a geographical area.
Originating Switchhook Status Indication	An audible and/or visible indication of the status of a calling party being held. (A Basic 9-1-1 feature)
Oscillatory	A transient comprised of various impulse transients with alternating characteristics. (Ref. NENA 04-001)
Otolaryngologist	A physician specialized in diagnosing diseases of the head and neck especially those involving the ears, nose, and throat (ENT).
Overflow	The telecommunications term for the condition when there are more calls than the primary network path is designated to handle. This condition invokes the need to perform some form of call treatment, such as busy signals or Alternate Routing (also see Alternate Routing).
P.01 Grade of Service	(see Grade of Service.)

Term	Definition
Packet	Logical grouping of information that includes a header containing control information and (usually) user data. Packets are most often used to refer to network layer units of data. The terms *datagram*, *frame*, *message*, and *segment* are also used to describe logical information groupings at various layers of the OSI reference model and in various technology circles
Packet-Switched Data Networks	In telecommunications, packet-switching is now-dominant communications paradigm, in which packets (units of information carriage) are individually routed between nodes over data links which might be shared by many other nodes. In packet switched networks, such as the Internet, the data is split up into packets, each labeled with the complete destination address and routed individually.
Permanent Virtual Circuit (PVC)	Permanent, or semi-permanent links that are configured in an packet network. A PVC follows a fixed path through a network.
Personal Communications Service (PCS)	A Commercial Mobile Radio Service using cellular radio networks, but distinct from cellular wireless in its frequencies and communications options.
Personal Digital Assistant (PDA)	Small, handheld device used to store address book information, telephone numbers, personal contacts and other personal information.
Phonetic Alphabet	Words and names used to clarify the letter used. (Example: A=alpha or Adam, B=bravo or boy).
Pilot Number	A telephone customer's main account number, lead number, main listed number, or billing account.
Point-to-Point Protocol (PPP)	A protocol that is used to establish a network link over a dedicated channel. It is widely used for internet access. PPP is modular in design and can support different authentication protocols.
Point-to-Point Protocol over Asynchronous Transfer Mode (ATM) (PPPoA)	A specific binding that allows PPP to be used for ATM links. PPPoA is used for DSL networks.
Point-to-Point Protocol over Ethernet (PPPoE)	A specific binding that allows PPP to be used for Ethernet networks links. PPPoE is used for DSL networks.
Polygon	A shape that is closed, i.e.: circle, square, triangle or any derivative thereof.

Term	Definition
Position Determining Entity (PDE)	The PDE determines the precise position or geographic location of a wireless terminal when the MS starts a call or while the MS is engaged in a call. Each PDE supports one or more position determining technologies. Multiple PDEs may service the coverage area of an MPC and multiple PDEs may serve the same coverage area of an MPC utilizing different positioning determining technologies. (PDE is synonymous with Location Determination Technology (LDT))
Position Identifier	A pulse in the IRIG time code which has a predetermined duration and rate that is used to identify location of time code information. (Ref. NENA 04-002)
Postal Address	Address recognized and used by the United States Postal Service (USPS) for delivery of mail. It may be an address with a house number and street name or may also consist of other USPS acceptable delivery options such as rural route information such as Army Post Office (APO), or Fleet Post Office (FPO). Postal addressing may contain variants of abbreviations (Avenue or Ave, Street or St, Route or Rt) that the Postal Service recognizes as acceptable postal addresses. Postal addresses reflect the name of the community assigned by the USPS to the correct zip code.
Pre-programmed message	Pre-programmed messages refer to TTY message that may be programmed into some models of standalone or integrated TTYs that allows the call taker to transmit the message within a minimum number of keystrokes or mouse clicks.
Prelingual Deafness	The loss of hearing before the development of language skills.
Presence	"Presence" or presence information, conveys the ability and willingness of a user to communicate with other users on a network, across a set of devices. IETF RFC 2778 defines a model and terminology for describing systems that provide presence information. In that model, a presence service is a system that accepts, stores, and distributes presence information to interested parties.
Presence Information Data Format (PIDF)	The Presence Information Data Format is specified in IETF RFC 3863; it provides a common presence data format for Presence protocols, and also defines a new media type. A presence protocol is a protocol for providing a presence service over the Internet or any IP network.
Presence Information Data Format – Location Object (PIDF-LO)	Provides a flexible and versatile means to represent location information in a SIP header using an XML schema.
Primary ISDN PSAP	(see Primary Public Safety Answering Point)
Primary Public Safety Answering Point (PSAP)	A PSAP to which 9-1-1 calls are routed directly from the 9-1-1 Control Office. (see Public Safety Answering Point)

One Nation 9-1-1 One Number

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 55 OF 91

Term	Definition
Primary Rate ISDN (PRI)	A non-switched digital service which utilizes DS1 level 1.544 mbps digital carrier full duplex technology and standards to transport multiple 64 kbps clear channels from an originating ISDN equipped central office switch over a point to point facility to a terminating ISDN equipped customer location. PRI utilizes a full duplex 1.544 mbps DS1 level circuit sectioned into twenty-four (24) individual 64 kbps clear channels. Bearer services and circuit control are comprised of twenty-three (23) 64 kbps B-channels and one (1) 64 kbps D-channel totaling to the 1.544 mbps level.
Primary Rate Interface (PRI)	A bundle of ISDN circuits with 23 B channels at 64 Kbps and one D channel equivalent to one T1 link.
Private 9-1-1 Emergency Answering Point	An answering point operated by non-public safety entities with functional alternative and adequate means of signaling and directing response to emergencies. Includes training to individuals intercepting call for assistance that is in accordance with applicable local emergency telecommunications requirements. Private 9-1-1 Emergency Answering Points are an adjunct to public safety response and as such must provide incident reporting to the public safety emergency response centers per local requirements.
Private Branch Exchange (PBX)	A private telephone switch that is connected to the Public Switched Telephone Network.
Private Switch 9-1-1 (PS/9-1-1)	A private telephone system which includes network, switching and data base elements capable of providing ANI (ELIN) and ALI (ERL). Designed to use in emergency situations to notify Public Safety personnel of the specific location of a 9-1-1 caller utilizing a Telephone Station connected to a private telephone network.
Private Switch ALI (PSALI)	A service option which provides Enhanced 9-1-1 features for telephone stations behind private switches. E.g. PBXs.
Project ALERT	America's Law Enforcement Retiree Team for MEC cases
Protocol	A set of rules or conventions that govern the format and relative timing of data in a communications network. There are three basic types of protocols: character-oriented, byte-oriented, and bit-oriented. The protocols for data communications cover such things as framing, error handling, transparency, and line control.
Provider Selection	New IP routing capability that allows a device to select its provider.
Proxy Operator	Operates proxy server(s).

Term	Definition
Proxy or Proxy Server/Policy and Routing Server	"A policy and routing server in the context of SIP is a proxy server, an intermediary entity that acts as both a server and a client for the purpose of making requests on behalf of other clients. A proxy server primarily plays the role of routing, which means its job is to ensure that a request is sent to another entity "closer" to the targeted user. Proxies are also useful for enforcing policy (for example, making sure a user is allowed to make a call). A proxy interprets, and, if necessary, rewrites specific parts of a request message before forwarding it." (Refer to IETF RFC 3261[5].) It can be a policy/routing element in other protocols.
Pseudo Automatic Location Identification (pALI)	An ALI record associated with a pANI, configured to provide the location of the wireless cell or sector and information about its coverage or serving area (footprint).
Pseudo Automatic Number Identification (pANI)	A telephone number used to support routing of wireless 9-1-1 calls. It may identify a wireless cell, cell sector or PSAP to which the call should be routed. Also known as routing number.
Public Agency	A state or any unit of local government or special purpose district located in whole or in part within a state, which provides police, fire-fighting, medical or other emergency services or has authority to do so.
Public Safety Agency	An entity that provides fire fighting, law enforcement, emergency medical or other emergency service.
Public Safety Answering Point (PSAP)	A facility equipped and staffed to receive 9-1-1 calls. (see also Primary and Secondary Public Safety Answering Point (PSAP))
Public Safety Answering Point (PSAP) Operators	Operates the Public Safety Answering Points in a particular county, state, or other regional jurisdiction.
Public Safety Answering Point (PSAP) Uniform Resource Identifier (URI)	A form of a name or address that denotes a PSAP and is used over an IP network.
Public Service Announcement (PSA)	Announcement of events, emergency information and other public interest information on public and private media (radio, television, print) at no cost to the requesting agency (usually).
Public Switched Telephone Network (PSTN)	The network of equipment, lines, and controls assembled to establish communication paths between calling and called parties in North America.

EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 57 OF 91

Term	Definition
Pulse Width Coded	Modulation of a carrier by the digital representation of an analog signal. (Ref. NENA 04-002)
Q or QQ	Indicates a question
Quality Assurance Program	System that facilitates review and evaluation of work product. Information is used to validate effectiveness of training and evaluate need for additional training or other corrective action.
Quality of Service (QoS)	As related to data transmission a measurement of latency, packet loss and jitter.
Queuing	Queuing is an automated process by which call are presented in a predefined sequence to a call taker.
Radio Frequency (RF)	Self explanatory.
Rate Center	A geographically specified area used for determining mileage and/or usage dependent rates in the Public Switched Telephone Network.
Real-Time	The availability of information at the exact time it is occurring.
Real-time Transport Control Protocol (RTCP)	RTCP is a sister protocol of RTP and provides out-of-band control information for an RTP flow. It partners RTP in the delivery and packaging of multimedia data, but does not transport any data itself. It is used periodically to transmit control packets to participants in a streaming multimedia session. The primary function of RTCP is to provide feedback on the quality of service being provided by RTP. It gathers statistics on a media connection and information such as bytes sent, packets sent, lost packets, jitter, feedback and round trip delay. An application may use this information to increase the quality of service perhaps by limiting flow, or maybe using a low compression codec instead of a high compression codec. RTCP is used for Quality of Service (QoS) reporting.
Real-Time Transport Protocol (RTP)	A network protocol used to carry packetized audio and video traffic over an IP network that helps ensure that packets get delivered in a timely way.
Recall Recorder	A voice-band audio recorder which records to and plays from a media that may not be permanent (such as tape loop, fixed disk or RAM). Recall recorders are typically associated with each operator position for the purpose of recording and playing back their most recent conversations. Also known as Call Check or Instant Playback Recorder.
Receipt	Date and time stamp when document either entered into an electronic tracking system by the jurisdiction or service provider.
Recipient Company	The new Service Provider responsible for the end users telephone service and E9-1-1 data after the migration of the telephone number from a Donor Service Provider.

Term	Definition
Redirect Operator	Operates redirect server(s).
Redirect Server/Call Relay Server	In the context of SIP, a call relay server is a redirect server UA server that generates (3xx) redirect responses to requests it receives, redirecting the client to contact an alternate set of Uniform Resource Identifiers (URIs). (Refer to IETF RFC 3261[5].) This may be an H.323 Gatekeeper for implementations that use ITU H.323 architectures.
Redundancy	Duplication of components, running in parallel, to increase reliability; A backup system (either a device or a connection) that serves in the event of primary system failure.
Referred	Date and time stamp when the Data Base Management System Provider's Data Rep determines it is necessary to forward the request to another entity.
Regional Access Network Provider (RANP)	The entity that provides wide area DSL coverage. The RANP provides logical links to an ISP in the form of ATM PVCs, L2TP tunnels, or IP routed traffic.
Rejected	Date and time stamp a request is denied by the recipient.
Remote Authentication Dial-In User Service (RADIUS)	The attributes for conveying access network ownership and location information based on a civic and geospatial location format
Remote Call Forwarding	As utilized within Interim Number Portability, a permanent call forwarding feature that allows a call to one Directory Number to be automatically advanced to a Directory Number of another Local Exchange Carrier.
Remote Switch Units (RSU)	A small switching system that is located at a remote point from a host switch. All or most of its call processing capability is obtained from an electronic type host office. The remote is connected to the host by umbilical circuits providing message and signal handling capabilities.
Reorder Tone	An audible tone of 120 interrupts per minute (ipm) returned to the calling party to indicate the call cannot be processed through the network. Sometimes referred to as fast busy.
Request for Comment (RFC)	A method by which standard setting bodies receive input from interested parties outside of the working group.
Re-Ring	(see Emergency Ring Back)
Resource Reservation Protocol (RSVP)	Protocol that supports the reservation of resources across an IP network.
Response Agency	The public safety agency having legal or consensual obligation to respond to a call for service.
Retrieval Key	A 10-digit number that is used to uniquely identify an emergency call for the purpose of retrieving the ALI record by the PSAP.

Term	Definition
Ringback Tone	A tone returned to the caller to indicate that a call is being processed.
RJ-11	A standard jack for handset and other devices connecting to a twisted pair.
Roaming	Roaming: means gaining network access through a service provider other than the one that the subscriber purchases service from, or outside the subscriber's home service territory.
Root Discovery Operator (RDO)	The operator that supports the well known root database from which the URI (Uniform Resource Identifier) of the correct VDB or ERDB can be determined based on regional location information.
Route Diversity	(see Diverse Routing)
Router	• An interface device between two networks that selects the best route to complete the call even if there are several networks between the originating network and the destination • A device that provides network management capabilities (e.g., load balancing, network partitioning, usage statistics, communications priority and troubleshooting tools) that help network managers to detect and correct problems • An intelligent device that forwards data packets from one local area network (LAN) to another and that selects the most expedient route based on traffic load, line speeds, costs, or network failures to complete the call
Routing Emergency Service Number (ESN)	The 3-5 position Emergency Service Number (ESN) used by a selective router to selectively route a 9-1-1 call and for switch-based selective transfer features. In cases where Routing ESNs are not used, the routing ESN equals the Administrative ESN. (Refer to Administrative ESN)
Routing Number	(see Pseudo Automatic Number Identification (pANI))
Routing Number Authority (RNA)	An authority responsible for distributing ranges of numbers to network operators for the purposes of call routing and query steering.
RS-232C	An electrical and mechanical standard for the serial transfer of digital information between digital systems, such as computers, printers or communications equipment.
Runaways	A runaway is when a child leave home without permission and stays away overnight; or a child 14 years old or younger (or older and mentally incompetent) who is away from home chooses not to return when supposed to and stays away overnight; or a child 15 years old or older who is away from home chooses not to return and stays away two nights.
Secondary ISDN Public Safety Answering Point	(see Secondary Public Safety Answering Point)

Term	Definition
Secondary Public Safety Answering Point	A PSAP to which 9-1-1 calls are transferred from a Primary PSAP. (See Public Safety Answering Point)
Selective Router	(see Enhanced 9-1-1 Control Office)
Selective Router (SR) Operators	Operates the Selective Router(s) corresponding to specific local exchange areas.
Selective Routing (SR)	The routing of a 9-1-1 call to the proper PSAP based upon the location of the caller. Selective routing is controlled by the ESN which is derived from the customer location.
Selective Routing Data Base (SRDB)	The routing table that contains telephone number to ESN relationships which determines the routing of 9-1-1 calls.
Selective Transfer	The capability to transfer a 9-1-1 call to a response agency by operation of one of several buttons typically designated as police, fire, and emergency medical; based on the ESN of the caller.
Server	In information technology, a server is a computer program that provides services to other computer programs (and their users) in the same or other computers. The computer that a server program runs in is also frequently referred to as a server (though it may be used for other purposes as well).
Server	• On a local area network, the computer that runs the administrative software to control access to the network. The server makes network resources available to the workstations • Node or software program that provides services to clients • In network addressing, a concentrator, data switch, or host computer being accessed • In a synchronous packet assembler/disassembler (PAD), a device that assigns remote devices to a logical multipoint host line
Service Address	The physical location of a subscriber access line. Service Address is the recommended address for 9-1-1 use. (May be different from the listed address or billing address)
Service Level Agreement (SLA)	A contract between a service provider and the end user, which stipulates and commits the service provider to a required level of service.
Service Order	Local Exchange Carrier document used for additions, changes or removals of telephone service.
Service Order Input (SOI)	Service Order Input is a file of completed service order updates that is sent to the DBMSP by all SP's.
Service Provider	An entity providing one or more of the following 9-1-1 elements: network, CPE, or data base service.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 61 OF 91

Term	*Definition*
Service Provider Identifier (SPID)	A four (4) character, numeric service provider identification code assigned by the National Exchange Carrier Association (NECA) to Local Exchange Carriers. It does not include resellers, private switch owners or others not acting as LEC's who are sending customer's transaction record data to the 9-1-1 data bases.
Serving Central Office	The central office (CO) from which a subscriber is served. (see Central Office (CO))
Serving Public Safety Answering Point	The PSAP to which call would normally be routed. (57-001)
Session Initiation Protocol (SIP)	This application protocol already has a priority field that recognizes four values. In order of importance, they are: *Emergency, Urgent, Normal, Non-Urgent*
Shared Residential MLTS Service	The use of a MLTS to provide service to residential facilities even if the service is not delineated for purposes of billing. For purposes of the definition, residential facilities shall be liberally construed to mean single family and multi-family facilities including Extended Care Facilities and Dormitories.
Shared Telecommunications Services	Includes the provision of telecommunications and information management services and equipment within a used group located in discrete private premises in building complexes, campuses, or high-rise buildings, by a commercial shared services provider or by a user association, through privately owned customer premises equipment and associated data processing and information management services, and includes the provision of connections to the facilities of a local exchange and to interexchange telecommunications companies.
Signaling Connection Control Part (SCCP)	SCCP is the protocol used at the transport layer for TCAP-based services such as freephone (800/888), calling card, local number portability, wireless roaming, and personal communication services (PCS). SCCP also provides the means by which an STP can perform global title translation (GTT), a procedure by which the destination signaling point and subsystem number (SSN) is determined from digits (i.e., the global title) present in the signaling message.
Signaling System 7 (SS7)/Common Channel Signaling 7 (CCS7)	An out-of-band signaling system used to provide basic routing information, call set-up and other call termination functions. Signaling is removed from the voice channel itself and put on a separate data network. Also known as Common Channel Signaling No. 7 (CCS7).
Signature Control	A means to control the output of a time code signal based on the sync or lock status of the PSAP master clock. (Ref. NENA 04-002)
Simple Network Time Protocol (SNTP)	A utility for synchronizing system clocks over a TCP/IP network. This protocol is similar to NTP and is used when the ultimate performance of the full NTP implementation is not needed.

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 62 OF 91

Term	Definition
Simple Object Access Protocol (SOAP)	SOAP is a protocol for exchanging XML-based messages over a computer network, normally using HTTP. SOAP forms the foundation layer of the Web services stack, providing a basic messaging framework that more abstract layers can build on.
Simple Transversal of User Datagram Protocol (UDP) Network AddressTtranslation (NATs) (STUN)	A protocol for assisting devices behind a NAT firewall or router with their packet routing.
Simulated Facility Group (SFG)	A Facility Group is a set of trunks established for a particular transport purpose to which incoming calls are routed. When this is simulated, this is a form of call blocking for congestion control.
Single Point of Failure	A hardware or software component or sub-system which experiences a failure causing more than 50% of the total system to fail. (Ref. NENA 04-001 Reliability Objectives)
Small Office/Home Office (SOHO)	Describes a small office or home office with few occupants, often just one.
Society of Automotive Engineers (SAE)	U.S. based engineering standard body for the automotive industry.
Sockets	A method for communication between two applications in a network. The socket is defined as "the endpoint in a connection".
Soft Permanent Virtual Circuit (SPVC)	A Soft PVC is a user-to-user connection in which the user-to-network connections are PVCs, but all or part of the cross-network connection is an SVC and does not need to be configured at every hop across the ATM network (as would be the case for a PVC).
Source Data Base	The data base maintained by each Service Provider which provides customer telephone number and location information for the initial load and ongoing updates to the ALI data base held by the Data Base Management System Provider.
Spatial	Concept of describing a space or area of space.
Speech Impairment	Speech Impairment is a communications disorder, such as stuttering, impaired articulation, language impairment or a voice impairment, which adversely affects a person's ability to articulate speech clearly.
Spike Masking	The "spike" is a rapid increase in the number of call attempts to the telephone network. When the network's capacity is reached, all call attempts beyond when can be carried are blocked or "masked" (i.e., you can't see them because they are being carried).

NENA MASTER GLOSSARY OF 9-1-1
TERMINOLOGY
PAGE 63 OF 91

Term	Definition
Splash Ringing	The capability to provide an audible signal simultaneously with trunk seizure on an incoming 9-1-1 call.
SSH File Transfer Protocol (SFTP)	A network protocol that provides file transfer and manipulation functionality over any reliable data stream. It is typically used with the SSH-2 protocol to provide secure file transfer.
Stand Alone Data Base	A data base system created, maintained and located at a 9-1-1 Jurisdiction.
Standard Master Street Address Guide (MSAG)	An MSAG maintained in accordance with the data fields as recommended in NENA standards 02-010 and 02-011. (See MSAG Address and Local Operational MSAG)
Standard Operating Procedure (SOP)	A written directive that provides a guideline for carrying out an activity. The guideline may be made mandatory by including terms such as "shall" rather than "should" or "must" rather than "may".
Start (ST)	An MF signaling tone (digit).
Start Bit	In asynchronous transmission, the first element in each character that prepares the receiving device to recognize the incoming information.
Start Prime (STP)	An MF signaling tone (digit)
Station Identification	A telephone number dialable from the public switched network, which provides sufficient information to permit a return call by the Public Safety Answering Point to the caller or a telephone nearby the caller.
Stop Bit	In asynchronous transmission, the last transmitted element in each character, which permits the receiver to come to an idle condition before accepting another character.
Straight Binary Seconds (SBS)	A binary number that appears in the IRIG time code which represents the total number of seconds since midnight. (Ref. NENA 04-002)
Stranded Unlock Record	A record in the E9-1-1 data base unlocked by the Donor Company via a Function of Change (U) unlock transaction record for more than seven (7) days for which a migrate order has not been sent by the Recipient Company. Once unlocked, a record remains unlocked until a (M) migrate record is received, or the systems permissive migrate transaction time has expired and no other changes shall be made to the record.

Term	*Definition*
Stream Control Transport Protocol (SCTP)	SCTP is defined by IETF RFC2960 as the transport layer to carry signaling messages over IP networks. SCTP/T is just one of the many products in the Adax Protocol Software (APS) SIGTRAN suite that has been designed for Convergence, Wireless and Intelligent Networks. Compliant with IETF RFC2960 and RFC3309, SCTP/T (SCTP for Telephony) is implemented in the OS kernel. SCTP/T provides a transport signaling framework for IP networks that enhances the speed and capability of SSCS/HSL and can be deployed over T1/E1, Ethernet and ATM OC3 physical media interfaces. In addition to the services specified in IETF RFC2960, Adax SCTP/T also provides a transport framework with levels of service quality and reliability as those expected from a Public Switched Telephony Network (PSTN).
Successful ALI Queries	The sum of all ALI Queries less No Record Founds, Misroutes, MSAG Discrepancies, and ALI Discrepancies.
Switched Virtual Circuit (SVC)	A network connection initiated by signaling at a UNI, where the originator specifies the destination address.
Symmetrical Digital Subscriber Line (SDSL)	A technology that allows more data to be sent over existing copper telephone lines. It is called symmetric because it supports the same data rates for upstream and downstream traffic.
Sync	Abbreviation for synchronized or synchronization.
Synchronization	In the context of timing, synchronization means to bring clocks or data streams into phase so they agree with the PSAP master clock. (Ref. NENA 04-002)
Synchronous Optical NETwork (SONET)	High speed digital transport over fiber optic networks using synchronous protocol.
System Network Architecture (SNA)	IBM's standard network architecture describing logical structure, formats, protocols and operational sequences for transmitting information between software and hardware devices.
System Provider	(see Service Provider)
T1	The T1 (or T-1) carrier is the most commonly used digital transmission service in the United States, Canada, and Japan. In these countries, it consists of 24 separate channels using pulse code modulation (PCM) signals with time-division multiplexing (TDM) at an overall rate of 1.544 million bits per second (Mbps). T1 lines originally used copper wire but now also include optical and wireless media. A T1 Outstate System has been developed for longer distances between cities. It is common for an Internet access provider to be connected to the Internet as a point-of-presence (POP) on a T1 line owned by a major telephone network. Many businesses also use T1 lines to connect to an Internet access provider.

One Nation 9-1-1 One Number

EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1
TERMINOLOGY
PAGE 65 OF 91

Term	Definition
Tag	A unique label that precedes the data for the data element associated with the tag.
Tag Data	A method of identifying data elements of varying lengths within a data record.
Tag Data Record	A record of varying length comprised of pre-defined tag labels and their associated data elements.
Tandem Central Office (Tandem CO)	(see Enhanced 9-1-1 Control Office)
Target	The IP endpoint to which location is attributed.
TDD/TTY Detector	Any device that automatically detects TDD/TTY tones and audibly and/or visually notifies the calltaker.
Team Adam	NCMEC on site emergency response team for abduction cases
Technical Advisory (TA)	A document describing Telcordia's preliminary view of proposed requirements for products, interfaces, technologies or services.
Technical Assistance (TA)	Technical Assistance document issued by the U.S. Department of Justice (US DOJ) to assist agencies in achieving compliance with regulations.
Technical Information Document (TID)	NENA White Paper.
Technical Reference (TR)	A Telcordia document that spells out detailed specification for product or service development.
Technical Requirements Document (TRD)	NENA Technical Requirements Document, developed by a Technical Committee, is used as basis for a NENA Technical Committee or outside Standards Development Organization (SDO) to develop formal industry accepted standards or guidelines.
Telecommunication Technology Committee (TTC)	A Japanese committee whose purpose is to contribute to standardization in the field of telecommunications by establishing protocols and standards for telecommunications networks and terminal equipment, etc as well as to disseminate those standards.
Telecommunications Device for the Deaf (TDD)	Also known as TTY. (see Teletypewriter (TTY))
Telecommunications Industry Association (TIA)	A lobbying and trade association, the result of the merger of the USTA (United States Telephone Association) and the EIA (Electronic Industries Association).
Telecommunications Relay Service (TRS)	A federally mandated service provided by states that provides communication relay between TTY users and voice telephone users, via a third party, for communications assistance.

Term	Definition
Telecommunications Service Provider (TSP)	A business that provides voice or data transmission services. These services are provided over a telecommunications network that transmits any combination of voice, video and/or data between users. A TSP could be, but is not limited to, a Local Exchange Carrier (LEC), a wireless telecommunications provider, a Commercial Mobile Radio Service provider, or a PBX service provider.
Telecommunications Technology Association (TTA)	Telecommunications Technology Association was founded as a voluntary standards body and has established a total of 450 standards in telecommunications fields. Its main aim is to enhance the Korean national infrastructure of telecommunication systems.
Telecommunicator	As used in 9-1-1, a person who is trained and employed in public safety telecommunications. The term applies to call takers, dispatchers, radio operators, data terminal operators or any combination of such functions in a PSAP.
Telematics	The system of components that supports two-way communications with a motor vehicle for the collection or transmission of information and commands.
Telephone Service Priority (TSP)	A procedure used by a telephone company to establish priorities in deciding which lines and trunks to restore subsequent to an outage. Generally, the highest priority goes to federal law enforcement and military usage, with local emergency services (including 9-1-1) and medical facilities following. Established by the National Communications System Office.
Teletypewriter (TTY)	Also know as TDD. A device capable of information interchange between compatible units using a dial up or private-line telephone network connections as the transmission medium. ASCII or Baudot codes are used by these units. (per EIA PN-1663)
Text Telephone	Another term for TDD/TTY
Three-Way Calling	(see Conference Transfer)
Thrownaway	A Thrownaway is a child asked or told to leave home by a parent or other household adult and the child is out of the household overnight; or a child who ia away from home is prevented from returning home by a parent or other household adult.
Time Code	A series of pulses or characters which represent a digit such as a 4. The location of a particular binary digit in the code defines its meaning, 4 hours, 4 minutes or 4 seconds. (Ref. NENA 04-002)
Time Difference of Arrival (TDOA)	A terrestrial Location Determination Technology (LDT) that computes a transmitter's location based upon the times a signal is received at multiple receivers.

Term	Definition
Time Division Duplex Mode (TDD)	This is using TDM access to separate outward and return signals in which the bandwidth used can be variable based on the requirements of the data being transmitted.
Time Division Multiple Access (TDMA)	A digital radio interface utilized by some North American PCS carriers.
Time Division Multiplexing (TDM)	A digital multiplexing technique for combining a number of signals into a single transmission facility by interweaving pieces from each source into separate time slots.
Time Sync Status Character	A specific character location in the ASCII time code data stream which changes dependent on the lock or unlock status of the PSAP master clock to its source. (Ref. NENA 04-002)
Token Ring	Local area network architecture originally developed by IBM. Later standardized by ISSS as 802.5. Transmission on the network is governed by the possession of a "token" or specific octet of data. A station may only transmit when it receives the token.
Traceable UTC Source	Traceable sources of UTC time are available from various time services of the National Institute of Standards and Technology (NIST) and US Naval Observatory (USNO). These services include telephone dial-up, low and high frequency radio transmissions, and Global Positioning System (GPS). (Ref. NENA 04-002)
Transaction Capabilities Application Port (TCAP)	TCAP is an application protocol used to connect to an external data base, perform a query of the data base and retrieve information. The information or data retrieved is then sent back in the form of a TCAP message to the signaling point that requested it. It may reside upon the SS7 protocol stack or TCP/IP stack.
Transfer	A feature which allows the PSAP Telecommunicator to redirect a 9-1-1 call to another location.
Transfer Key	A key which is programmed to dial a telephone number, a selective routing transfer code, or a speed dial code to accomplish the transfer of calls.
Transient	A random disturbance of normal voltage with a very short time duration (<8.3ms) that occurs on the power source or data/signal/telecommunications conductors.
Transient Voltage Surge Suppression (TVSS)	Devices designed to protect critical PSAP equipment from transients induced on powering and data/signal/telecommunications conductors. (Ref. NENA 04-001)
Transmission Control Protocol (TCP)	A communications protocol linking different computer platforms across networks. TCP/IP functions at the 3rd and 4th levels of the open system integration model.

Term	Definition
Transmission Control Protocol/Internet Protocol (TCP/IP)	A layered set of protocols used to connect dissimilar computers together. The TCP part of this provides the transport service required by the application layer. The TCP layers in the two host computers that are sending data will communicate to each other to insure reliable data packet transport. The IP part of this provides the service user to deliver the datagram to its destination. This layer provides the routing through the network and the error messages should the datagram be undeliverable.
Transport Control Protocol (TCP)	The end to end reliability protocol that recognizes and corrects lower layer errors caused by connectionless networks.
Trunk	Typically, a communication path between central office switches, or between the 9-1-1 Control Office and the PSAP.
Trunk Group	One or more trunks terminated at the same two points.
Trunk Seizure	The point in time at which a 9-1-1 call is assigned to a trunk and acknowledgment is provided by the equipment at the distant end.
TTY Protocol	TTY protocol refers to the use of unique abbreviations used to control the flow of conversation. The use of TTY protocols is critical to effective TTY communications.
Unavailable Bit Rate (UBR)	A service call where the bit rate available in the network is not guaranteed to the user. The network does not provide flow control handshaking with the user.
Uncertainty	(See Confidence/Uncertainty)
Underwriters Laboratories (UL)	One of several United States nationally recognized testing laboratories (NRTL) whose testing specifications have been adopted as de facto industry standards.
Uniform Resource Identifier (URI)	A predictable formatting of text used to identify a resource on a network (usually the Internet) OR A string of characters that must follow prescribed syntaxes such as URL, URN... Note Version 1.1 of the XML namespaces recommendation uses IRIs (Internationalized Resource Identifiers) instead of URIs. However, because version 1.1 is not yet a full recommendation [February, 2003] and because the IRI RFC [11] is not yet complete, this document continues to refer to URIs instead of IRIs.
Uniform Resource Locator (URL)	A URL is a URI specifically used for describing and navigating to a resource (e.g. http://www.nena.org)
Uninterruptible Power Supply (UPS)	A backup system designed to provide continuous power in the event of a commercial power failure or fluctuation.
Universal Coordinated Time (UTC)	Also known as Zulu or GMT. Time provided by National Institute of Standards and Technology (NIST) and United States Naval Observatory (USNC).

DOCKET NO. 070736-TP
EXHIBIT _____(CC-1)
NENA MASTER GLOSSARY OF 9-1-1 TERMINOLOGY
PAGE 69 OF 91

Term	*Definition*
Universal Terrestrial Radio Access (UTRA)	UTRA is a standard for 3G mobile communications services being specified by 3GPP. The radio access components of UTRA are based on direct-spread wideband code-division multiple access (WCDMA) and hybrid time-division (TDCDMA) access methods that have been designed for 3G frequency efficiency, mobility, and QoS requirements.
Unlock	The action required by a 9-1-1 Data Base Management System Provider, upon notification from a Donor Company, that makes the end user's telephone number record available for the Recipient Company to replace the customer details and Company ID.
User Agent (UA)	As defined for SIP in IETF RFC 3261[5], the User Agent represents an endpoint in the IP domain, a logical entity that can act as both a user agent client (UAC) that sends requests, and as user agent server (UAS) responding to requests.
User Agent Client (UAC)	Refer to IETF RFC 3261 for the following definition. "A user agent client is a logical entity that creates a new request, and then uses the client transaction state machinery to send it. The role of UAC lasts only for the duration of that transaction. In other words, if a piece of software initiates a request, it acts as a UAC for the duration of that transaction. If it receives a request later, it assumes the role of a user agent server for the processing of that transaction."
User Agent Server (UAS)	Refer to IETF RFC 3261 for the following definition. "A user agent server is a logical entity that generates a response to a SIP request. The response accepts, rejects, or redirects the request. This role lasts only for the duration of that transaction. In other words, if a piece of software responds to a request, it acts as a UAS for the duration of that transaction. If it generates a request later, it assumes the role of a user agent client for the processing of that transaction.
User Datagram Protocol (UDP)	One of several core protocols commonly used on the Internet. Used by programs on networked computers to send short messages, called datagrams, between one another. UDP is a lightweight message protocol, compared to TCP, is stateless and more efficient at handling lots of short messages from many clients compared to other protocols like TCP. Because UDP is widely used, and also since it has no guaranteed delivery mechanism built in, it is also referred to as Universal Datagram Protocol, and as Unreliable Datagram Protocol.
V0 Interface	**LIS to VoIP Endpoint.** The V0 interface is used to provide a means for a VoIP endpoint to receive information corresponding to a pre-determined location.
V1 Interface	**VoIP Endpoint to Call Server/Proxy.** The V1 interface is between the VoIP Endpoint and the Call Server within the VSP's network.

Term	Definition
V2 Interface	**Call Server/Proxy to VPC.** The V2 interface is used to request emergency call routing information when the Call Server/Routing Proxy/Redirect Server is a separate element from the VPC.
V3 Interface	**LIS to VPC (Optional).** The V3 interface provides a means for the VPC to obtain the emergency caller's location.
V4 Interface	**Call Server/Routing Proxy to ESGW.** The V4 interface is used to forward the call to the appropriate ESGW.
V5 Interface	**Call Server to Redirect Server.** The V5 interface is defined as a SIP interface to a Redirect Server so it supports a subset of the SIP specification.
V6 Interface	**Call Server to Routing Proxy.** The V6 interface is defined as a SIP interface to a Routing Proxy.
V7 Interface	**Location Validation Interface.** The V7 interface is used by the LIS provider to request validation of a given Civic Location as compared with the MSAG-based data stored in the VDB. The VSP may also use this interface, when acting on behalf of its customers in the function of location provider/verifier.
V8 Interface	**VPC to ERDB.** The V8 interface supports queries from the VPC to the ERDB.
V9 Interface	**LIS/VPC to Root Discovery Operator.** The V9 interface allows a VEP/LIS or VPC to discover the appropriate VDB/ERDB.
Valid Emergency Services Authority (VESA)	This organization is the root source of all certificates. It is responsible for identifying and issuing certificates either directly to end using entities or through delegate credential authorities. It is responsible for ensuring that any delegate credential authority that it identifies is properly qualified and operating with sufficient security and legitimacy to perform this role. Where VESA issues certificates directly to end users, it also has the responsibilities of a delegate credential authority in those cases.
Valid XML instance document	The instance document satisfies the structural, content type and constraints established by its associated schema (document definition).
Validation Data Base (VDB)	The VDB contains information that describes the current, valid civic address space defined by the Emergency Services Network Provider's MSAG. Validation against this database ensures that the address is a real address (i.e., the address exists) but does not ensure that it is the location of the caller.
Validation Data Base (VDB) Operator	An operator that provides location information validation services to LIS operators and other users.
Variable Bit Rate non-real Time (VBRnrt)	A service where the transmission rate varies over time incorporating the concept of bandwidth on demand.
Variable Bit Rate real-time (VBRrt)	A service where the transmission rate varies over time incorporating the concept of bandwidth on demand.

Term	Definition
V-E2 Interface	**VPC to ALI DB.** The V-E2 interface uses the E2+ protocol as defined in NENA Standards 05-001[13], with modifications required for support of i2.
Version 4 of the Internet Protocol	The transmission of voice as packets of data, using the protocol originally developed for the Internet.
VESA Certificate	This is the certification provided by a VESA that clearly identifies the end user is properly qualified and operating with sufficient security and legitimacy to perform its role. Presumably it can be used in a variety of situation including secure web based transactions and exchange of data from one point to another on the network. Generally, the process of checking certification occurs in the background and the end user receives either a pass or a fail.
Virtual Circuit (VC)	A packet-based communications link between two devices that emulates a dedicated physical circuit.
Virtual Circuit Identifier (VCI)	Part of the addressing information used in an ATM frame that identifies a particular virtual path.
Virtual Facility Group (VFG)	One or more trunks terminated at the same two points and used internally within a switch. When referred to as E9-1-1VFG, it relates to the E9-1-1 Control Office switch. (From 03-007)
Virtual LAN (VLAN)	A logical grouping of ports and endpoints such that all ports and endpoints in the VLAN appear to be on the same physical (or extended) LAN segment even though they may be geographically separated.
Virtual Path Identifier (VPI)	Part of the addressing information used in an ATM frame that identifies a particular virtual path.
Virtual Private Network (VPN)	A virtual private network (VPN) is a network that uses a public telecommunication infrastructure, such as the Internet, to provide remote offices or individual users with secure access to their organization's network
Voice Carry Over (VCO)	A method which utilizes both voice and text communications on the same call, allowing a person who is hearing impaired to speak directly to the other party and receive response via a TTY or other means for text communications.
Voice over Asynchronous Transfer Mode (VoATM)	A technology that has its root in the development of broadband ISDN. It integrates the multiplexing and switching functions and allows communications between devices
Voice over Digital Subscriber Link (VoDSL)	Enabling digital voice transmission identical to voice over internet protocol but using digital subscriber services as the transport.

Term	Definition
Voice over Frame Relay (VoFR)	A high-speed communications technology used to connect voice applications. It is a way of sending information over a wide area network (WAN) that divides the information into frames or packets. Each frame has a label that the network uses to decide the destination of the frame.
Voice over Internet Protocol (VoIP) Positioning Center (VPC)	The element that provides routing information to support the routing of VoIP emergency calls, and cooperates in delivering location information to the PSAP over the existing ALI DB infrastructure. The VPC supports access to the routing data in the ERDB.
Voice over Internet Protocol (VoIP) Service Provider (VSP)	Operates the network service and equipment that provides call processing for Voice over IP subscribers.
Voice over Internet Protocol, Voice over IP (VoIP)	Provides distinct packetized voice information in digital format using the Internet Protocol. The IP address assigned to the user's telephone number may be static or dynamic.
Voice over Packet (VoP)	Packetized voice communication over a data network.
Voice over the Internet	Transmit voice with varying consistency depending on overall traffic and engineering of the Internet circuits.
Voice Service Provider (VSP)	Operates the network equipment that provides call processing for Voice over Internet Protocol subscribers.
VoIP Endpoint (VEP)	The endpoint IP Device that is used to originate an emergency call.
VoIP Positioning Center (VPC)	The VoIP Positioning Center (VPC) is the element that provides routing information to support the routing of VoIP emergency calls, and cooperates in delivering location information to the PSAP over the existing ALI DB infrastructure. The VPC supports access to the routing data in the ERDB.
VPC Operator	Operates VPC network element(s).
Web	World Wide Web or Internet.

Term	Definition
Web Service Description Language (WSDL)	The Web Services Description Language (WSDL) is an XML-based language used to describe the services a business offers and to provide a way for individuals and other businesses to access those services electronically. WSDL is the cornerstone of the Universal Description, Discovery, and Integration (UDDI) initiative spearheaded by Microsoft, IBM, and ARIBA. UDDI is an XML-based registry for businesses worldwide, which enables businesses to list themselves and their services on the Internet. WSDL is the language used to do this. WSDL is derived from Microsoft's Simple Object Access Protocol (SOAP) and IBM's Network Accessible Service Specification Language (NASSL). WSDL replaces both NASSL and SOAP as the means of expressing business services in the UDDI registry.
Well-formed XML instance document	The instance document satisfies XML syntax rules
Wide Area Network (WAN)	Network using common carrier-provided lines that covers and extended geographical area.
Wireless	Means any Commercial Mobile Radio Service (CMRS) that falls under the FCC's Docket 94-102 requirement for wireless enhanced 9-1-1 service.
Wireless Access Point (WAP)	http://en.wikipedia.org/wiki/Wireless access point, provides the following definition: "In computer networking, **a wireless access point (WAP or AP)** is a device that connects wireless communication devices together to form a wireless network. The WAP usually connects to a wired network, and can relay data between wireless devices and wired devices. Several WAPs can link together to form a larger network that allows "roaming". (In contrast, a network where the client devices manage themselves – without the need for any access points – becomes an ad-hoc network.) Wireless access points have IP addresses for configuration." Refer also to http://www.ieee802.org/11/
Wireless Fidelity (WiFi)	A common name for IEEE 802.11 wireless broadband access networks.
Wireless Local Loop	A "local loop" is a telephone company's distribution of PSTN connectivity to end users within a small (e.g., less than one square mile) geographic area. When that connectivity is done via two-way radio transmission that is a "wireless local loop".
Wireless Network Controller (WNC)	A wireless network controller manages a group of wireless access points in a wireless LAN. In this type of network the wireless network controller is able to control wireless access point hand-overs to improve the overall performance of the network.

Term	Definition
Wireless Phase I	Required by FCC Report and Order 96-264 pursuant to Notice of Proposed Rulemaking (NPRM) 94-102. The delivery of a wireless 9-1-1 call with callback number and identification of the cell-tower from which the call originated. Call routing is usually determined by cell-sector.
Wireless Phase II	Required by FCC Report and Order 96-264 pursuant to Notice of Proposed Rulemaking (NPRM) 94-102. The delivery of a wireless 9-1-1 call with Phase I requirements plus location of the caller within 125 meters 67% of the time and Selective Routing based upon those coordinates. Subsequent FCC rulings have redefined the accuracy requirements.
Wireless Service Provider (WSP)	Cellular, satellite or other radio based telephony or data transport commercial entity.
Wireless Telecommunications	The family of Telecommunications services under the heading of Commercial Mobile Radio Service. Includes Cellular, Personal Communications Services (PCS), Mobile Satellite Services (MSS) and Enhanced Specialized Mobile Radio (ESMR).
Withdrawn	Date and time stamp a request is cancelled by the originator.
Workspace	The physical building area where work is normally performed. This is a net square footage measurement which includes hallways, conference rooms, rest rooms, and break rooms but does not include wall thickness, shafts, heating/ventilating/air conditioning equipment spaces, mechanical/electrical spaces or similar areas where employees do not normally have acc
Worldwide Interoperability for Microwave Access (WiMAX)	A brand name and a certification mark for IEEE 802.16 compliant products.
World Wide Web (WWW)	The public internet.
eXtensible Markup Language (XML)	An internet specification for web documents that enables tags to be used that provide functionality beyond that in Hyper Text Markup Language (HTML). Its reference is its ability to allow information of indeterminate length to be transmitted to a PSAP call taker or dispatcher versus the current restriction that requires information to fit the parameters of pre-defined fields.
eXtensible Markup Language (XML) instance document	An XML document that conforms to a given schema, as a specific instance of that schema.
eXtensible Markup Language (XML) Schema	The formal document definition (structure, content type and constraints) describing a class of XML instance documents. There are various XML schema languages, but in this document, all schemas are assumed to be defined using the W3C XML Schema definition language [5].

3 Acronyms

Acronym	Definitions
3GPP	3RD Generation Partner Project
3GPP2	3rd Generation Partnership Project 2
AAR	Association of American Railroads
ACB	All Circuits Busy
ACCDEN	Access Denied
ACD	Automatic Call Distribution, Automatic Call Distributor
can	Automatic Collision Notification
ADA	Americans with Disabilities Act
ADEA	Age Discrimination in Employment Act
ADSL	Asymmetrical Digital Subscriber Line
AEAN	Alternate Emergency Access Number
AES	Advanced Encryption Standard
AIP	Access Infrastructure Provider
ALE	Access Location Entity
ALEC	Alternate Local Exchange Carrier
ALI	Automatic Location Identification
ALI DB	Automatic Location Identification Database
AMPS	Advanced Mobile Phone Service
ANI	Automatic Number Identification
ANSI	American National Standards Institute
AOA	Angle of Arrival
AoR	Address of Record
API	Application Programming Interface
APU	Answering Position Unit
AQS	NENA ALI Query Service
AQSI	ALI Query Services Interface
ARIB	Association of Radio Industries and Businesses
ARP	Address resolution Protocol
ASCII	American Standard Code for Information Exchange
ASL	American Sign Language
ASLARRA	American Short Line and Regional Railroad Association
ASP	Application Service Provider
ASRR	Average Sector Radius Range
ATA	Analog Terminal Adapter
ATIS	Alliance for Telecommunications Industry Solutions
ATM	Asynchronous Transfer Mode
AVL	Automatic Vehicle Location
BASK	Binary Amplitude Shift Key
BCD	Binary Coded Decimal

BellCore	Bell Communications Research
BLI	Busy Line Interrupt
BLV	Busy Line Verification
BOC	Bell Operating Company
BOOTP	Bootstrap Protocol
BPL	Broadband Over Power Lines
BRAS	Broadband Remote Access Server
BRI	Basic Rate Interface
BUI	Building Unit Identifier
C-TAG	The innermost VLAN tag as defined in IEEE 802.1ad
CA	Communication Assistant
CAD	Computer Aided Dispatch
CAMA	Centralized Automatic Message Accounting
CAP	Competitive Access Provider
CART	Child Abduction Response Team
CAS	Call-path Associated Signaling, Channel Associated Signaling
CBN	Call Back Number
CBR	Constant Bit Rate
CCH	Computerized Criminal History
CCS	Common Channel Signaling or Hundred Call Seconds
CCSA	China Communications Standards Association
CCS7	Common Channel Signaling 7
CDMA	Code Division Multiple Access
CdPN	Called Party Number
CDR	Call Detail Record
CGI	Common Gateway Interface
CGL	Calling Geodetic Location Parameter
CgPN	Calling Party Number
CHGN	Charge Number Parameter
CID	Company Identification/Identifier
CISC	Canadian Radio-Television and Telecommunications Commission Interconnection Steering Committee
CLEC	Competitive Local Exchange Carrier or Certified Local Exchange Carrier
CLID	Calling Line Identification
CLLI	Common Language Location Identifier
CMRS	Commercial Mobile Radio Service
CMTS	Cable Modem Termination System
CO	Central Office
CODEc	Coder/EDCoder or Compression/DECompression
COG	Council of Government
COLT	Cell on Light Truck

Port Service Request (PSR) Instructions and Field Descriptions

PSR Form Submittal Instructions

1. Complete the Port Service Request (PSR) form for each Point of Interface (POI) you will be connecting to.
2. Submit the completed PSR form to IENVprovisioning@intrado.com.
3. Upon receipt of the completed PSR form, Intrado will review the information provided and will reply within two (2) business days as follows:
   - — Provide confirmation of receipt of the properly completed PSR form
   - — Provide the Intrado Facility Point Codes (if applicable – applies to SS7 Connectivity only)
   - — If the form is not properly completed, the confirmation will indicate missing or incorrect data and what additional or corrected information is needed. Please resubmit a properly completed form within two (2) business days (or sooner).
4. Once your circuit is delivered to the POI location, resubmit the PSR form as 'version 2' with your requested test date and the Exchange Company Circuit ID fields populated on the 'version 2' submittal.
5. Once the cross connect is completed, Intrado will notify the TSP of completion within five (5) business days of the 'version 2' submittal and schedule initial testing.
6. Please forward any questions to IENVprovisioning@intrado.com.

PSR Field Descriptions

Administrative Information Section of PSR Form

PON: Purchase Order Number. Identifies the Telephone Service Providers (TSP's) unique purchase-order or requisition number that authorizes the issuance of this request or supplement.

USAGE – The field is required.

DATA CHARACTERISTICSCHARACTERISTICS – 16 alpha numeric characters

EXAMPLE: 824Z9

VER: Version Identification. Identifies the TSP version number.

USAGE – The field is required.

DATA CHARACTERISTICSCHARACTERISTICS – Up to 2 alpha numeric characters

EXAMPLE: A2

D/TSENT: Date Sent. Identifies the date the Port Service Request is sent by the TSP.

Two-Digit Month (01-12)

Two-Digit Date (01-31)

Four-Digit Year (0000-9999)

USAGE – The field is required.

DATA CHARACTERISTICSCHARACTERISTICS – 8 numeric characters (including 2 hyphens)

EXAMPLE: 05-22-2007

DDD: Desired Due Date. Identifies the TSP's expected delivery of CFA (Tie Down) .

Two-Digit Month (01-12)

Two-Digit Date (01-31)

Four-Digit Year (0000-9999)

USAGE – The field is required.

DATA CHARACTERISTICSCHARACTERISTICS – 8 alpha numeric characters (including 2 hyphens)

EXAMPLE: 03-02-2008

PROJECT: Project Identification. Identifies the project with which the request is to be associated. Examples of the use of this field would be relating multiple requests especially for an initial cutover.

USAGE – The field is optional.

DATA CHARACTERISTICSCHARACTERISTICS – Up to 16 alpha numeric characters

EXAMPLE: MS736119

PPTD: Test Date. Identifies the pre-negotiated test date for the start of testing. Must be greater than the desired due date.

USAGE – The field is optional.

DATA CHARACTERISTICSCHARACTERISTICS – 8 alpha numeric/characters (including 2 hyphens)

VALID ENTRIES:

U.S. Standard	Metric Format
Two -Digit Month (01-12)	Two -Digit Century (00-99)
Two-Digit Day (01-31)	Two-Digit Year (00-99)
Four-Digit Year (0000-9999)	Two-Digit Day (01-31)

EXAMPLE: 03-22-2007

NOR: Number of Requests. Identifies both specific and total quantity of requests within a group of Requests being ordered.

USAGE – The field is required

DATA CHARACTERISTICS – 4 numeric characters

EXAMPLE: 01 of 06

ACT: Activity. Identifies the activity involved in this request.

USAGE – The field is required.

DATA CHARACTERISTICS – 1 alpha character

VALID ENTRIES

New installation or increase in capacity

Disconnection or decrease in capacity

Change CAMA to SS7, ISDN, or IP

EXAMPLE: N

SUP: Supplement Type. A supplement is any new iteration of a PSR. The entry in the SUP field identifies the reason for which the supplement is being issued.

USAGE – The field is conditional. Not for use on an initial request.

DATA CHARACTERISTICS – 1 numeric character

VALID ENTRIES:

Cancel – Indicates that the pending order is to be cancelled in its entirety.

New Due Date – Indicates that the pending order requires only a change of due date.

Other – Any other change to the request.

Correction – Indicates that this request is being issued to correct a previous request for which a firm confirmation has not been received.

EXAMPLE: 4

EXP: Expedite. Indicates that expedited treatment is requested and any charges generated in provisioning this request (e.g., additional engineering charges or labor charges if applicable) will be accepted.

USAGE – The field is optional.

DATA CHARACTERISTICS – 1 alpha character

VALID ENTRIES:

Y = Expedite Charges Authorized

EXAMPLE: Y

CKR: TSP Circuit Reference (primary/secondary). Identifies the circuit number or range of circuit numbers used by the TSP.

USAGE – The field is optional.

DATA CHARACTERISTICS – Up to 53 alpha/numeric characters.

EXAMPLE: 0002/DF88ES

ECCKT. Exchange Company Circuit ID (Primary/Secondary). Identifies the LEC local loop circuit ID or multiple circuit IDs.

USAGE – The field is required on final draft of order (Version 2).

DATA CHARACTERISTICS – Up to 53 alpha/numeric characters.

EXAMPLE: 0002/DF88ES

RORD. Related Order Number – Identifies a related AP order number.

USAGE – The field is optional.

DATA CHARACTERISTICS – Up to 17 alpha/numeric characters

EXAMPLE: C456895

RPON: Related Purchase Order Number. Identifies the PON of a related Port Service Request.

USAGE – The field is optional.

DATA CHARACTERISTICS – Up to 16 alpha/numeric characters

EXAMPLE: 824Z9

POI SITE: Point of Interface Site. The location of the POI site that the TSP is connecting into. Each TSP must connect to a minimum of two POI locations. For a list of POI locations, go to Intrado's IEN Interconnection web page at www.Intradocomm.com.

USAGE – The field is required.

DATA CHARACTERISTICS – City: 32 alpha characters, State: 2 alpha characters

EXAMPLE: City: Denver; State: CO

POI CLLI CODE: Point of Interface Site CLLI Code. The CLLI code of the POI site you are connecting into. For a list of POI CLLI Codes, go to Intrado's IEN Interconnection web page at www.Intradocomm.com.

USAGE – The field is required.

DATA CHARACTERISTICS – 11 alpha/numeric characters

EXAMPLE: WCHSOHGR0ED

REMARKS: Identifies a free flowing field which can be used to expand upon and clarify other data on this form.

USAGE – The field is optional.

DATA CHARACTERISTICS – Up to 186 alpha/numeric characters

EXAMPLE: DISC OF FIRST CIRCUIT IN GROUP

Billing Section of PSR Form

BILLNM: Billing Name. Identifies the name of the person, office, or company to whom the TSP has designated that the bill be sent.

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 25 alpha/numeric characters

EXAMPLE: XYZ CORPORATION

SBILLNM: Secondary Billing Name. Identifies the name of a department or group within the designated BILLNM entry.

USAGE – The field is optional.

DATA CHARACTERISTICS – Up to 25 alpha/numeric characters

EXAMPLE: TSPCOUNTS RECEIVABLE

STREET: Street Address. Identifies the street of the billing address associated with the billing name.

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 25 alpha/numeric characters

EXAMPLE: 125 E MAIN STREET

FLOOR: Identifies the floor for the billing address associated with the billing name.

USAGE – The field is optional.

DATA CHARACTERISTICS – Up to 3 alpha/numeric characters

EXAMPLE: 32

ROOM: Identifies the room for the billing address associated with the billing name.

USAGE – The field is optional.

DATA CHARACTERISTICS – Up to 6 alpha/numeric characters

EXAMPLE: 1K151A

CITY: Identifies the city, village, township, etc. of the billing address associated with the billing name.

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 25 alpha/numeric characters

EXAMPLE: LONGMONT

STATE: State/Province. Identifies the two character postal code for the state/province of the billing address associated with the billing name.

USAGE – The field is required.

DATA CHARACTERISTICS – 2 alpha/numeric characters

EXAMPLE: CO

ZIP CODE: Identifies the zip code or zip+4 of the billing address associated with the billing name.

USAGE – The field is required.

DATA CHARACTERISTICS – 12 alpha/numeric characters

EXAMPLE: 07039 or 08854-1234

BILLCON: Billing Contact. Identifies the name of the person or office to be contacted on billing matters.

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 15 alpha/numeric characters

EXAMPLE: JANE T DOE

TEL NO: Telephone Number. Identifies the telephone number of the billing contact.

USAGE – The field is required.

DATA CHARACTERISTICS – 14 (10 digit + 4 digit extension) alpha/numeric characters (including 3 hyphens)

EXAMPLE: 201-555-3400-2223

Contact Section of PSR Form

INIT: Initiator Identification. Identifies the TSP's employee who originated this request.

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 15 alpha/numeric characters

EXAMPLE: JOHN SMITH

TEL NO: Telephone Number. Identifies the telephone number of the TSP's employee who initiated the request.

USAGE – The field is required.

DATA CHARACTERISTICS – 14 (10 digit + 4 digit extension) alpha/numeric characters (including 3 hyphens)

EXAMPLE: 201-555-3400-2225

FAX NO: Fax Number. Identifies the fax number of the TSP's employee who initiated the request.

USAGE – The field is optional.

DATA CHARACTERISTICS – 10 digits (including 2 hyphens)

EXAMPLE: 201-981-3500

ENGINEERING: Engineering Identification

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 15 alpha/numeric characters

EXAMPLE: JOHN SMITH

TEL NO: Telephone Number. Identifies the telephone number of the Engineering Contact.

USAGE – The field is required.

DATA CHARACTERISTICS – 14 (10 digit + 4 digit extension) alpha/numeric characters (including 3 hyphens)

EXAMPLE: 201-555-3400-2225

FAX NO: Fax Number. Identifies the fax number of the Engineering Contact.

USAGE – The field is optional.

DATA CHARACTERISTICS – 10 digits (including 2 hyphens)

EXAMPLE: 201-981-3500

TEST: Tester Identification

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 15 alpha/numeric characters

EXAMPLE: JOHN SMITH

TEL NO: Telephone Number. Identifies the telephone number of Tester.

USAGE – The field is required.

DATA CHARACTERISTICS – 14 (10 digit + 4 digit extension) alpha/numeric characters (including 3 hyphens)

EXAMPLE: 201-555-3400-2226

FAX NO: Fax Number. Identifies the fax number of the Tester.

USAGE – The field is optional.

DATA CHARACTERISTICS – 10 digits (including 2 hyphens)

EXAMPLE: 201-981-3500

SITE: Site Contact Tester Identification

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 15 alpha/numeric characters

EXAMPLE: JOHN SMITH

TEL NO: Telephone Number. Identifies the telephone number of the TSP's Site Contact.

USAGE – The field is required.

DATA CHARACTERISTICS – 14 (10 digit + 4 digit extension) alpha/numeric characters (including 3 hyphens)

EXAMPLE: 201-555-3400-2226

FAX NO: Fax Number. Identifies the fax number of the TSP's Site Contact.

USAGE – The field is optional.

DATA CHARACTERISTICS – 10 digits (including 2 hyphens)

EXAMPLE: 201-981-3500

NOC: Network Operations Center. Identifies the NOC Name for future trouble reporting of this connectivity.

USAGE – The field is required.

DATA CHARACTERISTICS – 25 alpha/numeric characters

EXAMPLE: XYZ NOC

TEL NO. Telephone Number. Identifies the NOC Telephone number for future trouble reporting of this connectivity.

USAGE – The field is required.

DATA CHARACTERISTICS – 10 digits (including 2 hyphens)

EXAMPLE: 201-981-3500

NOC EMAIL ADDRESS: Network Operations Center Email Address. Identifies the email address of the TSPs NOC.

USAGE – The field is required.

DATA CHARACTERISTICS – 50 alpha/numeric characters

EXAMPLE: XYZCORPNOC@XYZ.COM

Trunking/Connectivity Section of PSR Form

Connectivity choices for connecting to Intrado's POIs. (Note: SS7 is the preferred method of connectivity.)

____ SS7 via VeriSign

____ SS7 via alternate SS7 provider

____ CAMA

DSO: Identifies number of DS 0s being used. (Note: Minimum requirement is two.)

USAGE – The field is required.

DATA CHARACTERISTICS – 2 numeric digits.

EXAMPLE: 02

HOM: Homed. Specify whether the connection from your End Office single (S), double (D) or triple (T) homed.

USAGE – The field is required.

DATA CHARACTERISTICS – 1 alpha character.

EXAMPLE: D

TRFTYP: Traffic Type. Identifies the type of Traffic, i.e., Wireline (WRLN), Wireless (WRLS) or Voice over IP (VOIP)..

USAGE – The field is required.

DATA CHARACTERISTICS – 4 alpha numeric characters

EXAMPLE: WRLN

TCIC: Trunk Circuit Identification Code. Identifies a specific trunk for which CCS is being performed.

USAGE – The field is required.

DATA CHARACTERISTICS – 11 alpha/numeric characters

EXAMPLE: 02345-02347

TRGP: Trunk Group. Identifies trunk group as either Selective Routing (SR) or Trunk only routing (TO).

USAGE – The field is required.

DATA CHARACTERISTICS – 2 alpha characters

EXAMPLE: TO

PSAP: Public Safety Answering Point. Identifies the Default Public Safety Answering Point to be used in the trunk group.

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 25 alpha/numeric characters

EXAMPLE: HOWARD COMM CTR

NPAT: NPA per trunk group. If multiple NPAs are used, this field identifies the NPA per Trunk Group.

USAGE – The field is required if using CAMA and multiple NPAs only.

DATA CHARACTERISTICS – Up to 30 alpha/numeric characters

EXAMPLE: TR1=NPA212

CFA: Connecting Facility Assignment (TIE-DOWN). Identifies the provider carrier system and channel to be used from a Wideband Analog, High Capacity, or Optical Network facility when the customer has assignment control.

USAGE – The field is required on final draft of order (Version 2)

DATA CHARACTERISTICS – Up to 42 alpha/numeric characters

EXAMPLE: 101/T1/3/BSTNMAGTCGO/BSTNMAMTCG0

CSL: Customer Switch Location. Identifies the CLLI Code of the customer's switch.

USAGE – The field is required.

DATA CHARACTERISTICS – 11 alpha/numeric characters

EXAMPLE: CHCGILWRDS0

CSPC: Customer Signaling Point Code. Identifies the electronic address of the customer's signaling point (SP) or signaling transfer point (STP) in a CCS network.

USAGE – The field is required for SS7 connectivity.

DATA CHARACTERISTICS – 11 numeric characters (including 2 hyphens)

EXAMPLE: 249-255-101

NENA: NENA ID of Telephone Service Provider. Identifies the NENA ID.

USAGE – The field is required.

DATA CHARACTERISTICS – Up to 6 alpha/numeric characters

EXAMPLE: ITRDO

IMP: Implied NPA. Identifies the implied NPA.

USAGE – The field is required for CAMA connectivity.

DATA CHARACTERISTICS – 3 digits

EXAMPLE: 303

INF: Information Digit. Identifies if an information digit is being used.

USAGE – The field is required if using CAMA only.

DATA CHARACTERISTICS – One alpha character (Y) Yes or (N) No

EXAMPLE: N

ISUP: ISUP Parameter. Identifies the ISUP Parameter Used. (See ISUP Parameter Table on next page.)

USAGE – The field is required for SS7 connectivity.

DATA CHARACTERISTICS – Up to 6 alpha/numeric characters

EXAMPLE: NCASA1

Reference Tables for ISUP Parameter

ISUP Parameter	OLI	CpCAT	Called Party	Calling Party	Charge	Generic Digits

Option for wireline/wireless calls	Wireless	Emergency	Number	Number	Number	Parameter
NCAS A1	NO	YES	911	ANI/pANI	ANI/pANI	BLANK

NETWORK AND EXCHANGE SERVICES
A9. CENTRAL OFFICE SERVICE

9.1 DIAL SWITCHING SYSTEMS (Cont'd)

9.1.11 WIRELESS 9-1-1 (T)

A. DESCRIPTION (N)

1. WIRELESS 9-1-1

Wireless 9-1-1 Service is a service offering which routes wireless calls to specific Public Safety Answering Points (PSAPs) and provides a Mobile Directory Number (MDN) for callback information and the appropriate caller location information to support the Federal Communication Commission's (FCC) Wireless Telecommunications Bureau Phase I and Phase II requirements established in CC Docket No. 94-102.

This service will support the following Wireless 9-1-1 design solutions:

a. Call path Associated Signaling (CAS)[1]
b. Non-Call path Associated Signaling (NCAS)
c. Hybrid

The Wireless 9-1-1 customer must be a municipality or other state or local government unit, or an authorized agent of one or more municipalities or other state or local government units to whom authority has been lawfully delegated, or a third party provider of 9-1-1 database services.

2. Definition of Terms

9-1-1 Selective Router

A central office providing tandem switching capability for 9-1-1 calls. It controls switching of ANI information to the PSAP and also provides the Selective Routing function capability and certain maintenance functions for each PSAP.

9-1-1 Tandem to 9-1-1 Tandem Transfer

The ability to transfer a 9-1-1 call from a PSAP served by one 9-1-1 Selective Router (a.k.a. Tandem) to a PSAP served by a different 9-1-1 Selective Router.

Call path Associated Signaling (CAS)

A Wireless 9-1-1 technology that utilizes the voice transmission path to also deliver the Mobile Directory Number and the caller's location to the PSAP.

NOTE 1: The CAS technology does not support Phase II and customers that utilize CAS for Phase I will be required to migrate to NCAS or Hybrid solutions for Phase II implementation (N)

9.1 DIAL SWITCHING SYSTEMS (Cont'd)
9.1.11 WIRELESS 9-1-1 (Cont'd) (T)
A. DESCRIPTION (Cont'd) (N)
2. Definition Of Terms (Cont'd)

Emergency Services Routing Digits (ESRD)

A 10-digit number that is used to identify the cell site/sector serving the caller. The selective router uses the ESRD to selectively route the call to the designated PSAP.

Emergency Services Routing Key (ESRK)

A 10-digit number that is normally used to identify an ongoing Wireless 9-1-1 call and to correlate the associated data for that call. The selective router uses the ESRK to selectively route the call to the designated PSAP.

Hybrid

A Wireless 9-1-1 technology that utilizes one transmission path to deliver the voice and Mobile Directory Number to the PSAP and a separate transmission path to deliver the caller's location information to the PSAP.

Mobile Directory Number (MDN)

A 10-digit telephone number that identifies the calling party and can be used as a call back number.

Mobile Switching Center

A switch that provides wireless telephone service.

Non-Call path Associated Signaling (NCAS)

A Wireless 9-1-1 technology that utilizes one transmission path to deliver the voice and a separate transmission to deliver the Mobile Directory Number and the caller's location to the PSAP. (N)

NETWORK AND EXCHANGE SERVICES
A9. CENTRAL OFFICE SERVICE

9.1 DIAL SWITCHING SYSTEMS (Cont'd)
9.1.11 WIRELESS 9-1-1 (Cont'd)
A. DESCRIPTION (Cont'd)
2. Definition Of Terms (Cont'd)

Pseudo-Automatic Number Identification (pANI)

A number, consisting of the same number of digits as ANI, but is used in place of an ANI to convey a special meaning. The specific meaning assigned to the pANI is determined by agreements, as necessary, between the telephone system originating the call, intermediate telephone systems handling and routing the call, and the destination telephone system. The pANI identifies the location of the base station or cell site through which a mobile call originates or the origination point of a VoIP call. (T)

VoIP Call: (N)

Any call generated by a VoIP end user via the digits "9-1-1" and delivered to the Utility utilizing existing wireless infrastructure. (N)

Wireless Call

Any call generated by a wireless end user via the digits "9-1-1" and delivered by the Wireless carrier to the Utility for routing to the PSAP in order to route the call to the designated PSAP.

Wireless Carrier

A private entity that provides telephone service to residential or business end users served by a wireless switch.

Wireless End User

An individual or organization authorized to use the telephone services provided by the wireless switch.

NETWORK AND EXCHANGE SERVICES
A9. CENTRAL OFFICE SERVICE

9.1 DIAL SWITCHING SYSTEMS (Cont'd)
9.1.11 WIRELESS 9-1-1 (Cont'd) (T)

B. REGULATIONS (N)

1. General

In addition to the following terms and conditions, the terms and conditions set forth in Schedule Cal.P.U.C. No. A and in the Enhanced 9-1-1 (E9-1-1) Service as described in Section A9.2 following, shall also apply.

a. Request for this service:

(1) can only be initiated by a 9-1-1 customer;
(2) must be provided to the Utility in writing; and
(3) must identify the PSAP or Call Centers service locations and the required network database configurations for the specified locations.

b. The minimum number of digits that the PSAP CPE must be capable of receiving is dependent on the wireless technology. A PSAP must be able to accept 8, 10, or 20 digits when the wireless technology is NCAS, Hybrid, or CAS, respectively. If a PSAP CPE does not meet these requirements, the Utility will continue to selectively route Wireless 9-1-1 calls to the designated PSAPs. However, the PSAP may not receive callback or location information for these calls.

2. Customer Responsibilities[1]

a. When the Utility is the database provider, the Wireless 9-1-1 customer is responsible for ensuring that the Wireless Carrier creates, maintains, and forwards to the Utility current pANI data according to the format and procedures specified by the Utility.

b. Wireless 9-1-1 Service Wireless End User's information is confidential. The 9-1-1 customer agrees to use such information only for the purpose of responding to emergency calls. All other uses of such information are prohibited.

c. To the extent that a Wireless End User's telephone number, the address and name associated with the originating station location are furnished to the PSAP and to the Utility, the Wireless End User (published and nonpublished) consents to the storage and retention of Wireless End User's location and telephone number in the Utility data base and also consents to access of this information by the PSAP for the sole purpose of responding to an emergency call.

d. The Wireless 9-1-1 customer has the responsibility for reporting all errors, defects and malfunctions that they are aware of to the Utility in a timely manner provided.

NOTE 1: The Utility will participate in all coordination efforts as the Utility deems appropriate. (N)

A9. CENTRAL OFFICE SERVICE

9.1 DIAL SWITCHING SYSTEMS (Cont'd)
9.1.11 WIRELESS 9-1-1 (Cont'd) (T)
B. REGULATIONS (Cont'd) (N)
2. Customer Responsibilities (Cont'd)

e. Cancellation of the service in whole or in part by the Wireless 9-1-1 customer prior to establishment thereof, will require payment of an amount equal to the cost of engineering, manufacturers' billings resulting from equipment orders, installation, assembly, labor, cost of removal and any other costs incurred by the Utility up to the time of cancellation resulting from the Wireless 9-1-1 customer's order for service.

f. The PSAP will be responsible for any local or long distance toll associated with the call-back of wireless callers or the transferring of calls to non-PSAP locations.

3. Limitation of Liabilities

a. The Utility's entire liability to the Wireless 9-1-1 customer or to any other person or legal entity for interruption or failure of Wireless 9-1-1 Service shall be limited by the terms set forth in this section and in Schedule Cal P.U.C. No. A2.1.14.

b. Wireless 9-1-1 Service is provided solely for the benefit of the Wireless 9-1-1 customer; the provision of such service shall not be interpreted, construed or regarded as being for the benefit of, or creating any obligation on the part of the Utility toward, or any right of action on behalf of, any third person or other legal entity.

c. To the extent allowed by law, the Wireless 9-1-1 customer agrees to release, indemnify, defend and hold harmless the Utility from any and all loss, claims, demands, suits or other action, or any liability whatsoever, to any other party or person, for any personal injury to or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by the Wireless 9-1-1 customer or others, caused or claimed to have been caused, directly or indirectly, by the Wireless 9-1-1 Service. 9.2 EMERGENCY REPORTING SERVICE

9.2.1 9-1-1 EMERGENCY SERVICE (T)

A. DESCRIPTION

1. 9-1-1 Service (T)

9-1-1 emergency service is a service whereby people in need of assistance may, by dialing "9-1-1" from within the serving area, gain access to a customer designated and operated Public Safety Answering Point (PSAP). (T) (T)

9-1-1 emergency service features and network arrangements will be based upon the operating limitations of the Utility's facilities and equipment. (T)

9-1-1 emergency service is furnished to political subdivisions and municipal corporations of the State of California. The political subdivision or municipal corporation placing an order for 9-1-1 emergency service is the customer as defined in Schedule Cal.P.U.C. No. A2.1.1., Definitions. (T) (T)

2. 9-1-1 Exchange Line (T)

Definition of "direct dedicated":

a. Direct

A communication path from a 9-1-1 call originating central office to a PSAP"s serving central office on which no switching occurs. (T)

b. Dedicated

A direct communication path used exclusively for carrying 9-1-1 calls over the particular route involved. (T)

3. 9-1-1 Attendant Position (T)

Public Safety Answering Point (PSAP) - terminal equipment on which incoming 9-1-1 calls are initially answered. (T)

9.2 EMERGENCY REPORTING SERVICE (CONT'D)
9.2.1 9-1-1 EMERGENCY SERVICE (CONT'D)
A. DESCRIPTION (CONT'D)

4. 8A Answer/Transfer Unit System (8A ATS)

a. The 8A ATS attendant positions utilize 18 or 30 button telephone sets as set forth in rates and charges following, with a maximum of 8 positions per system. The transfer, transfer release and hold features are located in the pick-up key field of the attendant position, which reduces the maximum number of line terminations from 18 and 30 to 15 and 27, respectively.

b. A maximum of eight two way lines can be provided per 8A ATS with no more than four of these being dial central office lines.

c. Each 8A ATS attendant position includes a handset equipped with a standard jack conforming to Part 68, Subpart F, of the FCC's Rules and Regulations that accommodates a head telephone set. A head telephone set will be customer provided. (T) | (T) z

5. 9-1-1 Features

a. Called Party Hold

A 9-1-1 connection is retained regardless of the switchhook status of the 9-1-1 calling party. The PSAP attendant remains off-hook or places the calling party on hold. This feature is a function of the 9-1-1 central office trunk circuit and is applicable only to 9-1-1 calls trunked directly from the originating central office.

b. Central Office Identification

Central Office Identification can be provided at no charge when direct 9-1-1 lines are provided. The PSAP can identify from which central office a call originated by visually identifying the direct trunk group on which the call is terminating.

c. Emergency Ringback

A PSAP attendant can ring the 9-1-1 calling party who goes on-hook after the call is answered by the attendant. This feature is limited to 9-1-1 calls trunked directly.

z Correction

9.2.1 9-1-1 EMERGENCY SERVICE (CONT'D) (T)
A. DESCRIPTION (CONT'D)
5. 9-1-1 Features (Cont'd) (T)

d. Forced Disconnect

The PSAP attendant can release the 9-1-1 connection even though the 9-1-1 calling party remains off-hook. This feature is a function of the 9-1-1 central office trunk circuit. (T) | (T)

e. Hunting

Hunting on 9-1-1 Exchange lines is provided at no charge. (T)

f. Switchhook Status

Audible and visual indications alert a PSAP attendant when the held on-hook 9-1-1 calling party has gone off-hook. This feature is limited to 9-1-1 calls trunked directly from the originating central office. (T) (T)

g. Tone Application

Gives the PSAP attendant indication of the on/off-hook status of the 9-1-1 caller. A 120 IPM tone is given if the 9-1-1 caller abandons the call before the PSAP attendant answers. A 60 IPM is given if the 9-1-1 caller goes on-hook after the PSAP attendant answers the call. No tone indicates a 9-1-1 caller who is retaining the connection but is not speaking. (T) (T) (T)

h. Call Transfer To Responding Agency

The PSAP attendant can transfer the 9-1-1 incoming calling party to another agency via a transfer to private line circuit or an individual access line. (T)

A. DESCRIPTION (CONT'D)
5. 9-1-1 Features (Cont'd)

i. 9-1-1 Automatic Call Distributor (ACD)[1,2] (N)

When placing a 9-1-1 call, incoming callers are immediately connected to the first available attendant. If an attendant is not available, a recorded announcement will be given to the caller that the call will be answered as quickly as possible. The ACD offers a Management Information Service capability that provides displays, printed reports and special programs designed to give complete statistical data for PSAP administrative and personnel management.

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.1 9-1-1 EMERGENCY SERVICE (Cont'd)

B. REGULATIONS

1. General

a. 9-1-1 service is provided by the Utility where facilities and operating conditions permit.

All calls originating from a single central office exchange will be routed to one PSAP. Where more then one PSAP is located in an exchange, and the exchange includes two or more central office locations, the PSAPs will be arranged to receive calls from distinct central offices.

b. Tie lines, private lines and other channels connecting a PSAP with responding agencies are provided at filed charges and rates for such facilities as specified in this or other appropriate tariffs.

c. When 9-1-1 is dialed no charge will be made to the calling party.

d. Where an exchange telephone service is used to report an emergency situation to a PSAP attendant over a 9-1-1 service or a seven digit telephone number terminating at the PSAP, the class, type and grade of service, primary service listing and locations of the service may be furnished by the Utility to a PSAP responding to the emergency; not withstanding other regulations shown elsewhere in those schedules which preclude the furnishing of telephone service customer information.[1,2]

e. Temporary suspension of service at the request of the customer, either partial or complete is not applicable to equipment, services or facilities furnished to provide 9-1-1 service.

f. Equipment arrangements, rearrangements and services available for use with other types of service will be furnished with a 9-1-1 Emergency System where facilities and operating conditions permit, unless otherwise specified in the tariffs. Where furnishing such arrangements and rearrangement involves costs in excess of those contemplated by filed tariffs, additional charges may be applicable, subject to prior authorization of the Public Utilities Commission of the State of California. (N)

NOTE 1: Also applicable to exchange service furnished by independent companies and Competitive Local Carriers (CLCs).
NOTE 2: Not applicable in situations where a calling party with call blocking has dialed the PSAP, unless the calling party orally discloses their telephone number to the PSAP attendant.

Continued

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.1 9-1-1 EMERGENCY SERVICE (Cont'd)
B. REGULATIONS (Cont'd)
1. General (Cont'd)

g. Service connection charges as shown in Schedule Cal.P.U.C. No. A3.1. are applicable to each 9-1-1 exchange line terminated. (L)

h. 9-1-1 Exchange Line may terminate on a standard type telephone set or other answering equipment with which it is compatible. When the 9-1-1 exchange line terminates on equipment other than the standard telephone set appropriate rates and charges for line terminations will apply. (L)

2. Terminal Equipment

a. Where Utility-provided terminal equipment is furnished, it will be provided at the rates and charges shown in this tariff or under separate contract.

b. 9-1-1 lines from the Utility central office may be furnished to terminate on authorized customer-provided terminal equipment in accordance with the provisions as set forth in Schedule Cal.P.U.C. No. A5. and A8.

3. Limitation of Liability

The Utility's liability to 9-1-1 customers and third parties utilizing the 9-1-1 service is set forth in Schedule Cal.P.U.C. No. A2.1.14.

4. Undertaking of Utility

a. Upon application by one or more political subdivisions acting as a single agency, or their certified agent, and subject to prior written approval by the State of California Department of General Services, Communications Division, the Utility will open the 9-1-1 emergency number and provide the associated equipment and facilities, for use by the general public in reporting emergencies to a PSAP.

b. The Utility does not undertake to answer and forward 9-1-1 calls, but furnishes the use of its facilities to enable the customer's personnel to respond to such calls with personnel on the customer's premises.

c. The Utility shall engineer the initial installation of a 9-1-1 system to meet the customer's requested communication requirements. Such engineering will be based on type and number of lines required, and other information furnished by the customer as well as engineering data used by the Utility.

(L) Formerly on Sheet 227.

A9. CENTRAL OFFICE SERVICE

9.2 EMERGENCY REPORTING SERVICE (CONT'D)
9.2.1 9-1-1 EMERGENCY SERVICE (CONT'D)
B. REGULATIONS (CONT'D)

5. Customer Responsibility

The 9-1-1 customer will:

a. Determine sufficient services and equipment quantities to meet the customer's needs during the engineering process, prior to initial installation and in concert with the Utility.

b. Adhere to the guidelines as set forth in the current State of California 9-1-1 Systems Standards and Planning Guidelines Manual.

6. Termination of Lines

Trunk line, individual line service, or 9-1-1 exchange lines may be furnished to the Utility's local loop demarcation point or to the terminal equipment where provided by the Utility. (T) (T) (N)

Trunk line or individual line service furnished with 9-1-1 Emergency Service is provided at the charges, rates and regulations from the tariffs specific to those services. (T)

B. REGULATIONS (CONT'D)

7. Optional Features

a. Provision of optional 9-1-1 features other than forced disconnect and tone application are dependent upon the type of terminating equipment and trunking arrangements. Not all routing arrangements, features or transfer arrangements are compatible nor can they be provided in all central offices.

b. Ringback, Switchhook Status and Called Party Hold features require direct trunking of 9-1-1 exchange lines from each originating central office to the PSAP.

8. Commercial Power

Commercial power, power wiring and outlets are furnished by the customer who assumes all responsibility for the safe condition of such wiring outlets and power.

9. Basic Termination Charges

If at any time during the period following the installation of any equipment to which a basic termination charge is applicable and such equipment is disconnected as a result of a request of the customer or disconnection of the customer's telephone service in accordance with the Utility's applicable tariffs, the customer shall pay to the Utility, upon demand, the basic termination charge specified in C. following, less a credit of said charge for each month and fractional portions of a month between the date on which it was installed and the date on which it was so disconnected. For the purpose of computing basic termination charges the last equipment of the same type installed shall be considered to be the first equipment removed.

10. Limitations of Liability

In addition to the liability limitations set forth in Schedule Cal.P.U.C. No. A2.1.14, the Utility shall not be held responsible for specific address information controlled by the customer. This information includes suite, room, apartment and all private switch data. (T)

11. Confidentiality of Data (N)

Private switch data is recognized as confidential and will not be used or distributed for purposes outside the scope of 9-1-1 Emergency Service. (N)

Continued

9.2 EMERGENCY REPORTING SERVICE (CONT'D)
9.2.1 9-1-1 EMERGENCY SERVICE (CONT'D)
B. REGULATIONS (CONT'D)

11. Demarcation Point (N)

9-1-1 Emergency Service will terminate at the Utility's local loop demarcation point except where the Utility provides the terminal equipment. Where the Utility has provided terminal equipment, its local loop demarcation point will be extended to include the Utility's terminal equipment. The Utility will maintain service to that point.

Where the Utility provides the terminal equipment for 9-1-1 Emergency Service, the Utility will be responsible for the installation and maintenance of the 9-1-1 service and its associated terminal equipment only, not for the intrabuilding network cable (INC cable).

The Utility shall be given access to available pairs within the INC cable, at no charge to the Utility, to install and maintain 9-1-1 Emergency Service to the Utility provided terminal equipment.

Where the Utility provides the terminal equipment and trouble is isolated to the INC cable, the Utility will be given access to spare pairs within the cable to maintain the 9-1-1 Emergency Service. The customers shall be responsible for repair of INC cable as set forth in Schedule Cal.P.U.C. No. A8.4. (N)

C. RATES AND CHARGES

1. 9-1-1 Exchange Line

A direct dedicated one-way incoming line terminating at the Utility's local loop demarcation point or on the Utility's terminal equipment located at the PSAP.[1] (T) (T)

a. Each 9-1-1 Exchange Line terminated routes wholly within or between Pacific Bell exchanges or district areas, all exchanges.

(1) Rates for business individual access line service or trunk line service as appropriate will apply. The monthly rate for a 9-1-1 exchange line is the rate applicable for the exchange or district area served by the 9-1-1 line.

(3003B)

	NONRECURRING CHARGE	MONTHLY RATE	USOC
Flat rate service[2]			
- Each access line	$ RR	$ RR	91M
- Each trunk	RR	RR	TGZ
Measured rate service[2]			
- Each access line	RR	RR	92K
- Each trunk	RR	RR	T99

(2) Mileage - Between Utility Exchanges or District Areas

When the 9-1-1 exchange line is provided from an exchange or district area that does not have local calling to the exchange or district area in which the PSAP is located, foreign exchange mileage rates as specified in Schedule Cal.P.U.C. No. A5.1.4 apply.

b. Routes Involving Connecting Company Exchanges.

When 9-1-1 exchange line originates in a Connecting Company's exchange and terminates on a PSAP located in a Utility Exchange, the monthly rate and nonrecurring installation charge will be composites of the involved Utility's rates and charges, including mileage.

NOTE 1: See A.2. preceding.
NOTE 2: Rates, charges and regulations as set forth in Schedule Cal.P.U.C. No. A5.2 and A5.3 apply.

9.2 EMERGENCY REPORTING SERVICE (CONT'D)

9.2.2 CONCENTRATOR-IDENTIFIER SYSTEM

A. DESCRIPTION

Concentrator-Identifier equipment is offered for use with nonmultiple cord and push button type switchboards and will be furnished for the purpose of emergency reporting arrangements within the exchange (or district area of an exchange divided into district areas) designated by the customer to be served by the Concentrator.

B. REGULATIONS

1. Equipment

a. Equipment will be provided subject to:

(1) The limitations of the Concentrator-Identifier equipment.

(2) The ability of the Utility to obtain the necessary equipment.

(3) Transmission limitations.

b. The Identifier unit of the system will be located on the same premises as the associated nonmultiple cord and push button switchboard.

The Concentrator will be located:

(1) In a central office building normally serving stations that are provided for emergency reporting purposes in an exchange designated by the customer or

(2) In the case of an exchange divided into district areas, in a central office building normally serving stations that are provided for emergency reporting purposes in a district area designated by the customer other than the district area in which the identifier unit is located.

2. Lines

a. A Concentrator-Identifier line connects a Concentrator to an Identifier.

b. Each Concentrator-Identifier line requires line equipment at both the Concentrator and Identifier, at rates and charges shown in C. following.

Continued

A9. CENTRAL OFFICES SERVICES

9.2 EMERGENCY REPORTING SERVICE (CONT'D)
9.2.2 CONCENTRATOR-IDENTIFIER SYSTEM (CONT'D)
B. REGULATIONS (CONT'D)

3. Stations

a. Stations may be installed for public use on streets or highways, in buildings or elsewhere for emergency reporting purposes.

b. For the purposes of measuring mileage, the "Concentrator" shall be considered equivalent to a "PBX switchboard" as shown in Schedule Cal.P.U.C. No. A10.2.

4. Responsibility of Customer

The customer, to service furnished in this schedule, releases, indemnifies and holds harmless the Utility from any and all loss, claims, demands, suits or other action or any liability whatsoever, whether suffered, made, instituted or asserted by the customer or by any other party or person, for any personal injury to or death of any person or persons or for any loss, damage or destruction of any property, whether owned by the customer or others, caused or claimed to have been caused directly or indirectly by the installation, operation, failure to operate, maintenance, removal, presence, condition, location or use of such equipment.

5. Basic Termination Charges

If, at any time during the five-year period following the installation of the Concentrator equipment, such equipment is permanently disconnected as a result of a request of the customer or disconnection of the customer's telephone service in accordance with Utility's applicable tariffs, the customer shall pay to Utility, upon demand, the basic termination charge specified in C. following, less a credit of one-sixtieth (1/60) of said charge for each full month between the date on which said equipment was installed and the date on which it was so disconnected. For the purpose of computing basic termination charges, the last equipment installed shall be considered to be the first equipment removed.

9.2 EMERGENCY REPORTING SERVICE (CONT'D)

9.2.3. ENHANCED 9-1-1 (E9-1-1)

A. DESCRIPTION

1. E9-1-1 Service

9-1-1 is a single three digit telephone number which connects the calling party with a Public Safety Answering Point (PSAP) where any kind of emergency response can be obtained. E9-1-1 is the most sophisticated of the 9-1-1 systems. It provides Selective Routing (SR) which routes the 9-1-1 call to the proper jurisdiction regardless of PSAP and central office boundary mismatches, Automatic Number Identification (ANI) and Automatic Location Identification (ALI), the calling party's address.

2. Definition of Terms

Additional E9-1-1 Exchange Line: Additional terminating line at a PSAP that may be ordered by the customer as an optional feature.

ANI Call Logging Printer: Prints the ANI information for each 9-1-1 call. Includes telephone number (ANI), Attendant and trunk numbers, the time of call seizure, answer, transfer, and disconnect.

Automatic Location Identification (ALI): A feature by which the listed (T)
name and address associated with the calling party's telephone number (T)
(identified by ANI as defined below and stored in Utility's customer records) is forwarded to the PSAP for display. Additional telephones with the same number (secondary locations, off premises, etc.) will be identified with the address of the telephone number at the main location.

Automatic Number Identification (ANI): A feature by which the calling party's ANI telephone number is forwarded to the Enhanced 9-1-1 (E9-1-1) Control Office and displayed on E9-1-1 Display and Transfer Units at PSAPs equipped with such Units.

Data Management System (DMS): A system of manual procedures and computer programs used to create, store and update the data required to provide the Selective Routing (SR) and ALI features.

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.3 ENHANCED 9-1-1 (E9-1-1) (Cont'd)
A. DESCRIPTION (Cont'd)
2. Definition of Terms (Cont'd)

E9-1-1 Display and Transfer Unit: A selector console and associated common equipment for displaying ANI numbers at the PSAP attendant position and used by the attendant to activate Fixed and/or Selective Transfer functions.

E9-1-1 End Office Trunk: Provides connection of a local telephone company end office to a E9-1-1 control office.

E9-1-1 Exchange Line: A one-way incoming line installed at the Utility's local loop demarcation point terminating at a PSAP. (Outgoing calls can be made on a transfer basis only.)

E9-1-1 Mileage: Airline distance per mile between the E9-1-1 Control Office and the local serving central office for the PSAP or between the end office and the E9-1-1 Control Office.

E9-1-1 SS7 End Office Trunk: Provides connection of a local telephone company end office (or wireless switch office for wireless 9-1-1) to a E9-1-1 control office using SS7 (SUP) signaling.

9-1-1 Tandem to 9-1-1 Tandem Transfer: The ability to transfer a 9-1-1 call from a PSAP served by one Utility 9-1-1 Selective Router (a.k.a. Tandem) to a PSAP served by a different Utility 9-1-1 Selective Router. This service is available only when the customer also purchases the Utility's Wireless 9-1-1 Tandem to 9-1-1 Tandem Transfer service for a Phase II wireless network. The rates and charges associated with the Utility's Wireless 9-1-1 Tandem to 9-1-1 Tandem Transfer service will apply. (N)

End Office: The Central Office(s) in the E9-1-1 System which service calling parties originating 9-1-1 calls.

Enhanced 9-1-1 Service Area: The geographic area in which the customer will respond to all E9-1-1 calls and dispatch appropriate emergency assistance.

Enhanced 9-1-1 (E9-1-1) Control Office: The office providing tandem switching capability for E9-1-1 calls. It controls switching of ANI information to the PSAP and also provides the SR (Selective Routing) feature, standard central office Speed Calling features, call transfer capability and certain maintenance functions for each PSAP.

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.3 ENHANCED 9-1-1 (E9-1-1) (Cont'd)
A. DESCRIPTION (Cont'd)
2. Definition of Terms (Cont'd)

High Speed Digital ALI (Automatic Location Identification) Retrieval Feature: High Speed Digital ALI Retrieval is a feature of the Utility's ALI Database, and therefore, provided when the customer orders or subscribes to the ALI database service. This feature provides for the routing of ANI(Automatic Number Identification) from specific Public Safety Answering Points (PSAPs) to the Utility's ALI Database to obtain the appropriate caller location information. The Utility will provide the necessary Network Terminating Equipment (NTE), to be placed at the customer's premises as part of the High Speed Digital ALI Feature. The Utility's NTE, is installed by the Utility on the customer's premise and shall remain the property of the Utility.[1] (N)

Public Safety Answering Point (PSAP): An answering location for 9-1-1 calls originating in a given area. A PSAP may be designated as Primary or Secondary, which refers to the order in which calls are directed for answering. Primary PSAPs answer all calls first; Secondary PSAPs receive calls on a transfer basis only. (L)

Selective Routing (SR): A feature that routes an E9-1-1 call from an E9-1-1 Control Office to the designated primary PSAP based upon the identified number of the calling party.

Serving Central Office: The local Central Office from which a PSAP, either Primary or Secondary, is served. (L)

NOTE 1: A 56K Frame Relay circuit is required to terminate at the customer's location (PSAP). The customer is also required to have a dedicated analog phone line to enable access to the Modem Pools at the Utility's secured External Network Access Facilities (ENAF's) in case of network failure. Demarcation of the circuits must be within 5 feet of the Utility's provided equipment. The Utility will be responsible to connect the Utility's provided equipment at the circuit Demarcation. Customers will be required to purchase the needed Frame Relay circuit(s) from the Utility or another vendor of their choice. (N)

(L) Material formerly located on Sheet 243.2.

Continued

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.3 ENHANCED 9-1-1 (E9-1-1) (Cont'd)
A. DESCRIPTION (Cont'd)

3. Available Service Arrangements

a. Automatic Number Identification (ANI), and Automatic Location Identification (ALI).

b. Automatic Number Identification (ANI), Automatic Location Identification (ALI), and Selective Routing (SR).

4. Customer Premise Equipment

a. E9-1-1 Customer Premise Equipment (CPE) is designed for use with key telephone systems (KTS) and Automatic Call Distributor (ACD) systems. The equipment provided includes ANI display and transfer equipment. ALI equipment is provided for retrieval of the calling party's address and its display on E9-1-1 ALI Display units located at PSAP attendant positions.

5. Standard Features

a. Forced Disconnect: A function of the E9-1-1 Control Office trunk circuit which enables the PSAP attendant to release a connection on 9-1-1 calls even though the calling party has not hung up. This feature prevents the jamming of the E9-1-1 exchange lines.

b. Default Routing (DR): A feature activated when an incoming E9-1-1 call cannot be selectively routed due to an ANI failure, garbled digits or other causes. Such incoming calls are routed from the E9-1-1 Control Office to a customer designated default PSAP. Each incoming E9-1-1 facility group to the Control Office is assigned to a designated default PSAP. Customer-provided Farmer Line multi-party service, will be default routed.

Material omitted now located on Sheet 243.2.

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.3 ENHANCED 9-1-1 (E9-1-1) (Cont'd)
A. DESCRIPTION (Cont'd)

6. Definition of Terms - Transfer (N)

a. Fixed Transfer: Fixed Transfer enables a PSAP attendant to transfer an incoming 9-1-1 call to another designated PSAP by depressing a single button on the E9-1-1 Display and Transfer Unit.

b. Selective Transfer: Selective Transfer enables any PSAP attendant to transfer an incoming 9-1-1 call to the proper response PSAP by depressing a single button labeled with the type of agency, e.g., "fire", on the E9-1-1 Display and Transfer Unit.

c. Manual Transfer: Manual Transfer enables the PSAP attendant to transfer an incoming 9-1-1 call by depressing the switchhook of the associated telephone or the "add" button on the E9-1-1 Display and Transfer Unit (if provided) and dialing either a 7-digit or 10-digit telephone number or a 2-digit Speed Calling Code.

7. Optional Features

a. ALI Printer: A printer that prints the ALI information for all 9-1-1 calls received at a PSAP.

b. ALI Print-on-Demand: A feature that allows the PSAP attendant to print the ALI information for selected 9-1-1 calls only. Requires an ALI printer.

c. Alternate Routing[1] A feature which allows E9-1-1 calls to be routed to a customer designated alternate location in the event the primary PSAP is forced to close.

d. Answer Only Attendant Position: A feature that allows PSAP attendant positions to answer 9-1-1 calls without ANI or ALI displays.

e. Computer Aided Dispatch (CAD) Interface: A feature that allows the sending of ALI information to a customer owned CAD system.

f. Night Service[1] A feature which allows E9-1-1 calls to be routed to a customer designated alternate location if the primary PSAP closes down for a period of time.

NOTE 1: A toggle switch (USOC: 5MU) is required in addition to the charges for this service arrangement found in Schedule Cal.P.U.C. Nos. A10. and 175-T, Section 7.

Continued

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.3. ENHANCED 9-1-1 (E9-1-1) (Cont'd)

B. REGULATIONS
1. General

a. E9-1-1 exchange lines are arranged for incoming service only. Outgoing calls can only be made on a transfer basis.
b. ANI or ALI information will not be displayed on calls received from customer-provided multi-party Farmer Line Service.
c. 9-1-1 calls from PBX and Centrex on-premises and off-premises stations, and other services with off-premises locations, will be forwarded to the PSAP serving the pilot number location of the PBX, Centrex and other off-premises services. ANI and ALI information received from such off-premises stations may not be the actual telephone number and address for those off-premises stations. (T) (D)
d. Charges for local and/or toll messages transferred over exchange facilities will be billed according to rates applicable from the E9-1-1 Control Office serving the PSAP originating the transfer.
e. Features and network arrangements will be based upon the operat ing limitations of Pacific's facilities and equipment.
f. If customer-provided terminal equipment is used, it will be subject to terms and conditions set forth in Schedules Cal.P.U.C. No. A5.2 and A8.1.
g. Any terminal equipment used by customer in conjunction with E9-1-1 service, whether such equipment is provided by Pacific or customer, shall be configured so that it is unable to extract any information from the Data Management System other than information relating to a number identified through the ANI capability as the source of an in-progress call.
h. The rates charged for E9-1-1 service do not contemplate the inspection or constant monitoring of facilities to discover errors, defects and malfunctions in the E9-1-1 service, and the Utility does not undertake such responsibility.
i. Customer must be a "public agency" as defined in Section 53100 of the Warren 9-1-1 Emergency Assistance Act.

Continued

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.3. ENHANCED 9-1-1 (E9-1-1)" (Cont'd)
B. REGULATIONS (Cont'd)
1. General (Cont'd)

j. The Utility's liability to E9-1-1 customers and third parties utilizing the E9-1-1 service is set forth in Schedule Cal.P.U.C. No. A2.1.14. (N)

2. Customer Responsibilities

a. The customer must adhere to the guidelines as set forth in the State of California 9-1-1 Guidelines Manual.

b. The customer must arrange to have all 9-1-1 calls answered 24 hours a day, 7 days a week.

c. The customer must subscribe to local exchange service at each PSAP location for emergency use by any person who does not want his/her telephone number and/or address displayed, for use by telephone company operators in transferring emergency calls, for administrative purposes, and for placing and receiving non-emergency calls.

d. The customer must make such operational tests as in the judgment of the customer are required to determine whether the E9-1-1 system is functioning properly for its use. Customer shall promptly notify Pacific in the event that the system is not functioning properly.

e. The customer is responsible to supply the County Coordinator with all appropriate information required to define their jurisdictional boundaries for creation of the Master Street Address Guide (MSAG). The customer and the County Coordinator shall be responsible to resolve boundary discrepancies and to keep the MSAG current for the life of the system.

Continued

9.2 EMERGENCY REPORTING SERVICE (CONT'D)
9.2.3. ENHANCED 9-1-1 (E9-1-1) (CONT'D)
B. REGULATIONS (CONT'D)
2. Customer Responsibilities (Cont'd)

f. The County Coordinator must identify PSAP locations as well as the unique combinations of police, fire, emergency medical and any other appropriate agencies responsible for providing emergency service in the E9-1-1 serving area. An Emergency Service Number (ESN) will be provided by the Utility for each unique combination. The County Coordinator will associate such ESN's with street address ranges or other routing criteria in the E9-1-1 serving area on forms supplied by the Utility for all agencies that are part of the system. Such ESNs will be carried in the Data Management System (DMS) to permit routing of 9-1-1 calls to the primary and secondary PSAPs responsible for handling calls from each telephone in the E9-1-1 serving area. The following terms define the County Coordinator's responsibility in providing this information:

(1) After establishment of the E9-1-1 service, it is the County Coordinator's responsibility to continue to verify the accuracy of the routing information contained in the Master Street Address Guide (MSAG) and to advise the Utility of any changes in street names, establishment of new streets, changes in address numbers used on existing streets, closing and abandonment of streets, changes in police, fire, ambulance or other approximate agencies' jurisdiction over any address, annexations and other changes in local jurisdictional boundaries, incorporation of new cities or any other matter that will affect the routing of E9-1-1 calls to the proper PSAP for all Agencies that are part of the system.

Note: The Utility will provide to the County Coordinator at no charge annually on request a complete copy of the MSAG to permit the County Coordinator to verify accuracy of police, fire, and emergency medical PSAP routing designations.

(2) Changes, deletions, and additions which the County Coordinator desires to have made in the MSAG should be submitted to Pacific on an "as occurred" basis. Pacific in turn will furnish the County Coordinator a copy of each change, deletion, and addition for verification.

(3) The County Coordinator is responsible for acting as the single point of contact with Pacific in defining the MSAG and for being the interface between Pacific and all other agencies that are part of the system. (N)

A9. CENTRAL OFFICES SERVICES

9.2 EMERGENCY REPORTING SERVICE (CONT'D)
9.2.3. ENHANCED 9-1-1 (E9-1-1) (CONT'D)
B. REGULATIONS (CONT'D)
2. Customer Responsibilities (Cont'd)

g. Customers shall notify the Utility when they reterminate service that is on their side of the local loop demarcation point to another part of a building or to another building on continuous property. (N)

Once notified, the Utility will update the customer's 9-1-1 address identification records. Charges as set forth in Schedule Cal.P.U.C. No. A3.1.6.q. shall apply.

3. Demarcation Point

9-1-1 Emergency Service will terminate at the Utility's local loop demarcation point except where the Utility provides the terminal equipment. Where the Utility has provided terminal equipment, its local loop demarcation point will be extended to include the Utility's terminal equipment. The Utility will maintain service to that point.

Where the Utility provides the terminal equipment for 9-1-1 Emergency Service, the Utility will be responsible for the installation and maintenance of the 9-1-1 service and its terminal equipment only, not for the intrabuilding network cable (INC cable).

The Utility shall be given access to available pairs within the INC cable, at no charge to the Utility, to install and maintain 9-1-1 Emergency Service to the Utility provided terminal equipment.

Where the Utility provides the terminal equipment and trouble is isolated to the INC cable, the Utility will be given access to spare pairs within the cable to maintain the 9-1-1 Emergency Service. The customers shall be responsible for repair of INC cable as set forth in Schedule Cal.P.U.C. No. A8.4. (N)

NETWORK AND EXCHANGE SERVICES
A9. CENTRAL OFFICE SERVICE

9.2 EMERGENCY REPORTING SERVICE (Cont'd)

9.2.4. 9-1-1 OTHER SERVICES

A. DESCRIPTION

1. Private Switch Automatic Location Identification (PS/ALI) (T)

   Private Switch Automatic Location Identification (PS/ALI) is a service offering which allows a Public Safety Answering Point (PSAP) to receive either (1) Automatic Number Identification (ANI) or (2) a combination of ANI and Automatic Location Identification (ALI) information on 9-1-1 calls originating from Direct Inward Dialing (DID) stations served by a private switch. (T)

2. The Private Switch Providers referred to in this tariff might include such organizations as: schools, nursing homes, hospitals, planned communities, shared tenant service (STS) providers, and residential multi-tenant service (RMTS) providers. (N)

3. The ANI-only option is available if the 9-1-1 customer's system is equipped with the ANI feature and if the private switch is equipped to send properly formatted ANI information to the Local Exchange Carrier (LEC) on 9-1-1 calls.

4. The option which provides ANI and ALI is available if (1) the Private Switch Provider (PSP) arranges to provide and update number, name, and location information for each DID station served by the private switch in the format required for the LEC's data base; (2) the private switch sends ANI to the LEC on 9-1-1 calls; and (3) the PSAP is equipped to provide 9-1-1 service with the ALI feature.

5. PS/ALI Trunk service requires a minimum of two (2) operator service-type TSPS, 2-wire trunks to terminate incoming E9-1-1 calls. These trunks are required between the private switch and the E9-1-1 Control Office.

6. The PS/ALI customer must be either:

   a. An E9-1-1 or D9-1-1 customer as described in Section 9.2.4.A.2 of this tariff, or

   b. A Private Switch Provider authorized by the 9-1-1 customer to subscribe to PS/ALI Service within the 9-1-1 customer's serving area. (N)

B. DEFINITION OF TERMS (T)

DOCKET NO. 070736-TP (D)
EXHIBIT _____(TH-7)
PACIFIC BELL TARIFF
PAGE 49 OF 62

(D)

ADMINISTRATIVE SITE (N)

A location responsible for administration of private switch end user records associated with one or more private switches. This location has the computer hardware and software necessary to create and transmit private switch end user (PSEU) information to the LEC data base.

AUTOMATIC LOCATION IDENTIFICATION (ALI)

A feature by which the name and address associated with the calling party's telephone number (identified by the ANI feature) are forwarded to the PSAP for display.

AUTOMATIC NUMBER IDENTIFICATION (ANI)

A feature by which the calling party's telephone number is forwarded to the PSAP for display.

CENTRAL OFFICE

A Utility switching system where telephone exchange service customer station loops are terminated for purposes of interconnection to each other and to trunks.

CONTROL OFFICE

The Utility central office providing tandem switching capabilities for 9-1-1 service calls from all end offices. It controls the switching of ANI information to a PSAP and also provides the Selective Routing service featured, Speed Calling features, Call Transfer services and certain maintenance functions for each PSAP. (N)

Material omitted now on Sheets 243.12.3, 243.12.4 and 243.12.6.

Continued

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.4. 9-1-1 OTHER SERVICES (Cont'd)
B. DEFINITION OF TERMS (Cont'd)

DATA BASE (N)

A system of manual procedures and computer programs used to create, store, and update the data required to provide the Selective Routing (SR) and ALI features.

INTRAEXCHANGE FACILITIES

The facilities used to connect a private switch to a Control Office or a PSAP located within the same exchange area.

INTEREXCHANGE FACILITIES

The facilities used to connect a private switch to a Control Office or a PSAP located in a different exchange area.

9-1-1 CUSTOMER

The local governmental agency, or its authorized agent, that is legally authorized to subscribe to 9-1-1 service.

PRIVATE SWITCH (PS)

A switch, such as a Private Branch Exchange (PBX), that provides wireline basic telephone service, but is not owned and operated by a Utility.

PRIVATE SWITCH END USER (PSEU)

An individual or organization authorized to use the telephone services provided by the private switch.

PRIVATE SWITCH PROVIDER (PSP)

A private entity that provides telephone service to a group of residential or business end users served by the provider's private switch (e.g., Private Branch Exchange).

PUBLIC SAFETY ANSWERING POINT (PSAP)

The location where 9-1-1 calls are answered.

RECORD

A telephone number and the 9-1-1 data base information associated with that number. (N)

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.4. 9-1-1 OTHER SERVICES (Cont'd)

C. TECHNICAL SPECIFICATIONS (T) (L)

1. Network interface requirements for E9-1-1 Trunks for PS/ALI customer access are described in detail in the Generic Digital Switch Requirements in Support of Enhanced 9-1-1 (PUB LO780025-PB). A copy of the requirements can be obtained from the Pacific Bell Data Integrity Unit.

2. Customers must order a minimum of two trunks for each PBX equipped.

3. A separate E9-1-1 PBX trunk group is required for each Numbering Plan Area (NPA) served by a PBX customer. (T) (L)

D. REGULATIONS (N)

1. Application for Service

Requests for this service: (1) can only be initiated by a 9-1-1 customer or a PSP; (2) must be provided to the Utility in writing; and (3) must identify service locations and arrangements.

2. Customer Obligations

a. The PSP must provide the full seven-digit Automatic Number Identification (ANI) according to the technical specifications established by the Utility. The private switch number information must be approved by the Utility prior to implementation to ensure that the service will function properly.

PS/ALI Service will not function properly if ANI is not in the proper format, if duplicate telephone numbers exist at the private switch, or if any telephone numbers assigned by the PSP are inconsistent with the Utility's numbering plan.

b. The PSP will create, maintain, and forward to the Utility current telephone number and address data according to the format and procedures specified by the Utility.

c. The PSP must develop and implement procedures to prevent the unauthorized or illegal use of PS/ALI Service facilities. These dedicated facilities may not be used for any purpose other than for 9-1-1 service. (N)

(L) Formerly on Sheet 243.11.

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.4. 9-1-1 OTHER SERVICES (Cont'd)
D. REGULATIONS (Cont'd) (N)
2. Customer Obligations (Cont'd)

d. The PSP must use computer hardware and software for ongoing Private Switch End User (PSEU) record update programs and processes, that conform to the specifications outlined by the Utility in the Training and Reference Guide.

e. PS/ALI Service information consisting of the name, address and telephone number of PSEUs is confidential. The 9-1-1 customer agrees to use such information only for the purpose of responding to emergency calls.

f. The PSEU forfeits the privacy afforded by non-listed and non-published service to the extent that the telephone number, the address and name associated with the originating station location are furnished to the PSAP and to the Utility. The PSEU (published and non-published) consents to the storage and retention of PSEU name, telephone number, and address in the data base and also consents to access to this information by the PSAP for the sole purpose of responding to an emergency call.

g. Cancellation of the service in whole or in part by the 9-1-1 customer prior to establishment thereof, will require payment to the Utility of an amount equal to the cost of engineering, manufacturers' billings resulting from equipment orders, installation, assembly, labor, cost of removal and any other costs incurred by the Utility up to the time of cancellation resulting from the 9-1-1 customer's order for service, but not to exceed the total nonrecurring charges. (N)

h. Temporary suspension of service at the request of the customer, either partial or complete, is not applicable. (T) (L) (L)

D. REGULATIONS (Cont'd)

3. Limitation Of Liability (T) (L)

a. PS/ALI service is provided solely for the benefit of the customer operating the PSAP. The provision of PS/ALI Service by the Utility shall not be interpreted, construed, or regarded, either expressly or implied, as being for the benefit of or creating any Utility obligation toward any third person or legal entity other than the customer. (N)

b. The Utility's entire liability to any person for interruption or failures of PS/ALI Service shall be limited to the term specified in this section and other sections of the tariffs. Provisions concerning limitation of liability and allowance for interruptions in service are specified in Schedule Cal.P.U.C. No. A2.1.14, Rule No. 14. (N) (T) (L) (T) (L)

c. Terminal equipment used in connection with PS/ALI Service, whether such equipment is provided by the Utility or the 9-1-1 customer, shall be configured so that it is unable to extract any information from the data base other than as it relates to an emergency call. Any PSEU information obtained from the data base in connection with an emergency call shall be used solely for the purpose of answering, handling and responding to emergency calls in a manner consistent with the nature of the emergency. Any permanent record associating a PSEU's telephone number with his/her name or address shall be secured by the 9-1-1 customer and disposed of in a manner that will retain that security. (N)

9.2 EMERGENCY REPORTING SERVICE (Cont'd)
9.2.4. 9-1-1 OTHER SERVICES (Cont'd)
D. REGULATIONS (Cont'd)
3. Limitation Of Liability (Cont'd)

d. To the extent allowed by law, the PS/ALI customer agrees to release, indemnify, defend and hold harmless the Utility from any and all loss, claims, demands, suits or other action, for any liability whatsoever, to any other party or person, for any personal injury to or death of any person or persons, or for any loss, demage or destruction of any property, whether owned by the PS/ALI customer or others, except those which arise out of the sole negligence or other wrongful act of the Utility.

e. To the extent allowed by law, the PS/ALI customer also agrees to release, indemnify and hold harmless the Utility for any infringement or invasion of the right of privacy of any person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, occasion or use of PS/ALI Service features and the equipment associated therewith, including, but not limited to, the identification of the telephone party or parties accessing PS/ALI service hereunder, except those which arise out of the sole negligence or other wrongful act of the Utility.

f. PS/ALI Service will be designed by the Utility to provide at least the same level of service reliability and quality as local exchange telephone service in the exchanges where 9-1-1 systems are equipped with the features required to provide PS/ALI Service. (N)

9.2 EMERGENCY REPORTING SERVICE (CONT'D) (N)

9.2.5. ENHANCED 9-1-1 (E9-1-1) DATA MANAGEMENT SERVICES

A. DESCRIPTION

E9-1-1 Data Management Services will allow Competitive Local Carriers (CLC) to transfer their customer data to the Utility's E9-1-1 Data Management System. Accurate information as to the caller's identity (telephone number) and location (address) is required in order to ensure that the caller is connected to the appropriate Public Safety Answering Point (PSAP) where any kind of emergency response can be obtained. The Utility's E9-1-1 Data Management System will enable the CLCs to route calls successfully to the PSAP with accurate Automatic Number Identification (ANI) and Automatic Location Information (ALI).

B. REGULATIONS

1. General

a. The CLC shall have obtained all necessary regulatory authority, which may include without limitation a Certificate of Public Convenience and Necessity from the Public Utilities Commission prior to subscribing to this service.

b. E9-1-1 services are provided by the Utility where facilities and operating conditions permit.

2. Limitation of Liability: CLC and E9-1-1 Data Management Services Limitation of Liability.

The Utility's liability to E9-1-1 customers and third parties utilizing E9-1-1 services is as set forth in Schedule Cal.P.U.C. No. A2.1.14 - Limitation of Liability. (N)

9.2.6 NEIGHBORHOOD CALL (N)

A. DESCRIPTION

1. Neighborhood Call

Neighborhood Call will provide subscriber data from the Pacific Bell E9-1-1 Management System to specific public agencies, or their designated subcontractors or agents, for the purpose of emergency notification system through the use of automatic dialing announcement devices as allowed by California Public Utilities Code Sections 2872 and 2891.1. Subscriber information is to be used for the sole purpose of contacting local citizens during localized emergencies.

B. REGULATIONS

1. General

a. Customers of these services must be "public agencies" referenced in tariff A9.2.3.B.1.i or their designated subcontractors or agents.

b. Neighborhood Call is provided by the Utility where facilities and operating conditions permit.

2. Customer Responsibilities

a. Customer warrants that if the Neighborhood Call database information is to be provided to its subcontractors or agents, Customer will enter into an agreement with the subcontractor or agent that limits the use of the Neighborhood Call database information stated herein. The subcontractor or agent must enter into a Nondisclosure Agreement with Pacific Bell. (N)

9.2 EMERGENCY REPORTING SERVICES (Cont'd)
9.2.6 NEIGHBORHOOD CALL (Cont'd)
B. REGULATIONS (Cont'd)
2. Customer Responsibilities (Cont'd)

b. The Neighborhood Call database information provided to Customer pursuant to this tariff is confidential and proprietary and such information will be held in confidence and only used and disclosed to Customer's employees or its subcontractors and agents with a need to know for purposes of providing a community alert and notifications to citizens as defined in California Public Utilities Code Sections 2872 and 2891.1. Customer agrees that each of its employees, subcontractors or agents receiving or having access to the Neighborhood Call database information will be informed that such information is subject to the terms and conditions of this tariff and the Neighborhood Call database information will remain the property of Pacific; that the Neighborhood Call database information will be treated with the same degree of care as Customer affords to its own highly confidential and proprietary information; and that the Neighborhood Call database information will not be reproduced in any manner, unless otherwise specifically authorized in writing by Pacific. Upon request, Customer will promptly return to Pacific all Neighborhood Call database information in a tangible form or certify to Pacific that such information has been destroyed.

3. Limitation of Liability

The Utility's liability to 9-1-1 customers and third parties utilizing 9-1-1 service(s) is set forth in Schedule Cal.P.U.C. No. A2.1.14 and California Public Utilities Code Section 2872 and 2891.1.

C. RATES AND CHARGES

	Nonrecurring Charge	Monthly Rate	USOC
1. Neighborhood Call	$99.74 (R)	$90.24 (R)	E9MN1
2. Neighborhood Call per 1000 records[1]	NO	.85 (R)	E9MOA
3. Neighborhood Call (Additional Download)	90.24 (R)	NO	E9MOB
4. Neighborhood Call Record Processing[2] per 1000 records (Additional Download)	.85 (R)	NO	E9MOC

NOTE 1: Once each year in January, this quantity (based upon the maximum number of main stations in Service) will be adjusted for purposes of updating Customer's monthly billing. No additional Installation charges will be applied to the updated amounts.
NOTE 2: For additional download(s) the charges include the base rate plus the per record charge.

Network Reliability Council Focus Group IV

Essential Communications During Emergencies Team Report

Findings and Recommendations Pertaining to Emergency Service Network Reliability

January 12, 1996

Focus Group Leader: **M. Michael Foster**
GTE Telephone Operations

Focus Group Mentor: ***Arthur Prest***
Cellular Telecommunications Industry Association

6. Essential Services Best Practice Recommendations

Best Practices are those countermeasures (but not the only countermeasures) that go furthest in eliminating the root causes of outages. *Network Reliability: A Report to the Nation* contained a total of 27 Best Practices pertaining to 9-1-1. All 27 original Best Practices have been rewritten and expanded to include alternate technologies where appropriate. These 27, and new best practices ES28 through ES33, being introduced by the ECOMM Team are categorized as follows. The ECOMM Team believes implementation of these practices will improve the reliability of the Public Switched Telephone Network (PSTN) and minimize the potential for interruption to vital emergency communications.

Category	New Best Practice No.	Former Best Practice No.
6.1 Defensive Measures for Interoffice Facilities...		
6.1.1 Diverse Interoffice Transport Facilities	ES01	112
6.1.2 Diverse Interoffice Transport Facilities with Standby Protection	ES02	113

Table 6-1 NRC Essential Service Best Practices

Some of the best practices are alternate solutions for improving network reliability, and implementation of one practice may negate the need to implement another. For example, if one

were to implement Best Practice ES03, it would not be necessary to implement Best Practice ES01 since the concept of facility route diversity is achieved in both practices.

6.1 Defensive Measures for Interoffice Facilities

Best Practices ES01 through ES05 describe practices that promote safeguarding of network facility paths between the callers end office and the PSAP.

6.1. Best Practice ES01 Diverse Interoffice Transport Facilities

When all 9-1-1 circuits are carried over a common interoffice facility route, the PSAP has increased exposure to possible service interruptions related to a single point of failure (e.g., cable cut). The ECOMM Team recommends diversification of 9-1-1 circuits over multiple, diverse interoffice facilities.

Diversification may be attained by placing half of the essential communication circuits on one facility route, and the other half over another geographically diverse facility route (i.e., separate facility routes). Many LECs deploy diverse interoffice facility strategies when diverse facilities are already available. (See Figure 6-1)

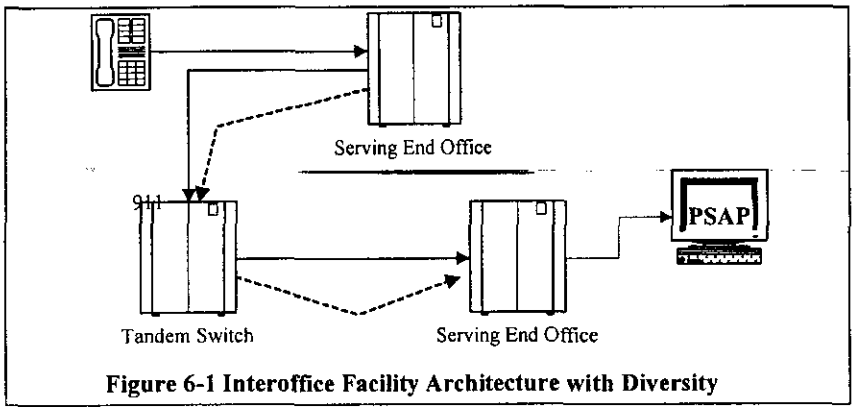

Figure 6-1 Interoffice Facility Architecture with Diversity

6.1.2 Best Practice ES02 Diverse Interoffice Transport Facilities with Standby Protection

A variation of the facility diversity architecture is deployment of a 1-by-1 facility transport system. This architecture is protected by a standby protection facility that is geographically diverse from the primary facility. Because no calls are lost while switching to the alternate transport facility during primary route failure, this architecture is considered self-healing.

6.1.3 Best Practice ES03 Diverse Interoffice Transport Facilities Using DCS

Earlier NRC Focus Group recommendations suggested using diverse interoffice transport facilities from the called serving end office via two diverse Digital Cross-connect Systems (DCS) for concentration. This approach provides diversity and, due to the concentration by the DCS network elements, offers a less costly network solution. Circuit rearrangement activity under this configuration will less likely result in the circuits being placed into non-diverse facilities. (See Figure 6-2)

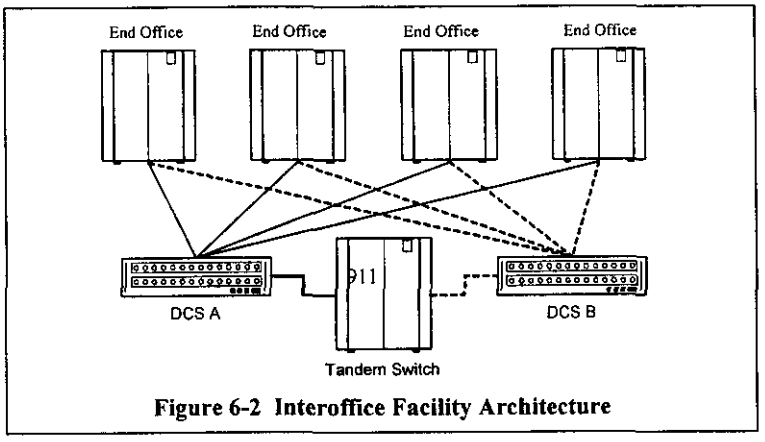

Figure 6-2 Interoffice Facility Architecture

6.1.4 Best Practice ES04 Fiber Ring Topologies for 9-1-1 Circuits

Fiber optic network elements offer network service providers the ability to aggregate large amounts of call traffic onto one transport facility. Traffic aggregation opposes the diverse facility transport recommendations defined in this document. However, fiber rings permit a collection of nodes to form a closed loop whereby each node is connected to two adjacent nodes via a duplex communications facility.

Fiber rings provide redundancy such that services may be automatically restored (self healing), allowing failure or degradation in a segment of the network without affecting service. Fiber rings are used in some metropolitan areas, ensuring essential communications service is unaffected by cuts to fibers riding on the ring. Ring features and functionality are part of the Synchronous Optical Network (SONET) technical requirements. The ECOMM Team believes

when essential communications is placed on SONET rings, service interruptions are minimized due to the self-healing architecture employed. (See Figure 6-3)

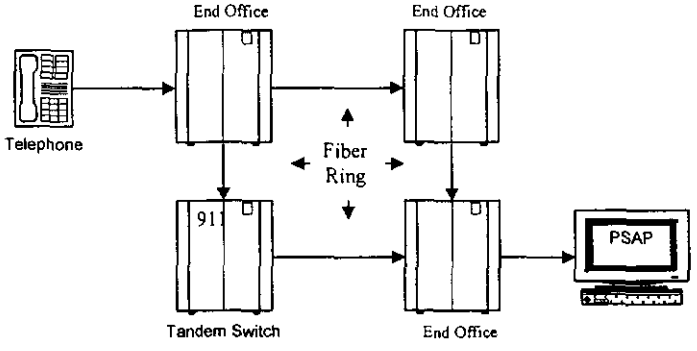

Figure 6-3 Interoffice Facility Architecture with Ring Diversity

6.1.5 Best Practice ES05 Red-Tagged Diverse Equipment

Depending on LEC provisioning practices, the equipment in the central office can represent single points of failure. The ECOMM Team supports the common LEC practice of spreading 9-1-1 circuits over similar pieces of equipment, and marking each plug-in-level component and frame termination with red tags. The red tags alert LEC maintenance personnel that the equipment is used for critical, essential services and is to be treated with a high level of care.

6.2 Alternate Path when the Primary 9-1-1 Interoffice Facility Fails

Best Practice ES06 through ES11 provide practices that promote establishment of alternate call paths between the caller's end office and the PSAP serving office.

6.2.1 Best Practice ES06 Alternate PSAPs from the 9-1-1 Tandem Switch

A common method of handling PSAP-to-Tandem transport facility interruptions is to program the 9-1-1 tandem switch for alternate route selection. If the 9-1-1 caller is unable to complete the call to the PSAP, the tandem switch would automatically complete the call to a pre-programmed directory number or alternate PSAP destination. The alternate PSAP may be either administrative telephones or another jurisdiction's PSAP positions, depending upon the primary PSAPs pre-arranged needs. (See Figure 6-4)

Curriculum Vitae

Corporate History

Mr. Melcher is the founder and president of The Melcher Group – a consulting firm specializing in public safety related activities. Activities include corporate mergers, acquisitions and strategy. Mr. Melcher is also a principal in Cyren Call Communications – advisor to the Public Safety Spectrum Trust Corporation (PSST). Cyren Call is led by veterans of the wireless industry and Public Safety communications, who will assist the PSST in the creation of a nationwide, wireless broadband network that will carry priority Public Safety communications. Cyren Call is headed by Morgan O'Brien, a co-founder of Nextel and a long-time champion of improving public safety communications.

9-1-1 and Public Safety Management/Related Activities

Cyren Call Communications 2006 – Present
Executive Vice President, Office of the Chairman
Managed external corporate communications, legislative, regulatory, lobbying and all outreach efforts to achieve favorable public policy positions for Cyren. Maintained relationships with various industry and public safety organizations such as APCO, IAFC, IACP, NENA to advance these public policy positions. An external presenter and speaker for Cyren at key public safety conferences as well as regulatory and legislative venues.

Greater Harris County 9-1-1 Emergency Network 2004 - 2005
Executive Director
Responsible for design and management of integrated voice and data networks providing emergency number service for over 4.5 million citizens in 48 cities and four counties in the Houston metropolitan area. Greater Harris County 9-1-1 Emergency Network is the largest regional 9-1-1 program in the country.

Chief Operating Officer - 1990 – 2004

Early Warning System Implementation, 2002

- Project Director, implementation of nation's largest early warning notification system for municipalities within coverage area.

Automatic Crash Notification Project (ACN), 2002 -present

- 2000 – Project Director of first proof-of-concept demonstration combining telematics technology within the native 9-1-1 communications infrastructure.
- 2002 – Project Director of first implementation of ACN technology in the public safety environment.
- 2005 – Expansion to include demonstration of mobile threat notification for chemical and bio-hazard.
- Total of 800 police cars across two technology platforms

Wireless 9-1-1 Implementation, 2002

- Project Director for first implementation of wireless 9-1-1 technology for major metropolitan area in the country. The first major deployment of location technology, allowing 9-1-1 call-takers and first responders to pinpoint location of wireless devices calling 9-1-1. Now a national mandate by the Federal Communications Commission.

Texas Wireless Integration Project (WIP), 1996

- *Co-chaired the first proof-of-concept demonstration utilizing location technology* for routing and delivery of wireless 9-1-1 calls.

Inventor - patented 9-1-1 emergency communications system solutions

National Emergency Number Association (NENA) -16-Year Member

- President of NENA June 2002 – 2003
- 2nd Vice President of NENA 2001 – 2002
- 1st Vice President of NENA 2000 – 2001
- Numerous Testimonies before the United States Congress
- Wireless Liaison for NENA working closely with wireless carriers manufacturer trade associations, the FCC and CTIA, TR45
- ENP certification 1999

Pasadena Police Department - Pasadena, Texas
Technical Director, Dispatch Supervisor 1986 - 1990
Dispatcher, 1982 – 1986
Paramedic, 1984 - 1990

City of Pasadena – Office of Emergency Preparedness
Radio Officer 1978 – 1980
Communications Manager 1980 - 1982

Recognitions:
Presidential Citation, NENA 1995, 1996, 1997, 1998, 2002, 2006
APCO 1993, 1994, 1995, 1996

Recognition by Radio Resource magazine, Most Influential People in Public Safety, 1998 and 1999

Innovator Award from Computerworld Smithsonian for Visionary Use of Information Technology, (organizational award) 1995

Presidential Award, APCO Project 31, 1992 and 1993

Other Endeavors:
President, Pasadena Rotary Club 1992-1993
Licensed Pilot – Instrument Rating
Regular keynote speaker at public safety related conferences

COMMONWEALTH OF VIRGINIA

STATE CORPORATION COMMISSION

AT RICHMOND, FEBRUARY 14, 2008

2008 FEB 14 A 11: 29

PETITION OF

INTRADO COMMUNICATIONS OF VIRGINIA, INC.

CASE NO. PUC-2007-00112

For Arbitration to Establish an Interconnection Agreement with Central Telephone Company of Virginia d/b/a Embarq and United Telephone - Southeast, Inc. d/b/a Embarq, under Section 252(b) of the Telecommunications Act of 1996

ORDER OF DISMISSAL

On November 27, 2007, Intrado Communications of Virginia, Inc. ("Intrado"), filed a Petition for Arbitration ("Petition") with the State Corporation Commission ("Commission") pursuant to 47 U.S.C. § 252(b)(1) ("Telecommunications Act"),[1] asking the Commission to resolve the disputes arising from Intrado's attempts to negotiate an interconnection agreement ("ICA") with Central Telephone Company of Virginia d/b/a Embarq and United Telephone - Southeast, Inc. d/b/a Embarq (collectively "Embarq").

In its Petition, Intrado requests that the Commission arbitrate the disputed issues identified in the attachments to its Petition, adopt Intrado's proposed contract language on those issues and order the parties to sign an ICA reflecting Intrado's proposed language and the parties' agreed-upon language.

On December 26, 2007, Embarq filed its response to Intrado's Petition ("Response"). Embarq's Response addressed 34 issues, but also noted a crucial threshold matter of whether Intrado had included interconnection issues that are not within the scope of § 251(c) of the Telecommunications Act.

[1] 47 U.S.C. § 151 et seq.

In a separate Motion to Dismiss, filed on December 27, 2007, Embarq argues that Intrado has failed to negotiate in good faith, that Intrado's Petition is procedurally deficient, and that Intrado has included issues that are not subject to arbitration. On January 14, 2008, Intrado filed its Opposition to Motion to Dismiss and Motion for Oral Argument, asserting that it had negotiated and sought arbitration in good faith, that its Petition meets the procedural requirements of § 252(b), and that the items included within its proposed ICA are within the purview of § 251(c).

Embarq filed its Reply on January 24, 2008. Embarq attached copies of motions to dismiss or to hold in abeyance filed by various AT&T operating companies in Ohio, Florida, and North Carolina. Embarq reiterated its allegations that Intrado sought to arbitrate issues that it had not sought to negotiate and noted that Intrado had apparently sought arbitration prematurely in Ohio, Florida, and North Carolina.

NOW THE COMMISSION, upon consideration of the pleadings and the applicable statutes and rules, finds that the Petition should be dismissed.

Section 56-265.4:4 B 4 of the Code of Virginia provides that the Commission shall discharge the responsibilities of state commissions pursuant to the Telecommunications Act and applicable law and regulations, including, but not limited to, the arbitration of interconnection agreements. However, the statute goes on to provide that the Commission may exercise its discretion to defer selected issues. In this case, we find there is a threshold issue that should be determined by the Federal Communications Commission ("FCC"). Therefore, we believe the FCC is the more appropriate agency to determine whether Intrado is entitled to interconnection pursuant to § 251(c) of the Telecommunications Act.[2] As a result, based upon the potential

[2] We note that until such time as this threshold issue is resolved that it would be inappropriate to resolve the other disputed issues. Therefore, we will defer resolution of all issues in Intrado's Petition to the FCC.

conflict that may arise should the Commission attempt to determine the rights and responsibilities of the parties under state law or through application of the federal standards embodied in the Telecommunications Act, we find that this arbitration proceeding should be deferred to the FCC.

Accordingly, IT IS ORDERED THAT the Petition is hereby dismissed. There being nothing further to come before the Commission, the papers shall be transferred to the files for ended causes.

AN ATTESTED COPY hereof shall be sent by the Clerk of the Commission to: Rebecca R. Geller, Esquire, Mintz Levin, 701 Pennsylvania Avenue, N.W., Washington, D.C. 20004; Rebecca Ballesteros, Associate Counsel, Intrado Communications, Inc., 1601 Dry Creek Drive, Longmont, Colorado 80503; Edward Phillips, Esquire, Mailstop: NCWKFR0313, 14111 Capital Boulevard, Wake Forest, North Carolina 27587-5900; William Watkins, United Telephone - Southeast, Inc., 5656 West 110th Street, Mailstop: KSOPKJ0401, Overland Park, Kansas 66211; and the Commission's Office of General Counsel and Division of Communications.

I.D. # Revised PHP-3

AT&T-Intrado Arbitration
FPSC Docket No.
070736-TP

Revised Exhibit PHP-3

Using the 9-state template will eliminate the following issues from the arbitration:

Issue	13-state ICA Sections	Description	9-State Exclusion
13b	IC § 16.2; ITR § 12.2	Assistance to stop switched access traffic over local interconnection trunks	No provisions regarding efforts to limit switched access over local trunks
15	IC §§ 4.2.1, 4.2.2	Intervening law regarding FCC's ISP Compensation Order	No provisions regarding ISP Compensation Order
25a	GTC §§ 10.1.4, 10.5, 10.6.3	Late payment charges on escrow amounts	No escrow provisions
31	GTC 1.1.61	Definition of End Users	Term End Users not defined or utilized as a defined term
32	ITR § 2.12	Definition of Offers Service to include 911 service	Term Offers Service not defined or utilized
34a, 34b	PC § 2.22	Description and ICB pricing of non-standard collocation	No provisions for non-standard collocation

Using the 9-state template will eliminate these contract language disputes[1] from the issues for arbitration:

Partial Issue	13-state ICA Sections	Description	9-State Exclusion
3b	GTC § 44.6.1.2	911 service for data only providers	No data-only provisions
4b	GTC § 1.1.118	Definition of POI	No dispute expected for definition of Interconnection Point (Att. 3 § 2.14)
4c	NIM § 3.3.1	Fiber meet point	Fiber meet point location
7a	NIM §§ 2.1, 4.1, 4.2, 4.3	Implementation plan, notice requirements	No provisions regarding implementation plans or notice requirements
7b	NIM §§ 1.26, 3.41	Other methods of interconnection via amendment / applicable law	No provisions regarding amending the ICA for alternative interconnection requiring amendment
9	OET § 1.1	OET excluded 911	No OET provisions
13a	IC §§ 1.2, 3.5, 16.1 (portion); ITR § 2.14	Local interconnection for wireline services	No related wordsmithing
29a	IC § 14.4; Pricing § 2.2	Reciprocal compensation usage rounding	Reciprocal compensation is based on factors rather than actual usage, so rounding does not apply

[1] Other contract provisions remain in dispute for these issues, thus the issues are not completely eliminated from the arbitration.

APPENDIX 911

While AT&T responds to the redlines offered by Intrado it does so with this caveat: AT&T does not believe that Intrado is entitled to an interconnection agreement under federal law.

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions by which the applicable AT&T Inc. (AT&T)-owned Incumbent Local Exchange Carrier (ILEC) and CLEC will provide each other with access to the applicable 911 and E911 Databases and provide Interconnection and Call Routing for purposes of 911 call completion to Public Safety Answering Point (PSAPs) as required by Section 251 of the Act.

1.2 The Parties acknowledge and agree that the Parties can only provide 911/E911 Service in a territory where the Party is the E911 network provider, and then only that E911 Service configuration as purchased by the E911 Customer. The Parties' E911 Selective Routers and E911 Database Management System are by mutual agreement being provided under this Agreement on an "as is" basis.

1.3 Each Party shall provide access to its respective E911 Selective Routers as described herein only where a PSAP and/or E911 Customer served by the E911 Selective Routers has requested and approved the Party to carry E911 Emergency Services call**, which approval is subject to being revoked, conditioned, or modified by the PSAP and/or E911 Customer.**

1.4 ***Intentionally Omitted*** **If a 911/E911 Customer requests either Party to establish a PSAP to PSAP transfer arrangement, the Parties will negotiate such a separate agreement consistent with the 911/E911 Customer 's request for such an arrangement. The 911/E911 Customer will be a party to this separate agreement.**

2. DEFINITIONS

2.1 "**911 Service**" means a service that uses a universal telephone number to provide the public access to the PSAP by dialing 911. Basic 911 Service collects 911 calls from one or more local exchange switches that serve a geographic area.

2.2 "**911 System**" or "**E911 System**" means the set of network, database and customer premise equipment (CPE) components required to provide 911 Service.

2.3 "**911 Trunk**" or "**E911 Trunk**" means a trunk capable of transmitting Automatic Number Identification (ANI) associated with a call to 911 from **AT&T-(STATE)** or CLEC 's ***End Office*** **Switch** to the E911 System.

2.4 "**Automatic Location Identification**" or "**ALI**" means the automatic display at the PSAP of the caller's telephone number, the address/location of the telephone and, in some cases, supplementary emergency services information.

2.5 "**Automatic Number Identification**" or "**ANI**" means the telephone number associated with a communications device that originates an emergency call, which is the number used to route an E911 call to the appropriate PSAP for use in retrieving the associated ALI record for display to the call taker, the access line from which a call to 911 originates.

2.6 "**Company Identifier**" or "**Company ID**" means a three to five (3 to 5) character identifier chosen by the Local Exchange Carrier that distinguishes the entity providing dial tone to the End-User. The Company Identifier is maintained by NENA in a nationally accessible database.

2.7 "**Database Management System**" or "**DBMS**" means a system of manual procedures and computer programs used to create, store and update the data required to provide Selective Routing and/or Automatic Location Identification for E911 Systems.

2.8 **"Designated 911/E911 Service Provider"** means the entity designated by the 911/E911 Customer to provide 911 services to the PSAPs in their jurisdictional serving area.

2.9 "**911/E911 Customer**" or "**PSAP**" means a municipality or other state or local government unit, or an authorized agent of one or more municipalities or other state or local government units to whom authority has been lawfully delegated to respond to public emergency telephone calls, at a minimum, for emergency police and fire services through the use of one telephone number, 911.

2.10 "**E911 Universal Emergency Number Service**" (also referred to as "**Enhanced 911 Service**") or "**E911 Service**" is a communications service whereby a public safety answering point (PSAP) answers telephone calls placed by dialing the number 911. E911 includes the service provided by the lines and equipment associated with the service arrangement for the answering, transferring, and dispatching of public emergency telephone calls dialed to 911. E911 provides completion of a call to 911 via dedicated trunking facilities and includes Automatic Number Identification (ANI), Automatic Location Identification (ALI), and/or Selective Routing.

2.11 "**Emergency Services**" means police, fire, ambulance, rescue, and medical services.

2.12 "**Emergency Service Number**" or "**ESN**" means a three to five digit number representing a unique combination of emergency service agencies (Law Enforcement, Fire, and Emergency Medical Service) designated to serve a specific range of addresses within a particular geographical area. The ESN facilitates selective routing and selective transfer, if required, to the appropriate PSAP and the dispatching of the proper service agency(ies).

2.13 **"Master Street Address Guide"** means a database of street names and house number ranges within their associated communities defining Emergency Service Zones (ESZs) and their associated Emergency Service Numbers (ESNs) to enable proper routing of E911 calls.

2.14 "**National Emergency Number Association**" or "**NENA**" means the National Emergency Number Association is a not-for-profit corporation established in 1982 to further the goal of "One Nation-One Number". NENA is a networking source and promotes research, planning, and training. NENA strives to educate, recommend standards and provide certification programs, legislative representation and technical assistance for implementing and managing 911 systems.

2.15 "**Pseudo-ANI**" or "**pANI**" means a ***10 digit*** **telephone** number ***that is*** used ***in place of ANI for E911 call routing and the delivery of dynamic ALI information*** **to support routing of wireless 911 calls or nomadic VoIP 911 calls. It may identify a wireless cell, cell sector or PSAP to which the call should be routed. Pseudo-ANI is also known as routing number.**

2.16 **"Point of Interconnection" or "POI"** means a point on ***one Party's*** **the AT&T-(STATE)** network **(E911 Selective Router building) identified by CLEC** where the Parties deliver 911/E911 traffic to each other, and also serves as a demarcation point between the facilities to which each Party is responsible to provide ***facilities on its side***.

2.17 "**Public Safety Answering Point**" or "**PSAP**" means an answering location for 911 calls originating in a given area. The E911 Customer may designate a PSAP as primary or secondary, which refers to the order in which calls are directed for answering. Primary PSAPs answer calls; secondary PSAPs receive calls on a transfer basis. PSAPs are public safety agencies such as police, fire, emergency medical, etc., or a common bureau serving a group of such entities.

2.18 "**Selective Routing**" means the routing and equipment used at a "**E911 Selective Router**" or"**911/E911 Tandem**" to route a 911 call to the proper PSAP based upon the number and location of the caller.

Selective Routing is controlled by an ESN, which is derived from the location of the access line from which the 911 call was placed.

2.19 **"Shell Records"** means those ***pre-provisioned service order input--type records necessary to enable dynamic ANI/ALI call delivery and display methods, and used to determine call routing and the appropriate dynamic ANI/ALI provider responsible for providing the caller's ANI/ALI for display at the appropriate PSAP upon the answer of a 911 call*** **database records associated with Pseudo-ANI telephone numbers. Shell Records facilitate call delivery and the appropriate ALI display for wireless 9-1-1 calls and nomadic VoIP 911 calls.**

3. AT&T-(STATE) RESPONSIBILITIES WHERE AT&T-(STATE) IS THE DESIGNATED 911/E911 SERVICE PROVIDER

3.1 **AT&T-(STATE)** shall provide and maintain such equipment at the **AT&T-(STATE)** E911 Selective Router and the DBMS as is necessary to provide CLEC E911 Emergency Services at parity with that of **AT&T-(STATE)** retail End Users ***and AT&T-(STATE) E911 Customers.*** **AT&T-(STATE)** shall provide CLEC access to the **AT&T-(STATE)** 911 System as described in this section.

3.2 Call Routing

3.2.1 **AT&T-(STATE)** will route 911 calls from the **AT&T-(STATE)** E911 Selective Router to the designated primary PSAP or to designated alternate locations, according to routing criteria specified by the PSAP.

3.2.2 **AT&T-(STATE)** will forward the calling party number (ANI) it receives from CLEC and the associated 911 Address Location Identification (ALI) to the PSAP for display. If no ANI is forwarded by CLEC, **AT&T-(STATE)** will forward an Emergency Service Central Office (ESCO) identification code for display at the PSAP. If ANI is forwarded by the CLEC, but no ALI record is found in the E911 DBMS, **AT&T-(STATE)** will report this "No Record Found" condition to the CLEC in accordance with NENA standards.

3.3 Facilities and Trunking

3.3.1 **AT&T-(STATE)** shall provide and maintain sufficient dedicated E911 trunks from **AT&T-(STATE)**'s E911 Selective Router to the PSAP of the E911 Customer, according to provisions of the appropriate state Commission-approved tariff and documented specifications of the E911 Customer.

3.3.2 **AT&T-(STATE)** will, if requested, provide facilities to interconnect the CLEC to the **AT&T-(STATE)** ***Point(s) of Interconnection (POI)*** **E911 Selective Router**, as specified in the applicable **AT&T-(STATE)** Special Access tariff. Additionally, when diverse facilities are requested by CLEC, **AT&T-(STATE)** will provide such diversity where technically feasible, at standard **AT&T-(STATE)** Special Access Tariff rates

3.4 Database

3.4.1 Where **AT&T-(STATE)** is designated by the E911 Customer to manage the E911 Database **AT&T-(STATE)** shall provide CLEC access to the **AT&T-(STATE)** E911 Database to store CLEC's End User 911 Records (e.g., the name, address, and associated telephone number(s) for each of CLEC's End Users). CLEC or its representative(s) is responsible for electronically providing End User 911 Records and updating this information.

3.4.2 Where **AT&T-(STATE)** manages the E911 Database, **AT&T-(STATE)** shall coordinate access to the **AT&T-(STATE)** DBMS for the initial loading and updating of CLEC End User 911 Records by CLEC.

3.4.3 Where **AT&T-(STATE)** manages the E911 Database, **AT&T-(STATE)**'s E911 Database shall accept electronically transmitted files that are based upon NENA recommended standards. Manual (i.e. facsimile) entry shall be utilized only in the event that the DBMS is not functioning properly.

3.4.4 Where **AT&T-(STATE)** manages the E911 Database, **AT&T-(STATE)** shall provide an initial MSAG load and updates to CLEC for use in submitting MSAG valid End User record information to **AT&T-**

(STATE)'s DBMS for those E911 Selective Routers that CLEC has End Users. CLEC shall be responsible for accepting and maintaining the updates from **AT&T-(STATE)**. **AT&T-(STATE)** will make updates available as frequently as each state's system currently provides.

4. CLEC RESPONSIBILITIES WHERE AT&T-(STATE) IS THE DESIGNATED 911/E911 SERVICE PROVIDER

4.1 Call Routing

4.1.1 CLEC will transport CLEC End User 911 calls to each CLEC-designated **AT&T-(STATE)** ***POI(s)*** **E911 Selective Router location.**

4.1.2 CLEC will forward the ANI information of the party calling 911 to the **AT&T-(STATE)** E911 Selective Router.

4.2 Facilities and Trunking

4.2.1 CLEC shall provide interconnection trunking at each **AT&T-(STATE)** 911 Selective Router that serves the exchange areas in which CLEC is authorized to ***and will*** provide telephone exchange service.

4.2.2 CLEC acknowledges that its End Users in a single local calling scope may be served by different E911 Selective Routers and CLEC shall be responsible for providing interconnection facilities to route 911 calls from its End Users to the proper ***POI(s)*** **E911 Selective Router.**

4.2.3 CLEC shall provide a minimum of two (2) one-way outgoing E911 trunk(s) dedicated for originating 911 emergency service calls to from the E911 Selective Router to the **AT&T-(STATE)** E911 Selective Router, where applicable. Where SS7 connectivity is available and required by the applicable E911 Customer, the Parties agree to implement Common Channel Signaling trunking rather than CAMA MF trunking.

4.2.3.1 CLEC is responsible for providing a separate E911 trunk group for each county or other geographic area that the CLEC serves if the E911 Customer for such county or geographic area has a specified varying default routing condition. Where MF signalling is used and PSAPs do not have the technical capability to receive 10-digit ANI, E911 traffic must be transmitted over a separate trunk group specific to the underlying technology. In addition, 911 traffic originating in one (1) NPA (area code) must be transmitted over a separate 911 trunk group from 911 traffic originating in any other NPA (area code) 911.

4.2.3.2 CLEC shall segregate wireless traffic on separate E911 trunk groups following the same requirements outlined in 4.2.3 and 4.2.3.1.

4.2.4 CLEC shall maintain facility transport capacity sufficient to route 911 traffic over trunks dedicated for 911 interconnection between the CLEC switch and the **AT&T-(STATE)** ***POI(s)*** **E911 Selective Router.**

4.2.5 CLEC shall provide sufficient trunking to route CLEC's originating 911 calls to the designated **AT&T-(STATE)** E911 Selective Router.

4.2.6 A diverse (i.e., separate) 911 Trunk is recommended and may be required by the E911 Customer. If required by the E911 Customer, diverse 911 Trunks shall be ordered in the same fashion as the primary 911 Trunks. CLEC is responsible for initiating trunking and facility orders for diverse routes for 911 interconnection.

4.2.7 CLEC is responsible for determining the proper quantity of trunks from its switch(es) to interconnect with the **AT&T-(STATE)** E911 Selective Router.

4.2.8 CLEC shall engineer its 911 trunks to attain a minimum P.01 grade of service as measured using the "busy day/busy hour" criteria or, if higher, at such other minimum grade of service as required by Applicable Law.

4.2.9 CLEC shall monitor its 911 trunks for the purpose of determining originating network traffic volumes. If CLEC's traffic study indicates that additional 911 trunks are needed to meet the current level of 911 call volumes, CLEC shall provision additional 911 trunks for interconnection with **AT&T-(STATE)**.

4.2.10 CLEC is responsible for the isolation, coordination and restoration of all 911 facility and trunking maintenance problems from CLEC's demarcation (for example, collocation) to the **AT&T-(STATE)** 911 Selective Router(s). CLEC is responsible for advising **AT&T-(STATE)** of the 911 trunk identification and the fact that the trunks are dedicated for 911 traffic when notifying **AT&T-(STATE)** of a failure or outage. The Parties agree to work cooperatively and expeditiously to resolve any 911 outage. **AT&T-(STATE)** will refer network trouble to CLEC if no defect is found in **AT&T-(STATE)**'s 911 network. The Parties agree that 911 network problem resolutions will be managed expeditiously at all times **and will work cooperatively until problems are resolved**.

4.3 Database

4.3.1 Once the 911 interconnection between CLEC and **AT&T-(STATE)** has been established and tested, CLEC or its representatives shall be responsible for providing CLEC's End User 911 Records to **AT&T-(STATE)** for inclusion in **AT&T-(STATE)**'s DBMS on a timely basis.

4.3.2 CLEC or its agent shall provide initial and ongoing updates of CLEC's End User 911 Records that are MSAG-valid in the electronic format established by **AT&T-(STATE)**.

4.3.3 CLEC shall adopt use of a Company ID on all CLEC End User 911 Records in accordance with industry standards.

4.3.4 CLEC is responsible for providing **AT&T-(STATE)** updates to the E911 database; in addition, CLEC is responsible for correcting any errors that may occur during the entry of its data to the **AT&T-(STATE)** 911 DBMS.

5. CLEC RESPONSIBILITIES WHERE CLEC IS DESIGNATED 911/E911 SERVICE PROVIDER

5.1 CLEC shall provide and maintain such equipment at the CLEC E911 Selective Router and the DBMS as is necessary to provide to **AT&T-(STATE)** E911 Emergency Services at parity with that of CLEC's End Users. CLEC shall provide **AT&T-(STATE)** access to CLEC's 911 System as described in this Section.

5.2 Call Routing

5.2.1 CLEC will route 911 calls from the CLEC E911 Selective Router to the designated primary PSAP or to designated alternate locations, according to routing criteria specified by the PSAP.

5.2.2 CLEC will forward the calling party number (ANI) it receives from **AT&T-(STATE)** and the associated 911 Address Location Identification (ALI) to the PSAP for display. If no ANI is forwarded by **AT&T-(STATE)**, CLEC will forward an Emergency Service Central Office (ESCO) identification code for display at the PSAP. If ANI is forwarded by **AT&T-(STATE)**, but no ALI record is found in the E911 DBMS, CLEC will report this "No Record Found" condition to **AT&T-(STATE)** in accordance with NENA standards.

5.3 Facilities and Trunking

5.3.1 CLEC shall provide and maintain sufficient dedicated E911 trunks from CLEC's E911 Selective Router to the PSAP of the E911 Customer, according to provisions of the appropriate state Commission-approved tariff and documented specifications of the E911 Customer.

5.4 Database

5.4.1 Where CLEC manages the E911 Database, CLEC shall provide **AT&T-(STATE)** access to the E911 Database to store **AT&T-(STATE)**'s End User 911 Records (e.g., the name, address, and associated telephone number(s) for each of **AT&T-(STATE)**'s End Users). **AT&T-(STATE)** or its representative(s) is responsible for electronically providing End User 911 Records and updating this information.

5.4.2 Where CLEC manages the E911 Database, CLEC shall coordinate access to the CLEC DBMS for the initial loading and updating of **AT&T-(STATE)** End User 911 Records by **AT&T-(STATE)**.

5.4.3 Where CLEC manages the E911 Database, CLEC's E911 Database shall accept electronically transmitted files that are based upon NENA standards. Manual (i.e., facsimile) entry shall be utilized only in the event that the DBMS is not functioning properly.

5.4.4 Where CLEC manages the E911 Database, CLEC shall provide an initial MSAG load and daily updates to **AT&T-(STATE)** for use in submitting MSAG valid End User record information to CLEC's DBMS. **AT&T-(STATE)** shall be responsible for accepting and maintaining the daily updates from CLEC.

6. AT&T-(STATE) RESPONSIBILITIES WHERE CLEC IS THE DESIGNATED 911/E911 SERVICE PROVIDER

6.1 Call Routing

6.1.1 **AT&T-(STATE)** will transport 911 calls from its End Offices to the CLEC POI(s). This traffic may be aggregated but not switched after **AT&T-(STATE)** End Office origination and prior to delivery to the CLEC E911 Selective Router. In the event **AT&T-(STATE)'s** End Office has End Users served by more than one E911 Selective Router network, **AT&T-(STATE)** **will transport 911 calls from its End Offices to the AT&T-(STATE) E911 Selective Router location** ***is technically incapable of segregation of its End Office 911 traffic destined for Intrado served PSAPs, AT&T-(STATE) may utilize the following call routing solutions***:

6.1.1.1. ***Split Wire Center Call Delivery Exception – Where AT&T-(STATE) is technically incapable of segregating its End User 911 Service or E911 Service call traffic associated with a Wire Center and where the Wire Center serves End Users both within and outside of the CLEC network serving area, AT&T-(STATE) shall work cooperatively with CLEC and the affected E911 Customer(s) (i) to establish call routing and/or call handoff arrangements, (ii) to establish which E911 Service provider will serve as the "Primary" Selective Routing provider for direct trunking from the split wire center, and (iii) to establish which E911 service provider will serve as the "Secondary" Selective Routing provider receiving a call hand-off from the Primary Selective Routing provider.*** **Where an End Office serves End Users both within and outside of the CLEC network serving area, AT&T-(STATE) shall work cooperatively with CLEC and the affected E911 Customer(s) (i) to establish call routing and/or call handoff arrangements, (ii) to establish which** E911 Service provider will serve as the "primary" Selective Routing provider for **direct trunking from the split wire center, determined by a clear majority based on the Number of Access Lines (NALs) served by the Designated Primary Wireline Service Provider and (iii) to establish which E911 service provider will serve as the "secondary" Selective Routing provider receiving a call hand-off from the primary Selective Routing provider.**

6.1.1.2. ***Intentionally Omitted Split Wire Center Call Delivery Cost - AT&T-(STATE) shall be responsible for any and all costs incurred by CLEC resulting from AT&T-(STATE)'s inability to segregate its End User 911 Service or E911 Service call traffic and resulting in call hand-offs from CLEC's network to another E911 service provider's network.***

6.1.1.3. ***Intentionally Omitted Split Wire Center "Partially Deployed" 911 Exception – Where AT&T-(STATE) is technically incapable of segregating its End User 911 Service or E911 Service call traffic associated with a specific Wire Center and where the Wire Center serves End Users that are within CLEC's network serving area and End Users that have not deployed 911 Services or E911 Services, 911 call traffic for the entire end office shall be delivered to CLEC for call delivery to the appropriate PSAP.***

6.1.2 **AT&T-(STATE)** will forward the ANI information of the party calling 911 to the CLEC E911 Selective Router.

6.2 Facilities and Trunking

6.2.1 **AT&T-(STATE)** shall provide ***interconnection*** **E911** trunking with each CLEC E911 Selective Router that serves the exchange areas in which **AT&T-(STATE)** is authorized to and will provide telephone exchange service.

6.2.2 **AT&T-(STATE)** acknowledges that its End Users in a single local calling scope may be served by different E911 Selective Routers, and **AT&T-(STATE)** shall be responsible for providing interconnection facilities to route 911 calls from its End Users to the proper CLEC ***POI(s)*** **E911 Selective Router location**.

6.2.3 **AT&T-(STATE)** shall provide a minimum of two (2) one-way outgoing 911 trunk(s) dedicated for originating 911 emergency service calls from its End Offices to each CLEC E911 Selective Router, where applicable. Where SS7 connectivity is available and required by the applicable E911 Customer, the Parties agree to implement Common Channel Signaling trunking rather than CAMA MF trunking.

6.2.3.1 **AT&T-(STATE)** is responsible for providing a separate E911 trunk group for each county or other geographic area that **AT&T-(STATE)** serves if the E911 Customer for such county or geographic area has a specified varying default routing condition.

6.3 **AT&T-(STATE)** shall maintain facility transport capacity sufficient to route 911 traffic over trunks on dedicated 911 facilities between the **AT&T-(STATE)** switch and the ***CLEC POI(s)*** **AT&T-(STATE) E911 Selective Router location.**

6.3.1 **AT&T-(STATE)** shall provide sufficient trunking to route **AT&T-(STATE)**'s originating 911 calls to the designated CLEC E911 Selective Router. A diverse (i.e., separate) 911 Trunk is recommended and may be required by the E911 Customer. If required by the E911 Customer, diverse 911 Trunks shall be ordered in the same fashion as the primary 911 Trunks. **AT&T-(STATE)** is responsible for initiating trunking and facility orders for diverse routes for 911 interconnection.

6.3.2 AT&T-(STATE) is responsible for determining the proper quantity of trunks from its switch(es) to the CLEC E911 Selective Router. **AT&T-(STATE)** is responsible for determining the proper quantity of facilities from its switch(es) to the ***CLEC POI(s)*** **AT&T-(STATE) E911 Selective Router location.**

6.3.3 **AT&T-(STATE)** shall engineer its 911 trunks to attain a minimum P.01 grade of service as measured using the "busy day/busy hour" criteria or, if higher, at such other minimum grade of service as required by Applicable Law.

6.3.4 **AT&T-(STATE)** shall monitor its 911 trunks for the purpose of determining originating network traffic volumes. If **AT&T-(STATE)**'s traffic study indicates that additional 911 trunks are needed to meet

the current level of 911 call volumes, **AT&T-(STATE)** shall provision additional 911 trunks for interconnection with CLEC.

6.3.5 **AT&T-(STATE)** is responsible for the isolation, coordination and restoration of all 911 facility and trunking maintenance problems **on *from* AT&T-(STATE)'s side of the POI *End Offices to the CLEC POI(s)*.** **AT&T-(STATE)** is responsible for advising CLEC of the 911 trunk identification and the fact that the trunks are dedicated for 911 traffic when notifying CLEC of a failure or outage. The Parties agree to work cooperatively and expeditiously to resolve any 911 outage. CLEC will refer network trouble to **AT&T-(STATE)** if no defect is found in CLEC's 911 network. The Parties agree that 911 network problem resolution will be managed expeditiously at all times **and will work cooperatively until problems are resolved**.

6.4 Database

6.4.1 Once the 911 interconnection between **AT&T-(STATE)** and CLEC has been established and tested, **AT&T-(STATE)** or its representatives shall be responsible for providing **AT&T-(STATE)**'s End User 911 Records to CLEC for inclusion in CLEC's DBMS on a timely basis.

6.4.2 **AT&T-(STATE)** or its agent shall provide initial and ongoing updates of **AT&T-(STATE)**'s End User 911 Records that are MSAG-valid in electronic format based upon established NENA standards.

6.4.3 **AT&T-(STATE)** shall adopt use of a Company ID on all **AT&T-(STATE)** End User 911 Records in accordance with NENA standards

6.4.4 **AT&T-(STATE)** is responsible for providing CLEC updates to the E911 database; in addition, **AT&T-(STATE)** is responsible for correcting any errors that may occur during the entry of their data to the CLEC 911 DBMS.

7. RESPONSIBILITIES OF BOTH PARTIES

7.1 **Both parties shall jointly coordinate the provisioning of transport capacity sufficient to route originating E911 calls to the 911 Selective Router(s).**

7.1.1 **AT&T-(STATE) and CLEC will cooperate to promptly test all trunks and facilities between their network(s) and Selective Router(s). The parties agree that they will not pass live traffic until successful testing is completed by both Parties.**

7.2 911 Surcharge Remittance to PSAP

7.2.1 The Parties agree that:

7.2.1.1 Each Party is responsible for collecting and remitting applicable 911 surcharges **or fees** from their respective End Users **directly** to municipalities or government entities where such surcharges or fees are assessed by said municipality or government entity, and

7.2.1.2 Each Party collecting and remitting 911 surcharges **from its respective End Users** is responsible for providing the 911 Customer detail**ed monthly listings of the actual number of access lines, or breakdowns between the types of access lines (e.g., residential, business, payphone, Centrex, PBX, and exempt lines)** in accordance with Applicable Law.

7.2.2 For CLEC as a Reseller, except where state law requires the ILEC to serve as a clearinghouse between Resellers and PSAPs, the Parties agree that:

7.2.2.1 CLEC shall be responsible for collecting and remitting all applicable 911 fees and surcharges on a per line basis to the appropriate PSAP or other governmental authority responsible for collection of such fees and surcharges.

7.2.2.2 AT&T-(STATE) shall include Reseller CLEC information when providing the 911 Customer with detailed monthly listings of the actual number of access lines, or

breakdowns between the types of access lines (e.g., residential, business, payphone, Centrex, PBX, and exempt lines).

7.3 ALI Database Responsibilities

7.3.1 Where CLEC has been designated the 911 Service Provider for a 911 Customer contiguous to an **AT&T-(STATE)** 9-1-1 Customer, **and where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer with ALI for dynamic ALI type calls (e.g., wireless 911 and nomadic VoIP calls),** each Party shall load pANI Shell Records and update ALI steering tables in their respective ALI databases to support PSAP-to-PSAP call transfer with ALI for dynamic ALI type calls (e.g., wireless 911 and nomadic VoIP calls).

7.3.3 Where CLEC has been designated the 911 Service Provider for a 911 Customer contiguous to an **AT&T-(STATE)** 911 Customer, **and where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer** the Parties shall work cooperatively to establish methods and procedures to support PSAP to PSAP call transfer with ALI for 911 calls.

7.4 Inter Selective Routing Trunks

7.4.1 Where CLEC is the E911 Service Provider for a 911 Customer that is contiguous to an **AT&T-(STATE)** 9-1-1 Customer, CLEC and **AT&T-(STATE)** may deploy bi-directional inter-SR trunking using one-way trunk configurations that will allow transfers between PSAPs subtending **AT&T-(STATE)** E911 Selective Routers and PSAPs subtending on CLEC Selective Routers. CLEC will be responsible for deploying and maintaining one-way trunks from CLEC's E911 routing network for PSAP call transfers from CLEC subtending PSAPs to **AT&T-(STATE)** subtending PSAPs. **AT&T-(STATE)** will be responsible for deploying and maintaining one-way trunks from the **AT&T-(STATE)** Selective Router for PSAP call transfers from the **AT&T-(STATE)** subtending PSAPs to CLEC subtending PSAPs.

7.4.1.1 Configuration of inter-Selective Router trunk groups shall be designed to support the existing E911 generic of the **AT&T-(STATE)** E911 Selective Router tandem. **AT&T-(STATE)** will notify CLEC of any upgrades to the **AT&T-(STATE)** E911 generic in the SR.

7.4.1.2 Each Party will have a sufficient number of inter-Selective Router tandem trunks to support simultaneous inter-Selective Router tandem PSAP call transfers such that a P.01 grade of service is attained.

7.4.1.3 Where technically feasible, each Party will establish and maintain appropriate Selective Routing trunk routing translations as necessary to support inter-tandem E911 PSAP call transfer capability requested by the 911 Customer.

7.4.1.4 Each Party will provide the appropriate number of one-way outgoing 911/E911 Trunks over diversely routed facilities **between Selective Routers** to enable transfer of 911 calls between PSAPs served by CLEC's E911 routing network and PSAPs served by **AT&T-(STATE)**'s E911 routing network.

7.4.1.5 **Intentionally Omitted*The Parties will maintain appropriate dial plans to support inter-Selective Router tandem transfer and each Party shall notify the other of changes, additions, or deletions to their respective inter-Selective Router dial plans.***

7.4.1.6 Each Party will be responsible for alarming and monitoring their respective originating E911 inter-Selective Routing trunks. Each Party shall notify the other of any service outages on their respective inter-Selective Routing trunk(s), and work cooperatively to restore service in accordance with federal, state and local 911 rules.

7.4.1.7 Inter Selective Router trunks shall not require an Exhibit 1.

8. METHODS AND PRACTICES

8.1 With respect to all matters covered by this Appendix, each Party will comply with all of the following to the extent that they apply to access to 911 and E911 Databases: (i) all FCC and applicable state Commission rules and regulations, (ii) any requirements imposed by any Governmental Authority other than a Commission, (iii) the terms and conditions of the Party's Commission-ordered tariff(s), and (iv) the principles expressed in the recommended standards published by NENA.

9. CONTINGENCY

9.1 The terms and conditions of this Appendix represent a negotiated plan for providing access to 911 and E911 Databases, and provide trunking and call routing for purposes of 911 call completion to a Public Safety Answering Point (PSAP) as required by Section 251 of the Act.

9.2 The Parties agree that the 911 System is provided herein is for the use of the E911 Customer, and recognize the authority of the E911 Customer to establish service specifications and grant final approval (or denial) of service configurations offered by **AT&T-(STATE)** and CLEC. Each Party's specifications shall be documented in ***Exhibit I*** **a state specific form, if applicable. If applicable** CLEC shall complete its portion of ***Exhibit I*** **a state specific form** and submit it to **AT&T-(STATE)** not later than forty-five (45) days prior to the passing of live traffic. **AT&T-(STATE)** shall complete its portion of ***Exhibit I*** **a state specific form** and return ***Exhibit I*** **it** to CLEC not later than forty-five (45) days prior to the passing of live traffic.

9.3 The Parties must obtain documentation of approval of the completed Exhibit I from the appropriate E911 Customer(s) that have jurisdiction in the area(s) in which each Party's End Users are located. Each Party shall provide documentation of all requisite approval(s) to the other Party prior to use of the E911 connection for actual emergency calls.

9.4 Each Party has designated a representative who has the authority to complete ***additional Exhibit(s) I*** **any state specific forms** to this Appendix when necessary to accommodate expansion of the geographic area of either Party into the jurisdiction of additional PSAP(s) or to increase the number of CAMA trunks. Each Party must obtain approval of each additional ***Exhibit I*** **state specific form**, as set forth in Section 9.2, and shall furnish documentation of all requisite approval(s) of each additional ***Exhibit I*** **state specific form** in accordance with Section 9.2.

9.5 **Intentionally Omitted** ***In AT&T-(STATE) the state specific forms shall be submitted in lieu of the Exhibit 1 referenced in Sections 9.1, 9.2 and 9.4 hereof.***

10. BASIS OF COMPENSATION

10.1 Rates for access to the Parties' 911 and E911 Databases, trunking and call routing of E911 call completion to a Public Safety Answering Point (PSAP) as required by Section 251 of the Act as set forth in the **AT&T-(STATE)** Appendix Pricing **or the applicable Party's Commission-approved access tariff**.

11. LIABILITY

11.1 **AT&T-(STATE)**'s liability and potential damages, if any, for its gross negligence, recklessness or intentional misconduct, is not limited by any provision of this Appendix. **AT&T-(STATE)** shall not be liable to CLEC, its ***customers*** **End Users** or its E911 calling parties or any other parties or persons for any Loss arising out of the 911 System or any errors, interruptions, defects, failures or malfunctions of the 911 System, including any and all equipment and data processing systems associated therewith. Damages arising out of such interruptions, defects, failures or malfunctions of the system after **AT&T-(STATE)** has been notified and has had reasonable time to repair, shall in no event exceed an amount equivalent to any charges made for the service affected for the period following notice from CLEC until service is restored.

11.2 CLEC's liability and potential damages, if any, for its gross negligence, recklessness or intentional misconduct is not limited by any provision of this Appendix. In the event CLEC provides E911 Service to **AT&T-(STATE)**, CLEC shall not be liable to **AT&T-(STATE)**, its End Users or its E911 calling parties or any

other parties or persons for any Loss arising out of the provision of E911 Service or any errors, interruptions, defects, failures or malfunctions of E911 Service, including any and all equipment and data processing systems associated therewith. Damages arising out of such interruptions, defects, failures or malfunctions of the system after CLEC has been notified and has had reasonable time to repair, shall in no event exceed an amount equivalent to any charges made for the service affected for the period following notice from **AT&T-(STATE)** until service is restored.

11.3 Each Party agrees to release, indemnify, defend and hold harmless the other Party from any and all Loss arising out of either Party's 911 System hereunder or out of either Party's **customers' or** End Users' use of the 911 System, whether suffered, made, instituted or asserted by their respective **customers or** End Users, or by any other parties or persons, for any personal injury or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by their respective **customers or** End Users or others.

11.4 Each Party also agrees to release, indemnify, defend and hold harmless the other Party from any and all Loss involving an allegation of the infringement or invasion of the right of privacy or confidentiality of any person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, occasion or use of the 911 System features and the equipment associated therewith, including but not limited to the identification of the telephone number, address or name associated with the telephone used by the calling party accessing the 911 System provided hereunder.

(NETWORK INTERCONNECTION METHODS)

TABLE OF CONTENTS

1. INTRODUCTION 3
2. AT&T-(STATE) NETWORK 3
3. METHODS OF INTERCO NNECTION TO AT&T-(STATE) 4
4. METHODS OF INTERCO NNECTION TO CLEC 5
45. NETWORK RESPONSIBILITIES OF THE PARTIES 5

APPENDIX CESIM

1. INTRODUCTION

1.1 This Appendix sets forth the terms and conditions that Network Interconnection Methods (NIM) are provided by the applicable AT&T Inc. (AT&T) owned Incumbent Local Exchange Carrier (ILEC) and Competitive Local Exchange Carrier (CLEC). This Appendix describes the physical architecture for Interconnection of the Parties' facilities and equipment for the transmission and routing of 911/E911 traffic between **AT&T-(STATE)**'s End Users and CLEC 911 Customers.

1.2 **Network Interconnection Methods** (NIMs) include, but are not limited to, Physical Collocation; Virtual Collocation; Fiber Meet Point; and other technically feasible method of obtaining Interconnection, which is incorporated into the Interconnection Agreement by amendment. One or more of these methods may be used to effect the Interconnection.

2. AT&T-(STATE) NETWORK

2.1. **AT&T-(STATE)**'s network is partly comprised of End Office switches and Tandem Switches. **AT&T-(STATE)**'s network architecture in any given local exchange area and/or LATA can vary markedly from another local exchange area/LATA. Using one or more of the NIMs herein, the Parties will agree to a physical architecture plan for a specific Interconnection area. A physical architecture plan will, at a minimum, include the location of CLEC's switch(es) and **AT&T-(STATE)**'s End Office switch(es) and/or Tandem switch(es) to be interconnected, the facilities that will connect the two networks and which Party will provide (be financially responsible for) the Interconnection facilities. At the time of implementation in a given Selective Router area, the plan will be documented and signed by appropriate representatives of the Parties, indicating their mutual agreement to the physical architecture plan.

2.2. Points of Interconnection (POIs): A Point of Interconnection (POI) is a point on the **AT&T-(STATE)** network **(Selective Router location)** identified by CLEC where the Parties deliver 911/E911 traffic to each other, and also serves as a demarcation point between the facilities that each Party is responsible to provide. ***This POI may be the AT&T Selective Router or any other point on the AT&T-(STATE) network where AT&T-(STATE) is the Designated E911 Service Provider and, CLEC may seek to establish more than one POI for the redundancy of the E911 interconnection. Where CTESC is the Designated E911 Service Provider the POI shall be on the CLEC network and serve as a demarcation point between the facilities that each Party is responsible to provide.***

2.3. Each Party is responsible for the facilities to its side of the POI(s) and may utilize any Method of Interconnection described in this Appendix. Each Party is responsible for the appropriate sizing, operation, and maintenance of the transport facility to the POI(s).

2.4. Either Party must provide thirty (30) days written notice of any intent to change to the physical architecture plan.

2.5. Technical Interfaces

2.5.1 The Interconnection facilities provided by each Party shall be formatted using either Alternate Mark Inversion (AMI) line code with Superframe format framing or Bipolar 8 Zero Signaling (B8ZS) with Extended Superframe format framing or any mutually agreeable line coding and framing.

2.5.2 Electrical handoffs at the POI(s) will be at the DS1 or DS3 level. When a DS3 handoff is agreed to by the Parties, **AT&T-(STATE)** will provide any multiplexing required for DS1 facilities or trunking at its end and CLEC will provide any DS1 multiplexing required for facilities or trunking at its end.

2.5.3 When the Parties demonstrate the need for Optical handoffs at the OC-n level, the Parties will meet to negotiate specific Optical handoff needs.

3. METHODS OF INTERCONNECTION *TO AT&T-(STATE)*

3.1. Physical Collocation

3.1.1 When CLEC provides its own facilities or uses the facilities of a third party to ***the POI(s)* an AT&T-(STATE) Selective Router location** and wishes to place its own transport terminating equipment at that location, CLEC may Interconnect using the provisions of Physical Collocation as set forth in Appendix Physical Collocation.

3.2. Virtual Collocation

3.2.1 When CLEC provides its own facilities or uses the facilities of a third party to ***the POI(s)* an AT&T-(STATE) Selective Router location** and wishes for **AT&T-(STATE)** to place transport terminating equipment at that location on CLEC's behalf, CLEC may Interconnect using the provisions of Virtual Collocation as set forth in Appendix Virtual Collocation. Virtual Collocation allows CLEC to choose the equipment vendor and does not require that CLEC be Physically Collocated.

3.3. Fiber Meet Point

3.3.1 Fiber Meet Point between **AT&T-(STATE)** and CLEC can occur at any mutually agreeable and technically feasible point ***on the* at an AT&T-(STATE) *network* Selective Router location associated with each local exchange or LATA**.

3.3.2 When the Parties agree to interconnect their networks pursuant to the Fiber Meet Point, a single point-to-point linear chain SONET system must be utilized. Only 911 **end office and inter Selective Router** Trunk groups shall be provisioned over this jointly provided facility.

3.3.3 Neither Party will be allowed to access the Data Communications Channel ("DCC") of the other Party's Fiber Optic Terminal (FOT). The Fiber Meet Point will be designed so that each Party may, as far as is technically feasible, independently select the transmission, multiplexing, and fiber terminating equipment to be used on its side of the POI(s). The Parties will work cooperatively to achieve equipment and vendor compatibility of the FOT equipment.

3.3.4 Requirements for such Interconnection specifications will be defined in joint engineering planning sessions between the Parties.

3.3.5 Discussions to provide relief to existing facilities can be initiated by either Party. Actual system augmentations will be initiated only upon mutual agreement. Facilities will be planned for to accommodate the verified and mutually agreed upon trunk forecast for the 911 Trunk group(s).

3.3.6 Both Parties will negotiate a project service date and corresponding work schedule to construct relief facilities prior to facilities exhaust.

3.3.7 CLEC will provide fiber cable to the last entrance (or **AT&T-(STATE)** designated) manhole at the ***POI(s)* AT&T-(STATE) Selective Router location**. **AT&T-(STATE)** shall make all necessary preparations to receive and to allow and enable CLEC to deliver fiber optic

facilities into that manhole. CLEC will provide a sufficient length of fiber cable for AT&T-(STATE) to pull through to the AT&T-(STATE) cable vault. CLEC shall deliver and maintain such strands wholly at its own expense up to the POI(s). AT&T-(STATE) shall take the fiber from the manhole and terminate it inside AT&T-(STATE)'s office at the cable vault at AT&T-(STATE)'s expense. In this case the POI shall be at the AT&T-(STATE) designated manhole location.

3.3.8 Each Party shall provide its own source for the synchronized timing of its FOT equipment.

3.3.9 CLEC and AT&T-(STATE) will mutually agree on the capacity of the FOT(s) to be utilized based on equivalent DS1s or DS3s. Each Party will also agree upon the optical frequency and wavelength necessary to implement the Interconnection. The Parties will develop and agree upon methods for the capacity planning and management for these facilities, terms and conditions for over provisioning facilities, and the necessary processes to implement facilities as indicated in Section **4 5** of this Appendix.

3.4. Other Interconnection Methods

3.4.1 The Parties may mutually agree to other methods of obtaining Interconnection that are technically feasible which are incorporated into the Interconnection Agreement by amendment.

4. METHODS OF INTERCONNECTION TO CLEC

4.1. Virtual Collocation

4.1.1 ***When AT&T-(STATE) provides its own facilities or uses the facilities of a third party to the POI(s) and wishes for CLEC to place transport terminating equipment at that location on AT&T-(STATE)'s behalf, AT&T-(STATE) may Interconnect using the provisions of Virtual Collocation as set forth in Appendix Virtual Collocation. Virtual Collocation allows AT&T-(STATE) to choose the equipment vendor and does not require that AT&T-(STATE) be Physically Collocated.***

4.2. Other Interconnection Methods

4.2.1 *The Parties may mutually agree to other methods of obtaining Interconnection that are technically feasible which are incorporated into the Interconnection Agreement by amendment.*

5. NETWORK RESPONSIBILITIES OF THE PARTIES

5.1. ***Intentionally Omitted.*** **For each Interconnection within an AT&T-(STATE) Selective Router area, CLEC shall provide written notice to AT&T-(STATE) of the need to establish Interconnection with each Selective Router. CLEC shall provide all applicable network information on forms acceptable to AT&T-(STATE) (as set forth in AT&T's CLEC Handbook, published on the CLEC website).**

5.2. Upon receipt of CLEC's notice to Interconnect, the Parties shall schedule a meeting to document the network architecture (including trunking) as discussed in Section 2.1. The Interconnection activation date for an Interconnection shall be established based on then-existing force and load, the scope and complexity of the requested Interconnection and other relevant factors.

5.3. Either Party may add or remove additional switches. The Parties shall provide ***30*** **120** days written notice to establish **such** ***additional*** Interconnection ***arrangements or re-arrangement of***

existing interconnections; and the terms and conditions of this Agreement will apply to such Interconnection.

5.4. The Parties recognize that a facility handoff point must be agreed to that establishes the demarcation for maintenance and provisioning responsibilities for each Party on its side of the POI.

FACILITIES AND TRUNKS

Q. WHAT IS THE DIFFERENCE BETWEEN FACILITIES AND TRUNKS?

A. A facility is a physical medium used to connect two points on a network or two different networks. Facilities in the AT&T Florida network are primarily made of copper or fiber optic cable. Facilities are used to establish physical connectivity between two points. When two telecommunications companies interconnect their networks together, facilities are physically connected, linking the two networks to one another. The point at which this connecting or linking takes place is known as the Point of Interconnection ("POI"). The physical linking of the two companies' facilities creates an end-to-end facility path that will allow each company to establish the trunking network between their switches. It is common to see facilities referred to in terms of their data capacity, such as DS1, DS3, OC3, OC12, etc.

Trunks utilize ports on a switch and are used to create a dedicated talk path from one switch to another. Between switches, there is typically a need for more than one talk path, so multiple trunks are grouped together by software in what is referred to as a Trunk Group ("TG"). Each TG will be dedicated for calls between the two switches. When an end user served by one switch wants to call an end user served by another switch, the originating switch routes the call to a particular TG, based on the NPA-NXX (dialed digits) of the end user being called. Within the TG, an idle

trunk is identified and is then dedicated to that call for the duration of the call. Consequently, no other call can use that trunk until the current call is completed. Consequently, in the 911 arena, the dialed digits 911 are referred to as an "N11" code, whereas N is a number between 2-9. Routing to a TG is performed in the same manner, using the dialed digits to "steer" the call through the network.

Q. CAN YOU ESTABLISH TRUNKS WITHOUT FACILITIES?

A. No. Trunks ride over facilities. Without a facility to ride, calls between switches cannot be established. Similarly, simply having a facility between two points is not enough to complete a call. A trunk must ride the facility for a call to be completed. Trunks and facilities work hand-in-hand so calls can be completed.

The distinction between a trunk and a facility is illustrated in the diagram below. In this illustration a physical facility (e.g., DS1) exists between Central Office A and Central Office B (the pipe). Trunks (represented by the thin lines) are then provisioned over the facility to establish the talking paths between the two switches.

NENA STANDARDS

NOTICE

The National Emergency Number Association (**NENA**) publishes this document as a guide for the designers and manufacturers of systems to utilize for the purpose of processing emergency calls. It is not intended to provide complete design specifications or to assure the quality of performance of such equipment.

NENA reserves the right to revise this NENA STANDARD for any reason including, but not limited to:

- conformity with criteria or standards promulgated by various agencies
- utilization of advances in the state of the technical arts
- or to reflect changes in the design of equipment or services described herein.

It is possible that certain advances in technology will precede these revisions. Therefore, this NENA STANDARD should not be the only source of information used. **NENA** recommends that readers contact their Telecommunications Carrier representative to ensure compatibility with the 9-1-1 network.

Patents may cover the specifications, techniques, or network interface/system characteristics disclosed herein. No license expressed or implied is hereby granted. This document shall not be construed as a suggestion to any manufacturer to modify or change any of its products, nor does this document represent any commitment by NENA or any affiliate thereof to purchase any product whether or not it provides the described characteristics.

This document has been prepared solely for the voluntary use of E9-1-1 Service System Providers, network interface and system vendors, participating telephone companies, etc.

By using this document, the user agrees that NENA will have no liability for any consequential, incidental, special, or punitive damages arising from use of the document.

NENA's Technical Committee has developed this document. Recommendations for change to this document may be submitted to:

1 Executive Overview

1.1 Purpose and Scope of Document

This "NENA Recommended Standard for E9-1-1 Default Assignment and Call Routing Functions" document provides an overview of various database and network specifications and requirements related to Default Routing of 9-1-1 calls. It is intended to help local authority; database and/or network administrators select a model in the development of standard default routing arrangements. It identifies and defines methods used to assign defaults and route 9-1-1 calls when circumstances prevent normal selective routing. Each approach is used during a specific set of circumstances; similarly a specific set of circumstances shall determine which approach is most appropriate.

1.2 Reason to Implement

While default routing schemes are critical to an E9-1-1 compliant set of database and network design, throughout much of the 9-1-1 community, there is misunderstanding from time to time about the methods used to route 9-1-1 calls when circumstances prevent typical routing. This document aims at describing such circumstances and the method(s) used in such circumstances which shall give the community a common foundation for discussing default call routing schemes.

It shall be recognized that the rationale for default management within database and network components and for default call routing is in an evolution with the advent of new communication mechanisms generating the end of local rate center number assignment restriction and the introduction of geographic number portability.

1.3 Benefits

Use of this "NENA E9-1-1 Default Assignment and Call Routing Functions" Standard will:

- foster a common understanding of terms used in the assessment, determination and deployment of default call routing for emergency services;
- foster fundamental default management rationale for databases;
- explain default call routing ;
- foster increased communication regarding default call routing selections in the planning of E9-1-1 deployments;
- provide alternatives to switch/network vendors regarding desired operational attributes; and
- foster a common set of standards to complete 9-1-1 calls to designated PSAPs when normal selective routing cannot be invoked.

1.4 Operational Impacts Summary

Default-routed calls arrive at the PSAP much like any other call, but may have originated from a neighboring area outside the PSAP's jurisdiction. If a PSAP is designated to receive default-routed calls, provisions must be made in advance for transferring those calls to the appropriate PSAP(s). This will require PSAPs to work with their 9-1-1 System Service Provider and governing authority

to negotiate default routing assignments that are the best possible choices for the specific circumstances, recognizing that those assignments may vary based on the footprints and technologies of the originating Communications Service Providers. If possible, it should also include the creation of "speed-dial" or "one button" transfer programming in the PSAP CPE, to facilitate the transfer as quickly as possible and eliminate human dialing errors.

1.5 Document Terminology

The terms "shall", "must" and "required" are used throughout this document to indicate required parameters and to differentiate from those parameters that are recommendations. Recommendations are identified by the words "desirable" or "preferably".

1.6 Reason for Issue/Reissue

This document details the processes and procedures to be followed by all NENA Technical Committee leaders and members. NENA reserves the right to modify this document. Whenever it is reissued, the reason(s) will be provided in this table.

Issue #	Date	Reason For Changes
Original	01/19/2008	Initial Document

1.7 Date Compliance

All systems that are associated with the 9-1-1 process shall be designed and engineered to ensure that no detrimental, or other noticeable impact of any kind, will occur as a result of a date/time change up to 30 years subsequent to the manufacture of the system. This shall include embedded application, computer based or any other type application.

To ensure true compliance, the manufacturer shall upon request, provide verifiable test results to an industry acceptable test plan such as Telcordia GR-2945 or equivalent.

1.8 Anticipated Timeline

The assessment, determination, deployment or implementation of default management shall take place as required.

1.9 Costs Factors

This document provides standards regarding default assignment and call routing. Compliance with the standards will be dependent upon the associated database, local and 9-1-1 Control Office switch capabilities. Cost factors will be associated with these system components to the degrees that database and switch upgrades or changes are required. Cost factors associated with other alternate

routing procedures will have potential impact to the local service provider, local 9-1-1 System Service Provider (SSP) and the PSAP – to the degree that the procedures are fully deployed.

1.10 Cost Recovery Considerations

Cost recovery will be dependent upon legislative and regulatory cost recovery mechanisms for E9-1-1 deployment in each state or province.

1.11 Acronyms/Abbreviations/Definitions

This is not a glossary! See NENA 00-001 - NENA Master Glossary of 9-1-1 Terminology located on the NENA web site for a complete listing of terms used in NENA documents.

The following Acronyms are used in this document:	
Acronym	***Description***
ALI	Automatic Location Identification
ANI	Automatic Number Identification
ATIS	Alliance for Telecommunications Industry Solutions
CSP	Communications Services Provider
ESRD	Emergency Services Routing Digit
ESRK	Emergency Services Routing Key
ESQK	Emergency Services Query Key
MSC	Mobile Switching Center
pANI	Pseudo-ANI
PSAP	Public Safety Answering Point
SR	Selective Router

1.12 Intellectual Property Rights Policy

1.12.1 General Policy Statement

NENA takes no position regarding the validity or scope of any Intellectual Property Rights or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; nor does it represent that it has made any independent effort to identify any such rights.

NENA invites any interested party to bring to its attention any copyrights, patents or patent applications, or other proprietary rights that may cover technology that may be required to implement this standard.

or: techdoccomments@nena.org

2 Introduction

This document is a complement to NENA 03-001and 03-501 documents regarding NENA recommendations for Network Quality Assurance and as deemed applicable to other NENA standards and technical information documents addressing directly or partially the subject of default routing.

The major distinguishing feature of Enhanced 9-1-1 (E9-1-1) is the ability to selectively route a 9-1-1 call to a designated Public Safety Answering Point (PSAP) based upon the caller's location. However, there are times when, even in an Enhanced 9-1-1 network, a call cannot be routed to the designated Primary PSAP. Unique and specific terminology is used to describe each set of circumstances when such call cannot be properly routed.

This document will try to depict such circumstances and to offer potential solutions to help lessen the impact on call taking and dispatch activities. It shall address both the default assignment rationale within the databases and call routing determination in the network environment.

2.1 Call Routing Facts

9-1-1 call routing accuracy may be affected by various factors ranging from lack of up-to-date identification of the subscriber's service address/calling location; delay in service order processing; default call routing rules used to support the subscriber's NPA NXX, the serving area or the network elements; the manner in which a carrier provides local end office trunking to the designated E9-1-1 Control Office; the 9-1-1 network infrastructure or even the way a reseller offers its local service.

It must be recognized that "default call routing" by definition may result in having some emergency calls reach a PSAP not directly responsible for the subscriber's location. Local authorities, E9-1-1 System Service Providers and carriers should ensure that default call routing impacts are minimized through the appropriate association of trunk groups with defined geographic areas. Further, unless using Enhanced MF (EMF) , Signaling System 7 (SS7), Internet Protocol (IP) type trunking, all carriers must provide NPA-specific MF E9-1-1 trunk groups within those exchanges served by more than one NPA.

It must also be recognized that "default" call routing is not the same as a "misroute". Misrouted calls are generally caused by incorrect information associated with the caller due to a human or mechanical failure, whereas default routed calls are caused by a lack of selective routing information.

By following the basic provisioning specifications outlined herein, carriers and service providers should be able to provide for an efficient delivery of E9-1-1 calls to a designated authority, even

when normal routing cannot be accomplished, thereby helping to prevent extreme situations that delay a life-saving response.

It is assumed that the use of Signaling System 7 (SS7) and SIP (Session Initiated Protocol, used in VoIP) will eliminate the occurrence of ANI failures. Their deployment will not, however, eliminate instances where data associated with the ANI has not been loaded into the appropriate 9-1-1 databases used to route and deliver the call. Therefore, the ability to default route a call remains a necessary function in all types of signaling protocols.

2.1.1 Assumptions

To achieve call routing functions, the critical and complex nature of the E9-1-1 network may utilize some of the following design provisions:

- LEC end office coverage areas will not coincide with municipal or county boundaries;
- E9-1-1 interconnection trunks must conform to E9-1-1 features as determined by applicable standards and protocols. At a minimum, it must be capable of providing the caller's ANI;
- E9-1-1 trunk groups should be dedicated and diversely routed, where applicable and available;
- E9-1-1 trunk groups should be provisioned to support a P.01 grade of service as outlined in NENA 03-001 and 03-501.
- *Alternate/Competitive LEC NXX application may not mirror* ILEC end office coverage areas, and therefore may not mirror ILEC trunk groups or ILEC trunk group default assignments;
- A minimum of two 9-1-1 interconnection trunks per trunk group are prescribed for survivability;
- E9-1-1 calls must be routed to the E9-1-1 Control Office switch(es) (also called Selective Routers or SRs) designated for the caller's geographic area;
- When Multi Frequency (MF) protocol is used, a 9-1-1 trunk group is required for each NPA in the end office; and
- Current E9-1-1 design defines ANI default on per trunk group basis. Migration to more flexible designs may rely on future Intelligent Network capabilities.

Federally mandated services and local competition affecting 9-1-1 may not follow the same outline assumptions as were true when E9-1-1 was originally designed. Some previously standard capabilities such as default call assignment and routing may not work the same way for new services or service providers.

2.2 Default Call Routing at Failure Points

Technically, default routing happens at specific places, as a result of specific events (or lack of them). During the process of a call, the following text starts at the first place it could be default routed and works its way through to the last place.

2.2.1 Wireline end office

- Primary trunk route
- Secondary trunk route
- Default route(s)
  - 10 digit number
  - O-
  - Call Diverter (INB) unit

2.2.2 Wireless MSC

- Primary trunk route
- Secondary trunk route
- Default route(s)
  - MSC default assignment
  - 10 digit number(s)

2.2.3 VSP via ESGW

- Primary trunk route
- Secondary trunk route
- Default route(s)
  - Contingency Routing Number (CRN)

2.2.4 9-1-1 SR

- Default Routing Reasons:
  - No ANI (in form of ANI, ESRD, ESRK, ESQK)
  - Garbled/Partial ANI
  - Unrecognized ANI
- Routing based on incoming TG
- Routing based on NPA-NXX or NPA-NXX-X

2.3 Default Assignment Model

Default ESN assignment is required to allow the processing of E9-1-1 calls by the E9-1-1 Control Office to the pre-determined PSAP for call handling in the event of certain hardware and software failures for routing E9-1-1 calls or when no information is populated in the E9-1-1 SRDB that prevents the delivery of the routing information.

The E9-1-1 Control Office switch uses various call routing keys and default values. The assignment process used for E9-1-1 service usually are:

1. The E9-1-1 DBMS uploads **all** validated wireline telephone number, wireless cell site/sector specific Emergency Service Routing Digit (ESRD) or destination PSAP specific Emergency Service Routing Key (ESRK) (e.g., NPA-511-XXXX), Private Branch eXchange (PBX) Emergency Line Identification Number records to the designated E9-1-1 SRDB table(s), using an embedded process. These 10-digit Directory Numbers (DN) are identified as **TN exception routing** keys.
2. For **traditional wireline services**, the **NPA-NXX default ESN** routing scheme takes place when the wireline TN is not available in the E9-1-1 Selective Routing Database.
3. There shall be **no NPA NXX default ESN** assigned to any **wireless NXX** codes used for ESRD or ESRK records. This is distinct from wireline services where an NPA-NXX is usually associated with only one or very few Municipalities. The wireless-specific NPA-NXX code used for ESRD numbers is used across the NPA that covers multiple Municipalities and 9-1-1 agencies. Never set a default ESN to wireless ESRD's or ESRK's NXX, as it CANNOT relate to a most appropriate Primary PSAP.
4. Likewise, a **default ESN** shall **not be assigned to NPA NXX** to any NXX codes used for VoIP Emergency Services Query Keys (ESQK). The reason is that while the NPA-NXX , may initially be usually associated with only one or very few Municipalities, when the device migrates, the IP-specific NPA-NXX code used for ESQK numbers may be used outside an area that covers multiple Municipalities and 9-1-1 agencies. Never set a default ESN to IP ESQK's NXX, as it CANNOT relate to a most appropriate Primary PSAP.
5. A wireline **incoming Trunk Group default ESN** is required when the TN and the NPA-NXX are not present in the E9-1-1 Selective Routing Database.
6. As well, for wireless E9-1-1 Service, the most likely default will be using the **wireless trunk group's Default ESN**. All incoming wireless E9-1-1 trunk groups shall be assigned a default ESN associated with the Municipalities / Primary PSAP it serves. That default is to be used to appropriately route wireless E9-1-1 calls when no ESRD or ESRK is received or the ESRD or ESRK is not available in the E9-1-1 Selective Routing Database. To achieve this process, the Wireless Service Provider (WSP) shall be requested to implement a dedicated E9-1-1 trunk group per Municipality / Primary PSAP. Where the WSP interconnects to dual E9-1-1 Control Office switches serving the designated Primary PSAP, a default ESN must be set for each trunk group.
7. The calls using the **inter-tandem trunk group default ESN**, that need to be default routed when they reach the 9-1-1 Control Office switch, should be pointing to the most appropriate Primary PSAP for that switch. This will require negotiation with the E9-1-1 Authorities in the switch sevring area, because calls could have originated anywhere in the 9-1-1 Control Office area.

2.4 Routing and Default Parameters Summary

The following is a brief description of the steps taken by the E9-1-1 System Service Provider to define an E9-1-1 serving area and the E9-1-1 routing implemented at time of cutover: (may vary from SSP to SSP):

1. In conjunction with the appropriate 9-1-1 Authority representative, the E911SSP shall map all involved emergency dispatch boundaries.
2. Emergency Service Zones (ESZ) are defined for each area that contains the same emergency dispatch agencies. (ESZ defines the 9-1-1 PSAP and emergency dispatch agencies for 9-1-1 calls originating within that zone).
3. An Emergency Service Number (ESN) is assigned to each ESZ.
4. All addresses within an ESZ are assigned the corresponding ESN number.
5. A default ESN may be assigned to each NXX based on the most appropriate serving PSAPs. See number 7 below.
6. A default ESN is assigned to each incoming 9-1-1 trunk group.
7. Each ANI / telephone number in the SRDB is assigned an ESN based on the validated service address. Although in many cases not all numbers are actually entered in the SRDB. If there is commonality between individual TNs in any given NPA-NXX range, a "wild card" entry technique may be employed by the E911SSP, whereby all TNs within a given range would be considered to be assigned the same ESN.

2.4.1 Default ESN assigned to NPA-NXX

Regulatory and traditional network specifications dictate that LECs provision at least one NXX per exchange. In most E9-1-1 Systems, the E9-1-1 Database Management Systems (DBMS) and E9-1-1 Control Office establishes a "Predominant ESN" at the 10,000 block level (i.e., NPA-NXX level). The assignment of the Predominant ESN for that NPA-NXX may be set using the Default ESN assigned to the incoming E9-1-1 trunk group that supports the NPA-NXX. The Default ESN in the SRDB is replaced at the line level (NPA-NXX-XXXX) with an ESN assigned to the individual number based on the service location of the number upon completion of a service order. In this scenario, any call arriving at the E9-1-1 Control Office using an ANI that has not been loaded using the service order process will Default Route using the Default ESN assigned to the incoming trunk group.

It should be noted that most E9-1-1 systems do not change ESN assignments in the switch based SRDB for individual telephone numbers when service is disconnected – only when new service is provisioned or when the service location changes. A disconnected number will retain its last ESN assignment until changed by a subsequent provisioning service order that reassigns the number. This is one of the reasons that service orders must be processed by the E9-1-1 system either before or immediately after service is provisioned, so as to prevent misrouting of calls based on a previous

ESN assignment that is no longer valid. Systems that use an SRDB residing in the ALI database do not have this issue.

2.4.2 Default ESN assigned to NPA-NXX-X (Predominant ESN)

Some E9-1-1 Database Management Systems (DBMS) and E9-1-1 Control Offices utilize a method of managing ALI and SRDB records that does not require an ALI record to be in the ALI database in order for the SRDB to return an ESN to the E9-1-1 Control Office. When the E9-1-1 Control Office queries the SRDB using an ANI for which no ALI record currently exists, the SRDB returns the ESN that occurs most frequently among the ALI records that have been processed for telephone numbers out of the same range of 1,000 numbers (i.e. NPA-NXX-Y000 thru NPA-NXX-Y999). This Predominant ESN is then used to route the 9-1-1 call, rather than having to use the default ESN of the incoming trunk group.

2.4.3 Default Routing Based on incoming E9-1-1 Trunk Group

It is recommended that all CSPs provision such number of E9-1-1 trunk groups as required to ensure that in the event of ANI failure, E9-1-1 calls are default routed to the most appropriate primary PSAP.

2.4.4 Default ESN Acquisition

Default ESNs for a pre-determined service area are assigned by the E9-1-1 Database Management System after discussion and/or negotiation with the local authority (PSAP/municipality/county). It is recognized that discussions involving the local authority and the LEC may be required to determine if additional E9-1-1 trunk groups will be required in cases where more than one municipality or county is served by the same primary PSAP.

2.4.5 Default ESN Selection

The logic behind default ESN selection, as well as default assignment rationale, starts at the DBMS level and is, primarily, a manual process.

Most default Emergency Service Number (ESN) codes are created and assigned within the Database Management System (DBMS). This is usually the result of a meticulous relationship between the DBMS assignment and the Selective Routing Database (SRDB) routing table creation, population and management schemes.

While the SRDB acts on ESN triggers, the DBMS creates and assigns them to each applicable telephone and administrative routing number. In addition, some DBMS systems transfer only those "exception" records to the SRDB. An exception record has an ESN value assigned that is distinct from its NPA-NXX (or NPA-NXX-X) default ESN assigned within the DBMS. That data transfer concept was put in place to help support transfer link and low SRDB size capability, not to mention SRDB data recovery mechanisms.

With the advent and propagation of out-of-exchange (out-of-territory) NPA-NXX codes within an E9-1-1 serving area, it becomes more and more important to manage the default ESN at the municipality, county, state/province level, rather than at the NPA-NXX level. Some DBMS are assigning default ESNs at the municipality level. Where such practice is implemented, while NPA-NXX-based default ESNs may still exist at the DBMS level, they cannot be used at the SRDB level.

This means that a telephone or routing number located or assigned in Philadelphia, PA would have one ESN assigned to it by default unless a specific exception ESN is assigned to that specific number. One could assign a California-based number to a device located in Philadelphia, and providing that the service provider can route 9-1-1 calls to the E9-1-1 Control Office serving Philadelphia,, AND having no NPA-NXX default assigned for the associated NPA-NXX in the local E9-1-1 SRDB, the 9-1-1 call would default route to the Philadelphia PSAP based on the incoming trunk group default ESN.

2.4.6 New NPA-NXX Assignment Notification

For each new NPA-NXX assignment, the E9-1-1 System Service Provider requires information to assign a specific default Emergency Service Number (Default ESN), in the E9-1-1 DBMS and the E9-1-1 SRDB, for emergency call routing purposes. Otherwise, a processing error / reject and call routing errors would occur. It is the responsibility of the LEC to notify the E9-1-1 System Service Provider of new or additional NPA-NXX assignments prior to the establishment of the E9-1-1 data exchange, to meet NPA-NXX to Default ESN routing assignment.

- When a LEC receives confirmation that a new NPA-NXX is to be opened in one of its switches, and it will service an E9-1-1 served area, the LEC must validate the new NPA-NXX coverage as compared to the 9-1-1 authority's coverage;
- The LEC must confirm Emergency Service Zone default routing for that NPA-NXX with the appropriate municipality if "wild card" default assignments are used;
- The LEC advises the E9-1-1 System Service Provider of the default routing agreement;
- The E9-1-1 System Service Provider assigns a default routing ESN for that new NPA-NXX if they use such routing schemes in their system;
- The E9-1-1 System Service Provider adds the information to the E9-1-1 databases as needed.

2.4.7 Area of Coverage for an Assigned Default ESN

Pre-determined default ESNs are specified by the 9-1-1 Database Management System operator and can be assigned to cover NPA(s), counties, rate centers or an individual municipality. These assignments are negotiated between the E9-1-1 SSP and the 9-1-1 authority(ies) served by the E9-1-1 Control Office.

2.4.8 Default Assignment Procedures

The E9-1-1 System Service Provider establishes a Default ESN code for each incoming trunk group and each applicable NPA-NXX (if applicable), based on each CSP's specific coverage information.

- The originating LEC advises the E9-1-1 System Service Provider of the selected default routing specifications based on municipal ESZ for each of its NPA-specific E9-1-1 trunk groups and each NPA-NXX fully or partially serving an E9-1-1 service area;
- The E9-1-1 System Service Provider assigns a specific default routing ESN to each incoming trunk group and (if applicable) to the new NPA-NXX;
- The E9-1-1 System Service Provider populates the information in the 9-1-1 databases as needed.

2.4.8.1 Assigned by NPA

A default ESN should never be assigned by NPA, unless that entire NPA service area is covered by a single PSAP.

2.4.8.2 Assigned by County or Municipality

Where requested, every service provider should establish one end office (or equivalent) to E9-1-1 Control Office trunk group per County (or equivalent jurisdiction) so that ANI failure or No Record Found (NRF) default routed calls will be directed to a PSAP in that County (or equivalent jurisdiction). It is essential to negotiate a default PSAP agreement with the applicable 9-1-1 authority. An exception might be where the LEC service area is primarily in a metropolitan area which has a PSAP, which would also act as the county default until service expands to full county coverage.

2.4.8.3 Assigned by Local PSAP Serving Area

A Default ESN is often assigned by local PSAP serving area. A 9-1-1 authority may determine it is appropriate to set multiple default assignments to distribute default calls from wireline, wireless, VoIP (and etc.) sources. Such practice must be closely monitored to ensure equitable distribution to all participating PSAPs.

2.4.8.4 Assigned by Traditional Rate Center

A traditional Rate Center may overlap more than one E9-1-1 service area. The local authorities shall determine and agree with the most appropriate set of default assignments. A potential complicating factor would be if adjacent agencies within such assigned areas are not be served by the same E9-1-1 Control Office(s). In those cases, inter-tandem services may be required to address the issue.

2.4.8.5 Assigned by Consolidated Rate Center

Rate Center Consolidation (RCC) might be implemented over an extensive geographic territory. A good example is the Denver, CO area. The RCC covers seven counties surrounding the Denver-Boulder metro area. On top of that, the Colorado Public Utilities Commission agreed to an NPA Overlay of the 303 NPA. Compounding the problem of these number conservation schemes was the fact that at the time of deployment there were multiple E9-1-1 Control Offices the RCC area. RCC could further exacerbate the situation if the 9-1-1 authority boards affected by these conservation measures are not willing, or neglect to designate a single Default PSAP location for default routing. Thus, in order to accommodate all the various default route designations and the NPA Overlay, a LEC with a single EO serving the Denver rate center had to deploy multiple 9-1-1 trunk groups. The only alternative was to designate each of the default routes as a unique rate center (or you could use line class coding in the originating central office) and build the line level translations accordingly based on the location of the end user. NENA does not recommend the use of LCCs, unless the CSP has mechanized capabilities to ensure such end office level translations are kept up-to-date at least consistent with the way other typical DBMS/SRDB records are updated.

2.4.8.6 Assigned by Mobile Switching Center (used for Wireless)

Another condition may arise when wireless carriers bring up cell sites/sectors for testing without having the information entered in the appropriate 9-1-1 database(s). Wireless 9-1-1 calls may hit such cell sites/sectors and may need to be routed to a PSAP designated as default for the entire Mobile Switching Center (MSC) system (which may straddle state or provincial boundaries). It is often difficult to get one PSAP to agree to be such a default answering point. It is very important that a wireless carrier supply the necessary information for the appropriate E9-1-1 database(s) prior to such testing, even if the site/sector may only be up a very short testing time and then taken off line again for a long period of time.

2.4.8.7 Recommended Actions to Reduce the Incidence of Default Routing

- Shorten the timeframe associated with updating the SRDB tables
- Require MSAG validation for order entry
- Require coordination for updating both the ALI & SR databases
- Shorten the timeframe associated with updating the DBMS;
- Speed up error correction processes
- Complete loading of pANI shell records for wireless and VoIP prior to service testing and activation

2.4.9 Impact of Large Serving Areas

When service providers serve large geographical areas that overlap numerous existing wire centers, using the same NXX as well as provide E9-1-1 service via a single E9-1-1 trunk group, the E9-1-1 default routing mechanisms fail to function effectively. That results in:

- 9-1-1 calls being directed to PSAPs that are geographically separated by great distances and not responsible or familiar with the caller's location and emergency dispatch agencies;
- delay in providing a response to a 9-1-1 emergency call
- In some cases PSAPs have advised the E9-1-1 System Service Provider that they do not want to receive 9-1-1 calls that do not originate in their territory, further exacerbating the ability of the E911SSP to deliver the call somewhere that can try to aid the caller
- Large serving areas may necessitate the use of class marking or a reduction in the number of rate centers in order to achieve default areas of manageable size.

2.5 ESIF – SG B Activities on Default Routing

The Alliance for Telecommunications Industry Solutions (ATIS) – Emergency Services Interconnection Forum (ESIF) has asked its sub-working group B (SG-B) to look at wireless default and alternate requirements. Various issues have been documented and are available at the ESIF web site, including:

ESIF-01	Default processes in the routing of wireless 911 calls
ESIF-03	Methodology for the monitoring of overflow conditions on PSAP trunks
ESIF-04	MSC overflow to 7/10 digit numbers when all 9-1-1 circuits are busy
ESIF 39	Post Deployment Cell Site Additions – Provisional Routing

2.6 Overflow Routing vs. Default Routing

Overflow routing is a method of assigning secondary trunk routes for transmission of E9-1-1 calls when the primary trunk route between the originating office and the E9-1-1 Control Office, or between two E9-1-1 Control Offices, is "traffic busy" (all trunk members are occupied with a call in progress) or temporarily out of service.

Overflow Routing is not a form of Default Routing and should not be confused with it. Overflow Routing takes place when a primary path is not available. Default Routing takes place when information required for routing is not available.

Not all 9-1-1 networks are designed with overflow trunk routes. It is a negotiation point between the E911SSP and the 9-1-1 administrative agency as to whether the originating network element (LEC end office, wireless MSC, etc) should be programmed to overflow 9-1-1 calls to a 7 or 10-digit number provided by the 9-1-1 agency.

3 Considerations and Recommendations

The relationship between municipal boundaries, NXX serving area and E9-1-1 trunk group serving areas is critical to the operation of the E9-1-1 system and must be maintained by all Communications Services Providers interconnecting to the E9-1-1 system. Any deviations from the established "norm" may result in operational problems and increased liabilities for PSAP operators, E9-1-1 System Service Providers and CSPs.

Should CSPs choose to serve a broad geographic area using a single switch/server they should provide multiple E9-1-1 trunk groups (associated with defined geographic areas) to mitigate the misrouting of 9-1-1 calls.

3.1 Assumptions:

- If the operational procedures are solid it is perfectly feasible to provide statistically perfect routing based on the traditional routing reference by telephone number.
- An SS7 environment anticipates this level of database quality.
- *Extensive efforts to accommodate default routing are likely to exacerbate the potential for* errors by adding increasingly hard-to-audit elements to the system. The "simple" approach generally has its advantages.
- Most rate centers are served by a PSAP that has the resources and knowledge base to answer non-routable calls and manage them effectively.
- Some E9-1-1 System Service Providers migrated to a centralized Off-Board Selective Routing (OBR) Interface. Depending upon the implementation, this has the potential to impact how default routing is handled by the SR.

3.2 Suggestions:

- Note the technical difficulties in continuing the past practices of default routing code provisioning compared to other options and what may be available today;
- Recognize it as a largely operational problem that has been dealt with by PSAPs for as long as E9-1-1 service has existed. Default routing is nothing new;
- Apply a technical standard that can be easily implemented.

3.3 Benefits of following procedures recommend in this document:

- Reduce the amount of time and effort on a problem that happens in an extremely small percentage of calls. (As low as .2%)
- PSAPs will know what to expect and the technical limitations involved.

- Carriers will know where to put their efforts, namely database accuracy and timeliness of updates.
- These general principles should applicable to future technologies, although specific steps &/or mechanisms may vary.

3.4 Political factors

PSAPs desire default call delivery to be as close as possible to previous ILEC handling, which was based on wireline end office. This is a much smaller footprint than service areas of CLECs, wireless carriers and VoIP service providers.

Extremes are:

- One trunk group for entire CSP service area to each E9-1-1 Control Office involved (therefore default to a single pre-defined PSAP for the entire SR area) and
- one trunk group to E9-1-1 Control Office per PSAP with line control class marking or coding.

3.5 Practicality aspects

In a "traditional" telephony environment, it is viewed that the number of defaulted calls is small (about two tenths of one percent) if all systems are working as designed.

Depending upon the process implemented, class marking may drive more misroutes (due to manual errors) than would occur for the occasional ANI failure default call.

Default routing based on NPA or NPA-NXX may be workable for now (as long as it is worked out with the PSAP authority), but the advent of Geographic Number Portability (in the wireline network) will break it. Wireless and VoIP telephone numbers already do not adhere to rate center boundaries. For that reason, basing default routing on the incoming dedicated trunk group (where applicable) may be a better choice than NPA-NXX level default routing.

3.5.1 Future Considerations

The size of the service areas associated with wireless and VoIP, and in particular, the nomadic capabilities of both, present the need to process TN-to-location relationships on the fly and to use that information in routing decisions. This creates a unique challenge for default routing. The good news is that the technologies used for call transmission (SS7 and IP) are theoretically immune to ANI failures.

Any long-term solutions need to address the wireline, wireless and IP network environments.

In addition to the ALI Database Manager, it is the responsibility of all carriers to optimize their service order provisioning processes. This may require significant changes to existing Operational Support Systems.

Where the SR does not allow automated delete function for disconnected numbers, it may be advisable for the ALI system to update the deleted TN with the NPA NXX default ESN in the E9-1-1 SRDB, in systems where such NPA-NXX level routing is used.

The removal of wild cards (default assignments based on NPA or NPA-NXX) doesn't correct the problem when there is old record information in the SR. Before deciding on the best way to go, a close look at the overall impact is warranted.

There are some instances in which the E9-1-1 System Service Providers do not populate the NPA-NXX default. This is the case for wireless Emergency Service Routing Digit/Key (ESRD/ESRK) routing numbers and VoIP Emergency Services Query Key (ESQK) routing numbers where the NPA-NXX assigned uses a TN with a universal pseudo NXX (i.e., 511 and 211) in all NPAs.

Exhibit MN-5

intrado

December 18, 2006

Dear Steering Partner,

On May 2, 2006, Intrado announced a staged discontinuation of support for the PAM interface to deliver VoIP and wireless carrier E9-1-1 location information according to the following schedule:

- ✓ Support for VoIP E9-1-1 location information over the PAM interface will continue through June 30, 2007.
- ✓ Support for wireless E9-1-1 location information over the PAM interface will continue through December 31, 2008.

The PAM interface was designed to support ALI to ALI database steering for wireline E9-1-1 information. Intrado has been working with our customers and partners over the past years to support delivery of wireless and more recently VoIP E9-1-1 location information through the PAM interface to our steering partners. Increasingly, PSAPs and regional authorities are demanding customization VoIP E9-1-1 location information, which cannot reliably be accommodated using the fixed format of the PAM interface.

Intrado continues to be dedicated to the delivery of reliable, accurate E9-1-1 information on behalf of our wireless and VoIP service providers. After a careful analysis of the future direction of E9-1-1, Intrado has made the decision to support only standards based interfaces going forward, such as the TIA/EIA/J-STD-036 E2 interface for VoIP and wireless E9-1-1 location information.

This letter provides clarification on Intrado's discontinuation of support for the PAM interface and further defines what support Intrado will continue to provide and what support is being discontinued.

Intrado will continue to provide the following support for the PAM interface:

- ✓ Support for the ALI-M[1] PAM software interface for E9-1-1 steering between ALI systems to retrieve wireline TN records.
- ✓ Intrado VoIP and Wireless business units will continue to maintain and monitor network links to steering partners.
- ✓ Intrado's systems will continue to process VoIP and Wireline queries over the PAM interface.
- ✓ Intrado will continue to troubleshoot all non-PAM issues, including system or link outages, provisioning and data entry errors

[1] The ALI-M system is Intrado's ALI database system, formerly known as the ALISA system.

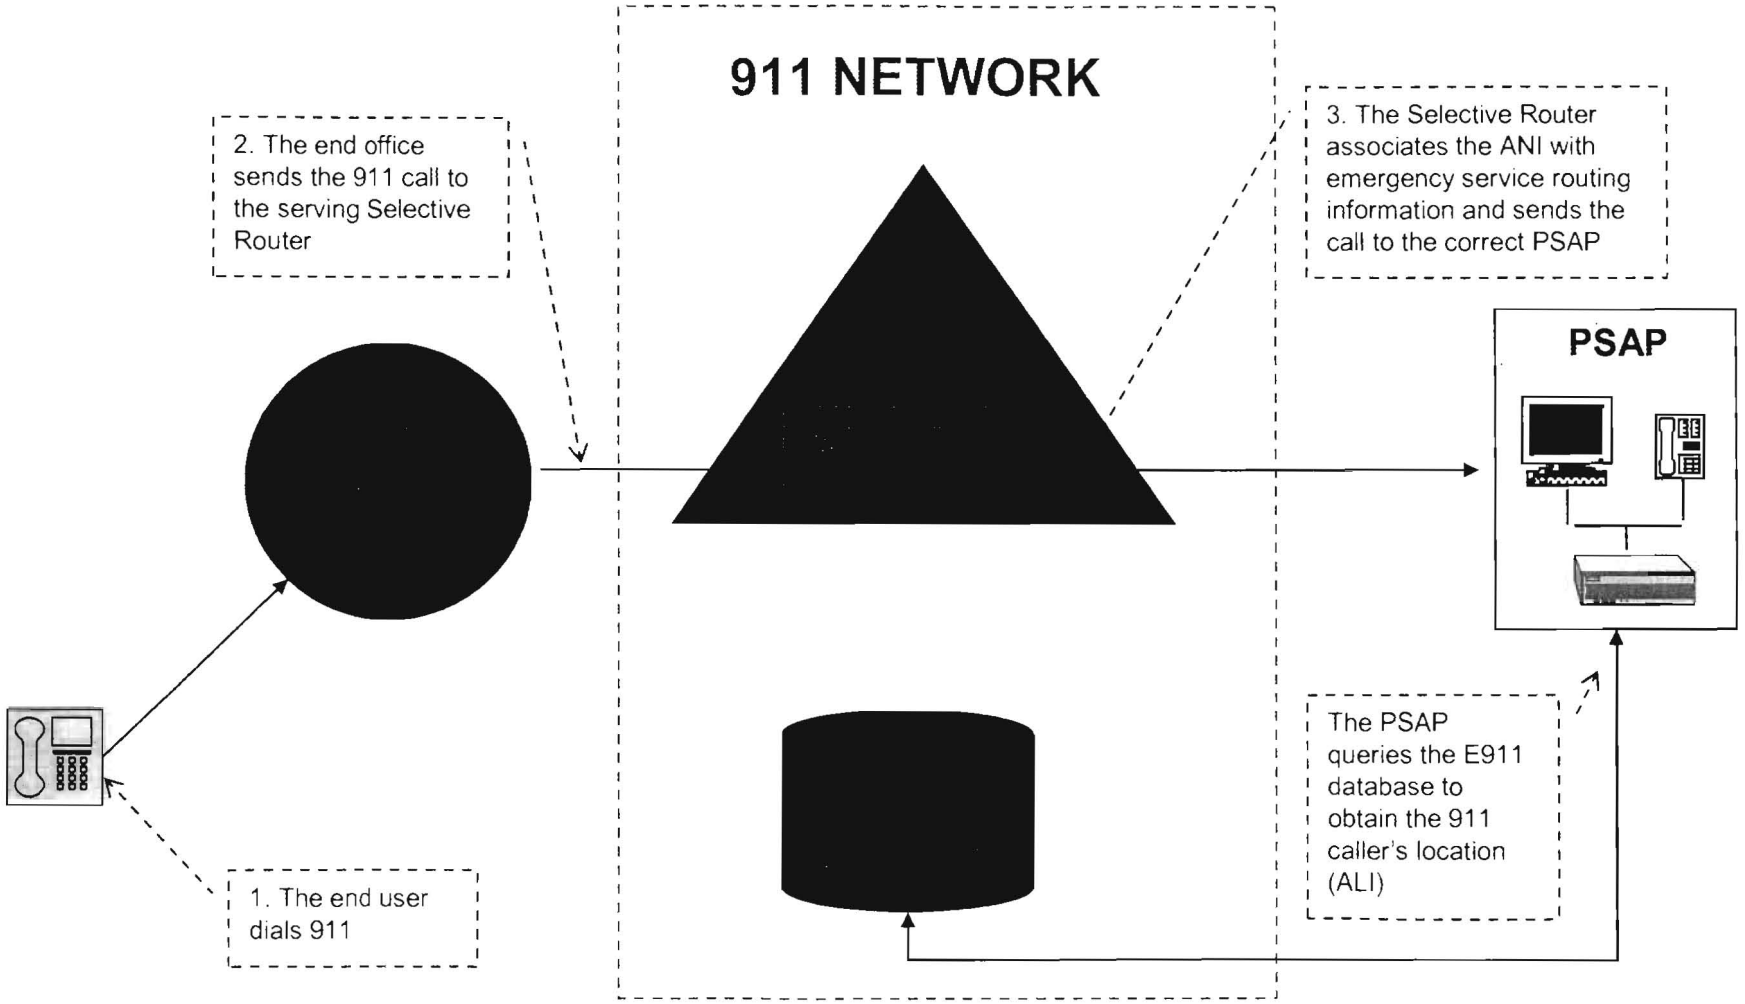
www.intrado.com

west Intrado Inc. is a Subsidiary of West Corporation

Intrado's Wireless and VoIP business units are discontinuing support for the PAM interface effective the dates listed above. The activities no longer supported include the following:

- ✓ No software enhancements to the PAM interface
- ✓ No production technical support for troubleshooting PAM issues
- ✓ No new or modified PAM formats after 12/31/08. After 12/31/08, PSAPs and other steering partners may elect to receive Wireless and VoIP data using existing PAM interface formats
- ✓ No custom formatting for VoIP TNs, such as: (1) suppression of latitude and longitude, (2) duplication of the Company ID into the OTC field, and (3) standardizing the COS to 'V'No support for new technologies over the PAM interface, such as WiFi/Cellular (FMC/UMA) or IMS (IP Multimedia Subsystem)

Please contact Customer Team Director to request additional information on this discontinuation announcement.



Thank you for your continued partnership,

John Hickey
