P R O C E E D I N G S

CHAIRMAN CARTER: We are back on the record. And when we left we were getting ready for AT&T to present their case in chief.

Mr. Carver, you're recognized, sir.

MR. CARVER: Yes. Thank you, Mr. Chairman.

AT&T Florida calls Patricia Pellerin. And while Ms. Pellerin is taking the stand, I had one housekeeping matter that I did want to bring up.

CHAIRMAN CARTER: You're recognized.

MR. CARVER: Ms. Pellerin original summary was less than five minutes, but it touches upon the question from the Commission earlier, so what I have asked her to do was sort of expand it so that she will be giving the summary and --

CHAIRMAN CARTER: There was a question that Commissioner Argenziano asked?

MR. CARVER: Yes. And, also, I believe there was a question about 251 and the applicability of 251 that Mr. Hicks responded to, and there was a request that our witness respond to that, also.

CHAIRMAN CARTER: That would be fine. We can do that on that.

MR. CARVER: Okay. So to do the summary and respond it will take her a little bit more than the five minutes.

CHAIRMAN CARTER: You're recognized.

MR. CARVER: Thank you.

CHAIRMAN CARTER: Thank you for the heads up.

MR. CARVER: Yes, sir. Ms. Pellerin, are you ready?

THE WITNESS: Yes, I am.

MR. CARVER: Okay.

PATRICIA H. PELLERIN

was called as a witness on behalf of AT&T Florida, and having been duly sworn, testified as follows:

DIRECT EXAMINATION

BY MR. CARVER:

Q Ms. Pellerin, for the record please state your full name and your business address.

A My name is Patricia H. Pellerin. My business address is 1441 North Colony Road, Meriden, Connecticut.

Q And by whom are you employed and in what capacity?

A I'm employed by the Southern New England Telephone Company, AT&T Connecticut, which is an affiliate of AT&T, Incorporated, and my position is Associate Director, Wholesale Regulatory Support.

Q Have you filed in this proceeding 79 pages of Direct Testimony?

A Yes.

Q And have you also filed 20 pages of rebuttal testimony?

A Yes.

Q And have you filed a total of four exhibits?

A Yes.

Q Do you have any corrections to your testimony or to the exhibits?

A Yes, I do.

Q Would you please make those corrections at this time.

A This relates to my rebuttal testimony. On Page 6, Footnote 8. The second sentence should end where the comma is, so it would read as follows, "This is another example of a situation where AT&T's thirteen-state standard terms and conditions are inappropriate for a nine-state agreement."

And then because of on-going negotiations between the parties since my rebuttal was filed and the rebuttal exhibits were filed, I've got a few changes regarding issue resolution that I would like to make in order to be helpful to the Commission.

Q And if I may, just to clarify, you are talking about exhibits in which you represent to the Commission the current status of negotiations and issues that have been resolved?

A That's correct.

Q Okay. So the purpose of the change is to update that to inform Commission and staff what has been resolved since your rebuttal testimony was filed?

A Yes.

Q Okay. Please proceed.

A Okay. On Page 2, Line 14 of my rebuttal, we should change 17 issues to 19 that have been resolved. Also on Page 2 on Line 14 we should insert 7(b) before 8(b). And on Line 15, change "and 31" to ",31 and 32."

Also on Page 2, Line 22, change 10 issues to 11 issues. And in Footnote 1, change "25(b) through (d)" to "25(a)through (d)." Then on Page 3, Line 5, change 6 to 4. In Footnote 2 on the first line, delete 25(a) and delete 32. And in the fourth line, delete 3(b) and change 7(a) and (b) to 7(a).

The other changes I have are on my revised exhibits. First, on Revised Exhibit PHP-2, the line for Issue 7(b) should be deleted. And on the line for Issue 8(a), Section 3.4.5 should be deleted. On Revised Exhibits PHP-3, Page 1, on the line for Issue 15, Section 4.2.2 should be deleted, and the lines for Issue 25(a) --

CHAIRMAN CARTER: I'm sorry, on Line 13 you said -- would you go through that again?

THE WITNESS: Yes. We are on PHP-3, Page 1. There is a line in the table for Issue 15.

CHAIRMAN CARTER: Oh, 15. Okay.

THE WITNESS: Yes. And Section 4.2.2 should be deleted from that issue.

CHAIRMAN CARTER: Okay. Thank you.

THE WITNESS: And then the lines for Issues 25(a), 31

and 32 should all be deleted from that table. And I have one more. On Page 2 of Revised Exhibit PHP-3, delete the lines for Issue 3(b) and 7(b), because those contract provisions have been resolved. And that's all.

CHAIRMAN CARTER: Okay. Thank you.

(REPORTER NOTE: Prefiled testimony inserted for the convenience of the record.)

AT&T FLORIDA

DIRECT TESTIMONY OF PATRICIA H. PELLERIN

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 070736-TP

APRIL 21, 2008

Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH AT&T ("AT&T"), AND YOUR BUSINESS ADDRESS.

A. My name is Patricia H. Pellerin. I am employed by The Southern New England Telephone Company ("AT&T Connecticut"), a subsidiary of AT&T, Inc., as an Associate Director – Wholesale Regulatory Support. My business address is 1441 North Colony Road, Meriden, Connecticut 06450.

Q. PLEASE SUMMARIZE YOUR BACKGROUND AND EXPERIENCE.

A. I attended Middlebury College in Middlebury, Vermont and received a Bachelor of Science Degree in Business Administration, magna cum laude, from the University of New Haven in West Haven, Connecticut. I have held several assignments in Network Engineering, Network Planning, and Network Marketing and Sales since joining AT&T Connecticut in 1973. Most recently, from 1994 to 1999 I was a leading member of the wholesale marketing team responsible for AT&T Connecticut's efforts supporting the opening of the local market to competition in Connecticut. I assumed my current position in April 2000.

As Associate Director – Wholesale Regulatory Support, I am responsible for providing regulatory and witness support relative to various wholesale products and pricing, supporting negotiations of local interconnection agreements ("ICAs") with competitive local exchange carriers ("CLECs"), participating in state and judicial proceedings, and guiding compliance with the Federal Telecommunications Act of 1996 ("Act") and its implementing rules.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE STATE REGULATORY COMMISSIONS?

A. Yes. I have previously testified before the Alabama Public Service Commission, the Connecticut Department of Public Utility Control, the Illinois Commerce Commission, the Kansas Corporation Commission, the Michigan Public Service Commission, the Oklahoma Corporation Commission, the Public Utility Commission of Texas and the Public Service Commission of Wisconsin.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. My testimony explains and supports AT&T Florida's position regarding certain issues raised in the arbitration petition filed by Intrado Communications Inc. ("Intrado") with the Florida Public Service Commission ("Commission") on December 21, 2007. Specifically, I address Issues 1, 2, 3b, 7b, 9, 11-16, 24, 25a, 29, 31, 32, 34 and 36.

Q. BEFORE DISCUSSING AT&T FLORIDA'S POSITION REGARDING SPECIFIC ISSUES, BRIEFLY DESCRIBE WHAT THIS CASE IS ABOUT.

A. According to Intrado's Petition, Intrado seeks to interconnect with AT&T Florida as a competitive provider of emergency services.[1] Issues 1 and 2 in this arbitration are threshold issues, the resolution of which will determine the outcome of many of the remaining issues. Issue 1 deals with the extent to which Intrado is entitled to interconnect with AT&T Florida pursuant to Section 251(c) of the Act, and Issue 2 relates to the foundation and structure of the parties' ICA.

Q. PLEASE PROVIDE A STATUS REGARDING THE ISSUES IN DISPUTE.

A. Intrado identified 36 issues in its arbitration Petition (numbered I through IX.E), and AT&T Florida included one additional issue in its Response (numbered 1-37). Based on input from the parties, the Commission issued its procedural order on March 21, 2008 and included a revised list of 36 issues (57 total when including subparts, five of which are encompassed by Issues 1 and 2). Of the remaining 52 issues, the parties have resolved 19.[2] An additional ten issues will not need to be addressed if the Commission determines in Issue 2 that

[1] Petition at 4.

[2] The parties have resolved Issues 8a, 17(a, b), 18(a, b), 19-23, 25(b-d), 26, 27(a, b), 28, 33 and 35.

AT&T's 9-state template is the proper basis for negotiating a Florida ICA.[3]

Q. HOW IS YOUR TESTIMONY ORGANIZED?

A. First, I will address threshold Issues 1 and 2. Assuming for purposes of this testimony that the Commission determines that AT&T Florida is obligated to enter a Section 251 ICA with Intrado, I will then address those non-technical issues that exist regardless of the ICA template utilized. (AT&T Florida witness Mark Neinast addresses the technical issues in dispute.) This includes Issues 9 (portions), 11, 12, 13(a), 14(a), 24, 29(a-b), and 36. Finally, I will address those issues that may be eliminated if the 9-state template is utilized, including Issues 3(b) (portions), 13(b), 14(b), 15, 16, 25(a), 31, 32, and 34(a-b).

Q. DOES INTRADO'S CERTIFICATION AS A CLEC IN FLORIDA AUTOMATICALLY MEAN THAT THE SERVICES IT SEEKS FROM AT&T FLORIDA ARE RIGHTFULLY THE SUBJECT OF A SECTION 251 INTERCONNECTION AGREEMENT?

A. No. I am not an attorney, and the legal aspects of this arbitration will be addressed by AT&T's attorneys in its briefs. However, Intrado must provide telephone exchange service and/or exchange access to qualify

[3] With a decision in Issue 2 to utilize the 9-state template, Issues 7b, 13b, 14b, 15, 16, 25a, 31, 32, and 34(a, b) will not need to be addressed because Intrado's disputes are not present in the 9-state language (and AT&T Florida will not introduce them). In addition, certain language disputes in Issues 3b, 4b, 4c, 7a, 9, 14a, 29(a, b) and 30a also do not exist in the 9-state template, further limiting the scope of issues the Commission must address. I will explain the basis for these exclusions in my testimony for Issue 2.

for a Section 251 agreement. To the extent that the Commission determines that Intrado does not provide such services, then all the other issues in this arbitration are rendered moot. So, for example, if the Commission determines that Intrado only offers enhanced services, such as Enhanced 911 (E911), then AT&T Florida is not subject to the Section 251 obligation to enter into a binding interconnection agreement with Intrado – Intrado's status as a CLEC notwithstanding. It is an open question in this arbitration as to whether the service Intrado seeks to offer is telephone exchange service. Importantly, even if Intrado is generally entitled to a Section 251 agreement, which AT&T Florida does not concede, that does not automatically mean that each and every individual item Intrado requests must be made available pursuant to Section 251.

Since the rest of my testimony would be rendered moot if the Commission agrees with AT&T Florida that Intrado is not entitled to a Section 251 agreement, the remaining portion of my testimony assumes that Intrado offers local exchange and/or exchange access service.

Q. IS AN ICA NECESSARY FOR INTRADO TO OFFER COMPETING 911 SERVICES?[4]

[4] I use the terms "911" and "E911" interchangeably in this testimony to refer to emergency services. And while there is a technical distinction between 911 and E911 services, there is no significant distinction in this testimony regarding which term I use.

A. No. There are three integrated components necessary to provide for the "routing and transmission of an E911 call." Intrado already has the first two components, a Selective Router, and an Automatic Location Identification ("ALI") (or E911) database. The third component is the network facilities from the Public Safety Answering Point ("PSAP") to the Selective Router ("SR"), as well as the facilities from the PSAP to the ALI database. Such facilities are common and easily provisioned by Intrado or a number of third parties, to the extent that Intrado doesn't already provide them today. Thus, none of the components necessary for Intrado to offer a competing service are dependent upon AT&T Florida, and Intrado has not specifically requested that AT&T Florida provide these services to Intrado as part of the ICA. Moreover, as I explain below, AT&T Florida is willing to enter into non-Section 251 agreements with Intrado to facilitate its emergency service offerings.

Q. DO YOU HAVE ANY GENERAL COMMENTS ABOUT INTRADO'S BUSINESS PLAN, AS REPRESENTED BY ITS PETITION AND PROPOSED CONTRACT LANGUAGE?

A. Yes. While there is little clarity regarding where Intrado's services begin and end with respect to Intrado Inc. (Intrado's corporate parent[5]), some aspects of Intrado's business plan are clear. Intrado intends to offer emergency services to PSAPs and to aggregate end users' calls placed by dialing 911.[6] Intrado also seeks to obtain services from

[5] Petition at 6.

[6] Petition at 6.

AT&T Florida pursuant to a Section 251 interconnection agreement.[7] While claiming the parties' obligations should be reciprocal,[8] Intrado's proposed language imposes an unequal burden on AT&T Florida.[9] It appears that Intrado intends to maximize its profits by shifting costs it should bear to AT&T Florida.[10]

Q. WHAT INCENTIVE DOES INTRADO HAVE TO SHIFT COSTS TO AT&T FLORIDA?

A. Intrado is a business. An essential element for a sustainable business model is profit – the more, the better. There are really only two ways to increase profit: increase revenues and/or reduce expenses.

One way to increase revenues is to obtain new customers. To acquire customers already served by another provider requires the offering of an equal (or superior product) at a comparable (or lower) price. Since E911 customers are government municipalities with limited financial resources, price would likely be a key component of their vendor selection process. So Intrado has an incentive to undercut AT&T Florida's price for E911 service.

---

[7] Petition at 7.

[8] Petition at 28, 36, 42-43.

[9] *See* the testimony of AT&T Florida witness, Mark Neinast, and his Exhibits MN-1 and MN-2 for related issues.

[10] Intrado's cost-shifting strategy is reflected by various issues and contract language Intrado presented for arbitration, as well as Intrado's Petition for Declaratory Statement (filed with the Commission February 8,2008). Specifics are addressed later in my testimony and by Mr. Neinast.

To offer a lower price and still make a profit, a business would also need to reduce expenses. One way to reduce expenses and thereby maximize profit is to shift as much of the cost burden to someone else as possible – in this case, AT&T Florida.

Q. WHAT ARE SOME EXAMPLES OF INTRADO'S ATTEMPT TO SHIFT ITS COSTS TO AT&T FLORIDA VIA THE ICA?

A. As discussed by Mr. Neinast, Intrado has proposed contract language that is not reciprocal, but instead places the primary financial burden upon AT&T Florida, even in instances where AT&T Florida would collect no revenue from the end users. For example, Intrado proposes that it have unilateral control over the point of interconnection ("POI") it establishes when AT&T Florida serves as the E911 service provider. Yet Intrado also wants unilateral control over the parties' POI when Intrado is the E911 service provider. Intrado's proposed language could require AT&T Florida to transport E911 calls to Intrado's selected location (*e.g.,* Colorado), outside of any Florida LATA (Local Access and Transport Area). Intrado ignores, as the Commission must not, that AT&T Florida is the incumbent local exchange carrier ("ILEC"), and it is Intrado that seeks to interconnect with AT&T Florida, not the other way around. AT&T Florida has no obligation to interconnect with Intrado, or any other CLEC, outside of the LATA. (*See* Neinast testimony for Issue 4.)

Another example of Intrado's shifting of costs to AT&T Florida is reflected by its language that would require AT&T Florida to bear all the costs to segregate the traffic when multiple PSAPs are served by the same switch. (*See* Neinast testimony for Issue 3.)

Q. HOW ELSE IS INTRADO ATTEMPTING TO SHIFT ITS COSTS TO AT&T FLORIDA?

A. Intrado recently filed a Petition for Declaratory Statement regarding other carriers' 911 charges when Intrado is the 911 service provider.[11] Intrado seeks to prevent AT&T Florida (and other carriers) from recovering legitimate costs it incurs when an AT&T Florida customer connects with the 911 customer. The simple fact that Intrado may provide 911 service to a municipality does not mean that AT&T Florida does not incur related costs that it is entitled to recover pursuant to its tariffs and/or contracts. AT&T Florida's specific objection and legal support on this matter are properly addressed within that proceeding. However, it is relevant here because it further demonstrates Intrado's objective to gain a competitive advantage by manipulating cost recovery mechanisms through a misuse of the regulatory process.

Q. IS AT&T FLORIDA REFUSING TO CONNECT WITH INTRADO AT ALL?

[11] Docket No. 08-0089-TP, *Petition of Intrado Communications Inc. for Declaratory Statement Regarding Local Exchange Telecommunications Network Emergency 911 Service*, February 8, 2008 ("Petition for Declaratory Statement").

A. No. The question, however, is what rates, terms, and conditions should apply to such connections and traffic. AT&T Florida proposes to treat Intrado the same way it treats other carriers that serve PSAPs and to use commercial agreements for matters not covered by Section 251. Intrado, however, seeks to inject many non-Section 251 matters into a Section 251 ICA and impose many one-sided requirements and costs on AT&T Florida. As I stated above, Intrado does not need an ICA with AT&T Florida to offer 911 service – AT&T Florida is willing to interconnect with Intrado as it does with other carriers (*i.e.*, pursuant to a commercial agreement), and AT&T Florida offers to lease its facilities to Intrado via its tariffs.

ISSUE 1(a): WHAT SERVICE(S) DOES INTRADO CURRENTLY PROVIDE OR INTEND TO PROVIDE IN FLORIDA?

Q. WHAT SERVICE(S) DOES INTRADO CURRENTLY PROVIDE OR INTEND TO PROVIDE IN FLORIDA?

A. Although Intrado states in its Petition that it intends to offer local exchange service,[12] based on Intrado's own tariff,[13] Intrado only intends to provide emergency services and will not be providing local exchange service or exchange access.

[12] Petition at 4. "Intrado seeks to offer local exchange services like any other competitor operating in Florida."

[13] Intrado's Florida Emergency Services Price List ("Intrado Tariff").

Q. WHAT SERVICES DOES INTRADO OFFER PURSUANT TO ITS TARIFF?

A. Intrado filed an update to its tariff, effective October 27, 2007, in which it deleted its 9-1-1 SafetyNet[SM] service and replaced it with Intelligent Emergency Network[TM] ("IEN") service. This is the only service offered in its tariff. Intrado's tariff describes IEN services as:

> services that permit a Public Safety Answering Point (PSAP) to receive emergency calls placed by dialing the number 9-1-1 and/or emergency calls originated by personal communications devices.[14]

Q. DOES INTRADO'S TARIFF INCLUDE THE OFFER OF LOCAL EXCHANGE SERVICE?

A. No. To the contrary, Intrado's tariff defines Local Exchange Service as:

> The furnishing of telecommunications services by a Local Exchange Provider to a Customer within an exchange for local calling. This service also provides access to and from the telecommunication network for long distance calling. *The Company is not responsible for the provision of local exchange service to its Customers.*[15]

Thus, Intrado's tariff offers IEN service, but not local exchange service.

ISSUE 1(b): OF THE SERVICES IDENTIFIED IN ISSUE 1(a), FOR WHICH, IF ANY, IS AT&T REQUIRED TO OFFER INTERCONNECTION

[14] Intrado Tariff at Section 5.1.

[15] Intrado Tariff Section 1 (emphasis added).

UNDER SECTION 251(c) OF THE TELECOMMUNICATIONS ACT OF 1996?

Q. INTRADO IMPLIES THAT THIS ISSUE IS REALLY QUITE SIMPLE – INTRADO SEEKS TO COMPETE WITH AT&T FLORIDA'S EMERGENCY SERVICES AND, THEREFORE, INTRADO IS ENTITLED TO WHATEVER IT SEEKS PURSUANT TO A SECTION 251 INTERCONNECTION AGREEMENT. IS THIS ISSUE AS CLEAR-CUT AS INTRADO WOULD HAVE THE COMMISSION BELIEVE?

A. Not at all. The fact that Intrado seeks to compete with AT&T Florida for emergency services does not automatically mean that each and every aspect of interconnection Intrado wants is subject to Section 251(c). Nor does it mean that Intrado's proposed language properly captures the parties' respective interconnection obligations. To consider the issues in context, the Commission needs to examine Intrado's demands one-by-one, including the specific language each party proposes. The legal question as to the extent of AT&T Florida's Section 251(c) obligations will be addressed in briefs.

Q. HOW HAVE OTHER STATE COMMISSIONS RECENTLY ADDRESSED SIMILAR INTRADO REQUESTS FOR ARBITRATION?

A. Intrado filed for arbitration with AT&T in four states: Alabama, Florida, North Carolina and Ohio. Both the North Carolina and Ohio state commissions delayed arbitration to permit the parties limited time to

negotiate the disputed issues.[16] Of these four states, only Florida has an established procedural schedule through the hearing phase.

Intrado also filed for arbitration with Embarq in various states. On February 14, 2008, the Virginia State Corporation Commission dismissed Intrado's November 27, 2007 arbitration petition; that order is attached as Exhibit PHP-1.[17] In that decision, the Virginia commission found:

> [W]e find that there is a threshold issue that should be determined by the Federal Communications Commission ("FCC"). Therefore, we believe the FCC is the more appropriate agency to determine whether Intrado is entitled to interconnection pursuant to § 251(c) of the Telecommunications Act. [note 2] As a result, based upon the potential conflict that may arise should the [Virginia] Commission attempt to determine the rights and responsibilities of the parties under state law or through application of the federal standards embodied in the Telecommunications Act, we find that this arbitration proceeding should be deferred to the FCC.
>
> [note 2] We note that until such time as this threshold issue is resolved that it would be inappropriate to resolve the other disputed issues.

[16] At the parties' joint request, the North Carolina and Ohio commissions extended their arbitration schedules an additional 30 days. The parties have been struggling to agree on what language remains in dispute and which issues are to be presented to the commissions for arbitration. And while the Ohio commission had previously published a proceeding schedule through hearing, as of the time this testimony was prepared, it had not yet issued a new schedule.

[17] *Petition of Intrado Communications of Virginia, Inc. For Arbitration to Establish an Interconnection Agreement with Central Telephone Company of Virginia d/b/a Embarq and United Telephone – Southeast, Inc. d/b/a Embarq, under Section 252(b) of the Telecommunications Act of 1996*, Virginia Case No. PUC-2007-00112, "Order of Dismissal" dated February 14, 2008.

> Therefore, we will defer resolution of all issues in Intrado's Petition to the FCC.

The Virginia state commission found sufficient uncertainty regarding Intrado's entitlement to Section 251(c) interconnection that it deferred the matter to the FCC for resolution.

Q. WHAT INTERCONNECTION ARRANGEMENTS DOES INTRADO SEEK PURSUANT TO SECTION 251(c)?

A. At a high level, there are three basic scenarios for which Intrado seeks "interconnection," which I address more fully below. Mr. Neinast provides testimony on the technical aspects of Intrado's requested interconnection.

1. Intrado delivers E911 traffic to AT&T Florida for completion to AT&T Florida-served PSAPs.

2. AT&T Florida delivers E911 traffic to Intrado for completion to Intrado-served PSAPs.

3. Certain PSAPs request that AT&T Florida (and Intrado) offer the ability to transfer emergency calls between them (*i.e.*, the PSAPs) serving adjacent areas.

Q. PLEASE DESCRIBE SCENARIO 1.

A. In Scenario 1, Intrado delivers E911 traffic to AT&T Florida for completion to AT&T Florida-served PSAPs. This is the situation where an Intrado local exchange customer (if there actually was one – which

there will not be, as I stated in my testimony for Issue 1(a)) dials 911 and the responding PSAP is served by AT&T Florida. This arrangement is the same as for any CLEC seeking to have its local exchange customers reach PSAPs served by AT&T Florida. This scenario would also include the situation where Intrado transported 911 calls originated by other carriers' (*e.g.,* wireless) end users for completion to AT&T Florida-served PSAPs. AT&T Florida agrees to include terms and conditions for Scenario 1; therefore, the Commission need not consider whether or not AT&T Florida is obligated to include such provisions.

Q. YOU STATED THAT AT&T FLORIDA AGREES TO INCLUDE TERMS AND CONDITIONS FOR SCENARIO 1 IN THE ICA. DOES IT ALSO AGREE TO OFFER TERMS AND CONDITIONS FOR SCENARIO 2 INTERCONNECTION PURSUANT TO SECTION 251(c)?

A. No. Under Scenario 2, Intrado is providing E911 service to the PSAP, and the 911 caller is an AT&T Florida end user. It is my understanding that AT&T Florida is not obligated to interconnect with Intrado pursuant to Section 251(c) in this situation. Accordingly, Scenario 2 should be covered by a separate commercial agreement, not a Section 251 ICA, and AT&T Florida is willing to negotiate such an agreement with Intrado. However, in the event the Commission disagrees, AT&T Florida offers Sections 5 and 6 in Appendix 911 to reflect reciprocity in the parties' E911 responsibilities. (*See* Neinast Exhibit MN-1.)

Q. YOU STATED THAT INTRADO IS NOT ENTITLED TO SECTION 251(c) INTERCONNECTION WHEN INTRADO IS PROVIDING THE E911 SERVICE TO A PSAP ACCESSED BY AN AT&T FLORIDA END USER DIALING 911. PLEASE EXPLAIN.

A. In its First Report and Order, the FCC concluded:

> the term "interconnection" under section 251(c)(2) refers only to the physical linking of two networks for the mutual exchange of traffic."[18]

When an AT&T Florida caller dials 911, the call is delivered to the PSAP over a one-way arrangement that cannot support the mutual exchange of traffic. Based on the FCC's definition of Section 251(c) interconnection, this scenario does not qualify.

Q. DOES E911 SERVICE SUPPORT THE MUTUAL EXCHANGE OF TRAFFIC?

A. No. Mr. Neinast addresses the technical aspects of the E911 network, but I think a very simple (*i.e.*, non-technical) description will provide the basic framework for my testimony on this matter. When a caller dials 911, the call is routed through the E911 network to the proper PSAP so that emergency resources can be dispatched to assist. The call comes into the PSAP via a dedicated one-way terminating arrangement that cannot support call origination. In other words, if the PSAP dispatcher needs to originate a telephone call (*e.g.*, if the caller is disconnected

[18] FCC's First Report and Order, In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, CC Docket No. 96-98 (rel. August 8, 1996) at ¶ 176. *See also* 47 C.F.R. § 51.5.

and the dispatcher needs to call the party back), that call must be placed via a *different* line that is *not* part of the E911 network – a line that is equipped for basic telephone service. Regular telephone calls cannot be dialed by the PSAP dispatcher via the E911 network. Thus, the E911 arrangement is not capable of supporting two-way traffic and, therefore, cannot support the mutual exchange of traffic.

Q HAS AT&T FLORIDA NONETHELESS PROPOSED CONTRACT LANGUAGE TO ACCOMMODATE THIS SCENARIO?

A. Yes. As I stated above, AT&T Florida has proposed contract language to address the circumstance when an AT&T Florida end user needs to access an Intrado-served PSAP. (*See* Neinast Exhibit MN-1, Sections 5 and 6.)

Q. WHY HAS AT&T FLORIDA PROPOSED CONTRACT LANGUAGE WHEN IT DOES NOT BELIEVE IT IS OBLIGATED TO INCLUDE SUCH LANGUAGE IN THE ICA?

A. AT&T Florida provides contract language out of an abundance of caution in the event the Commission decides that such matters must be included in a Section 251 ICA. If that were to occur, AT&T Florida needs to have its competing language before the Commission to demonstrate the problems with Intrado's one-sided language.

Intrado has raised issues regarding its need for terms and conditions to be reciprocal to reflect that either Party may be responsible for routing

calls to their PSAP customers. For example, on page 42 of its Petition, Intrado states:

> Intrado also has made AT&T's original language regarding 911/E911 rights and obligations reciprocal so that it addresses each Party's obligations regardless of whether the primary provider of those services in a particular geographic area is AT&T or Intrado.

Yet the language Intrado has proposed is anything but "reciprocal." As discussed by Mr. Neinast regarding Issue 3 and related issues, Intrado's language inappropriately imposes unequal obligations upon AT&T Florida.

While AT&T Florida believes Scenario 2 is not properly included in a Section 251 ICA, and will enter into a commercial agreement if so requested, to the extent the Commission disagrees, AT&T Florida's proposed language (which *is* appropriately reciprocal) should be adopted.

Q. DOES AT&T FLORIDA INTERCONNECT WITH OTHER ILECS FOR COMPLETION OF E911 CALLS?

A. Yes. AT&T Florida interconnects with adjacent ILECs for handling of E911 calls. The ILECs' geographic footprints do not always align with municipal boundaries, making such interconnection essential for prompt emergency response. This ILEC to ILEC arrangement permits AT&T Florida's end users to access other ILECs' E911 customers, as may be appropriate, and vice versa. It also permits transfer of calls between

emergency responders serving adjacent areas. Importantly, however, these arrangements are pursuant to commercial agreements, not Section 251(c) interconnection agreements. Intrado's attempt to force such arrangements into a Section 251 ICA is novel and, to my knowledge, unprecedented – and appears to be primarily driven by Intrado's attempts to shift its costs onto AT&T Florida.

Q DOES AT&T FLORIDA ALSO OPPOSE INCLUDING SCENARIO 3 (SELECTIVE ROUTER TO SELECTIVE ROUTER CALL TRANSFERS) IN A SECTION 251 ICA?

A. Yes. Scenario 3 involves establishing the capability for PSAPs served by AT&T Florida and by Intrado to have calls transferred between them via Selective Router to Selective Router call transfers between AT&T Florida and Intrado. AT&T Florida does not believe it is required by Section 251(c) to offer Selective Router to Selective Router transfers pursuant to an ICA. Moreover, it is essential that the PSAPs requesting this service actively participate in negotiating such arrangements. Therefore, Scenario 3 should be covered by a separate commercial agreement, not a Section 251 ICA. AT&T Florida commits to make Selective Router to Selective Router functionality available to PSAPs pursuant to a commercial agreement that includes all affected parties, upon PSAP request.

Q. HAS AT&T FLORIDA NONETHELESS PROPOSED CONTRACT LANGUAGE TO ACCOMMODATE THIS SCENARIO 3?

A. Yes. As discussed by Mr. Neinast, PSAPs typically only require transfer functionality when a call needs to be redirected to a different PSAP to reach the appropriate emergency responders. It is the PSAP customers, however, not the LECs, that request the ability to effectuate such transfers.

Accordingly, the LECs should enter into an agreement that reflects the particular needs of the affected PSAPs, with the PSAPs' participation. Such an arrangement cannot be adequately addressed in an ICA between two parties. AT&T Florida has proposed language that obligates the parties to coordinate and cooperate with requesting PSAPs for such an arrangement. (*See* Neinast Exhibit MN-1, Section 1.4.)

ISSUE 1(c): OF THE SERVICE IDENTIFIED IN ISSUE 1(a), FOR WHICH, IF ANY, SHOULD RATES APPEAR IN THE ICA?

ISSUE 1(d): FOR THOSE SERVICES IDENTIFIED IN ISSUE 1(c), WHAT ARE THE APPROPRIATE RATES?

Q. SINCE YOU HAVE STATED THAT AT&T FLORIDA IS NOT OBLIGATED TO OFFER INTRADO SECTION 251(c) INTERCONNECTION FOR ANY OF THE SERVICES IT PROVIDES, WHAT, IF ANY, RATES FOR THESE SERVICES SHOULD APPEAR IN THE ICA?

A. Since AT&T Florida has agreed to include terms and conditions for Scenario 1 in the ICA, any related Section 251 rates should be included in the ICA as well. However, it is only appropriate to include relevant prices in the ICA for Scenarios 2 and/or 3 to the extent the Commission requires inclusion of terms and conditions for such interconnection.

That notwithstanding, there may be terms and conditions associated with these interconnection scenarios for which prices are contained in AT&T Florida's tariffs and not in the ICA. For example, Appendix 911 NIM Section 2.3 provides that each party is responsible for the facilities on its side of the POI. To the extent Intrado chooses to obtain facilities from AT&T Florida to meet this obligation (rather than obtaining them from another carrier or self-providing), these facilities would be leased pursuant to AT&T Florida's special access tariff – not the ICA. In such cases, it would be improper to include the prices in the ICA.

Q. HAS AT&T FLORIDA PROPOSED RATES SPECIFIC TO 911 SERVICE?

A. No. AT&T's 9-state template does not include prices relative to 911 service, *e.g.*, database charges. Likewise, AT&T does not propose to charge for interconnection trunks pursuant to the ICA. However, as I stated above, AT&T Florida does offer to lease tariffed special access facilities to Intrado (on Intrado's side of the POI) that Intrado may use to provide 911 service.

Q. HAS INTRADO PROPOSED RATES FOR THE 911 INTERCONNECTION IT SEEKS?

A. No, Intrado did not propose any 911 charges.[19] The parties have therefore agreed, for all intents and purposes, that there will be no charges to each other for 911 interconnection.

Q. PLEASE PROVIDE A BRIEF SUMMARY OF YOUR TESTIMONY FOR ISSUE 1.

A. Intrado intends to offer only emergency services and seeks to interconnect with AT&T Florida for those services. There are three basic scenarios regarding E911 network interconnection that are the subject of Issue 1:

1. Intrado delivers E911 traffic (originated by its own end users, if there were any, and by other carriers' end users) to AT&T Florida for completion to AT&T Florida-served PSAPs. AT&T Florida agrees to include terms and conditions for this circumstance; therefore, the Commission need not consider whether or not AT&T Florida is obligated to include such provisions.

[19] While Intrado has not provided AT&T Florida with any charges it intends to impose, Intrado has proposed language in Appendix 911 Section 6.1.1.2 that, to the extent AT&T Florida does not segregate 911 traffic to route directly from the end office to Intrado's Selective Router, AT&T Florida will bear any and all costs Intrado might incur as a result. Mr. Neinast explains the technical aspects of Intrado's language in his testimony for Issue 3(a). Intrado's language is another demonstration of its objective to improperly shift its costs to AT&T Florida and/or impose additional costs on AT&T Florida.

2. AT&T Florida delivers E911 traffic (originated by its own end users) to Intrado for completion to Intrado-served PSAPs. AT&T Florida does not believe it is obligated by Section 251(c) to include terms and conditions for this arrangement in the ICA. In the event the Commission disagrees, AT&T Florida offers Sections 5 and 6 in Appendix 911 to reflect reciprocity in the parties' E911 responsibilities.

3. Certain PSAPs request that AT&T Florida (and Intrado) offer the ability to transfer emergency calls between them (*i.e.*, the PSAPs) serving adjacent areas. AT&T Florida does not believe it is required by Section 251(c) to offer Selective Router to Selective Router transfers pursuant to an ICA. Moreover, it is essential that the PSAPs requesting this service actively participate in negotiating such arrangements. AT&T Florida commits to make Selective Router to Selective Router functionality available to PSAPs pursuant to a commercial agreement that includes all affected parties, upon PSAP request. AT&T Florida proposes language to capture this commitment in Appendix 911, Section 1.4.

ISSUE 2: IS AT&T'S 9-STATE TEMPLATE INTERCONNECTON AGREEMENT THE APPROPRIATE STARTING POINT FOR NEGOTIATIONS? IF NOT, WHAT IS?

Q. IS AT&T'S 9-STATE TEMPLATE INTERCONNECTION AGREEMENT THE APPROPRIATE STARTING POINT FOR NEGOTIATIONS?

A. Yes, it is. AT&T's 9-state template was specifically designed for CLEC ICAs in its 9-state (former BellSouth) territory and is therefore the appropriate starting point for negotiations of an ICA with Intrado in Florida. This template reflects the appropriate terms and conditions and network architecture for services AT&T offers in the 9-state region and accommodates the unique state-specific legal and regulatory requirements, network, technical, operational, operations support systems ("OSS"), policies, etc, for the former BellSouth region, including Florida. AT&T offered Intrado the 9-state template for Florida, and the parties commenced negotiations on those documents.

In contrast, the 13-state template was designed for CLEC ICAs in AT&T's 13-state (former SBC) territory and does not accommodate the particular characteristics present in Florida.

Q. HOW WOULD A COMMISSION DECISION TO UTILIZE THE 9-STATE TEMPLATE FOR INTRADO'S FLORIDA ICA AFFECT OTHER ISSUES IN THIS ARBITRATION?

A. If the Commission agrees with AT&T Florida that the 9-state template provides the proper framework for the parties' ICA, a number of issues in this arbitration would be eliminated. Many issues associated with the

13-state appendices (*i.e.*, GTC, NIM, ITR, OET, IC, PC, and Pricing[20]) would be moot, as well as portions of some of the remaining issues. Thus, the only issues outstanding for the Commission to resolve would be threshold Issue 1, plus those issues specifically associated with the parties' interconnection for 911 service, which includes Issues 3-5, portions of 7a, 8b, 9-11, and 24. In addition, there are some disputes not specific to 911 service that AT&T Florida expects Intrado would introduce to the 9-state template. These issues include Issue 6, 12, 13a, 14a, 29a, 29b, 30a, 30b and possibly, to a limited degree, 36. *See* Exhibit PHP-2 for a matrix of issues remaining for arbitration with the use of the 9-state template. The 911 issues represent the crux of the parties' dispute, so a decision to utilize the 9-state template would enable the Commission to focus its attention on issues of substance.

Q. YOU MENTIONED THAT CERTAIN ISSUES WOULD NOT EXIST WITH THE 9-STATE TEMPLATE. WHY WOULD THESE ISSUES BE ELIMINATED (OR LIMITED) FROM THE ARBITRATION?

A. Certain issues are specific to 13-state language in dispute, specifically Issues 7b, 13b, 14b, 15, 16, 25a, 31, 32, and 34a, and 34b. Intrado's disputes are not present in the 9-state language for these issues (and AT&T Florida will not introduce them). *See* page one of Exhibit PHP-3 for a matrix that depicts the relevant ICA sections and a brief

[20] General Terms and Conditions ("GTC"), Network Interconnection Methods ("NIM"), Interconnection Trunking Requirements ("ITR"), Out of Exchange Traffic ("OET"), Intercarrier Compensation ("IC") and Physical Collocation ("PC").

explanation for their exclusion. In addition, some other issues with multiple language sections in dispute are partially eliminated. See page two of Exhibit PHP-3 for a matrix depicting those issues that are partially eliminated from the arbitration, with the corresponding ICA references.

Q. WHAT CRITERIA DID YOU USE TO DETERMINE WHICH ISSUES (OR PARTS OF ISSUES) COULD BE ELIMINATED AND WHICH WOULD BE RETAINED?

A. I examined the 13-state language for each ICA section in dispute and looked for comparable language in the 9-state template. If I found similar language that I believed Intrado would seek to modify, I retained that as an issue for arbitration; if I did not, I assumed it would be omitted.

Consider, for example, the parties' dispute in Issue 29(a) regarding Pricing Sections 2.2 and 2.3. Pricing Section 2.2 contains language regarding the appropriate increment for rounding local usage (in six-second increments versus to the next whole minute) prior to assessing reciprocal compensation charges. Since the 9-state ICA provides that reciprocal compensation charges are based on factors rather than actual usage, the dispute about how to round usage no longer makes sense, and Pricing Section 2.2 can be eliminated from consideration in Issue 29(a).

Pricing Section 2.3 considers how to round mileage (to the next mile versus to the next one-fifth mile) before assessing facility charges. Since there is language in 9-state Attachment 2 Section 2.3.11 stating that facility mileage is to be rounded to the next mile, I assumed Intrado would maintain its dispute that the proper rounding increment is one-fifth mile. Thus, Issue 29(a) is retained for Pricing Section 2.3.

Q. WHAT WOULD BE THE PRACTICAL RESULT IF THE COMMISSION REQUIRED AT&T TO USE THE 13-STATE TEMPLATE FOR INTRADO'S NEW ICA IN FLORIDA?

A. If the Commission were to order AT&T Florida to negotiate an ICA with Intrado based on the 13-state template, AT&T would need to undertake a thorough analysis of the 13-state template to determine what language would need to be added, deleted and/or changed to accommodate the particular requirements for a CLEC ICA in Florida. Such an analysis could take several months or longer, depending, in part on the volume of ICA porting requests AT&T must undertake (using the same resources) during the same time period. In addition, the result of that review would most certainly generate new issues to be presented for arbitration. Since Intrado has expressed a sense of urgency in executing an ICA with AT&T Florida, it is surprising that they adamantly refuse to use an ICA template that does not impose such hurdles.

Q. BRIEFLY DESCRIBE AT&T'S EXPERIENCE "NEGOTIATING" WITH INTRADO FOR A FLORIDA ICA.

A. As I stated, AT&T provided Intrado with its 9-state generic template ICA as a starting point for negotiations in AT&T's 9-state region, including Florida.[21] There was a very limited exchange of redlines of that 9-state template. At the time Intrado provided AT&T with its redlines (October 2007), Intrado apparently agreed with AT&T that the 9-state template represented the appropriate documents to be negotiated for Florida. However, when Intrado filed its arbitration petition with the Commission on December 21, 2007, Intrado did not utilize the 9-state template the parties had begun negotiating from. Rather, Intrado redlined AT&T's 13-state template agreement – which is not now and never has applied in or been offered to CLECs for negotiation of a new ICA in Florida or anywhere in the former BellSouth 9-state region – to simply state that it encompassed all 22 states, including Florida and the entire 9-state region.

Q. IS AT&T OBLIGATED TO NEGOTIATE AND ENTER INTO A NEW INTERCONNECTION AGREEMENT WITH INTRADO IN FLORIDA THAT IS BASED ON AT&T'S 13-STATE TEMPLATE?

A. No. It is evident to me that there is nothing in the 1996 Telecom Act requiring AT&T to negotiate for a Florida ICA using such a template.

[21] AT&T also provide Intrado with its 13-state template for negotiation in the 13-state region.

Q. DOES INTRADO CONTEND THAT THE 1996 ACT REQUIRES AT&T TO NEGOTIATE WITH INTRADO FOR AN ICA BASED ON A TEMPLATE NEVER INTENDED FOR APPLICATION IN FLORIDA?

A. No. To my knowledge Intrado relies exclusively on its recently stated preference for AT&T's 13-state template.

Q. DID INTRADO REQUEST THAT AT&T PORT AN INTERCONNECTION AGREEMENT FROM A FORMER SBC STATE (*i.e.*, 13-STATE REGION) TO FLORIDA?

A. No. Intrado did not select any currently effective ICA from another state and request that it be ported to Florida.[22] That, however, is the only situation in which AT&T is obligated to provide such an agreement, and then, only after modifications are made as provided for by the FCC. It is only in the context of this arbitration that Intrado claims it was seeking a Florida ICA based on AT&T's 13-state template. Had Intrado made a porting request, the history of this case and the negotiations would have been entirely different.

Q. HAVE THE PARTIES ENGAGED IN NEGOTIATIONS SUBSEQUENT TO THE COMMENCEMENT OF THIS ARBITRATION?

A. Yes, although the parties have not specifically discussed the ICA in the context of this Florida arbitration. Both the Ohio Public Utilities Commission (PUCO) and the North Carolina Utilities Commission

[22] Intrado did not make a porting request but rather initiated a request to negotiate a brand-new interconnection agreement with AT&T.

(NCUC) abated their respective proceedings (Ohio for 30 days and North Carolina for 45 days) so the parties could negotiate the issues presented for arbitration.[23] Since the parties had virtually no negotiations prior to Intrado's arbitration filings, this very limited time was allocated so the parties could negotiate the issues presented for arbitration with the expectation that the issues would be clarified and that, hopefully, at least some of the issues would be resolved between the parties.[24]

Q. HAVE THE PARTIES REACHED AGREEMENT ON THIS FUNDAMENTAL ISSUE 2?

A. No. Although in post-arbitration negotiation sessions the parties agreed to use AT&T's 13-state Appendix 911 and have created a new Appendix 911 NIM as the basis for certain contract language in Florida (*see* Exhibits MN-1 and MN-2), they were unable to agree on the template to be used for the remainder of the ICA.

Q. PLEASE SUMMARIZE YOUR TESTIMONY ON ISSUE 2.

A. AT&T's 9-state (former BellSouth) template was specifically designed to accommodate the requirements (*e.g.,* network architecture, system,

[23] On December 21, 2007, Intrado filed for arbitration with AT&T in four states: Alabama, Florida, North Carolina, and Ohio.

[24] During the limited time available, the parties have been struggling to agree on what language remains in dispute and which issues are to be presented to the commissions for arbitration. Accordingly and at the parties' joint request, the North Carolina and Ohio commissions extended their arbitration schedules an additional 30 days – still significantly less than the 135-160 days allotted for negotiations by the Act.

service offering, legal, and regulatory) of AT&T's former BellSouth 9-state region. It is from this template that the parties' commenced and engaged in negotiations (however limited) prior to Intrado's arbitration filing. Using this template would eliminate many of the disputed issues from this arbitration, permitting the Commission to focus on matters of substance.

AT&T's 13-state (former SBC) template was never intended for use in the 9-state region, nor was it offered to Intrado for such use. A decision to utilize the 13-state template would require significant and time-consuming analysis of that template to identify language that must be changed for Florida – which would result in additional, as-yet unidentified issues requiring arbitration. Additionally, this is not the agreement that the parties started negotiating from for Florida, so it is not appropriate as a basis for this arbitration.

ISSUE 9: TO THE EXTENT NOT ADDRESSED IN ANOTHER ISSUE, WHICH TERMS AND CONDITIONS SHOULD BE RECIPROCAL? (911 Section 10.1, 11.1, 11.3; OET Section 1.1)[25]

Q. WHAT IS THE PARTIES' DISPUTE IN APPENDIX 911 SECTION 10?

[25] Mr. Neinast provides testimony for other ICA sections reflected as disputed in Issue 9.

A. Appendix 911 Section 10.1 addresses compensation for access to 911 services. The parties agree that rates for such access pursuant to Section 251 of the Act are set forth in Appendix Pricing. However, Intrado objects to AT&T Florida's language (bold underline) providing that access tariff pricing (rather than ICA pricing) might be appropriate in certain situations.

> Rates for access to the Parties' 911 and E911 Databases, trunking and call routing of E911 call completion to a Public Safety Answering Point (PSAP) as required by Section 251 of the Act as set forth in the **AT&T-(STATE)** Appendix Pricing **or the applicable Party's Commission-approved access tariff**.[26]

As I stated above for Issues 1(c) and 1(d), the parties have not proposed rates for 911 database functions or trunking, so there would be no relevant prices in Appendix Pricing. Furthermore, Appendix Pricing is a 13-state document that would not apply in Florida (since pricing is state specific).

Q. PLEASE PROVIDE AN EXAMPLE OF WHEN ACCESS TARIFF PRICING WOULD BE APPROPRIATE FOR THE PROVISION OF 911 SERVICES.

A. A simple example would be a situation where Intrado sought to lease facilities from AT&T Florida to provide 911 service to a PSAP. When

[26] Throughout this testimony, I reflect the parties' disputed ICA language as follows: AT&T Florida's language to which Intrado objects is reflected in **bold underline** font. Intrado's language to which AT&T Florida objects is reflected in ***bold italics*** font. Text that is in normal font or simply **bold** is agreed to by the parties.

AT&T Florida is not obligated to offer such facilities pursuant to the ICA (*e.g.,* dedicated transport on a route that is not impaired and therefore not offered in the ICA), Intrado would order and pay for such facilities pursuant to AT&T Florida's access tariff. Further, to the extent Intrado elected to utilize AT&T Florida's facilities to connect to the POI, such facilities would also be ordered and priced pursuant to AT&T Florida's special access tariff. Thus, AT&T Florida's inclusion of the Commission-approved access tariff as applicable in some circumstances is appropriate and should be adopted.

Q. WHAT IS THE PARTIES' DISPUTE IN APPENDIX 911 SECTIONS 11.1 AND 11.3?

A. The parties disagree about whether to use the term "customers" or "End Users" to describe the limits to each party's 911 liability. A representative sample of the disputed language is reflected in Section 11.3 and states:

> Each Party agrees to release, indemnify, defend and hold harmless the other Party from any and all Loss arising out of either Party's 911 System hereunder or out of either Party's **customers' or** End Users' use of the 911 System ...

Intrado may (and AT&T Florida does) provide wholesale and/or retail service to other carriers and, as I discuss in my testimony for Issue 31, carriers are not End Users and End Users are not carriers. Including customers in this language affords both parties protection from loss

arising from *all* of the other party's customers, not just those defined by the ICA as End Users.

The use of the term End Users, as proposed by Intrado, is too narrow and does not adequately capture the appropriate limits to each party's 911 liability. AT&T Florida's addition of the more general term "customer" is appropriate and should be adopted because there is an important distinction in the ICA between customers and End Users.

Q. WHAT IS THE PARTIES' DISPUTE REGARDING LANGUAGE IN OET SECTION 1.1?[27]

A. The language in dispute in Appendix Out-of-Exchange Traffic (OET) Section 1.1 is:

> This Appendix sets forth the terms and conditions necessary for the exchange of Out of Exchange Traffic (as defined in Section 1.4). ***This Appendix does not govern the Parties' exchange of 911/E911 Service calls or the inter-Selective Router transfer of 911/E911 Service calls.***

Intrado proposes language (bold italics) to exclude the exchange of 911 calls and inter-SR calls from the OET appendix. This language is unnecessary because the definition of out-of-exchange traffic in OET Section 1.4 already excludes 911 traffic:

[27] This language dispute (OET Section 1.1) is not present in the 9-state template and need not be addressed by the Commission unless it requires use of the 13-state template. I have included this testimony here to avoid any confusion that might be caused by reflecting the same issue (albeit for different ICA sections) in two places.

> For purposes of this Appendix only, **"Out of Exchange Traffic"** is defined as Section 251(b)(5) Traffic, ISP-Bound Traffic, FX, intraLATA traffic and/or InterLATA Section 251(b)(5) Traffic exchanged pursuant to an FCC approved or court ordered InterLATA boundary waiver ...

Intrado's additional language is unnecessary and should be rejected.

ISSUE 11: WHAT ARE THE OBLIGATIONS AND RESPONSIBILITIES OF EACH PARTY TO COLLECT AND REMIT 911/E911 SURCHARGES, AND TO PROVIDE ANY RELATED REPORTS? (911 Sections 7.2.1.1, 7.2.1.2, 7.2.2, 7.2.2.1, 7.2.2.2)

Q. ARE THE PARTIES IN GENERAL AGREEMENT REGARDING HANDLING OF 911 SURCHARGES?

A. Yes. The parties agree that each is responsible for collecting 911 surcharges from its end users and remitting them to the proper government agencies. And while language in 911 Sections 7.2.1.1 and 7.2.1.2 is still reflected as disputed, the parties resolved this language in negotiations for their ICA in Ohio and can, I believe, reach similar resolution for Florida.

Q. WHAT IS THE DISPUTE IN 911 SECTION 7.2.2 AND ITS SUBSECTIONS?

A. AT&T Florida has proposed additional language to address the parties' respective obligations when Intrado is operating as a reseller of basic local exchange service.

> **7.2.2 For CLEC as a Reseller, except where state law requires the ILEC to serve as a clearinghouse between Resellers and PSAPs, the Parties agree that:**
>
> **7.2.2.1 CLEC shall be responsible for collecting and remitting all applicable 911 fees and surcharges on a per line basis to the appropriate PSAP or other governmental authority responsible for collection of such fees and surcharges.**
>
> **7.2.2.2 AT&T-(STATE) shall include Reseller CLEC information when providing the 911 Customer with detailed monthly listings of the actual number of access lines, or breakdowns between the types of access lines (e.g., residential, business, payphone, Centrex, PBX, and exempt lines).**

This language clearly sets forth how 911 surcharges will be handled if Intrado ever operates as a reseller. When Intrado is not operating as a reseller, this language is not invoked, and there is no harm to Intrado by including it in the ICA. However, since Intrado is authorized to be a reseller in Florida, and the ICA will include resale provisions, the ICA should also include provisions for the associated 911 responsibilities. In addition, because other CLECs that may operate as resellers can adopt this ICA, inclusion of this language is important.

ISSUE 12: ARE 911/E911 CALLS EXCHANGED BETWEEN THE PARTIES SUBJECT TO INTERCARRIER COMPENSATION? (IC Sections 1.1, 6.1)

Q. DO AT&T FLORIDA AND INTRADO AGREE IN PRINCIPLE WITH RESPECT TO INTERCARRIER COMPENSATION FOR E911 SERVICE CALLS?

A. Yes. The parties agree that E911 calls are not subject to intercarrier compensation. The question in this issue is not whether such calls are subject to intercarrier compensation – they are not. The question is how should the ICA capture the exclusion.

Q. GIVEN THAT THE PARTIES AGREE IN PRINCIPLE, WHAT IS THE REAL DISPUTE IN THIS ISSUE?

A. AT&T Florida's position is that the agreed upon language is sufficient. IC Section 1.1 provides that Appendix Intercarrier Compensation "does not apply to 911 Service or E911 Service calls delivered to either AT&T-(STATE)'s 911 System or CLEC's 911 System."

Despite the clear language already set forth in IC Section 1.1, Intrado proposes the following additional language that goes beyond the scope of the ICA and to which AT&T Florida objects.

> ***Such calls shall not be billed at reciprocal compensation rates, access rates, transit rates, or any other intercarrier compensation rate.***

Since the appendix in its entirety does not apply to E911 traffic, it is inappropriate to include in the ICA any *additional* language with respect to compensation for E911 calls. Moreover, such language could be in conflict with other terms and conditions, either within the ICA or in a separate agreement or tariff. For example, if the parties (or a CLEC adopting Intrado's ICA) negotiated a separate agreement for the express purpose of transiting 911 calls, and that contract included a charge for that service, it is unclear which contract term would prevail – Intrado's ICA provision that there shall be no transit charge, or the commercial agreement that specifically sets forth a transit charge.

IC Section 1.1 already provides that 911 calls are not subject to Appendix Intercarrier Compensation. This language is sufficient. Intrado's additional language, which goes beyond the scope of the ICA, should be rejected because it creates an unnecessary potential for future disputes.

Regarding IC Section 6.1, AT&T Florida agrees to Intrado's proposed deletion of "911 Service traffic," resolving the language dispute in that section. 911 Service traffic is already excluded from intercarrier compensation by the agreed-upon language in Section 1.1.

ISSUE 13(a): WHAT SUBSET OF TRAFFIC, IF ANY, SHOULD BE ELIGIBLE FOR INTERCARRIER COMPENSATION WHEN EXCHANGED

BETWEEN THE PARTIES? (GTC Sections 1.1.84, 1.1.122; IC Sections 1.2, 4.1, 5.1, 16.1; ITR Sections 2.14, 12.1, 12.2)

Q. PLEASE PROVIDE AN OVERVIEW OF THIS ISSUE, SINCE THERE ARE NUMEROUS ICA SECTIONS IN DISPUTE.

A. The parties disagree as to the proper definitions for "Section 251(b)(5) Traffic," "ISP-Bound Traffic" and "Switched Access Traffic." AT&T Florida defines these terms with specificity to clearly articulate the conditions under which traffic is subject to intercarrier compensation. Intrado's proposed language that generally defines these terms in accordance with "Applicable Law" is unnecessarily vague and should be rejected. The parties also disagree regarding application of those terms to other provisions in the ICA.

Q WHY HAS AT&T FLORIDA PROPOSED A COMPREHENSIVE DEFINITION FOR SECTION 251(b)(5) TRAFFIC?

A. AT&T Florida's proposed definition for Section 251(b)(5) traffic,[28] set forth below, accurately reflects the specific criteria applied in determining what traffic is subject to reciprocal compensation.

> **Section 251(b)(5) Traffic" shall mean telecommunications traffic in which the originating End User of one Party and the terminating End User of the other Party are:**

[28] AT&T Florida has proposed its definition of Section 251(b)(5) Traffic be included in both the GTCs (Section 1.1.124) and Appendix IC (Section 4.1). Intrado has not objected to this definition appearing twice; rather Intrado has proposed the same competing language in both instances.

a. **both physically located in the same ILEC Local Exchange Area as defined by the ILEC Local (or "General") Exchange Tariff on file with the applicable state commission or regulatory agency; or**

b. **both physically located within neighboring ILEC Local Exchange Areas that are within the same common mandatory local calling area. This includes but is not limited to, mandatory Extended Area Service (EAS), mandatory Extended Local Calling Service (ELCS), or other types of mandatory expanded local calling scopes.**

Intrado's proposed definition is unnecessarily vague:

"Section 251(b)(5) Traffic" is as defined by Applicable Law, including the rules, regulations and orders of the FCC and courts of competent jurisdiction.

It is not clear whether Intrado disagrees with the substance of AT&T Florida's language or simply prefers a vague definition that is open to differing interpretations. AT&T Florida's specific definition is consistent with the language previously adopted by the Public Utilities Commission of Ohio[29] and should be adopted here.[30]

Q. WHAT IS DISPUTE REGARDING THE DEFINITION OF ISP-BOUND TRAFFIC?

[29] See, for example, *In the Matter Of TelCove Operations, Inc.'s Petition for Arbitration Pursuant to Section 252(b) of the Communications Act of 1934, as Amended by the Telecommunications Act of 1996, and Applicable State Laws for Rates, Terms, and Conditions of Interconnection with Ohio Bell Telephone Company d/b/a SBC Ohio*, Case No. 04-1822-TP-ARB, Arbitration Award dated January 25, 2006, Issue 37.

[30] Since this language is 13-state language never presented for arbitration in Florida, there can be no prior state-specific ruling to reference. It is therefore appropriate to consider that a 13-state commission (in this case, Ohio) adopted this language.

A. The parties dispute is reflected by the following language:

> "**ISP-Bound Traffic**" shall mean telecommunications traffic, ***defined*** in accordance with the FCC's Order on Remand and Report and Order, In the Matter of Implementation of the Local Compensation Provisions in the Telecommunications Act of 1996, Intercarrier Compensation for ISP-Bound Traffic, FCC 01-131, CC Docket Nos. 96-98, 99-68 (rel. April, 27, 2001) ("FCC ISP Compensation Order")., **"ISP-Bound Traffic" shall mean telecommunications traffic exchanged between CLEC and AT&T-(STATE) in which the originating End User of one Party and the ISP served by the other Party are:**
>
> a. **both physically located in the same ILEC Local Exchange Area as defined by the ILEC's Local (or "General") Exchange Tariff on file with the applicable state commission or regulatory agency; or**
>
> b. **both physically located within neighboring ILEC Local Exchange Areas that are within the same common mandatory local calling area. This includes, but it is not limited to, mandatory Extended Area Service (EAS), mandatory Extended Local Calling Service (ELCS) or other types of mandatory expanded local calling scopes.**

As with the definition of Section 251(b)(5) Traffic, AT&T Florida has proposed additional language be included in the definition of ISP-Bound Traffic to clearly articulate what is intended.[31] Accordingly, AT&T Florida's language should be adopted.

[31] AT&T Florida has proposed its definition of ISP-Bound Traffic be included in both the GTCs (Section 1.1.84) and Appendix IC (Section 5.1). Intrado has not objected to this definition appearing twice; rather Intrado has proposed the same competing language in both instances.

Q. BRIEFLY DISCUSS THE PARTIES' DISPUTE REGARDING THE DEFINITION OF SWITCHED ACCESS TRAFFIC.

A. AT&T Florida has proposed a comprehensive definition of Switched Access Traffic, while Intrado simply wants a vague reference to Applicable Law.[32]

> For purposes of this Agreement only, Switched Access Traffic shall ***be defined consistent with Applicable Law.*** **mean all traffic that originates from an End User physically located in one local exchange and delivered for termination to an End User physically located in a different local exchange (excluding traffic from exchanges sharing a common mandatory local calling area as defined in AT&T-(STATE)'s local exchange tariffs on file with the applicable state commission) including, without limitation, any traffic that (i) terminates over a Party's circuit switch, including traffic from a service that originates over a circuit switch and uses Internet Protocol (IP) transport technology (regardless of whether only one provider uses IP transport or multiple providers are involved in providing IP transport) and/or (ii) originates from the End User's premises in IP format and is transmitted to the switch of a provider of voice communication applications or services when such switch utilizes IP technology. Notwithstanding anything to the contrary in this Agreement.** ***To the extent required by Applicable Law***, all Switched Access Traffic shall be delivered to the terminating Party over feature group access trunks per the terminating Party's access tariff(s) and shall be subject to applicable intrastate and interstate switched access charges;

[32] AT&T Florida has proposed its definition of Switched Access Traffic be included in both Appendix IC (Section 16.1) and Appendix ITR (Section 12.1). Intrado has not objected to this definition appearing twice; rather Intrado has proposed the same competing language in both instances.

provided, however, the following categories of Switched Access Traffic are not subject to the above stated requirement relating to routing over feature group access trunks.

The Ohio state commission previously adopted the same language AT&T Florida proposes here.[33] As with other 13-state language in dispute, which was intended for 13-state application, the Commission has not had occasion to consider this language. In absence of specific Florida precedent and because there is no further direction from the FCC regarding this type of traffic, the Commission should follow the lead of the Ohio commission, which has experience with the 13-state language, and adopt AT&T Florida's language.

Q. WHAT OTHER DISPUTED LANGUAGE IS ENCOMPASSED BY THIS ISSUE 13(a)?

A. The parties have a language dispute in IC Section 1.2, subsections of IC Section 16.1, and ITR Section 2.14.[34] This language relates to the type of services Intrado will be offering its end users.

AT&T Florida's language in IC Section 1.2 clarifies that Appendix IC applies to Intrado's "wireline local telephone exchange (dialtone) service." This is a wireline ICA, and Intrado should not be delivering

[33] TelCove Arbitration Award at pp. 16-18, SBC Issue 46.

[34] This language dispute is not present in the 9-state template and need not be addressed by the Commission unless it requires use of the 13-state template. I have included this testimony here to avoid any confusion that might be caused by reflecting the same issue (albeit for different ICA sections) in two places.

wireless traffic to AT&T Florida over local interconnection trunks pursuant to this agreement.[35] Likewise, in IC Section 16.1 (subsections i and ii) and ITR Section 2.14, Intrado's traffic delivered over the local interconnection trunks should be dial tone (*i.e.,* wireline) traffic originated by its end users. Accordingly, AT&T Florida's language should be adopted.

ISSUE 14(a): SHOULD THE TERMS AND CONDITIONS FOR THE EXCHANGE OF TRAFFIC FROM THIRD-PARTIES AND INTERLATA TRAFFIC BE RECIPROCAL? (IC Sections 3.5, 12.1)

Q. SHOULD THE TERMS AND CONDITIONS FOR THE EXCHANGE OF TRAFFIC FROM THIRD PARTIES BE RECIPROCAL?

A. No. AT&T Florida has direct interconnection arrangements with all other local exchange carriers doing business in its territory – none of that traffic will be carried by Intrado. Therefore, the language in IC Section 3.5 regarding intercarrier compensation arrangements with third parties is only applicable to Intrado (to the extent it originates and/or terminates traffic to third parties via AT&T Florida as the transit provider) and is not appropriate for AT&T Florida.

[35] AT&T Florida offers a different ICA to wireless carriers that accommodates the differing requirements of wireless service. If Intrado seeks to deliver wireless traffic to AT&T Florida, Intrado should request a wireless ICA. To the extent Intrado intends to deliver wireless 911 traffic to AT&T Florida, the parties have agreed that Appendix IC does not apply to 911 traffic.

Q. PLEASE DESCRIBE THE PARTIES' DISPUTE REGARDING INTERLATA TRAFFIC.[36]

A. Intrado proposes to make language regarding compensation for interLATA traffic reciprocal, to which AT&T Florida objects. IC Section 12.1 states:

> Where **CLEC** ***either Party*** originates or terminates its own End User InterLATA Traffic not subject to Meet Point Billing, **CLEC** ***the Party*** must purchase feature group access service from **AT&T-(STATE)** ***the other Party***'s state or federal access tariffs, whichever is applicable, to carry such InterLATA Traffic.

AT&T Florida does not provide interLATA service and therefore does not purchase related feature group access services from any carrier. Thus, Intrado's proposed reciprocity for interLATA traffic is inappropriate and should be rejected.

ISSUE 24: WHAT LIMITATION OF LIABILITY AND/OR INDEMNIFICATION LANGUAGE SHOULD BE INCLUDED IN THE ICA? (GTC Section 15.7)

Q. WHAT IS THE PARTIES' DISPUTE REGARDING 911 LIABILITY?

A. There are two parts to the language in dispute for GTC Section 15.7, which states as follows:

[36] The language dispute reflected in IC Section 12.1 is not present in the 9-state template and need not be addressed by the Commission unless it requires use of the 13-state template. I have included this testimony here to avoid any confusion that might be caused by reflecting the same issue (albeit for different ICA sections) in two places.

> **AT&T-(STATE)** shall not be liable to CLEC, its **customer** ***End User*** or any other Person for any Loss alleged to arise out of the provision of access to 911 service or any errors, interruptions, defects, failures or malfunctions of 911 service ***unless attributable to AT&T-(STATE)***.

First, since Intrado will not be serving End Users (*see* Issue 31), AT&T Florida proposes the use of the word customer instead of End User. When PSAPs obtain service from Intrado, there is no doubt that they are customers, independent of the parties' dispute regarding the definition of End Users. Furthermore, Intrado indicates it intends to provide service to other carriers, such as wireless carriers and VOIP providers, and AT&T Florida does not agree that such carriers should be classified as End Users. Using the word customer rather than End User effectively sidesteps the dispute in Issue 31 regarding the definition of End Users.

Second, the parties disagree regarding the extent of AT&T Florida's liability pursuant to the ICA.

Q. WHY DOES AT&T FLORIDA OBJECT TO BEING HELD LIABLE FOR 911 FAILURES THAT MIGHT BE "ATTRIBUTABLE" TO AT&T FLORIDA?

A. Neither Intrado nor its customers should be allowed to hold AT&T Florida liable for personal injury, death or destruction of property for system and/or equipment "errors, interruptions, defects, failures or malfunctions of 911 service" that result from the normal course of doing

business. Such damage may very well be the result of actions outside of AT&T Florida's control, but might still be considered as "attributable to AT&T." For example, an independent contractor could inadvertently cut one or more E911 facilities. In the event of a major disaster, capacity in the facilities or at the emergency answering points might be inadequate to handle the volume of calls. In these circumstances, peoples' lives or property may be at stake. Such situations are unfortunate, but Intrado cannot hold AT&T Florida responsible for any and all damage resulting from such events. Furthermore, Intrado's Tariff includes liability language that would protect Intrado in such circumstances:

> The sole and exclusive remedy against the Company for an interruption or failure of service resulting from errors, mistakes, omissions, interruptions, failures, delays, or defects or malfunctions of equipment or facilities shall be as follows: The Company shall repair or replace any item of its facilities or defective part thereof at its expense. The Company shall have the option to decide whether to repair or to replace its facilities.[37]

Q. WHY ARE SUCH BROAD LIMITS ON LIABILITY FOR 911 SERVICE APPROPRIATE?

A. Broad limits on liability for 911 service are not only appropriate, they are critical and essential to allow carriers to provide 911 service at all. Without the protection of a broad limitation of liability, the cost and risk

[37] *See* Intrado Tariff Section 2.9.2.2.

of providing 911 service would be prohibitive, and no carrier would reasonably be able (or willing) to provide 911 service without an exponential rate increase, and perhaps not even then. There is no reason to deny AT&T Florida the liability protection it requires, especially ;when Intrado is still able to protect itself through its tariffs.

ISSUE 29(a): WHAT ROUNDING PRACTICES SHOULD APPLY FOR RECIPROCAL COMPENSATION USAGE AND AIRLINE MILEAGE? (IC Section 14.4; Pricing Sections 2.2, 2.3)

Q. WHERE RATES ARE DISTANCE SENSITIVE, WHAT IS THE PROPER INCREMENT FOR ROUNDING?

A. The language in dispute regarding mileage rounding is reflected in Pricing Section 2.3:

> When the calculation results in a fraction of a mile, **AT&T-(STATE)** will round up to the next ***one-fifth (1/5)*** **whole** mile before determining the mileage and applying rates.

The proper increment for rounding distance sensitive rates is one mile, which is standard in the industry for carrier interconnection. For example, AT&T Florida's switched access tariff provides:

> To determine the rate to be billed, first compute the mileage using the V&H coordinates method for the points involved, then apply the per mile rate shown. If the calculation results in a fraction of a mile, always round up to the next whole mile

> before determining the mileage and applying the rates.[38]

AT&T Florida's tariff for Dedicated Access Services provides similar language:

> To determine the rate to be billed, first compute the mileage using the V&H coordinates method, as set forth in the National Exchange Carrier Association Tariff FCC. No. 4, then find the band into which the computed mileage falls and apply the rates shown for that band. When the calculation results in a fraction of a mile, always round up to the next whole mile before determining the mileage band and applying the rates.[39]

Intrado's proposed language to round mileage to the next one-fifth mile is inconsistent with industry standard and should be rejected. AT&T Florida's *mileage rounding increment of one mile should be adopted.*

Q. WHAT IS THE APPROPRIATE ROUNDING INCREMENT FOR RECIPROCAL COMPENSATION?[40]

A. The appropriate rounding increment for calculation of conversation time is one minute, not six (6) seconds as Intrado proposes. Similar language appears in both Pricing Section 2.2 and IC Section 14.4:[41]

---

[38] BellSouth Telecommunications, Inc. Florida Access Services Tariff, Section E6.7.19.

[39] BellSouth Telecommunications, Inc. Florida Access Services Tariff, Section E6.7.4.6.

[40] This is an appropriate point to remind the Commission that AT&T's 13-state language was specifically crafted and intended for AT&T's former SBC states. (See my testimony for Issue 2.) The former BellSouth states, including Florida, bill intercarrier compensation based on factors rather than actual usage. In that context, any discussion of rounding increments is meaningless. This is just one very small example of where the 13-state language simply does not "fit" in Florida. Because AT&T has not undertaken the significant effort required to identify exactly what 13-state language would need to be changed to permit its application in Florida, I do not know what other language is problematic.

> For purposes of reciprocal compensation only, measurement of minutes of use over Local Interconnection Trunk Groups shall be in actual conversation seconds. The total conversation seconds over each individual Local Interconnection Trunk Group will be totaled for the entire monthly bill and then rounded ***based on six (6) second intervals*** **to the next whole minute**.

The parties agree that reciprocal compensation is calculated based on actual conversation seconds, as opposed to including non-conversation time (which is how access usage is calculated). Thus, there is no reciprocal compensation charge for calls not completed. The parties also agree that usage is calculated on a trunk group basis.

Rounding usage to the next whole minute is standard industry practice for carrier billing. For example, AT&T Florida's switched access tariff provides:

> *BellSouth* ... access minutes or fractions thereof, the exact value of the fraction being a function of the switch technology where the measurement is made, are accumulated over the billing period for each end office, and are then rounded up to the nearest access minute for each end office.[42]

[41] The language dispute reflected in Pricing Section 2.2 and IC Section 14.4 is not present in the 9-state template and need not be addressed by the Commission unless it requires use of the 13-state template. I have included this testimony here to avoid any confusion that might be caused by reflecting the same issue (albeit for different ICA sections) in two places.

[42] BellSouth Telecommunications, Inc. Florida Access Services Tariff, Section E6.7.8.

Q. WHAT IS THE POTENTIAL FINANCIAL IMPACT TO INTRADO IF RECIPROCAL COMPENSATION USAGE IS ROUNDED TO THE NEXT MINUTE INSTEAD OF IN SIX SECOND INCREMENTS?

A. The financial impact to Intrado is truly de minimus. IC Section 14.4 provides that usage is accumulated on each trunk group for a month, and then rounded up before being billed at the agreed-upon reciprocal compensation rate of $0.0007 per minute. So, hypothetically, if Intrado had 100 trunk groups delivering Section 251(b)(5) usage to AT&T Florida, and all were rounded up by a full minute (which would never happen), that would equate to *7 cents* per month for all 100 trunk groups together – or 84 cents per year. Even if Intrado had 1000 trunk groups to AT&T Florida, that is still only $8.40 per year. It is not even worth the arithmetic to be more accurate by backing out the fraction of a minute Intrado would pay based on six second rounding.

AT&T's industry standard practice of rounding reciprocal compensation usage to the next whole minute, which is in effect with other carriers, should be adopted.

ISSUE 29(b): IS AT&T PERMITTED TO IMPOSE UNSPECIFIED NON-RECURRING CHARGES ON INTRADO? (Pricing Sections 1.9.1, 1.9.2, 1.10.1)

Q. WHAT IS THE DISPUTE REFLECTED IN PRICING SECTIONS 1.9.1 AND 1.9.2?

A. For context, in Pricing Section 1.9, the parties have agreed that AT&T Florida's obligation to provide products and services to Intrado is limited to those for which rates, terms, and conditions are contained in the ICA. The parties also agreed in Section 1.9 that to the extent Intrado ordered a product or service not contained in the ICA, AT&T Florida would reject that order. If the order was for a UNE, Intrado could submit a Bona Fide Request ("BFR") in accordance with Appendix UNE's BFR provisions. If the order was for a product or service still available in AT&T Florida's tariff, Intrado could seek to amend the ICA to incorporate relevant rates, terms and conditions.

Pricing Sections 1.9.1 and 1.9.2 address what happens if Intrado orders a product or service not contained in the ICA and AT&T Florida provisions it nonetheless. The language in Sections 1.9.1 and 1.9.2 is as follows:

> 1.9.1 CLEC shall pay for the Product or Service provisioned to CLEC at the rates set forth in **AT&T-(STATE)**'s applicable intrastate tariff(s) for the Product or Service or, to the extent there are no tariff rates, terms or conditions available for the Product or Service in the applicable state, then ***AT&T-(STATE) shall propose rates pursuant to the process required in Sections 251 and 252 of the Act*** **CLEC shall pay for the Product or Service at AT&T-(STATE)'s current generic contract rate for the Product or Service set forth in AT&T-(STATE)'s applicable state-**

specific generic pricing schedule as published on AT&T-(STATE)'s CLEC website; or

1.9.2 CLEC will be billed and shall pay for the product or service as provided in Section 1.9.1, above, and AT&T-(STATE) may, without further obligation, reject future orders and further provisioning of the product or service until such time as applicable rates, terms and conditions are incorporated into this Agreement as set forth in this Section 1.9.

AT&T Florida's language in Section 1.9.1 provides that Intrado will pay the standard generic rate that another CLEC would pay for that same product or service (provided there is no tariff rate). Intrado's language requiring AT&T Florida to *propose* rates pursuant to the Act should be rejected. It is important to keep in mind in this example that Intrado has ordered, and AT&T Florida has provisioned, a product or service that is available to CLECs but is not in Intrado's ICA. AT&T Florida should not have to go through the process of proposing rates when it already has rates established. Moreover, Intrado has objected to AT&T Florida's language in Section 1.9.2 that would require Intrado to actually pay for these services.

AT&T Florida's language in Section 1.9.2 also provides that AT&T Florida may reject other orders for the same product or service until rates, terms and conditions are incorporated into the ICA. AT&T Florida should not be expected or required to continue providing service outside the ICA simply because it did so once.

AT&T Florida's language is entirely appropriate when you consider that Intrado has ordered a product or service for which it had no contract terms, but that AT&T Florida provisioned anyway.

Q. PLEASE EXPLAIN AT&T FLORIDA'S OBJECTION TO INTRADO'S PROPOSED LANGUAGE IN PRICING SECTION 1.10.1.

A. Pricing Section 1.10.1 addresses any rates in the Pricing Schedule that are "TBD" (to be determined). The parties have agreed to most of the language regarding TBD rates, including retroactive application of generic prices "without the need for any additional modification(s) to this Agreement or further Commission action." Intrado then adds this conflicting language: "*if the Parties have reached mutual agreement of the specified rate and the Commission has approved pursuant to the following process.*"[43] This language would require that 1) Intrado agrees to the prices, and 2) the Commission approves them. This language would improperly permit Intrado to object to prices even if the Commission had approved them. Accordingly, Intrado's language should be rejected.

ISSUE 36: SHOULD THE PARTIES IDENTIFY, BY CAPITALIZATION OR SOME OTHER MEANS, TERMS THAT HAVE BEEN FORMALLY DEFINED IN THE ICA?

[43] The "following process" includes, for example, AT&T Florida's notification to Intrado of the rate, effective date, and the amendment process.

Q. UNDER WHAT CIRCUMSTANCES SHOULD TERMS BE CAPITALIZED IN THE ICA?

A. AT&T Florida agrees that defined terms should be appropriately capitalized throughout the interconnection agreement based on the use of the terms. Such cosmetic revisions are normally made during the negotiation process or when conforming the ICA following arbitration of substantive issues, not raised as an issue for arbitration.

Since Intrado has raised this as an issue for arbitration, words should only be capitalized when their use is consistent with the defined term. There may be some occasions where Intrado has capitalized terms that are not used in a manner consistent with the definition. For example, in the 13-state template, End User is defined relative to customers of AT&T and Intrado specifically, not end users of other parties generally. The parties should make any capitalization revisions necessary during the process of conforming the ICA to the arbitration order and preparing it for signature. To the extent the parties have a remaining disagreement as to whether a particular word should be capitalized in the ICA, the parties may seek the Commission's assistance.

The following testimony addresses issues that are only present with the 13-state template. In the event the Commission determines in Issue 2 that the 9-state template is the proper basis for Intrado's Florida ICA, this testimony becomes irrelevant.

ISSUE 3(b): WHAT TRUNKING AND TRAFFIC ROUTING ARRANGEMENTS SHOULD BE USED FOR THE EXCHANGE OF TRAFFIC WHEN AT&T IS THE DESIGNATED 911/E911 SERVICE PROVIDER? (GTC Section 44.6.1.2)[44]

Q. WHY HAS AT&T FLORIDA PROPOSED LANGUAGE IN GTC SECTION 44.6.1.2 REGARDING THE 911 REQUIREMENTS FOR DATA-ONLY PROVIDERS?

A. AT&T Florida's language in GTC Section 44.6.1.2 sets forth the 911 requirements applicable to Intrado in the event it offers either terminating-only service (Section 44.6.1.2.1) and/or subsequently offers voice service (Sections 44.6.1.2.2 – 44.6.1.2.4) to end users. Because Intrado will not be providing basic local exchange service and will therefore not have end users dialing 911, it will operate in much the same way as data-only providers (which also do not provide dial tone services). If Intrado never offers its customers the ability to dial 911, then this language will never apply. However, AT&T Florida's language

[44] Mr. Neinast provides testimony for other ICA sections related to this Issue 3(b) and that are relevant to the arbitration independent of the Commission's finding in Issue 2 regarding the base template.

is appropriate for Intrado and should be adopted because the ICA will contain terms and conditions for Intrado to offer local exchange service, including the ability to dial 911, during the term of the agreement. Moreover, inclusion of this language is necessary in the event another carrier (that is a data-only provider) adopts this ICA.

ISSUE 7(b): SHOULD THE ICA INCLUDE TERMS AND CONDITIONS TO ADDRESS SUBSEQUENT MODIFICATIONS TO THE INTERCONNECTION AGREEMENT AND CHANGES IN LAW? IF SO, WHAT TERMS AND CONDITIONS SHOULD BE INCLUDED? (NIM Sections 1.26, 3.4.1)

Q. *WHAT IS THE PARTIES' DISAGREEMENT REGARDING LANGUAGE IN NIM SECTIONS 1.26 AND 3.4.1?*

A. The parties disagree as to how to accommodate interconnection methods that are not specifically set forth in the ICA. NIM Section 1.26 states:

> **Network Interconnection Methods** (NIMs) include, but are not limited to, Physical Collocation; Virtual Collocation; Fiber Meet Point; and other technically feasible method of obtaining Interconnection which shall be incorporated into the Interconnection Agreement **by amendment**. One or more of these methods may be used to effect the Interconnection pursuant to Section 251(c)(2) of the Act ***and Applicable Law***.

Appendix NIM includes terms and conditions for physical collocation (Section 3.1), Virtual Collocation (Section 3.2), and Fiber Meet Point

(Section 3.3). The parties have agreed that the interconnection method is for the purpose of Section 251(c)(2) interconnection. However, Intrado proposes that such interconnection is also pursuant to some unidentified "Applicable Law." It is my understanding that the law applicable to the parties' interconnection is Section 251(c)(2). AT&T Florida objects to Intrado's language that could be interpreted in a manner that would expand AT&T Florida's interconnection obligations beyond that required by Section 251(c)(2) of the Act.

NIM Section 1.26 also provides that there may be another technically feasible method of interconnection, but that such method must be incorporated into the ICA by amendment. Section 3.4.1 addresses generally such "other interconnection methods":

> The Parties may mutually agree to other methods of obtaining Interconnection that are technically feasible which are incorporated into the Interconnection Agreement **by amendment**.

It is unclear why Intrado would object to amending the ICA to memorialize such other interconnection method, since relevant terms and conditions would not otherwise be a part of the ICA. AT&T Florida's reference to incorporating another method of interconnection (i.e., *not* physical or virtual collocation or fiber meet point) into the ICA by amendment should be adopted.

ISSUE 13(b): SHOULD THE PARTIES COOPERATE TO ELIMINATE MISROUTED ACCESS TRAFFIC? (IC Section 16.2; ITR Section 12.2)

Q. WHAT IS THE DISPUTE REGARDING SWITCHED ACCESS TRAFFIC DELIVERED OVER LOCAL INTERCONNECTION TRUNKS?

A. The parties have agreed (*see* IC Section 16.1 quoted above for Issue 13(a)) that, with some exceptions, Switched Access Traffic will be delivered over Feature Group access trunks. To the extent Switched Access Traffic is improperly routed to local interconnection trunks,[45] the parties disagree as to the proper steps required to remedy the misrouting condition.

> If it is determined that such traffic has been delivered over Local Interconnection Trunk Groups ***inconsistent with Applicable Law***, the terminating Party may object to the delivery of such traffic by providing written notice to the delivering Party pursuant to the notice provisions set forth in the General Terms and Conditions and request removal of such traffic. The Parties will work cooperatively to identify the traffic with the goal of removing such traffic from the Local Interconnection Trunk Groups. **If the delivering Party has not removed or is unable to remove such Switched Access Traffic as described in Section 16.1(iv) above from the Local Interconnection Trunk Groups within sixty (60) days of receipt of notice from the other party, the Parties agree to jointly file a complaint or**

[45] Section 16.1(iv) of Appendix IC states: "Switched Access Traffic delivered to either Party from a third party competitive local exchange carrier over interconnection trunk groups carrying Section 251(b)(5) Traffic and ISP-Bound Traffic (hereinafter referred to as "Local Interconnection Trunk Groups") destined to the other Party." This is the exception referenced in AT&T Florida's proposed language in IC Section 16.2.

any other appropriate action with the applicable Commission to seek any necessary permission to remove the traffic from such interconnection trunks up to and including the right to block such traffic and to obtain compensation, if appropriate, from the third party competitive local exchange carrier delivering such traffic to the extent it is not blocked.[46]

The parties have agreed to work cooperatively to identify such traffic with the goal of removing it from the local interconnection trunks. However, Intrado's agreement to assist AT&T Florida in this endeavor rings hollow in light of Intrado's objection to language requiring it to cooperate in actually eliminating the misrouted traffic. The effective result, if Intrado's position is adopted, would be to enable traffic washing and related access avoidance schemes[47] – with AT&T Florida's hands tied in its ability to forestall any such fraudulent behavior by third parties. AT&T Florida's language provides the appropriate course of action for the parties to follow when Switched

[46] AT&T Florida has proposed that its language regarding misrouted Switched Access Traffic be included in both Appendix IC (Section 16.2) and Appendix ITR (Section 12.2). Intrado has not objected to this definition appearing twice; rather Intrado has proposed the same competing language in both instances.

[47] Carriers route traffic based upon the local exchange routing guide ("LERG"), which tells carriers the end office, and local and access tandems, to which they are to route traffic. Some carriers, however, ignore this industry standard method of routing and instead of routing the call to the carrier that owns the terminating NPA NXX (as the LERG requires), they route to the carrier that offers the cheapest rates. Some carriers take this a step further and disguise their traffic by modifying the calling party number ("CPN") to protect the carriers that are engaged in this traffic washing. The result is what the industry has come to refer to as "phantom traffic." In this manner, some carriers manipulate and route their traffic to make it appear local in order to avoid legitimate access charges. It is this type of scenario for which AT&T Florida would seek Intrado's assistance to identify and eliminate such traffic from the local interconnection trunks.

Access Traffic is improperly routed to local interconnection trunks. Accordingly, AT&T Florida's language should be adopted.

ISSUE 14(b): WHAT TERMS AND CONDITIONS SHOULD APPLY TO ALTERNATE TANDEM PROVIDER TRAFFIC? (IC Section 17.4)

Q. WHAT IS AT&T FLORIDA'S OBJECTION TO INTRADO'S PROPOSED REVISIONS TO IC SECTION 17.4?

A. IC Section 17 deals with Alternate Tandem Provider traffic. The parties agree to language in Section 17.1 that describes an Alternate Tandem Provider as a carrier that provides tandem switching services to Intrado and that is directly connected with Intrado to deliver third party originated traffic to AT&T Florida's network for completion.

IC Section 17.4 addresses the situation where Intrado is the third party originating carrier and states:

> When Alternate Tandem Provider sends Traffic originated by the End Users of CLEC functioning as the Third Party Originating Carrier to an End User of ***the other Party*** **AT&T-(STATE)** who is functioning as the Third Party Terminating Carrier, **CLEC** ***the originating Party*** is responsible for all Minutes of Use ("MOUs") billed by ***the other Party*** **AT&T-(STATE)** for the termination of such traffic.

Intrado's proposed revisions create an inconsistent result and make no sense, because agreed-upon language in this Section 17.4 states that

the Alternate Tandem Provider traffic at issue is originated by Intrado's end users. AT&T Florida's language is consistent with the requirement that Intrado, as the originating carrier, is responsible for compensating the terminating carrier to complete a call, and should therefore be adopted.

ISSUE 15: SHOULD THE ICA PERMIT THE RETROACTIVE APPLICATION OF CHARGES THAT ARE NOT PROHIBITED BY AN ORDER OR OTHER CHANGE-IN-LAW? (IC Section 4.2.1, 4.2.2, 15.1)

Q. WHAT IS THE PARTIES' DISPUTE REGARDING INTERVENING LAW SPECIFIC TO THE FCC'S ISP COMPENSATION ORDER?[48]

A. The parties disagree on terms and conditions for retroactive treatment following modification or nullification of the compensation plan ("ISP Compensation Plan") set forth in the FCC's ISP Compensation Order. There are three sections in Appendix IC related to this issue.

First, AT&T Florida proposes in IC Section 4.2.1 that retroactive treatment would apply to traffic exchanged as "local calls." This is the appropriate classification of traffic to which a retroactive adjustment would apply. Intrado objects to this language, preferring a vague

[48] Order on Remand and Report and Order, *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, Intercarrier Compensation for ISP-Bound Traffic, FCC 01-131, CC Docket Nos. 96-98, 99-68 (rel. April 27, 2001) ("ISP Compensation Order").

reference to intervening law. Intrado's added language "to which Intervening Law applies" is redundant and therefore unnecessary.

> Should a regulatory agency, court or legislature change or nullify the **AT&T-OHIO**'s designated date to begin billing under the FCC's ISP terminating compensation plan, then the Parties also agree that any necessary billing true ups, reimbursements, or other accounting adjustments shall be made symmetrically and to the same date that the FCC terminating compensation plan was deemed applicable to all traffic in that state exchanged under Section 251(b)(5) of the Act. By way of interpretation, and without limiting the application of the foregoing, the Parties intend for retroactive compensation adjustments, to the extent they are ordered by Intervening Law, to *apply uniformly to all traffic among* **AT&T-OHIO**, CLEC and Commercial Mobile Radio Service (CMRS) carriers in the state where traffic is exchanged ***to which Intervening Law applies*** **as local calls within the meaning of this Appendix**.

Second, regarding Section 4.2.2, AT&T Florida proposes (in this testimony) that Section 4.2.2 be deleted in its entirety, which would eliminate the language dispute in this ICA section. The parties did not negotiate any language in Appendix Intercarrier Compensation for Florida, but I believe the deletion of Section 4.2.2 should be acceptable to Intrado.

Third, IC Section 15.1 also addresses retroactive treatment in the event the ISP Compensation Plan is "modified, eliminated or replaced."

> True-up of any retroactive application, for either the amendment negotiation period and/or for the retroactive application period **provided in** ***permitted by*** the order, shall occur within one hundred and twenty (120) days of the effective date of the order, or be subject to dispute under Section 9 of the General Terms and Conditions of this Agreement.

AT&T Florida objects to Intrado's language in IC Section 15.1. A retroactive application of charges is appropriate only when an order specifically provides for such treatment. The term "permitted" is too broad, and could be interpreted to mean anything that is not forbidden by an order.

ISSUE 16: WHAT PROCESS SHOULD BE USED TO REBUT THE PRESUMPTION THAT CERTAIN TRAFFIC IS OR IS NOT ISP-BOUND TRAFFIC? (IC Section 5.4.1)

Q. WHAT IS THE LANGUAGE IN DISPUTE IN IC SECTION 5.4.1?

A. The parties' dispute is reflected by the following language excerpt from IC Section 5.4.1.

> Either Party has the right to rebut the 3:1 ISP-Bound Traffic presumption by identifying the actual ISP-Bound Traffic by any means mutually agreed by the Parties, or by any method approved by the ***FCC or*** Commission. If a Party seeking to rebut the presumption takes appropriate action at the ***FCC or*** Commission **pursuant to Section 252 of the Act** and the ***FCC or*** Commission agrees that such Party has rebutted the presumption, the methodology and/or means approved by the ***FCC or*** Commission for use in determining the ratio

> shall be utilized by the Parties as of the date of the ***FCC or*** Commission approval.

Q. WHAT IS AT&T FLORIDA'S OBJECTION TO INTRADO'S INCLUSION OF THE FCC AS BEING INVOLVED IN A PARTY'S ACTIONS TO REBUT THE 3:1 ISP-BOUND PRESUMPTION?

A. AT&T Florida objects to Intrado's language because the FCC specifically stated that state commissions are to be involved in a party's actions to rebut the 3:1 ISP-bound rebuttable presumption, not the FCC.

> A carrier may rebut the presumption, for example, by demonstrating to the appropriate state commission that traffic above the 3:1 ratio is in fact local traffic delivered to non-ISP customers. In that case, the state commission will order payment of the state-approved or state-arbitrated reciprocal compensation rates for that traffic. Conversely, if a carrier can demonstrate to the state commission that traffic it delivers to another carrier is ISP-bound traffic, even though it does not exceed the 3:1 ratio, the state commission will relieve the originating carrier of reciprocal compensation payments for that traffic, which is subject instead to the compensation regime set forth in this Order.[49]

Q. WHY DOES AT&T FLORIDA INCLUDE A REFERENCE TO SECTION 252 OF THE ACT IN THE CONTEXT OF REBUTTING THE 3:1 ISP-BOUND PRESUMPTION?

[49] ISP Compensation Order at ¶ 79.

A. Section 252 of the Act provides for the parties to voluntarily negotiate terms and conditions for conducting business. It also provides for state commission mediation and/or arbitration of issues for which the parties cannot reach agreement. Thus, it is appropriate for the ICA to reference Section 252 as the appropriate avenue for the parties to address the 3:1 rebuttable presumption for ISP-bound traffic with the Commission.

ISSUE 25(a): *SHOULD DISPUTED CHARGES BE SUBJECT TO LATE PAYMENT PENALTIES?* (GTC Sections 10.1.4, 10.5, 10.6.3)

Q. HAVE THE PARTIES AGREED IN PRINCIPLE TO THE APPLICATION (OR NOT) OF LATE PAYMENT CHARGES TO DISPUTED AMOUNTS?

A. Generally, yes. The parties have agreed to a "pay and dispute" bill payment methodology. Thus, Intrado must pay all bills on time or be subject to late payment charges. For amounts disputed in accordance with the ICA's terms, Intrado must still make payment to an interest-bearing escrow account on time to avoid late payment charges.

Q. SINCE THE PARTIES AGREE IN PRINCIPLE, WHAT IS THE DISPUTE?

A. In GTC Section 10.1.4, Intrado proposes to also excuse disputed amounts from any interest charges.

> Remittance in full of all bills rendered by CLEC is due within thirty (30) calendar days of each bill date (the "Bill Due Date"). To avoid late payment charges ***or interest,*** CLEC can either pay all billed charges to **AT&T-(STATE)** by the bill due date, or pay all undisputed billed charges to **AT&T-(STATE)** when due and pay any properly disputed and fact based claimed amounts into escrow by bill due date.

AT&T Florida agrees that Intrado can avoid late payment charges by paying disputed amounts into an interest-bearing escrow account. However, Intrado may still be subject to interest charges based on the resolution of the billing dispute. GTC Section 10.6.2.4 provides that "all interest earned on deposits to the escrow account will be disbursed to the Parties in the same proportion as the principal." Therefore, to the extent a dispute is resolved in AT&T Florida's favor, Intrado would be obligated to pay AT&T Florida the proportionate interest earned in the escrow account to which AT&T Florida is entitled. Intrado cannot avoid any and all interest charges by paying disputed amounts into an escrow account.

Q. WHAT IS THE INTEREST COST TO INTRADO ON FUNDS IT HAS HELD IN AN ESCROW ACCOUNT?

A. Nothing. The parties have agreed in GTC Section 10.6.2.1 that "[t]he escrow account must be an interest bearing account." The interest that is paid from the escrow account is therefore generated by the financial institution holding the account and does not come out of Intrado's pocket. Thus, paying interest imposes no added cost on Intrado – while

not paying such interest imposes a cost on AT&T Florida, because AT&T Florida would lose the time value of money that was rightfully owed by Intrado all along. It is for this reason that escrow and interest provisions are routinely placed in AT&T's ICAs.

Q. WHAT IS THE DISPUTE REGARDING GTC SECTIONS 10.5 AND 10.6.3?

A. GTC Sections 10.5 and 10.6.3, to which Intrado objects, both state:

> **Disputed Amounts in escrow will be subject to Late Payment Charges as set forth in Section 10.1.5.**[50]

Section 10.1.5 provides (agreed) terms and conditions for late payment charges when Intrado fails to pay its bill on time.

> If CLEC fails to remit payment for any charges by the Bill Due Date, or if payment for any portion of the charges is received from CLEC after the Bill Due Date, or if payment for any portion of the charges is received in funds which are not immediately available to **AT&T-(STATE)** as of the Bill Due Date (individually and collectively, "Past Due"), then a late payment charge will be assessed as provided below, as applicable.

Since Section 10.1.4 provides that payment of disputed amounts into escrow by the payment due date constitutes timely payment, the late payment charge terms and conditions set forth in Section 10.1.5 would not apply. To the extent Intrado pays into escrow past the bill due date,

[50] GTC Section 10.5 is a general statement regarding billing and payment, while Section 10.6.3 is specific to the escrow section of the ICA.

late payment charges are indeed appropriate up to the point payment is made. And it is this condition that is addressed by GTC Sections 10.5 and 10.6.3.

ISSUE 31: HOW SHOULD THE TERM "END USER" BE DEFINED IN THE ICA? (GTC Section 1.1.61)

Q. WHAT IS THE LANGUAGE IN DISPUTE REGARDING THE DEFINITION OF "END USERS"?

A. Section 1.1.61 of the General Terms and Conditions (GTCs) states:

> "**End Users**" means a third-party residence or business, ***including communications service providers and other governmental and non-governmental customers (e.g., E911 Customers),*** that subscribes to Telecommunications Services provided by any of the Parties at retail. As used herein, the term "End Users" does not include any of the Parties to this Agreement with respect to any item or service obtained under this Agreement.[51]

Q. WHAT IS AT&T FLORIDA'S OBJECTION TO INTRADO'S DEFINITION OF "END USERS"?

A. AT&T Florida objects to Intrado's expansion of the definition of "End Users" to include communications service providers[52] and other

[51] Intrado's proposed language to which AT&T Florida objects is in bold italics font. Agreed upon language is in normal font.

[52] "Communications service providers" may refer to telecommunications carriers or information/enhanced service providers. While information/enhanced service providers may, in certain limited circumstances, be treated as end users, they are not always end users; nor are telecommunications carriers treated as end users. For simplicity, I use the general term

customers, such as E911 Customers. It is unclear what Intrado intended with its inclusion of "other communications providers" in its definition, but it is inappropriate to define "End Users" to include other carriers obtaining Intrado's retail services. In the context of 911 service, a carrier may only be considered an end user in the limited circumstance when it purchases basic local exchange service for administrative use. AT&T Florida's legal argument for excluding other carriers and E911 Customers (including PSAPs) from the definition of "End User" will be addressed in its briefs.

In addition, the parties have already agreed to the definition of E911 Customers in Section 2.8 of Appendix 911:

> **"E911 Customer"** means a municipality or other state or local government unit, or an authorized agent of one or more municipalities or other state or local government units to whom authority has been lawfully delegated to respond to public emergency telephone calls, at a minimum, for emergency police and fire services through the use of one telephone number, 911.

A municipality (*e.g.,* a county) may certainly be a customer, but it makes no sense to define an entire county as a single end user. The terms customer and end user are not interchangeable.

---

carrier to refer to communications service providers – whether information/enhanced service providers or telecommunications carriers..

Q. YOU MENTIONED THAT IT IS INAPPROPRIATE TO CLASSIFY OTHER CARRIERS AS "END USERS." PLEASE EXPLAIN FURTHER.

A. The word "end" means last, whether in distance, time or sequence. In this instance, the "end user" is not necessarily Intrado's customer, because that customer may not be the last in the call sequence. For example, Section 5.1 of Intrado's tariff indicates that its IEN service may be offered to other carriers:

> Intelligent Emergency Network™ Services may have further customers for the purpose of interconnection who are a Local Exchange Carrier (LEC), Wireless Services Provider (WSP), a Telematics-type service provider, VoIP Service Provider (VSP) or any other originating communications provider (voice and/or data) requiring aggregation and termination of calls and/or data information to the 9-1-1 network for the purpose of obtaining or delivering emergency services.

Clearly, another local exchange carrier or wireless carrier is not an "end user" simply because it is Intrado's customer. Yet Intrado's definition would include as "End Users" other carriers purchasing a CLEC's retail service and then offering it to other carriers (*i.e.*, actually serving as a wholesale provider).

When Intrado's definition is applied to non-911 traffic, it could subject AT&T Florida to traffic washing and related access avoidance schemes because the carrier delivering traffic to Intrado would (by Intrado's

definition) be the originating end user. Such an application of the term end user could effectively manipulate the jurisdiction of a call such that it would appear to be a local call even though it was actually a toll call. Wholesale providers are not end users – they are carriers. Moreover, there are numerous occurrences in the interconnection agreement for which Intrado's definition of the term End User could make those provisions incorrect and/or unworkable.

Q. PLEASE PROVIDE AN EXAMPLE OF HOW INTRADO'S DEFINITION OF "END USERS" TO INCLUDE CARRIERS AND E911 CUSTOMERS WOULD MAKE OTHER PROVISIONS OF THE ICA MEANINGLESS.

A. The term "End User" is utilized in numerous provisions of Appendix IC – none of which would make any sense if End User was defined to include carriers, as Intrado proposes. In plain terms, reciprocal compensation provides that the originating carrier (providing local service to the calling party) compensates the terminating carrier (providing local service to the called party) for transport and termination of a local telephone call. On both ends of this local call, you have an individual (in the case of a voice call), *i.e.,* an end user – <u>not</u> a carrier. One specific example of this (and there are many) is found IC Section 3.7, to which the parties have agreed:

> For Section 251(b)(5) Traffic, ISP-Bound Traffic, Optional EAS Traffic, and IntraLATA Toll Traffic, the Party whose End User originates such traffic shall compensate the Party who terminates such traffic to its End User for the transport and

> termination of such traffic at the applicable rate(s) provided in this Appendix and Appendix Pricing and/or the applicable switched access tariffs.

This language makes clear that the End User is an individual, not a carrier and not an E911 Customer – carriers and E911 Customers do not place and receive local telephone calls. As I stated, the term "End User" is used throughout Appendix IC, and in none of those cases would it be appropriate for End User to mean carrier or E911 Customer. The same is true for Appendix Resale as well as various other appendices to the 13-state ICA.

Q. YOU HAVE PROVIDED AN EXAMPLE FROM THE 13-STATE TEMPLATE WHERE INTRADO'S DEFINITION OF "END USERS" IS UNWORKABLE. PLEASE PROVIDE AN EXAMPLE IN THE CONTEXT OF 911 SERVICE.

A. There are several examples of the problem created by including "E911 Customers" in the definition of "End Users," specifically in Appendix 911. For instance, Section 3.4 provides database terms and conditions when AT&T Florida is the 911 service provider. Subsection 3.4.1 (which is agreed language) states:

> Where **AT&T-(STATE)** is designated by the E911 Customer to manage the E911 Database **AT&T-(STATE)** shall provide CLEC access to the **AT&T-(STATE)** E911 Database to store CLEC's End User 911 Records (e.g., the name, address, and associated telephone number(s) for each of CLEC's End Users). CLEC or its representative(s) is responsible for electronically providing End User 911 Records and updating this information.

When you substitute the term "E911 Customer" everywhere the term "End User" appears, the provision becomes nonsensical. Here, as elsewhere, the term "End Users" is intended to mean individuals with telephone service that permits them to dial 911 and for which database records are essential. The E911 Customer is not able to dial 911 and does not have "End User 911 Records" – unless it obtains a separate and distinct basic local exchange service line, in which case the individual is no longer (by definition) considered the "E911 Customer." Intrado's inappropriate expansion of the definition of the term "End Users" to include E911 Customers (a term already defined) and other "communications service providers" should be rejected.

Q. HOW DOES THE NATIONAL EMERGENCY NUMBER ASSOCIATION ("NENA") DEFINE END USER?

A. NENA defines end user as "the 9-1-1 caller."[53] NENA definitions are intended for specific application to emergency services. To the extent Intrado is offering emergency services – and not basic local exchange services – the NENA definition is appropriate.

Q. IF THE NENA DEFINITION OF END USER IS APPROPRIATE, WHY DOES AT&T FLORIDA PROPOSE A DIFFERENT DEFINITION?

[53] NENA-00-001, NENA Master Glossary of 9-1-1 Terminology, Updated Version 10, June 5, 2007 ("NENA Glossary") at page 31 of 91.

A. In the limited context of 911 service, AT&T Florida agrees with NENA that the End User is the 911 caller – and only the 911 caller. However, AT&T Florida's generic definition for the term "End Users" was intended for CLECs offering *basic local exchange services*, not merely 911 service. There are numerous provisions throughout the standard ICA that are appropriately applicable to a CLEC's and AT&T Florida's respective end users that are unrelated to 911 service – in fact, 911 service is a very small part of a CLEC's ICA. Therefore, AT&T Florida proposes a definition of End User that satisfies the need for a broader application of the term than the NENA definition affords.

ISSUE 32: SHOULD THE TERM "OFFERS SERVICE" BE DEFINED IN THE ICA? IF SO, WHAT IS THE APPROPRIATE DEFINITION? (ITR Section 2.12)

Q. SHOULD THE TERM "OFFERS SERVICE" BE DEFINED IN THE ICA?

A. In the context of the 13-state template Intrado submitted for arbitration in Florida, AT&T Florida agrees to include a definition for "Offers Service" and agrees to make the definition reciprocal, *i.e.,* either party can "Offer Service." However, Intrado's addition of E911 routing services to the definition of "Offers Service" should be rejected.

Q. WHY SHOULD INTRADO'S INCLUSION OF E911 ROUTING SERVICES IN THE DEFINITION OF "OFFERS SERVICE" BE REJECTED?

A. It is first necessary to look at the disputed language itself, and then consider it in the context of the ICA. The language in dispute in Appendix ITR Section 2.12 is as follows:

> "Offers Service" is defined as when either Party opens an NPA-NXX, ports a number to serve an End User, ***routes E911 Service calls from communication service provider End Users, provides service to E911 Customers***, or pools a block of numbers to serve End Users.

This term is defined in Appendix ITR and its use is limited to that appendix.[54] By agreement of the parties, Appendix ITR does not include provisions for E911 traffic. Within ITR, "Offers Service" is utilized in Sections 4.2 and 5.1 (as applied in 5.3). Sections 4.2 and 5.3 are limited to local interconnection trunk groups and clearly not applicable to E911 traffic.[55] Since the term "Offers Service" is not utilized in either Appendix 911 or Appendix 911 NIM or in any context relevant to E911 service, there is no reason for its definition to include any language related to E911 calls or E911 Customers.

[54] The parties dispute the definition of the term End Users, which is reflected as Issue 31; however, that dispute is not relevant in the context of my testimony on this issue. The parties agree that the term E911 Customers refers to emergency responders, not to 911 callers.

[55] Local interconnection trunk groups are used for the exchange of traffic between the parties' local exchange service customers, and such traffic is subject to intercarrier compensation. These trunk groups do not carry 911 traffic.

ISSUE 34(a): HOW SHOULD A "NON-STANDARD" COLLOCATION REQUEST BE DEFINED? (PC Section 2.22)

ISSUE 34(b): SHOULD NON-STANDARD COLLOCATION REQUESTS BE PRICED BASED ON AN INDIVIDUAL CASE BASIS? (PC Section 2.22)

Q. WHAT CONSTITUTES A "NON-STANDARD" COLLOCATION REQUEST?

A. There is no language in dispute regarding the definition of a non-standard" collocation request. However, the determination of what constitutes a non-standard collocation request is important to the context of the parties' pricing dispute in Issue 34(b).

The parties have agreed in PC Section 2.22 that a non-standard collocation request is any collocation request that is beyond the terms, conditions, and rates set forth in Appendix Physical Collocation.

The parties have also agreed to the definition of "Custom Work Charge":

> Denotes the charge(s) developed solely to meet the construction requirements of the Collocator, (e.g., brighter lighting above the Collocator's cage, circular cage, different style tile within the cage).

Because custom work such as that described above is provided for by Appendix Physical Collocation, it would be considered a "standard" (rather than a "non-standard") collocation request.

Q. WHAT IS AT&T FLORIDA'S OBJECTION TO INTRADO'S PROPOSED LANGUAGE REGARDING "SIMILAR" COLLOCATION ARRANGEMENTS?

A. Intrado proposes additional language, to which AT&T Florida objects, as set forth in bold italics below:

> **Non-Standard Collocation Request (NSCR)** – **AT&T-]STATE]** may seek to impose non-standard charges for requirements based on requests from a Collocator that are beyond the terms, conditions, and rates established in this Appendix; ***provided, however, that NSCR charges shall not apply to CLEC requests for collocation or interconnection[56] for which AT&T-(STATE) has existing similar arrangements with other communications service providers. The charges for such similar existing arrangements requested by CLEC shall be in parity with AT&T-(STATE) charges for existing similar arrangements.*** (*Footnote added.*)

Intrado should be required to pay for non-standard collocation arrangements (*i.e.*, beyond the terms and conditions set forth in the ICA) based on Intrado's specific collocation arrangement. The term "similar" is sufficiently vague in the context of physical collocation

[56] It is unclear why Intrado also included requests for interconnection in its proposed language in Section 2.22 of the physical collocation appendix. Only physical collocation may be requested pursuant to Appendix Physical Collocation. Interconnection must be requested pursuant to the 911, 911NIM, NIM, and/or ITR appendices or via AT&T Florida's tariffs.

requests as to be fraught with potential for dispute. While another carrier might have what Intrado would characterize as an arrangement "similar" to what Intrado requests, such arrangement may actually be quite different and may impose on AT&T Florida different provisioning costs. Furthermore, another carrier's collocation arrangement may have been engineered and provisioned several years prior to Intrado's request, making any associated pricing obsolete and inappropriate for application to Intrado. If Intrado objects to AT&T Florida's NSCR charges because it believes them to be discriminatory, it may invoke dispute resolution pursuant to the ICA. Individual case basis ("ICB") pricing is appropriate for any non-standard collocation arrangement; therefore, Intrado's proposed language should be rejected.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

AT&T FLORIDA

REBUTTAL TESTIMONY OF PATRICIA H. PELLERIN

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 070736-TP

MAY 28, 2008

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING.

A. Yes. I filed direct testimony on April 21, 2008.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony updates the status of the issues in dispute and responds to portions of the direct testimony filed by Carley Spence-Lenss ("Spence-Lenss Direct"), Cynthia Clugy ("Clugy Direct"), and Thomas Hicks ("Hicks Direct") on behalf of Intrado Communications Inc. ("Intrado"). Specifically, I address Issues 1, 2, 3(a), and 13(a).

Q. DO YOU HAVE ANY CORRECTIONS TO YOUR DIRECT TESTIMONY FOR ISSUES YOU DO NOT ADDRESS ON REBUTTAL?

A. Yes. In footnote 39 on page 49 of my direct testimony, I cited to AT&T Florida's access tariff at Section E6.7.4.6. The correct reference is Section E7.4.6.

Q. DO YOU HAVE ANY REVISIONS TO THE EXHIBITS PROVIDED WITH YOUR DIRECT TESTIMONY?

A. Yes. I have revised two of my exhibits to reflect the current status of the issues to be arbitrated as a result of the parties' ongoing negotiations. These revisions are reflected in the attached Revised Exhibit PHP-2 and Revised Exhibit PHP-3.

Q. PLEASE PROVIDE A STATUS REGARDING THE ISSUES IN DISPUTE.

A. Intrado identified 36 issues in its arbitration Petition (numbered I through IX.E), and AT&T Florida included one additional issue in its Response (numbered 1-37). Based on input from the parties, the Commission issued its procedural order on March 21, 2008 and included a revised list of 36 issues (57 total when including subparts, five of which are encompassed by Issues 1 and 2). Of the remaining 52 issues, the parties have resolved the following ~~17~~ 19 issues: 7(b), 8(b), 11, 12, 14(a-b), 16, 17(a-b), 19, 21, 26, 27(a-b), 28, 30(a-b) and 31, and 32. One issue reflected in my direct testimony as resolved is now open again. At the time AT&T Florida's direct testimony was filed, Issue 8(a) was resolved and Issue 8(b) was open. As a result of further negotiations between the parties, the opposite is now true – Issue 8(a) is open and Issue 8(b) is resolved. Mr. Neinast discusses Issue 8(a) in his rebuttal testimony.

In addition, there are ~~ten~~ 11 issues that AT&T resolved in negotiations with Intrado for an Ohio ICA (13-state template) and for which the parties agree there is no content dispute.[1] In my direct testimony, I therefore

[1] This includes Issues 18(a, b), 20, 22, 23, 25(~~b-d~~ a-d), 33 and 35.

reflected these issues as resolved; however, Intrado seeks to retain them as issues for arbitration. I will address these issues in the context of Issue 2 below.

An additional ~~six~~ four issues will not need to be addressed if the Commission determines in Issue 2 that AT&T's 9-state template is the proper basis for negotiating a Florida ICA.[2] *See* page 1 of Revised Exhibit PHP-3.

ISSUE 1(a): WHAT SERVICE(S) DOES INTRADO CURRENTLY PROVIDE OR INTEND TO PROVIDE IN FLORIDA?

ISSUE 1(b): OF THE SERVICES IDENTIFIED IN ISSUE 1(a), FOR WHICH, IF ANY, IS AT&T REQUIRED TO OFFER INTERCONNECTION UNDER SECTION 251(c) OF THE TELECOMMUNICATIONS ACT OF 1996?

Q. WHAT DO INTRADO'S WITNESSES SAY ABOUT THE SERVICE(S) INTRADO CURRENTLY PROVIDES OR INTENDS TO PROVIDE IN FLORIDA?

A. Intrado's witnesses state that Intrado intends to provide emergency services to PSAPs and other carriers.[3] While seeking to include in the

[2] With a decision in Issue 2 to utilize the 9-state template, Issues 13(b), 15, ~~25(a), 29~~, and 34(a, b) will not need to be addressed because Intrado's disputes are not present in the 9-state language (and AT&T Florida will not introduce them). In addition, certain language disputes in Issues ~~3(b~~), 4(b), 4(c), 7(a-~~c~~), 9, 13(a), and 29(a) also do not exist in the 9-state template, further limiting the scope of issues the Commission must address. *See* page 2 of Revised Exhibit PHP-3.

[3] Spence-Lenns Direct at 12, Hicks Direct at 4-5.

ICA terms and conditions for basic local exchange service (and raising numerous arbitration issues related to that language), Intrado does not intend to provide basic local exchange services. Moreover, Ms. Spence-Lenss is the only Intrado witness to even mention non-911 services in the context of discussing what services Intrado intends to offer – and she simply indicates in passing that Intrado may offer other services sometime "in the future."[4] In addition, Intrado's tariff is limited to emergency services and does not include either local exchange service or exchange access. There is no indication that Intrado will ever offer basic local exchange services to end users.

Q. MS. SPENCE-LENSS STATES THAT INTRADO INTENDS TO OFFER "TELEPHONE EXCHANGE SERVICE" TO PSAPS, SIMILAR TO WHAT AT&T FLORIDA OFFERS (SPENCE-LENSS DIRECT AT 12). DO YOU AGREE?

A. No.[5] Ms. Spence-Lenss improperly equates AT&T Florida's "telephone exchange communication service" with "Telephone Exchange Service," as defined by the Act. AT&T Florida offers a communication service within a telephone exchange. The FCC uses the term "communication service," however that term is not limited to the context of Section 251 of the Act, but also applies, for example, to Section 202 regarding

[4] Spence-Lenss Direct at 12.

[5] AT&T Florida does (separately) offer Telephone Exchange Service to PSAPs, but only for administrative purposes – not as part of 911 service. Any CLEC may also provide administrative lines to PSAPs, independent of 911 service.

interexchange service.[6] Moreover, AT&T Florida does not classify its E911 service as "Business Exchange Service," which only applies to *basic* 911 service, as Ms. Spence-Lenss acknowledges.[7] Mr. Hicks describes Intrado's IEN service offering as "next generation 911 network" (Hicks Direct at 4), so it is obvious that Intrado does not intend to offer emergency services comparable to AT&T Florida's *basic* 911 service, which is the predecessor to AT&T Florida's E911 (*i.e.*, enhanced) service. Furthermore, it is obvious that Intrado intends to provide 911 services differently than AT&T Florida does. Thus, even if AT&T Florida's E911 services were deemed to be local exchange services, which AT&T Florida does not concede, it does not automatically follow that Intrado's 911 services would be properly classified as local exchange services as well.

Access to 911 is included as part of local exchange service provided to end users, and an end user dialing 911 uses his/her local exchange service for such access – but the routing and delivery of the 911 call is based on municipal boundaries, not exchange boundaries. Once a 911 call connects to the 911 selective router, the call proceeds on the dedicated 911 network – separate and distinct from the Public Switched Telephone Network ("PSTN").

[7] Spence-Lenss Direct at 14.

ISSUE 1(c): OF THE SERVICES IDENTIFIED IN ISSUE 1(a), FOR WHICH, IF ANY, SHOULD RATES APPEAR IN THE ICA?

ISSUE 1(d): FOR THOSE SERVICES IDENTIFIED IN ISSUE 1(c), WHAT ARE THE APPROPRIATE RATES?

Q DO YOU HAVE ANY CORRECTIONS TO YOUR DIRECT TESTIMONY WITH RESPECT TO PRICING?

A. Yes. In my direct testimony, I stated that AT&T Florida does not intend to charge for interconnection trunks. That is incorrect. AT&T Florida has proposed its generic nonrecurring charges for interconnection trunks as set forth in its 9-state pricing attachment to ICA Attachment 3.[8] These are the same charges that would apply when Intrado obtains 911 trunks from AT&T Florida. AT&T Florida's price list also includes nonrecurring charges and monthly recurring rates for local interconnection transport that could apply, depending on Intrado's interconnection arrangement to AT&T Florida.

Q. HAS AT&T FLORIDA PROPOSED RATES SPECIFIC TO THE 911 DATABASE?

A. No. AT&T's 9-state template does not include prices relative to the 911 database, which is referred to in ICA Attachment 2 as the Automatic

[8] AT&T's 9-state ICA was provided with its response to Intrado's arbitration petition. This is another example of a situation where AT&T's 13-state standard terms and conditions are inappropriate for a 9-state agreement ~~since AT&T does not charge for interconnection trunks in the 13-state region.~~

Location Identification / Database Management System ("ALI/DMS") database.

Q. MS. SPENCE-LENSS STATES THAT INTRADO PROPOSED RATES FOR ITS INTERCONNECTION WITH AT&T FLORIDA (SPENCE-LENSS DIRECT AT 16). DO YOU AGREE?

A. No. Intrado did not propose any 911 charges for application in Florida. However, on April 2, 2008 Intrado provided AT&T with a pricing exhibit in the context of negotiations for an ICA in Ohio, which I have attached as Exhibit PHP-4.

Q. WHAT COMMENTS DO YOU HAVE REGARDING THAT EXHIBIT?

A. The header of Intrado's pricing exhibit is labeled "INTELLIGENT EMERGENCY NETWORK SERVICE® E9-1-1 STANDALONE AGREEMENT." This label indicates to me that Intrado is proposing to charge AT&T Florida for what appear to be port charges as though the parties had a commercial agreement whereby AT&T Florida was purchasing Intrado's IEN service. If Intrado wants to negotiate for a commercial agreement for the parties' 911 interconnection arrangements, AT&T Florida certainly is willing to do so. But Intrado should not be imposing its commercial rates (which it implies are retail rates[9]) on AT&T Florida in a Section 251 ICA.

[9] Clugy Direct at 21.

Q. MS. SPENCE-LENSS ALSO STATES THAT INTRADO'S PORT CHARGES ARE "SIMILAR TO THE ENTRANCE FACILITY AND PORT CHARGES IMPOSED BY AT&T ON COMPETITORS FOR INTERCONNECTION TO AT&T'S NETWORK" (SPENCE-LENSS DIRECT AT 16). HOW DO YOU RESPOND?

A. Intrado has not explained how its charges would be assessed, so I am unable to respond to Ms. Spence-Lenss' claim that the rates are comparable. Mr. Hicks states that pricing terms and conditions should be reciprocal,[10] but he makes no such assertion about the rates themselves.

Furthermore, Intrado should not be charging AT&T Florida for entrance facilities (or at rates commensurate with entrance facilities), because AT&T Florida will utilize its own facilities (not Intrado's) to interconnect with Intrado.

Q. DOES INTRADO PROPOSE TO CHARGE AT&T FLORIDA FOR SERVICES OTHER THAN THE PORT CHARGES DISCUSSED ABOVE?

A. While Intrado has not provided AT&T Florida with any rates it intends to impose beyond what is reflected in its pricing exhibit, Intrado proposed language in Appendix 911 Section 6.1.1.2 that, to the extent AT&T Florida does not segregate 911 traffic to route directly from the end

[10] Hicks Direct at 14.

office to Intrado's Selective Router, AT&T Florida will bear any and all costs Intrado might incur as a result. This Intrado language is another demonstration of its objective to improperly shift its costs to AT&T Florida and/or impose additional costs on AT&T Florida. Mr. Neinast responds to the technical aspects of Intrado's testimony in his rebuttal testimony for Issue 3(a).

ISSUE 2: IS AT&T'S 9-STATE TEMPLATE INTERCONNECTON AGREEMENT THE APPROPRIATE STARTING POINT FOR NEGOTIATIONS? IF NOT, WHAT IS?

Q. MS. SPENCE-LENSS STATES THAT INTRADO SEEKS "CONSISTENT INTERCONNECTION TERMS ACROSS AT&T'S 22-STATE OPERATING TERRITORY."[11] DOES THE 13-STATE TEMPLATE PROVIDE THAT CONSISTENCY?

A. No. There are numerous provisions (not yet specifically identified) that would be different for the 9-state region than what is set forth in the 13-state template. Importantly, the majority of AT&T's generic terms and conditions (whether 9-state or 13-state) are unrelated to emergency services – and will therefore not even be applicable to Intrado.

Q. HAS AT&T FLORIDA OFFERED INTRADO CONSISTENT TERMS AND CONDITIONS FOR 911 SERVICES?

[11] Spence-Lenss Direct at 3.

A. Yes. AT&T Florida recognizes that Intrado's business plan is limited to the provision of emergency services. Accordingly, AT&T Florida offered (and Intrado agreed) to use two discrete appendices (Appendix 911 and Appendix 911 NIM) to memorialize the terms and conditions for 911 service across AT&T's operating territory.[12] The parties have agreed to delete any 911-related terms and conditions from the standard interconnection attachments.

Q. MS. SPENCE-LENSS CRITICIZES AT&T FLORIDA FOR NOT INFORMING INTRADO OF THE MODIFICATIONS NEEDED TO THE 13-STATE TEMPLATE TO ACCOMMODATE THE SPECIFIC REQUIREMENTS IN FLORIDA (SPENCE-LENSS AT 17). PLEASE EXPLAIN.

A. AT&T's obligation to offer a 13-state agreement in Florida is limited to an ICA porting request made pursuant to Merger Commitment 7.1. It is therefore only appropriate for AT&T to undertake the significant effort required to modify a 13-state ICA for a CLEC that actually asks AT&T to port an entire *effective* ICA to Florida. Intrado did not make a porting request – it requested negotiation of a new ICA.

Q. AT&T HAS ACCOMMODATED OTHER CLECS' PORTING REQUESTS FROM A 13-STATE ICA TO A FORMER BELLSOUTH

[12] The parties have negotiated slightly different terms and conditions for 911 services in Ohio to accommodate the Ohio commission's decision to deny Intrado's application for certification as a CLEC and to instead certify Intrado as a Competitive Emergency Services Telecommunications Carrier. To the extent the negotiated Ohio 911 provisions can properly be applied in other states, the parties have agreed to do so.

STATE. CAN'T AT&T SIMPLY APPLY THE SAME CHANGES FOR INTRADO, AS MS. SPENCE-LENSS SUGGESTS (SPENCE-LENSS DIRECT AT 17)?

A. No. Intrado's request to negotiate a Florida ICA based on the 13-state template is quite different than a porting request. For example, AT&T ported an ICA from Wisconsin to Florida for First Communications, LLC. However, the Wisconsin ICA that formed the basis for the ported agreement is not the same as the 13-state template Intrado marked up (by simply changing "13-state" to "22-state") and filed with its arbitration petition. Thus, changes AT&T made to accommodate First Communications' porting request cannot simply be applied to Intrado's negotiations request. If Intrado likes First Communications' Florida ICA, it can adopt (*i.e.*, MFN into) that ICA.

Q. AT A HIGH LEVEL, WHAT IS REQUIRED FOR AT&T TO MODIFY AN EXISTING ICA IN RESPONSE TO A PORTING REQUEST PURSUANT TO MERGER COMMITMENT 7.1, SUCH AS WHAT WAS DONE FOR FIRST COMMUNICATIONS?

A. AT&T's porting team must review the entire requested ICA, provision by provision, in order to ensure that every provision that must be modified in order for the agreement, as ported, to comply with Merger Commitment 7.1 is appropriately modified. When they perform this review, the members of the porting team consult, as necessary and appropriate, with product managers, attorneys with knowledge of the laws and regulatory requirements of the port-to state, and others.

As the "subject to" language of the merger commitment provides, the port of an ICA is subject to state-specific pricing and performance plans, and must be technically feasible to implement in the port-to state. Further, the merger commitment does not obligate AT&T to provide any interconnection arrangement or unbundled network element unless it is feasible to provide, given the technical, network, and OSS attributes and limitations in the port-to state and is consistent with the laws and regulatory requirements of the port-to state. In addition, certain administrative changes, such as the operating entity name, are essential for the agreement to be legally binding and operational in the port-to state. The necessary changes to the requested ICA are shown in "redline" form, so that the CLP may easily see the edits to the agreement.

Each porting request is unique as it involves adapting a specific ICA from State A for State B, and with hundreds of effective ICAs in the 22-state region, the permutations are voluminous. But with each porting request, AT&T seeks to provide a complete contract that 1) comports with Merger Commitment 7.1; and 2) results in a workable agreement, by which I mean one that both parties will be able to implement, without breaches, in the port-to state immediately upon the agreement becoming effective.

Q. WHAT ARE SOME OF THE COMMON ITEMS THAT WOULD BE REDLINED TO EFFECTUATE A LEGITIMATE PORTING REQUEST?

A. Some of the common items that would be redlined include the following

- Each product and service in the ported ICA must have corresponding language that conforms with the OSS attributes and limitations in the port-to state. OSS includes all things related to pre-order, ordering, provisioning, maintenance and billing for the products and services in the agreement. AT&T's goal is for the parties to successfully function under the terms of the agreement in the port-to state. Thus AT&T identifies any gaps or hindrances in the contract language that relate to OSS, and provides alternative language that will ensure that the agreement is operational in the port-to state.

    - OSS systems/processes are compatible only within the legacy BellSouth 9-state region, or within the legacy SBC 13-state region. Therefore, if the request is to port an ICA from one region to the other, much OSS language in the ported agreement must be replaced with the OSS language for the port-to region.

    - Additionally, if the port-to state cannot accommodate the same mechanized billing as the port-from state for a given product or service, AT&T will conform the agreement such that the products and services are compatible with the mechanized billing processes in the port-to state.

- Performance Measures ("PMs") and the accompanying business rules are generally state-specific. Accordingly, the PM and business rule language in the ported ICA is typically replaced with the PM and business rule language of the port-to state.

- Terms and conditions that conflict with the law or regulatory requirements of the port-to state, as reflected, for example, in the state commission's rulings, must be replaced with language consistent with the applicable ruling or requirement. For example, many state commissions issued rulings interpreting and implementing the FCC's Triennial Review Order ("TRO") and Triennial Review Remand Order ("TRRO"), and those rulings were not necessarily identical from state to state. Language reflecting the port-from state's TRO/TRRO rulings must typically be replaced with language that is consistent with the rulings of the port-to state.

- Rates and pricing are state specific; therefore, pricing from the port-from state must be replaced with pricing from the port-to state.

- Network attributes and limitations, such as switch translations, differ from state to state and must be reflected in the agreement.

Q YOU MENTIONED ABOVE THAT THERE ARE TEN ISSUES FOR WHICH THE PARTIES HAVE NO CONTENT DISPUTE, BUT WHICH

INTRADO INSISTS BE RETAINED AS ISSUES FOR ARBITRATION. HOW DO YOU RESPOND?

A. It is important to keep in mind that these issues all relate to language from AT&T's 13-state template. The language disputes for Issues 18(a-b), 20, 22, 23, 25(b-d), 33 and 35 were resolved between the parties in the context of negotiations for an ICA in Ohio. These issues simply do not exist if the 9-state template is used.

I find Intrado's direct testimony on the specific issues curious. For each issue, Intrado's witnesses explain Intrado's support for its proposed language[13] – but as I stated, the parties have reached resolution on the content in the 13-state context. There is no content dispute for the Commission to decide in Florida, so it makes no sense to offer such testimony. Intrado's witnesses go on to state that because each of these issues was resolved for Ohio's ICA based on the 13-state template, Intrado should have the same language in Florida. That is exactly the issue presented by the parties for Issue 2 – there is no need to retain ten additional issues and argue language content when there is no dispute.

In the event the Commission concludes that the 9-state template is the proper foundation for the parties' ICA in Florida, it would be inappropriate to import the 13-state language from these ten issues into

[13] *See*, for example, Clugy Direct at pages 14-15 for Issue 20.

a 9-state agreement – just as it would be improper to require other 13-state language be included in an ICA that is based on the 9-state template.

Q. REGARDING ISSUE 18(a), MS. CLUGY TESTIFIES THAT THREE-YEARS IS A REASONABLE TERM FOR THE ICA (CLUGY DIRECT AT 13). DOES AT&T FLORIDA AGREE?

A. Yes. Ms. Clugy implies that AT&T Florida was seeking a shorter term, but just the opposite is true. AT&T's 9-state template reflects an ICA term of *five* years. In negotiations, AT&T Florida agreed to a three-year term for Intrado's Florida ICA and offered to modify the 9-state GTCs to so indicate. Intrado would not accept AT&T Florida's offer, however, insisting that *all* the 13-state terms and conditions be imported to Florida, not just the three-year term provision.

ISSUE 3(a): WHAT TRUNKING AND TRAFFIC ROUTING ARRANGEMENTS SHOULD BE USED FOR THE EXCHANGE OF TRAFFIC WHEN INTRADO COMM IS THE DESIGNATED 911/E911 SERVICE PROVIDER? (911 Section 5.1)

Q. WHAT IS THE PARTIES' DISPUTE AS REFLECTED BY APPENDIX 911 SECTION 5.1?

A. The parties disagree about whether to use the term "customers" or "End Users" regarding the parity provision of 911 services in the ICA. Disputed language in 911 Section 5.1 is as follows:

> CLEC shall provide and maintain such equipment at the CLEC E911 Selective Router and the DBMS as is necessary to provide to **AT&T-(STATE)** E911 Emergency Services at parity with that of CLEC's **customers *End Users***.

Intrado may provide wholesale and/or retail service to other carriers, but carriers are not End Users and End Users are not carriers.[14] Including "customers" in 911 Section 5.1 provides AT&T Florida assurance that Intrado will not provide preferential treatment to its carrier customers. Likewise, 911 traffic exchanged between the parties may include traffic from Intrado's carrier customers. The use of the term End Users is too narrow and does not adequately reflect Intrado's customers. AT&T Florida's use of the more general term "customer" is appropriate and should be adopted because there is an important distinction in the ICA between customers and End Users.

ISSUE 13(a): WHAT SUBSET OF TRAFFIC, IF ANY, SHOULD BE ELIGIBLE FOR INTERCARRIER COMPENSATION WHEN EXCHANGED BETWEEN THE PARTIES? (GTC Sections 1.1.84, 1.1.122; IC Sections 1.2, 3.5, 4.1, 5.1, 16.1; ITR Sections 2.14, 12.1)

Q. IS AT&T FLORIDA'S DEFINITION OF SECTION 251(b)(5) CONSISTENT WITH THE LAW?

[14] In the context of the 13-state language, Intrado agreed to AT&T Florida's definition for "End Users" – withdrawing its language that would have classified PSAPs and other carriers as End Users.

A. While I am not an attorney, it is my understanding that AT&T Florida's definition is consistent with the law. AT&T Florida's language properly recognizes that the physical location of the originating and terminating end users is determinative as to whether a call is subject to Section 251(b)(5), consistent with the FCC's *ISP Remand Order*.[15] Ms. Clugy is incorrect in stating that AT&T Florida's definition is inconsistent with the law simply because the FCC abandoned its use of the term "local" in identifying traffic subject to Section 251(b)(5).[16] While the FCC dispensed with using "local" as the term for traffic subject to reciprocal compensation under Section 251(b)(5), the FCC reaffirmed that Section 251(b)(5) reciprocal compensation only applies to traffic that originates and terminates in the same local exchange. FCC Rule 701(b) states that Section 251(b)(5) reciprocal compensation is inapplicable to "traffic that is interstate or intrastate exchange access, information access, or exchange services for such access."[17]

Q. MS. CLUGY SUGGESTS THAT AT&T FLORIDA'S LANGUAGE REGARDING RECIPROCAL COMPENSATION IMPROPERLY REFERENCES "WIRELINE" OR "DIAL TONE" SERVICE (CLUGY AT

---

[15] *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Intercarrier Compensation for ISP-bound Traffic*, CC Docket Nos. 96-98 & 99-68, *Order on Remand and Report and Order*, 16 F.C.C. Rcd. 9151, FCC 01-131 (rel. April 27, 2001) ("*ISP Remand Order*"), *remanded but not vacated, WorldCom, Inc. v. FCC*, No. 01-1218 (D.C. Cir. 2002).

[16] Clugy Direct at 9-10.

[17] 47 C.F.R. § 51.701(b)(1).

10). WHY DOES AT&T FLORIDA PROPOSE TO CHARACTERIZE THE PARTIES' NON-911 TRAFFIC IN THIS MANNER?

A. As I discuss in my direct testimony (p. 43-44), AT&T Florida's language in IC Section 1.2 clarifies that Appendix IC applies to Intrado's "wireline local telephone exchange (dialtone) service." This is a wireline ICA, and Intrado should not be delivering wireless traffic to AT&T Florida over local interconnection trunks pursuant to this agreement. Similar references occur in IC Sections 3.5 and 16.1 (subsections i and ii), and in ITR Section 2.14. AT&T Florida offers a different ICA to wireless carriers that accommodates the differing requirements of wireless service.

Q. PLEASE DESCRIBE SOME OF THE DIFFERING REQUIREMENTS OF WIRELESS SERVICE.

A. In the context of intercarrier compensation, wireless carriers' calling scopes are based on Major Trading Areas ("MTA") rather than the local calling (or exchange) areas used by wireline carriers. In addition, many wireless carriers have different usage recording capabilities, necessitating a different method for exchanging billing records. In that situation, a factor based on the shared use of facilities is used to allow wireless carriers to calculate usage for billing reciprocal compensation. Thus the terms and conditions for wireless carriers necessarily vary from those of wireline carriers. AT&T's generic CLEC interconnection agreements do not accommodate the unique requirements of wireless

carriers. If Intrado seeks to deliver wireless traffic to AT&T Florida, Intrado should request a wireless ICA.

To the extent Intrado intends to deliver wireless *911* traffic to AT&T Florida, the parties have agreed that Appendix IC does not apply to 911 traffic and the language in dispute above is irrelevant. Accordingly, AT&T Florida's language should be adopted.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

BY MR. CARVER:

Q Ms. Pellerin, with those changes, if I were to ask you today the questions that appear in your testimony, would your answers to those questions be the same?

A Yes.

Q Ms. Pellerin, would you please summarize your testimony at this time.

A Of the issues still in dispute in this arbitration, I address in my testimony Issues 1 and 2, part of Issues 3 and 9, and Issues 13(a), 13(b), 24, 29(a), 29(b), 34, and 36. In the summary I will focus on Issues 1 and 2, because the Commission's rulings on these issues effect all the other issues.

Issue 1 considers what services Intrado intends to provide, whether AT&T is obligated to interconnect with Intrado pursuant to Section 251(c) of the Act, and if so, how those services should be priced. Intrado has said that its business plan is to provide emergency services to other carriers and to PSAPs, and Intrado claims that this is telephone exchange service and, therefore, Intrado is entitled to Section 251(c) interconnection.

So what is telephone exchange service? This is a legal question, and I'm not an attorney, but I will describe generally AT&T's position. The Act defines telephone exchange service, and I'm paraphrasing here, as a service within a

telephone exchange that has the capability to originate and terminate telecommunications. And Section 251(c), interconnection of telephone exchange services, requires a mutual exchange of traffic.

Intrado's emergency services do not have the ability to originate and terminate telecommunications, so there can be no mutual exchange of traffic. When a PSAP receives an emergency call, the dispatcher taking that call cannot use the 911 service to initiate a call. He may be able to transfer the call, but that is not the same as originating a new call. He cannot place a call.

So, for example, if the 911 caller is disconnected, the dispatcher must use another line that's not part of the 911 network, a telephone exchange service line, to call the caller back. Intrado's PSAP customers are not end users. The parties had an issue, Number 31, regarding the definition of end user where Intrado had initially proposed that PSAPs be included in that definition of end user. They have conceded on that and withdrawn that language, so the definition that the parties have agreed to does not include PSAPs as end users.

The bottom line for Issue 1 is this, 911 service is not telephone exchange service because it cannot originate telephone calls, and there is no mutual exchange of traffic, because the 911 service obtained by the PSAPs is not capable of placing a call. That is why Intrado is not entitled to Section

251(c) interconnection with AT&T.

So where does that leave Intrado? It is important to recognize that the absence of an ICA does not diminish Intrado's ability to offer the services it wants. Everything it claims it needs is available by a commercial agreement and/or tariffs. The question about whether Intrado's service constitutes telephone exchange service is not one of equity, it is a purely legal question about what the law requires.

Intrado wants a Section 251 interconnection agreement because they want the Commission to take Intrado's costs of doing business and impose them on AT&T. Intrado's service is not telephone exchange service and they are not entitled to misuse Section 251 to obtain an agreement that allows them to provide that service. Intrado wants it both ways. They want Section 251 treatment when it is to their advantage, and they don't want to follow Section 251 when it doesn't.

Now, assuming for discussion purposes that Intrado is entitled to a Section 251(c) interconnection agreement with AT&T. Then Issue 2 deals with what is the proper template for the ICA. The nine-state template that AT&T offered to Intrado and that the parties began negotiating from which was created and designed for the former BellSouth states, including Florida, or the thirteen-state agreement that was intended for the former SBC states. First, I would like to point out that AT&T and Intrado have agreed to separate appendices for 911

services. Issue 2 does not apply to 911, which is the service Intrado intends to offer, so all the issues about nine state versus thirteen state, and non-911 interconnection and compensation arrangements don't even come into play for 911 service.

As I stated, the thirteen-state template was written for the SBC states, not for the BellSouth states. There are a number of areas where the thirteen-state contract language simply does not work for Florida. Here's a few examples. In the thirteen-state region, for the most part, the parties have actual usage recordings from which to bill for non-911 traffic that the parties exchange. But in Florida, due to switch recording and billing limitations, non-911 traffic is build based on percentage factors. An example would be 72 percent local and 28 percent toll. Parties apply these factors to a big bucket or buckets of minutes to create their intercarrier compensation bills.

Another example would be the way the trunk groups are defined and how traffic is routed, which are different between the states. Also, collocation is handled differently. For instance, in some cases there is nine state pricing which Intrado says it will accept, but there are no comparable terms and conditions in the thirteen-state, so it is unclear how those rates would be applied.

Finally, with respect to Issue 2, there are 11 issues

for which the parties have no content dispute, but that Intrado insists be retained. These issues are encompassed by Issue 2, and none of the issues are specific to the 911 services Intrado intends to offer.

The decision the Commission needs to make is simply whether to use AT&T nine-state template or its thirteen-state template. It doesn't make sense to mix small excerpts of the thirteen-state language into a nine-state agreement. If the Commission orders the nine-state template, then none of the thirteen-state language should be used because the ICA will use the nine-state language. The fact that some thirteen-state language was once in dispute for Ohio is irrelevant.

In conclusion, AT&T requests that the Commission find that Intrado is not entitled to a Section 251(c) interconnection agreement for the emergency service it intends to provide because it is not telephone exchange service and there can be no mutual exchange of traffic. If the Commission does require AT&T to execute an ICA with Intrado, it should be based on the nine-state template that was specifically designed for operation in Florida. Thank you.

MR. CARVER: The witness is available for cross-examination.

CHAIRMAN CARTER: Let's do this first. Do you want to move the testimony into the record as though read?

MR. CARVER: Yes, thank you. I forgot to do that. I

would like to move Ms. Pellerin's Direct and Rebuttal Testimony into the record as though read.

CHAIRMAN CARTER: The Direct and Rebuttal Testimony will be entered into the record as though read. And for our identification purposes, exhibits marked for identification as 39 through 42, Commissioners, exhibits marked 39 through 42.

Commissioners, I know that -- would you like for Ms. Kiser to go ahead and do her cross and then we decide if you have some questions at that point in time? Okay.

Ms. Kiser, you're recognized.

MS. KISER: Thank you.

CROSS EXAMINATION

BY MS. KISER:

Q Good afternoon, Ms. Pellerin.

Let's review the definition of telephone exchange that you just provided for the Commissioners. Does AT&T tariff its 911 service provided to PSAPs?

A Yes.

Q And that service is contained in your exchange service tariff, correct?

A Yes.

Q And how long has AT&T provided 911 services to PSAPs in Florida?

A I would presume since 911 service went into effect.

Q So approximately 1968?

A I don't know when.

Q And who competes with AT&T for that 911 service?

A That I don't know.

Q Do you know of any provider in the Florida market that you serve that competes with AT&T for the provision of 911 services to public service answering points?

A Not that I'm aware of. 911 is not typically a profitable service that attracts competitors.

Q Have you reviewed the order that was discussed earlier, the FCC order that Mr. Carver provided the room, and also is contained at Exhibit 4(b), Page 351 in this proceeding?

A I have not reviewed that order, no.

Q Were you here for the discussions regarding that order?

A Yes, I was.

Q You mentioned or referred to the specific definition of telephone exchange in the Federal Act, correct?

A Yes.

Q And your testimony also cites that Act, correct?

A Yes.

Q And there are two portions to that definition, is that correct?

A Yes.

Q A and B?

A Yes.

Q And do A and B -- are they viewed as having the same definition for telephone exchange?

A I think they're taken together.

Q Do you have Exhibit 4(b) with you?

A I don't know it by number.

Q It would be Intrado's Response to Second Set of Interrogatories, Document Production 1?

A I don't have the documents, no.

MS. TAN: Commissioners, we can provide a copy to the witness, if necessary.

MS. KISER: I think we have it right here. Thank you.

MR. CARVER: Could I just take a look at what she is giving the witness, please?

CHAIRMAN CARTER: Absolutely.

MS. KISER: I think you have it, don't you? It's part of the exhibits.

MR. CARVER: Rather than looking it up, I just wanted to review it.

MS. KISER: It is the exact same order that you provided.

MR. CARVER: Thank you, that's all I needed.

MS. KISER: Give me one second.

BY MS. KISER:

Q This order concerns DSL services, is that correct?

MR. CARVER: Mr. Chairman, I'm going to object at this point. Ms. Pellerin has said that she is not a lawyer and she has also said she is not familiar with this order. Now, I you I did ask Mr. Hicks some questions about it, but that is because the order was specifically referenced in his testimony and he made an assertion about the meaning of the order.

I think that's a very different situation than asking a non-lawyer witness to answer questions about an order that she has already said she has no knowledge of and hasn't reviewed.

MS. KISER: And what I would offer the Commission is that Ms. Pellerin has given you the definition of telephone exchange under the Communications Act. The Federal Communications Commission under the Act is charged with the implementation of that statute. In its role as the Commission to implement that statute, it has to formulate rules and regulations of how those provisions of that statute are to be applied which this order goes directly to.

CHAIRMAN CARTER: Staff.

MS. BRUBAKER: I suppose what I need really is a deeper understanding of what the order is meant to convey and its application to this witness. I don't have a sense of that from the comments we have heard from counsel.

CHAIRMAN CARTER: Ms. Kiser.

MS. KISER: It goes directly to Ms. Pellerin's

representation of how you define telephone exchange and that Intrado's service is not telephone exchange service. The FCC in this order specifically explains what the definition of telephone exchange access under 347(a) and (b) means. You cannot look solely to the statute for the definition of telephone exchange.

MR. CARVER: If I may respond to that briefly.

CHAIRMAN CARTER: You're recognized.

MR. CARVER: Thank you. That certainly is an issue in the case and it is an issue that the lawyers will be addressing in the brief, but I think it is dangerous to have a witness who is not a lawyer try to give legal opinions, which is specifically what this is asking for.

Now, in her testimony Ms. Pellerin does talk about 251 and her understanding, and it is certainly fair game for counsel to ask about the law that she references generally as part of her opinion. But to take her beyond that and to start asking her about FCC orders that she has no familiarity with and to ask her to provide what is, without question, a legal opinion interpreting that order, I think that is an inappropriate thing to ask her both because she has said she has no knowledge, and because she is not a lawyer.

And this is something that Intrado is going to be free to address at whatever length they want in their brief and they can file briefs that are prepared by lawyers, but I don't

think it is productive to spend time asking a witness questions that she can't possibly answer since she's not a lawyer.

MS. BRUBAKER: To the extent the order does address the definition, it may be appropriate to ask some very limited questions regarding her layman's understanding of the order. But, again, I do share of the same concerns, that to the extent that the questions elicit a legal opinion, that is a matter that is more appropriately addressed in briefs.

CHAIRMAN CARTER: Tread lightly, Ms. Kiser. Tread lightly.

MS. KISER: Thank you.

Thank you, Ms. Pellerin.

BY MS. KISER:

Q You just indicated that you viewed 347(a) and (b) as read together, correct?

A I'm assuming that's the proper legal cite.

Q Could you turn to page -- or Paragraph 32 of that decision?

A Okay.

Q And the end of that paragraph there that reads, "While the services described in Subsection B and Subsection A share similar qualities, they are not necessarily identical service offerings."

A I see that.

Q Would your answer still be the same?

A Well, when I look at a definition in the Act that has multiples provisions, I read them both and I look see if it fits with what is being presented. And in some cases they go together, and in others it is an either/or depending on how it is characterized in the Act. And obviously, as a nonattorney, it is a little bit difficult for me to speak with any expertise regarding whether those two provisions work together or independently. And I read them both.

Q Thank you.

And would you agree that when this Commission needs to evaluate whether a service falls within the definitions of the Communications Act, it needs to consider the functionality of that service?

A I would assume so.

Q Thank you.

Continuing here. Let me get my bearing again. All right. Page 13 of your deposition, please.

A Okay.

Q You discuss AT&T's arrangements for interconnecting with adjacent ILECs, is that correct?

A Give me a moment. To a limited degree, yes.

Q Pardon me?

A To a limited degree I discuss it, yes.

Q Do those agreements cover anything other than the exchange of 911 traffic?

A I would presume so.

Q And you indicate -- on Page 49 of your deposition, Lines 14 through 15, you indicate that AT&T has written an oral agreement, is that correct?

A That is my understanding, yes.

Q We were not able to find any copies of the written interconnection agreements with adjacent ILECs. Did you file those agreements with the Florida PSC for its review?

A I don't know how to answer that question. I don't know, but I want to clarify. When you look at this, my response in the deposition, I was not asked only about ILEC agreements, I was also asked about commercial agreements. I am aware of commercial agreements that are written.

Q That are what?

A That are written. I don't know with ILECs whether they are all oral or some written and some oral.

Q Are any of them written?

A I don't know.

Q Thank you. Does AT&T believe that those interconnection agreements with ILECs should be written?

A I don't have an opinion on that.

Q Okay. Your rebuttal testimony, Page 6, Lines 6 through 16.

A Okay.

Q You discuss the pricing of interconnection trunks

there and 911 trunks specifically. Under AT&T's template, it requires CLECs to establish dedicated trunks on AT&T's network beyond the point of interconnection, is that correct?

A No, I don't think so.

Q Subject to check, BellSouth's templates CLEC agreement, publicly available document, the AT&T thirteen-state agreement, the AT&T 22-state agreement, all contain provisions that indicate that dedicated trunking is required by the CLEC to 911 selective routers when there is a tandem exhaust, when a threshold at the point of interconnection tandem is exceeded. Would you agree with that?

A That is not necessarily on AT&T's side of the point of interconnection. It depends on where the point of interconnection is. The 911 may very well be on the CLEC's side of the 911 point of interconnection.

Q The 911 may be on the CLEC side of interconnection. Can you explain that for me?

A Sure.

Q Isn't AT&T the 911 service provider?

A My understanding of the way the interconnection agreements are written is that the CLEC is required to provide 911 trunks to our network to our selective router. Now it may very well be that the CLEC has a point of interconnection at our selective router, so that trunking would be on their side of the point of interconnection.

Q How do you define point of interconnection?

A The demark between the parties' responsibilities for network and provisioning and cost.

Q So if there is a circle and the CLEC comes to the circle and the circle is owned by AT&T, and so AT&T is at the circle, and they interconnect and that's the point of interconnection, and AT&T is the 911 service provider and it has selective routers -- I don't know, how many selective routers do you have in the state on the map that was presented earlier?

A I think there's ten.

Q Ten. I assume all ten of those are on your network?

A Yes.

MR. CARVER: I'm going to object to this line of questioning. These sort of technical issues are addressed by Mr. Neinast in his testimony, and I believe that they are more appropriately directed to him. I believe that counsel is asking this witness questions about things that she has not testified about.

CHAIRMAN CARTER: Ms. Kiser.

MS. KISER: Well, I think that the point of interconnection is throughout Ms. Pellerin's testimony, as well as the trunking that's required. And at Page 6 that I started earlier of rebuttal, as well as Page 16 where she specifically goes into what constitutes a point of interconnection and

provides a definition there goes directly to her testimony.

MR. CARVER: One moment. If I may, I just wanted to add that the point of interconnection issue is Issue 4, and Mr. Neinast addresses that in his testimony. That is not an issue that Ms. Pellerin has.

MS. BRUBAKER: Just my perception, Chairman, is that counsel has indicated that there is another witness who is better suited to answer those questions. However, if the witness would care to offer an answer, I think that would be appropriate, also.

THE WITNESS: I think I can clarify a little bit in terms of trunk pricing and some of the background regarding the interconnection agreement. And if we can take that independent of where the point of interconnection is, then I can deal with the pricing on the trunks. And the reason that we require CLECs to pay for the 911 trunks is because the CLECs have the customers that are placing those 911 calls to use AT&T's network. There are no AT&T end users involved in those calls at all. It is purely the CLEC's customer that needs to access the PSAP, and that is why the CLEC pays for those trunks independent of where the POI is.

BY MS. KISER:

Q And you provide the service to the PSAP, is that correct?

A Yes.

Q So the CLEC's customer is reaching AT&T's customer, correct?

A But the service to the PSAP does not provide for the trunks between the CLEC and AT&T's selective router.

Q When a CLEC customer makes a call, just a regular local exchange carrier call to you, I assume you have AT&T's service?

A Yes.

Q How is that different?

A It's different because with our end users there is a mutual exchange of traffic. It does go both ways. Our end users can call a CLEC's end users, a CLEC's end users can call our end users. Each party is responsible for getting their calls to the other side.

Q And if your customers are making a call to a PSAP that is served by Intrado, your customer needs to reach Intrado's customer, isn't that correct?

A That is correct. And we have not objected to establishing trunks with Intrado, nor have we objected to paying a reciprocal rate for those trunks that are at parity with what we charge.

Q And the rates that these CLECs charge for the 911 trunks, are they retail or are they TELRIC?

A The 911 trunking charges?

Q Uh-huh.

A I believe they are TELRIC. They are not specific to 911. They are the same rates that we charge for interconnection trunks.

Q Okay, thank you. And do competitive local exchange carriers have TELRIC rates?

A They are not obligated to have TELRIC rates, but I am aware of -- I can't say that I am aware specific to arrangements in Florida. I am aware of arrangements with CLECs in other states where they have parity pricing in terms of what the ILEC charges them that is what they charge the ILEC.

Q Isn't it correct that only incumbent local exchange carriers are required to have TELRIC pricing?

A That is correct as far as I know.

MS. KISER: Thank you, Ms. Pellerin. I have no more questions.

CHAIRMAN CARTER: Thank you. Commissioners?

Mr. Carver, I was listening, and, of course, I had one of my over-50 moments, so I forgot the area that one of the Commissioners had asked early on during -- I think it was during Mr. Hick's cross-examination, and for the life of me I'm drawing a blank. Can you help me out here?

MR. CARVER: I think the question had to do with -- and I think it was a question from Commissioner McMurrian of Mr. Hicks about 251 and what their position was as to why they were entitled to 251. And I believe the question was could our

witness when her time comes respond to that and talk about it from our perspective. So she tried to cover that somewhat in her summary, but to the extent the Commission has additional questions she would be happy to entertain them.

CHAIRMAN CARTER: Now, would that be with Ms. Pellerin or would that be --

MR. CARVER: Ms. Pellerin would be the appropriate witness. Mr. Neinast addresses --

CHAIRMAN CARTER: Oh, she addressed it in her summary. Okay, thank you. I just wanted to make sure. Commissioners, anything further from the bench? Staff.

MS. TAN: Staff has no questions for the witness.

CHAIRMAN CARTER: Mr. Carver.

MR. CARVER: I just have one or two questions.

REDIRECT EXAMINATION

BY MR. CARVER:

Q Counsel asked you some questions about agreements between AT&T Florida and other ILECs, do you remember those?

A Yes.

Q Are those agreements pursuant to Section 251?

A No.

MR. CARVER: That's all I have. Thank you very much.

CHAIRMAN CARTER: Let's deal with the exhibits.

MR. CARVER: AT&T Florida moves 39 through 42.

CHAIRMAN CARTER: 39 through 42. Any objections?

MS. KISER: No objections.

CHAIRMAN CARTER: Without objection, show it done.

(Exhibits 39 through 42 admitted into the record.)

CHAIRMAN CARTER: Thank you. You may call your next witness.

MR. CARVER: Mr. Chairman, I understand my next witness has stepped out for just a moment. I'm sure he will be here shortly.

CHAIRMAN CARTER: Okay. Well, let's take five and allow him the chance to step back in.

MR. CARVER: Thank you very much.

CHAIRMAN CARTER: Commissioners, why don't we come back at 25 after. We're on recess.

(Recess.)

CHAIRMAN CARTER: Mr. Carver, you're recognized.

MR. CARVER: Thank you, sir. AT&T Florida calls Mark Neinast.

Mr. Neinast, are you ready?

MR. NEINAST: I'm ready.

THOMAS MARK NEINAST

was called as a witness on behalf of AT&T Florida, and having been duly sworn, testified as follows:

DIRECT EXAMINATION

BY MR. CARVER:

Q Okay. Mr. Neinast, would you please state your full name and your business address for the record?

A My name is Thomas Mark Neinast. My business address is 308 South Akard, Room 710, Dallas, Texas 75202.

Q By whom are you employed and in what capacity?

A I'm employed by AT&T Services, Inc. as an Associate Director, Network Regulatory.

Q Now, Mr. Neinast, have you filed 57 pages of Direct Testimony in this proceeding?

A Yes, I have.

Q And have you also filed 17 pages of Rebuttal Testimony?

A Yes, I have.

Q And have you also filed 12 pages of Supplemental Rebuttal Testimony?

A Yes, I have.

Q And attached to your testimony there are a total of five exhibits, is that correct?

A That's correct.

Q Do you have any corrections or changes to either your testimony or to your exhibits?

A I do. I have two corrections in my Direct Testimony.

Q Could you make those, please.

A Page 1, Line 14, instead of Florida Bell, it should be BellSouth Telecommunications, Inc. And on Page 33, Line 22,

it says Issues 4(a), it should be Issue 3(a). And that's all.

Q Thank you.

Mr. Neinast, with those corrections, if I asked you the questions that appear in your testimony, would your answers be the same as they appear in your testimony?

A Yes, they would.

MR. CARVER: Mr. Chairman, at this time I would like to request that Mr. Neinast's direct, rebuttal, and supplemental rebuttal testimony be inserted into the record as though read.

CHAIRMAN CARTER: The prefiled testimony will be entered into the record as though read.

AT&T FLORIDA

DIRECT TESTIMONY OF MARK NEINAST

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 070736-TP

APRIL 21, 2008

Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH AT&T ("AT&T"), AND YOUR BUSINESS ADDRESS.

A. My name is Mark Neinast. My business address is 308 S. Akard, Dallas, Texas 75202. I am employed by AT&T Services, Inc. as an Area Manager – Regulatory Relations to AT&T's Network Planning and Engineering Department. My primary responsibility is to represent AT&T's various operating companies, including ~~Florida Bell~~ BellSouth Telecommunications, Inc. d/b/a AT&T Florida ("AT&T Florida") in the development of network policies, procedures, and plans from both a technical and regulatory perspective. I assist in developing corporate strategy associated with 9-1-1, Interconnection, switching, Signaling System 7 ("SS7"), call-related databases, and emerging technologies such as Internet Protocol ("IP")-based technologies and services. I am also responsible for representing the company's network organization in negotiations and arbitrations with Competitive Local Exchange Carriers ("CLECs").

Q. PLEASE SUMMARIZE YOUR BACKGROUND AND EXPERIENCE.

A. I have been employed by AT&T for over 30 years, primarily in the network organization. This includes seven years in non-management positions in central offices as a technician. I also spent two years as a training instructor for electronic switching systems and then four years managing technicians in central offices and a Network Operations Center ("NOC"). I also worked as a staff manager for the North Texas Network Operations Division for five years, where I supported NOC functions and managed major switching system projects, then as an Area Manager in a NOC Translations Center for over seven years, where I was responsible for 16 Selective Routers and the dial-dial conversion of them from analog to digital, prior to moving into the regulatory organization. I have a Bachelor of Science in Business Administration from the University of Texas at Dallas, with a double major of Management Information Systems and Behavioral Management. I have also attended numerous training classes, some of which are listed below:

- 1/1AESS, 2/2BESS, 3ESS, 5ESS, DMS100, Ericsson AXE Switching Translations Routing and Charging
- Access Signaling System 7
- AIN Network Operations and Maintenance

— LNP Local Number Portability Operations

— DSC STP Basic Methods of Operation

— DMS-100 Operations and Maintenance

— Principles of Digital Transmission

— Network Fundamentals

Q. HAVE YOU PREVIOUSLY PARTICIPATED IN OTHER REGULATORY PROCEEDINGS?

A. Yes, I have participated in numerous dockets including:

— The Texas T2A successor, ICA Arbitration, Docket D28821

— California Public Utilities Commission – Level 3/SBC interconnection agreement arbitration, California A.04-06-004

— Arkansas Public Service Commission – Level 3/SBC Arkansas interconnection agreement arbitration, Case No. 04-099-U

— SBC California / AT&T ICA Arbitration, Dockets

— SBC Connecticut / Level 3 ICA Arbitration, Docket ADJ:VYM

— Arkansas Public Service Commission – TelCove/SBC Arkansas interconnection agreement arbitration, Docket No. 04-167-U

— SBC Kansas / TelCove ICA Arbitration, Docket 05-ABIT-507-ARB

— Public Utilities Commission of Ohio – TelCove/SBC interconnection agreement arbitration, Ohio Case No. 04-1822-TP-ARB

— Corporate Commission of the State of Oklahoma – Complaint of Inventive vs. SBC Oklahoma, Cause No. PUD 200500229 (December, 2005)

— The Arkansas A2A successor, ICA Arbitration, Docket 05-081-U

— Washington State Utilities and Transportation Commission - Qwest Corporation Complaint vs. TCG-Seattle Docket No. UT-063038

Q. DO YOU HAVE PERSONAL KNOWLEDGE OF 911/E911 NETWORKS?

A. Yes. I have spent the majority of my 33 year career with SBC/AT&T in the Operations, Administration, Maintenance and Provisioning (OAM&P) organization for various network components in the SBC network, both as technician and manager. My last assignment, for over seven years prior to assuming my current position, was the Area Manager-Translations in the Dallas Network Operations Center. I was responsible for the switch software changes for AT&T Texas ILEC network. As part of my

duties, I managed 16 Selective Routers and was responsible for the successful conversion from analog to digital during this time frame. I also successfully managed many other major network projects, including over 60 analog-digital dial-to-dial conversions, each of which included 911 trunks.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I am offering direct testimony on the network and technical aspects of Intrado's Petition for Arbitration ("Petition"). Specifically, I address AT&T Issues 3-10, and 30. My testimony is intended to operate in conjunction with the testimony of AT&T Florida witness Ms. Pellerin. Ms. Pellerin addresses issues in the Petition from a policy perspective, including the issue of whether Intrado is eligible for a Section 251 interconnection agreement ("ICA"), and if so, what issues are properly dealt with in a Section 252 arbitration. Depending on the outcome of those issues, all or portions of my testimony may be moot.

Q. BRIEFLY SUMMARIZE WHAT IS AT ISSUE.

A. AT&T Florida is experienced in creating interconnection agreements with CLECs that seek to provide competing voice service, and has a standard 9-state template agreement used in the

legacy BellSouth states. Intrado's business plan, however, is unique in nature and limited to 911 service to Public Service Answering Points (PSAPs). As a result, Intrado is seeking various types of contract provisions that AT&T Florida does not believe are appropriate. Since Intrado is requesting to interconnect as a 911 carrier, AT&T has proposed that certain appendices be included that are applicable for use by a 911 competitor, namely, the 911 Appendix and 911 Network Interconnection Methods ("911 NIM"). These appendices are in addition to Attachment 3 to AT&T Florida's proposed agreement, which describes methods of interconnection for local exchange and access traffic and comports to use in the 9 state region.

By its requests here, Intrado would create new requirements for ILECs if Intrado were to provide service to a 911 customer. For example, if Intrado is allowed to pick the location of the point of interconnection (POI) and this location is not at AT&T's Selective Router, AT&T Florida and all other carriers previously connected to that Selective Router for 911 traffic would need to provision additional diverse facility investments beyond what is in existence today to rehome 911 traffic[1]. Intrado also requests that AT&T convert to Class Marking, which, (as I will discuss later in my

[1] Intrado has stated during negotiations that it is their intention to locate their POI at the Selective Router location, but they do not want to be required to do so.

testimony) would require a total overhaul of end user provisioning for AT&T Florida. All of Intrado's requests are part of Intrado's effort to avoid paying AT&T for the services it provides for 911 service, such as Automatic Number Identification (ANI) or Selective Router (SR) functionalities.

Q. HOW IS YOUR TESTIMONY ORGANIZED?

A. First, I will describe the current 911 network as deployed not only in Florida, but across the U.S., to give the Commission a better understanding of the issues presented by Intrado's requests. As part of this description, I will explain the three different 911 routing scenarios that are pertinent to this docket. Within those scenarios, there are further breakdowns of call flows that will be discussed in order to fully appreciate all that is required to complete 911 traffic.

Second, I will address the service aspects that are critical to 911 and provide the Commission with AT&T Florida's positions on Issues 3 -10, and 30.

Finally, I will conclude with my recommendations to the Commission and explain why AT&T's language should be adopted. Included in my testimony as Exhibit MN-1 is AT&T Florida's

proposed 911 and Exhibit MN-2 is AT&T Florida's proposed 911 NIM Appendices. I have included in both Appendices AT&T Florida's proposed language to which Intrado objects (bold underlined) and Intrado's proposed language to which AT&T Florida objects (bold italics). The language agreed upon by the parties is in normal font. In many cases I have pulled Intrado's proposed language from the AT&T 13-State NIM and Interconnection Trunking Requirements ("ITR") redlined Appendices that Intrado submitted. This should assist the Commission in comparing the parties' proposed language. Throughout my testimony, when I discuss Intrado's proposed language, I will also include in parentheses where Intrado's proposed language appears in the 911 or 911 NIM Appendix.

Q. WHAT ARE THE THREE 911 ROUTING SCENARIOS THAT ARE RELEVANT TO THIS ARBITRATION?

A. The three basic scenarios regarding E911 network interconnection are:

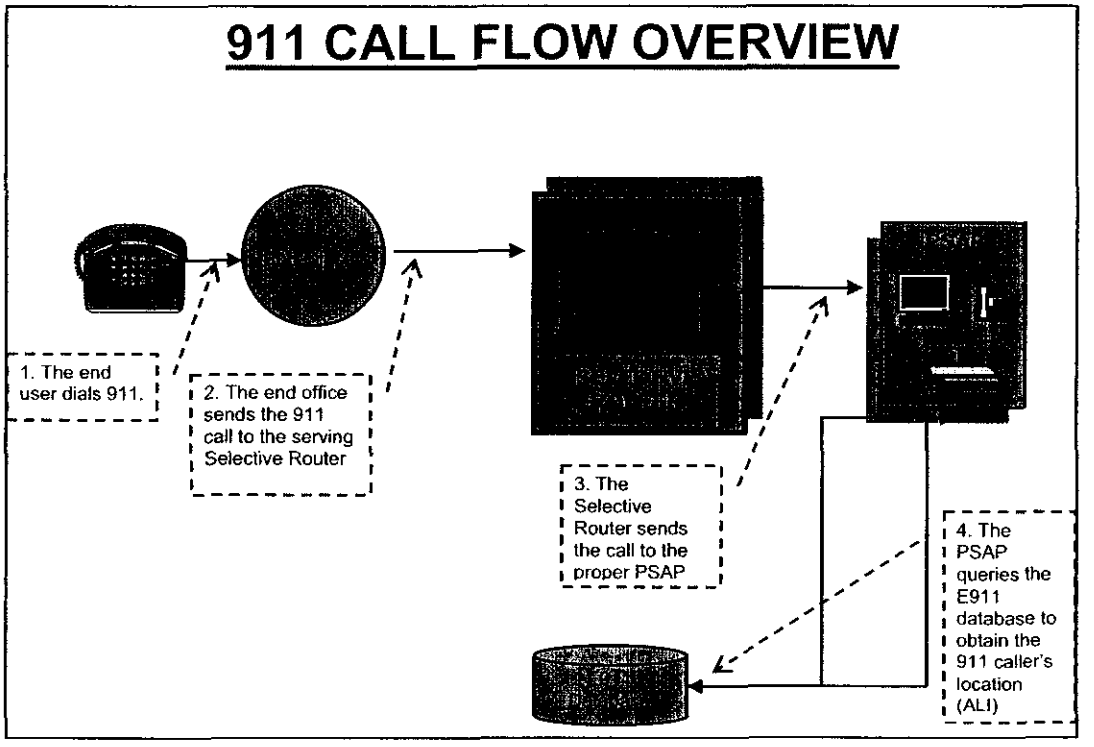
1. Intrado delivers E911 traffic originated by its own end users (if there were any, or any other carrier's end users) to AT&T Florida for completion to AT&T Florida-served PSAPs. AT&T

Florida agrees to include terms and conditions for this circumstance like those it provides to normal CLECs. Since Intrado has no end users, however, it is not clear that such terms are necessary.

2. AT&T Florida delivers E911 traffic (originated by its own end users) to Intrado for completion to Intrado-served PSAPs. AT&T Florida does not believe it is obligated by Section 251(c) to include terms and conditions for this arrangement in the ICA. However, in an abundance of caution, AT&T Florida has provided language in Sections 5 and 6 in Appendix 911 to reflect the parties' E911 responsibilities.

3. Certain PSAPs request that AT&T Florida (and Intrado) offer the ability to transfer emergency calls between them (i.e., the PSAPs) serving adjacent areas. This would require special connections between AT&T Florida's Selective Router and Intrado's Selective Router. AT&T Florida does not believe it is required by Section 251(c) to offer Selective Router to Selective Router transfers pursuant to an ICA. Moreover, it is essential that the PSAPs requesting this service actively participate in negotiating such arrangements. AT&T Florida will make Selective Router to Selective Router functionality available to PSAPs pursuant to a commercial agreement that includes all affected parties, but only upon PSAP request and with PSAP

involvement. AT&T Florida proposes language to capture this situation in Appendix 911, Section 1.4.



911/E911 Network Overview

Q. BRIEFLY DESCRIBE HOW A 911 CALL COMPLETES TO AN EMERGENCY RESPONDER (PSAP) AND THE 911 NETWORK ELEMENTS INVOLVED.

A. When an end user picks up the phone and dials 911, the call is sent to the end user's serving end office, in the same manner as any originating call. The end office switch routes the 911 call to the Selective Router (sometimes known as an E911 tandem) that serves the end office. In AT&T Florida's network, the Selective Router consists of additional hardware and software capabilities in ten of AT&T Florida's central office switches. The Selective Router queries an E911 database (internal to the Selective Router) to obtain the Emergency Service Number (ESN) that determines the correct PSAP, based on the originating end user's telephone number or ANI (Automatic Number Identification)[2] , then routes the

[2] An E911 call uses the ANI digits at a couple of points in processing a 911 call, first as a reference to obtain the ESN (Emergency Service Number), which determines the correct PSAP to route the call to. The ANI digits are used again by the PSAP to determine the street address of the end user by indexing the ANI to the MSAG (Master Street Address Guide) in the ALI (Automatic Location Identification) database.

call to the proper Public Safety Answering Point ("PSAP"). The PSAP then queries the E911 database to obtain the Automatic Location Identification ("ALI") of the end user. This enables the PSAP to know the address of the 911 caller, so that the PSAP is better equipped to provide emergency service. The key components of the E911 network are the Selective Router, the E911 database and the facilities and trunks used to connect the components together. The diagram below provides an overview.

Q. CAN YOU DESCRIBE THE E911 DATABASE IN MORE DETAIL?

A. Yes. The E911 database utilizes information from the 911 caller's service provider and the Master Street Access Guides ("MSAG") to provide the correct location information to the PSAP. AT&T Florida, in conjunction with local emergency service authorities, develops the MSAG data, which contains street and house number information. AT&T Florida provides CLECs with updated MSAG data, in the form of either an email or CD for the areas where the CLEC is providing competing voice services. CLECs use the MSAG information in preparing the end user information that they will enter into the E911 database. The information assists CLECs in making sure that the address information that they have for their end users is in a format that the E911 database can accept, and that the E911 database has the necessary routing information to route calls from that address to the correct PSAP. Carriers enter this information into the E911 database through the Database Management System ("DBMS").

Q. HOW DOES AT&T FLORIDA TYPICALLY PROVIDE 911/E911 SERVICES TO CLECS?

A. CLECs typically offer competing voice service. As a result, a CLEC will need to offer the capability for its end users to access the proper PSAP for 911. AT&T Florida therefore offers the ability for

the CLEC to establish facilities and trunks from its end office to an AT&T Florida Selective Router, as well as the ability for the CLEC to enter and update its end users' information in the E911 database. AT&T Florida includes these provisions for CLECs in its generic ICA. This is Scenario 1 that I discussed above.

Q. WHAT OTHER 911 SCENARIOS NEED TO BE EXPLAINED?

A. Unlike a traditional CLEC, Intrado wishes to provide the Selective Router and E911 database capabilities to PSAPs. To the extent that Intrado does so, voice providers, including AT&T Florida, will need to connect to Intrado's Selective Router so that their end users will be able to reach the PSAP(s) served by the Intrado Selective Router. This is Scenario 2 discussed above.

Q. SHOULD SCENARIO 2 BE INCLUDED IN THE ICA?

A. No. Ms. Pellerin discusses why this is improper from a regulatory policy perspective in her testimony concerning issue 1. In addition, as I discuss later with respect to Issues 4 and 5, Intrado seeks to force a network arrangement on AT&T Florida that AT&T Florida has no obligation to agree to, that is not within the proper scope of a Section 251 ICA, and that is contrary to FCC rules. Terms and

conditions for Scenario 2 should be included in a separate, non-Section 251 agreement.

Q. HAS AT&T FLORIDA NEVERTHELESS PROVIDED LANGUAGE REGARDING SCENARIO #2?

A. Yes, but only out of an abundance of caution. AT&T Florida does not believe the ICA should contain any terms and conditions regarding Scenario 2 at all. If the Commission were to disagree, however, the language that AT&T Florida would propose is included in Sections 5 and 6 of the 911 Appendix. If the Commission agrees with AT&T Florida that Scenario 2 is not properly included in a Section 251 agreement, no language is required.

Q. IS THERE A THIRD SCENARIO THAT INTRADO SEEKS TO INCLUDE IN THE ICA?

A. Yes. Scenario 3 involves the transfer of 911 calls from an AT&T Florida PSAP to an Intrado PSAP or vice versa.

Q. SHOULD TERMS FOR SCENARIO 3 BE INCLUDED IN A SECTION 251 ICA?

A. No.

Q. PLEASE EXPLAIN.

A. Scenario 3 involves the transfer of calls from an AT&T Florida-served PSAP to an Intrado-served PSAP, which would occur by sending the 911 call through AT&T Florida's Selective Router to Intrado's Selective Router, or vice versa. Intrado seeks to dictate ICA terms that require such PSAP to PSAP call transfers and establish the terms and conditions, including network architecture, for making them. The terms are not appropriate for inclusion in a Section 251 ICA because arrangements for these call transfers are only necessary when the PSAP requests them and can only be established using the facilities, protocols, etc. that the specific PSAP requests. A PSAP might request such a service if it erroneously receives calls that should be directed to a different PSAP. For example, a customer on a cellular phone may call 911 from a location served by a PSAP other than the PSAP that is assigned to receive calls from that wireless customer. To allow call transfers between PSAPs in such instances, both Intrado and AT&T Florida would need to work with the PSAPs to determine the exact capabilities that the PSAPs request and the operating protocol that the PSAPs support. Then Intrado and AT&T Florida

would need to establish trunks and facilities between their Selective Routers that are configured using protocols that allow the PSAPs to transmit and receive the information they request. In addition, Intrado and AT&T Florida may each need to update their respective ALI databases with information to support the ALI information required by this scenario.

The PSAPs and relevant government agencies need to be included in any such agreement for Selective Router to Selective Router call transfers. AT&T Florida is certainly willing to negotiate non-Section 251 agreements with Intrado and the E911 customers to address such circumstances (as it has done with PSAPs and other carriers in the past), and has proposed language in Section 1.4 of the 911 Appendix that would require it to do so, but I do not believe that the blanket terms proposed by Intrado are best suited to maintain the PSAP input and flexibility necessary for such arrangements. AT&T Florida simply proposes to deal with Intrado in the same way it has successfully dealt with other carriers and PSAPs in this situation. I more fully discuss this issue in Issue 5.

General Comments

Q. DOES INTRADO SEEK AN INTERCONNECTION

ARRANGEMENT THAT WOULD PERMIT INTRADO TO ENTER THE MARKET AND COMPETE ON A LEVEL PLAYING FIELD WITH AT&T?

A. No. Intrado is seeking to establish an interconnection arrangement that would improperly shift Intrado's network and facility costs to AT&T Florida. Also, as evidenced in their request for a Declaratory Statement from the Commission, Intrado is also attempting to prohibit AT&T Florida from being compensated for services it provides to a PSAP, when Intrado provides service to the PSAP as well. For example, if an AT&T end user originates a 911 call, AT&T will provide ANI to Intrado, without which Intrado could not route the call to the correct PSAP. On top of that, Intrado seeks to radically change the way E911 traffic has been successfully routed over these many years when an AT&T Florida wire center is split between PSAPs that AT&T Florida and another carrier serve.

Q. WOULD AT&T BE WILLING TO ENTER INTO A NON-SECTION 251 AGREEMENT WITH INTRADO?

A. Yes. As AT&T Florida has made clear, it has no problem entering into non-Section 251 agreements to cover the only relevant scenarios here, Scenarios 2 and 3, just as it has done with other

carriers and PSAPs. Entering into such agreements would give Intrado everything it purports to need to compete on a "level playing field" with AT&T Florida. Additionally, AT&T Florida has tariffed facilities made publicly available for purchase, which would give Intrado all three of the network functionalities Intrado agrees are necessary. Furthermore, AT&T Florida has standard ICA language that any CLEC can accept that allows it to use AT&T Florida's Selective Router, ALI database, and network transport facilities. If anything, Intrado is operating at an *advantage* to AT&T Florida, as it is not required to offer its competing services via tariff and ICA. My suspicion is that Intrado is seeking to use Section 251 not to achieve a level playing field, but rather to obtain an unwarranted regulatory advantage.

Q. WHY THEN IS INTRADO REQUESTING AN ICA?

A. Rather than negotiate a non-Section 251 agreement, (and rather than negotiate as Section 251 requires) Intrado has rushed to arbitration, seeking to force a Section 251 ICA on AT&T Florida. To effectuate this goal, Intrado has proposed lopsided language that would routinely shift costs to AT&T Florida and impose one-sided obligations. For example, when a wire center overlaps multiple PSAPs, Intrado proposes language that would require AT&T to use

Class Marking at the end offices, which would mean issuing service orders for each AT&T customer to change line records, instead of using the existing centralized 911 database at the Selective Router. NENA (National Emergency Number Association) does not recommend end office Class Marking, which would be a potential disaster from a 911 routing perspective[3]. Intrado proposes language that would require AT&T Florida to bear such costs in the 911 Appendix, sections 6.1.1.1, 6.1.1.2 and 6.1.1.3[4]. This would raise AT&T Florida's costs and allow Intrado to offer its services to PSAPs at discounted rates, putting AT&T Florida at an unfair competitive disadvantage (Issue 3). Intrado has also proposed language that would require AT&T Florida to offer redundant facilities, while Intrado would have no such obligation, again giving Intrado an unfair competitive advantage and possibly compromising public safety (Issue 4). Similarly, Intrado has proposed language that would require AT&T Florida to be responsible for long-haul interstate transport facilities (Issue 4), despite the fact that the

---

[3] Exhibit MN-4 - NENA Standard for E9-1-1 Default Assignment and Call Routing Functions NENA 03-008, Version 1, January 19, 2008, § 2.1 Call Routing Facts (at para. 1) "9-1-1 call routing accuracy may be affected by various factors ranging from lack of up-to-date identification of the subscriber's service address/calling location; delay in service order processing; default call routing rules used to support the subscriber's NPA NXX, the serving area or the network elements..." (at para. 3) "It must also be recognized that "default" call routing is not the same as a "misroute". Misrouted calls are generally caused by incorrect information associated with the caller due to a human or mechanical failure, whereas default routed calls are caused by a lack of selective routing information."

[4] See Exhibit MN-1.

Telecom Act requires Intrado to provide the facilities necessary to reach the ILEC's network.

Q. IN THIS ARBITRATION, WHAT ARE THE MAJOR ISSUES INTRADO INTRODUCES FROM A 911 NETWORK PERSPECTIVE?

A. There are two major network issues that are more critical in nature than a typical CLEC ICA arbitration, due to the high importance of 911 traffic. The first is how E911 traffic is routed between AT&T Florida and Intrado and the second is the location of the Point of Interconnection (POI).

Q. DURING MAJOR CONVERSION PROJECTS, ARE THERE ASPECTS OF 911/E911 NETWORKS THAT CAN AFFECT PUBLIC SAFETY?

A. Yes. The Public Switched Telephone Network (PSTN) is a very redundant resilient network. The transport facilities in a 911 network are engineered to an even higher level of redundancy and diversity than the standard PSTN, due to the potential loss of life that is associated with the emergency functions the network performs. The personnel receive additional training to understand the intricacies of this network. In my previous organization,

technicians had to be "qualified" before they were allowed to perform maintenance and provisioning for 911 translations. For good reason, the qualifications are high, and the cost of error is even higher.

Q. DO YOU HAVE ANY PRELIMINARY STATEMENTS ABOUT THE CONTRACT APPENDICES THAT ARE AT ISSUE?[5]

A. To the extent a Section 251 ICA is to be established at all, AT&T Florida's position is that issues regarding 911 should be included in the 911 Appendix rather than in the Appendices used to describe the network obligations for traditional voice traffic. Terms for voice traffic and 911 traffic must be kept separate to reduce confusion, because 911 and traditional voice traffic are engineered and provisioned differently. For example, a CLEC may establish a single point of interconnection (POI) for its voice traffic. However, because of the unique and critical nature of 911 traffic, a single POI is not appropriate and the CLEC needs to establish a secondary POI for diversity. Dedicated trunks and diverse facilities to each AT&T Florida Selective Router that serves a PSAP exist already that each CLEC uses to deliver 911 traffic. If the 911 facility and

[5] It is not clear that Intrado offers or will offer telephone exchange service or exchange access at all, which are prerequisites to seeking Section 251(c) interconnection. That is an issue for legal briefs.

trunking obligations were intermingled with the facility and trunk group obligations for traditional voice traffic, it would cause confusion as to how to identify and acknowledge the different network obligations. I believe that Intrado agrees to these two additional appendices, but want to make clear the differences between them. In negotiations with Intrado in other states on this issue, Intrado has agreed to this concept and the parties have worked toward negotiating language into the 911 Appendix.

Q. ARE THERE ANY OTHER PRELIMINARY ITEMS THAT MAY BE PERTINENT TO THIS ARBITRATION?

A. Yes. As a helpful tool, I am attaching a brief description of facilities and trunks as Exhibit MN-3.

Specific Arbitration Issues

Q. WHICH ISSUES REMAIN UNRESOLVED?

A. Issues: 3a, 3b, 4a, 4b, 4c, 5a, 5b, 6a, 6b, 7a, 8b, 9, 10, 30

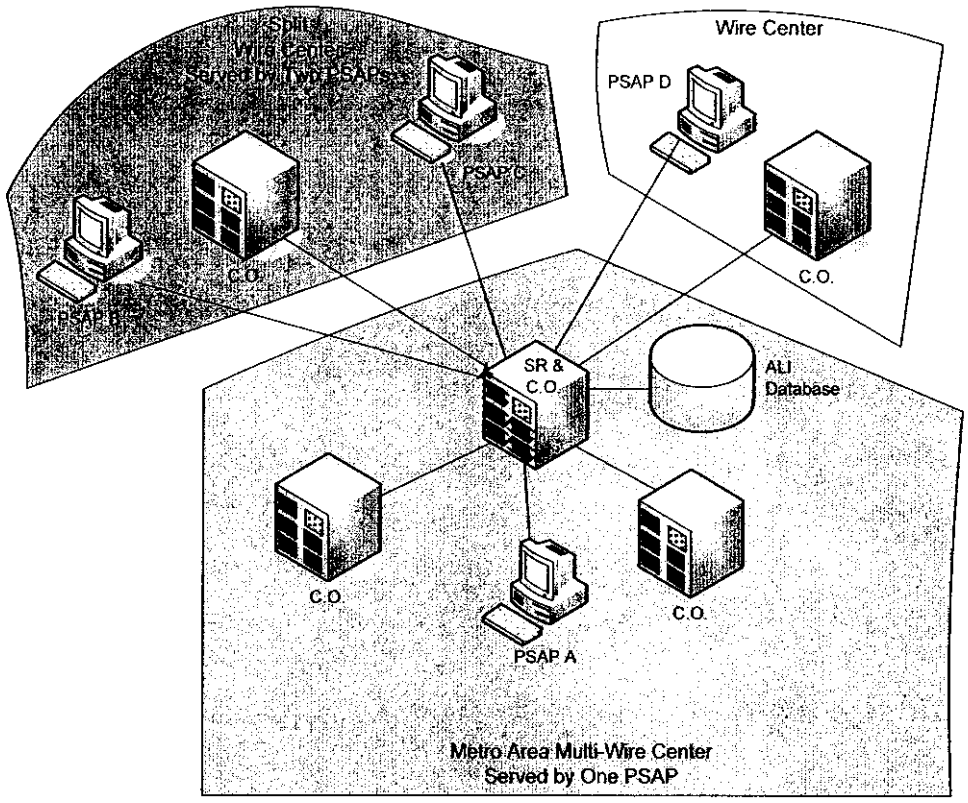
Issue 3a: What trunking and traffic routing arrangements should be used for the exchange of traffic when Intrado is the

designated 911/E911 Service Provider?

Appendix 911: § 6.1.1, 6.1.1.1, 6.1.1.2, 6.1.1.3, 6.2.1

Appendix ITR: § 4.2

Q. WHAT ARE THE DISPUTES UNDER ISSUE 3(a)?



A. There are two main disputes: (i) In a split wire center[6], which carrier's Selective Router should be the "Primary" Selective Router for that wire center? and (ii) Should AT&T Florida be required to use Class Marking? Also, depending on whether the Commission agrees with AT&T for issue 2, Intrado's language in Appendix ITR in Section 4.2 will become important to normal PSTN routing of traffic.

Q. WHAT IS A "SPLIT" WIRE CENTER?

A. A split wire center is an AT&T wire center where there are PSAPs served by AT&T and by Intrado. A wire center boundary follows the local loop cable footprint serving a specific geographic area and may or may not overlap municipal jurisdictions. Since PSAPs typically follow municipal or other governmental jurisdictions, a wire

center may encompass the territory of two or more PSAPs that are served by different carriers (e.g., one by AT&T Florida and one by Intrado) and thus be "split."

Below is a diagram depicting a typical overlapping scenario:

Q. HOW IS THE ROUTING OF 911 CALLS HANDLED TODAY IN SPLIT WIRE CENTERS IN AT&T FLORIDA'S SERVICE AREA?

[6] AT&T defines wire center as "the location of one or more local switching systems. A point at which End Users' loops within a defined geographic area converge. Such local loops may be served by one (1) or more Central Office Switches within such premises."

A. Today, 911 calls in a split wire center are routed to the designated "Primary" Selective Router, which then either routes the call directly to a PSAP served by that router or, if necessary, sends the call to the "Secondary" Selective Router (the one owned by the other carrier serving a PSAP for that wire center), which then sends the call to the correct PSAP served by that router. The determination of which carriers Selective Router is Primary and which is Secondary is based on which router serves PSAPs that serve the clear majority of access lines (customers) in the wire center. This is the fairest method and is the method that carriers in the industry use today. For example, this is how AT&T Florida deals with wire centers that are split between its PSAP customers and PSAP customers of an adjacent ILEC.

Q. HOW DOES AT&T FLORIDA PROPOSE TO HANDLE THE ROUTING OF 911 TRAFFIC IN WIRE CENTERS THAT ARE SPLIT WITH INTRADO?

a. AT&T Florida's language would use the same Primary/Secondary Selective Router relationship and process that it uses with adjacent ILECs today. All calls from split wire centers would route to the Primary Selective Router, where a determination would be made

via the ALI database to route the call directly to a PSAP or deliver the call to the Secondary Selective Router for delivery to a PSAP.

Q. WHY DOES AT&T FLORIDA'S PROPOSAL MAKE SENSE?

A. Selective Routers serve multiple PSAPs, and the centralized ALI database determines the route to the correct PSAP, based on the ANI digits. This is a reliable process that has been in place for many years and is a critical component in a 911 network.

Q. WHAT IS INTRADO'S PROPOSAL ON THIS ISSUE?

A. Intrado's primary proposal is to do away with the Primary/Secondary system altogether and instead force AT&T Florida (and all other carriers) to adopt a new system based on "Class Marking." Alternatively, Intrado's back-up proposal is that it be automatically designated as the Primary Selective Router provider in all split wire centers, regardless of how many lines are served by its PSAP customer.

Q. WHAT IS CLASS MARKING?

A. Class Marking is a type of screening where individual line screening must be performed on each and every subscriber line. Thus,

instead of being sent to a Selective Router, every 911 call would be routed directly to a PSAP from each end office, or in the case of Intrado, to Intrado's Selective Router.

Q. DOES AT&T FLORIDA USE CLASS MARKING FOR 911 CALLS TODAY?

A. No.

Q. HAS AT&T FLORIDA EVER USED CLASS MARKING FOR 911 CALLS?

A. No.

Q. DOES ANY AT&T ILEC USE CLASS MARKING FOR 911 CALLS TODAY, OR HAS EVER USED CLASS MARKING, FOR THIS PURPOSE?

A. No.

Q. DOES NENA RECOMMEND USING CLASS MARKING FOR 911 CALLS?

A. No. NENA has recently issued a recommended Standard for E9-1-1 Default Assignment and Call Routing Functions[7]. This standard "identifies and defines methods used to assign defaults and route 9-1-1 calls when circumstances prevent normal selective routing."[8] Under normal circumstances, Selective Router capabilities are always available, and it could be potentially catastrophic to allow a network designed specifically to serve public safety to not use a Selective Router. "NENA does not recommend the use of LCCs"[9]. LCC stands for Line Class Codes, which is the switch name for the individual line screening mentioned earlier that is used for Class Marking.

Q. WHAT ARE SOME OF THE PROBLEMS WITH CLASS MARKING?

A. Class Marking is expensive, requiring costly changes at both the wire center level and on each individual line, and presents serious reliability concerns by replacing the use of a centralized database, where all the relevant information is maintained, with reliance on changes being made at every affected wire center. At the wire

[7] See Exhibit-MN-4

[8] Id at 1.1

[9] Id at 2.4.8.5

center level, Class Marking would require that special, complicated switch translations (software) be built into every split wire center switch for each class of service (e.g., 1FR and 1FB[10]) and for each PSAP served within the split wire center office. This would require thousands of minute translations changes across the network, along with a parallel amount of changes in provisioning and billing systems that would be required to properly identify which street address ranges should route to which PSAPs.

Once all of these system changes have been made, then the project of converting customer lines would begin. Each line would require a service order to be issued to change the properties associated with the individual customer's service to "Class Mark" that line to the correct PSAP.

These kinds of changes are expensive, time-consuming, and present innumerable opportunities for human errors or other errors that could reduce the reliability of 911 service in split wire centers. Moreover, Intrado's language in Appendix 911 at section 6.1.1.2 would charge AT&T Florida for using the more reliable process of a

[10] The symbols 1FR and 1FB are examples of class of service designations for single line flat rate residential local exchange service and single line flat rate business local exchange service. There are numerous classes of service depending on the service and rate plan provided to the end user.

centralized database, instead of the de-centralized method Intrado suggests. Also, in conjunction with this issue are disputes related to pricing, which Ms. Pellerin addresses.

Q. DO ANY OF THOSE PROBLEMS EXIST WITH AT&T'S PROPOSAL?

A. No.

Q. WHY SHOULD THE COMMISSION REJECT INTRADO'S ALTERNATIVE POSITION THAT INTRADO SHOULD ALWAYS BE DESIGNATED AS THE PRIMARY SELECTIVE ROUTER?

A. The Commission should reject Intrado's proposed language because it seeks to shift costs it should bear to AT&T Florida and/or imposes unnecessary and unwarranted costs on AT&T Florida – giving Intrado an unearned and unfair competitive advantage. Under established practice, the carrier designated as the Primary Selective Router bills the PSAP that ultimately receives the call for selective router functionality. Intrado seeks to game that system, bringing more revenue to itself and denying revenue to AT&T Florida, by asserting that it always be designated the Primary Selective Router, even when Intrado does not serve the majority of 911 calls. There is no logical basis why Intrado

should always be the Primary Selective Router, particularly in wire centers where AT&T Florida's PSAP customers serve the clear majority of access lines in the wire center, and thus will likely be receiving the clear majority of 911 calls.

We know that AT&T Florida's proposal works today, which is not only an industry standard, but recommended by NENA as well.

Q. THE PARTIES ALSO HAVE A DISPUTE IN APPENDIX ITR SECTION 4.2 IN THE 13-STATE TEMPLATE. DOES INTRADO'S PROPOSED LANGUAGE IN ITR SECTION 4.2 AFFECT THE ROUTING OF PSTN TRAFFIC?

A. Yes. Appendix ITR includes provisions for non-911 trunking requirements and is therefore not relevant to any disputes regarding 911 service. Rather, Appendix ITR relates to interconnection trunking requirements for PSTN traffic. AT&T Florida's language defines the various categories of tandem switches that may require a carrier to establish trunking for call completion to the end offices grouped behind those tandems. The Local Exchange Routing Guide (LERG) is the national routing database. All LECs use this database to input their NPA-NXX information and lists the Local, Feature Group B and D tandems

where they want other carriers not directly interconnected with them to route their traffic. Not routing per the LERG will result in misrouted traffic and possibly blocked calls.

Intrado has substituted the word "may" for "shall" where AT&T would ask a carrier to establish trunking to the correct tandem. Without a trunk group at these tandems, there is a possibility that there could be misrouted traffic or blocked calls. Intrado may never send PSTN traffic anywhere, as it only wants to route 911 traffic, but the language AT&T proposes is important if they ever do (or if another CLEC adopts Intrado's ICA).

Q. HOW SHOULD THE COMMISSION RULE ON THE DISPUTE IN ITR SECTION 4.2?

A. The Commission should adopt AT&T's language, as it is necessary for the completion of traffic to the right end office and ultimately the right end user.[11]

Issue 3b: What trunking and traffic routing arrangements

[11] As Ms. Pellerin explains in her testimony for Issue 2, Appendix ITR is a 13-state document that would be excluded from the ICA if the Commission determines that the 9-state template is the appropriate basis for the parties' ICA. To the extent Intrado might raise the same issue in the 9-state template, the Commission should adopt AT&T Florida's language in that context as well for the reasons described above.

should be used for the exchange of traffic when AT&T is the designated 911/E911 Service Provider?

Appendix 911: § 4.2.1

Appendix ITR: § 4.2

Q. PLEASE EXPLAIN AT&T FLORIDA'S POSITION REGARDING ISSUE 3B.

A. This issue involves traffic from Intrado's end users (if it had any) to AT&T Florida's PSAP customer (Scenario 1). The language in dispute requires Intrado to provide for the appropriate trunks and routing arrangements that should be used to interconnect to AT&T Florida's Selective Routers.

Q. DOES INTRADO'S PROPOSED LANGUAGE IN APPENDIX ITR SECTION 4.2 AFFECT THE ROUTING OF PSTN TRAFFIC WHEN AT&T FLORIDA IS THE DESIGNATED 911/E911 SERVICE PROVIDER?

A. Yes. Regardless of which carrier is providing 911 service, the correct trunking for PSTN traffic must be established, as I have previously stated in issue 3a. The Commission should rule that the

proposed AT&T Florida language is appropriate and should be used in the ICA. If Intrado does not build all of the appropriate trunk groups for each type of traffic, calls will not route correctly and may result in blocked calls.

Issue 4: What terms and conditions should govern points of interconnection (POIs) when:

a) Intrado is the designated 911/E911 service provider?

Appendix 911: § 2.16, 6.2.2, 6.3, 6.3.2, 6.3.5

Appendix 911 NIM: § 4.1, 4.1.1, 4.2, 4.2.1

b) AT&T is the designated 911/E911/ service provider?

Appendix 911: § 2.16, 3.3.2, 4.1.1, 4.2.2, 4.2.4

Appendix 911 NIM: § 2.2, 3.1.1, 3.2.1, 3.3.1, 3.3.2, 3.3.7

Appendix NIM: § 2.2, 2.3

Q. WHAT IS THE DISPUTE HERE?

A. The dispute is over the number and locations of Intrado's points of interconnection (POIs) to AT&T Florida (Scenario 2), as well as the definition of POI itself.

Q. WHAT IS A POI?

A. When two telecommunications companies interconnect their networks

together, facilities are physically connected, linking the two networks to one another. The point at which this connecting or linking takes place is known as the Point of Interconnection or POI. The physical linking of the two companies' facilities creates an end to end facility path that will allow each company to establish the trunking network between their switches. The POI is only created when a CLEC's facilities are physically connected to AT&T Florida's network.

Q. WHAT IS INTRADO'S PROPOSAL?

A. Intrado proposes that it be allowed to establish a single POI at a location that Intrado chooses in order to deliver 911 traffic to AT&T Florida, but that AT&T Florida be required to establish two POIs on Intrado's network to send calls to Intrado when Intrado is the 911 service provider.

Q. WHAT DOES AT&T FLORIDA PROPOSE?

A. AT&T Florida proposes that the parties interconnect their networks at the AT&T Florida Selective Router location(s) and send traffic to each other there. This position makes the most sense from an engineering and service viewpoint, as the parties will each have facilities at that location, as well as from a regulatory perspective, which requires a

carrier connecting to an ILEC under Section 251 to establish the facilities to connect to the ILEC network. I explain both of these points in further detail below.

Q. IS AT&T'S PROPOSAL CONSISTENT WITH THE WAY IT INTERCONNECTS WITH ADJACENT ILECS FOR ROUTING 911 CALLS TODAY?

A. Yes. AT&T Florida's proposed language is consistent with the way that other ILECs are interconnected to AT&T's Selective Router location.

Q. IS AT&T FLORIDA PROPOSING TO TREAT INTRADO THE SAME WAY IT TREATS ADJACENT ILECS?

A. Yes. AT&T Florida proposes to treat Intrado the same way, although pursuant to Section 251. Intrado's POI must be on the AT&T Florida network, instead of at the exchange area boundary, as it would be for a non-competing ILEC.

Q. WHAT PROBLEMS WOULD ARISE IF INTRADO DID NOT INTERCONNECT AT AT&T'S SELECTIVE ROUTER LOCATION?

A. If Intrado is not required to connect to AT&T Florida at AT&T Florida's

Selective Router, Intrado's proposed language in the 911 and 911 NIM Appendices would require all carriers to re-route their facilities from that Selective Router to the different POI that Intrado proposes, imposing costs and risking service interruptions for 911 traffic. 911 interruptions can cause loss of life and property. The risk seems unnecessarily high with Intrado's proposal, whereas AT&T's proposal will require only cross-connect changes and not a total facility re-route.

Q. ARE THERE OTHER PROBLEMS WITH INTRADO'S INTERCONNECTION PROPOSAL?

A. Intrado's proposed language is unfair and one-sided. To begin with, Intrado has proposed language that would allow it to establish a single POI but would require AT&T Florida to establish two POIs on Intrado's network. That is both unreasonable on its face and extremely unfair in practice. I am not an attorney, but it is my understanding that when a party seeks interconnection under Section 251(c)(2), it is the CLEC's obligation to supply the facilities and equipment necessary to reach the ILEC's network. Intrado seeks to turn that principle on its head, forcing AT&T Florida to provide all the facilities and equipment necessary to reach Intrado's network.

Q. ARE THERE INHERENT PROBLEMS WITH THE CONCEPT OF A

SINGLE POI IN A 911 ENVIRONMENT?

A. Yes. A single Point of Interconnection is also a single point of failure. Best practices, industry forums and the recent Post Hurricane Katrina Independent Panel all agree that redundant, diverse facilities should be established for 911 traffic. Intrado apparently agrees that diverse facilities should be used when AT&T Florida pays for them, but when Intrado is responsible for the costs involved it seems that Intrado no longer believes that such diversity is needed. AT&T recommends multiple POIs for 911 service, with one of them being at the Selective Router location. Intrado's language would allow them to establish a POI at a convenient location for Intrado and expect not only AT&T, but all carriers to move their facilities to the Intrado POI, possibly disrupting 911 service in the process.

Q. IF INTRADO IS TREATED AS A CLEC AND ALLOWED TO PICK ITS POI, WHY SHOULD IT BE REQUIRED TO INTERCONNECT AT AT&T'S SELECTIVE ROUTER LOCATION?

A. 911 traffic is different than regular PSTN voice traffic and is subject to more stringent guidelines for network diversity and reliability, as I previously mentioned. Also, other carriers will be affected by where Intrado interconnects with AT&T, since all those other carriers are

already connect to AT&T Florida's Selective Router, but would need to re-route facilities and establish new connections if Intrado established a POI somewhere else..

Q. DO ANY OF THESE PROBLEMS YOU HAVE DISCUSSED EXIST WITH AT&T'S PROPOSAL?

A. No.

Q. WHAT IS THE DISPUTE WITH INTRADO'S PROPOSED LANGUAGE IN SECTION 2.2 OF APPENDIX NIM?

A. The dispute centers on where the POI is located for PSTN traffic. As I have stated earlier in my testimony a requesting CLEC must establish a POI on the ILEC's network. In the TRRO at ¶ 138, the FCC states that CLECs

> can choose to locate their switches close to other competitors' switches, maximizing the ability to share costs and aggregate traffic, or close to transmission facilities deployed by other competitors, increasing the possibility of finding an alternative wholesale supply.

Also, according to the FCC[12], if a CLEC does want to interconnect at

[12] FCC First Report and Order - ¶¶ 199, 200, 209 – "Of course a requesting carrier that wishes a 'technically feasible' but expensive interconnection would, pursuant to section 251(d)(1), be required to bear the cost of that interconnection, including a reasonable profit." "[T]o the extent incumbent LECs incur costs to provide interconnection or access under sections

any technically feasible point, they must bear the cost of such interconnection arrangement. Intrado's language ignores the requirement that they must establish their POI at an AT&T Florida End Office or Tandem building for PSTN traffic. The Commission should adopt AT&T's language, as it follows existing law and will minimize potential disputes when establishing interconnection arrangements between the parties.

Issue 4: What terms and conditions should govern points of interconnection (POIs) when:

c) Intrado requests the use of a mid-span meet point?

Appendix NIM: § 3.3.1.1

Q. WHAT IS THE DISPUTE HERE?

A. This is part of issue 2 and the 13 State ICA NIM Appendix for PSTN traffic. It is my understanding that Intrado's proposed language for a mid-span meet point does not comport with federal law. Intrado ignores the Act and grants themselves "sole discretion" as to when, where, and how to establish a POI. Section 251(c)(2)(B) of the Act is very clear

251(c)(2) or 251(c)(3), incumbent LECs may recover such costs from requesting carriers." "Moreover, because competing carriers must usually compensate incumbent LECs for the additional costs incurred by providing interconnection, competitors have an incentive to make economically efficient decisions about where to interconnect."

that incumbent LECs must provide for interconnection at points "within the carrier's network."

Q. ARE THERE OTHER PROBLEMS WITH INTRADO'S PROPOSED LANGUAGE?

A. Yes. As in other areas of the ICA, Intrado is not only shifting its costs to AT&T Florida, they are attempting to limit AT&T's ability to be compensated. Since this is PSTN traffic, it will include all possible traffic types except 911. Intrado's language clearly states that AT&T Florida is responsible for 50% of Intrado's facility cost and "*will not bill the other Party for any portion of those facilities*" – even if Intrado uses 90% of the facilities for traffic and AT&T Florida uses only 10%. This is another attempt by Intrado to avoid paying AT&T for the services it provides.

Issue 5

a): Should specific terms and conditions be included in the ICA for inter-selective router trunking? If so, what are the appropriate terms and conditions?

Appendix 911: § 7.4.1.4, 7.4.1.5

b): Should specific terms and conditions be included in the

ICA to support PSAP-to-PSAP call transfer with automatic location information ("ALI")? If so, what are the appropriate terms and conditions?

Appendix 911: § 1.3, 1.4

Q. WHICH SCENARIO IS INVOLVED WITH THIS ISSUE?

A. This issue concerns Scenario 3 and call transfers between AT&T Florida and Intrado Selective Routers for their respective PSAP Customers.

Q. WHAT IS THE DISPUTE?

A. Intrado wants mandatory PSAP-PSAP call transfer with ALI everywhere. AT&T's position is that terms for such call transfer capability do not belong in an ICA, but in any event it should not be done with fixed contract terms between AT&T and Intrado. Rather, the PSAPs at issue must be involved and all parties must work together.

Q. IS IT SAFE TO ASSUME THAT ALL CARRIERS THAT WANT THIS CAPABILITY WILL WANT IT SET UP IN THE SAME WAY, i.e., THE WAY DICTATED BY INTRADO'S PROPOSED LANGUAGE?

A. No. When PSAPs do formally request such call transfer capability, they

may not all want to set it up the same way. Different PSAPs may want different arrangements. All parties need to work together to meet the specific desires of the affected PSAPs.

Q. WOULD AT&T FLORIDA INCUR COSTS TO IMPLEMENT SUCH A CAPABILITY, AND IF SO, DOES INTRADO'S PROPOSED LANGUAGE PROVIDE FOR ANY COMPENSATION?

A. Yes, AT&T Florida would incur costs, but no, Intrado's proposed language does not provide for any compensation to AT&T Florida. Implementing this capability would require AT&T Florida to incur costs for facilities, trunks, database storage, extensive translations and testing. Such costs should be incurred only at the PSAP's request, since there would otherwise be no need to incur the expense of providing facilities and trunks for a capability that the PSAP didn't ask for or intend to use. Moreover, the engineering and implementation of such an architecture must be designed and implemented in conjunction with the PSAP as well as any other relevant government agency. Unlike facility and trunking arrangements in a Section 251 ICA, these facilities and trunks would be deployed not to effectuate interconnection between AT&T Florida and Intrado, but rather solely to meet a specific request of the E911 Customers, who are not a party to this agreement. This is one reason why such provisions should not be placed in a

Section 251 ICA. Intrado's language would cut the PSAP out of the process and require that facilities and trunks be provisioned and implemented only one way every time, despite the fact that the PSAPs may want something different, new or unique. Alternatively, Intrado may push to represent only the needs of Intrado's 911 Customer, at the expense of the others, who also deserve a say in how this traffic is routed. As Intrado itself has recognized, "Increasingly, PSAPs and regional authorities are demanding customization"[13].

Q. DOES INTRADO'S PROPOSAL ALSO IMPROPERLY SHIFT COSTS TO AT&T FLORIDA?

A. Yes. Under the established practice today, when AT&T Florida incurs the costs to implement the capability for Selective Router-to-Selective Router call transfers, the requesting PSAP compensates AT&T Florida for those costs. Under Intrado's proposal, however, AT&T Florida would be required to incur all the costs to implement this capability, regardless of whether any PSAP requested it, yet neither the PSAP nor Intrado would compensate AT&T Florida for any of its costs. In effect, Intrado is trying to force AT&T Florida to spend the money to implement new capabilities so that Intrado can then attract PSAP customers by

[13] Intrado December 18, 2006 letter, included as Exhibit MN-5 to my testimony.

promising that those capabilities will be available at reduced rates.

Q. IF INTRADO'S LANGUAGE ISN'T ACCEPTED THEN WOULDN'T AT&T FLORIDA JUST REFUSE TO IMPLEMENT THE FACILITIES AND TRUNKS REQUIRED TO SERVE THE PSAPS?

A. No. AT&T Florida would not refuse implementation. However, to ease Intrado's concern on this issue, AT&T Florida has proposed language in Section 1.4 of the 911 Appendix that would require both Intrado and AT&T Florida to work together and enter into a separate agreement – with the assistance of the PSAPs and necessary government agencies – to effectuate such an arrangement. Thus, accepting AT&T Florida's proposed language would accomplish two goals. First, it would require AT&T Florida to work with Intrado, which it would do anyway; and second, it would allow PSAPs to remain in the picture to ensure that the specific functionalities that they request are provided in a manner acceptable to them.

Issue 6:

a) Should requirements be included in the ICA on a reciprocal basis for:
1) trunking forecasting;
2) ordering; and
3) service grading?

b) If not, what are the appropriate requirements?

Appendix ITR: § 6.1, 8.6, 8.6.1

Attachment 3: § 4, 5, 6

Q. SHOULD FORECASTING REQUIREMENTS BE INCLUDED IN THE INTERCONNECTION AGREEMENT?

A. Yes, they should, but they should also be fair and reciprocal. In order to insure that AT&T Florida has enough trunks to meet the demand of a requesting carrier's traffic, a CLEC must provide its trunk forecast. AT&T's language follows industry guidelines, principles and standards for trunk planning and engineering. AT&T will make available trunk forecast information to Intrado, but the dispute centers around the initial forecast that AT&T Florida requests of Intrado in ITR Section 6.1. It is very important to size trunk groups properly before adding new traffic.

AT&T Florida's trunk forecast will have no meaning for Intrado, from an initial implementation perspective. Intrado's network is the new network and will have to be sized. AT&T Florida's network is already sized to handle the traffic loads that are presented on a minute-by-minute basis every day.

Q. DOES INTRADO'S PROPOSED LANGUAGE FOR ORDERING

CREATE PROVISIONING PROBLEMS?

A. Yes. Intrado's proposed language would require AT&T Florida to follow whatever ordering procedures that Intrado posts on its website (as well as pay whatever rates Intrado wishes to charge), while AT&T Florida's ordering processes and rates are clearly spelled out and incorporated into the ICA. AT&T Florida has proposed fair and reciprocal ordering, forecasting, and trunk grading language in Sections 4 and 6 of the 911 Appendix, Section 4.9 of 9 State Attachment 3 and Sections 8.6 and 8.6.1 of the ITR Appendix, using standard industry accepted systems and processes (e.g., EXACT system and an Access Service Request (ASR) to place orders).

Issue 7:

a) Should the ICA include terms and conditions to address separate implementation activities for interconnection arrangements after the execution of the interconnection agreement? If so, what terms and conditions should be included?

Appendix 911 NIM: § 5.1, 5.3

Q. WHAT IS BEING DISPUTED IN THE ISSUE FOR 911 NIM SECTION 5.1?

A. AT&T Florida's language in 911 NIM Section 5.1 is necessary when

Intrado establishes facility and trunking arrangements at a new AT&T Selective Router. Intrado seeks to omit such language, but without it there would be no way to establish any new interconnection arrangements for Intrado. The language AT&T proposes is standard language that it offers to all CLECs using established practices that provide for advance notification, using systems that have worked successfully for years and would meet both Intrado's and AT&T's network needs.

Q. HOW SHOULD THE COMMISSION RULE ON THIS ISSUE?

A. The Commission should approve AT&T Florida's language, as it is necessary to establish interconnections to AT&T's Selective Routers.

Q. WHAT IS BEING DISPUTED IN THE ISSUE FOR 911 NIM SECTION 5.3?

A. AT&T Florida's language in 911 NIM Section 5.3 is necessary when either party wishes to add or remove switches from their networks. From time to time, with either growth or new technology, a switch is added to the network or retired if it has been deemed to be manufactured discontinued. These projects usually take up to a year, as they require long range planning, capital expenditures and require

coordination with other carriers.

Q. WHAT PROBLEMS ARISE IN USING INTRADO'S PROPOSED LANGUAGE?

A. Intrado has edited the NIM Appendix Section 5.3 and has attempted to make it the language of Section 5.1, which as I just stated is meant to notify AT&T when Intrado intends to establish additional interconnections. Intrado left in the Section 5.3 language regarding the removal and installation of additional switches. However, AT&T's Section 5.3 language allows for a 120 day interval to notify the other party of the intent to install or remove switching machines that require coordinated conversion activity. Replacing a switching system is a very large task and the thirty day period suggested by Intrado, is an insufficient amount of time to prepare for such a task.

Q. HOW SHOULD THE COMMISSION RULE ON THIS ISSUE?

A. AT&T asks the Commission to rule in favor of AT&T to maintain the necessary language for managing the network elements and provide for good service.

Issue 8:

b) What terms and conditions should be included in the ICA to address access to 911/E911 database information when Intrado is the Designated 911/E911 Service Provider?

Appendix 911: § 7.3.1, 7.3.3

Q. WHAT IS THE DISPUTE HERE?

A. This issue concerns Scenario 3 for the ALI database responsibilities for PSAP-PSAP call transfers. This issue is closely related to Issue 5, where Intrado wants this feature to be included in the ICA. As stated earlier, AT&T Florida believes that the PSAPs of both parties must agree to any call transferring, not just Intrado's. Again, Intrado's proposed language would cut the PSAP out of the process and require database entries to be made regardless of whether both PSAPs agreed to receive these calls or not.

Q. HOW SHOULD THE COMMISSION RULE ON THIS ISSUE?

A. The Commission should adopt AT&T's language, as it is fair to all parties. The PSAPs are the 911 customer and this service is specifically for PSAP-PSAP call transfers. They must be involved with the process and AT&T's language allows for that provision.

Issue 9: To the extent not addressed in another issue, which terms and conditions should be reciprocal?

Appendix 911: § 3.1,, 7.1, 7.1.1, 9.2, 9.4, 9.5

Q. WHAT IS THE ISSUE ASSOCIATED WITH THE DISPUTED LANGUAGE IN THE 911 APPENDIX SECTION 3.1?

A. This issue deals with each Party treating the other Party's end user at parity with how they treat their own end user. It is AT&T's position that the 911 customer is not an end user, but rather is in a separate category altogether. Section 3 provides terms and conditions for AT&T Florida's responsibilities when AT&T Florida is the 911 service provider. This is Scenario 1, where Intrado's end users are dialing 911 to access AT&T Florida-served PSAPs. Since this is a service provided to Intrado's end users, it is appropriate that AT&T Florida provide such service at parity with what it provides its own end users. Since AT&T Florida's E911 Customer (i.e., the PSAP) is not dialing 911, it does not make sense to include E911 Customers in this parity provision. AT&T has proposed language to Intrado to resolve this issue, but without response.

Q. HOW SHOULD THE COMMISSION RULE ON THIS ISSUE?

A. The Commission should adopt AT&T's language, as it is fair to both parties. AT&T's language provides for parity in the treatment of the end user dial-tone customers who rely on 911 services for their safety. Intrado seeks to define "End User" in an inappropriate way which would include parties that are not customers that actually utilize 911 services. The measure of parity is and must be based on the true end user, as it is their lives and property at stake when they make that 911 call.

Q. WHAT IS THE ISSUE ASSOCIATED WITH THE DISPUTED LANGUAGE IN THE 911 APPENDIX SECTIONS 7.1 AND 7.1.1?

A. This issue concerns the language that AT&T proposes in these sections pertaining to the coordination and provisioning of facilities and trunks, as well as testing all of them prior to passing live traffic. AT&T believes this is a fundamental step in providing service and that AT&T's language is in the best interest of public safety and the general public at large.

Q. HAS INTRADO OFFERED LANGUAGE THAT ACCOMPLISHES

THESE TASKS?

A. No.

Q. HOW SHOULD THE COMMISSION RULE ON THIS ISSUE?

A. The Commission should adopt AT&T's language, as it is especially necessary for 911 traffic and the public at large.

Q. WHAT IS THE ISSUE ASSOCIATED WITH THE DISPUTED LANGUAGE IN THE 911 APPENDIX SECTIONS 9.2, 9.4 AND 9.5?

A. This issue deals with any state specific forms that may be required to be filled out for any carrier that provides service and whose end users will be originating 911 calls. AT&T has offered language to Intrado that, if accepted, will address this issue.

Q. HAS INTRADO OFFERED LANGUAGE TO ADDRESS ANY STATE SPECIFIC 911 REQUIREMENTS?

A. No.

Q. HOW SHOULD THE COMMISSION RULE ON THIS ISSUE?

A. The Commission should adopt AT&T's language, as it is fair to both parties. AT&T's language allows for a generic term to accommodate any state form that may exist today or in the future. Intrado's language makes reference to the Exhibit 1, which is in use in some of the AT&T Southwest states, but not in all of the states where AT&T provides service. The term that AT&T has proposed is more appropriate, since it can conform to any requirements necessary.

Issue 10: What 911/E911- related terms should be included in the ICA and how should those terms be defined?

Appendix 911: § 2.3, 2.15, 2.19

Q. WHAT IS THE ISSUE ASSOCIATED WITH THE DISPUTED LANGUAGE IN THE 911 APPENDIX SECTIONS 2.3?

A. The language in 911 Appendix Section 2.3 concerns a definition for 911 trunk, which is changed to meet the needs of Intrado, since they are only using Selective Routers and not End Office switches. AT&T has proposed the generic term "switch" in place. This language has been proposed to Intrado, but Intrado has not responded.

Q. WHAT IS THE ISSUE ASSOCIATED WITH THE DISPUTED LANGUAGE IN THE 911 APPENDIX SECTIONS 2.15 AND 2.19?

A. The dispute involves language proposed by Intrado that is vague and ambiguous, even though Intrado has agreed to other language in another state. AT&T's proposed language is the language Intrado agreed to in the other state. It seems logical that if Intrado has agreed to this language before the issue should be resolved. However, it remains open until Intrado determines that it will either accept it or let the Commission decide. The language that both parties have already agreed to elsewhere is the appropriate language.

Issue 30:

a) Should the definitions of Central Office Switch and Tandem Office Switch include selective routers or 911/E911 tandem switches?

Appendix GTC §§ 1.1.42

b) Should the definition of Tandem Office Switch include emergency call routing?

Appendix GTC § 1.1.42.2

Q. WHAT IS THE DISPUTE IN GTC 1.1.42?

A. Intrado's proposed language in GTC Section 1.1.42 creates a new category for the PSTN. Intrado's language provides that any switching system that may be connected is also part of the PSTN.

That opens up sub-switches, such as PBXs, which are definitely not a part of the PSTN. There are guidelines defining the minimum requirements for a class 5 switching system. Telcordia publishes these requirements in the Local Switching Systems Generic Requirements (LSSGR), which is a multi volume document that defines all aspects of a switching system. Intrado's language should not be adopted as it changes the meaning of the definition.

Q. WHAT IS THE DISPUTE IN GTC 1.1.42.2?

A. Intrado has proposed language that is technically incorrect. A tandem switch is sometime referred to as a class 4 switch. The basic function of a tandem switch is to switch calls or traffic between other switches - that is, calls from one switch to another switch for which there is no available direct trunk path connecting those switches. A tandem switch accomplishes this by connecting a trunk, which comes from one switch, to a trunk that goes to another switch. A tandem switch does this for all types of traffic for which it is designed and provisioned. However, it does not function as a Selective Router.

Q. HOW SHOULD THE COMMISSION RULE IN THIS ISSUE?

A. The Commission should adopt AT&T's language for these definitions, which is technically correct and depicts the proper function of the switch that is described. Intrado's does not.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, but I reserve the right to supplement my testimony in the event new issues arise.

AT&T FLORIDA

REBUTTAL TESTIMONY OF MARK NEINAST

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 070736-TP

MAY 28, 2008

Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH AT&T ("AT&T"), AND YOUR BUSINESS ADDRESS.

A. My name is Mark Neinast. My business address is 308 S. Akard, Dallas, Texas 75202. I am employed by AT&T Services, Inc. as an Area Manager – Regulatory Relations to AT&T's Network Planning and Engineering Department.

Q. ARE YOU THE SAME MARK NEINAST THAT FILED DIRECT TESTIMONY ON APRIL 21, 2008?

A. Yes.

Q. PLEASE DESCRIBE THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am offering rebuttal testimony on the network and technical aspects of Intrado's Petition for Arbitration, Docket No. 070736-TP and the direct testimony of one of its witness, Mr. Hicks. Specifically, I address Issues 3(a-b), 4, 7(a) and 8(a) in rebuttal. Issue 8(a) was designated as "agreed to" at the time I filed my direct testimony, but that status has been changed as noted by Ms. Pellerin. My

testimony is intended to operate in conjunction with the testimony of AT&T Florida witness Ms. Pellerin.

Q. CAN YOU PLEASE SUMMARIZE THE KEY POINTS IN THIS ARBITRATION, FROM A NETWORK PERSPECTIVE?

A. Yes. From a network perspective, there are several key issues that must be resolved between Intrado and AT&T Florida that affect both the cost of providing network services and the actual quality of 911 service itself. Intrado attempts to create a regulatory arbitrage, whereby AT&T Florida must subsidize Intrado's network architecture by placing a Point of Interconnection ("POI") beyond the ILEC network on Intrado's network when Intrado is the E911 System Service Provider, in all other situations rearrange the currently diverse AT&T Florida 911 facilities to establish a POI in a central office other than the AT&T Florida Selective Router location, establish an entirely new methodology of provisioning service to end users to implement Class Marking (which effectively makes each End Office a Selective Router) and forego all compensation for providing network services.

Issue 3a: What trunking and traffic routing arrangements should be used for the exchange of traffic when Intrado is the designated 911/E911 Service Provider?

Issue 3b: What trunking and traffic routing arrangements should be used for the exchange of traffic when AT&T is the designated 911/E911 Service Provider?

Q. IS IT APPROPRIATE FOR INTRADO TO REDESIGN THE ORDERING AND PROVISIONING OF SERVICE ORDER SYSTEMS FOR AT&T FLORIDA?

A. No. On page 10 of Mr. Hicks' testimony, he refers to using tax rate data and 911 collection data as a means of provisioning local service for AT&T Florida. As I stated in my direct testimony on Issue 3a regarding Class Marking, this system is not in use today because it is manual, unreliable and prone to errors. The public's expectation of 911 service is that it should be automatic, reliable and error free.

Q. MR. HICKS' EXPLANATION FOR A SPLIT WIRE CENTER IS THAT THE CURRENT ILEC MODEL USING INDUSTRY STANDARDS IS AN "UNREASONABLY COSTLY OPTION"[1]. PLEASE RESPOND.

A. In a switching network, each switch has complex translations tables to maintain the services for each End User customer, as well as routing instructions for each possible call scenario. Mr. Hicks' suggestion is to create additional complexities to these translations tables, rather than use the existing centralized Selective Router Data Base (SRDB). As I stated in my direct testimony, there are reliability concerns with Class Marking and the Commission should reject this concept. This data is used in call processing and is critical to the completion of 911 calls.

Q. MR. HICKS STATES ON PAGE FOURTEEN OF HIS DIRECT TESTIMONY THAT CLASS MARKING IS THE OPTIMAL WAY FOR CARRIERS TO ROUTE

[1] Hicks Direct at page 10, line 22

TRAFFIC TO THE APPROPRIATE 911 PROVIDER. IS THIS ACCURATE FROM A TECHNICAL STANDPOINT?

A. No. Intrado's recommendations are simply an attempt to make AT&T Florida's 911 service cost prohibitive and Intrado's 911 service more cost competitive. The current AT&T Florida 911 system is one of the best in the nation. To intentionally make service degradation concessions for Intrado's financial benefit would not serve the public at large in Florida and does not make sense. Intrado seeks to profiteer from 911 services by creating complex End User translations table changes that are unwieldy, manual and not recommended by NENA (as stated in my direct testimony at page 28). End Users rely on this system for their safety. The risks are too high, in terms of potential loss of life and property to make the changes Intrado advocates.

Q. MR. HICKS CONTENDS (P. 17) THAT THE PRIMARY SELECTIVE ROUTING SOLUTION HAS A NEGATIVE PUBLIC SAFETY EFFECT. DO YOU AGREE?

A. No. The basis for Mr. Hicks' argument seems to be that the Primary Selective Router method introduces an additional point of failure in the network. However, the only additional network element being introduced is Intrado's Selective Router, which Mr. Hicks contends is necessary to promote quality and reliability.[2] Additionally, Intrado does not oppose the Primary Selective Router methodology as long as *Intrado* performs as the Primary Selective Router in all circumstances. If Mr. Hicks was truly concerned about introducing additional points of failure in

[2] Hicks Direct at page 11, lines 14,15

the network, then he would accept AT&T Florida's fair proposal that the party that serves the majority of the End Users serve as the primary Selective Router. That way the fewest possible calls receive Selective Router switching twice. Mr. Hicks' arguments do not hold water.

Q. DOES INTRADO HAVE EXPERIENCE WITH CLASS MARKING?

A. I do not believe so. Intrado does not operate end office switches, and therefore it would not implement Class Marking in its own network. Furthermore, it is my understanding that Intrado does not require its carrier customers to implement Class Marking in their networks either.

Q. IS THERE A LEGAL REASON WHY CLASS MARKING SHOULD NOT BE REQUIRED?

A. Yes. As Mr. Hicks is fond of mentioning, the Section 251 rules only require ILECs to offer interconnection that is at least equal in quality to that provided to itself, an affiliate, or another carrier.[3] AT&T Florida is not under any obligation to provide interconnection that it does not provide to itself or to another party. AT&T Florida does not provide Class Marking to itself or another carrier, and therefore it is not obligated to do so for Intrado.

Q. WHAT DOES AT&T FLORIDA PROPOSE TO DO WHEN INTRADO SERVES A PSAP IN A WIRE CENTER THAT IS NOT SPLIT?

[3] Section 251(c)(2)(c).

A. In such instances, it is not necessary to do either Class Marking or Primary Selective Routing. Instead, AT&T Florida will establish a direct trunk group to the Intrado Selective Router without providing any additional switching. The parties do not have a dispute regarding such instances.

Q. IS MR. HICKS CONFUSED IN REGARD TO ROUTING DIFFERENT TYPES OF TRAFFIC OVER A FIBER MEET, AS HE DESCRIBES ON PAGE 19 OF HIS DIRECT TESTIMONY?

A. Yes. Mr. Hicks states that AT&T Florida 's practices would restrict the type of 911 traffic to be included on the fiber meet facility. This is not the case. AT&T Florida would only want Intrado to establish the appropriate trunk groups for each category of traffic, i.e. local exchange, inter-LATA interexchange, 911, etc.

Q. MR. HICKS MAKES A STATEMENT THAT AT&T FLORIDA'S PROPOSED LANGAUGE WOULD REQUIRE INTRADO TO DOCUMENT SPECIFICATIONS AND CONFIGURATIONS OF INTRADO'S 911 CUSTOMER.[4] IS THIS SO?

A. I am not aware of any customer proprietary information that Intrado would be required to provide to AT&T Florida. Since Mr. Hicks does not cite to an appendix or section, it is hard to specifically rebut his claim. However, I believe that he is mistaken.

[4] Hicks Direct at page 20, lines 9 - 11

Q. ON PAGE 20, LINES 18-23 AND PAGE 21, LINES 1-3, MR. HICKS DESCRIBES THE TERMS "DESIGNATED" AND "PRIMARY" TO BE USED WHEN DETERMINING WHICH CARRIER IS SERVING THE PSAP. DOES THIS TESTIMONY RELATE TO DISPUTED LANGUAGE?

A. Since Mr. Hicks has chosen not to cite the language in question, I can only search through the 911 appendix for any use of the word "primary". I have not found any use of the word "primary" in respect to which carrier serves the 911 customer. There are several uses of the word "primary" and all of these are appropriate uses of the word that describe the relationships that are required for this interconnection. If Mr. Hicks' suggestion is that the word "primary" be stricken from the ICA, there would be holes in the agreement that would require much interpretation by the parties on an ongoing basis or in dispute resolution.

Q. ON PAGE 26 OF MR. HICKS' TESTIMONY, HE MAKES REFERENCE TO MISDIRECTED 911 CALLS. IS THIS INCONSISTENT WITH INTRADO'S PUSH FOR CLASS MARKING OR LINE ATTRIBUTE ROUTING, AS IT IS SOMETIMES REFERRED TO?

A. Yes. Mr. Hicks advocates Class Marking throughout his entire testimony, in spite of the fact that this technique is technically inferior and fraught with potential for misrouted 911 calls. However, in this section of testimony regarding PSAP-PSAP transfers, misrouted traffic is the reason Mr. Hicks uses to establish these customer specific trunk groups. In my experience of routing 911 traffic, there are very few misrouted calls and none of them were resolved using a PSAP-PSAP transfer trunk group. PSAP-PSAP transfer trunk groups are complicated, costly,

and AT&T Florida's position is they are only needed when a PSAP requests them. That is why these arrangements should be outside of the ICA and should involve the requesting PSAP(s).

Issue 4: What terms and conditions should govern points of interconnection (POIs) when:

a) Intrado is the designated 911/E911 service provider?
b) AT&T is the designated 911/E911 service provider?
c) Intrado requests the use of a mid-span meet point?

Q. MR. HICKS STATES ON PAGE 16 OF HIS DIRECT TESTIMONY THAT AT&T FLORIDA HAS PERMITTED THE SAME TYPE OF INTERCONNECTION THAT INTRADO IS REQUESTING WITH OTHER ILECS. IS THIS TRUE?

A. No. When ILECs interconnect with each other, they are not in competition with each other. An ILEC provides service within its own local exchange area and does not compete for customers in another carrier's exchange. Each ILEC pays for cable facilities to the edge of their exchange (Exchange Area Boundary) and traffic is typically "in balance" between each carrier. Intrado is a CLEC, not an ILEC, is in direct competition with AT&T Florida, and does not have an Exchange Area Boundary. Also, if Intrado becomes the 911 provider, there will be one-way traffic from AT&T Florida to Intrado, which is not a balance of traffic.

With CLECs, the Telecom Act of 1996, Section 251(c) (along with several subsequent FCC Orders) governs the rules of interconnection. There are many concessions ILECs must provide to CLECs as a part of an interconnection, e.g. certain subsidies given at TELRIC rates, collocation in ILEC equipment rooms, and rules to establish an interconnection agreement that are indicative of

competitive LEC (or CLEC) interconnections. Intrado is certificated as a CLEC and AT&T Florida should not be obligated to treat Intrado as an ILEC. If another ILEC were to compete within AT&T Florida's local exchange, it would be entering AT&T Florida's market as a CLEC and would be required to establish a separate interconnection under Section 251(c). For the purposes of an ILEC's CLEC operation, the rules of ILEC interconnection are no longer applicable. This is consistent with how AT&T functions in its CLEC role when interconnecting with other ILECs.

Q. MR. HICKS STATES ON PAGES 21-24 OF HIS DIRECT TESTIMONY THAT INTRADO WANTS TO MIRROR THE TYPE OF INTERCONNECTION USED WITH OTHER ILECS. IS INTRADO AN ILEC?

A. No. As I stated earlier, Intrado is a CLEC and must interconnect with AT&T Florida following the rules of Section 251(c). The rules of interconnection are different for CLECs than for ILECs. Intrado wants to be treated as a CLEC in some instances, and as though it were an ILEC in others, depending on which classification it finds most advantageous in any given situation. Section 251(c) does not allow this approach. Instead, Intrado must stay within the system designed for CLEC interconnection. Facility costs are a significant outlay for a carrier. By stating that this type of interconnection "yields the most efficient and cost effective interconnection arrangement"[5], Intrado seeks to shift its costs to AT&T Florida in an attempt to create a competitive edge for Intrado's 911

[5] Hicks Direct at page 22, lines 6 - 8

service. I hope that the Commission is not misled by this maneuver into allowing Intrado an ILEC interconnection for a CLEC business model.

Q. ARE THERE OTHER PROBLEMS WITH INTRADO'S INTERCONNECTION PROPOSAL?

A. Yes. When a CLEC seeks interconnection under Section 251(c)(2), it is the CLEC's obligation to supply the facilities and equipment necessary to reach the ILEC's network. Intrado seeks to turn that principle on its head, forcing AT&T Florida to provide all the facilities and equipment necessary to reach Intrado's network.

Q. WHY DID THE FCC ESTABLISH DIFFERENT RULES FOR CLECS?

A. When ILECs interconnect, the distance between them is typically very short and the cost is minimal to both sides. The FCC noted that CLECs could control such facility costs in a manner that the ILEC cannot, by deciding where to place its network.[6]

Q. ARE THERE OTHER PROBLEMS WITH INTRADO'S PROPOSED LANGUAGE?

A. Yes. As in other areas of the ICA, Intrado is not only shifting its costs to AT&T Florida, it is attempting to limit AT&T Florida's ability to be compensated. Since

[6] 12 FCC First Report and Order - ¶¶ 199, 200, 209

this is Public Switched Telephone Network ("PSTN") traffic, it will include all possible traffic types except 911. Intrado's language clearly states that AT&T Florida is responsible for 50% of Intrado's facility cost and "*will not bill the other Party for any portion of those facilities*" – even if Intrado uses 90% of the facilities for traffic and AT&T Florida uses only 10%. This is another attempt by Intrado to avoid paying AT&T Florida for the services it provides.

Q. MR. HICKS MENTIONS, ON PAGE 24 OF HIS DIRECT TESTIMONY, AN FCC RULE REGARDING THE USE OF A MID-SPAN MEET POINT. DOES THIS RULE STILL APPLY?

A. While I am not an attorney, my reading of the authority is that the FCC's First Report and Order made the comment that a mid-span meet point was technically feasible and something that the ILEC could provide. However, subsequent orders from the FCC treat the entire facility as an entrance facility that the CLEC controls and is not impaired from ordering from third parties. In this regard, the FCC's Triennial Review Remand Order ("TRRO") states the following at 138:

> As we noted in the *Triennial Review Order*, entrance facilities are used to transport traffic to a switch and often represent the point of greatest aggregation of traffic in a competitive LEC's network. Because of this aggregation potential, entrance facilities are more likely than dedicated transport between incumbent LEC offices to carry enough traffic to justify self-deployment by a competitive LEC. Moreover, competitive LECs have a unique degree of control over the cost of entrance facilities, in contrast to other types of dedicated transport, because they can choose the location of their own switches. For example, they can choose to locate their switches close to other competitors' switches, maximizing the ability to share costs and aggregate traffic, or close to transmission facilities deployed by other competitors, increasing the possibility of finding an alternative wholesale supply. In addition, they often can locate their switches close to the incumbent LEC's central office, minimizing the length and cost of entrance facilities.

The facility costs for Intrado are under Intrado's control, since Intrado can place its switch in close proximity to the area that it will be serving.

Q. MR. HICKS STATES ON PAGE 25 OF HIS TESTIMONY THAT INTRADO HAS THE RIGHT TO A SINGLE POI AT ANY TECHNICALLY FEASIBLE POINT ON AT&T FLORIDA'S NETWORK. IS THIS IN THE BEST INTEREST OF A 911 NETWORK?

A. No. For normal voice traffic, a single POI is an economical way for a new entrant CLEC to establish an interconnection. However, a single Point of Interconnection is also potentially a single point of failure. Normally, AT&T Florida would not meddle with where a CLEC wants to place its POI. However, AT&T Florida has a vested interest in the reliability of Intrado's network architecture because AT&T Florida's end users will be required to rely on Intrado's ability to properly route 911 traffic to the correct PSAP. There is an extremely large investment by *all carriers* that have established 911 trunks to the AT&T Florida Selective Router using diverse facilities.

To allow Intrado to place its single POI in any other place will require *all carriers* to establish new diverse facilities at some arbitrary location of Intrado's choosing. This is not only an unsound business decision for *all carriers*, but has the potential for a major FCC Reportable Service Disruption[7] if allowed to occur.

[7] The FCC has stringent guidelines for reporting Service Disruptions and all 911 outages with a duration equal to thirty minutes or longer must be reported to the FCC. An outage is defined as a significant degradation in the ability of an end user to establish and maintain a channel of communications as a result of failure or degradation in the performance of a communications

Again, AT&T Florida's end users rely on 911 service for their safety, and it would not be prudent to allow Intrado to arbitrarily choose a POI at any location other than the Selective Router location. If Intrado chooses to have a second or more POIs, then there is no problem building out to accommodate these requests, as long as it's coordinated properly to avoid an outage.

Q. YOU'VE TESTIFIED REGARDING THE LEGAL OBLIGATION FOR THE POI TO BE ON THE ILEC'S NETWORK. HAS THE FCC SPECIFICALLY ADDRESSED THIS ISSUE?

A. Yes. In an Order dealing with the proper cost demarcation point of facilities for 911 traffic (which is essentially what the POI is), the FCC determined that the Selective Router is the proper demarcation point.[8]

Issue 7: a) Should the ICA include terms and conditions to address separate implementation activities for interconnection arrangements after the execution of the interconnection agreement? If so, what terms and conditions should be included?

---

provider's network. Degradation differs from the term "outage" in that it connotes a reduction in the quality of service that could be perceived by some (but not necessarily all of the) users as a total outage. The FCC has categorized four types of 911 outages: 1) 900,000 Potential User Minutes when failure is not at the PSAP location and no reroute for all end users; 2) Loss of 911 call processing capabilities in one or more E-911 tandems/ selective routers; 3) Isolation of one or more end-offices or host /remote clusters; 4) Loss of ANI/ALI and/or a failure of Phase II equipment and potentially affecting at least 900,000 User-Minutes.

[8] *In the Matter of Revision of the Commission's Rules To Ensure Compatibility with Enhanced 911 Emergency Calling Systems, Request of King County, Washington,* CC Docket No. 94-102, *Order on Reconsideration,* (rel. July 24, 2002, ¶ 4.

Q. ON PAGE 30 OF MR. HICKS' TESTIMONY, HE STATES THAT AT&T FLORIDA SHOULD NOTIFY INTRADO OF ANY NETWORK CHANGES. IS THIS PART OF THE LANGUAGE THAT INTRADO HAS DISPUTED IN APPENDIX 911 NIM, SECTIONS 5.1 AND 5.3?

A. Yes. As I stated in my direct testimony, Section 5.1 pertains to Intrado establishing a new interconnection, possibly with an AT&T Florida Selective Router, which is a minor change. Section 5.3 states "Either Party may add or remove additional switches. The Parties shall provide ***30*** **120** days written notice to establish **such** ***additional*** Interconnection ***arrangements or re-arrangements of existing interconnections***; and the terms and conditions of this Agreement will apply to such Interconnection." (AT&T's proposed language is **bold underlined** and Intrado's proposed language is ***bold italics.***) AT&T Florida believes that each party should notify the other within 120 days, so that these major changes to the network can be coordinated and all of the details worked out to avoid a service outage.

Intrado has rejected AT&T Florida's language, and now Mr. Hicks is complaining that Intrado will not know when these changes will occur. The solution to Mr. Hicks' dilemma is to accept the language in Appendix 911 NIM, Sections 5.1 and 5.3. AT&T Florida does not want service outages and will work diligently toward avoiding an outage, but Intrado does need to cooperate.

Issue 8a: What terms and conditions should be included in the ICA to address access to 911/E911 database information when AT&T is the Designated 911/E911 Service Provider?

Appendix 911: § 3.4.3, 3.4.5

Q. WHAT ARE THE DISPUTES UNDER ISSUE 8(a)?

A. There are two main disputes associated with Intrado's proposed language in the 911 Appendix for Issue 8(a). The first involves Intrado's proposed language in Section 3.4.3. Intrado proposes an undefined, vague and ambiguous term "ALI Interoperability", which Intrado seeks to obligate AT&T Florida to provide. The second dispute involves Intrado's proposed language in Section 3.4.5 that obligates AT&T Florida to work collaboratively to maintain steering tables in Intrado's network.

Q. IN APPENDIX 911 SECTION 3.4.3, WHAT DOES THE TERM ALI INTEROPERABILITY MEAN?

A. I am not exactly sure what it means, since the term "ALI interoperability" is not defined anywhere in the ICA or on the NENA website, which is the default definition standard both parties have agreed to use when settling definition issues. This term is vague and ambiguous and may be an attempt by Intrado to establish a new protocol beyond what is in use today. If that is the case, then any new protocols should be agreed to at an industry level. An industry standards body should be utilized to allow all carriers to have input into this as well.

However, there are known definitions of each word of Intrado's newly created term, but that does not resolve the issue. I know the term ALI is Automatic Location Identification, which is used by PSAPs to identify an end user's street address from the MSAG (Master Street Address Guide). NENA defines Interoperability as "The capability for disparate systems to work together." To combine these two terms creates a new definition altogether with a new meaning that is vague and ambiguous. This may even have the possibility of creating an obligation for AT&T Florida to use non-standard protocols that are unreliable. This should not be allowed.

Q. IN APPENDIX 911 SECTION 3.4.5, WHAT OBLIGATIONS DOES THE INTRADO LANGUAGE PLACE ON AT&T FLORIDA?

A. I am not an attorney, but the implications are that AT&T Florida is to "collaboratively work" with Intrado to help Intrado maintain the 911 steering tables in Intrado's 911 system. This is the software within a 911 network that will either route to the correct PSAP or not.

Q. DOES AT&T FLORIDA CURRENTLY PROVIDE THIS SERVICE TO ILECS OR ANY OTHER 911 SYSTEM SERVICE PROVIDER?

A. No.

Q. REGARDLESS OF THE TYPE OF TRAFFIC, DOES AT&T FLORIDA PROVIDE TRANSLATIONS TABLE PROVISIONING AND MAINTENANCE TO OTHER CARRIERS?

A. No.

Q. HOW SHOULD THE COMMISSION RULE ON THIS ISSUE?

A. The Commission should adopt the AT&T Florida language, because it is clearly stated and does not create unnecessary obligations for Intrado or AT&T Florida.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

AT&T FLORIDA

SUPPLEMENTAL REBUTTAL TESTIMONY OF MARK NEINAST

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 070736-TP

JUNE 13, 2008

Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH AT&T ("AT&T"), AND YOUR BUSINESS ADDRESS.

A. My name is Mark Neinast. My business address is 308 S. Akard, Dallas, Texas 75202. I am employed by AT&T Services, Inc. as an Area Manager – Regulatory Relations to AT&T's Network Planning and Engineering Department.

Q. ARE YOU THE SAME MARK NEINAST THAT FILED DIRECT TESTIMONY ON APRIL 21, 2008 AND REBUTTAL TESTIMONY ON MAY 28, 2008?

A. Yes.

Q. PLEASE DESCRIBE THE PURPOSE OF YOUR SUPPLEMENTAL REBUTTAL TESTIMONY?

A. I am offering supplemental rebuttal testimony to respond to issues raised for the first time in the rebuttal testimony of Intrado's witness, John Melcher. Specifically, I address Issues 3(a-b), in this rebuttal.

Q. CAN YOU PLEASE SUMMARIZE THE KEY POINTS IN YOUR SUPPLEMENTAL REBUTTAL TESTIMONY?

A. Yes. Mr. Melcher goes into great detail as to why AT&T Florida should adopt a methodology known as Class Marking, which Mr. Melcher refers to as Line Attribute Routing. Although Mr. Melcher has some impressive references regarding his 911 PSAP and NENA experience, he does not state that he has the professional telecommunications background necessary to support the claims he makes. Specifically, he lacks an understanding of the switching translation changes that would be necessary to implement Class Marking[1], and therefore, he can not accurately testify whether Class Marking is more (or less) reliable than the Primary Selective Router method. In fact, he provides no references to NENA, where he was past president, and it was NENA that deemed Class Marking as problematic. As I stated in my direct testimony at page 19, lines 4-6 (with supporting documentation in Exhibit MN-4)[2] NENA does not

[1] Intrado witness Hicks uses the term Class Marking, while Mr. Melcher uses the term Line Attribute Routing. It is unclear, whether both Intrado witnesses are testifying as to the same proposal or not, but for purposes of my testimony, I will assume that both terms are synonyms for Class Marking.

[2] Exhibit MN-4 - NENA Standard for E9-1-1 Default Assignment and Call Routing Functions NENA 03-008, Version 1, January 19, 2008, § 2.1 Call Routing Facts (at para. 1) "9-1-1 call

recommend using Line Class Codes for determining call routing of 911 calls. The process that Intrado proposes would be a detriment to AT&T Florida and its end users that rely on 911 for their protection of life and property and is only being proposed to create a competitive advantage for Intrado. In my supplemental rebuttal testimony, I will further describe the many issues that arise with the use of Class Marking, also known as Line Attribute Routing.

Issue 3a: What trunking and traffic routing arrangements should be used for the exchange of traffic when Intrado is the designated 911/E911 Service Provider?

Issue 3b: What trunking and traffic routing arrangements should be used for the exchange of traffic when AT&T is the designated 911/E911 Service Provider?

Q. MR. MELCHER STATES THAT THERE ARE ONLY LIMITED EFFORTS MADE FOR 911 COMPETITION. IS THIS A LARGE MARKET SEGMENT THAT IS BEING OVERLOOKED BY CLECS?

routing accuracy may be affected by various factors ranging from lack of up-to-date identification of the subscriber's service address/calling location; delay in service order processing; default call routing rules used to support the subscriber's NPA NXX, the serving area or the network elements..." (at para. 3) "It must also be recognized that "default" call routing is not the same as a "misroute". Misrouted calls are generally caused by incorrect information associated with the caller due to a human or mechanical failure, whereas default routed calls are caused by a lack of selective routing information."

A. No. This is not a large market segment - rather it is an obligation to provide for emergency services for the end users in each community. I cannot agree with Mr. Melcher regarding the competitive market opportunities he sees for 911 services, but Mr. Melcher does correctly state that cost recovery is an issue. Until now, there have not been any CLECs approaching AT&T Florida to compete for 911 services. Maybe CLECs avoid this market because it is a public service and not a retail service with a higher profit margin. Nevertheless, AT&T Florida has not kept CLECs from providing 911 service, as Mr. Melcher alludes in his testimony on page six, lines 9-12. AT&T Florida's negotiations and positions in the Intrado arbitration are mainly concerned with equitable cost recovery and network reliability.

Q. IS IT APPROPRIATE FOR INTRADO TO REDESIGN THE ORDERING AND PROVISIONING OF SERVICE ORDER SYSTEMS FOR AT&T FLORIDA?

A. No. The system Mr. Melcher proposes is not in use today because it is manual, unreliable and prone to errors. The public's expectation of 911 service is that it should be automatic, reliable and error free. Intrado has created a niche market providing database management functions for 911 traffic and should clearly know that any manual system would be inferior to

an automated process that utilizes modern database management processes.

The E911 selective router in fact, utilizes a database management process to route a 911 call to the correct PSAP. Class Marking is a manual process and if it were to be automated, it would require significant financial and manpower resources to change AT&T's overall provisioning process just to accommodate what the selective router already does with a very high degree of accuracy.

Q. ON PAGE 11, LINES 12-15 OF MR. MELCHER'S TESTIMONY, HE MAKES THE STATEMENT THAT "BY RELYING ON LINE ATTRIBUTE ROUTING...THE CALL MAY BE DELIVERED WITHOUT INTRODUCING FURTHER COMPLEXITIES OR POINTS OF FAILURE DURING CALL SET-UP AND DELIVERY TO THE APPROPRIATE E911 SYSTEM." IS THIS CORRECT?

A. No. In fact, exactly the opposite is true. Class Marking is a manual process, where each individual Service Representative processing customer service orders will determine the routing of 911 traffic. There are AT&T Service Representatives across AT&T's footprint who take orders from customers and process service orders each day. If they have the necessary knowledge and make no errors whatsoever in their work

activities, there will be no problems in processing these orders; 911 calls will route correctly. However, if there are human errors in the processing of these orders, there will be misrouted 911 calls. In my experience, what Intrado proposes is very complex, involving personnel that were never meant to be included in the routing of 911 calls. Mr. Melcher correctly states that the fewer points of failure introduced into call set-up and delivery, the more accurate call delivery will be. However, the method he proposes will create more complexity and points of potential failure than the current selective router method that is in use today.

Q. ARE 911 CALLS MORE RELIABLE USING THE CURRENT SELCTIVE ROUTER METHOD THAN CLASS MARKING?

A. Yes. On page 11, lines 17-20, Mr. Melcher ignores a fundamental network principle in that he assumes that all points in the call path will all have the same degree of reliability. This is not the case. 911 Selective Routing is a highly reliable method for routing 911 traffic that has been in place for decades. It is mechanized, efficient and its proven track record makes it the gold standard for the routing of 911 traffic. Performing 911 Selective Routing twice, will not degrade the 911 network, since Selective Routing is highly reliable. Conversely, Class Marking is not highly reliable, but error prone. The fact that Class Marking will only be performed once

on a call as opposed to Selective Routing being performed twice, does not in itself mean that Class Marking is more reliable.

Q. CAN YOU PROVIDE AN EXAMPLE TO ILLUSTRATE?

A. Yes. Assume Selective Routing is 99.999% reliable, and Class Marking is only 90% reliable. Since a call will only be Class Marked once, the overall Class Marking process is 90% reliable. AT&T Florida's proposal is to use the primary Selective Routing method. The majority of calls under this proposal will only need to be Selective Routed once, making the process for the majority of calls 99.999% reliable. The other calls will need to be Selective Routed twice (once at the primary Selective Router, and once again at the Secondary Selective Router); however, since Selective Routing is 99.999% reliable, performing the function twice, still makes the overall process 99.998% reliable, which is still a significant improvement from the Class Marking process which is only 90% reliable.

Q. CAN CLASS MARKING ACTUALLY CREATE MORE POINTS OF FAILURE IN THE NETWORK THAN PRIMARY SELECTIVE ROUTING?

A. Yes. Mr. Melcher correctly states that the fewer points of failure introduced into call set-up and delivery, the more accurate call delivery will be. However, the method he proposes will create more complexity and

points of failure than the current selective router method that is in use today. With Class Marking, many manual translations changes are required to create the initial network capabilities before it can be used. This is both expensive and labor intensive. Once the basic capabilities have been built into the network, service order changes will be required for every existing customer to change their service to include Class Marking. This step too, is manual, expensive and labor intensive. These manual decisions will be required each time a customer establishes or changes their service. AT&T Florida has never needed to train Service Representatives to understand call routing and network translations impacts, let alone be responsible for insuring that 911 calls are delivered to the correct PSAP.

Q. ARE 911 CALLS SIMILAR TO LONG DISTANCE CALLS, AS MR. MELCHER STATES IN HIS TESTIMONY, ON PAGE 11, LINES 3-4?

A. No. Mr. Melcher makes the comparison that 911 routing would be similar to routing 1+ long distance traffic. There are two major configurations with long distance call routing. The first is often referred to as intraLATA toll (or LEC-LEC toll), and it does not use an interexchange carrier (IXC) in any part of the call. The second uses an IXC to carry the call from the originating End Office or Tandem switch to the terminating End Office or Tandem switch. The translations used to route these calls utilize a carrier

common block within the switch. Each IXC has specific routing instructions coded into the switch to determine how and where each type of call will be routed, e.g., coin, 8YY, etc.

Line Class Codes (LCCs) utilize what is referred to as class of service screening to route calls. For each class of service, certain distinctions are coded into the switch to determine the originating rate center, toll properties, block 900 calling and attributes that customers may desire. This is the type of screening that Intrado proposes for AT&T Florida to change within its network and operational support systems. These changes are very complex, expensive and would not work as well as Intrado claims. As I had previously testified, NENA does not endorse Class Marking, and other ILECs do not use or recommend Class Marking to route 911 traffic.

Q. AT&T FLORIDA PROPOSES USING THE SELECTIVE ROUTER DATABASE TO ROUTE 911 CALLS TO THE CORRECT PSAPS AND TO INTRADO FOR THE PSAPS INTRADO SERVES. ARE THERE OTHER SERVICES IN THE TELECOMMUNICATIONS FIELD THAT UTILIZE DATABASES FOR CALL ROUTING?

A. Yes. There are several instances where a database is utilized in call routing. One of the first used was Line Identification Data Base (LIDB),

where customer specific data was used for operator assisted calls for third party billing and calling name data for Caller-ID. Another is the 800 database that correlates an 800 number to a POTS dialable number. Advanced Intelligent Network (AIN) establishes trigger points of a call, where call processing is suspended until a database correlation can be made to determine where a call will route or if it should route. Local Number Portability (LNP) was implemented in 1998, and queries are performed to the LNP database on every call to determine if the terminating end user customer has moved their service to another service provider.

In support of accurate 911 call routing, there are no major carriers that would ever entertain implementing such a process as Class Marking when a centralized database can do and has done a superior job of call routing. Intrado has hired Mr. Melcher to provide his personal opinion to try to reduce Intrado's costs, even at the risk of inferior service. The inevitably inferior service; however, will harm AT&T Florida and its customers. Intrado's customer is the 911 PSAP, which is essentially unaffected by this issue, since they only terminate the calls and never originate 911 calls.

Q. ON PAGE 12, LINES 9-19, MR. MELCHER COMPARES CLECS WITH ILECS FOR CALL DELIVERY. IS THIS A FAIR COMPARISON?

A. No. CLECs typically serve customers from a single switch across a broad area because entrance facilities are less costly to build.[3] Also, depending on how it is configured, a switch can handle as many as 100,000 end user customers before a second switch is required. CLECs choose to implement a method of Class Marking because their customer base is small and there is little or no economy of scale for mechanization. Mr. Melcher correctly acknowledges that he cannot make an apples-to-apples comparison with wireless providers;, however, he erred when he makes the comparison of CLECs and ILECs. ILECs have been providing service for many years, and there are no substantial issues of misrouted 911 calls today. AT&T Florida fully embraces all of the new services offered in next generation technologies; however, there must be sound decisions made that will allow a safe and reliable transition to next generation switching. Intrado's proposal does not accommodate this very necessary aspect of network reliability.

Q. IS THERE AN ADVANTAGE TO INTRADO IF AT&T FLORIDA USES CLASS MARKING?

A. Yes. Intrado has proposed Class Marking in order to prevent AT&T Florida from using a selective router as part of a 911 call destined for an Intrado served PSAP. In this way, Intrado's PSAP will not be charged by

[3] TRRO at ¶ 138

two carriers for the selective router function. This is an incremental cost that will be incurred using a Primary/Secondary selective router when AT&T Florida's end offices are split between PSAP jurisdictions. AT&T Florida's proposed language[4] clearly establishes the majority of calls will be routed to the Primary selective router, which will mitigate additional selective router costs to the greatest extent possible. AT&T Florida's language is reciprocal, fair and will allow Intrado to charge the PSAP for any selective routing it performs, if and when Intrado begins to provide local exchange service in Florida.

Intrado's language would either use Class Marking or establish Intrado as the Primary selective router, regardless of the number of access lines using Intrado's PSAP service. This is not equitable and should not be allowable. Emergency 911 traffic is an obligation to the public and network reliability must be put before Intrado's profitability.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

[4] 911 Appendix Section 6.1.1.1

BY MR. CARVER:

Q Mr. Neinast, could you please summarize your testimony?

A Yes. I am the network witness for AT&T, and I cover Issues 3 through 10. And AT&T Florida is not opposed to providing Intrado with what it needs to offer 911 service. Intrado can obtain everything they need through tariffs and commercial agreements. The problem is that Intrado is trying to misuse the 251 process to obtain an interconnection agreement that improperly shifts its costs of doing business onto AT&T. Specifically, Intrado seeks to shift its costs onto AT&T Florida by its insistence for interconnecting Intrado's network and class marking.

The physical location of the POI for 911 service is the most critical network issue that must be determined. AT&T Florida believes that there should be multiple POIs and that one of these POIs should be at the selective router location on AT&T's network where there are currently deployed diverse and redundant facilities for the provision of 911 traffic. Any change to this would undermine the current reliability of the 911 system for AT&T Florida's end users.

There are two misconceptions portrayed by Intrado regarding AT&T Florida's proposal for primary/secondary selective routing between split wire centers. First, that a carrier providing switching and transport should not be

compensated for it. A carrier has the right to be compensated for the switching and transport of calls that it provides.

Second, 911 network reliability is accomplished by using the selective router database functionality that is automated and the data has been purified through years of use. Intrado would force AT&T Florida to implement class marking, a methodology that is manual and known to be problematic and to cause misrouted 911 calls. The concept of class marking, or line attribute routing as Intrado has now changed in their terminology, must be avoided at all costs when Intrado provides service to a PSAP and a split wire center. This is purely a cost-shifting strategy of Intrado that would introduce a very expensive cost structure for service provisioning and reduce the overall quality of 911 call completion.

The translation changes in the network and provisioning systems that are required to implement this process are massive. The routing decisions on a call-by-call basis today are automated and utilize a centralized selective report database. Line attribute routing, or class marking, whatever Intrado chooses to call it today, would move the call-by-call decision-making to the service representatives processing service orders for end user customers. Service representatives do not have the technical knowledge and abilities to make call routing decisions. This has been pointed out in the NENA document in my Exhibit MM-4, and NENA

does not recommend using line level routing of 911 calls.

PSAP-to-PSAP call transfer arrangements do not belong in an interconnection agreement between carriers. PSAPs are not a party to the interconnection agreements between carriers today. Today PSAP-to-PSAP transfer arrangements are ordered by PSAPs to reflect what they want and they pay for what they order. Intrado's proposal would impose a one-size-fits-all approach on PSAPs, and would have AT&T Florida to incur the cost of implementing these arrangements. AT&T Florida has proposed language that will allow PSAP-to-PSAP arrangements as required.

In conclusion, next generation technology is not the issue here. In fact, there is no way to know in advance whether a next generation network will hold up better in a hurricane or whether Intrado's network operation centers will manage their network in a disaster better than an incumbent LEC. What the Commission needs to decide in this arbitration is whether Intrado should be allowed to misuse the Section 251 process and shift its costs and require AT&T Florida to subsidize Intrado's business plan.

Q Does this conclude your summary?

A Yes. Thank you.

MR. CARVER: Mr. Chairman, the witness is available for cross-examination.

CHAIRMAN CARTER: Thank you.

Ms. Kiser, you're recognized.

MS. KISER: Thank you.

CROSS EXAMINATION

BY MS. KISER:

Q Good afternoon, Mr. Neinast.

A Good afternoon.

Q A question about something you just said in your summary. PSAP-to-PSAP arrangements --

A Yes.

Q -- AT&T provides PSAP-to-PSAP interconnection today, correct?

A Well, a PSAP request -- to have a call transfer between another PSAP, we would make those arrangements, yes.

Q And you serve all of those PSAPs, correct?

A I'm not sure. We serve a lot of PSAPs. I'm not sure that all PSAPs that have PSAP-to-PSAP transfer capabilities are served by us, though.

Q Okay, thank you. Don't most competitive local exchange carriers who have interconnection with AT&T, isn't their designated point of interconnection at AT&T's tandem?

A Typically that's the case.

Q And were you here when I was asking Ms. Pellerin about the selective routers and the trunking to the selective routers?

A Yes.

Q Ms. Pellerin suggested that that trunking is on the side of the CLEC's network from the point of interconnection.

A I'll clarify that, if you would. The trunking arrangements made between a CLEC and AT&T when AT&T has the selective router is solely for the benefit of the CLEC and their end users. It's their obligation to provide 911 services to their customers and, therefore, it is not an exchange of traffic between AT&T and that CLEC, so, therefore, they have to provide the facility to the selective router.

Q Thank you, Mr. Neinast. My question, though, was different.

My question was is that on the competitive local exchange carrier's side of the point of interconnection, the trunk between the POI and the selective router that AT&T owns?

A Is the trunk on their side of the POI, is that your question?

Q That's correct.

A There is a trunk port on their side of the POI and on the AT&T side of the POI.

Q But when the competitive local exchange carrier is required under the interconnection agreement with AT&T, which AT&T requires to dedicate a trunk from the point of interconnection to the selective router, isn't that on AT&T's side of the network? Yes or no, please.

A Is the trunk on AT&T's side?

Q That's the question, yes, sir.

A All of AT&T's trunk are on AT&T's side of the POI. The trunking is not the actual question I think you're trying to ask, but the facility cost and the facilities and trunks are different. The facility, I think, is what you're after.

Q No, I'm actually asking about the trunk, Mr. Neinast.

A Okay. AT&T's trunks are part of AT&T's switches, and a CLEC's trunks are part of the CLEC's switch.

Q Thank you, Mr. Neinast.

You indicate in your deposition at Page 9, Lines 8 through 13, that in normal CLEC traffic we do not dictate where the POI --

A I'm sorry, could you wait just a minute.

Q Oh, I'm sorry. Let me give you a moment to get there. Let me know when you are ready.

A My deposition --

Q Page 9, Line 8 through 13.

A I'm there.

Q You indicate that in normal CLEC traffic, we do not dictate where the point of interconnections are, how the points of interconnection should be -- well, how many and so forth, is that correct?

A That's correct.

Q Your interconnection agreement templates with competitive local exchange carriers do, however, dictate where

those POIs are, how many, and how the POIs should be, isn't that correct?

A There are certain guidelines. In fact, they are based on a model of a single POI. A new entrant, depending on if it is a CLEC that is a new entrant into a market, certainly has a right to a single POI, but it is AT&T's position that as their traffic grows larger and larger that there should be more of a cost sharing. So, therefore, we would ask the thresholding to establish multiple POIs at multiple tandems. It depends on the metropolitan area whether there is one tandem in a LATA or more. If there are more tandems, then certainly we feel that the CLEC should -- if they have traffic going to it and once they reach that threshold that they should establish multiple POIs.

Q Mr. Neinast, did you say you ask the CLEC?

A It's a negotiated aspect within the template agreement. The template agreement is simply a starting point for negotiations.

Q But the template agreement actually says they shall have additional points of interconnection, doesn't it?

A If that agreement is then signed into agreement that they shall, then, yes.

Q I'm sorry, Mr. Neinast, was that a yes or a no?

A That is a yes.

Q In the 911 arena, I think you talk about that it is

wise, and continuing on that same page of the deposition that it's a wise decision to have multiple POIs, even though the AT&T language does not require it. Isn't that correct?

A That's correct. But the language, in fact, that we have negotiated with Intrado specifically for 911 traffic, the 911 traffic has been segregated into a separate 911 NIM appendix to deal with the point of interconnections, and within that 911 NIM there are no requirements for Intrado to have multiple POIs. We can only suggest that they would for the public safety aspect and the guidelines that the ESIF and FCC have recommended they have multiple POIs.

Q Competitive local exchange carriers under the law are only required to go to a single point of interconnection, isn't that correct?

A That's correct.

Q On Page 11 beginning at Line 2, and I think you may have just referred to this, and continuing down that page, you were asked a question regarding the current AT&T interconnection agreement makes no provision for multiple POIs for 911?

A That's correct.

Q And I believe your response is that it is correct that it doesn't, but further down that page at Line 17 you indicate that even though the language doesn't require it, the inference is there.

A Yes, that's correct. Just as my statement on 16 said through negotiations we have had discussions with Intrado that they would be establishing multiple POIs.

Q And that at Lines 17 to 18 that there is certainly nothing to prevent Intrado from establishing multiple POIs, correct?

A That's correct.

Q So is it your position that when it may be a concern whether there are provisions in the interconnection agreement for Intrado, if the agreement doesn't speak to it, Intrado should not worry about it, correct?

A I'm not sure I understand your question.

Q Well, you agreed that your statements at Line 16 through 18, that even though the language doesn't require it, the language of the agreement, the inference is there, and there is certainly nothing there to prevent Intrado from seeking multiple POIs, correct?

A That's correct.

Q So what I understand is that even though the language doesn't exist in the agreement, Intrado shouldn't worry about it because it's silent.

A Okay. Let me make sure I understand your question. It's still vague to me. But if I understand you, if the agreement doesn't require Intrado to provide multiple POIs for 911 emergency services, then they shouldn't, is that your

question?

Q No, no. My question is that it's AT&T's position that if the agreement doesn't require multiple POIs and Intrado wants multiple POIs, even though the agreement doesn't speak to it, it shouldn't worry about it because the agreement is silent and they can still certainly avail themselves of multiple POIs.

A Absolutely. They can avail themselves to as many POIs as they feel is appropriate to diversify their network.

Q So the fact that the selective routers for Intrado Communications -- there was a discussion about that earlier and not specifically identified in the interconnection agreement, AT&T's concern regarding them not being specifically identified in the agreement shouldn't be a problem because the agreement is silent on those, correct?

A Are you talking about Intrado's selective routers?

Q That's correct.

A It's not silent on those. AT&T's language has specifically asked that the POI be established at the AT&T selective router location, that is AT&T's position, not at the Intrado. In fact, any CLEC that would compete with an ILEC has to interconnect on the ILEC's network, not vice versa.

Q There was testimony earlier by Ms. Pellerin that you could be forced to interconnect in Colorado, and I believe there is also testimony in the record stating that, of course, Intrado is not going to ask you to interconnect in Colorado,

but the fact that selective routers weren't designated in the interconnection agreement, the devil is in the details, and that that is a problem. Everything should be spelled out in the interconnection agreement.

A The AT&T position is that the selective router location is the proper demark for 911 traffic, and since the CLEC is interconnecting with AT&T and not AT&T interconnecting with the CLEC, it would be the AT&T selective router where that location would be.

Q And Intrado has agreed to go to your selective routers, correct?

A It's disputed language, so I'm not sure about that yet. That is still disputed language and has not been agreed to yet; so, no, I would not agree that that is a true statement.

Q It is not your understanding based upon testimony in this proceeding that Intrado would bring 911 calls destined for AT&T public service answering point customers to AT&T's selective routers?

A Not from the physical facilities perspective. Maybe from a trunking perspective, but those are two different aspects of call routing.

Q But it is AT&T's position that all 911 calls should be delivered directly to the selective router for the PSAP that that call is destined to, correct?

A It would have to be, yes. But you are actually talking apples and oranges with your questions, though.

Q If a 911 caller makes a call and AT&T serves that, the public service answer point that needs to receive that call to ensure that the emergency response team gets to that caller who happens to be in the geographic area served by the emergency response team --

A Yes.

Q -- that call should be routed to AT&T's selective router to get to that PSAP, correct?

A That's correct. But, again, the facility and the point of interconnection has nothing to do -- it is not one in the same as call routing. It is kind of like the railroad tracks. The tracks are facilities and the trains are the routing, so you are talking apples and oranges again.

Q No, I am talking -- I have said the same thing three times, so let me try one more time.

A What you said is true about the routing, but earlier you were asking about the POI, so I guess that is where I am confused on your line of questioning.

Q I was concerned about the point of interconnection earlier, and now I am talking about where you want the calls to be terminated for 911 service purposes.

A Okay.

Q And just to make sure certain that is clear, and I

think it is on the record, but it is AT&T's position that for the delivery of 911 traffic to a public service answering point that those calls should be directly terminated to the selective router serving the relevant PSAP.

A I would say that that is a true statement except in the areas where we have split wire centers, and then we would have to impose a primary/secondary relationship to handle those split wire centers.

Q And isn't it correct that this is the way 911 traffic has been handled since its inception in 1968?

A It is the best way to have the most reliable 911 network that is there, yes, to use a selective router database.

Q And in 1968 it was AT&T Corp, wasn't it?

A Except for the rural --

Q Except for the --

A Except for the rural ILECs and independents, that's a correct statement, and general telephone, et cetera.

MS. KISER: Thank you, Mr. Neinast. I have no further questions.

CHAIRMAN CARTER: Thank you. Commissioners? Staff?

MS. TAN: Staff has no questions.

CHAIRMAN CARTER: Mr. Carver.

MR. CARVER: Thank you, Mr. Chairman.

I just have one or two clarifying questions that have to do with the last few questions that counsel asked you.

REDIRECT EXAMINATION

BY MR. CARVER:

Q In a situation where AT&T is providing the E911 service, in a situation where Intrado, for example, where we would request them to interconnect onto AT&T's network. Are you with me so far?

A Yes.

Q In that situation, let's say the customers being served are in Jacksonville and the PSAP is in Jacksonville. That interconnection would occur in the Jacksonville LATA, wouldn't it?

A That is correct.

Q And if the customers and the PSAP were in Pensacola, the interconnection would occur there, correct?

A That's correct.

Q And if they were the southeast LATA, then the interconnection would occur in the southeast LATA, correct?

A That is correct.

Q And there are multiple selective routers in the southeast LATA, correct?

A That's correct.

Q So if they were in Dade County, there would be one in Dade County?

A Yes.

Q Okay. So under AT&T's proposal, Intrado is not going

to have to haul traffic all over the state to serve PSAPs, are they?

A No.

MR. CARVER: Thank you. That's all I have.

CHAIRMAN CARTER: Thank you. Exhibits.

MR. CARVER: Yes. Mr. Chairman, we would like to move 43 through 47, please.

CHAIRMAN CARTER: Any objections?

MS. KISER: No objection.

CHAIRMAN CARTER: Without objection, show it done.

(Exhibits 43 through 47 admitted into the record.)

CHAIRMAN CARTER: Commissioners, that would be Exhibit 43 through 47. Thank you.

Staff, you are recognized for additional procedures and concluding matters.

One second. Commissioners, anything further before we --

Staff, you're recognized.

MS. TAN: At this time we have significant dates to offer. The transcript will be due on July 21st, 2008. The briefs will be due on August 14th, 2008; and the recommendation is currently scheduled for October 30th, 2008.

CHAIRMAN CARTER: Thank you. Any concluding matters by any of the parties?

MS. KISER: Nothing.

MR. CARVER: None by AT&T.

CHAIRMAN CARTER: Hearing none, Commissioners, we are adjourned.

(The hearing concluded at 2:50 p.m.)

STATE OF FLORIDA)

: CERTIFICATE OF REPORTER

COUNTY OF LEON)

I, JANE FAUROT, RPR, Chief, Hearing Reporter Services Section, FPSC Division of Commission Clerk, do hereby certify that the foregoing proceeding was heard at the time and place herein stated.

IT IS FURTHER CERTIFIED that I stenographically reported the said proceedings; that the same has been transcribed under my direct supervision; and that this transcript constitutes a true transcription of my notes of said proceedings.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorney or counsel connected with the action, nor am I financially interested in the action.

DATED THIS 21st day of July, 2008.

I.D. # STIP-3

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition by Intrado Communications, Inc. for arbitration of certain rates, terms, and conditions for interconnection and related arrangements with BellSouth Telecommunications, Inc. d/b/a AT&T Florida, pursuant to Section 252(b) of the Communications Act of 1934, as amended, and Sections 120.80(13), 120.57(1), 364.15, 364.16, 364.161, and 364.162, F.S., and Rule 28-106.201, F.A.C.	Docket No. 070736-TP

INTRADO COMMUNICATIONS INC.'S
RESPONSES TO STAFF'S FIRST SET OF INTERROGATORIES (Nos. 1-40)

Intrado Communications Inc. ("Intrado Comm"), by its attorneys, hereby respectfully responds to the Florida Public Service Commission ("Commission") Staff's First Set of Interrogatories (Nos. 1-40) as follows:

INTERROGATORIES

1. **Should a single definition for "End User" apply throughout the ICA? Please explain your answer.**

Intrado Comm Response:

This Interrogatory concerns Issue 31. The Parties resolved Issue 31 after the filing of direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

2. **On page 13 of Exhibit CSL-4, the "Intrado Florida Tariff," attached to the direct testimony of witness Spence-Lenss, Intrado defines the term 'End User' as "any Customer of an intrastate telecommunications service that is not a carrier." Please explain why Intrado's proposed definition for this term in the arbitration with AT&T is significantly different than Intrado's definition from its "Florida Tariff."**

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition by Intrado Communications, Inc. for arbitration of certain rates, terms, and conditions for interconnection and related arrangements with BellSouth Telecommunications, Inc. d/b/a AT&T Florida, pursuant to Section 252(b) of the Communications Act of 1934, as amended, and Sections 120.80(13), 120.57(1), 364.15, 364.16, 364.161, and 364.162, F.S., and Rule 28-106.201, F.A.C.	Docket No. 070736-TP Filed: May 30, 2008

INTRADO COMMUNICATIONS INC.'S NOTICE OF SERVICE OF RESPONSES TO FPSC STAFF'S FIRST SET OF INTERROGATORIES (NOS. 1-40) AND RESPONSES TO FPSC STAFF'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS (NOS. 1-3)

Intrado Communications Inc. ("Intrado") by and through its undersigned counsel, hereby files and serves Notice that it has served its Responses to FPSC Staff's First Set of Interrogatories (Nos. 1-40) and Responses to FPSC Staff's First Request for Production of Documents by electronic mail and U. S. Mail pursuant to the attached service list on this 30th day of May, 2008.

Floyd R. Self
MESSER, CAPARELLO & SELF
2618 Centennial Place
Tallahassee, Florida 32308
Tel. 850-222-0720
Fax 850-558-0656
E-mail: fself@lawfla.com

Counsel for Intrado Communications, Inc.

Intrado Comm Response:

This Interrogatory concerns Issue 31. The Parties resolved Issue 31 after the filing of direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

3. **On page 6, lines 7-16 of her direct testimony witness Clugy states that Intrado modified the definition for the term 'central office switch' so that it would be "consistent with the NENA Glossary [and] Newton's Telecom Dictionary." Please identify the specific page references from those documents that support this testimony.**

Intrado Comm Response:

This Interrogatory concerns witness Clugy's direct testimony in connection with Issue 30. The Parties have resolved Issue 30 after the filing of witness Clugy's direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

4. **On page 6, lines 7-16 of her direct testimony witness Clugy states that Intrado modified the definition for the term 'tandem office switch' so that it would be "consistent with the NENA Glossary [and] Newton's Telecom Dictionary." Please identify the specific page references from those documents that support this testimony.**

Intrado Comm Response:

This Interrogatory concerns witness Clugy's direct testimony in connection with Issue 30. The Parties have resolved Issue 30 after the filing of witness Clugy's direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

5. **IC Section 1.1 provides that Appendix Intercarrier Compensation "does not apply to 911 Service or E91 1 Service calls delivered to either AT&T-(STATE)'s 911 System or CLEC's 911 System." Please explain how this language does not memorialize AT&T's practice that 911 /E9 11 service traffic is not subject to intercarrier compensation and that the terms and conditions contained in AT&T's Appendix Intercarrier Compensation do not apply to 911/E911 traffic.**

Intrado Comm Response:

This Interrogatory concerns Issue 12. The Parties have resolved Issue 12 after the filing of direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

6. If Intrado's suggested additional language for Issue 12 is added to IC Section 1.1, how would Intrado suggest handling possible conflicts with other terms and conditions that are either within the ICA or in a separate agreement or tariff?

Intrado Comm Response:

This Interrogatory concerns Issue 12. The Parties have resolved Issue 12 after the filing of direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

7. Has the language dispute between Intrado and AT&T Florida in IC Section 6.1 been resolved? If no, please explain the specific dispute that remains.

Intrado Comm Response:

Yes, the language in dispute in IC Section 6.1 has been resolved. This Interrogatory concerns Issue 12. The Parties have resolved Issue 12 after the filing of direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

8. Please refer to page 9, lines 19-23, and page 10, lines 1-7 of Intrado witness Clugy's direct testimony.

a. Please identify the specific FCC orders and applicable paragraphs therein where the "FCC has determined that it is inaccurate to limit the application of reciprocal compensation to telecommunications traffic that is 'local.'"

b. Please identify the specific FCC rules referenced that do not impose a qualification on the subset of traffic that is eligible for compensation.

c. Does Intrado disagree with the substance of AT&T Florida's language

defining Section 251 (b)(5) traffic, ISP-Bound Traffic, or Switched Access Traffic? If affirmative, please explain Intrado's specific disagreements?

d. Does Intrado seek to deliver wireless traffic to AT&T Florida? If affirmative, has Intrado requested a wireless ICA? If negative, please explain why not.

e. Please explain the specific "onerous terms and conditions" that AT&T Florida's proposed language places on the Parties' exchange of intercarrier compensation?

Intrado Comm Response:

a. In its 2001 *ISP Remand Order* (16 FCC Rcd 9151 (2001)), the FCC determined that its prior reliance on the characterization of traffic as local or non-local to determine whether reciprocal compensation obligations applied was incorrect (¶ 54) . Specifically, the FCC determined that "*all* telecommunications traffic" is subject to reciprocal compensation under Section 251(b)(5) of the Act except for those specific types of traffic carved out by Section 251(g) – exchange access, information access, and exchange services for such access (¶ 32). As a result of these findings, the FCC removed the term "local" from its rules when describing the subset of telecommunications traffic that is subject to reciprocal compensation (*ISP Remand Order* at Appendix B). The FCC determined that it should refrain from generically describing traffic as "local" traffic because the term "local" is particularly susceptible to varying meanings and, significantly, is not a term used in Section 251(b)(5) or Section 251(g) of the Act (¶ 34). On review, the D.C. Circuit remanded the FCC's determination that Section 251(g) exempted ISP-bound traffic from reciprocal compensation, but made no further determinations with respect to the remainder of the FCC's findings (*WorldCom, Inc. v. FCC*, 288 F.3d 429 (D.C. Cir. 2002), *petition for reh'g and reh'g en banc denied* (Sept. 24, 2002), *cert. denied sub nom*, 123 S. Ct. 1927 (2003)).

b. Section 51.703(a) of the FCC's rules states that "Each LEC shall establish reciprocal compensation arrangements for transport and termination of telecommunications traffic with any requesting telecommunications carrier." AT&T's proposed language would limit reciprocal compensation to traffic determined to be "wireline" or "dialtone" neither of which are defined in the interconnection agreement. FCC Rule 51.703(a) and the *ISP Remand Order*, by contrast, speak in terms of "telecommunications traffic," not "wireline" or "dialtone."

c. Yes, Intrado Comm disagrees with the substance of AT&T's proposed definitions for Section 251(b)(5) Traffic, ISP-Bound Traffic, and Switched Access Traffic.

Section 251(b)(5) Traffic: AT&T's proposed definition requires the originating party and the terminating party to be located in the "same ILEC Local Exchange Area" or in different areas that are subject to an Extended Area Service ("EAS") arrangement. As discussed above, the FCC's *ISP Remand Order* and Section 51.703 do not contain such qualifications. Further, the FCC has determined that compensation should be based on the NPA-NXX of the calling and

called parties, not the physical location of the calling and called parties (*Virginia Arbitration Order*, 17 FCC Rcd 27039, ¶¶ 301-02 (2002); *Regulation of Prepaid Calling Card Services*, 21 FCC Rcd 7290, n.89 (2006) ("for now carriers continue to rely on telephone numbers as a proxy for geographic location")).

ISP-Bound Traffic: AT&T's proposed definition requires the originating party and the terminating party to be located in the "same ILEC Local Exchange Area" or in different areas that are subject to an Extended Area Service ("EAS") arrangement. In the *ISP Remand Order*, the FCC defined ISP-Bound Traffic as "telecommunications traffic delivered to Internet service providers (ISPs)" (*ISP Remand Order* ¶ 1). ISP-Bound Traffic is not defined with respect to originating and terminating points. The FCC found that ISP-Bound Traffic was incapable of being measured and adopted a 3:1 ratio scheme to determine what portion of the traffic exchanged between telecommunications carriers should be considered ISP-Bound Traffic (*ISP Remand Order* ¶ 79). AT&T's proposed definition ignores the FCC's findings.

Switched Access Traffic: AT&T's proposed definition includes "traffic that . . . (ii) originates from the End User's premises in IP format and is transmitted to the switch of a provider of voice communication applications or services when such switch utilizes IP technology." This definition appears to encompass interconnected VoIP services. The FCC defines "access service" as "services and facilities provided for the origination and termination of any interstate or foreign telecommunication" (47 C.F.R. § 69.2(b)). The FCC has not determined whether interconnected VoIP services are telecommunications service or information services. In addition, the FCC has not determined that interconnected VoIP services are subject to switched access charges. AT&T's proposed language goes beyond the parameters of the FCC's rules regarding switched access services.

d. Intrado Comm does not offer wireless services. As interconnected co-carriers, however, Intrado Comm may deliver wireless traffic to AT&T to the extent Intrado Comm is providing telecommunications services to a wireless provider, and that wireless provider's customers call an AT&T customer. Intrado Comm has not requested a wireless ICA because it is not a wireless provider.

e. Please see Intrado Comm's Response to Interrogatory 8(a), (b), and (c).

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

9. Please refer to Intrado witness Clugy's direct testimony, page 10, lines 8-18.

a. AT&T Florida addresses the "Switched Access Traffic" disputed definition language as part of Issue 13(a). Intrado addresses the disputed language in Issue 13(b). Other than this disputed language, what other specific dispute does Intrado have with AT&T Florida in Issue 13(b)?

b. Please identify the current requirements for "Switched Access Traffic" referenced on line 13.

c. On lines 14-15, specifically identify the "more onerous restrictions found in the FCC's rules" that AT&T Florida's proposed definition of "Switched Access Traffic" places on Intrado.

d. Please identify the FCC docket number where it is currently reviewing switched access traffic issues referenced on lines 15-16.

e. Please explain the uncertainty Intrado references on line 16.

f. Please explain how Intrado's position on Issue 13(b) relates to whether the parties should cooperate to eliminate misrouted access traffic.

g. Please explain how the parties should cooperate to eliminate misrouted access traffic. What steps should be required to remedy the misrouting condition?

h. In what ways is Intrado willing to assist AT&T Florida in identifying and eliminating phantom traffic from local interconnection trunks?

i. Please explain Intrado's specific objections to AT&T Florida's proposed language to follow when switched access traffic is improperly routed to local interconnection trunks.

Intrado Comm Response:

a. The definition of "Switched Access Traffic" in IC 16.1 is at issue in Issue 13(a). Other terms and conditions governing Switched Access Traffic, such as eliminated misrouted access traffic in IC 16.2 are at issue in Issue 13(b).

b. Under the FCC's current rules, access charges shall be assessed upon all interexchange carriers that use local exchange switching facilities for the provision of interstate or foreign telecommunications services (47 C.F.R. § 69.5(b).

c. Please see Response to Interrogatory 8.

d. Issues surrounding the payment of switched access charges are being reviewed by the FCC in the following dockets: CC Docket No. 01-92, WC Docket No. 05-283, and WC Docket No. 07-135.

e. Please see Response to Interrogatory 8.

f. Please see Response to Interrogatory 9(a) and 9(i).

g. As co-carriers, the Parties will work together to identify phantom traffic or mis-routed access traffic in accordance with the requirements of the FCC and any terms and conditions contained in the interconnection agreement. Specific actions will depend on the specific traffic at issue.

h. Please see Response to Interrogatory 9(g).

i. AT&T's language appears to contemplate that the Parties would exercise "self-help" or block so-called misrouted access traffic. The FCC disfavors "self-help" policies and has indicated carriers may not block traffic. *See Madison River Communications, LLC and Affiliated Companies*, Order, 20 FCC Rcd 4295 (2005) (taking enforcement action for blocking traffic); *OCMC, Inc.; Apparent Liability for Forfeiture*, Notice of Apparent Liability for Forfeiture, 20 FCC Rcd 14160, ¶ 13 (2005) ("a carrier may not engage in self-help"); *Bell Atlantic-Delaware, et al., Complainants, v. Frontier Communications Services, Inc., et al., Defendants; and Ameritech Illinois, Pacific Bell, et al., Complainants, v. Frontier Communications Services, Inc., Defendants*, Order on Review, 15 FCC Rcd 7475, ¶ 11 (2000) ("the Commission looks disfavorably on such self-help"); *see also MGC Communications, Inc v. AT&T Corp.*, 14 FCC Rcd 11647 (1999); *In the Matter of Communique Telecommunications, Inc. d/b/a LOGICALL*, Declaratory Ruling and Order, 10 FCC Rcd 10399 (1995).

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

10. Please refer to AT&T Florida witness Pellerin's direct testimony, page 45, lines 12-16. The witness asserts that AT&T Florida does not provide interLATA service and does not purchase related feature group access services from any carrier. Given this,

a. Please explain why Intrado believes it should not be Intrado's responsibility to enter into arrangements with third-party carriers for the exchange of other types of traffic. (Refer to page 11 of Intrado witness Clugy's direct testimony, lines 1-3.)

b. Please explain why Intrado believes that AT&T Florida has the responsibility to act as the transit provider between Intrado and third parties. (Refer to page 11 of Intrado witness Clugy's direct testimony, lines 3-4.)

c. To the extent that Intrado originates and/or terminates traffic to third parties via AT&T Florida as the transit provider, please explain the specific compensation arrangements Intrado is seeking from AT&T Florida.

d. What specific obligations does Intrado believe that AT&T Florida has with respect to alternate tandem provider traffic?

e. Please identify Intrado's specific objections to AT&T Florida's terms and conditions that should apply to alternative tandem provider traffic.

Intrado Comm Response:

This Interrogatory concerns Issue 14. The Parties resolved Issue 14 after the filing of direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

11. Please refer to Intrado witness Clugy's direct testimony, page 11, lines 5-6. The witness states that "Intrado Comm seeks the same protections and rights that AT&T's language gives AT&T." Please explain the specific protections and rights that AT&T Florida's language gives AT&T Florida that are not afforded Intrado, given that AT&T Florida does not provide interLATA service and does not purchase related feature group access services from any carrier.

Intrado Comm Response:

This Interrogatory concerns Issue 14. The Parties resolved Issue 14 after the filing of direct testimony.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

12. Please explain any disagreement between AT&T Florida and Intrado with respect to how the parties' resolved language in Issue 23 will be implemented in Florida.

Intrado Comm Response:

Intrado Comm seeks a consistent and uniform interconnection agreement across the entire AT&T 22-state territory. The Parties have spent a significant amount of time negotiating various provisions found in AT&T's 13-state template. The Parties reached agreement on various changes to the AT&T template language after negotiations that revised some provisions and Intrado Comm agreeing to accept the remainder of the provisions as originally proposed by

AT&T. AT&T has not demonstrated any reason, technical feasibility or otherwise, for not using the terms the Parties have already negotiated in Florida. AT&T has indicated that it would be willing to implement "similar" language in Florida to the extent certain an issue is addressed in the Florida interconnection agreement. AT&T, however, is unwilling to utilize the entire provision reviewed, negotiated, and accepted by Intrado Comm. For the language relating to Issue 23, AT&T has indicated it would be unwilling to use the exact language agreed upon by the Parties because a similar issue is not contained in AT&T's 9-state template agreement.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

13. **Regarding Issue 29(a), please refer to page 36 of Intrado witness Hicks' direct testimony, lines 7-10. The witness states that per-minute charges are "normally" billed in six-second increments and per-mile charges are "normally" billed in one-fifth mile increments.**

    a. **Please explain what Intrado means by "normally."**

    b. **Please identify all documents supporting Intrado's position of how per-minute charges and per-mile charges are "normally" billed.**

    c. **If the Commission determines that AT&T's 9-state generic template interconnection agreement should be used as a starting point in this proceeding rather than the 13- state template, is the dispute between the Parties about how to round usage prior to assessing reciprocal compensation charges resolved? If no, please explain.**

Intrado Comm Response:

a. By "normally," Intrado Comm is referring to common industry norms in contracts between carriers.

b. It is Intrado Comm's experience that many carrier-to-carrier agreements and carrier tariffs utilize six-second increments for per minute charges and one-fifth increments for per mile charges.

c. Yes. It is Intrado Comm's understanding based on representations from AT&T that the 9-state template does not use a minute-based usage calculation for determining reciprocal compensation charges.

Responsible Person:
Thomas Hicks, Director-Carrier Relations

14. Please explain why the rounding increments should not follow that contained in AT&T Florida's switched access tariff and Dedicated Access Services tariff.

Intrado Comm Response:

AT&T Florida's switched access tariff and Dedicated Access Services tariff do not reflect current industry norms or newer technologies that have the ability to measure in increments less than one minute or less than one mile.

Responsible Person:
Thomas Hicks, Director-Carrier Relations

15. What is the potential financial impact to Intrado if reciprocal compensation usage is rounded to the next minute instead of six-second intervals. Please identify all source documents supporting Intrado's potential financial impact.

Intrado Comm Response:

Even if the financial impact were minimal, Intrado Comm should not be required pay AT&T more than it otherwise would owe to AT&T. Intrado Comm has not had the opportunity to fully evaluate AT&T's claims of "minimal" financial impact.

Responsible Person:
Thomas Hicks, Director-Carrier Relations

16. Please explain Intrado's specific objections to AT&T Florida's proposed language to Sections 1.9.1 and 1.9.2 that address pricing for ordered services or products not contained in the ICA and for which there is no tariff rate. The explanation should include the specific reasons for Intrado' s objections.

Intrado Comm Response:

AT&T's proposed language would impose unknown rates on Intrado Comm that were not otherwise approved by the Commission via the Section 251/252 process or the review of filed tariffs. Intrado Comm cannot agree to pay for services or products when it does not know the rate to be charged. There must be some parameters on AT&T's ability to impose rates on Intrado Comm.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

17. Please refer to page 36, lines 13-21, of Intrado witness Hicks' direct testimony. Please explain specifically what Intrado means by "extraordinary charges" on line 15.

Intrado Comm Position:

The term "extraordinary" is the term contained in AT&T's template language. Intrado Comm understands the term to be beyond ordinary day-to-day charges. AT&T can provide more information on what it meant in its template language

Responsible Person:
Thomas Hicks, Director – Carrier Relations

18. Under Intrado's proposed language to Pricing Section 1.9.1, is Intrado willing to accept AT&T Florida's rejections of orders for products and services not included in the ICA, and for which no applicable intrastate tariff rates exist, until the applicable rates are set pursuant to the Section 251 and 252 process? If no, explain why not.

Intrado Comm Response:

Intrado Comm may be willing to accept such a proposal. Intrado Comm would need to closely review AT&T's tariffs and the products and services in the interconnection agreement to ensure orders for necessary products and services would not be rejected.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

19. Please explain with specificity Intrado's objections to AT&T Florida's proposed language to Pricing Sections 1.9.1 and 1.9.2.

Intrado Comm Response:

Please see the Response to Interrogatory 16.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

20. a. Please explain Intrado's reasons for its proposed additional language to Pricing Section 1.10.1 "if the Parties have reached mutual agreement of the specified rate and the Commission has approved pursuant to the following process."

b. Is it Intrado's position that this language would permit Intrado to object to prices even if the Commission has approved them?

c. Would it be more appropriate to require that either the rates are mutually agreed to by both parties or the parties accept the rates the Commission approves? If no, please explain why not.

Intrado Comm Response:

a. Please see the Response to Interrogatory 16.

b. Intrado Comm would not be permitted to object to prices if the Commission has approved them. This is Intrado Comm's concern with AT&T's proposed language – there is no mechanism for Commission approval either through the tariff process or the 251/252 process.

c. Yes, that approach would be appropriate.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

21. Is Intrado an authorized re-seller of telecommunications services in Florida?

Intrado Comm Response:

Yes, Intrado Comm's certification as an Alternate Local Exchange Carrier ("ALEC") includes resale authority.

Responsible Person:
Thomas Hicks, Director-Carrier Relations

22. By way of clarification, have all issues relating to collection and remittance of 911/E911 surcharges contained in sections 7.2.2, 7.2.2.1, 7.2.2.2 been resolved by the parties?

Intrado Comm Response:

Yes, all issues relating to collection and remittance of 911/E911 surcharges have been resolved by the Parties.

Respon Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

23. By way of clarification, are issues relating to collection and remittance of 911 /E9 11 surcharges contained in sections 7.2.1.1 and 7.2.1.2 still in dispute?

Intrado Comm Response:

All issues relating to collection and remittance of 911/E911 surcharges are resolved.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

24. For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 36, lines 26-29, where it is stated that, "This language clearly sets forth how 911 surcharges will be handled if Intrado ever operates as a reseller. When Intrado is not operating as a reseller, this language is not invoked, and there is no harm to Intrado by including it in the ICA."

a. If Intrado is not operating as a reseller, why does Intrado object to the inclusion of this language?

b. To the best of Intrado's knowledge, why is AT&T proposing language that is not relevant to Intrado's business model?

Intrado Comm Response:

All issues relating to collection and remittance of 911/E911 surcharges are resolved.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

25. **a. Is there language in the 13 states agreement analogous to the language AT&T proposes in Florida in regards to collection and remittance of 911/E911 surcharges?**

b. Please identify the language in the thirteen states agreement.

Intrado Comm Response:

All issues relating to collection and remittance of 911/E911 surcharges are resolved.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

26. **For purposes of the following request, please refer to the direct testimony of Intrado Witness Cynthia Clugy, page 8, lines 5-10. What is the exact language agreed upon by the parties in Ohio?**

Intrado Comm Response:

All issues relating to collection and remittance of 911/E911 surcharges are resolved.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

27. **For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 5, lines 7-12.**

a. Please identify the specific terms and conditions that Intrado has identified in the ICA that should be reciprocal.

b. How did Intrado determine which terms in the ICA should be reciprocal?

Intrado Comm Response:

a. Intrado Comm is unclear what provisions of the interconnection agreement are included under this Issue 9. This issue was included by AT&T. Intrado Comm has asked AT&T for clarification as to what provisions of the contract fall under this issue, but has not received a response.

b. Any provision affecting interoperability and mutual exchange of traffic was reviewed to ensure reciprocity. Also, where AT&T sought to put the onus of certain liabilities on Intrado

Comm, Intrado Comm amended those provisions to make them shared responsibilities given the co-carrier relationship.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

28. For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 13, lines 7 through page 14, lines 4.

a. Please identify the type of barrier to entry that a term shorter than three years erects, and explain the effects such barrier would have on Intrado's delivery of services to its customers.

b. Please explain what is meant by "decidedly counter to the public interest."

c. Had AT&T, at the time your direct testimony was filed, proposed language regarding the term that should apply for the interconnection agreement in Florida?

d. If your response to Interrogatory 28(c) is affirmative, was the term proposed for the interconnection agreement in Florida the same as the term that the parties' agreed to in Ohio (13-state agreement)?

e. Please explain what is meant by the phrase, AT&T is unwilling to use the 13-state agreement "as the basis for" the Parties' Florida agreement.

Intrado Comm Response:

The actual term of the interconnection agreement is not at issue - AT&T has agreed to provide Intrado Comm with a three-year term for the interconnection agreement. The issue is whether the entire Term and Termination provision the Parties reviewed, negotiated, and revised in Ohio should be used in Florida. AT&T proposes using the 9-state template Term and Termination provision and simply substituting "5 years" for "3 years" to achieve Intrado Comm's desired result. That does not provide Intrado Comm with the entire provision the Parties already negotiated. Also see Intrado Comm's Response to Interrogatory 12.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

29. **For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 14, lines 5-21.**

a. **Had AT&T, at the time your direct testimony was filed, proposed language regarding a successor ICA in Florida?**

b. **If your response to Interrogatory 29(a) is affirmative, was the period of time to request a successor agreement in Florida based upon the language use in Ohio (13- state agreement)?**

c. **Please explain your assertion: "Originally, Intrado Comm had proposed a longer period of time in order to request a successor agreement, but has since agreed with AT&T's original language providing for a ten (10) day timeframe."**

Intrado Comm Response:

a. No.

b. Not applicable.

c. In its Petition for Arbitration, Intrado Comm proposed language allowing Intrado Comm more than 10 days to request a successor interconnection agreement. Since its Petition was filed, Intrado Comm has accepted AT&T's originally proposed language, which sets forth a 10 day timeframe.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

30. For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 22, lines 12-18.

a. Does Intrado have ICAs with other carriers in Florida that have already addressed capitalization?

b. Does Intrado have ICAs with other carriers in other states that have already addressed capitalization?

c. Please explain why defined terms in the ICA should be identified in the manner Intrado asserts they should be identified.

Intrado Comm Response:

a. Intrado Comm does not have any currently executed and ratified interconnection agreements with other carriers in Florida that have already addressed capitalization.

b. Intrado Comm and its affiliates have interconnection agreements with other carriers in other states that capitalize certain definitions and subsequently uses those capitalized defined terms throughout the body of the document.

c. When negotiating parties agree on a specifically defined meaning for a word, term, or acronym being used throughout a binding contract, that word, term or acronym should be duly represented by the use of capitalization. This capitalization should be carried throughout the text of the document. This ensures that all parties have a common understanding of crucial terminology should any ambiguities arise from specific text in the document.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

31. For purposes of the following request, please refer to the direct testimony of Intrado witness Hicks, page 32, lines 18 through page 34, lines 1-4.

a. What types of trunk forecasting information does Intrado's modified language seek to obtain from AT&T?

b. Please explain Intrado's ordering processes and describe how it is consistent with industry standards.

Intrado Comm Response:

a. The goal is to ensure that Intrado Comm's traffic carrying capacity will be comfortably greater than the current need through expected need six months later. Forecasts are requested quarterly at the end of each quarter (*e.g.*, March 31 for first quarter) to be delivered within two weeks of the end of that quarter. The data is desired in spreadsheet format with column headings:

- Type of Trunk,
- CLLI of AT&T's originating CO,
- Intrado's POI CLLI,
- number of circuits installed as of date of report,
- the grade of service being provided on the current trunks
- the date of the traffic study that established the grade of service
- number of circuits forecast for end of next quarter,
- number of circuits forecast for end of second subsequent quarter,
- number of circuits forecast for end of third subsequent quarter

- number of circuits forecast for one year
- TGSN Code
- Remarks

b. When Intrado Comm is the designated E911 service provider it is necessary for communication service providers to order trunks from Intrado Comm to terminate 911 traffic from their end users to the Intrado Comm 911 selective router serving PSAPs authorized to answer 911 calls from those end users. Intrado Comm has established Access Service Request ("ASR") processes that enable the carriers to place orders for these trunks. These processes use the same industry accepted abbreviations and acronyms for ASR used by large carriers such as AT&T. Intrado Comm also has companion documentation that explains the fields on the ASR forms. Generally, a carrier will place an ASR with Intrado Comm and pre-populate certain order data fields on the form. This form is then submitted for Intrado Comm to engineer and design the circuits based on facility information provided by the carrier. Intrado Comm then returns a Firm Order Commitment ("FOC") due date and circuit identification information back to the originating carrier. This order flow process is no different than what AT&T uses today.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

32. **For purposes of the following request, please refer to the direct testimony of Intrado witness Hicks, page 33, lines 9-11. How will Intrado utilize the initial trunk forecast requested from AT&T?**

Intrado Comm Response:

Intrado will use the grade of service information to be able to report to the PSAPs to which it provides service whether the interconnection trunking meets the NENA recommended service level of P.01 GOS and if not, to plan actions in cooperation with AT&T to upgrade the trunking to meet the NENA recommendation. The number of trunks forecast per quarter will enable Intrado to plan any upgrades to its traffic handling capacity to meet AT&T's forecast demand.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

33. For purposes of the following request, please refer to the direct testimony of Intrado witness Hicks, page 14, line 13, through page 19, line through 5:

a. Does Intrado have the infrastructure in their existing network that supports direct and redundant trunk configurations available to AT&T Florida?

b. What types of multiple, diverse 911 network access points does Intrado currently have in place and between what locations?

c. What types of alternative diverse facilities does Intrado currently have in AT&T Florida's serving areas?

d. Who would decide where the diverse points would be located for each carrier to interconnect to Intrado's network and why?

Intrado Comm Response:

a. Intrado Comm will provide a minimum of two geographically diverse access points within the State of Florida to which AT&T may terminate its end users' 911 traffic that is destined for PSAPs served by Intrado Comm. While AT&T has direct control over its network facility transport designs and the level of facility diversity it will employ, Intrado Comm has strongly recommended that it employs diverse voice paths from its end offices to each access point. The mere fact that Intrado Comm will employ two geographically points of termination ensures that AT&T will have some level of diversity in its network design to be able to reach each location. Such diversity and redundancy represent the common expectations of public safety communications, are consistent with the FCC's Network Reliability and Interoperability Council ("NRIC") recommendations and promotes network reliability for highly critical emergency service access.

b. Intrado Comm has not yet established the locations for the access points that will be deployed within the State of Florida. Determination of where the geographically diverse Intelligent Emergency Network® access points will be placed in Florida is contingent upon many factors, as well as the locations of the early adopters of Intrado Comm's E911 network offering. The quantity and location of the network access points are designed for the greatest level of efficiency and reliability. Such determinations are made only after an E911 Customer has entered into agreement to subscribe to Intrado Comm's 911 service.

c. Intrado Comm currently has a portion of its national emergency calling complex softswitch located in AT&T Florida's serving area. As stated previously, the locations of Intrado Comm's Intelligent Emergency Network® access points remains to be determined.

d. Intrado Comm's network design personnel work closely with its E911 Customers to identify diverse access point locations that will provide the greatest efficiency and reliability for public safety. Given the nature of Florida's exposure to hurricanes and other severe weather

conditions, regional diversity within the State will be a critical factor in making those determinations.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

34. For purposes of the following request, please refer to the direct testimony of Intrado witness Hicks, page 26, line 16 through page 32, line 17:

a. What benefit, if any, would it be to an ILEC to deny inter-selective router transfer capability to a 911 Service Provider?

b. Should the language of the ICA contain provisions for the PSAPs inclusion in the process and its facility requirements as to how their particular traffic may be routed? If Not, why not?

c. Would Intrado's proposed language require any modifications and/or upgrades to AT&T Florida's current network infrastructure? If so, what modifications/upgrades would be needed to be compatible with the Intrado network?

d. Does Intrado currently provide any contracted services to AT&T Florida as it relates to the provisioning of 911/E911 services? If so, what services does Intrado provide and in what capacity?

Intrado Comm Response:

a. A public safety entity opting to subscribe to Intrado Comm's Intelligent Emergency Network® offering will have every expectation that it will retain the ability to perform and receive call transfers to/from PSAPs remaining on AT&T's E911 network. By denying inter-network call transfer capabilities to competing providers of E911 network services, AT&T could severely diminish a competitive provider's ability to enter the public safety market place since E911 Customers would need to sacrifice existing call transfer capabilities when moving away from the incumbent provider's technology-limited E911 network. Thus the benefits of a more robust and enhanced public safety network would be denied to Florida PSAPs.

b. E911 Controlling Authorities play a vital role in defining operational expectations of their E911 service providers, inclusive of call transfer locations, back up PSAPs, alternate and default routing schemes and other aspects of E911 service. While parties subscribing to Intrado Comm's Intelligent Emergency Network® offering will have the ability to establish call transfer, backup routing, alternate and default routing to any PSAP in the nation served off Intrado Comm's network, Intrado Comm recognizes that it is inefficient to establish such capabilities to every PSAP in Florida currently served by separate AT&T networks in the legacy environment Accordingly, Intrado Comm has not sought the establishment of full interoperability for call transfers between ALL PSAPs served by AT&T and Intrado Comm. Intrado Comm believes the

determination of where and when inter-selective router call transfers may occur must be under the direction of the public safety entities seeking the service. However, Intrado Comm is seeking the inclusion of language in the interconnection agreement that will permit such transfer and routing arrangements to occur should an E911 Controlling Authority request such capabilities. By doing so, the administrative costs of negotiating and establishing independent commercial agreements between the service providers for such interoperability will be greatly reduced, as multiple agreements will not be necessary. This approach will not negate the need for a request from public safety to each 911 service provider to effectuate the transfer arrangements.

c. No. The language proposed by Intrado Comm does not impose any modifications to AT&T Florida's current network infrastructure. However, Intrado Comm's language does impose a requirement for AT&T to re-direct/re-home its end office 911 traffic destined for PSAPs served by Intrado to Intrado Comm's Intelligent Emergency Network®.

d. No. Intrado Comm does not currently provide any contracted services to AT&T Florida.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

35. By way of clarification, have issues relating to the appropriate terms and conditions regarding billing and invoicing audits been resolved by the parties?

Intrado Comm Response:

Issues relating to the terms and conditions regarding the billing and invoicing of audits have been resolved by the Parties in Ohio, but not in Florida because AT&T is unwilling to utilize the entire audit provision reviewed, negotiated, and revised by the Parties in Florida. See Response to Interrogatory 12.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

36. By way of clarification, have Issue Nos. 25(b), 25(c), and 25(d) been resolved by the parties?

Intrado Comm Response:

Issues 25(b), 25(c), and 25(d) have been resolved by the Parties in Ohio, but not in Florida because AT&T is unwilling to utilize the entire audit provision reviewed, negotiated, and revised by the Parties in Florida. See Response to Interrogatory 12.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

37. For purposes of the following request, please refer to the direct testimony of Intrado witness Spence-Lenss, page 18, lines 6-8.

a. By way of clarification, will late payment charges only be applied if the payment of properly disputed charges is not remitted to the escrow account by 30 calendar days of the invoice date?

b. If the response to Interrogatory 37(a) is negative, how will late payment charges apply?

c. Is it Intrado's position that properly disputed amounts remitted to a interest-bearing escrow account, within 30 calendar days of the invoice due date, are subject to late payment charges?

d. If the response to Interrogatory 3 7(c) is negative, please detail Intrado's position.

Intrado Comm Position:

a. It is Intrado Comm's understanding that late payment charges will apply only if disputed amounts are not placed in escrow by the bill due date.

b. Not applicable.

c. No. Intrado Comm's position is that late payment charges should apply only to amounts that are not paid by the bill due date or not properly disputed (*i.e.*, placed in escrow) by the bill due date.

d. See Response to Interrogatory 37(d).

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

38. With regards to section 10.1.4 of the proposed ICA, who will pay interest on the principal of the properly disputed amounts if the principal was deemed 100% owed to AT&T after resolution?

Intrado Comm Response:

Intrado Comm agrees that interest charges should apply to any disputed amounts contained in escrow if those payments are deemed to be owed to AT&T after resolution of the dispute.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

39. With regards to section 10.1.4, please explain the difference between the late payment charges, and the interest earned on the principal of properly disputed charges remitted to the escrow account prior to 30 calendar days of invoice date, provided that the principal was later deemed 100% owed to AT&T.

Intrado Comm Response:

Intrado Comm agrees that interest charges should apply to any disputed amounts contained in escrow if those payments are deemed to be owed to AT&T after resolution of the dispute.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

40. For purposes of the following request, please refer to the direct testimony of AT&T witness Pellerin, page 67, lines 13-15. What is Intrado' s position with regards to *interest* payments being proportioned equal to the proportioning of the principle balance once dispute resolution is achieved?

Intrado Comm Response:

Intrado Comm agrees that interest charges should apply to any disputed amounts contained in escrow if those payments are deemed to be owed to AT&T after resolution of the dispute.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

000024

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition by Intrado Communications, Inc. for arbitration of certain rates, terms, and conditions for interconnection and related arrangements with BellSouth Telecommunications, Inc. d/b/a AT&T Florida, pursuant to Section 252(b) of the Communications Act of 1934, as amended, and Sections 120.80(13), 120.57(1), 364.15, 364.16, 364.161, and 364.162, F.S., and Rule 28-106.201, F.A.C.	DOCKET NO. 070736-TP DATED: June 11, 2008

2008 JUN 12 PM 12:29
FLORIDA PUBLIC SERVICE COMMISSION

INTRADO COMMUNICATIONS INC.'S
RESPONSES TO STAFF'S SECOND SET OF INTERROGATORIES (NOS. 41-66)

Intrado Communications Inc. ("Intrado Comm"), by its attorneys, hereby respectfully responds to the Florida Public Service Commission ("Commission") Staff's Second Set of Interrogatories (Nos. 41-66) as follows:

INTERROGATORIES

41. Please refer to page 76, lines 13-18 of AT&T witness Pellerin's direct testimony regarding Issue 32. Does Intrado agree that:

a. The term "offers service" is defined in Appendix ITR?

b. The use of the term is limited to that appendix?

c. Appendix ITR does not include provisions for E911 traffic?

d. Within Appendix ITR, the term "offers service" is limited to local interconnection trunks only?

e. If Intrado disagrees with any, or all of the assertions in subparts (a) through (d) above, please explain the basis for this disagreement.

Intrado Comm Response:

This Interrogatory addresses issue 32 and is currently resolved. Intrado Comm has accepted the AT&T definition of "Offers Service" in the Appendix ITR as this document has

been edited to specifically exclude 911 traffic, which is addressed in the 911 Appendix and the 911 NIM Appendix.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

42. Please refer to page 77, lines 1-24 of AT&T witness Pellerin's direct testimony regarding Issue 34. Does Intrado agree that:

a. There is no language in dispute regarding the definition of a "non-standard" collocation request?

b. There is no language in dispute regarding the definition of a "Custom Work Charge?"

c. If Intrado disagrees with the assertions in subparts (a) or (b) above, please explain the basis for this disagreement.

Intrado Comm Response:

a. Intrado Comm disagrees - - there is a dispute regarding the definition of a "Non-Standard Collocation Request ("NCSR")." Intrado Comm agrees with the original draft definition in the AT&T Physical Collocation appendix with modification. Intrado Comm has added text to address a NCSR that may be more commonly requested. AT&T does not concur with the additional language added by Intrado.

b. Intrado Comm agrees there is no dispute regarding the definition of a "Custom Work Charge".

c. While Intrado Comm recognizes that custom work charges may need to be applied to Non-Standard Collocation Requests, custom work charges should be uniform where similar custom work is requested. The Act requires ILECs to provide interconnection and related services on a nondiscriminatory basis. 47 U.S.C. §251(c)(6). Intrado Comm is entitled to the same Custom Work Charges billed to other entities that made the same or fundamentally similar requests as Intrado. AT&T has used a "Special Service Assembly Request ("SSAR")" to provide customer pricing for regulated retail services. A good example might be the data conditioning once performed for Plain Old Telephone Service ("POTS") lines used with modems for the purpose of dial up connections associated with data transfer. AT&T's work performed for this purpose was generally the same for all customers making such a request and was billed uniformly. Intrado Comm is requesting AT&T to treat commonly requested NCSRs not envisioned by the existing Physical Collocation appendix in a parity manner.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

43. Please refer to page 79, lines 1-12 of AT&T witness Pellerin's direct testimony regarding Issue 34. Which party should determine what constitutes "a similar arrangement?" What objective parameters or guidelines should be considered by Intrado Comm in reaching this determination?

Intrado Comm Response:

There is a well-defined body of federal law that can be relied upon for determining when customers are similarly-situated and entitled to the same rates, terms and conditions. These criteria should be relied upon to determine whether AT&T is engaged in discrimination. If the charges are not in parity with others similarly served, AT&T has an obligation to delineate with specificity the reasons why Intrado Comm's costs to provide seemingly similar serving arrangements are so disparate. Intrado Comm could then invoke the terms of dispute resolution to establish why AT&T's pricing is discriminatory.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

44. For the following questions, please refer to the specific portion of Intrado Comm witness Hicks' direct testimony identified at the beginning of each question.

a. Page 12, lines 17-20. Do you believe Intrado Comm is acting as a CLEC when providing only 911 Network services? Please explain your response.

b. Page 13, lines 1-4. Please identify all applicable statutes, rules, orders or other pertinent materials, including specific page(s) and/or paragraph(s) numbers where applicable, that support your statement that the interconnection arrangements Intrado Comm needs to offer its PSAP customers service falls squarely within the category of arrangements eligible to be obtained from AT&T via the Section 251 (c) process. Please include the specific page(s) and/or paragraph(s) numbers where applicable.

Intrado Comm Response:

a. Yes, Intrado Comm is acting as a CLEC when it provides 911/E911 services. A CLEC is a competitive local exchange carrier. Under the federal Communications Act, a "local exchange carrier" is any person engaged in the provision of "telephone exchange service" or "exchange access" (47 U.S.C. § 153(26)). "Telephone exchange service" is (1) service within a telephone exchange, or within a connected system of telephone exchanges or (2) comparable service provided by a system of switches, transmission equipment or other facilities by which a subscriber can originate and terminate a telecommunications service (47 U.S.C. § 153(47)). The FCC has determined that the "key component" of telephone exchange service is "'intercommunication' among subscribers within a local exchange area" (*Deployment of Wireline Services Offering Advanced Telecommunications Capability*, 15 FCC Rcd 385, ¶¶ 30-31 (1999)). When providing 911/E911 services to a PSAP, Intrado Comm provides "intercommunication" because it transports the 911 call to the appropriate PSAP and enables the person dialing 911 to talk to someone at the PSAP and the person at the PSAP to respond to the

caller. Intrado Comm's 911/E911 services will provide a greater degree of intercommunication than is available in fax communications, which the FCC has declared to be telephone exchange service (*Deployment of Wireline Services Offering Advanced Telecommunications Capability*, 15 FCC Rcd 385, ¶ 21 (1999)).

The plain language of section 364.02(14), Florida Statutes states a "telecommunications company" includes every corporation "offering two-way telecommunications service to the public for hire within this state." In section 364.02(13), the Legislature has said that "service" "is to be construed in its broadest and most inclusive sense." Unquestionably, persons who dial 911 are capable of two-way communications with the 911 call taker. Moreover, the conversation is occurring over telecommunications lines that Intrado Comm offers for compensation to the PSAP. These lines utilize both the local exchange network provided by the caller's local exchange carrier as well as the Wireline 911 Network provided by Intrado Comm when it is serving as the voice telephone network provider for the PSAP. In addition, 911 services provided by the ILECs have been tariffed for years by the ILECs as local exchange services – such services do not change their nature because they will be provided a CLEC.

Finally, the Florida Legislature has also recognized that 911 services are telecommunications services in its establishment of the State E911 Board and the 911 fees that may be levied. In Section 364.171(2), the Legislature has stated its intent to have implemented and continually updated "a cohesive statewide emergency communications number "E911" plan for enhanced services." Further, in Section 364.172(2)(d), the Legislature has said 911 fees should be administered "in a manner that is competitively and technologically neutral as to all voice communications services providers." Finally, the Legislature in Section 364.172(9)(b) declared it appropriate for 911 fee revenues to "be used for next-generation E911 network services." This statutory language recognizes that the service Intrado Comm is proposing to provide is a "telecommunications service" that will be provided by a CLEC pursuant to the authorization granted to Intrado Comm by this Commission.

b. Section 251(c) requires ILECs to provide interconnection for the transmission and routing of telephone exchange service and exchange access (47 U.S.C. § 251(c)(2)). As discussed in the Response to Interrogatory 6(a), Intrado Comm offers telephone exchange service when it provides 911/E911 services to PSAPs. The FCC has defined "interconnection" as "the linking of two networks for the mutual exchange of traffic" (47 C.F.R. § 51.5). The arrangements Intrado Comm seeks in the interconnection agreement are for the purpose of linking two networks – AT&T's network and Intrado Comm's network - - for interconnection to the public switched network for the mutual exchange of 911 calls destined to the other carrier's PSAP end user.

Thomas Hicks, Director – Carrier Relations

45. Please refer to page 21, lines 13-15 of Intrado Comm witness Hicks' direct testimony. Why does Intrado Comm want a "minimum of two . . . POIs?" Please explain the technical and regulatory reasons for two POIs.

Intrado Comm Response:

It is in the public's interest to require a minimum of two POIs for the mutual exchange of traffic between 911 networks. This requirement is consistent with the 911 network recommendations of the FCC chartered Network Reliability and Interoperability Council IV ("NRIC") Best Practice ES01. Intrado Comm's 911 network consists of a secure, managed IP network from the Intrado Comm Regional Collocation ("RCL") gateways and the Intrado Comm served PSAPs. Intrado Comm's RCL gateways serve as the interface for traditional Time Division Multiplex ("TDM") circuit switch local exchange providers. Intrado Comm's network design typically consists of three (3) geographically diverse RCL gateway access points so as to provide consistent diversity and redundancy to the managed IP network serving the PSAPs. That is, should a gateway be taken out of service for maintenance or repair, reliability is not diminished since the other two geographically diverse interfaces remain available for call delivery. Intrado Comm recommends interconnection to all three diverse RCL gateways, but has only proposed a requirement to interconnect to two.

Intrado Comm is not averse to interconnecting to a minimum of two POI on the AT&T network when AT&T has been designated as the E911 Services provider. However, the current AT&T interconnection agreement makes no provisions for multiple POIs for 911 interconnection. AT&T believes the POI for 911 traffic should be at the locations of the 911 Selective Router. In most AT&T 911 deployments, a single Selective Router is used, thus reducing the value of establishing multiple POIs for 911. Intrado Comm fully intends to establish multiple and diverse paths to the AT&T network, likely at the AT&T Selective Router location. This will not, however, provide full network diversity as recommended by NRIC. Intrado Comm is not aware of any regulatory requirement to establish multiple POIs for 911 network interconnection in Florida. The FCC has, however, directed the Public Safety and Homeland Security Bureau to implement NRIC best practices that are consistent with 911 network design proposed by Intrado. *See Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks*, EB Dkt No. 06-119, WC Dkt. No. 06-63, 22 FCC Rcd 10541 at ¶¶ 74, 79-81 (2007); Extended, 22 FCC Rcd 14246 (2007); *Order on Reconsideration*, 22 FCC Rcd 18013 (2007).

46. Please refer to page 21, lines 17-19 of Intrado Comm witness Hicks' direct testimony for the following questions.

a. Please identify any technical and regulatory support for the assertion that "AT&T either uses mid-span meet points with adjacent ILECs for the transport of 911/E911 traffic to the appropriate PSAP or transport traffic to the selective router of the 911/E911 provider."

b. Does AT&T compete with any adjacent ILECs to provide 911 service to PSAPs? Please explain your answer.

Intrado Comm Response:

a. AT&T serves PSAPs located in the AT&T local exchange franchise service area with E911 Selective Routers that are generally located in major metropolitan areas. AT&T E911 Tandems are usually located in close proximity to its access tandems. This is largely attributable to the physical interoffice facilities used to deliver calls to the access tandems also being used to deliver 911 calls from end offices served by independent incumbent local exchange companies ("ICOs"). AT&T's franchise areas generally are densely populated areas that are surrounded by smaller exchanges served by ICOs. These ICOs do not provide E911 Selective Routers and therefore have no problem sending their 911 traffic to AT&T's Selective Routers via the facilities used to transport local exchange traffic to the access tandems. AT&T has established meet-points designed to serve as demarcation points for the maintenance of these facilities. These meet-point arrangements were either established via verbal agreements or private joint provisioning agreements designed to facilitate the exchange or passage of traffic between non-competing ILECs. These serving arrangements were not established to facilitate competition between AT&T and its neighboring ICO, but instead to enable each company to service customers within their respective franchise territory.

b. No, AT&T provides E911 Services to PSAPs within its franchise territory, but will provide E911 Services to PSAPs outside of its franchise territory if the incumbent serving the PSAP does not wish to provide E911 Selective Routing services. Should the neighboring ILEC choose to provide E911 services via its own Selective Routing Tandem then AT&T will generally establish what it refers to as "primary" and "secondary" serving arrangements that will enable AT&T to continue to interconnect its AT&T end offices to an AT&T Selective Router instead of another company's E911 Selective Router. This arrangement is primarily used where an AT&T end office subscribers is served by more than one PSAP and one of those PSAPs is located outside of AT&T's franchised area and served by the neighboring ILEC's Selective Router. This is not a competitive arrangement, but is instead non-competing carriers managing their provision of services within their franchise service area.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

47. Please refer to page 22, lines 1-4 of Intrado Comm witness Hicks' direct testimony for the following questions.

a. Please identify any technical and regulatory support for the assertion that "[T]here should be only one stage of E911 switching after the originating office processes the call."

b. How does only one stage of switching "ensure the greatest degree of reliability?" Please explain your answer.

Intrado Comm Response:

a. Technically, the ability to switch a 911 call requires several process steps. Simply, call processing logic for E911 service requires the network to:

1. receive call routing digits and wireline caller's telephone number from the transmitting central office over a transport facility (e.g., copper, fiber, air);
2. interpret the routing digits received as a 911 call type;
3. use the caller's telephone number to index into the appropriate call routing translation tables (i.e., Selective Routing Data Base ("SRDB"));
4. identify the Emergency Service Number ("ESN") stored in the SRDB with the caller's telephone number via a previously stored line attribute for the caller;
5. translate the ESN line attribute to a routing index to query trunk translation tables to determine which outgoing trunk group the call will be switched to and the appropriate signaling to be transmitted over the outgoing trunk group;
6. seize an available outgoing trunk from the trunk group selected (or over a trunk from the appropriate alternate route trunk group if all trunks are busy in the primary trunk group);
7. pass the properly formatted digits over the chosen trunks in accordance with trunk group translation table entries for the trunk group chosen; and
8. cut through the voice path upon answer at the PSAP.

Technically, failure could occur during any stage of the call process logic steps if the switch routing tables are not pre-provisioned properly, if the caller's telephone number data in the SRDB fails to contain the most current information for that caller, or if a hardware or software error occurs.

b. By introducing a second stage of switching into the E911 call completion process, the potential points of failure are more than doubled because errors may also be introduced into the varied provisioning platforms and database systems used to provision the trunk and data tables contained in each switch. To successfully process a 911 call in the manner commonly deployed by AT&T where two Wireline E911 Network service providers are involved (*i.e.*, primary and secondary routing), both switching stages must be provisioned using common source data (the caller's telephone number, address location and Master Street Address Guide ("MSAG"). As only one Wireline 911 Network service provider will be chosen by an E911 Controlling Authority to serve as the "designated" service provider, the potential for the provisioning information to get out of synchronization between the service providers or be misapplied increases the risks of failure. Further, the overall Wireline E911 Network service quality delivered by the competitive provider that is designated to provide E911 services remains within the control of AT&T.

Intrado Comm's network design limits the exposure of a switching system's failure to an end office level, thereby exposing a smaller subset of customers the risk of an ILEC's call processing failure. By switching *all* 911 traffic through another switching stage within the ILEC's network, an entire community is exposed to one central office's loss of call processing (their Control Office), be it related to weather (e.g., Hurricane Katrina type event) or maintenance failure condition.

Lastly, inter-office trunk groups are typically designed for a P.01 grade of service for each trunk group. A P.01 is understood to represent one in one hundred calls may fail during the busiest hour of the busiest day due to all trunks being busy. If more than one inter-office trunk group is involved in the call path to Intrado Comm's selective router due to the unnecessary insertion of another stage of switching, the potential for call blockage due to one of the inter-office trunk groups being "all trunks busy" is more likely.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

48. Please refer to page 22, lines 10-14 of Intrado Comm witness Hicks' direct testimony. How has 911 traffic "historically been handled" between adjacent ILECs? Please explain your answer.

Intrado Comm Response:

As discussed in the Intrado Comm reply to Interrogatory 46, adjacent ILECs have a mutual need to exchange traffic so as to effectively serve customers within their respective franchise areas. This mutual exchange of traffic may be for termination within the franchise territory or may be merely a pass-through of traffic on interoffice facilities destined for another franchise territory. For example, AT&T may not be the predominant carrier within a local access transport area ("LATA"). AT&T may have a need to transport its end office traffic to access tandems of other carriers. It is in the best interest of the public for all carriers to mutually support interoffice facilities within a state to provide optimal service to all customers making 911 calls. Therefore, adjacent carriers have historically designated a "meet point" on an interoffice facility and agreed to maintain their respective portion of the circuit up to the meet point. The meet point also serves as a demarcation point for the billing of mileage and cost recovery from public safety. In such scenarios, it is often AT&T, not the ICO, providing the E911 Selective Routing services. AT&T and the ICO historically have agreed to use the "meet point" for the exchange of E911 traffic originating from ICO end offices destined for AT&T's Selective Router(s) or from AT&T's Selective Router(s) destined for PSAP(s) located in ICOs franchise territories. This arrangement generally has not applied to competitive local exchange carriers ("CLECs"), wireless carriers, or VoIP service providers because they do not provide services to PSAPs. Consequently, each of these types of carriers is commonly relegated to arranging for termination of their respective traffic at the selective router of the entity providing E911 services to the PSAP.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

49. Please refer to page 22, line 21 through page 23, line 2 of Intrado Comm witness Hicks' direct testimony. Please identify any technical and regulatory support for the assertion that when Intrado Comm is serving the PSAP, the most efficient and effective network architecture and the highest degree of reliability for 911 services is for Intrado Comm to "deviate" from a "traditional POI arrangement."

Intrado Comm Response:

Intrado Comm will be deploying three RCL gateways that will serve as multiple POIs within a state for the termination of E911 calls from all types of communication service providers. This includes CLECs, VoIP service providers, and wireless service providers ("WSPs") who have historically deployed a more economical network using fewer switching elements to cover a large geographic area. The current 911 infrastructure deployed by AT&T is very switch centric because it is designed to reduce the costs of E911 transport from the multiple AT&T end offices to the AT&T Selective Routers. As an example, there are 4 separate E911 Selective Routers in the heavily populated Southeast Florida LATA where AT&T is the dominant local exchange provider. The E911 switching capacity on these 4 separate non-interoperable Selective Routers could probably serve the entire states of Florida and Alabama but at the expense of higher transport costs to deliver all AT&T end office traffic to these Selective Routers. A CLEC, VoIP service provider, or WSP operating fewer switches serving more than a single LATA are now compelled to establish multiple diverse and redundant trunk groups to all these Selective Routers in all the LATAs served by the ILEC switch.

Intrado Comm's RCL gateway deployment will serve a wider range of PSAPs with geographically diverse and redundant interoperable switches that will reduce the number of trunks required to deliver E911 traffic for all service providers. Therefore, deviation from the traditional POI arrangement whereby the ILEC is the sole provider of E911 services will result in a more robust E911 infrastructure that provides a higher degree of interoperability between PSAPs and overall 911 network reliability, promote efficient service provider network design, and will establish competition in a market that has previously has been isolated from competitive market benefits. The presence of competition in the 911 arena should hasten the development of next generation 911 network standards based on emerging IP technologies that can more easily accommodate a wider range of communication services that include voice, video, and text. Limiting the POI for interconnection for the purpose of E911service competition to the incumbent's legacy 911 infrastructure will do nothing to offer more redundancy and flexibility, or contribute to improving compatibility between public safety systems that operate using different proprietary standards.

Further, for those carriers switching calls outside the LATA or outside the state of the end user, 911 provisioning efficiencies may be achieved though termination to any RCL gateway on Intrado Comm's national network. As an example, a wireless carrier switching 911 calls from a Mobile Switching Center in Georgia or Alabama serving Florida subscribers may find it more economical to route such calls over facilities terminated to RCL gateways outside the state of Florida.

Thomas Hicks, Director – Carrier Relations

50. Please refer to page 23, lines 7-11 of Intrado Comm witness Hicks' direct testimony. Please identify in which FCC order or other decision, that the FCC "determined that any arrangements between neighboring ILECs for the mutual exchange of traffic are considered technically feasible arrangements for interconnection between CLECs and ILECs."

Intrado Comm Response:

The FCC order regarding local competition supports the conclusion that the meet-point arrangements currently used by adjacent ILECs demonstrate that such arrangements are technically feasible and must be made available to competitive entrants. *See Implementation of Local Competition Provisions in the Telecommunications Act of 1996*, CC Docket No.96-98 *11 FCC Rcd 15499 at ¶553 (1996).*

Responsible Person:
Thomas Hicks, Director – Carrier Relations

51. Please refer to page 23, lines 13-16 of Intrado Comm witness Hicks' direct testimony. Is AT&T proposing that 911/E911 calls "be delivered to any tandem other than the relevant selective router/911 tandem that is connected to the PSAP for the geographic area in which the 911/E911 call was originated?" Please explain your answer.

Intrado Comm Response:

Yes, AT&T intends to continue to run all AT&T end offices through their existing AT&T Selective Routers as established in the current monopoly network design. AT&T will use the router to act as a traffic "sorter" or "segregator" and switch the call to either an AT&T served PSAP or the Intrado Comm Selective Router. This will be done for all AT&T end offices, even those end offices whose end users are entirely within a jurisdiction served by an Intrado Comm served PSAP. This network configuration introduces unnecessary additional points of failure and should be avoided where it is technically feasible to sort the traffic as it originates in the end office. An ILEC should only be permitted to sort the 911 traffic at another central office or tandem if the end office of the call originator is incapable of sorting the 911 traffic using Line Attribute Routing or any other originating office solution/method, and where the intermediate central office or tandem supports the principles of dedicated, direct trunking and diversity.

When an ILEC chooses to sort 911 traffic destined for a competitive provider's selective routing system (like Intrado) using a second central office in this manner, it should be noted that such sorting does not constitute selective routing Selective routing occurs when calls are terminated to a PSAP and all features typically associated with selective routing are provided (i.e. selective transfer, fixed transfer, night transfer, etc.). The use of a central office for sorting purposes does not provide these services to PSAPs and tariff rates for selective routing should not apply.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

52. Please refer to page 24, lines 4-6 of Intrado Comm witness Hicks' direct testimony for the following questions:

a. What the pros and cons of establishing a POI at AT&T's selective router/911 tandem?

b. What are the pros and cons of establishing a POI at a mid-span meet point?

c. When is establishing a POI at AT&T's selective router/911 tandem preferable to establishing one at a mid-span meet point? Please explain your answer.

d. When is establishing a POI at a mid-span meet point preferable to establishing one at AT&T's selective router/911 tandem? Please explain your answer.

Intrado Comm Response:

a. It is appropriate to establish the 911 POI at the AT&T Selective Router when AT&T is designated as the E911 Service Provider for the termination of E911 calls originated by Intrado Comm end users. Intrado Comm is not averse to establishing the POI at the AT&T Selective Router in this instance; however, AT&T is not the appropriate party to dictate the location. Interconnection to AT&T's legacy 911 infrastructure is most logically done at the Selective Router. This may not be the case as more technologically advanced or efficient form of interconnection as 911 platforms emerge in a competitive 911 market. Therefore, Intrado Comm seeks to retain the right to designate the POI on the incumbent's network when the incumbent is providing 911 services. The main drawbacks associated with the establishment of the POI at the AT&T Selective Router are AT&T's inefficient switch centric network design that drives up a competitive entrant's transport costs and AT&T's traditional single Selective Router deployment that creates a single point of failure in the 911 network.

b. The establishment of a POI at a mid-span meet would conceivably reduce transport costs to the switch centric AT&T network. Intrado Comm would be responsible for physical transport costs to the mid-span meet and AT&T would bear the costs of transporting that traffic on its side of the mid-span meet. It should be noted that Intrado Comm does not have a franchised service area. Consequently, a true mid-span meet point for Intrado Comm may cover several LATAs.

c. Establishment of the POI at an AT&T Selective Router is preferable to one at the mid-span meet when trunk capacity is limited to a DS-1 level connection or less. However, should AT&T deploy physically diverse facility path engineering from the mid-span meet to the appropriate selective router this would not be an issue. Mid-span meets can be costly for both

parties to build and maintain. Therefore, any time a mid-span meet is used, it is appropriate to determine if the capacity required for the mutual exchange of traffic warrants the cost. For example, if a DS-3 level of capacity was required for establishing a mid-span meet, such costs would be prohibited for purposes of purely 911 trunking.

d. Establishment of the POI at an mid-span meet would be beneficial to both parties should both parties use diverse and redundant switching elements for the mutual exchange of traffic. Use of a diverse and redundant mid-span meets would allow the parties to control over the integrity of the facilities to the respective switching elements and not burden the interconnecting parties with the inefficiencies of the other's network design. That is, once the traffic was delivered to the diverse redundant meet points it would be the responsibility of each party to terminate the traffic to the appropriate 911 in whatever fashion those routers have been deployed.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

53. Please refer to page 24, lines 18-19 of Intrado Comm witness Hicks' direct testimony. How does each Party determine what its "portion of the costs" are to reach the mid-span meet point? Please explain your answer.

Intrado Comm Response:

The determination of cost allocation portions are a negotiated process whereby several factors are taken into consideration. As indicated earlier, AT&T's current legacy 911 infrastructure is unnecessarily switch centric. This design developed because multiple Selective Routers in a LATA reduce the transport costs for the carrier who has the most switches in the LATA. This arrangement was fine when there was no competition in the local exchange market, but it unfairly compels competitive entrants to establish inefficient and convoluted transport arrangements. In a competitive local exchange market the E911 Service provider should utilize the most efficient, diverse, and redundant architecture that accommodates the widest variety of communication service providers. The architecture used to support 911 should not be designed to support an inefficient local exchange network. Any mid-span meet point cost allocation should acknowledge and assess appropriate cost allocation to the inefficient 911 Network provider. Traffic volume is another consideration for allocating costs of a mid-span arrangement. The party with the larger call volume will probably benefit the most from the mid-span arrangement, which should be reflected in cost allocation portions. The physical distance between the parties switching elements and the mid-span meet point should also be factored into the proportioning of the mid-span cost. Should one party locate their switching element in a remote and sparsely served area, that party should probably bear some responsibility for such inefficient location.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

54. Please refer to page 24, lines 19-22 of Intrado Comm witness Hicks' direct testimony. Please identify the pertinent rule or order where the "FCC has determined that both the ILEC and the new entrant 'gains value' from the use of mid-span meet . . ."

Intrado Comm Response:

The FCC order regarding local competition supports the conclusion that the meet-point arrangements currently used by adjacent ILECs demonstrate that such arrangements are technically feasible and must be made available to competitive entrants. *See Implementation of Local Competition Provisions in the Telecommunications Act of 1996*, CC Docket No.96-98 *11 FCC Rcd 15499 at ¶553 (1996).*

Responsible Person:
Thomas Hicks, Director – Carrier Relations

55. Please refer to page 25, lines 5-12 of Intrado Comm witness Hicks' direct testimony for the following questions/requests.

a. Does Intrado Comm anticipate or plan to have non-911 traffic? Please explain your answer.

b. Does Intrado Comm have the right to designate a single POI at any technically feasible location on AT&T's network for 911 traffic? Please explain your answer and identify any pertinent orders or rules.

Intrado Comm Response:

a. Intrado Comm is certified as a competitive local exchange carrier in Florida and as such can provide other local exchange and toll services. If its business plan dictates, it may provide such other services in the future. Intrado Comm has no immediate plans to introduce other local exchange services at this time.

a. Yes, Section 251(c)(2)(b) addressing interconnection obligations of the ILEC for the establishment of a POI for the mutual exchange of traffic imposes a duty on the ILEC to provide interconnection to the competitive entrant at any technically feasible point within the ILEC's network. Therefore, Intrado Comm has the right to request a single POI at any technically feasible location within AT&T's network for the mutual exchange of local exchange traffic. Section 251(c)(2)(C) requires the ILEC to provide interconnection that is "at least equal in quality to that provided [to itself] or to any subsidiary, affiliate, or any other party to which the carrier provides interconnection." Quality network engineering design for reliable 911 service provisioning dictates the establishment of multiple POIs.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

56. Please refer to page 34, lines 14-16 of Intrado Comm witness Hicks' direct testimony for the following question. Why does Intrado Comm disagree with AT&T's requirement to provide notice beyond the interconnection agreement or to amend the agreement to seek interconnection? Please explain your answer.

Intrado Comm Response:

This Interrogatory addresses Issue 7a which remains an open issue. This issues concerns contract language sections 1.2, 2.1, 2.4, 5.1, and 5.3 of Appendix 911 NIM, and sections 2.1, 4.1, 4.2, 4.3, of Appendix NIM. The Parties are negotiating/arbitrating the terms and conditions of their interconnection arrangement for the mutual exchange of traffic. The arrangements should be delineated in this agreement not left to a later date and further negotiations and based on present experience further arbitration. Locations of switches, etc., can be added to the agreement, but the terms and conditions should be clearly defined now. Given AT&T's less than enthusiastic embrace of competitive entrants in the local exchange market, including the 911 market, Intrado Comm is concerned that its entry will be further delayed by bureaucratic requirements permitting AT&T to withhold approval of a final plan for a series of perceived shortcomings. The purpose of this arbitration process it to produce an interconnection agreement that contains the necessary terms and conditions of interconnection pursuant to 251(c) that is the lynchpin enabling Intrado Comm to enter the Florida market as a CLEC and offer competitive 911 services to PSAPs in the AT&T operating territory.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

57. Please refer to page 4, lines 21-23 of Intrado Comm witness Clugy's direct testimony for the following question. Please identify what section of "AT&T's language indicates that retroactive compensation adjustments will apply 'uniformly' to all traffic exchanged as 'local' calls under the agreement."

Intrado Comm Response:

The AT&T Inter-Carrier Compensation Appendix, Sections 4.2.1, addresses the retroactive compensation issue. AT&T is trying to dictate to what traffic any retroactive payments will apply in the Parties agreement. Intrado Comm is opposed to stating how an Order of the FCC or courts will be applied or interpreted when it has not been issued. AT&T's proposed language is unreasonable.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

58. **Please refer to page 5, lines 2-6 of Intrado Comm witness Clugy's direct testimony for the following questions:**

a. **What language is proposed by Intrado?**

b. **What are Intrado's adjustments to AT&T's language?**

Intrado Comm Response:

a. Intrado Comm proposes a minor addition to the existing AT&T language in Paragraph 4.2.1 of Section 4 of the Inter-Carrier Compensation Appendix. This modification merely adds the words "*to which intervening Law applies.*"

b. As explained in response 57 above, Intrado Comm's proposed language acknowledges that any Order or decision that may impose retroactive charges will be applied as specified by the Order or decision not pursuant to AT&T's personal dictates that it has managed to set forth in a contract. AT&T's proposed language could result in retroactive compensation being permitted to be applied to traffic not addressed in the FCC's, Court's, or legislative decision. Laws should can be applied consistent with the intent of the decision or legislation. That intent is not apparent know until the law is issued.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

59. **Please refer to page 35, lines 11-15 of AT&T witness Neinast's direct testimony for the following question. Does Intrado Comm propose that it establish a single POI when it delivers 911 traffic to AT&T but that AT&T is to establish two POIs when AT&T delivers 911 traffic to Intrado? If no, please explain Intrado's proposal. If yes, please identify any technical and regulatory support for Intrado's proposal.**

Intrado Comm Response:

Intrado Comm discussed this issue of multiple POI for 911 in the answer to Interrogatory 45 above. Intrado Comm does not proposed to establish a single POI when it delivers traffic to AT&T but instead is only complying with the existing AT&T 911 interconnection arrangements which do not have provisions for multiple POIs. In fact, the unedited AT&T interconnection template only contemplates multiple POIs for load balances purposes and the traffic exchanged by the parties must meet certain thresholds to be eligible for multiple POIs. Further, the purpose of multiple POIs in a 911 network is for diversity and redundancy. AT&T's typical 911 network topography consists of a single Selective Router and therefore generally defeats the purpose of establishing multiple 911 POI for redundancy. Intrado Comm will certainly use diverse and redundant facilities to deliver 911 traffic to the AT&T Selective Router should it serve as the POI, however a true multiple POI architecture cannot exist in a single Selective Routing serving arrangement. Since Intrado Comm's network is designed for maximum diversity and

redundancy via the use of three RCL gateways for Selective Routing it more readily lends itself to a multiple POI termination architecture. Intrado Comm is unaware of any regulatory requirements beyond the FCC's NRIC Best Practices that address multiple POI for 911 services.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

60. Please refer to page 10, section 6.3.5 of Exhibit MN-1, attached to AT&T witness Neinast's direct testimony for the following questions.

a. What is the significance of Intrado's proposed "from" versus AT&T's proposed "on" in the second line, in the sentence, "AT&T is responsible for the isolation, coordination and restoration of all 911 facility and trunk maintenance problems [from or on] . . . ?"

b. What is the significance of Intrado's "End Offices to the CLEC POI(s)" versus AT&T's proposed "side of the POI" in the second and third lines?

c. Does Intrado Comm reject AT&T's proposed language on the last two lines, "and will work cooperatively until problems are resolved?" If so, please explain why.

Intrado Comm Response:

The parties have resolved the language associated with this interrogatory. The parties have agreed on new language for this paragraph as follows:

> *AT&T-(STATE) is responsible for the isolation, coordination and restoration of all 911 facility and trunking maintenance problems on AT&T-(STATE)'s side of the POI. AT&T-(STATE) is responsible for advising CLEC of the 911 Trunk identification and the fact that the trunks are dedicated for 911 traffic when notifying CLEC of a failure or outage. The Parties agree to work cooperatively and expeditiously to resolve any 911 outage. CLEC will refer network trouble to AT&T-(STATE) if no defect is found in CLEC's 911 network. The Parties agree that 911 network problems will be managed expeditiously and the Parties will work cooperatively until problems are resolved.*

Responsible Person:
Thomas Hicks, Director – Carrier Relations

61. Please refer to page 11, section 7.3.1. of Exhibit MN-1, attached to AT&T witness Neinast's direct testimony for the following question. Does Intrado Comm reject AT&T's proposed language, "[a]nd where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer with ALI for dynamic ALI type calls (e.g., wireless 911 and nomadic VoIP calls) . . . ?" If so, please explain why.

Intrado Comm Response:

The parties have resolved the language associated with this interrogatory. The parties have agreed on new language for this Section as follows:

> *Where CLEC has been designated the 911 Service Provider for a 911 Customer contiguous to an AT&T-(STATE) 911 Customer, and where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer with ALI for dynamic ALI type calls (e.g., wireless 911 and nomadic VoIP calls), each Party shall load pANI Shell Records and update ALI steering tables in their respective ALI databases to support PSAP-to-PSAP call transfer with ALI for dynamic ALI type calls (e.g., wireless 911 and nomadic VoIP calls).*

Responsible Person:
Thomas Hicks, Director – Carrier Relations

62. Please refer to page 11, section 7.3.3. of Exhibit MN-1, attached to AT&T witness Neinast's direct testimony for the following question. Does Intrado Comm reject AT&T's proposed language, "[a]nd where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer . . . ?" If so, please explain why.

Intrado Comm Response:

The parties have resolved the language associated with this interrogatory. The parties have agreed on new language for this Section as follows:

> *Where CLEC has been designated the 911 Service Provider for a 911 Customer contiguous to an AT&T-(STATE) 911 Customer, and where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer the Parties shall work cooperatively to establish methods and procedures to support PSAP to PSAP call transfer with ALI for 911 calls.*

Responsible Person:
Thomas Hicks, Director – Carrier Relations

63. Please refer to page 3, section 2.2 of Exhibit MN-2, attached to AT&T witness Neinast's direct testimony for the following question. Please define and explain the term "CTESC?"

Intrado Comm Response:

The use of CTESC is a transposed version of the acronym CESTC, which stands for Competitive Emergency Services Telecommunications Carrier. This is the terminology and acronym used by the Ohio Public Utilities Commission in granting Intrado Comm a certificate of operating authority. Exhibit MN-2 is an adaptation of a 911 NIM used in an interconnection agreement currently being negotiated between the parties in the state of Ohio. The

interconnection agreement being negotiated there has been modified to take into consideration Intrado Comm's unique designation as a competitive local exchange provider of competing 911 Services. As Intrado Comm will be providing the same services in Florida, much of the text used in Ohio was applied to the agreement currently being arbitrated in Florida. However, the proposed 911 Appendix should use the term CLEC instead of CESTC. The use of CTESC in this agreement was a mistake on the part of both parties and the Commission should read the language in 2.2 to include the use of the term CLEC instead of the CTESC.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

64. When a PSAP purchases Wireline 911 Network services from Intrado, is the PSAP considered a wholesale or retail customer of Intrado? Please explain your response.

Intrado Comm Response:

When a PSAP purchases 911/E911 services from Intrado Comm, the PSAP is considered a retail customer of Intrado Comm. The common definition of "retail" is "the sale of goods to the ultimate consumers" according to *Random House Webster's Unabridged Dictionary*. The FCC also has distinguished between "retail" and "wholesale" for the purposes of determining how a customer should be classified. The FCC has found that "wholesale" means a service or product that is an input to a further sale to an end user (*Time Warner Cable Request for Declaratory Ruling that Competitive Local Exchange Carriers May Obtain Interconnection Under Section 251 of the Communications Act of 1934, as Amended, to Provide Wholesale Telecommunications Services to VoIP Providers*, 22 FCC Rcd 3513, ¶ 9 n.19 (2007)). By contrast and similar to the dictionary definition of "retail," the FCC has said that a retail transaction is for the customer's own personal use or consumption (*Time Warner Cable Request for Declaratory Ruling that Competitive Local Exchange Carriers May Obtain Interconnection Under Section 251 of the Communications Act of 1934, as Amended, to Provide Wholesale Telecommunications Services to VoIP Providers*, 22 FCC Rcd 3513, ¶ 9 n. 19 (2007)). The PSAP is the ultimate consumer of the 911/E911 services to be provided by Intrado Comm. The PSAP will not be making a "further sale" to another entity. Classification of the PSAP as a "retail customer" of Intrado Comm is consistent with the way in which AT&T classifies its provision of services to PSAPs. AT&T's 911/E911 service offering is contained in its General Exchange tariff, which is the same tariff that contains all of AT&T's other retail service offerings in Florida (AT&T General Subscriber Service Tariff).

However, whether a CLEC is entitled to Section 251(c) interconnection is not based on the customers it serves. Rather, it is based on whether the CLEC offers telephone exchange service, which Intrado Comm does (see Response to Interrogatory 6(a) and (b)). The FCC has specifically stated that (1) a provider of wholesale telecommunications service is a telecommunications carrier and is entitled to interconnection under Section 251 and (2) the regulatory classification of the service provided to the ultimate end user has no bearing on the wholesale provider's rights as a telecommunications carrier to interconnect under section 251 (*Time Warner Cable Request for Declaratory Ruling that Competitive Local Exchange Carriers May Obtain Interconnection Under Section 251 of the Communications Act of 1934, as*

Amended, to Provide Wholesale Telecommunications Services to VoIP Providers, 22 FCC Rcd 3513, ¶ 15 (2007)).

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm's Government & Regulatory Affairs Department

65. **Do you believe AT&T is obligated to modify its network, offerings, procedures, or practices to accommodate Intrado's request for service? If so, please identify all applicable statutes, rules, orders or other pertinent materials which support this belief.**

Intrado Comm Response:

AT&T is obligated to make the requisite changes in its network and operational practices that will accommodate the interconnection of competing local exchange networks and the mutual exchange of traffic between those networks. The FCC has stated that incumbent carriers like AT&T are required to adapt their facilities to interconnection or use by other carriers and an ILEC must accept the novel use of, and modification to, its network facilities to accommodate the interconnector (*Local Competition Order*, 11 FCC Rcd 15499, ¶ 202 (1996)). The FCC recognized that ILEC networks were not designed to accommodate third party interconnection, and the purposes of the federal Telecommunications Act of 1996 would be frustrated if ILECs were not required, at least to some extent, to adapt their facilities. The FCC's rules also require AT&T to provide any technically feasible interconnection arrangement to Intrado Comm (47 C.F.R. § 51.305). The FCC has determined that, if a particular method of interconnection is currently employed between two networks or has been used successfully in the past, a rebuttable presumption is created that such a method is technically feasible for substantially similar network architectures (*Local Competition Order*, 11 FCC Rcd 15499, ¶ 554). AT&T bears "the burden of demonstrating the technical infeasibility of a particular method of interconnection or access at any particular point (*Local Competition Order*, 11 FCC Rcd 15499, ¶ 554).

These principles are even more important with the interconnection of 911/E911 networks. The emergence of a competitive 911/E911 service market will require network and operational modifications to ensure that PSAPs continue to have all the services, functionality, and interoperability available to them today as well as enhancements to those services and functions when the PSAP chooses a competitive provider.

Responsible Person:
Thomas Hicks, Director – Carrier Relations

66. **For the following questions, please refer to the specific portion of Intrado Comm witness Spence-Lenss' direct testimony identified at the beginning of each question.**

    a. **Page 6, lines 1-2. Please identify which AT&T affiliates, in Illinois and California, with whom Intrado Comm has Section 251 interconnection agreements. Do the interconnection agreements with the AT&T's affiliates,**

in Illinois and California, contain provisions for 911 network service arrangements, prices, and interconnection obligations?

b. **Page 6, lines 6-7. What local exchange services does Intrado Comm offer in other states? Are these local exchange services also offered in Florida?**

c. **Page 12, lines 18-20. Please identify all applicable statutes, rules, orders or other pertinent materials, including specific page(s) and/or paragraph(s) numbers where applicable, that support your assertion that 911 and E911 services are local exchange services. Please include the specific page(s) and/or paragraph(s) numbers where applicable.**

d. **Page 16, lines 22-23 and page 17, lines 1-13. On page 17, it is noted that Intrado Comm understands that billing systems, UNEs, pricing, and performance standards differ by state, and also states that it believes potential disputes and disagreements between the Parties would be minimized if only one set of terms and conditions govern the Parties relationship throughout the nation. If billing systems, UNEs, pricing, and performance standards vary, please explain how only one set of terms and conditions could govern the Parties relationship?**

e. **Page 17, lines 13-16. Please identify the carrier you are referring to on line 16. Are AT&T and the carrier referred to at line 16 in the process of negotiating or arbitrating an agreement based on the 13-state template? Please explain your response.**

Intrado Comm Response:

a. Intrado Comm has 251 interconnection agreements with AT&T Ameritech in Illinois and AT&T SBC/Pac Bell in California. These interconnection agreements do have 911 provisions which allow Intrado Comm to offer an intermediary wholesale interconnection to carriers requiring interconnection to the AT&T E911 Selective Routers in those states. The current 251 interconnection agreements do not address the interconnection arrangements necessary to offer a competing E911 service to PSAPs. Therefore, the provisions for 911 network service arrangements, prices, and interconnection obligations are unilateral in favor of AT&T and do not accommodate the mutual exchange of 911 service traffic.

b. Intrado Comm will offer its competitive local exchange 911 Services to PSAPs in numerous states. It has authority in thirty-eight (38) states to provide local exchange services and has filed tariffs for its 911 Services in many of those states, including West Virginia, Ohio, Florida, and Alabama.

c. Both Embarq and AT&T have described their E911 offerings as telephone exchange service in their E911 tariffs in Florida. Embarq's Florida General Exchange Tariff, Section A10, Sheet 1, Paragraph 1.a states E911 is a telephone exchange service. AT&T's BellSouth Florida's General Subscribers Tariff, Section A24, Page 6, Paragraph A24.1.4.A.1 also

describes E911 services as telephone exchange service. Further, the primary purpose of E911 services is to deliver an emergency call to the agency that is responsible for the dispatch of first responder services. First responder services by their very nature are local in scope. It is therefore logical and reasonable to assume E911 telephone exchange services are more local in nature than not.

d. The AT&T interconnection agreement template is voluminous. The General Terms and Conditions is 60 pages and the overall agreement has over a dozen supporting appendices of which some are state specific and some are not. Intrado Comm seeks an interconnection agreement as a carrier operating in more than one state to have terms and conditions that do not vary by state. The arrangements Intrado Comm needs do not vary by geographic location. The terms for liability, dispute escalation, insurance, assignability, etc, should be the same when doing business with the same carrier and from a practical perspective, probably the same for most carriers. Also, some appendices, by example, Inward Assistance Operator Services or Recordings, should likely be uniform through out the AT&T operating territory. Intrado Comm understands there may be justification for state specific pricing, UNEs, performance measures, etc., and the negotiated agreements should properly reflect the state by state specific requirements. Where there is no need for a state specific attachment then uniform conditions should apply for agreements covering the entire AT&T operating territory.

e. Intrado Comm refers the Staff to the rebuttal testimony of Patricia H. Pellerin, page 11, lines 5-10, where AT&T states it ported a Wisconsin agreement to Florida for First Communications, LLC. AT&T claims the existing Wisconsin agreement is not the same template marked up by Intrado. Whether it is the same template or an updated template, it is still an AT&T template. AT&T's past actions reflect its ability to adapt its template from the north to be used in the south. AT&T committed repeatedly to provide Intrado Comm with an AT&T template agreement that could be used throughout its service territory, but it never delivered. AT&T has been negotiating an agreement with Intrado Comm for Florida and North Carolina based on a single AT&T template, and the issues identified are based on that template. It would appear AT&T has no Florida specific reason that the template which has been the underpinning of this entire arbitration cannot be used for the interconnection arrangements needed in Florida.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition by Intrado Communications, Inc. for arbitration of certain rates, terms, and conditions for interconnection and related arrangements with BellSouth Telecommunications, Inc. d/b/a AT&T Florida, pursuant to Section 252(b) of the Communications Act of 1934, as amended, and Sections 120.80(13), 120.57(1), 364.15, 364.16, 364.161, and 364.162, F.S., and Rule 28-106.201, F.A.C.	DOCKET NO. 070736-TP DATED: JUNE 30, 2008

INTRADO COMMUNICATIONS INC.'S
RESPONSES TO STAFF'S THIRD SET OF INTERROGATORIES (Nos. 67-107)

Intrado Communications Inc. ("Intrado Comm"), by its attorneys, hereby respectfully responds to the Florida Public Service Commission ("Commission") Staff's Third Set of Interrogatories (Nos. 67-107) as follows:

67. Please refer to Intrado witness Hicks' rebuttal testimony, page 8, lines 9-12. Is this sentence complete?

Intrado Comm Response:

Lines 9-12 were submitted as follows:
"Today, most E91 1 selective routers can receive E91 1 calls with Signaling System 7 ("SS7") and SS7, as per the AT&T interconnection agreement, is the preferred way to interconnect to the AT&T Selective Router."

For clarity, the sentence should have been submitted as follows:
"Today, most E911 selective routers can receive E911 calls using Signaling System 7 ("SS7"), and SS7 has been defined in the AT&T interconnection agreement as the preferred signaling method when interconnecting to the AT&T Selective Router."

Responsible Person:
Thomas Hicks, Director - Carrier Relations

68. Please refer to Intrado witness Hicks' rebuttal testimony, page 8, lines 19-23. Please identify other local service providers that recover costs associated with ANI delivery from the local exchange operations rather than from the PSAPs.

Intrado Comm Response:

It is Intrado Comm's understanding that there are no Florida rules or statutes authorizing other local service providers to charge PSAPs for ANI.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

69. **Please refer to page 9 of Intrado witness Hicks' rebuttal testimony, lines 8-11. The witness states that AT&T has implied in other FPSC dockets that it should continue to receive cost recovery for submission of subscriber data to the E911 database management system of the E911 Services provider. Please identify the FPSC dockets where AT&T has made this implication.**

Intrado Comm Response:

In AT&T's Motion to Dismiss and Response to Intrado Communication's Petition for Declaratory Statement (Docket No. 080089-TP, Petition of Intrado Communications for Declaratory Statement Regarding Local Exchange Telecommunications, Network Emergency 911 Service), AT&T explicitly stated its intention to continue to bill PSAPs that have selected Intrado Comm as their 911/E911 service provider. AT&T's stated intentions to continue to bill a PSAP even though it has selected Intrado Comm as their 911/E911 service provider may be found at:

- Page 10 ("When an ILEC performs the ANI functions to deliver ANI to the PSAP, the ILEC is entitled to charge for this service.")
- Page 10, item 19
- Page 11, item 21
- Pages 11-12, item 22
- Page 12, item 23
- Pages 12-13, item 24
- Page 13, item 26
- Page 13, 27

AT&T's intentions may also be found in memos from the Office of the Sheriff of Martin County, Florida and the Sheriff of Charlotte County, Florida submitted to the Commission as Exhibit CSL-5 to the prefiled direct testimony of Carey Spence-Lenss in this docket. Those government agencies expressed that they are constrained from moving forward with alternative 911 service providers by the information they are receiving from the ILECs (none specifically named) regarding "continuing obligations" once the ILEC is no longer the network service provider. These government officials' memos express concern that they may still be subject to certain ILEC tariff charges, or that the ILEC may create new tariff or other rate elements, or that the services they receive may be bundled with services they no longer receive, resulting in billing for services no longer received or necessary.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

70. Please identify and list all source documents supporting the derivation of the rates contained in TH-8 attached to Intrado Communications witness Hicks' rebuttal testimony.

Intrado Comm Response:

The rates shown in the rebuttal testimony are market-based prices. These rates reflect costs incurred by Intrado Comm associated with the 911 network access hardware, software and Intrado Comm labor costs incurred for the engineering, installation, testing and implementation of telecommunication service provider access to the Intrado Comm 911/E911 network. Each Point of Interconnection (POI) is equipped with Digital Access Cross-connect System(s) and Emergency Service Gateway (ESGW) switches as well as the number of DS1 and DS0 terminations supported at the POI location(s). The source documents initially used as a part of the process to develop market prices no longer exist.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

71. Please refer to Intrado witness Hicks' rebuttal testimony, page 14, lines 2-7.

a. Is it Intrado's position that AT&T incurs no cost for the call sorting arrangement? If affirmative, please identify all documents supporting this position. If negative, please explain how AT&T would receive preferential treatment by recovering these costs from PSAPs.

b. What would be the appropriate recovery mechanism if the costs are not recovered from the PSAPs?

Intrado Comm Response:

a. No. Intrado Comm recognizes that AT&T incurs costs for call sorting arrangements whether the sorting is performed at its end office or at another AT&T central office using its selective router to sort the 911 calls. The costs associated with providing end users access to E911 services are borne by all entrants in the competitive market: traditional wireline carriers, wireless carriers, and VoIP service providers. However, only the incumbent wireline carriers who also provide E911 services, such as AT&T and dominant ILECs such as Embarq and Verizon, have tariffs for 911 services provided to PSAPs that they may use to recover costs associated with access to E911 services by their end users. The ability to recover costs associated with providing access to E911 services through billing of E911 service rates to PSAPs gives AT&T a competitive advantage in the provision of local exchange services because none of AT&T's competitors can recoup these costs from public safety they must pass-through to end users.

b. The appropriate recovery mechanism to recover costs associated with providing access to E911 systems is from the subscriber rate base. That is, AT&T's rates for local exchange dial tone services are the appropriate source for cost recovery of access to E911 services.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

72. **Please refer to AT&T witness Pellerin's rebuttal testimony, page, 2, lines 22-24. The witness states that there are ten issues that AT&T resolved with Intrado for the Ohio ICA using a 13-state template and for which the parties agree there is no content dispute. Does Intrado agree that there is no content dispute with Issues 18(a, b), 20, 22, 23, 25(b-d), 33, and 35? If no, please identify each issue Intrado has a content dispute with AT&T and explain the specific dispute.**

Intrado Comm Response:

Yes, Intrado Comm agrees that there is no "content" dispute with respect to the contract provisions associated with Issues 18(a, b), 20, 22, 23, 25(a-d), 33, and 35 (note, 25(a) has been added to the list since the filing of rebuttal testimony). The Parties were able to agree on the content of the language for the above-referenced issues after negotiations that revised some portions of the contract provisions and Intrado Comm agreeing to accept the remainder of the provisions as originally proposed by AT&T. These issues remain open because AT&T has indicated it is unwilling to use the negotiated sections in their entirety in the Parties' Florida interconnection agreement.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

73. **AT&T witness Pellerin asserts in footnote 2 on page 3 of her rebuttal testimony, that, if the Commission decides in Issue 2 to utilize the 9-state template, six issues will not need to be addressed because "Intrado's disputes are not present in the 9-state language." Does Intrado agree with AT&T that if the 9-state template is utilized, six issues will not need to be addressed? If no, please explain.**

Intrado Comm Response:

No, Intrado Comm does not agree that resolution of Issue 2 would eliminate the need for the Commission to address the six issues referenced by Ms. Pellerin. Intrado Comm has proposed language for each of the contract sections associated with the six issues referenced by Ms. Pellerin (*i.e.*, the entire provision negotiated by the Parties in Ohio). Despite the resolution of Issue 2, the Commission will still be required to determine whether to adopt Intrado Comm's proposed language for the remaining outstanding issues.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

74. Please refer to AT&T witness Pellerin's rebuttal testimony, page 7, lines 13-22. Are the rates shown in Intrado witness Hicks' exhibit TH-8 retail rates or commercial rates? Does the fact that the exhibit is labeled Intrado Communications Inc. imply that the rates are commercial?

Intrado Comm Response:

No. The rates contained in TH-8 are the rates imposed on all entities interconnecting to Intrado Comm's network.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

75. Please refer to Intrado witness Spence-Lenss' direct testimony, page 16, lines 8-10. Please explain how Intrado's port charges are "similar to the entrance facility and port charges imposed by AT&T on competitors for interconnection to AT&T's network."

Intrado Comm Response:

The charts below compare the charges proposed by Intrado Comm and those imposed by AT&T for interconnection to AT&T's network. The AT&T charges are based on the Florida pricing schedules included in the AT&T template agreement available on AT&T's website.

Because AT&T Florida's Dedicated Tandem Trunk Port Services are not shown, but relate to minutes of use, an exact comparison cannot be made. Even without the AT&T Dedicated Tandem Trunk Port Services prices available, AT&T charges are more costly than the Intrado Comm proposed monthly rates. Using just the pricing shown, purchasing from Intrado Comm with the higher NRC has a breakeven point by the seventh month when compared to AT&T's similar charges.

Intrado Comm Proposed Pricing

	Service	MRC	NRC
	Per DS0	$ 40	$250
	Per DS1	$127	$250
Intrado Comm. for two DS0s into one DS1		**$207**	**$750**

Intrado Comm for four DS0s in two DS1s*	**$414**	**$1,500**

*Based on the concept that the connectivity will be a pair of DS0s travelling in a DS1 trunk group to two different POIs, the costs are for four DS0s and two DS1s.

AT&T Pricing

Reference	Service	MRC	NRC
AT&T Florida, TPP6X*	Installation, Trunk Side Service – per DSO for 1st	0	$21.73
AT&T Florida, TPP6X*	Installation, Trunk Side Service – per DSO for 2nd	0	$8.19
AT&T Florida, TDWOP	Dedicated Tandem Trunk Port Service – per DS0	MOU**	MOU**
AT&T Florida, SATN1*	Channelization – DS1 to DS0 Channel System for 1st	$146.77	$101.42
AT&T Florida, SATN1*	Channelization – DS1 to DS0 Channel System for 2nd	$146.77	$71.62
AT&T Florida, TDW1P	Dedicated Tandem Trunk Port Service – per DS1	MOU**	MOU**
AT&T total for two DS0s into one DS1		**$146.77**	**$131.34**
AT&T total for four DS0s in two DS1s		**$293.54**	**$232.88**

The Monthly Recurring Charges for both the DS0 connection and for the channelization of DS1 to DS0 is lower for the second unit of each.

*USOC – Uniform Service Order Code

**"This rate element is recovered on a per MOU basis and is included in the End Office Switching and Tandem Switching, per MOU rate elements."

Responsible Person:
Thomas Hicks, Director - Carrier Relations

76. Please refer to AT&T witness Pellerin's rebuttal testimony, page 8, lines 12-15. Because AT&T will utilize its own facilities to interconnect with Intrado, under what circumstances would Intrado charge AT&T for entrance facilities?

Intrado Comm Response:

AT&T cannot use its facilities for all aspects of its interconnection with Intrado Comm. The terminating ports at the Intrado Comm selective router are and remain Intrado Comm equipment for which Intrado Comm will charge non-recurring and monthly recurring charges.

Responsible Person:
Tom Hicks, Director, Carrier Relations

77. **If Intrado seeks "consistent interconnection terms across AT&T's 22-state operating territory, as Intrado witness Spence-Lenss testifies in the direct testimony on page 3, lines 18-21, please explain how utilizing the 13-state template achieves this consistency.**

Intrado Comm Response:

Intrado Comm has thoroughly reviewed the 13-state template and provided proposed changes, additions, and deletions to AT&T based on that review. The Parties also have spent a significant amount of time negotiating and revising the language contained in the 13-state template. The issue is not which template should be used – the 13-state template versus the 9-state template. The Parties needed to begin negotiations from a draft agreement. The draft could have been one provided by Intrado Comm or one provided by AT&T. Intrado Comm agreed to begin negotiations utilizing a draft that was developed by AT&T. The interconnection arrangements Intrado Comm seeks do not vary by geographic location. Thus, Intrado Comm seeks to use the contract provisions the Parties have already reviewed, revised, and finalized, and that will apply to the Parties' interconnection relationship in other states. Using the same agreement in multiple states minimizes potential disputes and disagreements between the Parties because there is only one set of terms and conditions governing the Parties' relationship throughout the nation. This is presumably why AT&T and other ILECs like to use their "template" interconnection agreements as the starting point for negotiations because it provides uniformity across the ILECs' entire operating territory.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

78. **Please refer to the rebuttal testimony of Intrado witness Carey F. Spence-Lenss, page 18, lines 6-8. Please explain the "general assertions" that were provided to Intrado with regards to unbundled network elements ("UNEs").**

Intrado Comm Response:

During the Parties' interconnection negotiations, AT&T has made "general assertions" that items such as UNEs, billing systems, and performance measures vary based on the state. Use of the term "general assertion" was intended to convey that AT&T has not provided specific

information to Intrado Comm as to why the provisions the Parties have reviewed, revised, and negotiated in Ohio cannot be used in Florida.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

79. Is Issue 33 resolved? If not, please identify the reason(s) the agreed-upon language in the 13-state template for Issue 33 is not appropriate for Florida.

Intrado Comm Response:

Intrado Comm requested language to be included in the UNE provisions of the interconnection agreement to ensure that AT&T would provide UNEs to Intrado Comm at parity to that which it provides to itself and other telecommunications carriers consistent with the FCC's rules. AT&T has agreed to incorporate this language into the Parties' Ohio agreement. Intrado Comm seeks to incorporate the same language into the Parties' Florida agreement, but AT&T has refused.

Responsible Person:
Tom Hicks, Director - Carrier Relations

80. For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 15, lines 3-15. Please identify the language agreed upon in Ohio concerning the interconnection agreement's audit procedures.

Intrado Comm Response:

In Ohio, the Parties have agreed to the following language. AT&T has offered no reason why these provisions cannot be used in the Parties' Florida interconnection agreement.

13.1 Subject to the restrictions set forth in Section 22 "Confidentiality" and except as may be otherwise expressly provided in this Agreement, a Party (the "Auditing Party") may audit the other Party's (the "Audited Party") books, records, data and other documents, as provided herein, once annually, with the audit period commencing not earlier than the date on which services were first supplied under this Agreement ("service start date") for the purpose of evaluating (i) the accuracy of Audited Party's billing and invoicing of the services provided hereunder and (ii) verification of compliance with any provision of this Agreement that affects the accuracy of Auditing Party's billing and invoicing of the services provided to Audited Party hereunder. Notwithstanding the foregoing, an Auditing Party may audit the Audited Party's books, records and documents more than once annually if the previous audit found (i) previously uncorrected net variances or errors in invoices in Audited Party's favor with an aggregate value of at least five percent (5%) of the amounts payable by Auditing Party for audited services provided during the period covered by the audit or (ii) non-compliance by Audited Party with any provision of this Agreement affecting Auditing Party's billing and invoicing of the services provided to Audited Party with an aggregate value of at

least five percent (5%) of the amounts payable by Audited Party for audited services provided during the period covered by the audit.

13.1.1 The scope of the audit shall be limited to the period which is the shorter of (i) the period subsequent to the last day of the period covered by the audit which was last performed (or if no audit has been performed, the service start date and (ii) the twelve (12) month period immediately preceding the date the Audited Party received notice of such requested audit, but in any event not prior to the service start date. Such audit shall begin no fewer than thirty (30) calendar days after Audited Party receives a written notice requesting an audit and shall be completed no later than thirty (30) calendar days after the start of such audit.

13.1.2 Such audit shall be conducted by an independent auditor acceptable to both Parties. Auditing Party shall cause the independent auditor to execute a nondisclosure agreement in a form agreed upon by the Parties.

13.1.3 Each audit shall be conducted on the premises of the Audited Party during normal business hours. Audited Party shall cooperate fully in any such audit and shall provide the auditor reasonable access to any and all appropriate Audited Party employees and any books, records and other documents reasonably necessary to assess (i) the accuracy of Audited Party's bills and (ii) Audited Party's compliance with the provisions of this Agreement that affect the accuracy of Auditing Party's billing and invoicing of the services provided to Audited Party hereunder. Audited Party may redact from the books, records and other documents provided to the auditor any Audited Party information that reveals the identity of customers or End Users of Audited Party.

13.1.4 Each Party shall maintain reports, records and data relevant to the billing of any services that are the subject matter of this Agreement for a period of not less than twenty-four (24) months after creation thereof, unless a longer period is required by Applicable Law.

13.1.5 If any audit confirms any undercharge or overcharge, then Audited Party shall (i) promptly correct any billing error, including making refund of any overpayment by Auditing Party in the form of a credit on the invoice for the first full billing cycle after the Parties have agreed upon the accuracy of the audit results and (ii) for any undercharge caused by the actions of the Audited Party, immediately compensate Auditing Party for such undercharge, and (iii) in each case, calculate and pay interest as provided in Section 10.1 for the number of calendar days from the date on which such undercharge or overcharge originated until the date on which such credit is issued or payment is made and available.

13.1.6 Except as may be otherwise provided in this Agreement, audits shall be performed at Auditing Party's expense, subject to reimbursement by Audited Party of one-quarter (1/4) of any independent auditor's fees and expenses in the event that an audit finds, and the Parties subsequently verify, a net adjustment in the charges paid or payable by Auditing Party hereunder by an amount that is, on an annualized basis, greater than five percent (5%) of the aggregate charges for the audited services during the period covered by the audit.

13.1.7 Any disputes concerning audit results shall be referred to the Parties' respective personnel responsible for informal resolution. If these individuals cannot resolve the dispute within thirty (30) calendar days of the referral, either Party may request in writing that an additional audit shall be conducted by an independent auditor acceptable

to both Parties, subject to the requirements set out in Section 13.1. Any additional audit shall be at the requesting Party's expense.

13.2 *Intentionally Omitted.*

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm Regulatory and Government Affairs

81. For purposes of the following request, please refer to the direct testimony of Intrado witness Clugy, page 15, lines 3-15. Please identify the language agreed upon in Ohio concerning the interconnection agreement's audit procedures.

Intrado Comm Response:

Please see Intrado Comm's Response to Interrogatory # 80.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm Regulatory and Government Affairs

82. What are the advantages and disadvantages to utilizing third-party auditors for handling interconnection billing disputes?

Intrado Comm Response:

There is no dispute between the Parties regarding the use of third-party auditors. AT&T has agreed that third-party auditors may be used.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm Regulatory and Government Affairs

83. Does Intrado require that a third-party auditor have experience in auditing telecommunication matters prior to their retention?

Intrado Comm Response:

There is no dispute between the Parties regarding the use of third-party auditors. AT&T has agreed that third-party auditors may be used.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm Regulatory and Government Affairs

84. Does Intrado employ any full-time nationally accredited auditors for handling interconnection billing disputes?

Intrado Comm Response:

Intrado Comm has not had a need to employ a third-party auditor for interconnection billing disputes as it has not yet experienced any such disputes.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Comm Regulatory and Government Affairs

85. If this Commission ultimately recommends that a third-party auditor, as opposed to in-house auditors, should be used, under what terms and conditions should the auditor be selected?

Intrado Comm Response:

There is no dispute between the Parties regarding the use of third-party auditors. AT&T has agreed that third-party auditors may be used.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Communications Regulatory and Governmental Affairs

86. a. Does the ICA language Intrado proposes requiring third-party auditors cover all types of audits?

b. If the response to (a) is negative, please identify for what types of audits a third-party auditor would be used.

Intrado Comm Response:

There is no dispute between the Parties regarding the use of third-party auditors. AT&T has agreed that third-party auditors may be used.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Communications Regulatory and Governmental Affairs

87. Does Intrado's proposed language provide for any limitation as to the frequency of audits that one party may request in the proposed ICA?

Intrado Comm Response:

The language negotiated by the Parties for use in Ohio (which AT&T refuses to use in Florida) restricts audits to one every twelve (12) months.

Responsible Person:
Cynthia Clugy, Consultant to Intrado Communications Regulatory and Governmental Affairs

88. **For purposes of the following request, please refer to the direct testimony of Intrado Communications witness Spence-Lenss, page 18, lines 16-20. Are properly disputed charges, where funds are placed into an interest-bearing escrow account prior to the bill's due date, still considered delinquent, and constitute grounds for disconnection? Please explain.**

Intrado Comm Response:

The Parties have resolved the "content" of the language associated with this issue. AT&T, however, has indicated it is unwilling to use the entire billing and payment section that the Parties have reviewed, negotiated, and revised. Intrado Comm sees no reason to negotiate new generic provisions like billing and payment when the Parties have already reached agreement on such provisions. AT&T has offered no reason why these provisions cannot be used in the Parties' Florida interconnection agreement.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

89. **For purposes of the following request, please refer to the direct testimony of Intrado witness Spence-Lenss, page 19, lines 10-14. By way of clarification, does the 10 (or 15) day business day cycle to remit payment begin with the date on the invoice, or the date Intrado informs AT&T of its dispute?**

Intrado Comm Response

The Parties have resolved the "content" of the language associated with this issue. AT&T, however, has indicated it is unwilling to use the entire billing and payment section that the Parties have reviewed, negotiated, and revised for use in Ohio. Intrado Comm sees no reason to negotiate new generic provisions like billing and payment when the Parties have already reached agreement on such provisions. AT&T has offered no reason why these provisions cannot be used in the Parties' Florida interconnection agreement.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

90. For purposes of the following request, please refer to the direct testimony of Intrado witness Spence-Lenss, page 20, lines 4-7. Please describe how the invoice payment process will be conducted when an automatic clearinghouse (ACH) is used.

Intrado Comm Response:

The Parties have resolved the "content" of the language associated with this issue. AT&T, however, has indicated it is unwilling to use the entire billing and payment section that the Parties have reviewed, negotiated, and revised. Intrado Comm sees no reason to negotiate new generic provisions like billing and payment when the Parties have already reached agreement on such provisions. AT&T has offered no reason why these provisions cannot be used in the Parties' Florida interconnection agreement.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

91. Please indicate Intrado's proposed language for the ACH process.

Intrado Comm Response:

The Parties have resolved the "content" of the language associated with this issue. AT&T, however, has indicated it is unwilling to use the entire billing and payment section that the Parties have reviewed, negotiated, and revised. Intrado Comm sees no reason to negotiate new generic provisions like billing and payment when the Parties have already reached agreement on such provisions. AT&T has offered no reason why these provisions cannot be used in the Parties' Florida interconnection agreement. Below is the language regarding ACH that Intrado Comm proposes to be used in the Parties' Florida agreement:

10.3 The Parties shall make all payments to the other Party via electronic funds credit transfers through the Automated Clearing House Association (ACH) network to the financial institution designated by that Party. Remittance information will be communicated together with the funds transfer via the ACH network. CLEC must use the CCD+ or the CTX transaction set. CLEC and AT&T will abide by the National Automated Clearing House Association (NACHA) Rules and Regulations. Each ACH credit transfer must be received by the other Party no later than the Bill Due Date of each bill or Late Payment Charges will apply. Neither Party is liable for any delays in receipt of funds or errors in entries caused by the other Party or Third Parties, including a Party's financial institution. Each Party is responsible for its own banking fees.

10.3.1 Processing of payments not made via electronic funds credit transfers through the ACH network may be delayed. Each Party is responsible for any Late Payment Charges resulting from the Party's failure to use electronic funds credit transfers through the ACH network.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

92. Where does Intrado intend to locate its selective routers and POIs for 911 traffic serving Florida PSAPs? Please list by county and identify the street address(es).

Intrado Comm Response:

Intrado Comm has not yet determined where Intrado Comm will place its selective router(s) or POIs for 911/E911 traffic serving Florida PSAPs. In part, this decision will be based on where Intrado Comm's PSAP customers are located, however there will be at least two in Florida.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

93. Please refer to Intrado witness Hicks' rebuttal testimony on page 18, lines 7-9. On what basis (e.g., the Telecommunications Act of 1996, FCC rules, etc.) is Intrado "requiring a minimum of two, geographically diverse POIs when Intrado Comm is the designated E911 service provider?"

Intrado Comm Response:

With regard to 911 services, the establishment of geographically diverse routes for the delivery of 911 traffic is good business sense. The critical nature of 911 communications demands diversity and redundancy. The interconnection of competing 911 networks should include a minimum of two points of interconnection to assure a robust and fault tolerant 911 infrastructure. In addition, geographically diverse routes for 911 traffic are consistent with industry guidelines and recommendations. Implementation of Intrado Comm's proposal would ensure that 911 calls are diversely routed, which is consistent with the FCC's recommendations (*Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems*, 9 FCC Rcd 6170, ¶ 3, n.6 (1994) ("the American public depends on 911 services in its emergencies" and that reliability in the 911 network results from the deployment of diverse routing of interoffice facilities, multiple 911 tandem switch architectures, and diverse links for ALI database access)). In fact, the FCC recognizing the importance of redundancy, is reviewing whether VoIP service providers should deploy redundant trunks to each selective router or require multiple selective routers that can route calls to each PSAP or both (*VoIP E911 Order*, 20 FCC Rcd 10245, ¶ 59 (2005)).

Responsible Person:
Thomas Hicks, Director - Carrier Relations

94. Please refer to Intrado witness Hicks' rebuttal testimony beginning on page 18, line 20 and continuing through page 19, line 2 for the following questions.

a. What is the basis for Intrado's belief that "it appears that only Brevard County is served by dual tandems . . ."?

b. Please explain why dual tandems "would be conducive to establishing multiple POIs for the exchange of E911 services traffic."

c. Please explain what is the "speculation" on Intrado Communications' part, e.g., that only Brevard County is served by dual tandems or that because of the dual tandems Brevard County's selective router would be conducive to establishing multiple POIs.

Intrado Comm Response:

a. Of the ten selective routers AT&T maintains in Florida, it appears that only Brevard County is served by dual tandems and therefore would be conducive to establishing multiple POIs for the exchange of 911/E911 service traffic. However, this is only speculation on the part of Intrado Comm. A search of the AT&T Internet site on NPA-NXX & E911 Tandem Information reveals that, for the Brevard County NPA-NXX of 321-264 in Titusville, the following two E911 Tandem CLLI codes exist: ORLDFLMADS1 and DYBHFLMADS0. No other Florida AT&T county identified two E911 Tandems. Source is at https://apps.wholesale.att.com/npanxx/rep_npanxx.jsp. Enter 321-264.

b. Interconnections could be made to each of the dual tandems versus having just one E911 tandem in a serving area. With each E911 tandem having a connection to Intrado Comm, there would be "multiple POIs."

c. The AT&T web site data that indicates that Brevard County is the only county served by dual tandems. Intrado Comm did not enter all of the NPA-NXX numbers in that county to determine if all of Brevard County is served by both selective routers. Thus, without that determination, it is speculation that all PSAPs in Brevard County are served by both. If not all PSAPs in Brevard County are served by both selective routers, then it would not be conducive to establish dual (*i.e.*, multiple) POIs.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

95. Please refer to AT&T witness Neinast's rebuttal testimony on page 8, lines 16-23 for the following questions.

a. Is witness Neinast correct when he asserts that "[W]hen ILECs interconnect with each other, they are not in competition with each other"? Please explain why or why not.

b. Is witness Neinast correct when he asserts that "traffic is typically 'in balance' between each [ILEC] carrier"? Please explain why or why not.

c. Is witness Neinast correct when he asserts that Intrado "does not have an Exchange Area Boundary"? Please explain why or why not.

d. Is witness Neinast correct when he asserts that "if Intrado becomes the 911 provider, there will be one-way traffic from AT&T Florida to Intrado, which is not a balance of traffic"? Please explain why or why not.

e. If the response to 4(d) is yes, please explain the implications of there being only one-way (i.e., unbalanced traffic) between AT&T and Intrado.

Intrado Comm Response:

a. Yes, Mr. Neinast is correct when he states that when adjacent ILECs interconnect at a meet point they are not in competition with each other. The type of interconnection he discusses is a connection to facilitate the exchange of traffic between adjacent territories. It is not uncommon for one ILEC needing to traverse the expanse of another ILEC's territory to connect geographically diverse central offices. Therefore, meet point arrangements on the border of the franchise service territory are generally mutually beneficial interconnection points for exchange of subscriber traffic or transiting of traffic to distant central offices that are separated by another ILEC franchise area. The bargaining power is relatively equal. This is not the situation that applies to Intrado Comm, however, as Intrado Comm will be actively competing for AT&T's customers within AT&T's service territory.

b. Intrado Comm cannot attest to the balance of traffic between adjacent ILECs using a meet point interconnection arrangement. Conceptually, however, the traffic could be balanced if both ILECs' local exchange customers were generating same number of incoming and outgoing calls.

c. Unlike ILECs that have restricted their service offerings to specific geographic areas of Florida, a competitor like Intrado Comm has the authority to serve throughout the entire state of Florida. Intrado Comm therefore does not have traditional Exchange Area Boundaries similar to the ones utilized by ILECs.

d. No. The interconnection arrangements Intrado Comm seeks from AT&T are for the mutual exchange of traffic. AT&T fails to acknowledge its control over access to the majority of end users connected to the public switched telephone network ("PSTN"). Intrado Comm must interconnect with the PSTN in order for its customers (PSAPs) to receive calls from AT&T's end users. The Commission's records reflect that AT&T has a significant share of the Florida local exchange service market – both PSAP customers and 911 callers. No competitor, whether a provider of 911 services to PSAPs or 911 access to callers can provide competitive local exchange services without mutually beneficial interconnection to the PSTN. The one-way nature of 911 calls does not change the fact that they are local exchange service. While 911

service is generally provided over one-way trunks, it enables two-way communication between the caller and called end users, the service is also capable of originating a call in a conferencing capacity. For example, once a 911 call is delivered over the one-way trunks to the PSAP, the PSAP may then "hookflash" to obtain dial tone to originate a bridged call to a third party. Further, although these trunks are engineered as one-way they are capable of supporting two-way voice communications. The "mutual exchange" of traffic need not actually occur over the same trunks, and may be properly reflected by traffic flows of originating and terminating traffic between the various trunking configurations established between the interconnected parties. The FCC has found that facsimile communications are telephone exchange services even though fax services are predominantly one-way (*Advanced Services Order*, 15 FCC Rcd 385, ¶ 21 (1999)). In addition, Intrado Comm and AT&T will be transferring 911/E911 service calls between their networks. They will exchange traffic for purposes of completing 911 calls to 911 service customers (PSAPs). The interconnection arrangements at issue are to enable Intrado Comm's entry to compete with AT&T in its provision of local exchange service to PSAPs.

e. Not applicable.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

96. Please refer to AT&T witness Neinast's rebuttal testimony on page 9, line 2. In this partial sentence, witness Neinast asserts that "AT&T Florida should not be obligated to treat Intrado as an ILEC." Is Intrado asking to be treated as an ILEC when providing 911 service to PSAPs? Please explain why or why not.

Intrado Comm Response:

No, Intrado Comm is not asking to be treated as an ILEC. Rather, Intrado Comm is asking AT&T to treat Intrado Comm as a co-carrier and provide Intrado Comm with similar interconnection arrangements as those used within AT&T's network and that AT&T provides to other 911/E911 service providers in Florida today. As a competitor, the federal Communications Act entitles Intrado Comm to interconnection "that is at least equal in quality to that provided by the [ILEC] to itself or to any subsidiary, affiliate, or any other party to which the carrier provides interconnection" (47 U.S.C. § 251(c)(2)(C)). Intrado Comm's proposed interconnection arrangement is consistent with the FCC's finding that the "cost-allocation point" for the exchange of 911/E911 traffic should be at the selective router (*Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems, Request of King County*, 17 FCC Rcd 14789, ¶ 1 (2002). When AT&T is not the 911/E911 service provider for a PSAP, AT&T takes its originating end users' 911 calls to a meet point established with an adjacent carrier or all the way to the adjacent carrier's selective router. Similar to the interconnection arrangement proposed by Intrado Comm, AT&T establishes a trunk group from its end office switch to the adjacent carrier's selective router, and 911 calls made by AT&T's end users to the PSAP served by the adjacent carrier are terminated at the adjacent carrier's selective router. Similarly, when AT&T is the designated 911/E911 service provider, it requires all

carriers serving end users in that geographic area to bring their end users' 911 calls to the AT&T selective router serving the PSAP to which the 911 call is destined. The type of interconnection Intrado Comm seeks from AT&T is to treat AT&T with parity in the manner in which ILECs have treated CLECs, which AT&T requires to terminate 911/E911 service calls on its network when it is the designated 911/E911 service provider. AT&T has not demonstrated why the interconnection arrangements it imposes when AT&T is the designated 911/E911 service provider are not equally applicable when Intrado Comm is the designated 911/E911 service provider.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

97. Please refer to AT&T witness Neinast's rebuttal testimony on page 9, lines 14-15. Is witness Neinast correct when he asserts that "Intrado is a CLEC and must interconnect with AT&T Florida following the rules of Section 251(c)"? Please explain why or why not, and address in the explanation what effect, if any, do the rules implementing Section 251(c) have on the provision of 911 service to PSAPs.

Intrado Comm Response:

For non-911 traffic, Intrado Comm agrees that a requesting carrier must select a POI on the ILEC's network pursuant to Section 251(c) and the FCC's implementing rules. For 911 traffic, however, Intrado Comm seeks to implement physical connectivity between its network and AT&T's network that is similar to what AT&T has implemented with other 911/E911 providers in Florida. To eliminate barriers to entry, the FCC, in its rules to implement the Act, gave competing carriers the option to select the most efficient points at which to exchange traffic with the ILEC (*Local Competition Order* ¶ 209). The FCC found that Section 251(c)(2) gave competitors "the right" to interconnect on the ILEC's network rather than obligating competitors to transport traffic to less convenient or efficient points. Section 251(c)(2)'s requirement that the POI be on the ILEC's network was established for the benefit of the competitor, not the ILEC. While the Act *permits* a competitor to choose where it will deliver its traffic, "carriers do not always deliver originating traffic and receive terminating traffic at the same place" (*Virginia Arbitration Order*, 17 FCC Rcd 27039, ¶ 71 (2002)). ILECs have historically delivered 911/E911 service traffic to the network of the entity serving the PSAP or required competitors to bring 911/E911 service traffic to the ILEC's network. For example, in today's environment, when AT&T is not the 911/E911 service provider for a PSAP, AT&T takes its originating end users' 911 calls to a meet point established with an adjacent carrier or all the way to the adjacent carrier's selective router. Similar to the interconnection arrangement proposed by Intrado Comm, AT&T establishes a trunk group from its end office switch to the adjacent carrier's selective router, and 911 calls made by AT&T's end users to the PSAP served by the adjacent carrier are terminated at the adjacent carrier's selective router. The Act entitles Intrado Comm to interconnection "that is at least equal in quality to that provided by the [ILEC] to itself or to any subsidiary, affiliate, or any other party to which the carrier provides interconnection" (47 U.S.C. § 251(c)(2)(C)). Thus, Intrado Comm will interconnect on the ILECs network to exchange non-

911 traffic and will abide by the ILECs' long-standing additional contract requirement that CLECs bring 911 calls to AT&T's 911 tandem or selective router. AT&T also makes CLECs go beyond the POI when traffic volumes at a tandem reach a certain threshold (*see, e.g.*, AT&T ITR Appendix 5.6 ("A dedicated trunk group for each NPA shall be established to each appropriate E911 switch within the local exchange area or LATA in which CLEC Offers Service")).

Specifically, when AT&T is the designated 911/E911 service provider, it requires all carriers serving end users in that geographic area to bring their end users' 911 calls to the AT&T selective router serving the PSAP to which the 911 call is destined. This is in addition to the single point of interconnection a CLEC has designated on the ILEC's network for the exchange of all other local traffic. The ILEC demands that dedicated trunks be deployed to the ILEC's selective routers for termination of CLEC customer 911 calls. The type of interconnection Intrado Comm seeks from AT&T is to treat AT&T in the same manner as it treats itself and competitors when it provides 911 services PSAPs. Intrado Comm expects AT&T to terminate 911/E911 service calls on Intrado Comm's network when it is the designated 911/E911 service provider. AT&T expects CLECs to go beyond the POI to complete 911 calls to AT&T's 911 service customer and AT&T directly connects or establishes a meet point with ILECs. The physical architecture arrangements Intrado Comm seeks in this proceeding are critical to issues of reliability, redundancy, and eliminating points of failure for 911/E911 services. Thus, interconnection for the purposes of providing competitive 911/E911 services must look beyond the traditional interconnection arrangements used for plain old telephone service ("POTS") and seek to establish physical architecture arrangements that specifically address the special needs of 911 callers and first responders. ILEC interconnection arrangements with other CLECs and adjacent non-competing ILECs for the exchange of 911 calls reflect what is technically feasible today and has been deployed by the ILECs as the preferred method for exchanging and completing 911 calls to PSAPs. Under Section 251 of the Act, this is the minimum standard of interconnection that should be available to a competitive provider of 911 services to PSAPs.

Responsible Person:
Carey Spence-Lenss, Vice President of Regulatory and Government Affairs

98. Please refer to AT&T witness Neinast's rebuttal testimony on page 9, beginning at line 10 and continuing through page 10, line 1, for the following questions.

a. Is witness Neinast correct when he asserts (lines 10-12) that "Intrado wants to mirror the type of interconnection used with other ILECs"? Please explain why or why not.

b. Is witness Neinast correct when he asserts (lines 16-18) that "Intrado wants to be treated as a CLEC in some instances, and as though it were an ILEC in others"? Please explain why or why not.

c. Is witness Neinast correct when he asserts (lines 19-20) that "Intrado must stay within the system designed for CLEC interconnection"? Please explain why or why not.

d. Is witness Neinast correct when he asserts (line 20 continuing to line 1) that through Intrado's interconnection proposal, "Intrado seeks to shift its costs to AT&T Florida in an attempt to create a competitive edge for Intrado's 911 service"? Please explain why or why not.

Intrado Comm Response:

a. Intrado Comm seeks interconnection that is "equal in quality" to that AT&T provides to itself and other 911/E911 service providers.

b. Please see Intrado Comm's Response to Interrogatory #96.

c. Please see Intrado Comm's Response to Interrogatory #97.

d. No, Intrado Comm does not seek to shift costs to AT&T to create a competitive edge for Intrado Comm's 911/E911 service. AT&T seems to be basing its position on statements made in the proceeding to address Intrado Comm's Petition for Declaratory Ruling. Intrado Comm's Petition for Declaratory Ruling, however, was intended to ensure that ILECs like AT&T cannot continue to charge PSAPs for services that PSAPs no longer purchase from the ILEC when Intrado Comm is the 911/E911 service provider. Intrado Comm cannot compete by "shifting costs" to existing providers. Contrary to AT&T's assertions that it will be cheated of legitimate charges by Intrado Comm's interconnection proposals, it is AT&T that is inappropriately imposing charges for certain activities related to local exchange provisioning. AT&T claims it should be able to charge Intrado Comm served PSAPs the AT&T tariffed rates for selective routing. This would allow AT&T to recover the costs associated with call sorting from PSAPs instead of attributing those costs as overhead. The end result of charging PSAPs would be that AT&T would be able to defray some expenses associated with the provisioning of local exchange service and the associated access to 911 services to PSAPs while AT&T's competitors have no recourse but to treat those costs as the cost of doing business or pass them onto end users. Further, allowing AT&T to charge a PSAP for selective routing when AT&T is no longer that PSAP's selective routing provider would violate Section 364.604(2), Florida Statues, which states that "[a] customer shall not be liable for any charges for telecommunications or information services that the customer did not order or that were not provided to the customer." Also see Intrado Comm's Response to Interrogatory # 69 and Interrogatory # 71.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

99. Please refer to AT&T witness Neinast's rebuttal testimony on page 10, lines 7-11, for the following questions.

a. Is witness Neinast correct when he asserts that it is the "CLEC's obligation *to supply the facilities and equipment necessary to reach the ILEC's* network"? Please explain why or why not.

b. Is witness Neinast correct when he asserts that "Intrado seeks to turn that principle on its head, forcing AT&T Florida to provide all the facilities and equipment necessary to reach Intrado's network"? Please explain why or why not.

Intrado Comm Response:

Each carrier should bear the cost of delivering traffic originating on its network to the POI. The POI is the demarcation point between the Parties' networks and determines the point at which each Party's operational and financial responsibility for its network ends. Each Party should bear the cost of delivering its originating traffic to the point of interconnection (*Virginia Arbitration Order* ¶¶ 52-53). The Commission has also determined that each Party has responsibility on its side of the POI (Docket No. 000731-TP, *Petition by AT&T Communications of the Southern States, Inc. d/b/a AT&T for Arbitration of Certain Terms and Conditions of a Proposed Agreement with BellSouth Telecommunications, Inc. Pursuant to 47 U.S.C. Section 252*, Order No. PSC-01-1402-FOF-TP, Final Order on Arbitration at 46 (June 28, 2001) (finding that each party assumes financial responsibility for bringing its traffic to the designated interconnection point); Docket No. 000075-TP, *Investigation into Appropriate Methods To Compensate Carriers for Exchange of Traffic Subject to Section 251 of the Telecommunications Act of 1996*, Order No. PSC-02-1248-FOF-TP, Order on Reciprocal Compensation at 26 (Sept. 10, 2002) ("[W]e find that an originating carrier is precluded by FCC rules from charging a terminating carrier for the cost of transport, or for the facilities used to transport the originating carrier's traffic, from its source to the point(s) of interconnection. . . .")). In addition, Intrado Comm understands AT&T requires CLECs to bear the costs associated with interconnection beyond the POI for termination of 911 calls at the AT&T selective router and for direct end-office trunks required to be deployed beyond the POI when CLEC traffic to the tandem (POI) reaches a certain threshold (*see, e.g.*, AT&T ITR Appendix 5.6 ("A dedicated trunk group for each NPA shall be established to each appropriate E911 switch within the local exchange area or LATA in which CLEC Offers Service")).

Responsible Person:
Thomas Hicks, Director - Carrier Relations

100. Please refer to AT&T witness Neinast's rebuttal testimony on page 11, lines 2-6. Is witness Neinast correct when he asserts that, under Intrado's proposed language, "AT&T is responsible for 50% of Intrado's facility cost and '*will not bill the other Party for any portion of those facilities*,' [italics in original] - even if Intrado uses

90% of the facilities for traffic and AT&T Florida uses only 10%"? Please explain why or why not.

Intrado Comm Response:

Intrado Comm's proposed language is consistent with the FCC's rules. The FCC has determined that both the ILEC and the new entrant "gains value" from the use of a meet point to exchange traffic and thus each Party to the arrangement should bear its portion of the economic costs of the arrangement (*Local Competition Order* ¶ 553). The FCC determined that it is reasonable to require each party to bear a reasonable portion of the economic costs of the meet point arrangement. Intrado Comm's language assumes that the meet point would be located halfway between the Parties' networks. The FCC has determined that it is reasonable for Parties to split the costs of meet point construction between the interconnecting parties equally (*Virginia Arbitration Order* ¶ 133). When each party bears half the construction costs of the meet point facilities, Intrado Comm has an incentive to choose a facility that is not prohibitively expensive (*Virginia Arbitration Order* ¶ 124 (noting AT&T's proposal as later adopted by the FCC)). Intrado Comm understands that AT&T establishes meet point arrangements with ILECs for the exchange of 911 traffic under which no compensation is exchanged for the arrangement.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

101. Please refer to AT&T witness Neinast's rebuttal testimony on page 11, lines 8-16. Is witness Neinast correct when he asserts that "subsequent orders from the FCC treat the entire facility [mid-span meet point] as an entrance facility that the CLEC controls and is not impaired from ordering from third parties"? If correct, please explain the impact on Intrado's offering and provision of 911 service to PSAPs. If incorrect, please explain why it is not correct.

Intrado Comm Response:

Mr. Neinast's statements regarding "impairment" are not relevant to Intrado Comm's right to request a meet point and each Party's obligation to build to the meet point. When Intrado Comm requests the use of meet point, it is Intrado Comm's responsibility to get to the meet point. This may be accomplished by Intrado Comm building out facilities, Intrado Comm obtaining the necessary facilities from AT&T, or Intrado Comm obtaining the necessary facilities from a third party. The FCC order quoted by Mr. Neinast has nothing to do with Intrado Comm's right to request a meet point interconnection arrangement or the FCC's statements that each Party bears a reasonable portion of the economic costs of the meet point arrangement. Rather, that order addresses whether competitors may obtain certain ILEC network elements on an unbundled basis.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

102. Please refer to AT&T witness Neinast's rebuttal testimony on page 12, lines 13-18 for the following questions.

a. Is witness Neinast correct when he asserts that "AT&T Florida's end users will be required to rely on Intrado's ability to properly route 911 traffic to the correct PSAP"? Please explain why or why not.

b. Is witness Neinast correct when he asserts that "[T]here is an extremely large *investment by all carriers* [italics in original] that have established 911 trunks to the AT&T Florida Selective Router using diverse facilities"? Please explain why or why not.

Intrado Comm Response:

a. Yes, when Intrado Comm is the 911/E911 service provider, Intrado Comm will be responsible for taking AT&T's end users' 911 calls from the Intrado Comm selective router to the appropriate PSAP. AT&T, however, has the responsibility as the entity serving the end user making the 911 call to ensure that its end users' 911 calls are delivered to the relevant selective router serving the appropriate PSAP for that end user.

b. AT&T's concerns are misplaced. This arbitration proceeding is between AT&T and Intrado Comm and deals with how the Parties will exchange 911/E911 service traffic between their networks when either AT&T is the designated 911/E911 service provider or Intrado Comm is the designated 911/E911 service provider. The POI established between AT&T and Intrado Comm for the mutual exchange of 911/E911 service traffic does not affect any other carriers that have established 911 trunks to AT&T's selective routers.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

103. Please refer to AT&T witness Neinast's rebuttal testimony on page 12, lines 20-23, for the following questions.

a. Is witness Neinast correct when he asserts that "[T]o allow Intrado to place its single POI in any other place [other than AT&T's selective router] will require *all carriers* [italics in original] to establish new diverse facilities at some arbitrary location of Intrado's choosing"? Please explain why or why not.

b. If the response to 12(a) is yes, does Intrado expect the other carriers (other than Intrado and AT&T) to bear the cost to connect to the Intrado's "single POI"? Please explain your answer.

c. Is witness Neinast correct when he asserts that allowing Intrado to place its single POI at a location other than AT&T's selective router, "is . . . an unsound business decision for *all carriers* [italics in original]"? Please explain why or why not.

d. Is witness Neinast correct when he asserts that allowing Intrado to place its single POI at a location other than AT&T's selective router "has the potential for a major FCC Reportable Service Disruption"? Please explain why or why not.

Intrado Comm Response:

a. When AT&T is the designated 911/E911 service provider, the AT&T selective router is the proper designation for the POI for the exchange of 911 traffic. As a competitor, however, Intrado Comm has the right to designate that POI, not AT&T. AT&T's concerns are misplaced. This arbitration proceeding is between AT&T and Intrado Comm and deals with how the Parties will exchange 911/E911 service traffic between their networks when either AT&T is the designated 911/E911 service provider or Intrado Comm is the designated 911/E911 service provider. The POI established between AT&T and Intrado Comm for the mutual exchange of 911/E911 service traffic between AT&T and Intrado Comm does not affect how other carriers may interconnect with Intrado Comm.

b. Assuming this question is asked in the context of Mr. Neinast's erroneous assertion that all carriers currently interconnecting to AT&T's 911 tandems must now interconnect to the same POI chosen by Intrado Comm on the AT&T network, Intrado Comm's answer is no. Mr. Neinast's assertion is also incorrect as it is predicated on the false premise that all carriers must interconnect at the same POI for 911 traffic.

c. Mr. Neinast is mistaken when he claims that all carriers must migrate to a POI chosen by Intrado Comm for interconnection to the AT&T selective router. This is not necessary; therefore it cannot harm all carriers. The POI established between AT&T and Intrado Comm for the mutual exchange of 911/E911 service traffic between AT&T and Intrado Comm does not affect how other carriers may interconnect with Intrado Comm.

d. Mr. Neinast's assertion regarding potential FCC outages should Intrado Comm dictate a POI other than the AT&T selective router is irrelevant. The 911 outage reporting requirements apply to all carriers, not just AT&T as the 911/E911 service provider. Many carriers must interconnect to the 911 network and thus there is a larger burden upon the 911/E911 service provider to assure the network integrity of the 911 call routing elements. That is why Intrado Comm has requested multiple POIs for interconnection to the Intrado Comm 911/E911 network. AT&T's network design of many single and unconnected 911 selective routers creates a potential for FCC outage reporting and has little to do with whether the POI is at the selective router itself or another designated location and then transported by AT&T to the selective router.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

104. Please refer to AT&T witness Neinast's rebuttal testimony on page 13, lines 11-13. Does Intrado agree with witness Neinast's assertion that the FCC has determined that the selective router is the "proper demarcation point" for 911 traffic? Please explain why or why not.

Intrado Comm Response:

Mr. Neinast is relying heavily on the FCC's decision in the wireless E911 docket 94-102, also known as the King County decision, to designate the E911 selective router as the demarcation point for cost recovery for the deployment of wireless E911. The context of this ruling was for use in determining whether the PSAP or the wireless carrier was responsible for costs associated with getting wireless 911 calls to the appropriate 911 selective router serving the PSAP pre-designated to receive the wireless 911 call. When AT&T is the designated 911/E911 service provider, the AT&T selective router is the proper designation for the POI for the exchange of 911/E911 service traffic. The reverse is true when Intrado Comm is the designated 911/E911 service provider – the Intrado Comm selective router is the proper designation for the POI for the exchange of 911/E911 service traffic. Intrado Comm, however, cannot agree to language in the interconnection agreement that would undermine its right as the competitor to designate the location of the POI when AT&T is the 911/E911 service provider.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

105. Please refer to AT&T witness Neinast's rebuttal testimony on page 14, lines 6-16 for the following questions.

a. Please explain why Intrado disagrees with AT&T's proposal of a 120-day written notice period.

b. Please explain why Intrado believes its 30-day written notice period is appropriate.

c. Is witness Neinast correct when he asserts AT&T's proposed 120-day written notice period is necessary to avoid a service outage? Please explain why or why not.

d. Does Intrado believe that a 30-day written notice period could result in service outages? Please explain why or why not.

e. Please explain why Intrado proposes to include the words "additional" before Interconnection (line 10) and "arrangements or rearrangement of existing interconnections" after Interconnection (line 10).

Intrado Comm Response:

a. There should not be any situation in which more than 30 days is required in order to establish additional interconnection arrangements or rearrangements of *existing* interconnections. In a world where timely response to customer requests is important, having any period longer than 30 days for notice of intention to make a change is poor business. In addition, it is unclear whether AT&T's proposed language applies to the Parties' initial interconnection arrangements. It is unreasonable for Intrado Comm to wait 120 days after the agreement is signed before the Parties interconnect their networks.

b. Please see Intrado Comm's Response to Interrogatory #105(a).

c. Only AT&T knows what is necessary to avoid an AT&T service outage, so Intrado Comm can only state what responsible local exchange carriers typically do for proper network management. First, each LEC has a network forecasting department (or group) that looks at trends and pre-plans for expansion and needs. As part of that, forecasting should be aware of new service requests that will come about as a result of the current negotiations. Therefore, equipment with long lead times should be in the procurement process well in advance of the need. Second, network planning should always plan a safety factor to cover unexpected demand up to a certain percentage, say ten percent (10%). Intrado Comm's demand for connectivity will likely be well below this percentage. Third, there will not be a service outage if AT&T is unable to perform and provide the service connectivity within 30 days. Rather, the new interconnection arrangement sought by Intrado Comm (and likely required by public safety) would be delayed in its implementation. Thus, the 120-day requirement is unfounded.

d. Should AT&T be unable to respond to a 30-day written notice, the new interconnection arrangement sought by Intrado Comm (and likely required by public safety) would be delayed in its implementation. A service outage would only result if AT&T decided to terminate service unilaterally without ensuring the appropriate interconnection arrangements were in place.

e. It is unclear whether AT&T's originally proposed language applies to the Parties' initial interconnection arrangements. It is unreasonable for Intrado Comm to wait 120 days for the Parties' to implement the initial interconnection of their networks. Intrado Comm therefore added the term "additional" to clarify that the waiting period did not apply to the initial interconnection of the Parties' networks.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

106. Please refer to AT&T witness Neinast's rebuttal testimony on page 15, lines 10-22 for the following questions.

a. Please define "ALI Interoperability."

b. Is witness Neinast correct when he asserts that "ALI *Interoperability*" is an "undefined, vague and ambiguous term"? Please explain why or why not.

c. Is witness Neinast correct when he asserts that "ALI interoperability" "is not *defined anywhere in the ICA or on the NENA website*"? Please explain why or why not.

d. Is witness Neinast correct when he asserts that the "default definition standard" is the ICA or the NENA website? Please explain why or why not.

Intrado Comm Response:

a. Automatic Location Identification (ALI) is an E911 feature that provides the subscriber or address or both associated with the calling party's telephone number (identified by the Automatic Number Identification [ANI]) to the PSAP for display. ALI interoperability involves the interconnection of two or more ALI systems for the purpose of automatically querying an interconnected ALI system in the event a caller's ALI record is not found in the ALI system that serves the PSAP. Such applications are warranted where end offices have subscribers served by more than one ALI system. The diagrams provided in Attachment 36 to Staff 3rd POD provide further information on ALI interoperability.

b. No, Mr. Neinast is not correct. AT&T has already deployed ALI interoperability arrangements in Texas between itself and another ALI service provider. In those areas where AT&T and other competitive 911/E911 service providers have deployed such arrangements, the alternative ALI provider's system is automatically queried if an ALI record is not found in the AT&T ALI system when an AT&T-served PSAP receives a call. Intrado Comm further believes similar ALI interoperability is being provided by AT&T in California where AT&T and Verizon retain their own service records on their own respective ALI systems. AT&T has defined ALI interoperability by its own actions.

c. While perhaps undefined in the interconnection agreement, Intrado Comm's expectations for interoperability have been openly shared with AT&T during negotiations and Intrado Comm is willing to negotiate specific language to support the interoperability sought by Intrado Comm. AT&T has never indicated during the Parties' negotiations that it needed further information on Intrado Comm's request for "ALI interoperability" and has never requested a formal definition be included in the interconnection agreement.

d. NENA maintains a Master Glossary of 911 Terminology of many 911 terms on its website at http://www.nena.org/pages/ContentList.asp?CTID=68, but does not include of all terms used within the public safety industry. However, AT&T's ALI system is fully capable of

ALI system interoperability as demonstrated by its ALI system interoperability with Texas and California ALI systems, as well as to multiple Mobile Positioning Center and VoIP Positioning Center ALI systems.

Responsible Person:
Thomas Hicks, Director - Carrier Relations

107. Please refer to AT&T witness Neinast's rebuttal testimony on page 16, lines 12-18. Is witness Neinast correct when he asserts that in Appendix 911, Section 3.4.5., Intrado Communications' proposed language implies that "AT&T Florida is to 'collaboratively work' with Intrado Communications to help Intrado Communications maintain the 911 steering tables in Intrado Communications' 911 system"? Please explain why or why not.

Intrado Comm Response:

This clause was intended to reflect the existing ALI system-to-ALI system arrangements currently employed and supported by AT&T in Texas and California used in those instances when an ALI record is not found in the AT&T ALI system during a 911 call. Mr. Neinast seemingly is unaware of this interoperable arrangement, and mistakenly perceives this section as imposing table maintenance requirements upon AT&T within Intrado Communications' system. However, given the confusion generated by the manner in which this issue is written and the limited value of such interoperability, Intrado Comm agrees to remove Section 3.4.5 and hereby considers this contract provision closed.

I.D. # STIP-4

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition by Intrado Communications, Inc. for arbitration of certain rates, terms, and conditions for interconnection and related arrangements with BellSouth Telecommunications, Inc. d/b/a AT&T Florida pursuant to Section 252(b) of the Communications Act of 1934, as amended, and Sections 120.80(13), 120.57(1), 364.15, 356.16, 364.161, and 364.162, F.S., and Rule 280106.201, F.A.C.	Docket No. 070736-TP

INTRADO COMMUNICATIONS INC.'S RESPONSES TO FPSC STAFF'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS (Nos. 1-3)

Intrado Communications Inc. ("Intrado Comm"), by its attorneys, hereby respectfully responds to the Florida Public Service Commission ("Commission") Staff's Request for Production of Documents (Nos. 1-3) as follows:

REQUEST FOR PRODUCTION OF DOCUMENTS

1. **Please provide any contractual agreements currently in effect between AT&T and any Intrado entity for the provision of any telecommunications services in the state of Florida.**

Intrado Comm Response:

There are no contractual agreements for the provision of telecommunications services between AT&T and any Intrado entity in the state of Florida. Intrado Inc., Intrado Comm's parent, has commercial agreements with various AT&T entities. For example, Intrado Inc. has an agreement with AT&T to arrange access to the public switched telephone network for VoIP service providers. Intrado Inc. serves as a non-regulated middleman enabling relationships between interconnected VoIP service providers and the regulated telecommunications service provider AT&T to gain access to AT&T's 911 services to PSAPs. Intrado Comm is not a party to any agreements between AT&T and Intrado Inc. The agreements between Intrado Inc. and AT&T do not pertain to the 911 services to PSAPs for which Intrado Comm requires interconnection from AT&T pursuant to Section 251(c).

2. **Please provide all documents that support your response to Interrogatory No. 30(a).**

Intrado Comm Response:

None.

3. **Please provide all documents that support your response to Interrogatory No. 30(a).**

Intrado Comm Response:

Intrado Comm and its affiliates have two interconnection agreements, and given the volume of paper involved, only one of the two is attached for illustrative purposes. The language in the two is virtually the same. If the Staff would like the second agreement please let us know.

Respectfully submitted this 30th day of May, 2008.

Respectfully submitted,

INTERCONNECTION AGREEMENT UNDER SECTIONS 251 AND 252 OF THE TELECOMMUNICATIONS ACT OF 1996

This Interconnection Agreement under Sections 251 and 252 of the Telecommunications Act of 1996 **(the Agreement)**, is dated as of _____, 2001 by and among SBC Communications Inc. (SBC)-owned ILECs **Illinois Bell Telephone, Indiana Bell Telephone Company Incorporated, Michigan Bell Telephone Company, Nevada Bell Telephone Company (a Nevada corporation), The Ohio Bell Telephone Company, Pacific Bell Telephone Company (a California corporation), The Southern New England Telephone Company (a Connecticut corporation) and Southwestern Bell Telephone Company (a Missouri corporation), Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin** (only to the extent that the agent for each such SBC-owned ILEC executes this Agreement for such SBC-owned ILEC and only to the extent that such SBC-owned ILEC provides Telephone Exchange Services as an ILEC in each state listed below), and, SCC Communications Corp., 6285 Lookout Road, Boulder, Colorado 80301 (SCC), (a Delaware corporation), shall apply to the state(s) of Arkansas, California, Connecticut, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin.

WHEREAS, the Parties are entering into this Agreement to set forth the respective obligations of the Parties and the terms and conditions under which the Parties will Interconnect their networks and facilities and provide to each other services as required by the Telecommunications Act of 1996 specifically set forth herein;

WHEREAS, for purposes of this Agreement, SCC intends to operate where **Illinois Bell Telephone, Indiana Bell Telephone Company Incorporated, Michigan Bell Telephone Company, Nevada Bell Telephone Company (a Nevada corporation), The Ohio Bell Telephone Company, Pacific Bell Telephone Company (a California corporation), The Southern New England Telephone Company (a Connecticut corporation) and Southwestern Bell Telephone Company (a Missouri corporation), Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin** are the incumbent Local Exchange Carrier(s) and SCC, a competitive Local Exchange Carrier, has or, prior to the provisioning of any Interconnection, access to Unbundled Network Elements, Telecommunications Services or any other functions, facilities, products or services hereunder, will have been granted authority to provide certain Telephone Exchange Services in any of the states listed above by the appropriate Commission(s);

NOW, THEREFORE, the Parties hereby agree as follows:

This Agreement is composed of General Terms and Conditions, which are set forth below, together with certain Appendices, Schedules, Exhibits and Addenda, which immediately follow this Agreement, all of which are hereby incorporated in this Agreement by this reference and constitute a part of this Agreement.

GENERAL TERMS AND CONDITIONS

1. DEFINITIONS

[1] Capitalized Terms used in this Agreement shall have the respective meanings specified below in, Section 1.x of each Appendix attached hereto, and/or as defined elsewhere in this Agreement.

1.1 GENERAL DEFINITIONS

1.1.1 **"A-link"** means a diverse pair of facilities connecting local end office switching centers with Signaling Transfer Points.

1.1.2 **"Act"** means the Communications Act of 1934 [47 U.S.C. 153(R)], as amended by the Telecommunications Act of 1996, Public Law 104-104, 110 Stat. 56 (1996) codified throughout 47 U.S.C.

1.1.3 **"Access Compensation"** is the compensation paid by one Party to the other Party for the origination/termination of intraLATA toll calls to/from its End User. Access compensation is in accordance with the LEC's tariffed access rates. The Parties agree that neither Party will pay Access Compensation to the other under this Agreement.

1.1.4 **"Access Service Request"** (ASR) is an industry standard form used by the Parties to add, establish, change or disconnect trunks for the purposes of Interconnection.

1.1.5 **"Advanced Services"** means high speed, switched, broadband, wireline telecommunications capability that enables users to originate and receive high-quality voice, data graphics or video communications using any technology.

1.1.6 **"Affiliate"** is As Defined in the Act.

1.1.7 **"Alternate Billing Service (ABS)"** means a service that allows End Users to bill calls to accounts that may not be associated with the originating line. There are three types of ABS calls: calling card, collect and third number billed calls.

1.1.8 **AM-IL** - As used herein, **AM-IL** means the applicable above listed ILEC(s) doing business in Illinois.

1.1.9 **AM-IN** - As used herein, **AM-IN** means the applicable above listed ILEC(s) doing business in Indiana.

1.1.10 **AM-MI** - As used herein, **AM-MI** means the applicable above listed ILEC(s) doing business in Michigan.

1.1.11 **AM-OH** - As used herein, **AM-OH** means the applicable above listed ILEC(s) doing business in Ohio.

1.1.12 **AM-WI** - As used herein, **AM-WI** means the applicable above listed ILEC(s) doing business in Wisconsin.

1.1.13 **"Applicable Law"** means all laws, statutes, common law, regulations, ordinances, codes, rules, guidelines, orders, permits, tariffs and approvals, including those relating to the environment or health and safety, of any Governmental Authority that apply to the Parties or the subject matter of this Agreement.

1.1.14 **"As Defined in the Act"** means as specifically defined by the Act.

1.1.15 **"As Described in the Act"** means as described in or required by the Act.

1.1.16 **"Automated Message Accounting"** (AMA) is a structure inherent in switch technology that initially records Telecommunication message information. AMA format is contained in the Automated Message Accounting document published by Telcordia (formerly known as Bellcore) as GR-1100-CORE, which defines and amends the industry standard for message recording.

1.1.17 **"Billed Number Screening (BNS)"** means a validation of toll billing exception (TBE) data and performance of public telephone checks; i.e., determining if a billed line is a public (including those classified as semi-public) telephone number.

1.1.18 **"Bona Fide Request" (BFR)** is the process described in the applicable Appendix UNE.

1.1.19 **"Business Day"** means Monday through Friday, excluding holidays on which the applicable SBC ILEC does not provision new retail services and products.

1.1.20 **"Busy Line Verification" (BLV)** means a service whereby an End User requests an operator to confirm the busy status of a line.

1.1.21 **"CABS"** means the Carrier Access Billing System.

1.1.22 **"Calling Card Service"** means a service that enables a calling End User to bill a telephone call to a calling card number with or without the help of an operator.

1.1.23 **"Calling Name Database"** means a Party's database containing current Calling Name Information, including the Calling Name Information of any telecommunications company participating in that Party's Calling Name Database. A Calling Name Database may be part of, or separate from, a LIDB.

1.1.24 **"Calling Name Delivery Service (CNDS)"** means a service that enables a terminating End User to identify the calling party by a displayed name before a call is answered. The calling party's name is retrieved from a Calling Name Database and delivered to the End User's premise between the first and second ring for display on compatible End User premises equipment.

1.1.25 **"Calling Name Information"** means a Telecommunications Carrier's records of its End Users names associated with one or more assigned ten-digit telephone numbers.

1.1.26 **"Calling Number Delivery"** means a feature that enables an End User to view the directory number of the calling party on a display unit.

1.1.27 **"Calling Party Number"** (**CPN**) means a Signaling System 7 "SS7" parameter whereby the ten (10) digit number of the calling Party is forwarded from the End Office.

1.1.28 **"Centralized Message Distribution System"** (**CMDS**) means the transport system that LECs use to exchange outcollect and Carrier Access Billing System "CABS" access messages among each other and other Parties connected to CMDS.

1.1.29 **"Central office switch"** (**Central Office**) is a switching entity within the public switched telecommunications network, including but not limited to:

1.1.29.1 **"End Office Switch" or "End Office"** is a switching machine that **directly** terminates traffic to and receives traffic from purchasers of local exchange services. An End Office Switch does not include a PBX.

1.1.29.2 **"Tandem Office Switch" or "Tandem(s)"** are used to connect and switch trunk circuits between and among other Central Office Switches. A Tandem Switch does not include a PBX.

1.1.29.3 **"Selective Routing Tandem"** is a switching entity used when routing a 911 call to the proper Public Safety Answering Point ("PSAP") based upon the number and location of the caller.

1.1.30 **"Claim"** means any pending or threatened claim, action, proceeding or suit.

1.1.31 **"CNAM Query"** means a LIDB Service Application that allows SCC to query a Calling Name Database for Calling Name Information in order to deliver that information to SCC's local CNDS subscribers.

1.1.32 **"CNAM Query Rate"** means a rate that applies to each CNAM Query received at the SCP where the Calling Name Database resides.

1.1.33 **"Collocation"** is As Described in the Act. Terms related to collocation are defined in the applicable Appendix Collocation or applicable collocation tariff, as appropriate.

1.1.34 **"Commercial Mobile Radio Services" (CMRS)** means Commercial Mobile Radio Service, As Defined in the Act and FCC rules.

1.1.35 **"Commission"** means the applicable State agency with regulatory authority over Telecommunications. Unless the context otherwise requires, use of the term **"Commissions"** means all of the thirteen agencies listed in this Section. The following is a list of the appropriate State agencies:

1.1.35.1 **the Arkansas Public Service Commission (AR-PSC);**
1.1.35.2 **the Public Utilities Commission of the State of California (CA-PUC);**
1.1.35.3 **the Connecticut Department of Public Utility Control (CT-DPUC);**
1.1.35.4 **the Illinois Commerce Commission (IL-CC);**
1.1.35.5 **the Indiana *Utilities Regulatory Commission* (IN-URC);**
1.1.35.6 **the Kansas Corporation Commission (KS-CC);**
1.1.35.7 **the Michigan Public Service Commission (MI-PSC);**
1.1.35.8 **the Missouri Public Service Commission (MO-PSC);**
1.1.35.9 **the Public Utilities Commission of Nevada (NV-PUC);**
1.1.35.10 **the Public Utilities Commission of Ohio (PUC-OH);**
1.1.35.11 **the Oklahoma Corporation Commission (OK-CC);**
1.1.35.12 **the Public Utility Commission of Texas (PUC-TX); and**
1.1.35.13 **the Public Service Commission of Wisconsin (PSC-WI)**

1.1.36 **"Common Channel Signaling"** (CCS) means an out-of-band, packet-switched, signaling network used to transport supervision signals, control signals, and data messages. It is a special network, fully separate from the transmission path of the public switched network. Unless otherwise agreed by the Parties, the CCS protocol used by the Parties shall be SS7.

1.1.37 **"Common Language Location Identifier"** (CLLI) codes provide a unique 11-character representation of a network interconnection point. The first 8 characters identify the city, state and building location, while the last 3 characters identify the network component.

1.1.38 **"Consequential Damages"** means Losses claimed to have resulted from any indirect, incidental, reliance, special, consequential, punitive, exemplary, multiple or any other Loss, including damages claimed to have resulted from harm to business, loss of anticipated revenues, savings, or profits, or other economic Loss claimed to have been suffered not measured by the prevailing Party's actual damages, and regardless of whether the Parties knew or had been advised of the possibility that such damages could result in connection with or arising from anything said, omitted, or done hereunder or related hereto, including willful acts or omissions.

1.1.39 **"Customer Usage Data"** means the Telecommunications Services usage data of an SCC 911 Call Routing Customer or Telematics Customer, as defined in Appendix 911 hereto, measured in minutes, sub-minute increments, message units, or otherwise, that is recorded by **SBC-13STATE** and forwarded to SCC.

1.1.40 **"Custom Local Area Signaling Service Features" (CLASS Features)** means certain Common Channel Signaling based features available to End Users, including: Automatic Call Back; Call Trace; Distinctive Ringing/Call Waiting; Selective Call Forward; and Selective Call Rejection.

1.1.41 **"End Users"** means a third-party residence or business that subscribes to Telecommunications Services and does not resell them to others. As used herein, the term "End Users" does not include any of the Parties to this Agreement with respect to any item or service obtained under this Agreement.

1.1.42 **"Customer Name and Address Information"** (CNA) means the name, service address and telephone numbers of a Party's End Users for a particular Exchange Area. CNA includes nonpublished listings, coin telephone information and published listings.

1.1.43 **"Delaying Event"** means (a) any failure of a Party to perform any of its obligations set forth in this Agreement, caused in whole or in part by:

1.1.43.1 the failure of the other Party to perform any of its obligations set forth in this Agreement, including but not limited to a Party's failure to provide the other Party with accurate and complete Service Orders;

1.1.43.2 any delay, act or failure to act by the other Party or its End User, agent or subcontractor; or

1.1.43.3 any Force Majeure Event.

1.1.44 **"Dialing Parity"** is As Defined in the Act. As used in this Agreement, Dialing Parity refers to both Local Dialing Parity and Toll Dialing Parity.

1.1.45 **"Digital Signal Level"** is one of several transmission rates in the time-division multiplex hierarchy.

1.1.45.1 **"Digital Signal Level 0"** (DS-0) is the 64 Kbps zero-level signal in the time-division multiplex hierarchy.

1.1.45.2 **"Digital Signal Level 1"** (DS-1) is the 1.544 Mbps first-level signal in the time-division multiplex hierarchy.

1.1.45.3 **"Digital Signal Level 3"** (DS-3) is the 44.736 Mbps third-level signal in the time-division multiplex hierarchy.

1.1.46 **"Digital Subscriber Line"** (DSL) is as defined in the applicable Appendix DSL and/or the applicable tariff, as appropriate.

1.1.47 **"Electronic File Transfer"** is any system or process that utilizes an electronic format and protocol to send or receive data files.

1.1.48 **"Enhanced Service Provider"** (ESP) is a provider of enhanced services as those services are defined in 47 CFR Section 64.702.

1.1.49 **"Exchange Access"** is As Defined in the Act.

1.1.50 **"Exchange Area"** means an area, defined by the Commission, for which a distinct local rate schedule is in effect.

1.1.51 **"Exchange Message Interface"** (EMI) (formerly Exchange Message Record - EMR) is the standard used for exchange of Telecommunications message information among Telecommunications Carriers for billable, non-

billable, sample, settlement and study data. EMI format is contained in Telcordia Practice BR-010-200-010, CRIS Exchange Message Record.

1.1.52 **"Exchange Service"** means Telephone Exchange Service, As Defined in the Act.

1.1.53 **"Feature Group A" (FGA)** means calls either originated by, or delivered to, an End User who has purchased switched access FGA service from the interstate or intrastate tariffs of either Party. FGA also includes, but is not limited to, FGA-like services provided by either Party, where calls are originated from and/or delivered to numbers which are assigned to a Rate Center within one LATA but where the Party receiving the call is physically located in a LATA different than the LATA of the Party originating the call. The intercarrier compensation mechanism as well as additional definitions for FGA are specified in the appropriate Appendix FGA.

1.1.54 **"Feature Group D" (FG-D)** is access available to all customers, providing trunk side access to a Party's End Office Switches with an associated uniform 101XXXX access code for customer's use in originating and terminating communications.

1.1.55 **"FCC"** means the Federal Communications Commission.

1.1.56 **"Foreign Exchange" (FX)** means a service whereby calls either originated by or delivered to a customer who has purchased FX service from the state or interstate tariffs of either Party. FX also includes, but is not limited to, FX-like services provided by either Party where calls are originated from and/or delivered to numbers which are assigned to a Rate Center within one local calling area but where the Party receiving the call is physically located outside of that local calling area. FX service can be either interLATA or intraLATA. InterLATA FX, where the originating and receiving parties are physically located in different LATAs, is considered equivalent to FGA and the intercarrier compensation mechanism is the same as FGA. IntraLATA FX, when provided by two or more local exchange carriers "LECs", is considered a jointly provided service and meet-point billed by those providing it utilizing a mutually agreed to meet-point billing, or meet-point billing like procedure.

1.1.57 **"Governmental Authority"** means any federal, state, local, foreign, or international court, government, department, commission, board, bureau, agency, official, or other regulatory, administrative, legislative, or judicial authority with jurisdiction over the subject matter at issue.

1.1.58 **"Group Record"** means information in LIDB and/or the LIDB administrative system that is common to all telephone numbers in an NPA-NXX or all Special Billing Numbers in an NPA-0/1XX.

1.1.59 **"Incumbent Local Exchange Carrier" (ILEC)** is As Defined in the Act.

1.1.60 **"Intellectual Property"** means copyrights, patents, trademarks, trade secrets, mask works and all other intellectual property rights.

1.1.61 **"Integrated Services Digital Network" (ISDN)** means a switched network service that provides end-to-end digital connectivity for the simultaneous transmission of voice and data. Basic Rate Interface-ISDN (BRI-ISDN) provides for a digital transmission of two 64 Kbps bearer channels and one 16 Kbps data channel (2B+D).

1.1.62 **"Interconnection"** is As Defined in the Act.

1.1.63 **"Interexchange Carrier" (IXC)** means a carrier that provides, directly or indirectly interLATA or intraLATA Telephone Toll Services.

1.1.64 **"InterLATA"** is As Defined in the Act.

1.1.65 **"Intermediate Distribution Frame" (IDF)** is a second frame that augments an existing Main Distribution Frame. Lines or outside cables do not terminate on the IDF.

1.1.66 **"Internet Service Provider" (ISP)** is an Enhanced Service Provider that provides Internet Services, and is defined in footnote 498 of the FCC's First Report and Order, 12 FCC Rcd 15982 (May 16, 1997).

1.1.67 **"IntraLATA Toll Traffic"** means the IntraLATA traffic between two locations within one LATA where one of the locations lies outside of the local calling area as defined by the applicable Commission.

1.1.68 **"LIDB Editor"** means a SCP tool that bypasses the LIDB administrative system and provides emergency access to LIDB for data administration.

1.1.69 **"Line Information Data Base" (LIDB)** means a transaction-oriented database system that functions as a centralized repository for data storage and retrieval. LIDB is accessible through CCS networks. LIDB contains records associated with End User line numbers and special billing numbers. LIDB accepts queries from other network elements and provides return result, return error, and return reject responses as appropriate. Examples of information that Data Owners might store in LIDB and in their Line

Records are: ABS Validation Data, Originating Line Number Screening (OLNS) data, ZIP Code data, and Calling Name Information.

1.1.70 **"LIDB Service Applications"** means the query types accepted for access to LIDB information.

1.1.71 **"Line Record"** means information in LIDB and/or the LIDB administrative system that is specific to a single telephone number or Special Billing Number.

1.1.72 **"Local Access Transport Area" (LATA)** is As Defined in the Act.

1.1.73 **"Local Exchange Carrier" (LEC)** is As Defined in the Act.

1.1.74 **"Local Exchange Routing Guide" (LERG)** is a Telcordia Reference document used by Telecommunications Carriers to identify NPA-NXX routing and homing information as well as Network element and equipment designations.

1.1.75 **"Local Calls"** is traffic that actually physically originates and actually physically terminates within a local calling area, as defined by the relevant Commission.

1.1.76 **"Local Number Portability"** means the ability of users of Telecommunications Services to retain, at the same location, the presence of a previously existing telephone number(s).

1.1.77 **"Location Routing Number" (LRN)** is a ten (10) digit number that is assigned to the network switching elements (Central Office – Host and Remotes as required) for the routing of calls in the network. The first six (6) digits of the LRN will be one of the assigned NPA NXX of the switching element. The purpose and functionality of the last four (4) digits of the LRN have not yet been defined but are passed across the network to the terminating switch.

1.1.78 **"Local Service Provider" (LSP)** is the LEC that provides retail local Exchange Service to an End User. The LSP may or may not provide any physical network components to support the provision of that End User's service.

1.1.79 **"Loss"** or **"Losses"** means any and all losses, costs (including court costs), claims, damages (including fines, penalties, and criminal or civil judgments and settlements), injuries, liabilities and expenses (including attorneys' fees).

1.1.80 **"MECAB"** refers to the Multiple Exchange Carrier Access Billing document prepared by the Billing Committee of the Ordering and Billing Forum "OBF", which functions under the auspices of the Carrier Liaison Committee "CLC of the Alliance for Telecommunications Industry Solutions "ATIS". The MECAB document, published by ATIS as ATIS/OBF- MECAB- Issue 6, February 1998, contains the recommended guidelines for the billing of access services provided to an IXC by two or more LECs, or by one LEC in two or more states within a single LATA.

1.1.81 **"MECOD"** refers to the Multiple Exchange Carriers Ordering and Design Guidelines for Access Services - Industry Support Interface, a document developed by the Ordering/Provisioning Committee of the OBF, which functions under the auspices of the CLC of ATIS. The MECOD document, published by ATIS as ATIS/OBF- MECAB- Issue 3, February 1993, establishes methods for processing orders for access service which is to be provided to an IXC by two or more telecommunications providers.

1.1.82 **"Meet-Point Billing" (MPB)** refers to the billing associated with interconnection of facilities between two or more LECs for the routing of traffic to and from an IXC with which one of the LECs does not have a direct connection. In a multi-bill environment, each Party bills the appropriate tariffed rate for its portion of a jointly provided Switched Exchange Access Service.

1.1.83 **"Meet-Point Trunks/Trunk Groups" (MPTGs)** are used for the joint provision of Switched Access services, pursuant to Telcordia Technical References GR-394-CORE "GR-394" and GR-317-CORE "GR-317". MPTGs are those between a local End Office and an Access Tandem as described in FSD 20-24-0000 and 20-24-0300.

1.1.84 **"Multiple Bill/Single Tariff"** is the meet-point billing method where each LEC prepares and renders its own meet point bill to the IXC in accordance with its own tariff for that portion of the jointly provided Switched Access Service which that LEC provides. The MECAB documents refer to this method as Multiple Bill/reflecting a single tariff (MM).

1.1.85 **"Network Data Mover" (NDM)** is an industry standard protocol for transferring information electrically.

1.1.86 **"Network Element"** is As Defined in the Act.

1.1.87 **NEVADA** – As used herein, **NEVADA** means the applicable above listed ILEC(s) doing business in Nevada.

1.1.88 **"North American Numbering Plan" (NANP)** A numbering architecture in which every station in the NANP Area is identified by a unique ten-digit address consisting of a three-digit NPA code, a three digit central office code of the form NXX, and a four-digit line number of the form XXXX.

1.1.89 **"Numbering Plan Area" (NPA)** also called area code. An NPA is the 3-digit code that occupies the A, B, C positions in the 10-digit NANP format that applies throughout the NANP Area. NPAs are of the form NXX, where N represents the digits 2-9 and X represents any digit 0-9. In the NANP, NPAs are classified as either geographic or non-geographic. a) Geographic NPAs are NPAs which correspond to discrete geographic areas within the NANP Area. b) Non-geographic NPAs are NPAs that do not correspond to discrete geographic areas, but which are instead assigned for services with attributes, functionalities, or requirements that transcend specific geographic boundaries. The common examples are NPAs in the N00 format, e.g., 800.

1.1.90 **"Number Portability"** is As Defined in the Act.

1.1.91 **"NXX" or "Central Office Code"** is the three-digit switch entity indicator that is defined by the fourth through sixth digits of a 10-digit telephone number within the NANP. Each NXX Code contains 10,000 station numbers.

1.1.92 **"Ordering and Billing Forum" (OBF)** is a forum comprised of local telephone companies and inter-exchange carriers whose responsibility is to create and document Telecommunication industry guidelines and standards.

1.1.93 **"Originating Point Code" (OPC)** means a code assigned to identify SCC's system(s) that originate SS7 messages, including LIDB Service Queries.

1.1.94 **PACIFIC** – As used herein, **PACIFIC** means the applicable above listed ILEC(s) doing business in California.

1.1.95 **"Party"** means either SCC or **SBC**; use of the term "Party" includes each of the ILECs that is a party to this Agreement. **"Parties"** means both SCC and **SBC**; use of the term "Parties" includes each of the ILECs that is a party to this Agreement.

1.1.96 **"Permanent Number Portability" (PNP)** is a long term method of providing LNP using LRN.

1.1.97 **"Person"** means an individual or a partnership, an association, a joint venture, a corporation, a business or a trust or other entity organized under

Applicable law, an unincorporated organization or any Governmental Authority.

1.1.98 **"Point of Interconnection" (POI)** is a physical location at which the Parties' networks meet for the purpose of establishing Interconnection.

1.1.99 **"Point of Presence" or "POP"** means a physical location at which SCC has a presence for access to **SBC-13STATE**'s network.

1.1.100 **"Physical Collocation"** is as defined in applicable Appendix Physical Collocation or applicable tariff, where applicable.

1.1.101 **"Rate Center Area"** means the following in each applicable area:

1.1.101.1 **SBC-AMERITECH**

1.1.101.1.1 "Rate Center" means the specific geographic point that has been designated by a given LEC as being associated with a particular NPA-NXX code that has been assigned to the LEC for its provision of Telephone Exchange Service. The Rate Center is the finite geographic point identified by a specific V&H coordinate, which is used by that LEC to measure, for billing purposes, distance sensitive transmission services associated with the specific Rate Center.

1.1.101.2 **NEVADA**

1.1.101.2.1 "Rate Center" denotes the designated points, representing exchanges, (or locations outside exchange areas), between which mileage measurements are made for the application of interexchange mileage rates. Rate Centers are defined in PUC-NV tariff A6.2.7.

1.1.101.3 **PACIFIC**

1.1.101.3.1 "Rate Center" denotes the designated points, representing exchanges or district area (or locations outside exchange areas), between which mileage measurements are made for the application of interexchange and interdistrict mileage rates, as defined by the CA-PUC.A2, 2.1.1 Definition of Terms.

1.1.101.4 **SNET**

1.1.101.4.1 "Rate Center means the specific geographic point and corresponding area that have been identified by a given LEC as being associated with a particular NPA-NXX code that has been assigned to the LEC for its provision of Exchange Services.

1.1.101.5 **SBC-SWBT**

1.1.101.5.1 "Rate Center" means an uniquely defined geographical location within an exchange area (or a location outside the exchange area) for which mileage measurements are determined for the application of interstate tariffs."

1.1.102 **"Rating Point"** means the V&H coordinates associated with a particular telephone number for rating purposes.

1.1.103 **"Reference of Calls"** refers to a process by which calls are routed to an announcement that states the new telephone number of an End User.

1.1.104 **SBC Communications Inc. (SBC)** means the holding company which owns the following ILECs: Illinois Bell Telephone Company, Indiana Bell Telephone Company Incorporated, Michigan Bell Telephone Company, Nevada Bell Telephone Company, The Ohio Bell Telephone Company, Pacific Bell Telephone Company, The Southern New England Telephone Company, Southwestern Bell Telephone Company, and/or Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin.

1.1.105 **SBC-SWBT** – As used herein, **SBC-SWBT** means the applicable above listed ILEC(s) doing business in Arkansas, Kansas, Missouri, Oklahoma, and Texas.

1.1.106 **SBC-AMERITECH** - As used herein, **SBC-AMERITECH** means the applicable above listed ILEC(s) doing business in Illinois, Indiana, Michigan, Ohio, and Wisconsin.

1.1.107 **SBC-MOKA** – As used herein, **SBC-MOKA** means the applicable above listed ILEC(s) doing business in Arkansas, Kansas, Missouri, and Oklahoma.

1.1.108 SBC-7STATE - As used herein, SBC-7STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Kansas, Missouri, Nevada, Oklahoma, and Texas.

1.1.109 SBC-8STATE - As used herein, SBC-8STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Connecticut, Kansas, Missouri, Nevada, Oklahoma, and Texas.

1.1.110 SBC-10STATE - As used herein, SBC-10STATE means an the applicable above listed ILEC(s) doing business in Arkansas, Illinois, Indiana, Kansas, Michigan, Missouri, Ohio, Oklahoma, Texas, and Wisconsin.

1.1.111 SBC-12STATE - As used herein, SBC-12STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin.

1.1.112 SBC-13STATE - As used herein, SBC-13STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Connecticut, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin.

1.1.113 **"Service Control Point" (SCP)** is the node in the common channel signaling network that accepts Queries for certain Database services. The SCP is a real time database system that receives Queries from service platforms, performs subscriber or application-specific service logic, and then sends a Response back to the Query-originating platform. Such service platforms can be Service Switching Points (SSPs) or other network nodes capable of properly formatting and launching Queries.

1.1.114 **"Service Management System" (SMS)** means an off-line system used to access, create, modify, or update information in a Database.

1.1.115 **"Service Provider Number Portability" (SPNP)** is synonymous with Permanent Number Portability "PNP".

1.1.116 **"Service Switching Point" (SSP)** is a telephone central office switch equipped with a Signaling System 7 (SS7) interface.

1.1.117 **"Signaling System 7" (SS7)** means a signaling protocol used by the CCS Network.

1.1.118 **"Signal Transfer Point" (STP)** performs a packet switching function that routes signaling messages among Service Switching Points (SSP),

Service Control Points (SCP), Signaling Points (SP), and other STPs in order to set up calls and to query databases for Advanced Services.

1.1.119 **"Sleuth"** means an off-line administration system that monitors suspected occurrences of ABS-related fraud.

1.1.120 **SNET** – As used herein, **SNET** means the applicable above listed ILEC(s) doing business in Connecticut.

1.1.121 **"Special Billing Number" SBN** means a Line Record in LIDB that is based on an NXX-0/1XX numbering format. NXX-0/1XX numbering formats are similar to NPA-NXX formats except that the fourth digit of a SBN is either a zero (0) or a one (1).

1.1.122 **"State Abbreviation"** means the following:

1.1.122.1 "AR" means Arkansas
1.1.122.2 "CA" means California
1.1.122.3 "CT" means Connecticut
1.1.122.4 "IL" means Illinois
1.1.122.5 "IN" means Indiana
1.1.122.6 "KS" means Kansas
1.1.122.7 "MI" means Michigan
1.1.122.8 "MO" means Missouri
1.1.122.9 "NV" means Nevada
1.1.122.10 "OH" means Ohio
1.1.122.11 "OK" means Oklahoma
1.1.122.12 "TX" means Texas
1.1.122.13 "WI" means Wisconsin

1.1.123 **SWBT-AR** - As used herein, **SWBT-AR** means the applicable above listed ILEC(s) doing business in Arkansas.

1.1.124 **SWBT-KS** - As used herein, **SWBT-KS** means the applicable above listed ILEC(s) doing business in Kansas.

1.1.125 **SWBT-MO** - As used herein, **SWBT-MO** means the applicable above listed ILEC(s) doing business in Missouri.

1.1.126 **SWBT-OK** - As used herein, **SWBT-OK** means the applicable above listed ILEC(s) doing business in Oklahoma.

1.1.127 **SWBT-TX** - As used herein, **SWBT-TX** means the applicable above listed ILEC(s) doing business in Texas.

INTERCONNECTION AGREEMENT UNDER SECTIONS 251 AND 252
OF THE TELECOMMUNICATIONS ACT OF 1996

by and among

Illinois Bell Telephone Company,
Indiana Bell Telephone Company Incorporated,
Michigan Bell Telephone Company,
Nevada Bell Telephone Company,
The Ohio Bell Telephone Company,
Pacific Bell Telephone Company,
The Southern New England Telephone Company,
Southwestern Bell Telephone Company,
Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin

and

SCC COMMUNICATIONS CORP.

INTERCONNECTION AGREEMENT UNDER SECTIONS 251 AND 252
OF THE TELECOMMUNICATIONS ACT OF 1996

by and among

Illinois Bell Telephone Company,
Indiana Bell Telephone Company Incorporated,
Michigan Bell Telephone Company,
Nevada Bell Telephone Company,
The Ohio Bell Telephone Company,
Pacific Bell Telephone Company,
The Southern New England Telephone Company,
Southwestern Bell Telephone Company,
Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin

and

SCC COMMUNICATIONS CORP.

TABLE OF CONTENTS

1. DEFINITIONS 6
2. INTERPRETATION, CONSTRUCTION AND SEVERABILITY 26
3. NOTICE OF CHANGES – SECTION 251(C)(5) 31
4. GENERAL RESPONSIBILITIES OF THE PARTIES 31
5. EFFECTIVE DATE, TERM, AND TERMINATION 35
6. END USER FRAUD 38
7. DEPOSITS (SBC-12STATE) 39
8. BILLING AND PAYMENT OF CHARGES 42
9. NONPAYMENT AND PROCEDURES FOR DISCONNECTION 48
10. DISPUTE RESOLUTION ..... 52~~53~~
11. AUDITS – APPLICABLE IN SBC-12STATE ONLY 57
12. DISCLAIMER OF REPRESENTATIONS AND WARRANTIES ..... 59~~60~~
13. LIMITATION OF LIABILITY 60
14. INDEMNITY 62
15. REMEDIES 67
16. INTELLECTUAL PROPERTY 67
17. NOTICES 67
18. PUBLICITY AND USE OF TRADEMARKS OR SERVICE MARKS ..... 69~~70~~
19. NO LICENSE 70
20. CONFIDENTIALITY 70
21. INTERVENING LAW 75
22. GOVERNING LAW ..... 75~~76~~
23. REGULATORY APPROVAL 76

24. CHANGES IN END USER LOCAL EXCHANGE SERVICE PROVIDER SELECTION 76

25. COMPLIANCE AND CERTIFICATION 78

26. LAW ENFORCEMENT 78

27. RELATIONSHIP OF THE PARTIES/INDEPENDENT CONTRACTOR 79

28. NO THIRD PARTY BENEFICIARIES; DISCLAIMER OF AGENCY 80

29. ASSIGNMENT 80

30. DELEGATION TO AFFILIATE 8081

31. SUBCONTRACTING 81

32. HAZARDOUS SUBSTANCES AND RESPONSIBILITY FOR ENVIRONMENTAL CONTAMINATION 8182

33. FORCE MAJEURE 8283

34. TAXES 83

35. NON-WAIVER 85

36. NETWORK MAINTENANCE AND MANAGEMENT 8586

37. SIGNALING 8687

38. TRANSMISSION OF TRAFFIC TO THIRD PARTIES 87

39. CUSTOMER INQUIRIES 87

40. EXPENSES 88

41. CONFLICT OF INTEREST 88

INTERCONNECTION AGREEMENT UNDER SECTIONS 251 AND 252 OF THE TELECOMMUNICATIONS ACT OF 1996

This Interconnection Agreement under Sections 251 and 252 of the Telecommunications Act of 1996 **(the Agreement)**, is dated as of _____, 2001 by and among SBC Communications Inc. (SBC)-owned ILECs **Illinois Bell Telephone, Indiana Bell Telephone Company Incorporated, Michigan Bell Telephone Company, Nevada Bell Telephone Company (a Nevada corporation), The Ohio Bell Telephone Company, Pacific Bell Telephone Company (a California corporation), The Southern New England Telephone Company (a Connecticut corporation) and Southwestern Bell Telephone Company (a Missouri corporation), Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin** (only to the extent that the agent for each such SBC-owned ILEC executes this Agreement for such SBC-owned ILEC and only to the extent that such SBC-owned ILEC provides Telephone Exchange Services as an ILEC in each state listed below), and, SCC Communications Corp., 6285 Lookout Road, Boulder, Colorado 80301 (SCC), (a Delaware corporation), shall apply to the state(s) of Arkansas, California, Connecticut, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin.

WHEREAS, the Parties are entering into this Agreement to set forth the respective obligations of the Parties and the terms and conditions under which the Parties will Interconnect their networks and facilities and provide to each other services as required by the Telecommunications Act of 1996 specifically set forth herein;

WHEREAS, for purposes of this Agreement, SCC intends to operate where **Illinois Bell Telephone, Indiana Bell Telephone Company Incorporated, Michigan Bell Telephone Company, Nevada Bell Telephone Company (a Nevada corporation), The Ohio Bell Telephone Company, Pacific Bell Telephone Company (a California corporation), The Southern New England Telephone Company (a Connecticut corporation) and Southwestern Bell Telephone Company (a Missouri corporation), Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin** are the incumbent Local Exchange Carrier(s) and SCC, a competitive Local Exchange Carrier, has or, prior to the provisioning of any Interconnection, access to Unbundled Network Elements, Telecommunications Services or any other functions, facilities, products or services hereunder, will have been granted authority to provide certain Telephone Exchange Services in any of the states listed above by the appropriate Commission(s);

NOW, THEREFORE, the Parties hereby agree as follows:

This Agreement is composed of General Terms and Conditions, which are set forth below, together with certain Appendices, Schedules, Exhibits and Addenda, which immediately follow this Agreement, all of which are hereby incorporated in this Agreement by this reference and constitute a part of this Agreement.

GENERAL TERMS AND CONDITIONS

1. DEFINITIONS

[1] Capitalized Terms used in this Agreement shall have the respective meanings specified below in, Section 1.x of each Appendix attached hereto, and/or as defined elsewhere in this Agreement.

1.1 GENERAL DEFINITIONS

1.1.1 **"A-link"** means a diverse pair of facilities connecting local end office switching centers with Signaling Transfer Points.

1.1.2 **"Act"** means the Communications Act of 1934 [47 U.S.C. 153(R)], as amended by the Telecommunications Act of 1996, Public Law 104-104, 110 Stat. 56 (1996) codified throughout 47 U.S.C.

1.1.3 **"Access Compensation"** is the compensation paid by one Party to the other Party for the origination/termination of intraLATA toll calls to/from its End User. Access compensation is in accordance with the LEC's tariffed access rates. The Parties agree that neither Party will pay Access Compensation to the other under this Agreement.

1.1.4 **"Access Service Request" (ASR)** is an industry standard form used by the Parties to add, establish, change or disconnect trunks for the purposes of Interconnection.

1.1.5 **"Advanced Services"** means high speed, switched, broadband, wireline telecommunications capability that enables users to originate and receive high-quality voice, data graphics or video communications using any technology.

1.1.6 **"Affiliate"** is As Defined in the Act.

1.1.7 **"Alternate Billing Service (ABS)"** means a service that allows End Users to bill calls to accounts that may not be associated with the originating line. There are three types of ABS calls: calling card, collect and third number billed calls.

1.1.8 AM-IL - As used herein, AM-IL means the applicable above listed ILEC(s) doing business in Illinois.

1.1.9 AM-IN - As used herein, AM-IN means the applicable above listed ILEC(s) doing business in Indiana.

1.1.10 AM-MI - As used herein, AM-MI means the applicable above listed ILEC(s) doing business in Michigan.

1.1.11 AM-OH - As used herein, AM-OH means the applicable above listed ILEC(s) doing business in Ohio.

1.1.12 AM-WI - As used herein, AM-WI means the applicable above listed ILEC(s) doing business in Wisconsin.

1.1.13 **"Applicable Law"** means all laws, statutes, common law, regulations, ordinances, codes, rules, guidelines, orders, permits, tariffs and approvals, including those relating to the environment or health and safety, of any Governmental Authority that apply to the Parties or the subject matter of this Agreement.

1.1.14 **"As Defined in the Act"** means as specifically defined by the Act.

1.1.15 **"As Described in the Act"** means as described in or required by the Act.

1.1.16 **"Automated Message Accounting" (AMA)** is a structure inherent in switch technology that initially records Telecommunication message information. AMA format is contained in the Automated Message Accounting document published by Telcordia (formerly known as Bellcore) as GR-1100-CORE, which defines and amends the industry standard for message recording.

1.1.17 **"Billed Number Screening (BNS)"** means a validation of toll billing exception (TBE) data and performance of public telephone checks; i.e., determining if a billed line is a public (including those classified as semi-public) telephone number.

1.1.18 **"Bona Fide Request" (BFR)** is the process described in the applicable Appendix UNE.

1.1.19 **"Business Day"** means Monday through Friday, excluding holidays on which the applicable SBC ILEC does not provision new retail services and products.

1.1.20 **"Busy Line Verification" (BLV)** means a service whereby an End User requests an operator to confirm the busy status of a line.

1.1.21 **"CABS"** means the Carrier Access Billing System.

1.1.22 **"Calling Card Service"** means a service that enables a calling End User to bill a telephone call to a calling card number with or without the help of an operator.

1.1.23 **"Calling Name Database"** means a Party's database containing current Calling Name Information, including the Calling Name Information of any telecommunications company participating in that Party's Calling Name Database. A Calling Name Database may be part of, or separate from, a LIDB.

1.1.24 **"Calling Name Delivery Service (CNDS)"** means a service that enables a terminating End User to identify the calling party by a displayed name before a call is answered. The calling party's name is retrieved from a Calling Name Database and delivered to the End User's premise between the first and second ring for display on compatible End User premises equipment.

1.1.25 **"Calling Name Information"** means a Telecommunications Carrier's records of its End Users names associated with one or more assigned ten-digit telephone numbers.

1.1.26 **"Calling Number Delivery"** means a feature that enables an End User to view the directory number of the calling party on a display unit.

1.1.27 **"Calling Party Number" (CPN)** means a Signaling System 7 "SS7" parameter whereby the ten (10) digit number of the calling Party is forwarded from the End Office.

1.1.28 **"Centralized Message Distribution System" (CMDS)** means the transport system that LECs use to exchange outcollect and Carrier Access Billing System "CABS" access messages among each other and other Parties connected to CMDS.

1.1.29 **"Central office switch" (Central Office)** is a switching entity within the public switched telecommunications network, including but not limited to:

1.1.29.1 **"End Office Switch" or "End Office"** is a switching machine that **directly** terminates traffic to and receives traffic from purchasers of local exchange services. An End Office Switch does not include a PBX.

1.1.29.2 **"Tandem Office Switch" or "Tandem(s)"** are used to connect and switch trunk circuits between and among other Central Office Switches. A Tandem Switch does not include a PBX.

1.1.29.3 **"Selective Routing Tandem"** is a switching entity used when routing a 911 call to the proper Public Safety Answering Point ("PSAP") based upon the number and location of the caller.

1.1.30 **"Claim"** means any pending or threatened claim, action, proceeding or suit.

1.1.31 **"CNAM Query"** means a LIDB Service Application that allows SCC to query a Calling Name Database for Calling Name Information in order to deliver that information to SCC's local CNDS subscribers.

1.1.32 **"CNAM Query Rate"** means a rate that applies to each CNAM Query received at the SCP where the Calling Name Database resides.

1.1.33 **"Collocation"** is As Described in the Act. Terms related to collocation are defined in the applicable Appendix Collocation or applicable collocation tariff, as appropriate.

1.1.34 **"Commercial Mobile Radio Services"** (CMRS) means Commercial Mobile Radio Service, As Defined in the Act and FCC rules.

1.1.35 **"Commission"** means the applicable State agency with regulatory authority over Telecommunications. Unless the context otherwise requires, use of the term **"Commissions"** means all of the thirteen agencies listed in this Section. The following is a list of the appropriate State agencies:

1.1.35.1 **the Arkansas Public Service Commission (AR-PSC);**
1.1.35.2 **the Public Utilities Commission of the State of California (CA-PUC);**
1.1.35.3 **the Connecticut Department of Public Utility Control (CT-DPUC);**
1.1.35.4 **the Illinois Commerce Commission (IL-CC);**
1.1.35.5 **the Indiana Utilities Regulatory Commission (IN-URC);**
1.1.35.6 **the Kansas Corporation Commission (KS-CC);**
1.1.35.7 **the Michigan Public Service Commission (MI-PSC);**
1.1.35.8 **the Missouri Public Service Commission (MO-PSC);**
1.1.35.9 **the Public Utilities Commission of Nevada (NV-PUC);**
1.1.35.10 **the Public Utilities Commission of Ohio (PUC-OH);**
1.1.35.11 **the Oklahoma Corporation Commission (OK-CC);**
1.1.35.12 **the Public Utility Commission of Texas (PUC-TX); and**
1.1.35.13 **the Public Service Commission of Wisconsin (PSC-WI)**

1.1.36 **"Common Channel Signaling" (CCS)** means an out-of-band, packet-switched, signaling network used to transport supervision signals, control signals, and data messages. It is a special network, fully separate from the transmission path of the public switched network. Unless otherwise agreed by the Parties, the CCS protocol used by the Parties shall be SS7.

1.1.37 **"Common Language Location Identifier" (CLLI)** codes provide a unique 11-character representation of a network interconnection point. The first 8 characters identify the city, state and building location, while the last 3 characters identify the network component.

1.1.38 **"Consequential Damages"** means Losses claimed to have resulted from any indirect, incidental, reliance, special, consequential, punitive, exemplary, multiple or any other Loss, including damages claimed to have resulted from harm to business, loss of anticipated revenues, savings, or profits, or other economic Loss claimed to have been suffered not measured by the prevailing Party's actual damages, and regardless of whether the Parties knew or had been advised of the possibility that such damages could result in connection with or arising from anything said, omitted, or done hereunder or related hereto, including willful acts or omissions.

1.1.39 **"Customer Usage Data"** means the Telecommunications Services usage data of an SCC 911 Call Routing Customer or Telematics Customer, as defined in Appendix 911 hereto, measured in minutes, sub-minute increments, message units, or otherwise, that is recorded by SBC-13STATE and forwarded to SCC.

1.1.40 **"Custom Local Area Signaling Service Features" (CLASS Features)** means certain Common Channel Signaling based features available to End Users, including: Automatic Call Back; Call Trace; Distinctive Ringing/Call Waiting; Selective Call Forward; and Selective Call Rejection.

1.1.41 **"End Users"** means a third-party residence or business that subscribes to Telecommunications Services and does not resell them to others. As used herein, the term "End Users" does not include any of the Parties to this Agreement with respect to any item or service obtained under this Agreement.

1.1.42 **"Customer Name and Address Information" (CNA)** means the name, service address and telephone numbers of a Party's End Users for a particular Exchange Area. CNA includes nonpublished listings, coin telephone information and published listings.

1.1.43 **"Delaying Event"** means (a) any failure of a Party to perform any of its obligations set forth in this Agreement, caused in whole or in part by:

1.1.43.1 the failure of the other Party to perform any of its obligations set forth in this Agreement, including but not limited to a Party's failure to provide the other Party with accurate and complete Service Orders;

1.1.43.2 any delay, act or failure to act by the other Party or its End User, agent or subcontractor; or

1.1.43.3 any Force Majeure Event.

1.1.44 **"Dialing Parity"** is As Defined in the Act. As used in this Agreement, Dialing Parity refers to both Local Dialing Parity and Toll Dialing Parity.

1.1.45 **"Digital Signal Level"** is one of several transmission rates in the time-division multiplex hierarchy.

1.1.45.1 **"Digital Signal Level 0" (DS-0)** is the 64 Kbps zero-level signal in the time-division multiplex hierarchy.

1.1.45.2 **"Digital Signal Level 1" (DS-1)** is the 1.544 Mbps first-level signal in the time-division multiplex hierarchy.

1.1.45.3 **"Digital Signal Level 3" (DS-3)** is the 44.736 Mbps third-level signal in the time-division multiplex hierarchy.

1.1.46 **"Digital Subscriber Line" (DSL)** is as defined in the applicable Appendix DSL and/or the applicable tariff, as appropriate.

1.1.47 **"Electronic File Transfer"** is any system or process that utilizes an electronic format and protocol to send or receive data files.

1.1.48 **"Enhanced Service Provider" (ESP)** is a provider of enhanced services as those services are defined in 47 CFR Section 64.702.

1.1.49 **"Exchange Access"** is As Defined in the Act.

1.1.50 **"Exchange Area"** means an area, defined by the Commission, for which a distinct local rate schedule is in effect.

1.1.51 **"Exchange Message Interface" (EMI)** (formerly Exchange Message Record - EMR) is the standard used for exchange of Telecommunications message information among Telecommunications Carriers for billable, non-

billable, sample, settlement and study data. EMI format is contained in Telcordia Practice BR-010-200-010, CRIS Exchange Message Record.

1.1.52 **"Exchange Service"** means Telephone Exchange Service, As Defined in the Act.

1.1.53 **"Feature Group A" (FGA)** means calls either originated by, or delivered to, an End User who has purchased switched access FGA service from the interstate or intrastate tariffs of either Party. FGA also includes, but is not limited to, FGA-like services provided by either Party, where calls are originated from and/or delivered to numbers which are assigned to a Rate Center within one LATA but where the Party receiving the call is physically located in a LATA different than the LATA of the Party originating the call. The intercarrier compensation mechanism as well as additional definitions for FGA are specified in the appropriate Appendix FGA.

1.1.54 **"Feature Group D" (FG-D)** is access available to all customers, providing trunk side access to a Party's End Office Switches with an associated uniform 101XXXX access code for customer's use in originating and terminating communications.

1.1.55 **"FCC"** means the Federal Communications Commission.

1.1.56 **"Foreign Exchange" (FX)** means a service whereby calls either originated by or delivered to a customer who has purchased FX service from the state or interstate tariffs of either Party. FX also includes, but is not limited to, FX-like services provided by either Party where calls are originated from and/or delivered to numbers which are assigned to a Rate Center within one local calling area but where the Party receiving the call is physically located outside of that local calling area. FX service can be either interLATA or intraLATA. InterLATA FX, where the originating and receiving parties are physically located in different LATAs, is considered equivalent to FGA and the intercarrier compensation mechanism is the same as FGA. IntraLATA FX, when provided by two or more local exchange carriers "LECs", is considered a jointly provided service and meet-point billed by those providing it utilizing a mutually agreed to meet-point billing, or meet-point billing like procedure.

1.1.57 **"Governmental Authority"** means any federal, state, local, foreign, or international court, government, department, commission, board, bureau, agency, official, or other regulatory, administrative, legislative, or judicial authority with jurisdiction over the subject matter at issue.

1.1.58 **"Group Record"** means information in LIDB and/or the LIDB administrative system that is common to all telephone numbers in an NPA-NXX or all Special Billing Numbers in an NPA-0/1XX.

1.1.59 **"Incumbent Local Exchange Carrier" (ILEC)** is As Defined in the Act.

1.1.60 **"Intellectual Property"** means copyrights, patents, trademarks, trade secrets, mask works and all other intellectual property rights.

1.1.61 **"Integrated Services Digital Network" (ISDN)** means a switched network service that provides end-to-end digital connectivity for the simultaneous transmission of voice and data. Basic Rate Interface-ISDN (BRI-ISDN) provides for a digital transmission of two 64 Kbps bearer channels and one 16 Kbps data channel (2B+D).

1.1.62 **"Interconnection"** is As Defined in the Act.

1.1.63 **"Interexchange Carrier" (IXC)** means a carrier that provides, directly or indirectly interLATA or intraLATA Telephone Toll Services.

1.1.64 **"InterLATA"** is As Defined in the Act.

1.1.65 **"Intermediate Distribution Frame" (IDF)** is a second frame that augments an existing Main Distribution Frame. Lines or outside cables do not terminate on the IDF.

1.1.66 **"Internet Service Provider" (ISP)** is an Enhanced Service Provider that provides Internet Services, and is defined in footnote 498 of the FCC's First Report and Order, 12 FCC Rcd 15982 (May 16, 1997).

1.1.67 **"IntraLATA Toll Traffic"** means the IntraLATA traffic between two locations within one LATA where one of the locations lies outside of the local calling area as defined by the applicable Commission.

1.1.68 **"LIDB Editor"** means a SCP tool that bypasses the LIDB administrative system and provides emergency access to LIDB for data administration.

1.1.69 **"Line Information Data Base" (LIDB)** means a transaction-oriented database system that functions as a centralized repository for data storage and retrieval. LIDB is accessible through CCS networks. LIDB contains records associated with End User line numbers and special billing numbers. LIDB accepts queries from other network elements and provides return result, return error, and return reject responses as appropriate. Examples of information that Data Owners might store in LIDB and in their Line

Records are: ABS Validation Data, Originating Line Number Screening (OLNS) data, ZIP Code data, and Calling Name Information.

1.1.70 **"LIDB Service Applications"** means the query types accepted for access to LIDB information.

1.1.71 **"Line Record"** means information in LIDB and/or the LIDB administrative system that is specific to a single telephone number or Special Billing Number.

1.1.72 **"Local Access Transport Area" (LATA)** is As Defined in the Act.

1.1.73 **"Local Exchange Carrier" (LEC)** is As Defined in the Act.

1.1.74 **"Local Exchange Routing Guide" (LERG)** is a Telcordia Reference document used by Telecommunications Carriers to identify NPA-NXX routing and homing information as well as Network element and equipment designations.

1.1.75 **"Local Calls"** is traffic that actually physically originates and actually physically terminates within a local calling area, as defined by the relevant Commission.

1.1.76 **"Local Number Portability"** means the ability of users of Telecommunications Services to retain, at the same location, the presence of a previously existing telephone number(s).

1.1.77 **"Location Routing Number" (LRN)** is a ten (10) digit number that is assigned to the network switching elements (Central Office – Host and Remotes as required) for the routing of calls in the network. The first six (6) digits of the LRN will be one of the assigned NPA NXX of the switching element. The purpose and functionality of the last four (4) digits of the LRN have not yet been defined but are passed across the network to the terminating switch.

1.1.78 **"Local Service Provider" (LSP)** is the LEC that provides retail local Exchange Service to an End User. The LSP may or may not provide any physical network components to support the provision of that End User's service.

1.1.79 **"Loss"** or **"Losses"** means any and all losses, costs (including court costs), claims, damages (including fines, penalties, and criminal or civil judgments and settlements), injuries, liabilities and expenses (including attorneys' fees).

1.1.80 **"MECAB"** refers to the Multiple Exchange Carrier Access Billing document prepared by the Billing Committee of the Ordering and Billing Forum "OBF", which functions under the auspices of the Carrier Liaison Committee "CLC of the Alliance for Telecommunications Industry Solutions "ATIS". The MECAB document, published by ATIS as ATIS/OBF- MECAB- Issue 6, February 1998, contains the recommended guidelines for the billing of access services provided to an IXC by two or more LECs, or by one LEC in two or more states within a single LATA.

1.1.81 **"MECOD"** refers to the Multiple Exchange Carriers Ordering and Design Guidelines for Access Services - Industry Support Interface, a document developed by the Ordering/Provisioning Committee of the OBF, which functions under the auspices of the CLC of ATIS. The MECOD document, published by ATIS as ATIS/OBF- MECAB- Issue 3, February 1993, establishes methods for processing orders for access service which is to be provided to an IXC by two or more telecommunications providers.

1.1.82 **"Meet-Point Billing" (MPB)** refers to the billing associated with interconnection of facilities between two or more LECs for the routing of traffic to and from an IXC with which one of the LECs does not have a direct connection. In a multi-bill environment, each Party bills the appropriate tariffed rate for its portion of a jointly provided Switched Exchange Access Service.

1.1.83 **"Meet-Point Trunks/Trunk Groups" (MPTGs)** are used for the joint provision of Switched Access services, pursuant to Telcordia Technical References GR-394-CORE "GR-394" and GR-317-CORE "GR-317". MPTGs are those between a local End Office and an Access Tandem as described in FSD 20-24-0000 and 20-24-0300.

1.1.84 **"Multiple Bill/Single Tariff"** is the meet-point billing method where each LEC prepares and renders its own meet point bill to the IXC in accordance with its own tariff for that portion of the jointly provided Switched Access Service which that LEC provides. The MECAB documents refer to this method as Multiple Bill/reflecting a single tariff (MM).

1.1.85 **"Network Data Mover" (NDM)** is an industry standard protocol for transferring information electrically.

1.1.86 **"Network Element"** is As Defined in the Act.

1.1.87 **NEVADA** – As used herein, **NEVADA** means the applicable above listed ILEC(s) doing business in Nevada.

1.1.88 **"North American Numbering Plan" (NANP)** A numbering architecture in which every station in the NANP Area is identified by a unique ten-digit address consisting of a three-digit NPA code, a three digit central office code of the form NXX, and a four-digit line number of the form XXXX.

1.1.89 **"Numbering Plan Area" (NPA)** also called area code. An NPA is the 3-digit code that occupies the A, B, C positions in the 10-digit NANP format that applies throughout the NANP Area. NPAs are of the form NXX, where N represents the digits 2-9 and X represents any digit 0-9. In the NANP, NPAs are classified as either geographic or non-geographic. a) Geographic NPAs are NPAs which correspond to discrete geographic areas within the NANP Area. b) Non-geographic NPAs are NPAs that do not correspond to discrete geographic areas, but which are instead assigned for services with attributes, functionalities, or requirements that transcend specific geographic boundaries. The common examples are NPAs in the N00 format, e.g., 800.

1.1.90 **"Number Portability"** is As Defined in the Act.

1.1.91 **"NXX" or "Central Office Code"** is the three-digit switch entity indicator that is defined by the fourth through sixth digits of a 10-digit telephone number within the NANP. Each NXX Code contains 10,000 station numbers.

1.1.92 **"Ordering and Billing Forum" (OBF)** is a forum comprised of local telephone companies and inter-exchange carriers whose responsibility is to create and document Telecommunication industry guidelines and standards.

1.1.93 **"Originating Point Code" (OPC)** means a code assigned to identify SCC's system(s) that originate SS7 messages, including LIDB Service Queries.

1.1.94 **PACIFIC** – As used herein, **PACIFIC** means the applicable above listed ILEC(s) doing business in California.

1.1.95 **"Party"** means either SCC or **SBC;** use of the term "Party" includes each of the ILECs that is a party to this Agreement. **"Parties"** means both SCC and **SBC;** use of the term "Parties" includes each of the ILECs that is a party to this Agreement.

1.1.96 **"Permanent Number Portability" (PNP)** is a long term method of providing LNP using LRN.

1.1.97 **"Person"** means an individual or a partnership, an association, a joint venture, a corporation, a business or a trust or other entity organized under

Applicable law, an unincorporated organization or any Governmental Authority.

1.1.98 **"Point of Interconnection" (POI)** is a physical location at which the Parties' networks meet for the purpose of establishing Interconnection.

1.1.99 **"Point of Presence" or "POP"** means a physical location at which SCC has a presence for access to **SBC-13STATE**'s network.

1.1.100 **"Physical Collocation"** is as defined in applicable Appendix Physical Collocation or applicable tariff, where applicable.

1.1.101 **"Rate Center Area"** means the following in each applicable area:

1.1.101.1 **SBC-AMERITECH**

1.1.101.1.1 "Rate Center" means the specific geographic point that has been designated by a given LEC as being associated with a particular NPA-NXX code that has been assigned to the LEC for its provision of Telephone Exchange Service. The Rate Center is the finite geographic point identified by a specific V&H coordinate, which is used by that LEC to measure, for billing purposes, distance sensitive transmission services associated with the specific Rate Center.

1.1.101.2 **NEVADA**

1.1.101.2.1 "Rate Center" denotes the designated points, representing exchanges, (or locations outside exchange areas), between which mileage measurements are made for the application of interexchange mileage rates. Rate Centers are defined in PUC-NV tariff A6.2.7.

1.1.101.3 **PACIFIC**

1.1.101.3.1 "Rate Center" denotes the designated points, representing exchanges or district area (or locations outside exchange areas), between which mileage measurements are made for the application of interexchange and interdistrict mileage rates, as defined by the CA-PUC.A2, 2.1.1 Definition of Terms.

1.1.101.4 **SNET**

1.1.101.4.1 "Rate Center means the specific geographic point and corresponding area that have been identified by a given LEC as being associated with a particular NPA-NXX code that has been assigned to the LEC for its provision of Exchange Services.

1.1.101.5 **SBC-SWBT**

1.1.101.5.1 "Rate Center" means an uniquely defined geographical location within an exchange area (or a location outside the exchange area) for which mileage measurements are determined for the application of interstate tariffs."

1.1.102 **"Rating Point"** means the V&H coordinates associated with a particular telephone number for rating purposes.

1.1.103 **"Reference of Calls"** refers to a process by which calls are routed to an announcement that states the new telephone number of an End User.

1.1.104 **SBC Communications Inc. (SBC)** means the holding company which owns the following ILECs: Illinois Bell Telephone Company, Indiana Bell Telephone Company Incorporated, Michigan Bell Telephone Company, Nevada Bell Telephone Company, The Ohio Bell Telephone Company, Pacific Bell Telephone Company, The Southern New England Telephone Company, Southwestern Bell Telephone Company, and/or Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin.

1.1.105 **SBC-SWBT** – As used herein, **SBC-SWBT** means the applicable above listed ILEC(s) doing business in Arkansas, Kansas, Missouri, Oklahoma, and Texas.

1.1.106 **SBC-AMERITECH** - As used herein, **SBC-AMERITECH** means the applicable above listed ILEC(s) doing business in Illinois, Indiana, Michigan, Ohio, and Wisconsin.

1.1.107 **SBC-MOKA** – As used herein, **SBC-MOKA** means the applicable above listed ILEC(s) doing business in Arkansas, Kansas, Missouri, and Oklahoma.

1.1.108 SBC-7STATE - As used herein, SBC-7STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Kansas, Missouri, Nevada, Oklahoma, and Texas.

1.1.109 SBC-8STATE - As used herein, SBC-8STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Connecticut, Kansas, Missouri, Nevada, Oklahoma, and Texas.

1.1.110 SBC-10STATE - As used herein, SBC-10STATE means an the applicable above listed ILEC(s) doing business in Arkansas, Illinois, Indiana, Kansas, Michigan, Missouri, Ohio, Oklahoma, Texas, and Wisconsin.

1.1.111 SBC-12STATE - As used herein, SBC-12STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin.

1.1.112 SBC-13STATE - As used herein, SBC-13STATE means the applicable above listed ILEC(s) doing business in Arkansas, California, Connecticut, Illinois, Indiana, Kansas, Michigan, Missouri, Nevada, Ohio, Oklahoma, Texas, and Wisconsin.

1.1.113 **"Service Control Point" (SCP)** is the node in the common channel signaling network that accepts Queries for certain Database services. The SCP is a real time database system that receives Queries from service platforms, performs subscriber or application-specific service logic, and then sends a Response back to the Query-originating platform. Such service platforms can be Service Switching Points (SSPs) or other network nodes capable of properly formatting and launching Queries.

1.1.114 **"Service Management System" (SMS)** means an off-line system used to access, create, modify, or update information in a Database.

1.1.115 **"Service Provider Number Portability" (SPNP)** is synonymous with Permanent Number Portability "PNP".

1.1.116 **"Service Switching Point" (SSP)** is a telephone central office switch equipped with a Signaling System 7 (SS7) interface.

1.1.117 **"Signaling System 7" (SS7)** means a signaling protocol used by the CCS Network.

1.1.118 **"Signal Transfer Point" (STP)** performs a packet switching function that routes signaling messages among Service Switching Points (SSP),

Service Control Points (SCP), Signaling Points (SP), and other STPs in order to set up calls and to query databases for Advanced Services.

1.1.119 **"Sleuth"** means an off-line administration system that monitors suspected occurrences of ABS-related fraud.

1.1.120 **SNET** – As used herein, **SNET** means the applicable above listed ILEC(s) doing business in Connecticut.

1.1.121 **"Special Billing Number" SBN** means a Line Record in LIDB that is based on an NXX-0/1XX numbering format. NXX-0/1XX numbering formats are similar to NPA-NXX formats except that the fourth digit of a SBN is either a zero (0) or a one (1).

1.1.122 **"State Abbreviation"** means the following:

1.1.122.1 "AR" means Arkansas
1.1.122.2 "CA" means California
1.1.122.3 "CT" means Connecticut
1.1.122.4 "IL" means Illinois
1.1.122.5 "IN" means Indiana
1.1.122.6 "KS" means Kansas
1.1.122.7 "MI" means Michigan
1.1.122.8 "MO" means Missouri
1.1.122.9 "NV" means Nevada
1.1.122.10 "OH" means Ohio
1.1.122.11 "OK" means Oklahoma
1.1.122.12 "TX" means Texas
1.1.122.13 "WI" means Wisconsin

1.1.123 **SWBT-AR** - As used herein, **SWBT-AR** means the applicable above listed ILEC(s) doing business in Arkansas.

1.1.124 **SWBT-KS** - As used herein, **SWBT-KS** means the applicable above listed ILEC(s) doing business in Kansas.

1.1.125 **SWBT-MO** - As used herein, **SWBT-MO** means the applicable above listed ILEC(s) doing business in Missouri.

1.1.126 **SWBT-OK** - As used herein, **SWBT-OK** means the applicable above listed ILEC(s) doing business in Oklahoma.

1.1.127 **SWBT-TX** - As used herein, **SWBT-TX** means the applicable above listed ILEC(s) doing business in Texas.

1.1.128 **"Switched Access Detail Usage Data"** means a category 1101xx record as defined in the EMR Telecordia Practice BR 010-200-010.

1.1.129 **"Synchronous Optical Network" (SONET)** is an optical interface standard that allows inter-networking of transmission products from multiple vendors. The base rate is 51.84 Mbps ("OC-1/STS-1") and higher rates are direct multiples of the base rate, up to 13.22 Gbps.

1.1.130 **"Tape Load Facility"** means data entry points at the LIDB administrative system and/or the SCPs where LIDB resides.

1.1.131 **"Telecommunications"** is As Defined in the Act.

1.1.132 **"Telecommunications Carrier"** is As Defined in the Act.

1.1.133 **"Telecommunications Service"** is As Defined in the Act.

1.1.134 **"Telephone Exchange Service"** is As Defined in the Act.

1.1.135 **"Telephone Toll Service"** is As Defined in the Act.

1.1.136 **"Third Party"** means any Person other than a Party.

1.1.137 **"Toll Billing Exception Service" (TBE)** means a service that allows End Users to restrict third number billing or collect calls to their lines.

1.1.138 **"Toll Free Service"** is service provided with any dialing sequence that invokes toll-free, 800-like, service processing, for example for illustration only, 800 or 800-like services. Toll Free Service includes but is not limited to calls placed to 800/888 NPA Service Access Codes (SAC).

1.1.139 **"Translation Type"** means a code in the Signaling Connection Control Part (SCCP) of the SS7 signaling message. Signal Transfer Points (STPs) use Translation Types to identify the routing table used to route a LIDB query. All LIDB queries that use the same Translation Type are routed to the same LIDB for a particular Line Record or, prior to number portability, for a particular NPA-NXX.

1.1.140 **"Trunk"** means a communication line between two switching systems.

1.1.141 **"Virtual Collocation"** is as defined in the applicable Virtual Collocation Agreement or applicable tariff, where applicable.

1.1.142 **"Wire Center"** is the location of one or more local switching systems. A point at which End User's loops within a defined geographic area

converge. Such local loops may be served by one (1) or more Central Office Switches within such premises.

1.2 DEFINITIONS APPLICABLE TO (SBC-12STATE) ONLY

1.2.1 **"Data Base Administration Center"** (DBAC) means an SBC-12STATE location where facility and administrative personnel are located for administering LIDB and/or Sleuth.

1.2.2 **"Designated Central Office Document" (Document DCO)** is a document that is referenced in SBC-12STATE Appendix NIM. The purpose of the DCO is to document the physical architectural plan for interconnection and specifies the SCC POPs, SCC Routing Points, Activation Dates, the POI(s) and the applicable SBC-12STATE Selective Routing Tandems, as defined in Appendix 911 hereto.

1.2.3 **"Digital Cross Connect Panel" (DSX Panel)** means a cross-connect bay or panel used for the termination of equipment and facilities operating at digital rates.

1.2.4 **"Fiber Meet"** means an Interconnection architecture method whereby the Parties physically Interconnect their networks via an optical fiber interface (as opposed to an electrical interface) at a mutually agreed upon location, at which one Party's responsibility or service begins and the other Party's responsibility ends.

1.2.5 **"Interconnection Activation Date"** is the date that the construction of the joint facility Interconnection arrangement has been completed, trunk groups have been established, joint trunk testing is completed and trunks have been mutually accepted by the Parties.

1.2.6 **"Main Distribution Frame" (MDF)** is termination frame for outside facility and inter-exchange office equipment at the central office for DS-0 and DSL services.

1.2.7 **"Plain Old Telephone Service" (POTS)** means telephone service for the transmission of human speech.

1.2.8 **"Routing Point"** is a location which a LEC has designated on its own network as the homing or routing point for traffic inbound to Exchange Service provided by the LEC which bears a certain NPA-NXX designation. The Routing Point is employed to calculate mileage measurements for the distance-sensitive transport element charges of Switched Access services. The Routing Point need not be the same as the Rating Point, nor must it be

located within the Rate Center area, but must be in the same LATA as the NPA-NXX.

1.3 DEFINITIONS APPLICABLE TO SBC-8STATE ONLY

1.3.1 **"Accessible Letters"** are correspondence used to communicate pertinent information regarding SBC-8STATE to the client/End User community.

1.3.2 **"Trunk-Side"** refers to a Central Office Switch connection that is capable of, and has been programmed to treat the circuit as connecting to another switching entity (for example another Central Office switch). Trunk-Side connections offer those transmission and signaling features appropriate for the connection of switching entities and cannot be used for the direct connection of ordinary telephone station sets.

1.3.3 **"Port"** is the point of interface/access connection to the SNET public switched network. This may be a switch line side interface or switch trunk side interface.

1.4 DEFINITIONS APPLICABLE TO SBC-7STATE ONLY

1.4.1 **"Line Side"** refers to End Office switch connections that have been programmed to treat the circuit as a local line connected to a terminating station (e.g., an ordinary subscriber's telephone station set, a PBX, answering machine, facsimile machine or computer). Line Side connections offer only those transmission and signal features appropriate for a connection between an End Office and such terminating station.

1.4.2 **"Mid-Point Meet"** is as defined in the appropriate Appendix NIM. The facility hand off point may differ from the billing point of interconnection.

1.4.3 **"Serving Wire Center" (SWC)** means a Wire Center that serves the area in which the other Party's or a third party's Wire Center, aggregation point, point of termination, or point of presence is located

1.4.4 **"Control Office"** means the appropriate exchange carrier center or office designated as its company's single point of contact for the provisioning and maintenance of its portion of interconnection arrangements.

1.4.5 **"Data Interexchange Carrier" (DIXC)** is a process designed to facilitate the reciprocal exchange of voice traffic load data between the SBC-7STATE and SCC. This reciprocal exchange of data enables SBC-7STATE and SCC to have a complete view of traffic loads on both ends of two-way trunk groups. The knowledge of call attempt and overflow data counts on both ends of a two-way trunk group enables each company to

more accurately estimate the offered, and thereby better estimate, the required quantities of trunks.

1.4.6 **"Local Interconnection Trunks/Trunk Groups"** are used for the termination of Local Exchange Traffic, pursuant to Telcordia Technical Reference GR-317-CORE "GR-317.

1.4.7 **"Mid-Span Meet"** is an interconnection between two LECs whereby each provides its own cable and equipment up to the meet point of the cable facilities. The meet point is the demarcation establishing ownership of and responsibility for each LEC's portion of the transmission facility.

1.5 DEFINITIONS APPLICABLE TO SNET and SBC-AMERITECH ONLY

1.5.1 **"Centralized AMA" (CAMA)** is an arrangement where the AMA equipment is centralized in, for example, a Tandem and is used by offices that do not have LAMA (Local AMA). The End Office Switch must send ANI digits to the CAMA office for billing a calling subscriber.

1.5.2 **"Inter-wire Center Transport"** means the transmission facilities between serving wire centers.

1.6 DEFINITIONS APPLICABLE TO SBC-AMERITECH ONLY

1.6.1 **"Automatic Route Selection"** or **"ARS"** means a service feature associated with a specific grouping of lines that provides for automatic selection of the least expensive or most appropriate transmission facility for each call based on criteria programmed into the system.

1.6.2 **"Control Office"** means the Central Office providing Tandem Switching Capability for E9-1-1 calls. The Control Office controls switching of ANI information to the PSAP and also provides the Selective Routing feature, standard speed calling features, call transfer capability and certain maintenance functions for each PSAP.

1.6.3 **"Enhanced LECLink"** is an customer access service to the national distribution of billing records via Telcordia's Centralized Message Distribution System (CMDS).

1.6.4 **"Integrated Digital Loop Carrier"** means a subscriber loop carrier system that is twenty-four (24) local Loop transmission paths combined into a 1.544 Mbps digital signal which integrates within the switch at a DS1 level.

1.6.5 **"Line Side"** refers to End Office switch connections that have been programmed to treat the circuit as a local line connected to a terminating station (e.g., an ordinary subscriber's telephone station set, a PBX, answering machine, facsimile machine or computer). Line Side connections offer only those transmission and signal features appropriate for a connection between an End Office and such terminating station.

1.6.6 **"Local Loop Transmission", "Unbundled Local Loop", "Loop"** means the transmission facility between a distribution frame (or its equivalent) in an incumbent LEC Central Office and the loop demarcation point at an End-User's premises including inside wire owned by the incumbent LEC.

1.6.7 **"Switched Exchange Access Service"** means the offering of transmission or switching services to Telecommunications Carriers for the purpose of the origination or termination of telephone toll service. Switched Exchange Access Services include: Feature Group A, Feature Group B, Feature Group D, 800/888 access, and 900 access and their successors or similar Switched Exchange Access Services.

1.7 DEFINITIONS APPLICABLE TO SNET ONLY

1.7.1 **"800 Series"** is a Telecommunications Service for business or residence that allows calls to be made to a specific location at no charge to the calling party. Use of the "800" Service Access Code (e.g., 800, 888) denotes calls that are to be billed to the receiving party. A computer database in the provider's network translates the 800 series number into a conventional 7 or 10 digit phone number for network switching and routing.

1.7.2 **"Charge Number"** is a CCS signaling parameter that refers to the number transmitted through the network identifying the billing number of the calling party.

1.7.3 **"ConnNET"** is a CT packet switching network used for data communication to and from hosts and databases.

1.7.4 **"Database Administrative Service LIDB Operating Guidelines"** (Operating Guidelines) means the document developed by SNET that provides detailed instructions as to the working parameters of SNET's provision of the LIDB Administrative System to SCC, as may be updated by SNET from time to time. SNET shall provide such Operating Guidelines to SCC upon execution of this Agreement.

1.7.5 **"Initial Billing Company" (IBC)** refers to the LEC that provides Feature Group B or D services at an End Office.

1.7.6 **"LIDB/AS"** means the LIDB administrative system for **SNET**.

1.7.7 **"Loop"** is the transmission facility between a distribution frame (or its equivalent) in an incumbent LEC Central Office and the loop demarcation point at an End-User's premises including inside wire owned by the incumbent LEC.

1.7.8 **"Subsequent Billing Company"** refers to SNET when it provides a segment of transport or switching services in connection with Feature Group B or D switched access service. (For purposes of this Agreement, the Tandem operator is the Subsequent Billing Company.)

1.7.9 **"Switched Access Service"** means an offering of facilities for the purpose of the origination or termination of traffic from or to Exchange Service customer in a given area pursuant to a Switched Access tariff. Switched Access Services include: Feature Group A, Feature Group B, Feature Group D, 800 Series, and 900 access. Switched Access does not include traffic exchanged between LECs for purpose of local exchange interconnection.

1.7.10 **"Universal Digital Loop Carrier"** (**UDLC**) describes a DLC system that has a Central Office terminal channel bank that is connected to the CO switches on the analog side.

1.8 DEFINITIONS APPLICABLE TO **SBC-SWBT** ONLY

1.8.1 **"Jurisdictional Identification Parameter"** (**JIP**) is an existing six (6) digit (NPA-NXX) field in the SS7 message. This field designates the first point of switching. (JIP is applicable to **SBC-SWBT** only)

1.8.2 **"Line Validation Administration System"** (LVAS) means the LIDB administrative system for **SBC-SWBT**.

1.8.3 **"Originating Line Information"** (**OLI**) is an SS7 Feature Group D signaling parameter which refers to the number transmitted through the network identifying the billing number of the calling Party. (OLI is applicable to **SBC-SWBT** only.)

2. INTERPRETATION, CONSTRUCTION AND SEVERABILITY

2.1 Definitions

2.1.1 For purposes of this Agreement, certain terms have been defined in this Agreement to encompass meanings that may differ from, or be in addition to, the normal connotation of the defined word. Unless the context clearly

indicates otherwise, any term defined or used in the singular will include the plural. Whenever the context may require, any pronoun shall include the corresponding masculine, feminine and neuter forms. The words "include," "includes" and "including" shall be deemed to be followed by the phrase "without limitation" and/or "but not limited to". The words "will" and "shall" are used interchangeably throughout this Agreement and the use of either connotes a mandatory requirement. The use of one or the other will not mean a different degree of right or obligation for either Party. A defined word intended to convey its special meaning is capitalized when used. Other terms that are capitalized and not defined in this Agreement will have the meaning in the Act, or in the absence of their inclusion in the Act, their customary usage in the Telecommunications industry as of the Effective Date.

2.2 Headings Not Controlling

2.2.1 The headings and numbering of Sections, Parts, Appendices Schedules and Exhibits to this Agreement are for convenience only and shall not be construed to define or limit any of the terms herein or affect the meaning or interpretation of this Agreement.

2.2.2 This Agreement incorporates a number of Appendices which, together with their associated Attachments, Exhibits, Schedules and Addenda, constitute the entire Agreement between the Parties. In order to facilitate use and comprehension of the Agreement, the Appendices have been grouped under broad headings. It is understood that these groupings are for convenience of reference only, and are not intended to limit the applicability that any particular appendix, attachment, exhibit, schedule or addenda may otherwise have.

2.3 Referenced Documents

2.3.1 Unless the context shall otherwise specifically require, and subject to **Section 21**, whenever any provision of this Agreement refers to a technical reference, technical publication, SCC Practice, SBC-13STATE Practice, any publication of telecommunications industry administrative or technical standards, or any other document specifically incorporated into this Agreement (collectively, a "**Referenced Instrument**"), it will be deemed to be a reference to the then-current version or edition (including any amendments, supplements, addenda, or successors) of each Referenced Instrument that is in effect, and will include the then-current version or edition (including any amendments, supplements, addenda, or successors) of any other Referenced Instrument incorporated by reference therein.

2.4 References

2.4.1 References herein to Sections, Paragraphs, Exhibits, Parts, Schedules, and Appendices shall be deemed to be references to Sections, Paragraphs and Parts of, and Exhibits, Schedules and Appendices to, this Agreement unless the context shall otherwise require.

2.5 Tariff References

2.5.1 Wherever any Commission ordered tariff provision or rate is cited or quoted herein, it is understood that said cite encompasses any revisions or modifications to said tariff.

2.5.2 Wherever any Commission ordered tariff provision or rate is incorporated, cited or quoted herein, it is understood that said incorporation or reference applies only to the entity within the state whose Commission ordered that tariff.

2.6 Conflict in Provisions

2.6.1 In the event of a conflict between the provisions of this Agreement and the Act, the provisions of the Act shall govern.

2.6.2 If any definitions, terms or conditions in any given Appendix, Attachment, Exhibit, Schedule or Addenda differ from those contained in the main body of this Agreement, those definitions, terms or conditions will supersede those contained in the main body of this Agreement, but only in regard to the services or activities listed in that particular Appendix, Attachment, Exhibit, Schedule or Addenda. In particular, if an Appendix contains a Term length that differs from the Term length in the main body of this Agreement, the Term length of that Appendix will control the length of time that services or activities are to occur under that Appendix, but will not affect the Term length of the remainder of this Agreement.

2.6.3 In SNET only, in the event of a conflict between any provision in this Agreement and any provision in the DPUC-ordered tariffs covering the services that are the subject of this Agreement with SNET, such DPUC-ordered tariffs will prevail.

2.7 Joint Work Product

2.7.1 This Agreement is the joint work product of the Parties and has been negotiated by the Parties and their respective counsel and shall be fairly interpreted in accordance with its terms and, in the event of any ambiguities, no inferences shall be drawn against either Party.

2.8 Severability

2.8.1 If any provision of this Agreement is rejected or held to be illegal, invalid or unenforceable, each Party agrees that such provision shall be enforced to the maximum extent permissible so as to effect the intent of the Parties, and the validity, legality and enforceability of the remaining provisions of this Agreement shall not in any way be affected or impaired thereby. If necessary to effect the intent of the Parties, the Parties shall negotiate in good faith to amend this Agreement to replace the unenforceable language with enforceable language that reflects such intent as closely as possible. The Parties negotiated the terms and conditions of this Agreement for Interconnection, services and Network Elements as a total arrangement and it is intended to be nonseverable.

2.9 Incorporation by Reference

2.9.1 The General Terms and Conditions of this Agreement, and every Interconnection, Resale Service Network Element, function, facility, product or service provided hereunder, shall be subject to all rates, terms and conditions contained in the Appendices to this Agreement which are legitimately related to such Interconnection, Resale Service, Network Element, function, facility, product or service; and all such rates, terms and conditions are incorporated by reference herein and deemed a part of every Interconnection, Resale Service, Network Element, function, facility, product or service provided hereunder. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each Interconnection, Resale Service, Network Element, function, facility, product or service provided hereunder: definitions; interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnity; remedies; intellectual property; publicity and use of trademarks and service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; relationship of the Parties/independent contractor; no third Party beneficiaries, disclaimer of agency; assignment; subcontracting; hazardous substances and responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; customer inquiries; expenses; conflict of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

2.10 Non-Voluntary Provisions

2.10.1 The Agreement incorporates certain rates, terms and conditions that were not voluntarily negotiated by SBC-13STATE, but instead resulted from determinations made in arbitrations under Section 252 of the Act or from other requirements of regulatory agencies or state law (individually and collectively, a "Non-Voluntary Arrangement"). SBC-13STATE has identified some, but not all, of the Non-Voluntary Arrangements contained in this Agreement, by designating such provisions with asterisks. If any Non-Voluntary Arrangement is modified as a result of any order or finding by the FCC, the appropriate Commission or a court of competent jurisdiction, any Party may, by providing written notice to the other Party, require that any affected Non-Voluntary Arrangement (and any related rates, terms and conditions) be deleted or renegotiated, as applicable, in good faith and this Agreement amended accordingly. If such modifications to this Agreement are not executed within sixty (60) days after the date of such notice, a Party may pursue its rights under Section 10.

2.10.2 The Parties acknowledge that the Non-Voluntary Arrangements contained in this Agreement shall not be available in any state other than the state that originally imposed/required such Non-Voluntary Arrangement. By way of example only, the Parties acknowledge that PUCO's imposition in Ohio of the Minimum Telephone Service Standards (and all terms and conditions relating thereto) shall not apply in or be "portable to" any state other than Ohio.

2.11 State-Specific Rates, Terms and Conditions

2.11.1 For ease of administration, this multistate Agreement contains certain specified rates, terms and conditions which apply only in a designated state ("**state-specific terms**"). To the extent that this Agreement contains specified rates, terms and conditions which apply only in a given state, such rates, terms and conditions shall not apply and shall have no effect in any other state(s) to which this Agreement is submitted for approval under Section 252(e) of the Act.

2.11.2 State-specific terms, as the phrase is described in Section 2.11.1 above, have been negotiated (or in the case of 2.10.2 above, included in the agreement per state requirement) by the Parties only as to the states where this Agreement has been executed, filed and approved. When the Parties negotiate an agreement for an additional state, neither Party shall be precluded by any language in this Agreement from negotiating state-specific terms for the state in which those terms are to apply.

2.11.3 **Successor Rates.** Certain of the rates, prices and charges set forth in the applicable Appendix Pricing have been established by the appropriate Commissions in cost proceedings or dockets initiated under or pursuant to the Act. If during the Term that Commission or the FCC changes a rate, price or charge in an order or docket that applies to any of the Interconnection, Resale Services, Network Elements, functions, facilities, products and services available hereunder, the Parties agree to amend this Agreement to incorporate such new rates, prices and charges, with such rates, prices and charges to be effective as of the date specified in such order or docket (including giving effect to any retroactive application, if so ordered). If either Party refuses to execute an amendment to this Agreement within sixty (60) days after the date of such order or docket, the other Party may pursue its rights under Section 10.

2.12 Scope of Obligations

2.12.1 Notwithstanding anything to the contrary contained herein, **SBC-13STATE**'s obligations under this Agreement shall apply only to:

2.12.1.1 the specific operating area(s) or portion thereof in which **SBC-13 STATE** is then deemed to be the ILEC under the Act (**the "ILEC Territory"**), and

2.12.1.2 assets that **SBC-13STATE** owns or leases and which are used in connection with **SBC-13STATE**'s provision to SCC of any Interconnection, Resale Services, Network Elements, functions, facilities, products or services provided or contemplated under this Agreement, the Act or any tariff or ancillary agreement referenced herein (individually and collectively, **the "ILEC Assets"**).

3. NOTICE OF CHANGES – SECTION 251(c)(5)

3.1 Nothing in this Agreement shall limit either Party's ability to upgrade its network through the incorporation of new equipment, new software or otherwise. **SBC-13STATE** agrees to comply with the Network Disclosure rules adopted by the FCC in CC Docket No. 96-98, Second Report and Order, codified at 47 C.F.R. 51.325 through 51.335, as such rules may be amended from time to time (the **"Network Disclosure Rules"**).

4. GENERAL RESPONSIBILITIES OF THE PARTIES

4.1 **SBC-12STATE** and SCC shall each use their best efforts to meet the Interconnection Activation Dates.

4.2 Each Party is individually responsible to provide facilities within its network that are necessary for routing, transporting, measuring, and billing traffic from the other Party's network and for delivering such traffic to the other Party's network in the standard format compatible with **SBC-13STATE**'s network as referenced in Telcordia BOC Notes on LEC Networks Practice No. SR-TSV-002275, and to terminate the traffic it receives in that standard format to the proper address on its network. The Parties are each solely responsible for participation in and compliance with national network plans, including the National Network Security Plan and the Emergency Preparedness Plan.

4.3 The Parties shall exchange technical descriptions and forecasts of their Interconnection and traffic requirements in sufficient detail necessary to establish the Interconnections required to assure traffic completion to and from all End Users in their respective designated service areas.

4.4 Each Party is solely responsible for all products and services it provides under this Agreement.

4.5 Facilities-based carriers and UNE-based Switch Port providers are responsible for administering their End User records in a LIDB.

4.5.1 **PACIFIC** reserves the right on one hundred eighty (180) calendar days notice to require UNE-Based Switch Port providers to administer their End User records in **PACIFIC**'s LIDB.

4.5.2 **NEVADA** does not have a line information database and/or Calling Name database. Line information database services can be purchased from **PACIFIC**.

4.6 At all times during the term of this Agreement, each Party shall keep and maintain in force at its own expense the following minimum insurance coverage and limits and any additional insurance and/or bonds required by Applicable Law:

4.6.1 Workers' Compensation insurance with benefits afforded under the laws of each state covered by this Agreement and Employers Liability insurance with minimum limits of $100,000 for Bodily Injury-each accident, $500,000 for Bodily Injury by disease-policy limits and $100,000 for Bodily Injury by disease-each employee.

4.6.2 Commercial General Liability insurance with minimum limits of: $10,000,000 General Aggregate limit; $5,000,000 each occurrence sub-limit for all bodily injury or property damage incurred in any one occurrence; $1,000,000 each occurrence sub-limit for Personal Injury and Advertising; $10,000,000 Products/Completed Operations Aggregate limit, with a $5,000,000 each occurrence sub-limit for Products/Completed

Operations. Fire Legal Liability sub-limits of $2,000,000 are also required if this Agreement involves collocation. The other Party must be named as an Additional Insured on the Commercial General Liability policy.

4.6.3 If use of an automobile is required, Automobile Liability insurance with minimum limits of $1,000,000 combined single limits per occurrence for bodily injury and property damage, which coverage shall extend to all owned, hired and non-owned vehicles.

4.6.4 Each Party shall require subcontractors providing services under this Agreement to maintain in force the insurance coverage and limits required in Sections 4.7 through 4.7.3 of this Agreement.

4.6.5 The Parties agree that companies affording the insurance coverage required under Section 4.7 shall have a rating of B+ or better and a Financial Size Category rating of VII or better, as rated in the A.M. Best Key Rating Guide for Property and Casualty Insurance Companies. Upon request from the other Party, each Party shall provide to the other Party evidence of such insurance coverage.

4.6.6 Each Party agrees to provide the other Party with at least thirty (30) days advance written notice of cancellation, material reduction or non-renewal of any of the insurance policies required herein.

4.6.7 Each Party agrees to accept the other Party's program of self-insurance in lieu of insurance coverage if certain requirements are met. These requirements are as follows:

4.6.7.1 The Party desiring to satisfy its Workers' Compensation and Employers Liability obligations through self-insurance shall submit to the other Party a copy of its Certificate of Authority to Self-Insure its Workers' Compensation obligations issued by each state covered by this Agreement or the employer's state of hire; and

4.6.7.2 The Party desiring to satisfy its automobile liability obligations through self-insurance shall submit to the other Party a copy of the state-issued letter approving self-insurance for automobile liability issued by each state covered by this Agreement; and

4.6.7.3 The Party desiring to satisfy its general liability obligations through self-insurance must provide evidence acceptable to the other Party that it maintains at least an investment grade (e.g., B+ or higher) debt or credit rating as determined by a nationally

recognized debt or credit rating agency such as Moody's, Standard and Poor's or Duff and Phelps.

4.6.8 This Section 4.7 is a general statement of insurance requirements and shall be in addition to any specific requirement of insurance referenced elsewhere in this Agreement or a Referenced Instrument.

4.7 Upon CLEC signature of this Agreement, CLEC shall provide **SBC-13STATE** with CLEC's state-specific authorized and nationally recognized OCN/AECNs for facilities-based (Interconnection and/or unbundled Network Elements) and a separate and distinct OCN/AECN for Resale Services.

4.8 In the event that a Party makes any corporate name change (including addition or deletion of a d/b/a), change in OCN/AECN, or makes or accepts a transfer or assignment of trunks or facilities (including leased facilities), or a change in any other identifier (collectively, a **"Change"**), the Party making the Change shall submit written notice to the other Party within thirty (30) days of the first action taken to implement such Change. Within thirty (30) days following receipt of that notice, the Parties shall negotiate rates to compensate the Party not making the Change for its costs to be incurred to make the Change to the applicable databases, systems, records and/or recording announcement(s) for branded/repair calls. In addition, the Party making the change shall compensate the other Party for any service order charges and/or service request charges associated with such Change.

4.9 When a End User changes its service provider from **SBC-13STATE** to SCC or from SCC to **SBC-13STATE** and does not retain its original telephone number, the Party formerly providing service to such End User shall furnish a referral announcement (**"Referral Announcement"**) on the original telephone number that specifies the End User's new telephone number.

4.9.1 The following pertains to **AM-IL**, **AM-WI** and **PACIFIC** only:

4.9.1.1 Referral Announcements shall be provided by a Party to the other Party for the period of time and at the rates set forth in the referring Party's tariff(s); provided, however, if either Party provides Referral Announcements for a period different (either shorter or longer) than the period(s) stated in its tariff(s) when its End Users change their telephone numbers, such Party shall provide the same level of service to End Users of the other Party.

4.9.2 The following applies to **AM-IN** only:

4.9.2.1 Referral Announcements shall be provided by a Party to the other Party for the period specified in 170 IAC 7-1.1-11(I)(3)(a) and (b) and at the rates set forth in the referring Party's tariff(s).

However, if either Party provides Referral Announcements for a period different than the above period(s) when its End Users change their telephone numbers, such Party shall provide the same level of service to End Users of the other Party.

4.9.3 The following applies to **AM-MI** only:

4.9.3.1 Referral Announcements shall be provided by a Party to the other Party for the period specified in Michigan Administrative Rule 484.134 and at the rates set forth in the referring Party's tariff(s). However, if either Party provides Referral Announcements for a period longer than the above period(s) when its End Users change their telephone numbers, such Party shall provide the same level of service to End Users of the other Party.

4.9.4 The following applies to **AM-OH** only:

4.9.4.1 Referral Announcements shall be provided by a Party to the other Party for the period of time specified in Rule 4901:1-5-12, Ohio Administrative Code and at the rates set forth in the referring Party's tariff(s). However, if either Party provides Referral Announcements for a period longer than the above period(s) when its End Users change their telephone numbers, such Party shall provide the same level of service to End Users of the other Party.

4.10 Each Party shall be responsible for labor relations with its own employees. Each Party agrees to notify the other Party as soon as practicable whenever such Party has knowledge that a labor dispute concerning its employees is delaying or threatens to delay such Party's timely performance of its obligations under this Agreement and shall endeavor to minimize impairment of service to the other Party (for example, by using its management personnel to perform work or by other means) in the event of a labor dispute to the extent permitted by Applicable Law.

4.11 Each Party shall act in good faith in its performance under this Agreement and, in each case in which a Party's consent or agreement is required or requested hereunder, such Party shall not unreasonably withhold or delay such consent or agreement.

5. EFFECTIVE DATE, TERM, AND TERMINATION

5.1 The Effective Date of this Agreement shall be ten (10) calendar days after the Commission approves this Agreement under Section 252(e) of the Act or, absent such commission approval, the date this Agreement is deemed approved under Section 252(e)(4) of the Act.

5.2 The term of this Agreement shall commence upon the Effective Date of this Agreement and shall expire two (2) years from the Effective Date (the "Term"). Absent the receipt by one Party of written notice from the other Party at least within 180 days prior to the expiration of the Term to the effect that such Party does not intend to extend the Term, this Agreement shall remain in full force and effect on and after the expiration of the Term until terminated by either Party pursuant to Section 5.3 or 5.4.

5.3 Notwithstanding any other provision of this Agreement, either Party may terminate this Agreement and the provision of any Interconnection, Resale Services, Network Elements, functions, facilities, products or services provided pursuant to this Agreement, at the sole discretion of the terminating Party, in the event that the other Party fails to perform a material obligation or breaches a material term of this Agreement and the other Party fails to cure such nonperformance or breach within forty-five (45) calendar days after written notice thereof. Any termination of this Agreement pursuant to this Section 5.3 shall take effect immediately upon delivery of written notice to the other Party that it failed to cure such nonperformance or breach within forty-five (45) calendar days after written notice thereof.

5.4 If pursuant to Section 5.2, this Agreement continues in full force and effect after the expiration of the Term, either Party may terminate this Agreement after delivering written notice to the other Party of its intention to terminate this Agreement, subject to Sections 5.5 and 5.6. Neither Party shall have any liability to the other Party for termination of this Agreement pursuant to this Section 5.4 other than its obligations under Sections 5.5 and 5.6.

5.5 Upon termination or expiration of this Agreement in accordance with Sections 5.2, 5.3 or 5.4:

5.5.1 Each Party shall continue to comply with its obligations set forth in Section 42; and

5.5.2 Each Party shall promptly pay all amounts owed under this Agreement or place any Disputed Amounts into an escrow account that complies with Section 8.4 hereof;

5.5.3 Each Party's confidentiality obligations shall survive; and

5.5.4 Each Party 's indemnification obligations shall survive.

5.6 If either Party serves notice of expiration pursuant to Section 5.2 or Section 5.4, SCC shall have ten (10) days to provide **SBC-13STATE** written confirmation if SCC wishes to pursue a successor agreement with **SBC-13STATE** or terminate its agreement. SCC shall identify the action to be taken on each applicable (13)

state(s). If SCC wishes to pursue a successor agreement with SBC-13STATE, SCC shall attach to its written confirmation or notice of expiration/termination, as applicable, a written request to commence negotiations with SBC-13STATE under Sections 251/252 of the Act and identify each of the state(s) the successor agreement will cover. Upon receipt of SCC's Section 252(a)(1) request, the Parties shall commence good faith negotiations on a successor agreement

5.7 The rates, terms and conditions of this Agreement shall continue in full force and effect until the earlier of (i) the effective date of its successor agreement, whether such successor agreement is established via negotiation, arbitration or pursuant to Section 252(i) of the Act; or (ii) the date that is ten (10) months after the date on which SBC-13STATE received SCC's Section 252(a)(1) request; provided, however, when a successor agreement becomes effective, the terms, rates and charges of such successor Agreement shall apply retroactively back to the date this Agreement is terminated or expires, whichever is later, and that the retro-active true-up shall be completed within 90 days following the effective date of such successor Agreement.

5.8 If at any time during the Section 252(a)(1) negotiation process (prior to or after the expiration date or termination date of this Agreement), SCC withdraws its Section 252(a)(1) request, SCC must include in its notice of withdrawal a request to adopt a successor agreement under Section 252(i) of the Act or affirmatively state that SCC does not wish to pursue a successor agreement with SBC-13STATE for a given state. The rates, terms and conditions of this Agreement shall continue in full force and effect for a period of ninety (90) days after the date SCC provides notice of withdrawal of its Section 252(a)(1) request. On the ninety-first (91) day following SBC-13STATE's receipt of SCC's notice of withdrawal of its Section 252(a)(1) request, unless SCC provided SBC-13STATE notice of a Section 252(i) adoption in the interim, the Parties shall, subject to Section 5.5, have no further obligations under this Agreement.

5.9 If SCC does not affirmatively state that it wishes to pursue a successor agreement with SBC-13STATE in its, as applicable, notice of expiration or termination or the written confirmation required after receipt of SBC-13STATE's notice of expiration or termination, then the rates, terms and conditions of this Agreement shall continue in full force and effect for a period of ninety (90) days after the date SCC provided or received notice of expiration or termination. On the ninety-first (91) day following SCC provided or received notice of expiration or termination, the Parties shall, subject to Section 5.5, have no further obligations under this Agreement.

5.10 In the event of termination of this Agreement pursuant to Section 5.9, SBC-13STATE and SCC shall cooperate in good faith to effect an orderly transition of service under this Agreement; provided that SCC shall be solely responsible (from a financial, operational and administrative standpoint) to ensure that its Telematics

Customers and 911 Call Routing Customers, as those terms are defined in Appendix 911, have been transitioned to a new provider by the expiration date, termination date of this Agreement.

6. END USER FRAUD

6.1 Neither Party shall be liable to the other party for any fraud associated with the other Party's End User's account, including 1+ IntraLATA toll, ported numbers, and Alternate Billing Service (ABS). ABS is a service that allows End Users to bill calls to account(s) that might not be associated with the originating line. There are three types of ABS calls: calling card, collect, and third number billed calls.

6.2 The Parties agree to cooperate with one another to investigate, minimize, and take corrective action in cases of fraud involving 1+ IntraLATA toll calls, ABS, and ported numbers. The Parties' fraud minimization procedures are to be cost-effective and implemented so as not to unduly burden or harm one Party as compared to the other.

6.3 In cases of suspected fraudulent activity by an End User, at a minimum, the cooperation referenced in Section 6.2 will include providing to the other Party, upon request, information concerning Customers who terminate services to that Party without paying all outstanding charges. The Party seeking such information is responsible for securing the End User's permission to obtain such information.

6.4 **SBC-AMERITECH, SBC-SWBT, PACIFIC, SNET** will provide notification messages to SCC on suspected occurrences of ABS-related fraud on SCC accounts stored in the applicable LIDB. **PACIFIC** will provide such alert messages by e-mail. **SBC-AMERITECH, SBC-SWBT and SNET** will provide via fax.

6.4.1 **SBC-SWBT (on behalf of itself and SNET) and PACIFIC** will use a Sleuth system to determine suspected occurrences of ABS-related fraud for SCC using the same criteria **SBC-SWBT and PACIFIC** use to monitor fraud on their respective accounts.

6.4.2 SCC understands that Sleuth alerts only identify potential occurrences of fraud. SCC understands and agrees that it will need to perform its own investigations to determine whether a fraud situation actually exists. SCC understands and agrees that it will also need to determine what, if any, action SCC should take as a result of a Sleuth alert.

6.4.3 The Parties will provide contact names and numbers to each other for the exchange of Sleuth alert notification information twenty-four (24) hours per day seven (7) days per week.

6.4.4 For each alert notification provided to SCC, SCC may request a corresponding thirty-day (30-day) historical report of ABS-related query processing. SCC may request up to three reports per alert.

6.5 In SBC-SWBT and PACIFIC ABS-related alerts are provided to SCC at no additional charge, except as related in 6.6 below.

6.5.1 In PACIFIC, 1+ IntraLATA toll fraud alerts are offered for Resale only under the product name Traffic Alert Referral Service (TARS). For TARS, SCC agrees to pay a recurring usage rate as outlined in Appendix Pricing.

6.6 Traffic Alert Referral Service ("TARS") 1+ Intra-LATA Toll Fraud Monitoring

6.6.1 For terms and conditions for TARS, see Appendix Resale.

6.6.2 TARS is offered in PACIFIC only.

7. DEPOSITS (SBC-12STATE)

7.1 The deposit requirements set forth in this Section 7 apply to the Resale Services and Network Elements furnished under this Agreement. Where SCC furnishes both Resale Services and Network Elements in one (1) state under this Agreement, SCC shall make two (2) separate deposits for that state, each calculated separately as set forth below in Sections 7.2 through 7.10, inclusive.

7.2 If SCC has not established a minimum of twelve (12) consecutive months good credit history with all telephone company affiliates of SBC (that is, AMERITECH, NEVADA, PACIFIC, SNET and SWBT) where SCC is doing or has done business as a local service provider, SCC shall remit an initial cash deposit to SBC-12STATE prior to the furnishing of Resale Services or Network Elements in each state under this Agreement. The deposit required by the previous sentence shall be determined as follows:

7.2.1 for NEVADA, PACIFIC and SWBT, if immediately prior to the Effective Date, SCC was not operating as a Local Service Provider in a state covered by this Agreement, the initial deposit for that state shall be in the amount of $17,000; or

7.2.2 for NEVADA, PACIFIC and SWBT, if immediately prior to the Effective Date, SCC was operating as a Local Service Provider in a state covered by this Agreement, the deposit for that state shall be in the amount calculated using the method set forth in Section 7.7 of this Agreement; or

7.2.3 for SBC-AMERITECH, subject to external credit check verification and/or financial statement review, SBC-AMERITECH may require two (2) to four (4) months of projected average monthly billings as a deposit.

7.2.4 If SCC has established a minimum of twelve (12) consecutive months good credit history with all ILEC Affiliates of SBC (that is, AMERITECH, NEVADA, PACIFIC, SNET and SWBT) with which SCC is doing or has done business as a Local Service Provider, SBC-12STATE shall waive the initial deposit requirement; provided, however, that the terms and conditions set forth in Section 7.1 through Section 7.10 of this Agreement shall continue to apply in each state for the Term. In determining whether SCC has established a minimum of twelve (12) consecutive months good credit history with each ILEC Affiliate of SBC with which SCC is doing or has done business, SCC's payment record with each ILEC Affiliate of SBC for the most recent twelve (12) months occurring within the twenty-four (24) month period immediately prior to the Effective Date shall be considered.

7.3 Any cash deposit for one state shall be held by SBC-12STATE as a guarantee of payment of charges billed to SCC, provided, however, SBC-12STATE may exercise its right to credit any cash deposit to SCC's account upon the occurrence of any one of the following events:

7.3.1 when SBC-12STATE sends SCC the second delinquency notification for that state during the most recent twelve (12) months; or

7.3.2 when SBC-12STATE suspends SCC's ability to process orders in accordance with Section 9.6.1.1; or

7.3.3 when SCC files for protection under the bankruptcy laws; or

7.3.4 when an involuntary petition in bankruptcy is filed against SCC and is not dismissed within sixty (60) days; or

7.3.5 when this Agreement expires or terminates; or

7.3.6 during the month following the expiration of twelve (12) months after that cash deposit was remitted, SBC-12STATE shall credit any cash deposit to SCC's account so long as SCC has not been sent more than one delinquency notification letter for that state during the most recent twelve (12) months.

7.3.7 For the purposes of this Section 7.3, interest will be calculated as specified in Section 8.1 and shall be credited to SCC's account at the time that the cash deposit is credited to SCC's account.

7.4 So long as SCC maintains timely compliance with its payment obligations, SBC-12STATE will not increase the deposit amount required. If SCC fails to maintain timely compliance with its payment obligations, SBC–12STATE reserves the right to require additional deposit(s) in accordance with Section 7.1 and Section 7.5 through Section 7.10.

7.5 If during the first six (6) months of operations in a state under this Agreement, SCC has been sent one delinquency notification letter by SBC-12STATE, the deposit amount for that state shall be re-evaluated based upon SCC's actual billing totals and shall be increased if SCC's actual billing average:

7.5.1 for NEVADA, PACIFIC or SWBT for a two (2) month period exceeds the deposit amount held; or

7.5.2 for AMERITECH for a two (2) to four (4) month period exceeds the deposit amount held.

7.6 Throughout the Term, any time SCC has been sent two (2) delinquency notification letters for any one state by SBC-12STATE, the deposit amount for that state shall be re-evaluated based upon SCC's actual billing totals and shall be increased if SCC's actual billing average:

7.6.1 or NEVADA, PACIFIC or SWBT for a two (2) month period exceeds the deposit amount held; or

7.6.2 for AMERITECH for a two (2) to four (4) month period exceeds the deposit amount held.

7.7 Whenever a deposit is re-evaluated as specified in Section 7.5 or Section 7.6, such deposit shall be calculated in an amount equal to the average billing to SCC for that state for a two (2) to four (4) month period. The most recent three (3) months billing on all of SCC's CBAs/ESBAs/ASBS ("CBA" is utilized in SWBT only; "ESBA" is utilized in PACIFIC and NEVADA only; "ASBS" is utilized in AMERITECH only) and BANs for Resale Services or Network Elements within that state shall be used to calculate SCC's monthly average.

7.7.1 In SBC-7STATE only, after calculating the amount equal to the average billing to SCC for that state for a two (2) month period, add the amount of any charges that would be applicable to transfer all of SCC's then-existing End-Users of Resale Services to SBC-7STATE in the event of SCC's disconnection for non-payment of charges. The resulting sum is the amount of the deposit.

7.8 Whenever a deposit is re-evaluated as specified in Section 7.5 and Section 7.6, SCC shall remit the additional deposit amount to SBC-12STATE within thirty (30) calendar days of receipt of written notification from SBC-12STATE requiring such deposit. If SCC fails to furnish the required deposit within thirty (30) calendar days of receipt of written notice requesting such deposit, SBC-12STATE shall begin the process set forth in Section 9 of this Agreement for that state. If SCC continues to fail to furnish the required deposit at the expiration of the fourteen (14) calendar days specified in Section 9.3 of this Agreement, then SBC-12STATE shall begin the procedure(s) set forth in Sections 9.5 and 9.6 of this Agreement for that state.

7.9 The cash deposit requirement may be satisfied in whole or in part with an irrevocable bank letter of credit acceptable to SBC-7STATE. No interest shall be paid by SBC-7STATE for any portion of the deposit requirement satisfied by an irrevocable bank letter of credit. SBC-7STATE may demand payment from the issuing bank of any irrevocable bank letter of credit upon the occurrence of any of the events listed in Section 7.3.1 through 7.3.4.

7.10 The fact that SBC-12STATE holds either a cash deposit or irrevocable bank letter of credit does not relieve SCC from timely compliance with its payment obligations under this Agreement.

7.11 For deposit requirements for SNET, see the applicable DPUC ordered tariff.

8. BILLING AND PAYMENT OF CHARGES

8.1 Unless otherwise stated, each Party will render monthly bill(s) to the other for Interconnection, Resale Services, Network Elements, functions, facilities, products and services provided hereunder at the rates set forth in the applicable Appendix Pricing, as set forth in applicable tariffs or other documents specifically referenced herein and, as applicable, as agreed upon by the Parties or authorized by a Party.

8.1.1 Remittance in full of all bills rendered by SBC-AMERITECH, SBC-SWBT and PACIFIC is due within thirty (30) days of each bill date (the **"Bill Due Date"**) and shall be paid in accordance with the terms of Section 8.3 of this Agreement.

8.1.2 Remittance in full of all bills rendered by NEVADA is due in accordance with the terms set forth in the Commission C2-A Tariff, with the date on which amounts are due referred to herein as the **"Bill Due Date"**.

8.1.3 Remittance in full of all bills rendered by SNET is due in accordance with the terms set forth in the Connecticut Access Service Tariff approved by the DPUC, with the date on which amounts are due referred to herein as the **"Bill Due Date"**.

8.1.4 Remittance in full of all bills rendered by SCC is due within thirty (30) days of each bill date (the **"Bill Due Date"**).

8.1.5 If SCC fails to remit payment for any charges for services by the Bill Due Date, or if a payment or any portion of a payment is received from SCC after the Bill Due Date, or if a payment or any portion of a payment is received in funds which are not immediately available to SBC-13STATE as of the Bill Due Date (individually and collectively, **"Past Due"**), then a late payment charge shall be assessed as provided in Sections 8.1.5.1 through 8.1.5.3, as applicable.

8.1.5.1 If any charge incurred under this Agreement that is billed out of any SBC-8STATE billing system other than the SBC-SWBT Customer Records Information System (CRIS) is Past Due, the unpaid amounts shall bear interest from the Bill Due Date until paid at the lesser of (i) the rate used to compute the Late Payment Charge in the applicable SBC-8STATE intrastate access services tariff in that state and (ii) the highest rate of interest that may be charged under Applicable Law, compounded daily from the Bill Due Date to and including the date that the payment is actually made and available. The method and timing for application of interest to any charge incurred under this Agreement that is billed out of any SBC-8STATE billing system other than SBC-SWBT's CRIS shall comply with the process set forth in the applicable SBC-8STATE intrastate access services tariff for that state.

8.1.5.2 If any charge incurred under this Agreement that is billed out of SBC-SWBT's CRIS is Past Due, the unpaid amounts shall bear interest from the Bill Due Date until paid. The interest rate applied to SBC-SWBT CRIS-billed Past Due unpaid amounts shall be the lesser of (i) the rate used to compute the Late Payment Charge contained in the applicable SBC-SWBT intrastate retail Commission-approved tariff governing Late Payment Charges to SBC-SWBT's retail End Users that are business End Users in that state and (ii) the highest rate of interest that may be charged under Applicable Law.

8.1.5.3 If any charge incurred under this Agreement that is billed out of any SBC-AMERITECH billing system is Past Due, the unpaid amounts shall accrue interest from the Due Date at the lesser of (i) one and one-half percent (1 ½%) per month and (ii) the highest rate of interest that may be charged under Applicable

Law, compounded daily from the Bill Due Date to and including the date that the payment is actually made and available.

8.2 If any charge incurred by SBC-12STATE under this Agreement is Past Due, the unpaid amounts shall bear interest from the Bill Due Date until paid. The interest rate applied shall be the lesser of (i) the rate used to compute the Late Payment Charge contained in the applicable SBC-12STATE's intrastate access services tariff in that state and (ii) the highest rate of interest that may be charged under Applicable Law, compounded daily from the Bill Due Date to and including the date that the payment is actually made and available.

8.3 SCC shall make all payments to SBC-12STATE via check with immediately available funds so that SBC-12STATE shall receive such payment no later than the Billing Due Date of each bill. If SBC-12STATE issues two late payment notices, as provided herein, within a twelve month period to SCC, SCC shall immediately begin electronic funds credit transfers through the Automated Clearing House Association (ACH) network to the financial institution designated by SBC-12STATE. If SCC makes payment through funds transfer via the ACH network, remittance information will be communicated together with the funds transfer via the ACH network, and SCC shall use the CCD+ or the CTX transaction set. SCC and SBC-12STATE shall abide by the National Automated Clearing House Association (NACHA) Rules and Regulations. Each ACH credit transfer or payment to SBC-12STATE shall be received by SBC-12STATE no later than the Bill Due Date of each bill or Late Payment Charges will apply. SBC-12STATE shall not be liable for any delays in receipt of funds or errors in entries caused by SCC or Third Parties, including SCC's financial institution. SCC is responsible for its own banking fees.

8.3.1 SCC shall make all payments to SNET in "immediately available funds." All payments to SNET shall be made using one of the methods set forth in the Connecticut Access Service Tariff approved by the CT-DPUC, via check with immediately available funds or via electronic funds credit transfers through the Automated Clearing House Association (ACH) network to the financial institution designated by SNET. If SCC makes payment through funds transfer via the ACH network, remittance information will be communicated together with the funds transfer via the ACH network. If SCC makes payment through funds transfer via the ACH network, SCC shall use the CCD+ or the CTX transaction set. SCC and SNET shall abide by the National Automated Clearing House Association (NACHA) Rules and Regulations. Each payment shall be received by SNET no later than the Bill Due Date of each bill or Late Payment Charges will apply. SNET shall not be liable for any delays in receipt of funds or errors in entries caused by SCC or Third Parties, including SCC's financial institution. SCC is responsible for its own banking fees.

8.4 If any portion of an amount due to a Party (the **"Billing Party"**) for Resale Services or Network Elements under this Agreement is subject to a bona fide dispute between the Parties, the Party billed (the **"Non-Paying Party"**) shall, prior to the Bill Due Date, give written notice to the Billing Party of the amounts it disputes **("Disputed Amounts")** and include in such written notice the specific details and reasons for disputing each item listed in Section 10.4.1. The Non-Paying Party shall pay when due (i) all undisputed amounts to the Billing Party, and (ii) all Disputed Amounts into an interest bearing escrow account with a Third Party escrow agent mutually agreed upon by the Parties. To be acceptable, the Third Party escrow agent must meet all of the following criteria:

8.4.1 The financial institution proposed as the Third Party escrow agent must be located within the continental United States;

8.4.2 The financial institution proposed as the Third Party escrow agent may not be an Affiliate of either Party; and

8.4.3 The financial institution proposed as the Third Party escrow agent must be authorized to handle Automatic Clearing House (ACH) (credit transactions) (electronic funds) transfers.

8.4.3 In addition to the foregoing requirements for the Third Party escrow agent, the disputing Party and the financial institution proposed as the Third Party escrow agent must agree that the escrow account will meet all of the following criteria:

8.4.3.1 The escrow account must be an interest bearing account;

8.4.3.2 All charges associated with opening and maintaining the escrow account will be borne by the disputing Party;

8.4.4.3 That none of the funds deposited into the escrow account or the interest earned thereon may be subjected to the financial institution's charges for serving as the Third Party escrow agent;

8.4.4.4 All interest earned on deposits to the escrow account shall be disbursed to the Parties in the same proportion as the principal; and

8.4.4.5 Disbursements from the escrow account shall be limited to those:

8.4.4.5.1 authorized in writing by both the disputing Party and the Billing Party (that is, signature(s) from representative(s) of the disputing Party only are not

sufficient to properly authorize any disbursement); or

8.4.4.5.2 made in accordance with the final, non-appealable order of the arbitrator appointed pursuant to the provisions of Section 10.7; or

8.4.4.5.3 made in accordance with the final, non-appealable order of the court that had jurisdiction to enter the arbitrator's award pursuant to Section 10.7.

8.5 Disputed Amounts in escrow shall be subject to Late Payment Charges as set forth in Sections 8.1 and 8.2.

8.6 Issues related to Disputed Amounts shall be resolved in accordance with the procedures identified in the Dispute Resolution provisions set forth in Section 10.

8.7 If the Non-Paying Party disputes any charges for Resale Services or Network Elements and any portion of the dispute is resolved in favor of such Non-Paying Party, the Parties shall cooperate to ensure that all of the following actions are taken:

8.7.1 the Billing Party shall credit the invoice of the Non-Paying Party for that portion of the Disputed Amounts resolved in favor of the Non-Paying Party, together with any Late Payment Charges assessed with respect thereto no later than the second Bill Due Date after the resolution of the Dispute;

8.7.2 within fifteen (15) calendar days after resolution of the Dispute, the portion of the escrowed Disputed Amounts resolved in favor of the Non-Paying Party shall be released to the Non-Paying Party, together with any accrued interest thereon;

8.7.3 within fifteen (15) calendar days after resolution of the Dispute, the portion of the Disputed Amounts resolved in favor of the Billing Party shall be released to the Billing Party, together with any accrued interest thereon; and

8.7.4 no later than the third Bill Due Date after the resolution of the dispute regarding the Disputed Amounts, the Non-Paying Party shall pay the Billing Party the difference between the amount of accrued interest such Billing Party received from the escrow disbursement and the amount of Late Payment Charges such Billing Party is entitled to receive pursuant to Sections 8.1 and 8.2.

8.8 Failure by the Non-Paying Party to pay any charges determined to be owed to the Billing Party within the time specified in Section 8.6 shall be grounds for termination of this Agreement.

8.9 Exchange of Billing Message Information

8.9.1 SBC-13 STATE will provide SCC a specific Daily Usage File (**"DUF" or "Usage Extract"**) for Resale Services and Network Element usage sensitive services provided hereunder (**"Customer Usage Data"**). Such Customer Usage Data shall be provided by SBC-13STATE in accordance with Exchange Message Interface (EMI) guidelines supported by OBF. Any exceptions to the supported formats will be noted in the DUF implementation requirements documentation for each ILEC. The DUF shall include (i) specific daily usage, including both Local Traffic (if and where applicable) and LEC-carried IntraLATA Toll Traffic, in EMI format for usage sensitive services furnished in connection with each Resale Service and Network Element to the extent that similar usage sensitive information is provided to retail End Users of SBC-13STATE within that state, (ii) with sufficient detail to enable SCC to bill its End Users for usage sensitive services furnished by SBC-13STATE in connection with Resale Services and Network Elements provided by SBC-13STATE. Procedures and processes for implementing the interfaces with SBC-AMERITECH, PACIFIC, NEVADA, SNET, and SBC-SWBT will be included in implementation requirements documentation.

8.9.2 To establish file transmission for the DUF, SCC must provide a separate written request for each state to SBC-AMERITECH, PACIFIC, NEVADA, SNET and SBC-SWBT no less than sixty (60) calendar days prior to the desired first transmission date for each file.

8.9.3 Call detail for LEC-carried calls that are alternately billed to SCC End Users will be forwarded to SCC as rated call detail on the DUF.

8.9.4 SBC-SWBT shall bill SCC for DUF furnished by SBC-SWBT in accordance with the price(s) provided in the applicable Appendix Pricing under "Electronic Billing Information."

8.9.5 Interexchange call detail on Resale Services or Network Elements (ports) that is forwarded to SBC-13STATE for billing, which would otherwise be processed by SBC-13STATE for its retail End Users, will be returned to the IXC and will not be passed through to SCC. This call detail will be returned to the IXC with a transaction code indicating that the returned call originated from a resold account. Billing for Information Services and other ancillary services traffic on Resale Services and Network Elements (ports) will be passed through when SBC-13STATE records the message.

8.9.6 SBC-AMERITECH, NEVADA and PACIFIC Ancillary Services messages originated on or billed to a Resale Service or Network Element (port) in those seven (7) states shall be subject to the rates, terms and conditions of Appendix MESSAGE EXCHANGE.

8.9.7 SCC shall be responsible for providing all billing information to each of its Telematics Customers and 911 Call Routing Customers, as those terms are defined in Appendix 911, regardless of the method used to provision such customer's service.

9. NONPAYMENT AND PROCEDURES FOR DISCONNECTION

9.1 Unless otherwise specified therein, Sections 9.1, 9.2, 9.3, 9.4 and 9.5 shall apply to all charges billed for all services Interconnection, Resale Services, Network Elements, functions, facilities, products and services furnished under this Agreement. Section 9.6 shall apply only to Resale Services and Network Elements furnished under this Agreement.

9.1.1 If a Party is furnished services under the terms of this Agreement in more than one (1) state, Sections 9.1 through 9.7, inclusive, shall be applied separately for each such state.

9.2 Failure to pay charges may be grounds for termination of this Agreement. If a Party fails to pay by the Bill Due Date, any and all charges billed to it under this Agreement, including any Late Payment Charges or miscellaneous charges **("Unpaid Charges")**, and any portion of such Unpaid Charges remain unpaid after the Bill Due Date, the Billing Party shall notify the Non-Paying Party in writing that in order to avoid disruption or disconnection of the applicable Interconnection, Resale Services, Network Elements, functions, facilities, products and services furnished under this Agreement, the Non-Paying Party must remit all Unpaid Charges to the Billing Party.

9.2.1 With respect to Resale Services and Network Elements, SBC-13STATE will notify SCC of any Unpaid Charges that remain unpaid fifteen (15) calendar days after the Bill Due Date and that SCC must remit payment within fourteen (14) calendar days following receipt of SBC-13STATE's notice.

9.3 If the Non-Paying Party desires to dispute any portion of the Unpaid Charges, the Non-Paying Party shall take all of the following actions not later than fourteen (14) calendar days following receipt of the Billing Party's notice of Unpaid Charges:

9.3.1 notify the Billing Party in writing which portion(s) of the Unpaid Charges it disputes, including the total amount disputed **("Disputed Amounts")** and

the specific details listed in Section 10.4.1 of this Agreement, together with the reasons for its dispute; and

9.3.2 immediately pay to the Billing Party all undisputed Unpaid Charges; and

9.3.3 pay all Disputed Amounts relating to Resale Services and Network Elements into an interest bearing escrow account that complies with the requirements set forth in Section 8.4.

9.3.4 With respect to Resale Services and Network Elements, evidence that the Non-Paying Party has established an interest bearing escrow account that complies with all of the terms set forth in Section 8.4 and deposited a sum equal to the Disputed Amounts into that account must be furnished to the Billing Party before the Unpaid Charges will be deemed to be "disputed" under Section 10 of this Agreement.

9.4 Issues related to Disputed Amounts shall be resolved in accordance with the procedures identified in the Dispute Resolution provision set forth in Section 10.

9.5 **SBC-AMERITECH only**

9.5.1 Notwithstanding anything to the contrary herein, if the Non-Paying Party fails to (i) pay any undisputed amounts by the Bill Due Date, (ii) pay the disputed portion of a past due bill into an interest-bearing escrow account with a Third Party escrow agent, (iii) pay any revised deposit or (iv) make a payment in accordance with the terms of any mutually agreed upon payment arrangement, the Billing Party may, in addition to exercising any other rights or remedies it may have under Applicable Law, provide written demand to the Non-Paying Party for failing to comply with the foregoing. If the Non-Paying Party does not satisfy the written demand within five (5) Business Days of receipt, the Billing Party may exercise any, or all, of the following options:

9.5.1.1 assess a late payment charge and where appropriate, a dishonored check charge;

9.5.1.2 require provision of a deposit or increase an existing deposit pursuant to a revised deposit request;

9.5.1.3 refuse to accept new, or complete pending, orders; and/or

9.5.1.4 discontinue service.

9.5.2 Notwithstanding anything to the contrary in this Agreement, the Billing Party's exercise of any of the above options:

9.5.2.1 shall not delay or relieve the Non-Paying Party's obligation to pay all charges on each and every invoice on or before the applicable Bill Due Date, and

9.5.2.2 Sections 9.5.1.3 and 9.5.1.4 shall exclude any affected order or service from any applicable performance interval or Performance Benchmark.

9.5.3 Once disconnection has occurred, additional charges may apply.

9.6 **SBC-7STATE only**

9.6.1 If any Unpaid Charges for Resale Services or Network Elements remain unpaid and undisputed twenty-nine (29) calendar days past the Bill Due Date of such Unpaid Charges, the Billing Party shall notify the Non-Paying Party in writing that unless all Unpaid Charges for Resale Services and Network Elements are paid within sixteen (16) calendar days following the Non-Paying Party's receipt of such notice, the Resale Services and/or Network Elements furnished to the Non-Paying Party under this Agreement for which Unpaid Charges are outstanding (i.e., delinquent and undisputed) shall be disconnected. This notice shall further specify that the Billing Party shall cause any of Non-Paying Party's End Users provisioned through Resale Services to be defaulted to the Billing Party's local service.

9.6.1.1 On the same day that it sends the letter required by Section 9.6.1, the Billing Party will suspend acceptance of any new order and completion of any pending order (other than a disconnect order) from the Non-Paying Party for any Resale Service or Network Element that could be furnished under this Agreement.

9.6.1.2 Section 9.6.1.1 shall exclude any affected order for Resale Services or Network Elements from any applicable performance interval and computation of any Performance Measurement.

9.6.2 If any Unpaid Charges for Resale Services or Network Elements remain unpaid and undisputed forty (40) calendar days past the Bill Due Date of the Unpaid Charges, the Non-Paying Party shall, at its sole expense, notify its End Users and the Commission that the End Users' service may be disconnected due to the Non-Paying Party's failure to pay Unpaid Charges, and that its End Users must affirmatively select a new provider within five (5) calendar days. This notice shall also advise the Non-Paying Party's End Users provisioned through Resale Services that the Billing Party will transfer provisioning of the End User's account to the Billing Party at the

end of the five (5) calendar day period should the Resale End User fail to select a new provider in the interim.

9.6.3 If any Unpaid Charges for Resale Services or Network Elements furnished to SCC under this Agreement remain unpaid and undisputed forty-five (45) calendar days past the Bill Due Date of such Unpaid Charges, the Billing Party shall disconnect such Resale Services and/or Network Elements.

9.6.3.1 On the same date that these Resale Services are disconnected, the Billing Party shall cause such End Users provisioned through Resale Services to be transferred directly to the Billing Party's local service. To the extent available at retail from the Billing Party, the Resale End Users transferred to the Billing Party's local service shall receive the same services provided through the Non-Paying Party immediately prior to the time of transfer; provided, however, the Billing Party reserves the right to toll restrict (both interLATA and intraLATA) such transferred End Users.

9.6.3.2 Applicable conversion charges and service establishment charges for transferring End Users from the Non-Paying Party to the Billing Party as specified in this Section 9.6 shall be billed to the Non-Paying Party.

9.6.3.3 The Billing Party shall inform the Commission of the names of all Resale End Users transferred through this process.

9.6.4 Within five (5) calendar days of the transfer, the Billing Party shall notify all transferred Resale End Users that because of the Non-Paying Party's failure to pay the Billing Party, their service is now being provided by the Billing Party. The Billing Party shall also notify each transferred Resale End User that the End User has thirty (30) calendar days to select a new provider.

9.6.5 In **SWBT-KS**, within twenty (20) days of transfer, the Billing Party shall again notify all transferred Resale End Users who have not exercised their option to select a new provider that because of the Non-Paying Party's failure to pay the Billing Party, their service is now being provided by the Billing Party. The Billing Party shall also notify the End Users that they have fifteen (15) days to select a provider.

9.6.6 If any End User transferred to the Billing Party's local service pursuant to Section 9.6.3 of this Agreement fails to select a new provider within thirty (30) calendar days of the transfer to the Billing Party's local service, the Billing Party shall terminate the transferred End User's service.

9.6.6.1 The transferred End User shall be responsible for any and all charges incurred during the selection period.

9.6.6.2 The Billing Party shall notify the Commission of the names of all transferred End Users whose service has been terminated pursuant to this Section 9.6.5.

9.6.7 The Billing Party may discontinue service to the Non-Paying Party as provided in Section 9.6.3 and shall have no liability to the Non-Paying Party or the Non-Paying Party's End Users in the event of such disconnection or any transfer of Resale End Users to the Billing Party's service in connection with such disconnection.

9.6.8 Nothing in this Agreement shall be interpreted to obligate the Billing Party to continue to provide service to any transferred End User beyond the thirty (30) calendar day selection period. Nothing herein shall be interpreted to limit any and all disconnection rights the Billing Party has with regard to such transferred End Users under Applicable Law; provided, however,

9.6.8.1 in **PACIFIC** only, following expiration of the selection period and disconnection of such transferred End Users, where facilities permit, the Billing Party will furnish transferred and subsequently disconnected residential End Users with "quick dial tone."

9.6.9 Once the letter required by Section 9.6.1 has been sent to the Non-Paying Party, the Billing Party shall not accept any order (other than a disconnect order) relating to Resale Services, Network Elements, functions, facilities, products, and services from the Non-Paying Party until

9.6.9.1 All Unpaid Charges are paid, and

9.6.9.2 The Non-Paying Party has furnished the Billing Party a cash deposit calculated pursuant to the terms and conditions of Section 7.

9.7 **SNET only**

9.7.1 For nonpayment and procedures for disconnection for **SNET**, see the applicable **DPUC** ordered tariff.

10. DISPUTE RESOLUTION

10.1 Finality of Disputes

10.1.1 Except as otherwise specifically provided for in this Agreement, no claim may be brought for any dispute arising from this Agreement more than twenty-four (24) months from the date the occurrence which gives rise to the dispute is discovered or reasonably should have been discovered with the exercise of due care and attention.

10.1.2 Notwithstanding anything contained in this Agreement to the contrary, a Party shall be entitled to dispute only those charges for which the Bill Due Date occurred within the twelve (12) months immediately preceding the date on which the other Party received notice of such Disputed Amounts.

10.2 Alternative to Litigation

10.2.1 The Parties desire to resolve disputes arising out of this Agreement without litigation. Accordingly, the Parties agree to use the following Dispute Resolution procedures with respect to any controversy or claim arising out of or relating to this Agreement or its breach.

10.3 Commencing Dispute Resolution

10.3.1 Dispute Resolution shall commence upon one Party's receipt of written notice of a controversy or claim arising out of or relating to this Agreement or its breach. No Party may pursue any claim unless such written notice has first been given to the other Party. There are three (3) separate Dispute Resolution methods:

10.3.1.1 Service Center (**SBC-AMERITECH**), LSC (**SBC-7STATE**), or LEC-C (**SNET**);

10.3.1.2 Informal Dispute Resolution; and

10.3.1.3 Formal Dispute Resolution,

each of which is described below.

10.4 LSC/Service Center/LEC-C Dispute Resolution -the following Dispute Resolution procedures will apply with respect to any billing dispute arising out of or relating to the Agreement when **SBC-13STATE** is the Billing Party. When SCC is the Billing Party, any dispute arising out of or relating to the Agreement shall be governed exclusively by the Dispute Resolution procedures set forth in sections 10.5, 10.6, and 10.7.

10.4.1 If the written notice given pursuant to Section 10.3 discloses that a dispute relates to billing and **SBC-13STATE** is the Billing Party, then the

procedures set forth in this Section 10.4 shall be used and the dispute shall first be referred to the appropriate service center [SBC-AMERITECH Service Center; SBC-7STATE Local Service Center (LSC); SNET Local Exchange Carrier Center (LEC-C)] for resolution. In order to resolve a billing dispute, SCC shall furnish SBC-13STATE written notice of (i) the date of the bill in question, (ii) CBA/ESBA/ASBS or BAN number of the bill in question, (iii) telephone number, circuit ID number or trunk number in question, (iv) any USOC information relating to the item questioned, (v) amount billed and (vi) amount in question and (vii) the reason that SCC disputes the billed amount. Failure to provide the information and evidence required by this Section 10.4.1 not later than twenty-nine (29) days following the Bill Due Date shall constitute SCC's irrevocable and full waiver of its right to dispute the subject charges.

10.4.2 The Parties shall attempt to resolve Disputed Amounts appearing on SBC-13STATE's current billing statements thirty (30) to sixty (60) calendar days from the Bill Due Date (provided that SCC furnishes all requisite information and evidence under Section 10.4.1 by the Bill Due Date). If not resolved within thirty (30) calendar days, upon request, SBC-13STATE will notify SCC of the status of the dispute and the expected resolution date.

10.4.3 The Parties shall attempt to resolve Disputed Amounts appearing on statements prior to the current billing statement within thirty (30) to ninety (90) calendar days, but resolution may take longer depending on the complexity of the dispute. If not resolved within thirty (30) calendar days from the date notice of the Disputed Amounts was received (provided that SCC furnishes all requisite information and evidence under Section 10.4.1), SBC-13STATE will notify SCC of the status of the dispute and the expected resolution date.

10.4.4 If SCC is not satisfied by the resolution of the billing dispute under this Section 10.4, SCC may notify SBC-13STATE in writing that it wishes to invoke the Informal Resolution of Disputes afforded pursuant to Section 10.5 of this Agreement.

10.5 Informal Resolution of Disputes

10.5.1 Any notice of Disputed Amounts given by SBC-13STATE to SCC pursuant to Section 10.3 shall furnish SCC written notice of: (i) the date of the bill in question; (ii) the account number or other identification of the bill in question; (iii) any telephone number, circuit ID number or trunk number in question; (iv) any USOC (or other descriptive information) questioned; (v) the amount billed; (vi) the amount in question; and (vii) the reason that SBC-13STATE disputes the amount.

10.5.2 Upon receipt by one Party of notice of a dispute by the other Party pursuant to Section 10.3, Section 10.4.5, or Section 10.5.1,each Party will appoint a knowledgeable, responsible representative to meet and negotiate in good faith to resolve any dispute arising under this Agreement. The location, form, frequency, duration, and conclusion of these discussions will be left to the discretion of the representatives. Upon agreement, the representatives may utilize other alternative Dispute Resolution procedures such as mediation to assist in the negotiations. Discussions and the correspondence among the representatives for purposes of settlement are exempt from discovery and production and will not be admissible in the arbitration described below or in any lawsuit without the concurrence of both Parties. Documents identified in or provided with such communications that were not prepared for purposes of the negotiations are not so exempted, and, if otherwise admissible, may be admitted in evidence in the arbitration or lawsuit.

10.6 Formal Dispute Resolution

10.6.1 If the Parties are unable to resolve the dispute through the informal procedure described in Section 10.5, then either Party may invoke the formal Dispute Resolution procedures described in this Section 10.6. Unless agreed among all Parties, formal Dispute Resolution procedures, including arbitration or other procedures as appropriate, may be invoked not earlier than sixty (60) calendar days after receipt of the letter initiating Dispute Resolution under Section 10.3.

10.6.2 Claims Subject to Mandatory Arbitration. The following claims, if not settled through informal Dispute Resolution, will be subject to mandatory arbitration pursuant to Section 10.7 below:

10.6.2.1 Each unresolved billing dispute involving one percent (1%) or less of the amounts charged to the Disputing Party under this Agreement in the state in which the dispute arises during the twelve (12) months immediately preceding receipt of the letter initiating Dispute Resolution under Section 10.3. If the disputing Party has not been billed for a minimum of twelve (12) months immediately preceding receipt of the letter initiating Dispute Resolution under Section 10.3, the Parties will annualize the actual number of months billed.

10.6.3 Claims Subject to Elective Arbitration. Claims will be subject to elective arbitration pursuant to Section 10.7 if, and only if, the claim is not settled through informal Dispute Resolution and both Parties agree to arbitration. If both Parties do not agree to arbitration, then either Party may proceed

with any remedy available to it pursuant to law, equity or agency mechanism.

10.6.4 Claims Not Subject to Arbitration. If the following claims are not resolved through informal Dispute Resolution, they will not be subject to arbitration and must be resolved through any remedy available to a Party pursuant to law, equity or agency mechanism.

10.6.4.1 Actions seeking a temporary restraining order or an injunction related to the purposes of this Agreement.

10.6.4.2 Actions to compel compliance with the Dispute Resolution process.

10.6.4.3 All claims arising under federal or state statute(s), including antitrust claims.

10.7 Arbitration

10.7.1 Disputes subject to mandatory or elective arbitration under the provisions of this Agreement will be submitted to a single arbitrator pursuant to the Commercial Arbitration Rules of the American Arbitration Association or pursuant to such other provider of arbitration services or rules as the Parties may agree. The arbitrator shall be knowledgeable of telecommunications issues. Each arbitration will be held in **Dallas, Texas (SBC-SWBT); Chicago, Illinois (SBC-AMERITECH), San Francisco, California (PACIFIC); Reno, Nevada (NEVADA); or New Haven, CT (SNET)** as appropriate, unless the Parties agree otherwise. The arbitration hearing will be requested to commence within sixty (60) calendar days of the demand for arbitration. The arbitrator will control the scheduling so as to process the matter expeditiously. The Parties may submit written briefs upon a schedule determined by the arbitrator. The Parties will request that the arbitrator rule on the dispute by issuing a written opinion within thirty (30) calendar days after the close of hearings. The Federal Arbitration Act, 9 U.S.C. Secs. 1-16, not state law, shall govern the arbitrability of all disputes. The arbitrator will have no authority to award punitive damages, exemplary damages, Consequential Damages, multiple damages, or any other damages not measured by the prevailing Party's actual damages, and may not, in any event, make any ruling, finding or award that does not conform to the terms and conditions of this Agreement. The times specified in this Section may be extended or shortened upon mutual agreement of the Parties or by the arbitrator upon a showing of good cause. Each Party will bear its own costs of these procedures, including attorneys' fees. The Parties will equally split the fees of the arbitration and the arbitrator. The arbitrator's award shall be final and binding and may be entered in any court

having jurisdiction thereof. Judgment upon the award rendered by the arbitrator may be entered in any court having jurisdiction.

11. AUDITS – Applicable in SBC-12STATE only

11.1 Subject to the restrictions set forth in Section 20 and except as may be otherwise expressly provided in this Agreement, a Party (the **"Auditing Party"**) may audit the other Party's (the **"Audited Party"**) books, records, data and other documents, as provided herein, once annually, with the audit period commencing not earlier than the date on which services were first supplied under this Agreement (**"service start date"**) for the purpose of evaluating (i) the accuracy of Audited Party's billing and invoicing of the services provided hereunder and (ii) verification of compliance with any provision of this Agreement that affects the accuracy of Auditing Party's billing and invoicing of the services provided to Audited Party hereunder. Notwithstanding the foregoing, an Auditing Party may audit the Audited Party's books, records and documents more than once annually if the previous audit found (i) previously uncorrected net variances or errors in invoices in Audited Party's favor with an aggregate value of at least five percent (5%) of the amounts payable by Auditing Party for audited services provided during the period covered by the audit or (ii) non-compliance by Audited Party with any provision of this Agreement affecting Auditing Party's billing and invoicing of the services provided to Audited Party with an aggregate value of at least five percent (5%) of the amounts payable by Audited Party for audited services provided during the period covered by the audit.

11.1.1 The scope of the audit shall be limited to the period which is the shorter of (i) the period subsequent to the last day of the period covered by the audit which was last performed (or if no audit has been performed, the service start date and (ii) the twelve (12) month period immediately preceding the date the Audited Party received notice of such requested audit, but in any event not prior to the service start date. Such audit shall begin no fewer than thirty (30) days after Audited Party receives a written notice requesting an audit and shall be completed no later than thirty (30) days after the start of such audit.

11.1.2 Such audit shall be conducted either by the Auditing Party's employee(s) or an independent auditor acceptable to both Parties; provided, however, if the Audited Party requests that an independent auditor be engaged and the Auditing Party agrees, the Audited Party shall pay one-quarter (1/4) of the independent auditor's fees and expenses. The Auditing Party shall only designate employees with the technical or subject matter and/or accounting or financial knowledge required to participate in such audits. The Auditing Party shall not designate any employees from the Auditing Party's sales or marketing departments. If an independent auditor is to be engaged, the Parties shall select an auditor by the thirtieth day following Audited Party's receipt of a written audit notice. Auditing Party shall cause the

independent auditor to execute a nondisclosure agreement in a form agreed upon by the Parties.

11.1.3 Each audit shall be conducted on the premises of the Audited Party during normal business hours. Audited Party shall cooperate fully in any such audit and shall provide the auditor reasonable access to any and all appropriate Audited Party employees and any books, records and other documents reasonably necessary to assess (i) the accuracy of Audited Party's bills and (ii) Audited Party's compliance with the provisions of this Agreement that affect the accuracy of Auditing Party's billing and invoicing of the services provided to Audited Party hereunder. Audited Party may redact from the books, records and other documents provided to the auditor any Audited Party Proprietary Information that reveals the identity of End Users of Audited Party.

11.1.4 Each Party shall maintain reports, records and data relevant to the billing of any services that are the subject matter of this Agreement for a period of not less than twenty-four (24) months after creation thereof, unless a longer period is required by Applicable Law.

11.1.5 If any audit confirms any undercharge or overcharge, then Audited Party shall (i) promptly correct any billing error, including making refund of any overpayment by Auditing Party in the form of a credit on the invoice for the first full billing cycle after the Parties have agreed upon the accuracy of the audit results and (ii) for any undercharge caused by the actions of the Audited Party, immediately compensate Auditing Party for such undercharge, and (iii) in each case, calculate and pay interest as provided in Section 8.1 (depending on the SBC-13STATE Parties involved) and Section 8.2, for the number of days from the date on which such undercharge or overcharge originated until the date on which such credit is issued or payment is made and available.

11.1.6 Except as may be otherwise provided in this Agreement, audits shall be performed at Auditing Party's expense, subject to reimbursement by Audited Party of one-quarter (1/4) of any independent auditor's fees and expenses in the event that an audit finds, and the Parties subsequently verify, a net adjustment in the charges paid or payable by Auditing Party hereunder by an amount that is, on an annualized basis, greater than five percent (5%) of the aggregate charges for the audited services during the period covered by the audit.

11.1.7 Any disputes concerning audit results shall be referred to the Parties' respective personnel responsible for informal resolution. If these individuals cannot resolve the dispute within thirty (30) days of the referral, either Party may request in writing that an additional audit shall be conducted by an independent auditor acceptable to both Parties, subject to

the requirements set out in Section 11.1. Any additional audit shall be at the requesting Party's expense. If the results of such additional audit are disputed, such dispute shall be resolved in accordance with Section 10.

11.2 Audits - SNET only

11.2.1 Except as provided in Appendix Compensation, SNET shall arrange for one (1) annual independent audit to be conducted by a "Big Six" independent public accounting firm or an accounting firm mutually agreed to by SNET, SCC and all other CLECs doing business with SNET under the terms of an agreement adopted pursuant to Sections 251 and 252 of the Act for the purpose of evaluating the accuracy of SNET's billing and invoicing.

11.2.2 SNET will cooperate fully with the independent auditor in such audit and provide reasonable access to any and all appropriate SNET employees, books, records and other documents reasonably necessary to perform the audit.

11.2.3 SNET shall promptly correct any billing error that is revealed in the audit, including making refund of any overpayment to SCC in the form of a credit on the invoice for the first full billing cycle after the audit report is issued; such refund shall include interest on the overpayment at the rate of eight percent (8%) per year. In the event that the audit reveals any underbilling and resulting underpayment to SNET by SCC, the underpayment shall be reflected in SCC's invoice for the first full billing cycle after the audit report is issued. SNET will not be entitled to recover interest on any underbilling to SCC revealed by the audit for the time preceding the amount appearing on SCC's bill from SNET, however, SNET shall be entitled to recover interest at the interest rate referenced in Section 8.1.5.1 on such underbilling and SCC shall pay interest for the number of days from the Bill Due Date of the bill on which such underbilling was rectified until the date on which payment is made and available to SNET.

12. DISCLAIMER OF REPRESENTATIONS AND WARRANTIES

12.1 EXCEPT AS EXPRESSLY PROVIDED UNDER THIS AGREEMENT, NO PARTY MAKES OR RECEIVES ANY WARRANTY, EXPRESS OR IMPLIED, WITH RESPECT TO THE INTERCONNECTION, RESALE SERVICES, NETWORK ELEMENTS, FUNCTIONS, FACILITIES, PRODUCTS AND SERVICES IT PROVIDES UNDER OR IS CONTEMPLATED TO PROVIDE UNDER THIS AGREEMENT AND EACH PARTY DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY AND/OR OF FITNESS FOR A PARTICULAR PURPOSE. ADDITIONALLY, NEITHER SBC-13STATE NOR SCC

ASSUMES RESPONSIBILITY WITH REGARD TO THE CORRECTNESS OF DATA OR INFORMATION SUPPLIED BY THE OTHER WHEN THIS DATA OR INFORMATION IS ACCESSED AND USED BY A THIRD PARTY.

13. LIMITATION OF LIABILITY

13.1 Except for indemnity obligations expressly set forth herein or as otherwise expressly provided in specific appendices, each Party's liability to the other Party for any Loss relating to or arising out of such Party's performance under this Agreement, including any negligent act or omission (whether willful or inadvertent), whether in contract, tort or otherwise, including alleged breaches of this Agreement and causes of action alleged to arise from allegations that breach of this Agreement also constitute a violation of a statute, including the Act, shall not exceed in total the amount SBC-13STATE or SCC has charged or would have charged to the other Party for the affected Interconnection, Resale Services, Network Elements, functions, facilities, products and service(s) that were not performed or were improperly performed.

13.2 Except as otherwise expressly provided in specific appendices, in the case of any Loss alleged or claimed by a Third Party to have arisen out of the negligence or willful misconduct of any Party, each Party shall bear, and its obligation shall be limited to, that portion (as mutually agreed to by the Parties or as otherwise established) of the resulting expense caused by its own negligence or willful misconduct or that of its agents, servants, contractors, or others acting in aid or concert with it.

13.3 A Party may, in its sole discretion, provide in its tariffs and contracts with its End Users, customers, or Third Parties that relate to any Interconnection, Resale Services, Network Elements, functions, facilities, products and services provided or contemplated under this Agreement that, to the maximum extent permitted by Applicable Law, such Party shall not be liable to such End User, customer, or Third Party for (i) any Loss relating to or arising out of this Agreement, whether in contract, tort or otherwise, that exceeds the amount such Party would have charged the End User or Third Party for the Interconnection, Resale Services, Network Elements, functions, facilities, products and services that gave rise to such Loss and (ii) any Consequential Damages. If a Party elects not to place in its tariffs or contracts such limitation(s) of liability, and the other Party incurs a Loss as a result thereof, the first Party shall indemnify and reimburse the other Party for that portion of the Loss that would have been limited had the first Party included in its tariffs and contracts the limitation(s) of liability described in this Section 13.3.

13.4 Neither SCC nor SBC-13STATE shall be liable to the other Party for any Consequential Damages suffered by the other Party, regardless of the form of action, whether in contract, warranty, strict liability, tort or otherwise, including negligence of any kind, whether active or passive (and including alleged breaches

of this Agreement and causes of action alleged to arise from allegations that breach of this Agreement constitutes a violation of the Act or other statute), and regardless of whether the Parties knew or had been advised of the possibility that such damages could result in connection with or arising from anything said, omitted, or done hereunder or related hereto, including willful acts or omissions; *provided that the foregoing shall not limit a Party's obligation under Section 14.2* to indemnify, defend, and hold the other Party harmless against any amounts payable to a Third Party, including any Losses, and Consequential Damages of such Third Party; provided, however, that nothing in this Section 13.4 shall impose indemnity obligations on a Party for any Loss or Consequential Damages suffered by a Party's End User in connection with any affected Interconnection, Resale Services, Network Elements, functions, facilities, products and services. Except as provided in the prior sentence, each Party hereby releases and holds harmless the other Party (and such other Party's Affiliates, and their respective officers, directors, employees and agents) from any such Claim.

13.5 Neither Party shall be liable for damages to an End User's or customer's premises resulting from the furnishing of any Interconnection, Resale Services, Network Elements, functions, facilities, products or services, including, if applicable, the installation and removal of equipment and associated wiring, unless the damage is caused by a Party's gross negligence or willful misconduct. Neither Party guarantees nor makes any warranty with respect to Interconnection, Resale Services, Network Elements, functions, facilities, products or services when used in an explosive atmosphere.

13.6 SCC hereby releases **SBC-13STATE** from any and all liability for damages due to errors or omissions in SCC's customers' End User listing information as provided by SCC to **SBC-13STATE** under this Agreement, including any errors or omissions occurring in SCC's End User listing information as it appears in the White Pages directory, including, but not limited to, special, indirect, Consequential, punitive or incidental damages.

13.7 **SBC-13 STATE** shall not be liable to SCC, its customer(s), the 911 calling party(ies), or any other Person for any Loss alleged to arise out of the provision of access to 911 service or any errors, interruptions, defects, failures or malfunctions of 911 service and all equipment and data processing systems associated therewith.

13.8 This Section 13 is not intended to exempt any Party from all liability under this Agreement, but only to set forth the scope of liability agreed to and the type of damages that are recoverable. Both Parties acknowledge that they negotiated regarding alternate limitation of liability provisions but that such provisions would have altered the cost, and thus the price, of providing the Interconnection, Resale Services, Network Elements, functions, facilities, products and services available hereunder, and no different pricing reflecting different costs and different limits of liability was agreed to.

violated by such Interconnection or unbundling and/or combining of Network Elements (including combining with SCC's Network Elements) in SBC-13STATE's network or SCC's use of other functions, facilities, products or services furnished under this Agreement. Any licenses or warranties for Intellectual Property rights associated with unbundled network elements are vendor licenses and warranties and are a part of the Intellectual Property rights SBC-13STATE agrees in Section 14.5.1.1 to use its best efforts to obtain.

14.5.3 Neither Party does or shall indemnify, defend or hold the other Party harmless, nor be responsible for indemnifying or defending, or holding the other Party harmless, for any Claims or Losses for actual or alleged infringement of any Intellectual Property right or interference with or violation of any contract right that arises out of, is caused by, or relates to Interconnection and unbundling and/or combining Network Elements or use of other functions, facilities, products or services furnished under this Agreement. Any indemnities for Intellectual Property rights associated with unbundled network elements shall be vendor's indemnities and are a part of the Intellectual Property rights SBC-13STATE agrees in Section 14.5.1.1 to use its best efforts to obtain.

14.6 The Parties shall reimburse each other for damages to their facilities utilized to provide Interconnection or Unbundled Network Elements hereunder caused by the negligence or willful act of the other Party, its agents or subcontractors or the other Party's End User or resulting from the other Party's improper use of the facilities, or due to malfunction of any facilities, functions, products, services or equipment provided by any person or entity other than a Party. Upon reimbursement for damages, the Parties will cooperate with each other in prosecuting a claim against the person causing such damage. The Party not suffering damage to its facilities shall be subrogated to the right of recovery by the other Party for the damages to the extent of such payment.

14.7 Indemnification Procedures

14.7.1 Whenever a claim shall arise for indemnification under this Section 14, the relevant Indemnified Party, as appropriate, shall promptly notify the Indemnifying Party and request in writing the Indemnifying Party to defend the same. Failure to so notify the Indemnifying Party shall not relieve the Indemnifying Party of any liability that the Indemnifying Party might have, except to the extent that such failure prejudices the Indemnifying Party's ability to defend such claim.

14.7.2 The Indemnifying Party shall have the right to defend against such liability or assertion, in which event the Indemnifying Party shall give written notice

to the Indemnified Party of acceptance of the defense of such claim and the identity of counsel selected by the Indemnifying Party.

14.7.3 Until such time as Indemnifying Party provides written notice of acceptance of the defense of such claim, the Indemnified Party shall defend such claim, at the expense of the Indemnifying Party, subject to any right of the Indemnifying Party to seek reimbursement for the costs of such defense in the event that it is determined that Indemnifying Party had no obligation to indemnify the Indemnified Party for such claim.

14.7.4 Upon accepting the defense, the Indemnifying Party shall have exclusive right to control and conduct the defense and settlement of any such claims, subject to consultation with the Indemnified Party. So long as the Indemnifying Party is controlling and conducting the defense, the Indemnifying Party shall not be liable for any settlement by the Indemnified Party unless such Indemnifying Party has approved such settlement in advance and agrees to be bound by the agreement incorporating such settlement.

14.7.5 At any time, an Indemnified Party shall have the right to refuse a compromise or settlement, and, at such refusing Party's cost, to take over such defense; provided that, in such event the Indemnifying Party shall not be responsible for, nor shall it be obligated to indemnify the refusing Party against, any cost or liability in excess of such refused compromise or settlement.

14.7.6 With respect to any defense accepted by the Indemnifying Party, the Indemnified Party will be entitled to participate with the Indemnifying Party in such defense if the claim requests equitable relief or other relief that could affect the rights of the Indemnified Party, and shall also be entitled to employ separate counsel for such defense at such Indemnified Party's expense.

14.7.7 If the Indemnifying Party does not accept the defense of any indemnified claim as provided above, the Indemnified Party shall have the right to employ counsel for such defense at the expense of the Indemnifying Party.

14.7.8 In the event of a failure to assume the defense, the Indemnified Party may negotiate a settlement, which shall be presented to the Indemnifying Party. If the Indemnifying Party refuses to agree to the presented settlement, the Indemnifying Party may take over the defense. If the Indemnifying Party refuses to agree to the presented settlement and refuses to take over the defense, the Indemnifying Party shall be liable for any reasonable cash settlement not involving any admission of liability by the Indemnifying Party, though such settlement may have been made by the Indemnified

Party without approval of the Indemnifying Party, it being the Parties' intent that no settlement involving a non-monetary concession by the Indemnifying Party, including an admission of liability by such Party, shall take effect without the written approval of the Indemnifying Party.

14.7.9 Each Party agrees to cooperate and to cause its employees and agents to cooperate with the other Party in the defense of any such claim and the relevant records of each Party shall be available to the other Party with respect to any such defense, subject to the restrictions and limitations set forth in Section 20.

15. REMEDIES

15.1 Attachment Performance Measures provides monetary payments for failure to meet specified performance standards. The provisions of that Attachment constitute the sole obligation of SBC-13STATE to pay damages or financial penalties for failure to meet specified performance standards identified in such Attachment and all other Attachments to this Agreement.

15.2 Except as otherwise provided in this Agreement, no remedy set forth herein is intended to be exclusive and each and every remedy shall be cumulative and in addition to any other rights or remedies now or hereafter existing under Applicable Law or otherwise.

16. INTELLECTUAL PROPERTY

16.1 Any Intellectual Property that originates from or is developed by a Party shall remain in the exclusive ownership of that Party.

17. NOTICES

17.1 Subject to Section 17.2, notices given by one Party to the other Party under this Agreement shall be in writing (unless specifically provided otherwise herein), and unless otherwise expressly required by this Agreement to be delivered to another representative or point of contact, shall be

17.1.1 delivered personally;

17.1.2 delivered by express overnight delivery service;

17.1.3 mailed, via certified mail or first class U.S. Postal Service, with postage prepaid, and a return receipt requested; or

17.1.4 delivered by facsimile; provided that a paper copy is also sent by a method described in (a), (b) or (c) of this Section 17.

17.1.5 Notices will be deemed given as of the earliest of:

17.1.5.1 the date of actual receipt,

17.1.5.2 the next Business Day when sent via express overnight delivery service,

17.1.5.3 five (5) days after mailing in the case of first class or certified U.S. Postal Service, or

17.1.5.4 on the date set forth on the confirmation produced by the sending facsimile machine when delivered by facsimile prior to 5:00 p.m. in the recipient's time zone, but the next Business Day when delivered by facsimile at 5:00 p.m. or later in the recipient's time zone.

17.1.6 Notices will be addressed to the Parties as follows:

NOTICE CONTACT	SCC CONTACT	SBC-13STATE CONTACT
NAME/TITLE	Gary A. Klug, Director – Regulatory Compliance	Contract Administration ATTN: Notices Manager
STREET ADDRESS	6285 Lookout Road	311 S. Akard, 9th Floor Four Bell Plaza
CITY, STATE, ZIP CODE	Boulder, CO 80301	Dallas, TX 75202-5398
FACSIMILE NUMBER	303-581-0900	214-464-2006

17.1.7 Either Party may unilaterally change its designated contact, address, telephone number and/or facsimile number for the receipt of notices by giving written notice to the other Party in compliance with this Section. Any notice to change the designated contact, address, telephone and/or facsimile number for the receipt of notices shall be deemed effective ten (10) days following receipt by the other Party.

17.2 SBC-8STATE communicates official information to CLECs via its Accessible Letter notification process. This process covers a variety of subjects, including updates on products/services promotions; deployment of new products/services; modifications and price changes to existing products/services; cancellation or retirement of existing products/services; and operational issues.

17.3 In the SBC-8STATES, SCC may elect in writing to receive Accessible Letter notification via electronic mail ("e-mail") distribution, either in lieu of or in addition to United States Postal Service (postage prepaid) distribution. SCC acknowledges that United States Postal Service (postage prepaid) delivery will

delay receipt of the information for a minimum of three (3) to five (5) days from the date the information is made available via e-mail. Accessible Letter notification via e-mail will be deemed given as of the earlier of the date of actual receipt and the date set forth on the e-mail receipt.

17.4 In SBC-8STATE, SCC may designate an unlimited number of recipients for Accessible Letter notification via e-mail, but SCC is limited to designating a maximum of four (4) recipients (in addition to the SCC contact designated in Section 17.1) for Accessible Letter notification via United States Postal Service (postage prepaid).

17.5 In SBC-8STATE, SCC shall submit a completed Notices/Accessible Letter Recipient Change Request Form (available on the applicable SBC-8STATE's CLEC Handbook website) to the individual specified on that form to designate in writing each individual (other than the SCC contact designated in Section 17.1) to whom SCC requests Accessible Letter notification be sent, whether via e-mail or United States Postal Service. SCC shall submit a completed Notices / Accessible Letter Recipient Change Request Form to add, remove or change recipient information for any SCC recipient of Accessible Letters (other than the SCC contact designated in Section 17.1). Any completed Notices/Accessible Letter Recipient Change Request Form shall be deemed effective ten (10) days following receipt by SBC-8STATE.

17.6 **SBC-SWBT only:**

17.6.1 SBC-SWBT shall provide a facsimile number to SCC for the submission of requests for Resale Services and Network Elements under this Agreement; SCC shall provide SBC-SWBT with a facsimile number for notices from SBC-SWBT relating to requests for Resale Services and Network Elements under this Agreement.

17.7 **SBC-AMERITECH only:**

17.7.1 SBC-AMERITECH communicates official information to CLECs via its TCNet notification process. This process covers a variety of subjects, including updates on products/services promotions; deployment of new products/services; modifications and price changes to existing products/services; cancellation or retirement of existing products/services; and operational issues.

18. PUBLICITY AND USE OF TRADEMARKS OR SERVICE MARKS

18.1 Neither Party nor its subcontractors or agents shall use in any advertising or sales promotion, press releases, or other publicity matters any endorsements, direct or indirect quotes, or pictures that imply endorsement by the other Party or any of its

employees without such first Party's prior written approval. The Parties will submit to each other for written approval, prior to publication, all publicity matters that mention or display one another's name and/or marks or contain language from which a connection to said name and/or marks may be inferred or implied; the Party to whom a request is directed shall respond promptly. Nothing herein, however, shall be construed as preventing either Party from publicly stating the fact that it has executed this Agreement with the other Party.

18.2 Nothing in this Agreement shall grant, suggest, or imply any authority for one Party to use the name, trademarks, service marks, logos, proprietary trade dress or trade names of the other Party in any advertising, press releases, publicity matters, marketing and/or promotional materials or for any other commercial purpose without prior written approval from such other Party.

19. NO LICENSE

19.1 Except at otherwise expressly provided in this Agreement, no license under patents, copyrights or any other Intellectual Property right (other than the limited license to use consistent with the terms, conditions and restrictions of this Agreement) is granted by either Party or shall be implied or arise by estoppel with respect to any transactions contemplated under this Agreement.

20. CONFIDENTIALITY

20.1 All information, including specifications, microfilm, photocopies, magnetic disks, magnetic tapes, audit information, models, system interfaces, forecasts, computer programs, software, documentation, drawings, sketches, models, samples, tools, technical information, data, employee records, maps, financial reports, and market data shall be deemed "Confidential" or "Proprietary" (**collectively "Proprietary Information"**) if:

20.1.1 Furnished or made available or otherwise disclosed by one Party (the **"Disclosing Party"**) or its agent, employee, representative or Affiliate to the other Party (the **"Receiving Party"**) or its agent, employee, representative or Affiliate dealing with End User-specific, customer-specific, facility-specific, or usage-specific information, other than End User information communicated for the purpose of publication or directory database inclusion, 911, call processing, billing or settlement or for such other purposes as mutually agreed upon;

20.1.2 In written, graphic, electromagnetic, or other tangible form and marked at the time of delivery as "Confidential" or "Proprietary;"; or

20.1.3 Communicated orally and declared to the Receiving Party at the time of delivery to be "Confidential" or "Proprietary", and which shall be

summarized in writing and marked "Confidential" or "Proprietary" and delivered to the Receiving Party within ten (10) days following such disclosure; and

20.1.4 Any portion of any notes, analyses, data, compilations, studies, interpretations or other documents prepared by any Receiving Party to the extent the same contain, reflect, are derived from, or are based upon, any of the information described in this Section 20, unless such information contained or reflected in such notes, analyses, etc. is so commingled with the Receiving Party's information that disclosure could not possibly disclose the underlying proprietary or confidential information (such portions of such notes, analyses, etc. referred to herein as **"Derivative Information"**).

20.2 Proprietary Information Shall be Held in Confidence

20.2.1 Each Receiving Party agrees that:

(a) all Proprietary Information communicated to it or any of its agents, employees, representatives and Affiliates in connection with this Agreement shall be held in confidence to the same extent as such Receiving Party holds its own confidential information of like importance; provided that such Receiving Party and its agents, employees, representatives and Affiliates shall not use less than a reasonable standard of care in maintaining the confidentiality of such information;

(b) it will not, and it will not permit any of its agents, employees, representatives and Affiliates to disclose such Proprietary Information to any Third Party;

(c) it will disclose Proprietary Information only to those of its agents, employees, representatives and Affiliates who have a need for it in connection with the use or provision of any services required to fulfill this Agreement; and

(d) it will, and will cause each of its agents, employees, representatives and Affiliates, to use such Proprietary Information only to perform its obligations under this Agreement or to use services provided by the Disclosing Party hereunder and for no other purpose, including its own marketing purposes.

20.2.2 A Receiving Party may disclose Proprietary Information of a Disclosing Party to the Receiving Party's agents, employees, representatives and Affiliates who need to know such information to perform their obligations

under this Agreement; provided that before disclosing any Proprietary Information to any agent, employee, representative or Affiliate, the Receiving Party shall notify such agent, employee, representative or Affiliate of such Party's obligation to comply with this Agreement. Any Receiving Party so disclosing Proprietary Information shall be jointly and severally liable for any breach of this Agreement by any of its agents, employees, representatives and Affiliates and such Receiving Party agrees, at its sole expense, to use its reasonable efforts (including court proceedings) to restrain its agents, employees, representatives and Affiliates from any prohibited or unauthorized disclosure or use of the Proprietary Information. Each Receiving Party making such disclosure shall notify the Disclosing Party as soon as possible if it has knowledge of a breach of this Agreement in any material respect. A Disclosing Party shall not disclose Proprietary Information directly to an agent, employee, representative or Affiliate of the Receiving Party without the prior written authorization of the Receiving Party.

20.2.3 Proprietary Information shall not be reproduced by any Receiving Party in any form except to the extent (i) necessary to comply with the provisions of Section 20.5 and (ii) reasonably necessary to perform its obligations under this Agreement. All such reproductions shall bear the same copyright and proprietary rights notices as are contained in or on the original.

20.3 Unless otherwise agreed, the obligations of confidentiality and non-use set forth in this Agreement do not apply to such Proprietary Information that:

20.3.1 Was at the time of receipt, already known to the Receiving Party, free of any obligation to keep confidential and evidenced by written records prepared prior to delivery by the Disclosing Party; or

20.3.2 Is, or becomes publicly known through no wrongful act of the Receiving Party; or

20.3.3 Is rightfully received from a Third Party having no direct or indirect secrecy or confidentiality obligation to the Disclosing Party with respect to such information; provided that such Receiving Party has exercised commercially reasonable efforts to determine whether such Third Party has any such obligation; or

20.3.4 Is independently developed by an agent, employee representative or Affiliate of the Receiving Party and such Party is not involved in any manner with the provision of services pursuant to this Agreement and does not have any direct or indirect access to the Proprietary Information; or

20.3.5 Is disclosed to a Third Party by the Disclosing Party without similar restrictions on such Third Party's rights; or

20.3.6 Is approved for release by written authorization of the Disclosing Party, but only to the extent of the authorization granted; or

20.3.7 Is required to be made public by the Receiving Party pursuant to Applicable Law or regulation, provided that such production or disclosure shall have been made in accordance with Section 20.5.

20.4 Disclosure of Proprietary Information to a Governmental Authority

20.4.1 If a Receiving Party is required by any Governmental Authority or by Applicable Law to disclose any Proprietary Information, then such Receiving Party shall provide the Disclosing Party with written notice of such requirement as soon as possible, and in no event later than five (5) calendar days after receipt of such requirement, and prior to such disclosure. Upon receipt of written notice of the requirement to disclose Proprietary Information, the Disclosing Party at its expense, may then either seek appropriate protective relief in advance of such requirement to prevent all or part of such disclosure or waive the Receiving Party's compliance with this Section 20.4 with respect to all or part of such requirement.

20.4.2 The Receiving Party shall use all commercially reasonable efforts to cooperate with the Disclosing Party in attempting to obtain any protective relief which such Disclosing Party chooses to seek pursuant to this Section 20.4. In the absence of such relief, if the Receiving Party is legally compelled to disclose any Proprietary Information, then the Receiving Party shall exercise all commercially reasonable efforts to preserve the confidentiality of the Proprietary information, including cooperating with the Disclosing Party to obtain an appropriate order for protective relief or other reliable assurance that confidential treatment will be accorded the Proprietary Information.

20.5 If the Receiving Party wishes to disclose or provide to a Commission, the FCC or any other governmental authority any Proprietary Information of the Disclosing Party, the Receiving Party shall not make such disclosure of Proprietary Information except in strict accordance with Section 20.4.1.

20.6 Return of Proprietary Information

20.6.1 All Proprietary Information, other than Derivative Information, shall remain the property of the Disclosing Party, and all documents or other tangible media delivered to the Receiving Party that embody such Proprietary Information shall be, at the option of the Disclosing Party,

either promptly returned to Disclosing Party or destroyed, except as otherwise may be required from time to time by Applicable Law (in which case the use and disclosure of such Proprietary Information will continue to be subject to this Agreement), upon the earlier of (i) the date on which the Receiving Party's need for it has expired and (ii) the expiration or termination of this Agreement.

20.6.2 At the request of the Disclosing Party, any Derivative Information shall be, at the option of the Receiving Party, either promptly returned to the Disclosing Party or destroyed, except as otherwise may be required from time to time by Applicable Law (in which case the use and disclosure of such Derivative Information will continue to be subject to this Agreement), upon the earlier of (i) the date on which the Receiving Party's need for it has expired and (ii) the expiration or termination of this Agreement.

20.6.3 The Receiving Party may at any time either return the Proprietary Information to the Disclosing Party or destroy such Proprietary Information. If the Receiving Party elects to destroy Proprietary Information, all copies of such information shall be destroyed and upon the written request of the Disclosing Party, the Receiving Party shall provide to the Disclosing Party written certification of such destruction. The destruction or return of Proprietary Information shall not relieve any Receiving Party of its obligation to continue to treat such Proprietary Information in the manner required by this Agreement.

20.7 Notwithstanding any other provision of this Agreement, the Proprietary Information provisions of this Agreement shall apply to all information furnished by either Party to the other in furtherance of the purpose of this Agreement, even if furnished before the date of this Agreement and each Party's obligation to safeguard Proprietary Information disclosed prior to expiration or termination of this Agreement will survive such expiration or termination.

20.8 Pursuant to Section 222(b) of the Act, both Parties agree to limit their use of Proprietary Information received from the other to the permitted purposes identified in the Act.

20.9 Each Party has the right to refuse to accept any Confidential Information under this Agreement, and nothing herein shall obligate either Party to disclose to the other Party any particular information.

20.10 The Parties agree that an impending or existing violation of any provision of this Section 20 would cause the Disclosing Party irreparable injury for which it would have no adequate remedy at law, and agree that Disclosing Party shall be entitled to obtain immediate injunctive relief prohibiting such violation, in addition to any other rights and remedies available to it at law or in equity, including both specific

performance and monetary damages. In the event of any breach of this Section 20 for which legal or equitable relief is sought, all reasonable attorney's fees and other reasonable costs associated therewith shall be recoverable by the prevailing Party.

21. INTERVENING LAW

21.1 This Agreement is entered into as a result of both private negotiation between the Parties and the incorporation of some of the results of arbitration by the Commission(s). In the event that any of the rates, terms and/or conditions herein, or any of the laws or regulations that were the basis or rationale for such rates, terms and/or conditions in the Agreement, are invalidated, modified or stayed by any action of any state or federal regulatory or legislative bodies or courts of competent jurisdiction, including but not limited to any decision by the Eighth Circuit relating to any of the costing/pricing rules adopted by the FCC in its First Report and Order, *In re: Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, 11 FCC Rcd 15499 (1996)(e.g., Section 51.501, et seq.), upon review and remand from the United States Supreme Court, in *AT&T Corp. v. Iowa Utilities Bd.*, 119 S. Ct. 721 (1999) or *Ameritech v. FCC*, No. 98-1381, 1999 WL 116994, 1999 Lexis 3671 (June 1, 1999), the affected provision shall be immediately invalidated, modified, or stayed, consistent with the action of the legislative body, court, or regulatory agency upon the written request of either Party. In such event, the Parties shall expend diligent efforts to arrive at an agreement regarding the appropriate conforming modifications to the Agreement. If negotiations fail, disputes between the Parties concerning the interpretation of the actions required or provisions affected by such governmental actions shall be resolved pursuant to the dispute resolution process provided for in this Agreement. Without limiting the general applicability of the foregoing, the Parties acknowledge that on January 25, 1999, the United States Supreme Court issued its opinion in *AT&T Corp. v. Iowa Utilities Bd.*, 119 S. Ct. 721 (1999) and on June 1, 1999, the United States Supreme Court issued its opinion in *Ameritech v. FCC*, No. 98-1381, 1999 WL 116994, 1999 Lexis 3671 (1999). In addition, the Parties acknowledge that on November 5, 1999, the FCC issued its Third Report and Order and Fourth Further Notice of Proposed Rulemaking in CC Docket No. 96-96 (FCC 99-238), including the FCC's Supplemental Order issued *In the Matter of the Local Competition Provisions of the Telecommunications Act of 1996*, in CC Docket No. 96-98 (FCC 99-370) (rel. November 24, 1999), portions of which become effective thirty (30) days following publication of such Order in the Federal Register (February 17, 2000) and other portions of which become effective 120 days following publication of such Order in the Federal Register (May 17, 2000). The Parties further acknowledge and agree that by executing this Agreement, neither Party waives any of its rights, remedies, or arguments with respect to such decisions and any remand thereof, including its right to seek legal review or a stay pending appeal of such decisions or its rights under this Intervening Law paragraph.

22. GOVERNING LAW

22.1 Unless otherwise provided by Applicable Law, this Agreement shall be governed by and construed in accordance with the Act, the FCC Rules and Regulations interpreting the Act and other applicable federal law. To the extent that federal law would apply state law in interpreting this Agreement, the domestic laws of the state in which the Interconnection, Resale Services, Network Elements, functions, facilities, products and services at issue are furnished or sought shall apply, without regard to that state's conflict of laws principles. The Parties submit to personal jurisdiction in Little Rock, Arkansas; San Francisco, California; New Haven, Connecticut; Chicago, Illinois; Indianapolis, Indiana; Topeka, Kansas; Detroit, Michigan; St. Louis, Missouri; Reno, Nevada; Columbus, Ohio; Oklahoma City, Oklahoma; Dallas, Texas and Milwaukee, Wisconsin, and waive any and all objection to any such venue.

23. REGULATORY APPROVAL

23.1 The Parties understand and agree that this Agreement and any amendment or modification hereto will be filed with the Commission(s) for approval in accordance with Section 252 of the Act and may thereafter be filed with the FCC. The Parties believe in good faith and agree that the services to be provided under this Agreement are in the public interest. Each Party covenants and agrees to fully support approval of this Agreement by the Commission(s) or the FCC under Section 252 of the Act without modification.

24. CHANGES IN END USER LOCAL EXCHANGE SERVICE PROVIDER SELECTION

24.1 **Applies to SBC-12STATE only**

24.1.1 Each Party will abide by applicable federal and state laws and regulations in obtaining End User authorization prior to changing an End User's Local Exchange Carrier to itself and in assuming responsibility for any applicable charges as specified in the FCC's rules regarding Subscriber Carrier Selection Changes (47 CFR 64.1100 through 64.1170) and any applicable state regulation. . Each Party shall deliver to the other Party a representation of authorization that applies to all orders submitted by a Party under this Agreement requiring a LEC change. A Party's representation of authorization shall be delivered to the other Party prior to the first order submitted to the other Party. Each Party shall retain on file all applicable letters and other documentation of authorization relating to its End User's selection of such Party as its LEC, which documentation shall be available for inspection by the other Party at its request during normal business hours and at no charge.

24.1.2 Only an End User can initiate a challenge to a change in its LEC. If an End User notifies one Party that the End User requests local exchange service,

and the other Party is such End User's LEC, then the Party receiving such request shall be free to immediately access such End User's CPNI subject to the requirements of the applicable Appendix OSS restricting access to CPNI in order to immediately provide service to such End User.

24.1.3 When an End User changes or withdraws authorization from its LEC, each Party shall release End User-specific facilities belonging to the ILEC in accordance with the End User's direction or that of the End User's authorized agent. Further, when an End User abandons its premise (that is, its place of business or domicile), SBC-12STATE is free to reclaim the unbundled Network Element facilities for use by another End User and is free to issue service orders required to reclaim such facilities.

24.1.4 Neither Party shall be obligated by this Agreement to investigate any allegations of unauthorized changes in local exchange service (slamming) at the request of the other Party; provided, however, that each Party shall cooperate with any investigation of a complaint alleging an unauthorized change in local exchange service at the request of the FCC or the applicable state Commission. If SBC-13STATE, at the request of CLEC, agrees to investigate an alleged incidence of slamming, SBC-13STATE shall charge CLEC an investigation fee as set forth in Appendix Pricing in the "Other (Resale)" category, listed as "Slamming Investigation Fee."

24.2 Applies to SNET only

24.2.1 The Parties agree that CLEC will not submit a Local Exchange Carrier order for an End User to the Local Service Provider currently serving that End User without proper authorization from that End User, as required by the FCC in Subpart K, Part 64 rules and regulations and by the DPUC in its applicable rules and regulations. SNET's wholesale tariff, Section 18, further documents requirements for Local Exchange Carrier changes and required End User authorizations.

24.2.2 The Parties agree to the re-use of existing network facilities when an End User changes its provider of local exchange service and the network facilities are provided by the same network provider.

25. COMPLIANCE AND CERTIFICATION

25.1 Each Party shall comply at its own expense with all Applicable Laws that relate to that Party's obligations to the other Party under this Agreement. Nothing in this Agreement shall be construed as requiring or permitting either Party to contravene any mandatory requirement of Applicable Law.

25.2 Each Party warrants that it has obtained all necessary state certification required in a state covered by this Agreement prior to ordering any Interconnection, Resale Services, Network Elements, functions, facilities, products and services for that state from the other Party pursuant to this Agreement. Upon request, each Party shall provide proof of certification.

25.3 Each Party shall be responsible for obtaining and keeping in effect all approvals from, and rights granted by, Governmental Authorities, building and property owners, other carriers, and any other Third Parties that may be required in connection with the performance of its obligations under this Agreement.

25.4 Each Party represents and warrants that any equipment, facilities or services provided to the other Party under this Agreement comply with the CALEA.

26. LAW ENFORCEMENT

26.1 SBC-12 STATE and SCC shall reasonably cooperate with the other Party in handling law enforcement requests as follows:

26.1.1 Intercept Devices:

26.1.1.1 Local and federal law enforcement agencies periodically request information or assistance from local telephone service providers. When either Party receives a request associated with an End User of the other Party, it shall refer such request to the Party that serves such End User, unless the request directs the receiving Party to attach a pen register, trap-and-trace or form of intercept on the Party's facilities, in which case that Party shall comply with any valid request.

26.1.2. Subpoenas:

26.1.2.1 If a Party receives a subpoena for information concerning an End User the Party knows to be an End User of the other Party, it shall refer the subpoena to the Requesting Party with an indication that the other Party is the responsible company, unless the subpoena requests records for a period of time during which the receiving Party was the End User's service provider, in which case that Party will respond to any valid request.

26.1.3 Emergencies:

26.1.3.1 If a Party receives a request from a law enforcement agency for a temporary number change, temporary disconnect, or one-way

denial of outbound calls by the receiving Party's switch for an End User of the other Party, that Receiving Party will comply with a valid emergency request. However, neither Party shall be held liable for any claims or Losses arising from compliance with such requests on behalf of the other Party's End User and the Party serving such End User agrees to indemnify and hold the other Party harmless against any and all such claims or Losses.

26.2 SNET and SCC shall reasonably cooperate with the other Party in handling law enforcement requests as follows:

26.2.1 Each of the Parties agree to comply with the applicable state and federal law enforcement authorities, laws, and requirements, including but not limited to, the Communications Assistance for Law Enforcement Act (CALEA) and to report to applicable State and Federal law enforcement authorities as required by law, the Telecommunications Services and related information provided by each of the Parties in Connecticut.

27. RELATIONSHIP OF THE PARTIES/INDEPENDENT CONTRACTOR

27.1 Each Party is an independent contractor, and has and hereby retains the right to exercise full control of and supervision over its own performance of its obligations under this Agreement and retains full control over the employment, direction, compensation and discharge of its employees assisting in the performance of such obligations. Each Party and each Party's contractor(s) shall be solely responsible for all matters relating to payment of such employees, including the withholding or payment of all applicable federal, state and local income taxes, social security taxes and other payroll taxes with respect to its employees, as well as any taxes, contributions or other obligations imposed by applicable state unemployment or workers' compensation acts and all other regulations governing such matters. Each Party has sole authority and responsibility to hire, fire and otherwise control its employees.

27.2 Nothing contained herein shall constitute the Parties as joint venturers, partners, employees or agents of one another, and neither Party shall have the right or power to bind or obligate the other. Nothing herein will be construed as making either Party responsible or liable for the obligations and undertakings of the other Party. Except for provisions herein expressly authorizing a Party to act for another, nothing in this Agreement shall constitute a Party as a legal representative or agent of the other Party, nor shall a Party have the right or authority to assume, create or incur any liability or any obligation of any kind, express or implied, against or in the name or on behalf of the other Party unless otherwise expressly permitted by such other Party. Except as otherwise expressly provided in this Agreement, no Party undertakes to perform any obligation of the other Party,

whether regulatory or contractual, or to assume any responsibility for the management of the other Party's business.

28. NO THIRD PARTY BENEFICIARIES; DISCLAIMER OF AGENCY

28.1 This Agreement is for the sole benefit of the Parties and their permitted assigns, and nothing herein expressed or implied shall create or be construed to create any Third Party beneficiary rights hereunder. This Agreement shall not provide any Person not a party hereto with any remedy, claim, liability, reimbursement, cause of action, or other right in excess of those existing without reference hereto.

29. ASSIGNMENT

29.1 Neither Party may assign or transfer (whether by operation of law or otherwise) this Agreement (or any rights or obligations hereunder) to a third person without the prior written consent of the other Party; provided that a Party may assign or transfer this Agreement to its Affiliate by providing ninety (90) days' prior written notice to the other Party of such assignment or transfer; provided, further, that such assignment is not inconsistent with Applicable Law (including the Affiliate's obligation to obtain proper Commission certification and approvals) or the terms and conditions of this Agreement. Any attempted assignment or transfer that is not permitted is void ab initio.

29.2 As a condition of any assignment or transfer of this Agreement (or any rights hereunder) that is permitted under or consented to pursuant to this Section 29, the Parties agree that any change, modification or other activity required to accommodate or recognize the successor to or assignee of a Party shall be a Change and shall be subject to Section 4.9. Neither Party shall have an obligation to proceed with such activities nor shall any otherwise acceptable assignment or transfer be effective against either Party until the Parties agree upon the charges that apply to such Change.

29.3 If during the Term, **SBC-13STATE** sells, assigns or otherwise transfers any ILEC Territory or ILEC Assets to a person other than an Affiliate or subsidiary, **SBC-13STATE** shall provide SCC not less than ninety (90) days prior written notice of such sale, assignment or transfer. Upon the consummation of such sale, assignment or transfer, SCC acknowledges that **SBC-13STATE** shall have no further obligations under this Agreement with respect to the ILEC Territories and/or ILEC Assets subject to such sale, assignment or transfer, and that SCC must establish its own Section 251 and 252 arrangement with the successor to such ILEC Territory and/or ILEC Assets.

30. DELEGATION TO AFFILIATE

30.1 Each Party may without the consent of the other Party fulfill its obligations under this Agreement by itself or may cause its Affiliate(s) to take some or all of such actions to fulfill such obligations. Upon such delegation, the Affiliate shall become a primary obligor hereunder with respect to the delegated matter, but such delegation shall not relieve the delegating Party of its obligations as co-obligor hereunder. Any Party which elects to perform its obligations through an Affiliate shall cause its Affiliate to take all action necessary for the performance of such Party's obligations hereunder. Each Party represents and warrants that if an obligation under this Agreement is to be performed by an Affiliate, such Party has the authority to cause such Affiliate to perform such obligation and such Affiliate will have the resources required to accomplish the delegated performance.

31. SUBCONTRACTING

31.1 If either Party retains or engages any subcontractor to perform any of that Party's obligations under this Agreement, each Party will remain fully responsible for the performance of this Agreement in accordance with its terms, including any obligations either Party performs through subcontractors.

31.2 Each Party will be solely responsible for payments due that Party's subcontractors.

31.3 No subcontractor will be deemed a Third Party beneficiary for any purposes under this Agreement.

31.4 No contract, subcontract or other agreement entered into by either Party with any Third Party in connection with the provision of Interconnection, Resale Services, Network Elements, functions, facilities, products and services hereunder will provide for any indemnity, guarantee or assumption of liability by the other Party to this Agreement with respect to such arrangement, except as consented to in writing by the other Party.

31.5 Any subcontractor that gains access to CPNI or Proprietary Information covered by this Agreement shall be required by the subcontracting Party to protect such CPNI or Proprietary Information to the same extent the subcontracting Party is required to protect such CPNI or Proprietary Information under the terms of this Agreement.

32. HAZARDOUS SUBSTANCES AND RESPONSIBILITY FOR ENVIRONMENTAL CONTAMINATION

32.1 Each Party will be solely responsible at it own expense for the proper handling, storage, transport, treatment, disposal and use of all Hazardous Substances by such Party and its contractors and agents. "Hazardous Substances" includes those substances:

32.1.1 included within the definition of hazardous substance, hazardous waste, hazardous material, toxic substance, solid waste or pollutant or contaminant under any Applicable Law, and

32.1.2 listed by any governmental agency as a hazardous substance.

32.2 SCC will in no event be liable to **SBC-13 STATE** for any costs whatsoever resulting from the presence or release of any environmental hazard, including Hazardous Substances, that SCC did not introduce to the affected work location. **SBC-13STATE** will indemnify, defend (at SCC's request) and hold SCC and each of its officers, directors and employees harmless from and against any Loss that arises out of or results from:

32.2.1 Any environmental hazard that **SBC-13STATE**, its contractors or agents introduce to the work locations, or

32.2.2 The presence or release of any environmental hazard for which **SBC-13STATE** is responsible under Applicable Law.

32.3 **SBC-13STATE** will in no event be liable to SCC for any costs whatsoever resulting from the presence or release of any environmental hazard that **SBC-13STATE** did not introduce to the affected work location. SCC will indemnify, defend (at **SBC-13STATE**'s request) and hold **SBC-13STATE** and each of its officers, directors and employees harmless from and against any Loss that arises out of or results from:

32.3.1 any environmental hazard that SCC, its contractors or agents introduce to the work locations, or

32.3.2 the presence or release of any environmental hazard for which SCC is responsible under Applicable Law.

33. FORCE MAJEURE

33.1 No Party shall be responsible for delays or failures in performance of any part of this Agreement (other than an obligation to make money payments) resulting from acts or occurrences beyond the reasonable control of such Party, including acts of nature, acts of civil or military authority, any law, order, regulation, ordinance of any Governmental Authority, embargoes, epidemics, terrorist acts, riots, insurrections, fires, explosions, earthquakes, nuclear accidents, hurricanes, floods, work stoppages, equipment failures, cable cuts, power blackouts, volcanic action, other major environmental disturbances, unusually severe weather conditions, inability to secure products or services of other persons or transportation facilities or acts or omissions of transportation carriers (individually or collectively, a

"Force Majeure Event") or any Delaying Event caused by the other Party or any other circumstances beyond the Party's reasonable control. If a Force Majeure Event shall occur, the Party affected shall give prompt notice to the other Party of such Force Majeure Event specifying the nature, date of inception and expected duration of such Force Majeure Event, whereupon such obligation or performance shall be suspended to the extent such Party is affected by such Force Majeure Event during the continuance thereof or be excused from such performance depending on the nature, severity and duration of such Force Majeure Event (and the other Party shall likewise be excused from performance of its obligations to the extent such Party's obligations relate to the performance so interfered with). The affected Party shall use its reasonable efforts to avoid or remove the cause of nonperformance and the Parties shall give like notice and proceed to perform with dispatch once the causes are removed or cease.

34. TAXES

34.1 Each Party purchasing Interconnection, Resale Services, Network Elements, functions, facilities, products and services under this Agreement shall pay or otherwise be responsible for all federal, state, or local sales, use, excise, gross receipts, municipal fees, transfer, transaction or similar taxes, fees, or surcharges (hereinafter "Tax") imposed on, or with respect to, the Interconnection, Resale Services, Network Elements, functions, facilities, products and services under this Agreement provided by or to such Party, except for (a) any Tax on either party's corporate existence, status, or income or (b) any corporate franchise Taxes. Whenever possible, Taxes shall be billed as a separate item on the invoice.

34.2 With respect to any purchase of Interconnection, Resale Services, Network Elements, functions, facilities, products and services under this Agreement if any Tax is required or permitted by Applicable Law to be collected from the purchasing Party by the providing Party, then: (i) the providing Party shall bill the purchasing Party for such Tax; (ii) the purchasing Party shall remit such Tax to the providing Party; and (iii) the providing Party shall remit such collected Tax to the applicable taxing authority. Failure to include Taxes on an invoice or to state a Tax separately shall not impair the obligation of the purchasing Party to pay any Tax. Nothing shall prevent the providing Party from paying any Tax to the appropriate taxing authority prior to the time: (1) it bills the purchasing Party for such Tax, or (2) it collects the Tax from the purchasing Party. Notwithstanding anything in this Agreement to the contrary, the purchasing Party shall be liable for and the providing Party may collect Taxes which were assessed by or paid to an appropriate taxing authority within the statute of limitations period but not included on an invoice within four (4) years after the Tax otherwise was owed or due.

34.3 With respect to any purchase hereunder of Interconnection, Resale Services, Network Elements, functions, facilities, products and services under this

Agreement that are resold to a third party, if any Tax is imposed by Applicable Law on the End User in connection with any such purchase, then: (i) the purchasing Party shall be required to impose and/or collect such Tax from the End User; and (ii) the purchasing Party shall remit such Tax to the applicable taxing authority. The purchasing Party agrees to indemnify and hold harmless the providing Party for any costs incurred by the providing Party as a result of actions taken by the applicable taxing authority to collect the Tax from the providing Party due to the failure of the purchasing Party to pay or collect and remit such tax to such authority.

34.4 If the providing Party fails to bill or to collect any Tax as required herein, then, as between the providing Party and the purchasing Party: (i) the purchasing Party shall remain liable for such uncollected Tax; and (ii) the providing Party shall be liable for any penalty and interest assessed with respect to such uncollected Tax by such authority. However, if the purchasing Party fails to pay any Taxes properly billed, then, as between the providing Party and the purchasing Party, the purchasing Party will be solely responsible for payment of the Taxes, penalty and interest.

34.5 If the purchasing Party fails to impose and/or collect any Tax from End Users as required herein, then, as between the providing Party and the purchasing Party, the purchasing Party shall remain liable for such uncollected Tax and any interest and penalty assessed thereon with respect to the uncollected Tax by the applicable taxing authority. With respect to any Tax that the purchasing Party has agreed to pay or impose on and/or collect from End Users, the purchasing Party agrees to indemnify and hold harmless the providing Party for any costs incurred by the providing Party as a result of actions taken by the applicable taxing authority to collect the Tax from the providing Party due to the failure of the purchasing Party to pay or collect and remit such Tax to such authority.

34.6 If either Party is audited by a taxing authority or other Governmental Authority, the other Party agrees to reasonably cooperate with the Party being audited in order to respond to any audit inquiries in a proper and timely manner so that the audit and/or any resulting controversy may be resolved expeditiously.

34.7 To the extent a sale is claimed to be for resale and thus subject to tax exemption, the purchasing Party shall furnish the providing Party a proper resale tax exemption certificate as authorized or required by statute or regulation of the jurisdiction providing said resale tax exemption. Failure to timely provide said resale tax exemption certificate will result in no exemption being available to the purchasing Party for any period prior to the date that the purchasing Party presents a valid certificate. If Applicable Law excludes or exempts a purchase of Interconnection, Resale Services, Network Elements, functions, facilities, products and services under this Agreement from a Tax, but does not also provide an exemption procedure, then the providing Party will not collect such Tax if the

purchasing Party (a) furnishes the providing Party with a letter signed by an officer of the purchasing Party claiming an exemption and identifying the Applicable Law that both allows such exemption and does not require an exemption certificate; and (b) supplies the providing Party with an indemnification agreement, reasonably acceptable to the providing Party, which holds the providing Party harmless from any tax, interest, penalties, loss, cost or expense with respect to forbearing to collect such Tax.

34.8 With respect to any Tax or Tax controversy covered by this Section 34, the purchasing Party is entitled to contest with the imposing jurisdiction, pursuant to Applicable Law and at its own expense, any Tax that it is ultimately obligated to pay or collect. The purchasing Party will ensure that no lien is attached to any asset of the providing Party as a result of any contest. The purchasing Party shall be entitled to the benefit of any refund or recovery of amounts that it had previously paid resulting from such a contest. Amounts previously paid by the providing Party shall be refunded to the providing Party. The providing Party will cooperate in any such contest.

34.9 All notices, affidavits, exemption certificates or other communications required or permitted to be given by either Party to the other under this Section 34 shall be sent in accordance with Section 17 hereof.

35. NON-WAIVER

35.1 Except as otherwise specified in this Agreement, no waiver of any provision of this Agreement and no consent to any default under this Agreement shall be effective unless the same is in writing and properly executed by or on behalf of the Party against whom such waiver or consent is claimed. Waiver by either Party of any default by the other Party shall not be deemed a waiver of any other default. Failure of either Party to insist on performance of any term or condition of this Agreement or to exercise any right or privilege hereunder shall not be construed as a continuing or future waiver of such term, condition, right or privilege. No course of dealing or failure of any Party to strictly enforce any term, right, or condition of this Agreement in any instance shall be construed as a general waiver or relinquishment of such term, right or condition.

36. NETWORK MAINTENANCE AND MANAGEMENT

36.1 The Parties will work cooperatively to implement this Agreement. The Parties will exchange appropriate information (for example, maintenance contact numbers, network information, information required to comply with law enforcement and other security agencies of the Government, escalation processes, etc.) to achieve this desired result.

36.2 Each Party will administer its network to ensure acceptable service levels to all

users of its network services. Service levels are generally considered acceptable only when End Users are able to establish connections with little or no delay encountered in the network. Each Party will provide a 24-hour contact number for Network Traffic Management issues to the other's surveillance management center.

36.3 Each Party maintains the right to implement protective network traffic management controls, such as "cancel to", "call gapping" or 7-digit and 10-digit code gaps, to selectively cancel the completion of traffic over its network, including traffic destined for the other Party's network, when required to protect the public-switched network from congestion as a result of occurrences such as facility failures, switch congestion or failure or focused overload. Each Party shall immediately notify the other Party of any protective control action planned or executed. This section 36.3 does not apply to E911 trunk groups and facilities.

36.4 Where the capability exists, originating or terminating traffic reroutes may be implemented by either Party to temporarily relieve network congestion due to facility failures or abnormal calling patterns. Reroutes shall not be used to circumvent normal trunk servicing. Expansive controls shall be used only when mutually agreed to by the Parties. This section 36.4 does not apply to E911 trunk groups and facilities.

36.5 The Parties shall cooperate and share pre-planning information regarding cross-network call-ins expected to generate large or focused temporary increases in call volumes to prevent or mitigate the impact of these events on the public-switched network, including any disruption or loss of service to other End User. Facsimile (FAX) numbers must be exchanged by the Parties to facilitate event notifications for planned mass calling events.

36.6 Neither Party shall use any Interconnection, Resale Service, Network Element, function, facility, product or service provided under this Agreement or any other service related thereto or used in combination therewith in any manner that interferes with any Party in the use of such Party's Telecommunications Service, prevents any Party from using its Telecommunications Service, impairs the quality of Telecommunications Service to other carriers or to either Party's End Users, causes electrical hazards to either Party's personnel, damage to either Party's facilities or equipment or malfunction of either Party's ordering or billing systems or equipment. Upon such occurrence either Party may discontinue or refuse service, but only for so long as the other Party is violating this provision. Upon such violation, either Party shall provide the other Party notice of the violation at the earliest practicable time.

37. SIGNALING

37.1 The Parties will Interconnect their networks using SS7 signaling as defined in GR-

000317-CORE and GR-000394-CORE, including ISDN User Part (ISUP) for trunk signaling and Transaction Capabilities Application Part (TCAP) for CCS-based features in the Interconnection of their networks. Each Party may establish CCS interconnections either directly and/or through a Third Party. If CCS interconnection is established through a Third Party, the rates, terms, and conditions of the Parties' respective tariffs will apply. If CCS interconnection is established directly between SCC and SBC-13STATE, the rates, terms, and conditions of Appendix SS7 will apply.

37.2 The Parties will cooperate in the exchange of TCAP messages to facilitate full interoperability of CCS-based features between their respective networks, including all CLASS features and functions, to the extent each Party offers such features and functions to its own End Users. All CCS signaling parameters deployed by both Parties will be provided including CPN. All privacy indicators will be honored.

38. TRANSMISSION OF TRAFFIC TO THIRD PARTIES

38.1 SCC will not send to SBC-13STATE local traffic that is destined for the network of a Third Party unless SCC has the authority to exchange traffic with that Third Party.

39. CUSTOMER INQUIRIES

39.1 Each Party will refer all questions regarding the other Party's services or products directly to the other Party at a telephone number specified by that Party.

39.2 Each Party will ensure that all of its representatives who receive inquiries regarding the other Party's services:

39.2.1 Provide the number described in Section 39.1 to callers who inquire about the other Party's services or products; and

39.2.2 Do not in any way disparage or discriminate against the other Party or its products or services.

39.3 Except as otherwise provided in this Agreement, SCC shall be the primary point of contact for SCC's customers with respect to the services SCC provides such customers.

40. EXPENSES

40.1 Except as expressly set forth in this Agreement, each Party will be solely responsible for its own expenses involved in all activities related to the matters covered by this Agreement.

40.2 SBC-12STATE and SCC shall each be responsible for one-half (1/2) of expenses payable to a Third Party for Commission fees or other charges (including regulatory fees and any costs of notice or publication, but not including attorney's fees) associated with the filing of this agreement.

41. CONFLICT OF INTEREST

41.1 The Parties represent that no employee or agent of either Party has been or will be employed, retained, paid a fee, or otherwise received or will receive any personal compensation or consideration from the other Party, or any of the other Party's employees or agents in connection with the negotiation of this Agreement or any associated documents.

42. SURVIVAL

42.1 The Parties' obligations under this Agreement which by their nature are intended to continue beyond the termination or expiration of this Agreement shall survive the termination or expiration of this Agreement. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to continue beyond the termination or expiration of this Agreement: Section 5.5; Section 5.6, Section 7.4; Section 8.1; Section 8.4; Section 8.5; Section 8.6; Section 8.7; Section 10, Section 11; Section 13; Section 14; Section 15; Section 16.1; Section 18; Section 19; Section 20; Section 22; Section 25.4; Section 26.1.3; Section 32; Section 34 and Section 42.

43. SCOPE OF AGREEMENT

43.1 This Agreement is intended to describe and enable specific Interconnection and compensation arrangements between the Parties. This Agreement is the arrangement under which the Parties may purchase from each other the products and services described in Section 251 of the Act and obtain approval of such arrangement under Section 252 of the Act. Solely with respect to the subject matter of this Agreement, and except as agreed upon in writing, neither Party shall be required to provide the other Party a function, facility, product, service or arrangement described in the Act that is not expressly provided herein.

43.2 Except as specifically contained herein or provided by the FCC or any Commission within its lawful jurisdiction, nothing in this Agreement shall be deemed to affect any access charge arrangement.

44. AMENDMENTS AND MODIFICATIONS

44.1 No provision of this Agreement shall be deemed amended or modified by either Party unless such an amendment or modification is in writing, dated, and signed by an authorized representative of both Parties. The rates, terms and conditions contained in the amendment shall become effective upon approval of such amendment by the appropriate Commission(s).

44.2 Neither Party shall be bound by any preprinted terms additional to or different from those in this Agreement that may appear subsequently in the other Party's form documents, purchase orders, quotations, acknowledgments, invoices or other communications.

45. IN-REGION MOST FAVORED NATIONS (MFN) BETWEEN SBC STATES

45.1 Subject to the conditions and limitations specified in Paragraph 43 of the SBC/Ameritech Merger Conditions[1], **SBC-13STATE** shall make available to any requesting telecommunication carrier in the SBC/Ameritech Area within any SBC/Ameritech State any interconnection arrangement or UNE in the SBC/Ameritech Service Area within any other SBC/Ameritech state that (1) was negotiated with a telecommunications carrier, pursuant to 47 U.S.C. § 252(a)(1), by **SBC-13STATE** (that at all times during the interconnection agreement negotiations was an **SBC**-owned ILEC) and (2) has been made available under an agreement to which **SBC-13STATE** is a party.

45.2 The Parties acknowledge and agree that it may require additional time to implement an interconnection arrangement or UNE ported from one **SBC**-owned ILEC state to another **SBC**-owned ILEC state pursuant to Paragraph 43 of the SBC/Ameritech Merger Conditions. Thus, when a CLEC exercises its option to adopt an interconnection arrangement or UNE in accordance with Paragraph 43 of the SBC/Ameritech Merger Conditions, the Parties shall meet within thirty (30) calendar days of state commission approval of the interconnection agreement or amendment containing such interconnection arrangement and/or UNE to agree upon an implementation schedule for such interconnection arrangement and/or UNE.

45.3 Paragraph 43 of the SBC/Ameritech Merger Conditions as well as this Section 45 shall expire the earliest of October 8, 2002 or the termination date outlined in section 5 of the General Terms and Conditions of this Agreement, whichever is earlier.

46. APPENDICES INCORPORATED BY REFERENCE

46.1 PHYSICAL COLLOCATION – SECTION 251(b)(4)

46.1.1 Physical Collocation will be provided pursuant to the applicable Appendix Physical Collocation, which is attached hereto and incorporated herein by reference.

46.2 VIRTUAL COLLOCATION – SECTION 251(b)(4)

46.2.1 Virtual Collocation will be provided pursuant to the applicable Virtual Collocation Agreement, which is attached hereto and incorporated herein by reference.

46.3 DATABASE ACCESS

46.3.1 **SBC13STATE** shall provide to SCC nondiscriminatory access to databases and associated signaling necessary for call routing and completion pursuant to the applicable Appendix UNE, which **is/are** attached hereto and incorporated herein by reference. (I agree to this change)

46.4 INTERCONNECTION PURSUANT TO SECTION 251(c)(2)(A), (B), (C); 47 CFR § 51.305(a)(1)

46.4.1 **SBC-13STATE** shall provide to SCC Interconnection of the Parties' facilities and equipment for the transmission and routing of Telephone Exchange Service traffic and Exchange Access traffic pursuant to the applicable Appendix ITR, which **is/are** attached hereto and incorporated herein by reference. Methods for Interconnection and Physical Architecture shall be as defined in the applicable Appendix NIM, which **is/are** attached hereto and incorporated herein by reference.

46.5 OTHER SERVICES

46.5.1 Emergency Services

46.5.1.1 **SBC-13STATE** will make nondiscriminatory access to 911, E911, and emergency services available under the terms and conditions of the applicable Appendix 911, which **is/are** attached hereto and incorporated herein by reference.

46.5.2 AIN

46.5.2.1 One or more of the ILECs making up **SBC-13STATE** have deployed a set of AIN features and functionalities unique to the particular ILEC(s). As such, the AIN network architecture, methods of access and manner of provisioning are specific to that ILEC or those ILECs. Accordingly, any request for AIN access pursuant to this Agreement must be reviewed for technical feasibility, with all rates, terms and conditions related to such request to be determined on an individual case basis and to be negotiated between the Parties. Upon request by CLEC, and where technically feasible, **SBC-13STATE** will provide CLEC with access to **SBC-13STATE**'s Advanced Intelligent Network (AIN) platform, AIN Service Creation Environment (SCE) and AIN Service Management System (SMS) based upon ILEC-specific rates, terms, conditions and means of access to be negotiated by the Parties pursuant to Section 252 of the Act, and incorporated into this Agreement by Appendix or amendment, as applicable, subject to approval by the appropriate state Commission.

46.5.3 Signaling System 7 Interconnection

46.5.3.1 At SCC's request, **SBC-13STATE** shall perform SS7 interconnection services for SCC pursuant to the applicable Appendix SS7, which is/are attached hereto and incorporated herein by reference.

46.6 RESALE – SECTIONS 251(b)(1)

46.6.1 **SBC-13STATE** shall provide to SCC Telecommunications Services for resale at wholesale rates pursuant to the applicable Appendix Resale, which is/are attached hereto and incorporated herein by reference.

46.7 TRANSMISSION AND ROUTING OF SWITCHED ACCESS TRAFFIC PURSUANT TO SECTION 251(c)(2)

46.7.1 **SBC-13STATE** shall provide to SCC certain trunk groups (Meet Point Trunks) under certain parameters pursuant to the applicable Appendix ITR, which is/are attached hereto and incorporated herein by reference.

46.8 TRANSMISSION AND ROUTING OF TELEPHONE EXCHANGE SERVICE TRAFFIC PURSUANT TO SECTIONS 251(c)(2)(D), 252(d)(1); 47 CFR § 51.305(a)(5).

46.8.1 The applicable Appendix Compensation, which is/are attached hereto and incorporated herein by reference, prescribe traffic routing parameters for

Interconnection Trunk Group(s) the Parties shall establish over the Interconnections specified in the applicable Appendix ITR, which is/are attached hereto and incorporated herein by reference.

46.9 UNBUNDLED NETWORK ELEMENTS – SECTIONS 251(c)(3)

46.9.1 Pursuant to the applicable Appendix UNE, which is/are attached hereto and incorporated herein by reference, SBC-13STATE will provide SCC access to Unbundled Network elements for the provision of Telecommunications Service as required by Sections 251 and 252 of the Act and in the Appendices hereto.

47. AUTHORITY

47.1 Each of the SBC Parties represents and warrants that it is a corporation duly organized, validly existing and in good standing under the laws of their respective states of incorporation. SBC Communications Inc. represents and warrants that it has full power and authority to execute and deliver this Agreement as agent for the SBC Parties. Each of the SBC Parties that is an ILEC represents and warrants that it has full power and authority to perform its obligations hereunder.

47.2 SCC represents and warrants that it is a corporation duly organized, validly existing and in good standing under the laws of the State of Delaware and has full power and authority to execute and deliver this Agreement and to perform its obligations hereunder. SCC represents and warrants that prior to submitting any orders hereunder for Interconnection, Resale Service, Network Elements, functions, facilities, products, services or other arrangements in an state, SCC has been or will be authorized to provide service by the applicable Commission(s) and is or will be authorized to provide the Telecommunications Services contemplated hereunder in the state prior to submission of orders for such Service.

47.3 Each Person whose signature appears below represents and warrants that he or she has authority to bind the Party on whose behalf he or she has executed this Agreement.

48. COUNTERPARTS

48.1 This Agreement may be executed in counterparts. Each counterpart shall be considered an original and such counterparts shall together constitute one and the same instrument.

49. ENTIRE AGREEMENT

49.1 The Parties agree that the Memorandum of Understanding dated on or about October 18, 2000, and any obligations therein, shall expire upon the Effective Date of this Agreement, and any obligations therein shall also expire.

49.2 **SBC-12STATE**

49.2.1 The terms contained in this Agreement and any Appendices, Attachments, Exhibits, Schedules, and Addenda constitute the entire agreement between the Parties with respect to the subject matter hereof, superseding all prior understandings, proposals and other communications, oral or written.

49.3 **SNET**

49.3.1 The terms contained in this Agreement and any Appendices, Attachments, Exhibits, Schedules, Addenda, Commission approved tariffs and other documents or instruments referred to herein and incorporated into this Agreement by reference constitute the entire agreement between the Parties with respect to the subject matter hereof, superseding all prior understandings, proposals and other communications, oral or written.

TERMS AND CONDITIONS FOR PROVIDING INTERCONNECTION TO SBC-13STATE'S SELECTIVE ROUTING TANDEMS AND FOR PROVIDING 911 CALL ROUTING AND EMERGENCY CALL ROUTING SERVICES

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions by which SBC Communications, Inc. ("SBC")-owned Incumbent Local Exchange Carriers ("ILECs"), as identified in the Agreement, shall provide SCC Communications Corp. ("SCC") with transport facilities, equipment, and services to interconnect to **SBC-13STATE**'s Selective Routing Tandems, for providing E911 Service and emergency call routing services (collectively "Services") in each LATA in each state of SBC's 13 State region, as identified in the Agreement, where SCC requests such Services, where SCC is authorized to provide telecommunications services, and where **SBC-13STATE** is the E911 Service Provider. SCC and **SBC-13STATE** may be referred to herein collectively as the "Parties" and individually as a "Party."

1.2 **SBC-13STATE** shall make the Services available to SCC at the rates contained in the applicable Appendix Pricing or at the applicable Commission-approved rates, provided that SCC shall be assured comparable treatment as CLECs and CMRS providers, including affiliates of **SBC-13STATE**, in **SBC-13STATE**.

2. DEFINITIONS

This Section hereby incorporates terms identified in the Agreement.

2.1 **"Automatic Location Identification" or "ALI"** means the automatic display at the PSAP of the caller's telephone number, the address/location of the telephone and, in some cases, supplementary Emergency Services information.

2.2 **"ALI Database"** means a database that stores information associated with the telephone numbers of the End Users.

2.3 **"ALI Connectivity"** means the capability by which the E911 Service Provider obtains ALI records from an alternate ALI provider upon requests for Emergency Services from a Telematics Customer. ALI Connectivity may be accomplished by ALI Steering, Dynamic ALI Update, or other means as determined by the requirements of the E911 Service Provider.

2.3.1 **"ALI Steering"** means the capability by which the E911 Service Provider steers to the alternate ALI provider's ALI database when searching for a specific ALI record associated with a request for Emergency Services from a Telematics Customer.

2.3.2 **"Dynamic ALI Update"** means the capability by which the alternate ALI provider transmits a data message on a real time basis that contains the Routing Number, Call Back Number, and location information for temporary storage in the E911 Service Provider's ALI database.

2.4 **"Automatic Number Identification" or "ANI"** means the information used to selectively route a 911 or emergency call and the information delivered to a PSAP along with a 911 or emergency call. ANI may be the caller's telephone number, a billing number, or a pseudo ANI such as a Routing Number.

2.5 **"Centralized Automatic Message Accounting ("CAMA") Trunk"** means a trunk that uses Multi-Frequency (MF) signaling to transmit calls from an SCC switch to an **SBC-13STATE** Selective Routing Tandem.

2.6 **"Common Channel Signaling System 7 ("CCSS7") Trunk"** means a trunk that uses Integrated Services Digital Network User Part ("ISUP") signaling to transmit ANI from an SCC switch to an **SBC-13STATE** Selective Routing Tandem.

2.7 **"Company Identifier" or "Company ID"** means a three (3) to five (5) character identifier chosen by the Local Exchange Carrier that distinguishes the entity providing dial tone to the End-User. In the case of an SCC Telematics Customer requesting Emergency Services, the "Company ID" will be SCC's Company Identifier. The Company Identifier is maintained by NENA in a nationally accessible database.

2.8 **"Database Management System" or "DBMS"** means a system of manual procedures and computer programs used to create, store and update the data required by the Selective Routing Tandem to perform the Selective Routing function and/or ALI for E911 Service.

2.9 **"E911 Authority"** means a municipality or other state or local government unit, or an authorized agent of one or more municipalities or other state or local government units to whom authority has been lawfully delegated to respond to public emergency telephone calls, at a minimum, for emergency police and fire services through the use of the telephone number, 911.

2.10 **"E911 Service Provider"** refers to **SBC-13STATE** as the provider of E911 Service. E911 Service is provided under contract and/or tariff to the E911 Authority.

2.11 **"E911 Trunk"** means a trunk capable of transmitting ANI associated with a call to 911 or a request for Emergency Services from a Telematics Customer from SCC's Point of Interconnection with **SBC-13STATE** to the PSAP.

2.12 **"E911 Universal Emergency Number Service" (also referred to as "Expanded 911 Service" or "Enhanced 911 Service"), "E911"** or **"E911 Service"** means the provision of lines and equipment associated with the service arrangement with the PSAP to receive, answer, transfer, and dispatch public emergency telephone calls dialed to 911 from the Point of Interconnection between the Parties. E911 Service may include Automatic Number Identification (ANI), Automatic Location Identification (ALI), Selective Routing (SR), and/or DBMS services.

2.13 **"Emergency Services"** means police, fire, ambulance, rescue, and medical services.

2.14 **"Emergency Service Number" or "ESN"** means a three (3) to five (5) digit number representing a unique combination of emergency service agencies (Law Enforcement, Fire, and Emergency Medical Service) designated to serve a specific range of addresses within a particular geographical area. The ESN facilitates selective routing and selective transfer, if required, to the appropriate PSAP and the dispatching of the proper service agency (ies).

2.15 **"Master Street Address Guide" or "MSAG"** means a database of street names and house number ranges within their associated communities defining Emergency Service Zones and their associated Emergency Service Numbers (ESNs) to enable routing of 911 calls. For purposes of this definition, Emergency Service Zone means the unique combination of Emergency Services agencies (Law Enforcement, Fire and Emergency Medical service) designated to serve a particular geographic area.

2.16 **"National Emergency Number Association" or "NENA"** is a not-for-profit corporation established in 1982 to further the goal of "One Nation-One Number." NENA is a networking source and promotes research, planning, and training. NENA strives to educate, set standards and provide certification programs, legislative representation and technical assistance for implementing and managing 911 systems.

2.17 **"Public Safety Answering Point" or "PSAP"** means an answering location for 911 calls originating in a given area. The E911 Authority may designate a PSAP

as primary or secondary, which refers to the order in which calls are directed for answering. Primary PSAPs answer calls; secondary PSAPs receive calls on a transfer basis. PSAPs are public safety agencies such as police, fire, emergency medical, etc., or a common bureau serving a group of such entities.

2.18 **"Routing Number"** is a ten-digit number that routes the request for emergency service from a Telematics Customer through the Selective Routing Tandem to the appropriate PSAP. The Routing Number is also the search key from the PSAP query to an ALI database for the host ALI record with a matching Routing Number.

2.19 **"SCC 911 Call Routing Customer"** means a Commercial Mobile Radio Services provider, as defined in 47 C.F.R. 20.3, or a telecommunications carrier entitled to deliver 9-1-1 and emergency call traffic by means of **SBC-13STATE**'s network.

2.20 **"Selective Routing" and "Selective Routing Tandem" or "SR"** mean the routing, equipment, and database used when routing a call to 911 to the proper PSAP based upon the number and location of the caller. Selective routing is controlled by an ESN, which is derived from the location of the access line from which the 911 call was placed.

2.21 **"Telematics"** means a communications device that uses electronic sensors, wireless communications technologies and/or location determination technologies to originate a request for Emergency Services.

2.22 **"Telematics Customer"** means a provider of Telematics services and its subscribers. A Telematics Customer initiates a request for Emergency Services via means other than by dialing the digits 9-1-1.

2.23 **"Telematics Routing Record"** means the ALI record associated with a request for Emergency Services from a Telematics Customer. A Telematics Routing Record may include a Routing Number, the name of the Telematics Customer, X and Y location coordinates and/or an MSAG-valid address or location.

2.24 **"Telephone Exchange Service"** is as defined in the Communications Act of 1934, as amended by the Telecommunications Act of 1996.

3. SBC-13STATE RESPONSIBILITIES

This section sets forth the Services that **SBC-13STATE** shall provide to SCC.

3.1 Network Interconnection, Facilities, and Trunking

3.1.1 SBC-13STATE shall provide leased facilities to interconnect the Parties' networks, upon request. SBC-13STATE shall provide diverse facilities where technically and fiscally feasible upon SCC's request. When diverse facilities are requested, special construction charges may apply. The Point of Interconnection between the Parties' networks shall be the SBC-13STATE Selective Routing Tandem(s). Where local practices differ, for example in PACIFIC and the City of Chicago where CLECs do not interconnect directly with the Selective Routing Tandem(s), the Point of Interconnection shall be as defined by local practices. Terms herein shall provide for such local practices with legitimately related terms and conditions, provided however, that SCC shall be assured comparable treatment as other CLECs operating in SBC-13STATE.

3.1.2 The Parties shall use CAMA Trunks or CCSS7 Trunks to interconnect their networks from SCC's Point of Presence to the Parties' Point of Interconnection at the SBC-13STATE Selective Routing Tandem(s) consistent with Section 4.1.1.

3.1.3 Upon SCC's request and where SCC is authorized to and will provide Telephone Exchange Service, SBC-13STATE shall provide SCC with a description of the geographic area (or Rate Center) and PSAPs served by each SBC-13STATE Selective Routing Tandem based upon existing, applicable local practices and subject to any applicable charges.

3.1.4 SBC-13STATE shall provide trunk terminations in SBC-13STATE Selective Routing Tandem(s). The provision of trunk terminations shall include necessary, associated hardware and administrative processes for translating switches.

3.1.5 SBC-13STATE and SCC shall provide mutually agreed upon connectivity to establish ALI Connectivity in those states where SBC-13STATE provides Commercial Mobile Radio Services ("CMRS") providers, as defined in 47 C.F.R. 20.3, the capability by which the E911 Service Provider may obtain ALI information from a third party ALI provider for the purpose of responding to a 911 call placed by a CMRS end user. SBC-13STATE shall provide such capability to SCC on the same terms and conditions as such capability is provided to CMRS providers.

3.1.6 SBC-13STATE shall provide and maintain sufficient dedicated E911 Trunks between its Selective Routing Tandem(s) and the PSAP(s) of the E911 Authority according to provisions of the appropriate state regulatory agency-approved tariff and documented specifications of the E911 Authority.

3.1.7 SBC-13STATE and SCC shall cooperate to promptly test all trunks and facilities between SCC's network and SBC-13STATE Selective Routing Tandem(s).

3.1.8 SBC-13STATE shall provide E911 Trunks that are engineered to attain a minimum of P.01 grade of service as measured using the "busy day/busy hour" criteria or, if higher, at such other minimum grade of service as required by Applicable Law or duly authorized Governmental Authority.

3.2 Call Routing

3.2.1 SBC-13STATE shall provide and maintain such equipment at the SBC-13STATE Selective Routing Tandem(s) and the E911 DBMS as is necessary to perform the E911 Service and emergency call routing services set forth herein when SBC-13STATE is the E911 Service Provider. SBC-13STATE shall provide E911 Service to SCC as described in this section in a particular Rate Center in which SCC is authorized to provide Telephone Exchange Service and SBC-13STATE is the E911 Service Provider.

3.2.2 The provision of transport specified in Section 3.1 shall include administrative processes for provisioning circuits and maintaining transport facilities consistent with Section 4.1.1.

3.2.3 SBC-13STATE shall switch 911 calls and requests for Emergency Services from Telematics Customers through the SBC-13STATE Selective Routing Tandem(s) to the designated primary PSAP or to designated alternate locations, according to routing criteria specified by the E911 Authority.

3.2.4 SBC-13STATE shall forward the ANI or Routing Number it receives from SCC and the associated ALI to the PSAP for display at an attendant position console. If no ANI is forwarded by SCC, SBC-13STATE shall forward an Emergency Service Central Office ("ESCO") identification code for display at the PSAP. If ANI is forwarded by SCC, but no ALI record is found in the E911 DBMS and the alternatives for locating ALI records are exhausted, SBC-13-STATE shall report this "No Record Found" condition to SCC in accordance with NENA standards.

3.3 Database

3.3.1 To the extent SBC-13STATE manages the E911 DBMS, SBC-13STATE shall provide SCC with a file containing the MSAG for the exchanges and communities specified in Exhibit I, CLEC Serving Area Description and E911 Interconnection Details, in accordance with the documentation provided by SBC-13STATE. SBC-13STATE shall provide SCC additional files that include subsequent additions or updates to the MSAG in accordance with the intervals specified in Exhibit I. Where local practices differ, terms herein shall provide for such local practices, provided however, that SCC shall be assured comparable treatment as other CLECs operating in SBC-13STATE.

3.3.2 Where SBC-13STATE manages the E911 database, SBC-13STATE shall store SCC's Telematics Routing Records [that is, the name, address and associated routing number(s) for each of SCC's Telematics Customers] in the electronic data processing database for the E911 DBMS. SCC or its representative(s) is responsible for electronically providing Telematics Routing Records and updating this information.

3.3.3 SBC-13STATE shall coordinate access to the SBC-13STATE E911 DBMS for the initial loading and updating of SCC's Telematics Routing Records.

3.3.4 SBC-13STATE's ALI database shall accept electronically transmitted files that are based upon NENA standards or existing local practices. Manual entry shall be allowed only in the event that DBMS is not functioning properly.

3.3.5 SBC-13STATE shall update SCC's Telematics Routing Records in the E911 DBMS. SBC-13STATE shall then provide SCC an error and status report. This report shall be provided in a timely fashion and in accordance with the methods and procedures described in the documentation to be provided to SCC.

3.3.6 Where SBC-13STATE manages the E911 DBMS, SBC-13STATE shall establish a process for the management of NPA splits by populating the E911 DBMS with the appropriate NPA codes.

3.4 Other

3.4.1 SBC-13STATE shall not be responsible for collecting or remitting to the appropriate municipality or other governmental entity any applicable 911 surcharges assessed on SCC or its customers.

4. SCC RESPONSIBILITIES

4.1 *Call Routing*

4.1.1 SCC shall transport 911 calls and requests for Emergency Services from Telematics Customers to each Point of Interconnection with **SBC-13STATE** at the **SBC-13STATE** Selective Routing Tandem(s). Consistent with Section 3.1.1, where local practices differ, SCC shall transport 911 calls and requests for Emergency Services from Telematics Customers to each Point of Interconnection with **SBC-13STATE** as local practices require, provided however, that SCC shall be assured comparable treatment as other CLECs operating in **SBC-13STATE**.

4.1.2 SCC shall forward the ANI of the End User of SCC's 911 Call Routing Customer to the **SBC-13STATE** Selective Routing Tandem(s).

4.1.3 SCC shall forward the Routing Number to the **SBC-13STATE** Selective Routing Tandem for SCC's Telematics Customers requesting Emergency Services.

4.2 Facilities and Trunking

4.2.1 SCC shall interconnect with each **SBC-13STATE** Selective Routing Tandem that serves the exchange areas in which SCC is authorized to and will provide Telephone Exchange Service, consistent with Section 2.1 of Appendix NIM.

4.2.2 SCC acknowledges that the End Users of its 911 Call Routing Customer(s) in a single local calling scope may be served by different **SBC-13STATE** Selective Routing Tandems and SCC shall be responsible for providing facilities to route 911 calls and requests for Emergency Services from such End Users to the proper **SBC-13STATE** Selective Routing Tandem(s).

4.2.3 SCC acknowledges that its Telematics Customer(s) in a single local calling scope may be served by different **SBC-13STATE** Selective Routing Tandems and SCC shall be responsible for providing facilities to route requests for emergency services from such Telematics Customers to the proper **SBC-13STATE** Selective Routing Tandem(s).

4.2.4 SCC shall maintain a minimum of two (2) one-way outgoing trunk(s) dedicated for originating 911 calls and requests for Emergency Services from Telematics Customers to each Point of Interconnection with **SBC-13STATE** Selective Routing Tandem(s), where applicable. Where CCSS7

Trunks are available and the applicable E911 Authority concurs that CCSS7 Trunks can be used for 911 and emergency calls, the Parties agree to deploy CCSS7 Trunks rather than CAMA Trunks.

4.2.5 In SBC-AMERITECH only, SCC shall be responsible for providing a separate 911 trunk group for each county or other geographic area that it serves if the E911 Authority for such county or geographic area has a specified varying default routing condition.

4.2.6 In addition, where applicable in SBC-13STATE, 911 traffic or requests for Emergency Services from Telematics Customers originating in one (1) NPA (area code) must be transmitted over a separate 911 trunk group from 911 traffic or requests from Emergency Services from Telematics Customers originating in any other NPA (area code).

4.2.7 SCC shall maintain sufficient trunking and facilities to route 911 calls and requests for Emergency Services from Telematics Customers from SCC's network to the designated SBC-13STATE Selective Routing Tandem(s). SCC is responsible for requesting that trunking and facilities be routed diversely for E911 connectivity.

4.2.8 SCC shall provision and maintain sufficient trunking and facilities to accomplish ALI Connectivity between SBC-13STATE ALI nodes and SCC ALI nodes.

4.2.9 SCC is responsible for determining the proper quantity of trunks and facilities from its switch(es) at a minimum grade of service as required by applicable law or as required by duly authorized governmental agency, to SBC-13STATE Selective Routing Tandem(s).

4.2.10 SCC shall monitor its E911 circuits for the purpose of determining originating network traffic volumes. If SCC's traffic study indicates that additional circuits are needed to meet the current level of 911 call and Emergency Services request volumes, SCC shall request additional circuits from SBC-13STATE.

4.2.11 SCC is responsible for the isolation, coordination and restoration of all E911 network maintenance problems to SCC's Point of Interconnection with SBC-13STATE. SBC-13STATE will be responsible for the coordination and restoration of all E911 network maintenance problems beyond the Parties' Point of Interconnection. SCC is responsible for advising SBC-13STATE of the circuit identification and the fact that the circuit is an E911 circuit when notifying SBC-13STATE of a failure or

outage. The Parties agree to work cooperatively and expeditiously to resolve any 911 outage. SBC-13STATE shall refer network trouble to SCC if no defect is found in SBC-13STATE's E911 network. The Parties agree that E911 network problem resolution will be managed expeditiously at all times.

4.3 Database

4.3.1 Once E911 trunking has been established and tested between SCC's Point of Presence and all appropriate Selective Routing Tandems, SCC or its representatives shall be responsible for providing SCC's Telematics Routing Records to SBC-13STATE for inclusion in SBC-13STATE's DBMS on a timely basis. SBC-13STATE and SCC shall arrange for the automated input and periodic updating of SCC's Telematics Routing Records.

4.3.2 SCC or its agent shall provide initial and ongoing updates of SCC's Telematics Routing Records that are MSAG-valid in electronic format based upon established NENA standards.

4.3.3 SCC shall adopt use of a Company ID on all of SCC's Telematics Routing Records in accordance with NENA standards. The Company ID is used to identify the carrier of record in facility configurations.

4.3.3.1 SCC is responsible for providing SBC-13STATE updates to the ALI database; in addition, SCC is responsible for correcting any errors that may occur during the entry of their data to the SBC-13STATE E911 DBMS.

4.3.3.2 Where SBC-13STATE is subject to fines and penalties for errors in ALI data updates caused by SCC or its third-party agent, SCC shall reimburse SBC-13STATE for such additional database charges incurred by SBC-13STATE.

4.3.3.3 SCC shall be solely responsible for providing test records and conducting call-through testing on all new exchanges.

4.4 Other

4.4.1 SCC shall provide notification to the appropriate E911 Authority 30 days prior to terminating service to an SCC 911 Call Routing Customer or Telematics Customer.

4.4.2 SCC shall provide SBC-13STATE notice consistent with Section 17 of the General Terms and Conditions ten (10) days prior to transition of a local exchange carrier or CMRS provider that is an existing E911 service customer of SBC-13STATE.

4.4.3 Within ten (10) days after a local exchange carrier or CMRS provider transitions to SCC's service, SCC shall provide SBC-13STATE notice consistent with Section 17 of the General Terms and Conditions that such a transition has occurred.

5. RESPONSIBILITIES OF BOTH PARTIES

5.1 The Parties shall jointly coordinate the provisioning of transport capacity sufficient to route originating 911 calls and requests for Emergency Services from Telematics Customers to the Parties' Point of Interconnection at SBC-13STATE's Selective Routing Tandem(s), consistent with Section 4.1.1.

5.2 The Parties shall cooperate to promptly test all E911 Trunks and facilities between SCC's network and SBC-13STATE's Selective Routing Tandem(s) to assure proper functioning of the Services. Except for testing purposes, SCC agrees that it will not pass live 911 traffic or requests for Emergency Services from Telematics Customers until successful testing is completed.

6. METHODS AND PRACTICES

6.1 With respect to all matters covered by this Appendix or legitimately related Agreements and Exhibits, each Party will comply with all of the following to the extent that they apply to E911 Service: (i) all FCC and applicable rules and regulations of state Commission(s), (ii) any requirements imposed by any Governmental Authority other than a state regulatory agency, (iii) the terms and conditions of Commission-approved tariff(s); and (iv) the principles expressed in the recommended standards published by NENA.

6.2 SBC-13STATE shall adhere to the March 1997 NENA recommended Standards for Local Service Providers relating to provision of dedicated trunks to the Parties' Point of Interconnection at SBC-13STATE's Selective Routing Tandem(s). SBC-13STATE will exceed the NENA recommended Minimum Trunking Requirements for such trunks only with the prior written approval of the E911 Authority.

7. CONTINGENCY

7.1 The terms and conditions of this Appendix represent a negotiated plan for providing the Services. The Parties agree that each term and condition herein, including certain terms in other Appendices of this Agreement, is legitimately related to, and was negotiated in whole to meet SCC's unique and specific service needs from SBC-13STATE.

7.2 The Parties agree that the E911 Service is provided for the use of the E911 Authority, and recognize the authority of the E911 Authority to establish service specifications and grant final approval (or denial) of service configurations offered by SBC-13STATE and SCC. These specifications shall be documented in Exhibit I, CLEC Serving Area Description and E911 Interconnection Details. SCC shall complete its portion of Exhibit I and submit it to SBC-13STATE not later than forty-five (45) days prior to the passing of live non-test traffic. SBC-13STATE shall complete its portion of Exhibit I and return Exhibit I to SCC not later than thirty (30) days prior to the passing of live non-test traffic.

7.3 SCC shall obtain documentation of approval of the completed Exhibit I from the appropriate E911 Authority that has jurisdiction in the area(s) in which SCC will route a request for Emergency Services from a Telematics Customer and shall provide documentation of all requisite approval(s) to SBC-13STATE prior to the passing of live non-test traffic.

7.4 The Parties designate the following representatives who shall have the authority to execute additional Exhibit I(s) to this Exhibit when necessary to accommodate expansion of SCC's geographic area into the jurisdiction of additional PSAPs or to increase the number of CAMA trunks. SCC must obtain approval of each additional Exhibit I, as set forth in Section 7.2, and shall furnish documentation of all requisite approval(s) of each additional Exhibit I in accordance with Section 7.2.

NOTICE CONTACT	SCC CONTACT	SBC-13STATE CONTACT
NAME/TITLE	Gary A. Klug, Director- Regulatory Compliance	Contract Administration ATTN: Notices Manager
STREET ADDRESS	6285 Lookout Road	311 S. Akard, 9th Floor Four Bell Plaza
CITY, STATE, ZIP CODE	Boulder, CO 80301	Dallas, TX 75202-5398
FACSIMILE NUMBER	303-581-0900	214-464-2006

Either Party may unilaterally change its designated representative and/or address, telephone contact number or facsimile number for the receipt of noticed by giving seven (7) days' prior written notice to the other Party in compliance with the Agreement.

7.5 In PACIFIC, NEVADA, and SBC-AMERITECH, the state specific forms shall be submitted in lieu of the Exhibit I referenced in Sections 7.2 – 7.5 hereof.

7.6 The terms and conditions of this Appendix are subject to renegotiation in the event that the E911 Authority orders changes to E911 Service and requests for Emergency Services that necessitate revision to this Appendix.

8. BASIS OF COMPENSATION

8.1 Charges shall begin on the date that the Services are activated.

8.2 SBC-13STATE shall make the Services available to SCC at the rates contained in the applicable Appendix Pricing or at the applicable Commission-approved rates, provided that SCC shall be assured comparable treatment as CLECs and CMRS providers, including affiliates of SBC-13STATE, in SBC-13STATE.

9. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

9.1 Every interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each interconnection, service and network element provided hereunder: definitions, interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries;

expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

APPENDIX NIM
(NETWORK INTERCONNECTION METHODS)

1. INTRODUCTION

1.1 This Appendix sets forth the terms and conditions that Network Interconnection Methods (NIM) is provided by the applicable SBC Communications Inc. (SBC) owned Incumbent Local Exchange Carrier (ILEC) and SCC. This Appendix describes the physical architecture for Interconnection of the Parties' facilities and equipment for the transmission and routing of solely 911 traffic and Requests for Emergency Services from Telematics Customers between the respective Customers of the Parties pursuant to Section 251(c)(2) of the Act; provided, however, Interconnection may not be used solely for the purpose of originating a Party's own interexchange traffic.

1.2 Network Interconnection Methods (NIMs) include, but are not limited to, Physical Collocation Interconnection; Virtual Collocation Interconnection; Leased Facilities Interconnection; Fiber Meet Interconnection; and other methods as mutually agreed to by the Parties. One or more of these methods may be used to effect the Interconnection.

1.2.1 Trunking requirements associated with Interconnection are contained in Appendix ITR.

1.2.2 The terms and conditions associated with access to Unbundled Network Elements (UNEs) are not found in Appendix NIM, but are contained in Appendix UNE. SNET Unbundled Network Elements are offered via the Connecticut Access Tariff.

1.3 SBC-13STATE shall provide Interconnection for SCC's facilities and equipment for the transmission and routing of telephone exchange service and exchange access, at a level of quality that is equal to that which SBC-13STATE provides itself, a subsidiary, an affiliate, or any other party to which SBC-13STATE provides Interconnection and on rates, terms and conditions that are just, reasonable and non-discriminatory.

1.4 The Parties shall effect an Interconnection that is efficient, fair and equitable with each party being financially responsible for approximately half of the Interconnection facilities or in any other manner that is mutually agreeable to the Parties.

2. NETWORK INTERCONNECTION ARCHITECTURE PLAN

2.1 SBC-13STATE's network architecture in any given local exchange area and/or LATA can vary markedly from another local exchange area/LATA. Using one or

more of the NIMs herein, the Parties will agree to a physical architecture plan for a specific Interconnection area. SCC and SBC-13STATE agree to Interconnect their networks through existing and/or new Interconnection facilities between SCC switch (es) or Point(s) of Presence (POP(s)) and SBC-13STATE Selective Routing Tandems. The network interconnection architecture plan will include the Points of Interconnection (POI), the location of SCC's switch(es) or its POP, and the facilities that will connect the two networks. Where multiple Selective Routing Tandems exist within a particular LATA, SCC agrees to interconnect its network with SBC-13STATE's network at those multiple Selective Routing Tandems in the LATA. Before any Access Service Requests are processed by SBC in that local exchange area or LATA, the network interconnection architecture plan must be documented by SBC-13STATE and signed by appropriate representatives of both Parties

2.2 Points of Interconnection (POIs): A Point of Interconnection (POI) is a point in the network where the Parties deliver Interconnection traffic to each other, and also serves as a demarcation point between the facilities that each Party is responsible to provide.

2.3 Each Party is responsible for the facilities to its side of the negotiated POI(s) and may utilize any method of Interconnection described in this Appendix. Each Party is responsible for the appropriate sizing, operation, and maintenance of the transport facility to the POI(s). The parties agree to provide sufficient facilities for the Interconnection trunk groups required for the exchange of traffic between SCC and SBC-13STATE.

2.4 Either Party, must provide thirty (30) days written notice of any intent to change to the physical architecture plan.

2.5 Technical Interfaces

2.5.1 The Interconnection facilities provided by each Party shall be formatted using either Alternative Mark Inversion (AMI) line code with Superframe format framing or Bipolar 8 Zero Signaling (B8ZS) with Extended Superframe format framing or any mutually agreeable line coding and framing.

2.5.2 Electrical handoffs at the POI(s) will be at the DS1 or DS3 level. When a DS3 handoff is agreed to by the Parties, SBC-13STATE will provide any multiplexing required for DS1 facilities or trunking at its end and SCC will provide any DS1 multiplexing required for facilities or trunking at its end.

3. METHODS OF INTERCONNECTION

3.1 Physical Collocation Interconnection

3.1.1 When SCC provides its own facilities, uses the facilities of a 3rd party, or obtains facilities from **SBC-13STATE** per the applicable Commission approved tariff(s) to an **SBC-13STATE** Selective Routing Tandem and wishes to place its own transport terminating equipment at that location, SCC may Interconnect using the provisions of Physical Collocation as set forth in Appendix Collocation or applicable Commission approved tariff.

3.2 Virtual Collocation Interconnection

3.2.1 When SCC provides its own facilities, uses the facilities of a 3rd party, or obtains facilities from **SBC-13STATE** per the applicable Commission approved tariff(s) to an **SBC-13STATE** Selective Routing Tandem and wishes for **SBC-13STATE** to place transport terminating equipment at that location on SCC's behalf, SCC may Interconnect using the provisions of Virtual Collocation as set forth in Appendix Virtual Collocation or applicable tariff. Virtual Collocation allows SCC to choose the equipment vendor and does not require that SCC be Physically Collocated.

3.3 Leasing Facilities

3.3.1 Where facilities exist, SCC may lease facilities from **SBC-13STATE** per the applicable, Commission approved tariff(s).

3.4 Other Interconnection Methods

3.4.1 Other Interconnection methods that are technically feasible may be mutually agreed to by the Parties.

4. RESPONSIBILITIES OF THE PARTIES

4.1 For each Interconnection in an **SBC-13STATE** local exchange area or LATA, SCC shall provide written notice to **SBC-13STATE** of the need to establish Interconnection. Such request will include (i) SCC's Switch address (or POP location), type of Switch and CLLI code; (ii) SCC's requested Interconnection activation date; and (iii) a non-binding forecast of SCC's trunking and facilities requirements.

4.2 Upon receipt of SCC's notice to interconnect, the Parties shall schedule a meeting to negotiate and mutually agree on the network architecture (including trunking) to be documented as discussed in Section 2.1. The Interconnection activation date for an Interconnect shall be established based on then-existing force and load, the scope and complexity of the requested Interconnection and other relevant factors.

4.3 Either party may add or remove additional switches. The parties shall be entitled to provide written notice to establish such Interconnection; and the terms and conditions of this agreement will apply to such Interconnection.

4.4 The Parties recognize that a facility handoff point must be agreed to that establishes the demarcation for maintenance and provisioning responsibilities for each party on their side of the POI.

4.5 Facilities will be planned for in accordance with the trunk forecasts exchanged between the Parties as described in Appendix ITR.

5. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

5.1 Every interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each interconnection, service and network element provided hereunder: definitions, interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries; expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

APPENDIX OSS
(ACCESS TO OPERATIONS SUPPORT SYSTEMS FUNCTIONS)

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions for nondiscriminatory access to Operations Support Systems (OSS) "functions" to SCC for pre-ordering, ordering, provisioning, maintenance/repair, and billing provided by the applicable SBC Communications Inc. (SBC) owned Incumbent Local Exchange Carrier (ILEC).

1.2 SBC-13STATE has established performance measurements to illustrate non-discriminatory access. These measurements are represented in Appendix Performance Measurements.

2. DEFINITIONS

2.1 **"LSC"** means (i) the Local Service Center (LSC) for SWBT, PACIFIC, and NEVADA; (ii) Local Exchange Carrier Center (LECC) for SNET; and (iii) Information Industry Service Center (IISC) for SBC-AMERITECH.

2.2 **"LOC"** means (i) the Local Operations Center (LOC) for SWBT, PACIFIC, NEVADA, and SNET; and (ii) the Customer Response Unit (CRU) for SBC-AMERITECH.

3. GENERAL CONDITIONS

3.1 Resale and Unbundled Network Elements (UNE) functions will be accessible via electronic interface(s), as described herein, where such functions are available. The Parties agree that electronic order processing is more efficient than manual order processing. During implementation the Parties will negotiate a threshold volume of orders after which electronic ordering is required. Once CLEC is submitting more than the agreed to threshold amount, but not later than twelve (12) months from the Effective Date of this Agreement, CLEC will no longer submit orders manually (and SBC-13 STATE shall not be required to accept and process orders manually) except when the electronic order processing is unavailable for a substantial period of time, or where a given order cannot be processed electronically.

3.2 **Proper Use of OSS interfaces:**

3.2.1 For SBC-7STATE, SCC agrees to utilize SBC-7STATE electronic interfaces, as described herein, only for the purposes of establishing and maintaining Resale Services or UNEs through SBC-7STATE. In addition, SCC agrees that such use will comply with the summary of SBC-7STATE 's Operating Practice No. 113, Protection of Electronic Information, titled

"Competitive Local Exchange Carrier Security Policies and Guidelines". Failure to comply with such security guidelines may result in forfeiture of electronic access to OSS functionality. In addition, SCC shall be responsible for and indemnifies SBC-7STATE against any cost, expense or liability relating to any unauthorized entry or access into, or use or manipulation of SBC-7STATE's OSS from SCC systems, workstations or terminals or by SCC employees or agents or any third party gaining access through information and/or facilities obtained from or utilized by SCC and shall pay SBC-7STATE for any and all damages caused by such unauthorized entry.

3.2.2 For SNET region, SCC agrees to access and utilize SNET's Enhanced Services Access Platform, (ESAP), only for the purposes described herein. SCC agrees that its access and use of ESAP shall, at all times, comport with SNET's "Wholesale CIWin User Guide", "EF User Guide", "ESAP Installation Guide", "ESAP Help Desk Guide", "CLEC Mechanized Interface Specification", and any other guide describing the interface or interface requirements that SNET may, from time to time, provide SCC (collectively, the "Guides"). Failure materially to adhere to any material provision of such Guides may result, among other things, in forfeiture of electronic access to SNET's OSS functionality via ESAP upon notice. In addition, SCC shall be responsible for and indemnifies SNET against any cost, expense or liability relating to any unauthorized entry or access into, or use or manipulation of SNET's OSS or ESAP from SCC complimentary systems, workstations or terminals or by SCC employees or agents any third party gaining access through information and/or facilities obtained from or utilized by SCC and shall pay SNET for any and all damages caused by such unauthorized entry.

3.3 Within SBC-7STATE regions, SCC's access to pre-order functions described in 4.2.2 and 4.3.2 will only be utilized to view Customer Proprietary Network Information (CPNI) of another carrier's End User where SCC has obtained an authorization for release of CPNI from the End User and has obtained an authorization to become the End User's Local Service Provider. Within SNET, and SBC-AMERITECH regions, SCC's access to pre-order functions described in 4.2.2 and 4.3.2 will only be utilized to view Customer Proprietary Network Information (CPNI) of the applicable ILEC's or requesting SCC's End User account where SCC has obtained an authorization for release of CPNI from the End User and has obtained an authorization to become the End User's Local Service Provider. The authorization for release of CPNI must substantially reflect the following:

3.3.1 Within SBC-7STATE regions, "This written consent serves as instruction to all holders of my local exchange telecommunications Customer Proprietary Network Information (CPNI) and account identification

information to provide such information to the undersigned CLEC. Specifically, I authorize disclosure of my account billing name, billing address, and directory listing information, and CPNI, including, service address, service and feature subscription, long distance carrier identity, and pending service order activity. I have authorized, CLEC to become my local service provider. This Authorization remains in effect until such time that I revoke it directly or appoint another individual/company with such capacity or undersigned receives notice to disconnect my local exchange service or notice that a service disconnect has been performed. At and from such time, this Authorization is null and void."

3.3.2 Within **SNET** region, "This written consent serves as instruction to all holders of any local exchange telecommunications Customer Proprietary Network Information ("CPNI") and account identification information to provide such information to [Name of CLEC]. Specifically, I authorize disclosure of any account billing name, billing address, and directory listing information, and CPNI, including, service address, service and feature subscription and long distance carrier identity. This Authorization remains in effect until such time as I [Name of Customer] revoke(s) it directly or appoint(s) another individual/company with such capacity or [Name of CLEC] receives notice to disconnect my local exchange service or notice that a service disconnect has been performed. At and from such time, this Authorization is null and void."

3.3.3 In **SBC-13STATE** regions, SCC may choose to use ***this*** CPNI language (in Section 3.3.3) in lieu of using the CPNI language in sections 3.3.1 or 3.3.2 above (depending on region). SCC must have documented authorization for change in local exchange service and release of CPNI that adheres to all requirements of state and federal law, as applicable.

3.3.3.1 This section applies to **PACIFIC** ONLY for those CLECs who opted to use CPNI language in Section 3.3.3. For residence End Users, prior to accessing such information, SCC shall, on its own behalf and on behalf of **PACIFIC**, comply with all applicable requirements of Section 2891 of the California Public Utilities Code and 47 USC 222 (and implementing FCC decisions thereunder), and, where accessing such information via an electronic interface, SCC shall have obtained an authorization to become the End User's local service provider. Accessing such information by SCC shall constitute certification that SCC is in compliance with applicable requirements of Section 2891 and Section 222 (and implementing FCC decisions thereunder) and has complied with the prior sentence. SCC shall receive and retain such information in conformance with the requirements of 47 USC 222 (and implementing FCC decisions thereunder). SCC

agrees to indemnify, defend and hold harmless **PACIFIC** against any claim made by a residence End User or governmental entity against **PACIFIC** or SCC under Section 2891 or Section 222 (and implementing FCC decisions thereunder) or for any breach by SCC of this section.

3.3.4 Throughout **SBC-13STATE** region, SCC is solely responsible for determining whether proper authorization has been obtained and holds **SBC-13STATE** harmless from any loss on account of SCC's failure to obtain proper CPNI consent from an End User.

3.4 By utilizing electronic interfaces to access OSS functions, SCC agrees to perform accurate and correct ordering as it relates to the application of Resale rates and charges, subject to the terms of this Agreement and applicable tariffs dependent on region of operation. In addition, SCC agrees to perform accurate and correct ordering as it relates to **SBC-13STATE**'s UNE rates and charges, dependent upon region of operation, pursuant to the terms of this Agreement. SCC is also responsible for all actions of its employees using any of **SBC-13STATE**'s OSS systems. As such, SCC agrees to accept and pay all reasonable costs or expenses, including labor costs, incurred by **SBC-13STATE** caused by any and all inaccurate ordering or usage of the OSS, if such costs are not already recovered through other charges assessed by **SBC-13STATE** to SCC. In addition, SCC agrees to indemnify and hold **SBC-13STATE** harmless against any claim made by an End User of SCC or other third parties against **SBC-13STATE** caused by or related to SCC's use of any **SBC-13STATE** OSS. In addition, **SBC-13STATE** retains the right to audit all activities by SCC using any **SBC-13STATE** OSS. All such information obtained through an audit shall be deemed proprietary and shall be covered by the Parties' Mutual Confidentiality and Nondisclosure Agreement signed by a representative of SCC Communications Corp. on May 5, 2000 and by a representative of **SBC-13STATE** on April 12, 2000.

3.5 In areas where Resale Service and UNE order functions are not available via an electronic interface for the pre-order, ordering and provisioning processes, **SBC-13STATE** and SCC will use manual processes. Should SBC develop electronic interfaces for these functions for itself, SBC will make electronic access available to SCC within the specific operating region.

3.6 The Information Services (I.S.) Call Center for the **SBC-8STATE** region, and the Resource Center for the **SBC-AMERITECH** region provides for technical support function of electronic OSS interfaces. SCC will also provide a single point of contact for technical issues related to the SCC's electronic interfaces.

3.7 **SBC-13STATE** and SCC will establish interface contingency plans and disaster recovery plans for the pre-order, ordering and provisioning of Resale services and UNE.

3.8 The Parties will follow the final adopted guidelines of Change Management, as may be modified from time to time in accordance with the Change Management principles.

3.9 SBC-13STATE will, and SCC may, participate in the Order and Billing Forum (OBF) and the Telecommunications Industry Forum (TCIF) to establish and conform to uniform industry guidelines for electronic interfaces for pre-order, ordering, and provisioning. Neither Party waives its rights as participants in such forums or in the implementation of the guidelines. To achieve system functionality as quickly as possible, the Parties acknowledge that SBC-13STATE may deploy interfaces with requirements developed in advance of industry guidelines. Thus, subsequent modifications may be necessary to comply with emerging guidelines. SCC and SBC-13STATE are individually responsible for evaluating the risk of developing their respective systems in advance of guidelines and agree to support their own system modifications to comply with new requirements. In addition, SBC-13STATE has the right to define Local Service Request (LSR) Usage requirements according to the General Section 1.0, paragraph 1.4 of the practices in the OBF Local Service Ordering Guidelines (LSOG), which states: "Options described in this practice may not be applicable to individual providers tariffs; therefore, use of either the field or valid entries within the field is based on the providers tariffs/practices."

3.10 Due to enhancements and on-going development of access to SBC-13STATE's OSS functions, certain interfaces described in this Appendix may be modified, temporarily unavailable or may be phased out after execution of this Appendix. SBC-13STATE shall provide proper notice of interface phase-out as required by the Change Management process.

3.11 SCC is responsible for obtaining operating system software and hardware to access SBC-13STATE OSS functions as specified in: "Requirements for Access to Southwestern Bell OSS Functions" and "Requirements for Access to Pacific Bell OSS Functions" and "SNET W-CIW in Installation Guide" and "Ameritech Electronic Service Order Guide", or any other documents or interface requirements subsequently generated by SBC-13STATE for any of its regions.

4. PRE-ORDERING

4.1 SBC-13STATE will provide real time access to pre-order functions to support SCC ordering of Resale services and UNE. The Parties acknowledge that ordering requirements necessitate the use of current, real time pre-order information to accurately build service orders. The following lists represent pre-order functions that are available to SCC so that SCC order requests may be created to comply with SBC-13STATE region-specific ordering requirements.

4.2 **Pre-ordering functions for Resale Services include:**

4.2.1 For SBC-7STATE, features and services available at a valid service address (as applicable) or, for SNET, features will be available based on NPA-NXX;

4.2.2 Access to SBC-13STATE retail or resold CPNI and account information for pre-ordering will include: billing name, service address, billing address, service and feature subscription, directory listing information, long distance carrier identity, and for SBC-12STATE only, pending service order activity. SCC agrees that SCC's representatives will not access the information specified in this subsection until after the End User requests that his or her Local Service Provider be changed to SCC, and an End User authorization for release of CPNI complies with conditions as described in section 3.2 of this Appendix.

4.2.3 A telephone number (if the End User does not have one assigned) with the End User on-line;

4.2.4 Service availability dates to the End User (where available);

4.2.5 Information regarding whether dispatch is required;

4.2.6 For SBC-12STATE, Primary Interexchange Carrier (PIC) options for intraLATA toll and interLATA toll; and

4.2.7 Service address verification.

4.3 **Pre-ordering functions for UNEs include:**

4.3.1 Features available at an End Office for a valid service address (as applicable);

4.3.2 Access to SBC-13STATE retail or resold CPNI and account information for pre-ordering will include: billing name, service address, billing address, service and feature subscription, directory listing information, long distance carrier identity, and, for SBC-12STATE only, pending service order activity. SCC agrees that SCC's representatives will not access the information specified in this subsection until after the End User requests that his or her Local Service Provider be changed to SCC, and an End User authorization for release of CPNI complies with conditions as described in Section 3.2 of this Appendix.

4.3.3 Telephone number assignment (if the End User does not have one assigned) with the End User on-line;

4.3.4 For SBC-12STATE, Primary Interexchange Carrier options for intraLATA toll and interLATA toll;

4.3.5 Service address verification; and

4.3.6 For SBC-12STATE, Channel facility assignment (CFA), network channel (NC), and network channel interface (NCI) data.

4.4 Electronic Access to Pre-Order Functions:

4.4.1 **SBC-SWBT Resale Services Pre-order System Availability:** SBC-SWBT will provide SCC access to one or more of the following systems:

4.4.1.1 Residential Easy Access Sales Environment (R-EASE): R-EASE is an ordering entry system through which SBC-SWBT provides SCC access to the functions of pre-ordering to order SBC-SWBT residential Resale services.

4.4.1.2 Business Easy Access Sales Environment (B-EASE): B-EASE is an ordering entry system through which SBC-SWBT provides SCC access to the functions of pre-ordering to order SBC-SWBT business Resale services.

4.4.2 **PACIFIC and NEVADA Resale Services Pre-Order System Availability:** PACIFIC will provide SCC access to the following system:

4.4.2.1 Service Order Retrieval and Distribution (SORD) is available for the pre-order function of viewing the CPNI, when SORD is used to order PACIFIC Resale service.

4.4.2.2 StarWriter is available for the pre-ordering functions listed in section 4.2 when StarWriter is used to order PACIFIC single line, basic exchange, residential Resale services.

4.4.3 SNET Resale Service Pre-Order System Availability:

SNET will provide SCC access to the following applications through its proprietary W-CIWin interface.

4.4.3.1 W-SNAP is an order entry application through which SNET provides SCC access to pre-ordering functionality embedded in the ordering tool.

4.4.3.2 CCTOOLS is a toolbar that provides icons for accessing pre-order GUI applications.

4.4.3.3 Electronic Forms (EF) is an automated workflow process for obtaining pre-order information for specific complex resale products.

4.4.4 **SNET Resale and UNE Services Pre-Order System Availability:** SNET will provide SCC access to its MSAP:

4.4.4.1 MSAP is an Electronic Data Interchange (EDI) based interface which provides access to pre-order functions.

4.4.5 **SBC-AMERITECH Resale and UNE Services Pre-Order System Availability:** SBC-AMERITECH will provide SCC access to the following system:

4.4.5.1 TCNet and EDI are available for the pre-ordering functions listed in section 4.2

4.4.6 **Resale and UNE Pre-order System Availability:** SBC-7STATE will provide SCC access to the following systems (except as noted in section 4.4.6.3):

4.4.6.1 DataGate is a transaction-based data query system through which SBC-7STATE provides SCC access to pre-ordering functions. This gateway shall be a Transmission Control Protocol/Internet Protocol (TCP/IP) gateway and will, once SCC has developed its own interface, allow SCC to access the pre-order functions for Resale services and UNE. An industry standard EDI/CORBA Pre-ordering Gateway is also provided by SBC-7STATE. This pre-ordering gateway supports two structural protocols, EDI and CORBA, as recommended by the technical industry committees. EDI/CORBA, like DataGate, is application-to-application interface that can be integrated with the SCC's own negotiation system and that supports both Resale services and UNEs. Where DataGate follows industry guidelines, but is based on SBC-7STATE's proprietary pre-ordering functionality, EDI/CORBA is an industry-wide standard pre-ordering interface.

4.4.6.2 Verigate is a CLEC interface developed by SBC-7STATE that provides access to the pre-ordering functions for Resale Services and UNE. Verigate is accessible via Toolbar.

4.4.6.3 CESAR is a **PACIFIC** and **NEVADA** system which is available on an interim basis provides pre-order functions for Resale service and UNE, with the exception of viewing CPNI. The pre-order functionality of CESAR will be replaced by Verigate.

4.5 **Other Pre-order Function Availability:**

4.5.1 Where pre-ordering functions are not available electronically, SCC will manually request this information from the LSC, dependent on operating region, for inclusion on the service order request.

4.5.2 Upon request, but not more frequently than once a month, **SBC-SWBT** will provide SCC certain pre-order information in batch transmission for the purposes of back-up data for periods of system unavailability. Specifically for **SBC-SWBT** and **SBC-AMERITECH**, the following database information may be electronically provided: Street Address Guide (SAG) Guide, Service and Feature Availability by NXX, and a PIC list, to support address verification, service and feature availability and PIC availability, respectively. Specifically for **PACIFIC**, the following database information may be electronically provided: Street Address Guide (SAG) Guide (with planned availability no later than June 1st, 2000), and a PIC list, to support address verification, service and feature availability and PIC availability, respectively. The Parties recognize such information must be used to construct order requests only in exception handling situations.

5. ORDERING/PROVISIONING

5.1 **SBC-13STATE** provides access to ordering functions (as measured from the time **SBC-13STATE** receives accurate service requests from the interface) to support SCC provisioning of Resale services and UNE via one or more electronic interfaces. To order Resale services and UNEs, SCC will format the service request to identify what features, services, or elements it wishes **SBC-13STATE** to provision in accordance with applicable **SBC-13STATE** ordering requirements. **SBC-13STATE** will provide SCC access to one or more of the following systems or interfaces:

5.2 **Resale Service Order Request System Availability:**

5.2.1 In **SBC-SWBT**:

5.2.1.1 R-EASE is available for the ordering of residential Resale services.

5.2.1.2 B-EASE is available for the ordering of business Resale services.

5.2.1.3 SORD interface provides SCC with the ability to create Resale orders as well as certain complex Resale orders that cannot be ordered through Easy Access Sales Environment (EASE), Electronic Data Interchange (EDI) or Local Exchange (LEX). In addition, the SORD interface supports the modification of service orders submitted electronically by SCC. The Parties agree that the following conditions are applicable to electronically generated service orders with errors corrected via SORD: If SCC chooses to use SORD to issue orders, then SCC becomes responsible for correction of all service order errors between order application and order completion that occur on mechanically generated service orders created or modified by SCC. SCC may need to call the LSC to obtain additional information. SCC may also choose to clear service order errors, even though SCC is not initiating service orders via SORD. SCC would then become responsible for correction of all errors, as detailed above. For terms and conditions for service order error correction within SORD, see section 5.4.3.

5.2.2 In NEVADA only:

5.2.2.1 Pacific Bell Service Manager (PBSM) is available for ordering Centrex and ISDN Resale services.

5.2.2.2 When available, SORD system will support the ordering of all Resale Services.

5.2.3 In PACIFIC only:

5.2.3.1 StarWriter supports the ordering of single line, basic exchange, and residential Resale services.

5.2.3.2 Pacific Bell Service Manager (PBSM) is available for ordering Centrex and ISDN Resale services.

5.2.3.3 SORD system supports the ordering of all Resale Services.

5.2.4 In SNET, Resale ordering is supported by W-CIWin (SNET's proprietary GUI interface).

5.2.4.1 W-SNAP is made available for the ordering of non-complex Resale products and services.

5.2.4.2 Order Negotiation (as part of CCTOOLS) is made available for the ordering of complex Resale products and services.

5.2.4.3 Electronic Forms (EF) is an automated workflow process for ordering of specific complex Resale products and services.

5.3 **Resale and UNE Service Order Request Ordering System Availability:**

5.3.1 SBC-13STATE makes available to SCC an Electronic Data Interchange (EDI) interface for transmission of SBC-13STATE ordering requirements via formats provided on the Local Service Request (LSR) as defined by the OBF and via EDI mapping as defined by TCIF. In ordering and provisioning Resale, SCC and SBC-13STATE will utilize industry guidelines developed by OBF and TCIF EDI to transmit data based upon SBC-13STATE's Resale ordering requirements, dependent on operating region. In ordering and provisioning UNE, SCC and SBC-13STATE will utilize industry guidelines developed by OBF and TCIF EDI to transmit data based upon SBC-13STATE's UNE ordering requirements dependent on operating region. In addition, Local Number Portability (LNP) and, where applicable, Interim Number Portability (INP), will be ordered consistent with the OBF LSR and EDI process.

5.3.2 For SBC-SWBT and PACIFIC regions, SORD interface provides SCC with the ability to create UNE orders as well as certain complex UNE orders that cannot be initiated through EASE, EDI or LEX.

5.3.2.1 For SBC-SWBT region, SORD interface supports the modification of service orders submitted electronically by SCC. The Parties agree that the following conditions are applicable to electronically generated service orders with errors corrected via SORD. If SCC chooses to use SORD to issue orders, then SCC becomes responsible for correction of all service order errors between order application and order completion that occur on mechanically generated service orders created or modified by SCC. SCC may need to call the LSC to obtain additional information. SCC may also choose to clear service order errors, even though SCC is not initiating service orders via SORD. SCC would then become responsible for correction of all errors, as detailed above. For terms and conditions for service order error correction within SORD, see section 5.4.3.

5.3.2.2 In PACIFIC region, any service order errors will be corrected by the LSC. SCC will be given a list generated by the LSC of SCC order errors, and SCC will be responsible for contacting their customer when necessary to clear an error. With SCC being the point of contact for their customer, the SCC agrees to respond timely to the LSC with correct information in order for LSC to

complete the correction of the error and subsequent completion of the order. For terms and conditions for service order error correction within SORD, see section 5.4.3.

5.3.3 In ordering and provisioning Unbundled Dedicated Transport and local interconnection trunks, SCC and SBC will utilize industry ASR guidelines developed by OBF based upon SBC ordering requirements. In **SBC-SWBT**, **SNET**, and **SBC-AMERITECH**, EXACT supports the ordering of Unbundled Dedicated Transport and local interconnection trunks. In **PACIFIC** and **NEVADA** CESAR supports the ordering of Unbundled Dedicated Transport and local interconnection trunks.

5.3.4 For **SBC-SWBT** and **PACIFIC**, LEX is an End User interface that provides access to the ordering functions for Resale Services and UNE.

5.3.5 In **SNET**, MSAP (**SNET**'s EDI-based industry standard app-to-app interface) is available for the ordering of both complex and non-complex Resale Services, as well as the ordering of UNEs.

5.4 **Provisioning for Resale Services and UNE in SBC-SWBT**: **SBC-SWBT** will provision Resale services and UNE as detailed in SCC order requests. Access to status on such orders will be provided via the following electronic interfaces:

5.4.1 Order Status will allow SCC to check service order status. Order Status and Provisioning Order Status are both accessible via **SBC-SWBT** Toolbar. In addition, pending orders can be viewed in SORD.

5.4.2 For EDI ordering, **SBC-SWBT** will provide, and SCC shall use, an EDI interface for transferring and receiving orders, Firm Order Confirmation (FOC), service completion, and, as available, other provisioning data and information. **SBC-SWBT** will provide SCC with a FOC for each Resale service and UNE request.

5.4.3 As detailed in section 5.2.1 and 5.3.2, the Parties agree that the following timelines are applicable to electronically generated service orders with errors corrected via SORD:

5.4.3.1 Errors occurring between application and distribution must be corrected within five (5) hours for a simple order and within twenty four (24) hours for a complex order;

5.4.3.2 Error Service Order Image (ESOI) errors must be corrected within three (3) business hours.

5.4.3.3 Service orders will be excluded from calculation of the results for all related performance measurements, described in Appendix Performance Measurements, if SCC fails to correct service order errors within the timeframes specified in this Section 5.4.3.

5.4.3.4 Additionally, service orders with errors that occur after order generation, but prior to distribution will not qualify for an SBC issued FOC.

5.4.4 A file transmission may be provided to confirm order completions for R-EASE or B-EASE order processing. This file will provide service order information of all distributed and completed orders for SCC.

5.5 **Provisioning for Resale services and UNEs in PACIFIC and NEVADA:** PACIFIC and NEVADA will provision Resale services and UNE as detailed in SCC order requests. Access to status on such orders is provided via the following electronic interfaces:

5.5.1 Pacific Bell Order Dispatch (PBOD) functions via DataGate allows SCC to check status of basic exchange service orders that require field work. PACIFIC also offers Provisioning order status to check the status of service orders.

5.5.2 For EDI ordering, PACIFIC shall provide SCC, and SCC shall use, an EDI interface for transferring and receiving orders, Firm Order Confirmation (FOC), service completion, and, as available, other provisioning data and information. PACIFIC will provide SCC with a FOC for each Resale service and UNE request.

5.5.3 For terms and conditions for service order error correction within SORD, see section 5.4.3.

5.6 **Provisioning for Resale Services and UNEs in SBC-AMERITECH and SNET:** SBC-SMERITECH and SNET will provision Resale services and UNE as detailed in SCC order requests. Access to status on such orders will be provided via the following electronic interfaces:

5.6.1 For EDI ordering, SBC-AMERITECH and SNET provide SCC, and SCC shall use, an EDI interface for transferring and receiving orders, FOC, Service Order Completion (SOC), and, as available, other provisioning data and information. SBC-AMERITECH and SNET will provide SCC with a FOC for each Resale service and UNE request.

6. MAINTENANCE/REPAIR

6.1 Two real time electronic interfaces are accessible in each region to place, and check the status of, trouble reports for both Resale services and UNEs. Upon request, SCC may access these functions via the following methods:

6.1.1 In SBC-SWBT, Trouble Administration (TA) system access provides SCC with SBC-SWBT software that allows SCC to submit trouble reports and subsequently check status on trouble reports for SCC End-Users. TA will provide the ability to review the maintenance history of a converted Resale SCC account. TA is accessible via SBC-SWBT Toolbar.

6.1.2 In PACIFIC and NEVADA, Pacific Bell Service Manager (PBSM) allows SCC to perform MLT, issue trouble tickets, view status, and view trouble history on-line.

6.1.3 In SBC-AMERITECH, Electronic Bonding for Trouble Administration (EBTA-GUI) allows SCC to issue trouble tickets, view status, and view trouble history on-line.

6.1.4 In SNET the maintenance and repair functionality for Resale services and UNEs is available via the MSAP EDI interface. In addition, for Resale products and services, trouble history and trouble status functions are available via CCTOOLS.

6.1.5 In SBC-12STATE, Electronic Bonding Interface (EBI) is an interface that is available for trouble report submission and status updates. EBI conforms to ANSI guidelines T1:227:1995 and T1.228:1995, Electronic Communications Implementation Committee (ECIC) Trouble Report Format Definition (TFRD) Number 1 as defined in ECIC document ECIC/TRA/95-003, and all guidelines referenced within those documents, as mutually agreed upon by SCC and SBC-12STATE. Functions currently implemented include Enter Trouble, Request Trouble Report Status, Add Trouble Information, Modify Trouble Report Attributes, Trouble Report Attribute Value Change Notification, and Cancel Trouble Report, as explained in 6 and 9 of ANSI T1.228:1995. SCC and SBC-12STATE will exchange requests over a mutually agreeable X.25-based network.

7. BILLING

7.1 SBC-7STATE will bill SCC for Resold services and UNEs. SBC-7STATE will send associated billing information to SCC as necessary to allow SCC to perform billing functions. At minimum SBC-7STATE will provide SCC billing information in a paper format or via magnetic tape, as agreed to between SCC and SBC-7STATE.

7.1.1 For Resale Services in PACIFIC, SCC may elect to receive Custom Billing

Disk/ CD Bill. Custom Billing Disk/ CD Bill provides an electronic bill with the same information as a paper bill along with various reporting options.

7.1.2 For Resale Services in SBC-AMERITECH, SCC may elect to receive its bill on CD.

7.2 Electronic access to billing information for Resale services will also be available via the following interfaces:

7.2.1 In SBC-SWBT, SCC may receive Bill Plus™, an electronic version of its bill, as described in, and in accordance with, SBC-SWBT's Local Exchange Tariff.

7.2.2 In SBC-SWBT, SCC may also view billing information through the Bill Information interface. Bill Information will be accessible via SBC-SWBT Toolbar.

7.2.3 In SBC-7STATE, SCC may receive a mechanized bill format via the EDI 811 transaction set.

7.2.4 In SBC-12STATE, SCC may receive electronically a Usage Extract Feed, or in SNET, a Daily Usage Feed (DUF). On a daily basis, this feed provides information on the usage billed to its accounts for Resale services in the industry standardized EMR format.

7.2.5 In SBC-7STATE, SCC may receive Local Disconnect Report records (via CARE records) or, in SNET Loss Notification File (via CARE-like records), electronically, that indicate when SCC's End Users change their Competitive Local Exchange Carrier. In SBC-AMERITECH this information is provided via the EDI 836 transaction set.

7.2.6 In SNET, SCC may receive a Billing Detail File on cartridge or magnetic tape.

7.2.7 In SBC-AMERITECH, SCC may receive a mechanized bill via the SBC-AMERITECH Electronic Billing System (AEBS) transaction set.

7.3 Electronic access to billing information for UNE will also be available via the following interfaces:

7.3.1 SBC-8STATE makes available to SCC a local Bill Data Tape to receive data in an electronic format from its CABS database. The local Bill Data Tape contains the same information that would appear on SCC's paper bill.

SBC-AMERITECH also makes available to SCC a local bill via the SBC-AMERITECH Electronic Billing System (AEBS) transaction set.

7.3.2 In SBC-SWBT, SCC may also view billing information through the Bill Information interface. Bill Information will be accessible via SBC-SWBT Toolbar.

7.3.3 In SBC-12STATE, SCC will receive a Usage Extract Feed, or in SNET, a Daily Usage Feed (DUF), electronically, on a daily basis, with information on the usage billed to its accounts for UNEs in the industry standardized Exchange Message Record (EMR) format.

7.3.4 SBC-7STATE, SCC may receive Local Disconnect Report records (via CARE records) electronically that indicate when SCC's End Users, utilizing SBC-7STATE, ports, change their Competitive Local Exchange Carrier. In SBC-AMERITECH this information is provided via the EDI 836 transaction set.

8. REMOTE ACCESS FACILITY

8.1 For the SBC-SWBT region, SCC must access the following OSS interfaces via a CLEC Remote Access Facility (LRAF) located in Dallas, Texas: R-EASE; B-EASE; DataGate; EDI-Ordering; SORD; Electronic Bonding via EDI/SSL or CORBA; and via Toolbar, Trouble Administration, Order Status, Provisioning Order Status, Verigate, LEX, and Bill Information. Connection to the LRAF will be established via a "port" either through dial-up or direct connection as described in Section 8.3. SCC may utilize a port to access these interfaces to perform the supported functions in any SBC-SWBT state where SCC has executed an Appendix OSS.

8.2 In PACIFIC and NEVADA regions, SCC must access the following OSS interfaces via a CLEC Remote Access Facility (PRAF) located in Fairfield, California: StarWriter; DataGate; EDI-Ordering; SORD; Electronic Bonding via EDI/SSL or CORBA; and via Toolbar Verigate, LEX, Order Status, PBSM, and Provisioning Order Status. Connection to the PRAF will be established via a "port" either through dial-up or direct connection as described in Section 8.3. SCC may utilize a port to access these interfaces to perform the supported functions in PACIFIC or NEVADA where SCC has executed an Appendix OSS and purchases System Access in that state.

8.3 For SBC-7STATE, SCC may use three types of access: Switched, Private Line, and Frame Relay. For Private Line and Frame Relay "Direct Connections," SCC shall provide its own router, circuit, and two Channel Service Units/Data Service Units (CSU/DSU). The demarcation point shall be the router interface at the LRAF and/or PRAF. Switched Access "Dial-up Connections" require SCC to

provide its own modems and connection to the **SBC-SWBT** LRAF and the **PACIFIC** PRAF. SCC shall pay the cost of the call if Switched Access is used.

8.4 For **SBC-7STATE**, SCC shall use TCP/IP to access **SBC-7STATE** OSS via the LRAF and the PRAF. In addition, each SCC shall have one valid Internet Protocol (IP) network address per region. SCC shall maintain a user-id / password unique to each individual for accessing a **SBC-SWBT** OSS and **PACIFIC** OSS on SCC's behalf. SCC shall provide estimates regarding its volume of transactions, number of concurrent users, desired number of private line or dial-up (switched) connections, and length of a typical session.

8.5 For **SBC-7STATE**, SCC shall attend and participate in implementation meetings to discuss SCC LRAF/PRAF access plans in detail and schedule testing of such connections.

8.6 For **SBC-AMERITECH**, SCC may use four types of access: DSO(56KB), DS1 (1.5MB), dedicated and Frame Relay (DS0 and DS1). SCC shall provide its own router, circuit, and two Channel Service Units/Data Service Units (CSU/DSU). SCC must use a legal IP address for its end of the connection.

8.7 For **SNET** region, SCC may use a private line connection. SCC shall provide and maintain own router and CSU/DSU.

9. DATA CONNECTION SECURITY REQUIREMENTS

9.1 SCC agrees that interconnection of SCC data facilities with **SBC-13STATE** data facilities for access to OSS will be in compliance with **SBC-13STATE**'s Competitive Local Exchange Carrier (CLEC) Operations Support System Interconnection Procedures document current at the time of initial connection to a RAF. The following additional terms in this Section 8 govern direct and dial up connections between SCC and the PRAF and LRAF for access to OSS Interfaces.

9.2 **Joint Security Requirements**

9.2.1 Both Parties will maintain accurate and auditable records that monitor user authentication and machine integrity and confidentiality (e.g., password assignment and aging, chronological logs configured, system accounting data, etc.)

9.2.2 Both Parties shall maintain accurate and complete records detailing the individual data connections and systems to which they have granted the other Party access or interface privileges. These records will include, but are not limited to, user ID assignment, user request records, system configuration, time limits of user access or system interfaces. These records should be kept until the termination of this Agreement or the termination of the requested access by the identified individual. Either Party may initiate a

compliance review of the connection records to verify that only the agreed to connections are in place and that the connection records are accurate.

9.2.3 Each Party shall notify the other party immediately, upon termination of employment of an individual user with approved access to the other Party's network.

9.2.4 Both Parties shall use an industry standard virus detection software program at all times. The Parties shall immediately advise each other by telephone upon actual knowledge that a virus or other malicious code has been transmitted to the other Party.

9.2.5 All physical access to equipment and services required to transmit data will be in secured locations. Verification of authorization will be required for access to all such secured locations. A secured location is where walls and doors are constructed and arranged to serve as barriers and to provide uniform protection for all equipment used in the data connections which are made as a result of the user's access to either SCC or SBC-13STATE network. At a minimum, this shall include: access doors equipped with card reader control or an equivalent authentication procedure and/or device, and egress doors which generate a real-time alarm when opened and which are equipped with tamper resistant and panic hardware as required to meet building and safety standards.

9.2.6 Both Parties shall maintain accurate and complete records on the card access system or lock and key administration to the rooms housing the equipment utilized to make the connection(s) to the other Party's network. These records will include management of card or key issue, activation or distribution and deactivation.

9.3 **Additional Responsibilities of Both Parties**

9.3.1 Modem/DSU Maintenance And Use Policy: To the extent the access provided hereunder involves the support and maintenance of SCC equipment on SBC-13STATE's premises, such maintenance will be provided under the terms of the Competitive Local Exchange Carrier (CLEC) Operations Support System Interconnection Procedures document cited above.

9.3.2 Monitoring: Each Party will monitor its own network relating to any user's access to the Party's networks, processing systems, and applications. This information may be collected, retained, and analyzed to identify potential security risks without notice. This information may include, but is not limited to, trace files, statistics, network addresses, and the actual data or screens accessed or transferred.

9.3.3 Each Party shall notify the other Party's security organization immediately upon initial discovery of actual or suspected unauthorized access to, misuse of, or other "at risk" conditions regarding the identified data facilities or information. Each Party shall provide a specified point of contact. If either Party suspects unauthorized or inappropriate access, the Parties shall work together to isolate and resolve the problem.

9.3.4 In the event that one Party identifies inconsistencies or lapses in the other Party's adherence to the security provisions described herein, or a discrepancy is found, documented, and delivered to the non-complying Party, a corrective action plan to address the identified vulnerabilities must be provided by the non-complying Party within thirty (30) calendar days of the date of the identified inconsistency. The corrective action plan must identify what will be done, the Party accountable/responsible, and the proposed compliance date. The non-complying Party must provide periodic status reports (minimally monthly) to the other Party's security organization on the implementation of the corrective action plan in order to track the work to completion.

9.3.5 In the event there are technological constraints or situations where either Party's corporate security requirements cannot be met, the Parties will institute mutually agreed upon alternative security controls and safeguards to mitigate risks.

9.3.6 All network-related problems will be managed to resolution by the respective organizations, SCC or **SBC-13STATE**, as appropriate to the ownership of a failed component. As necessary, SCC and **SBC-13STATE** will work together to resolve problems where the responsibility of either Party is not easily identified.

9.4 **Information Security Policies And Guidelines For Access To Computers, Networks and Information By Non-Employee Personnel:**

9.4.1 Information security policies and guidelines are designed to protect the integrity, confidentiality and availability of computer, networks and information resources. Sections 9.5 - 9.11 summarize the general policies and principles for individuals who are not employees of the Party that provides the computer, network or information, but have authorized access to that Party's systems, networks or information. Questions should be referred to SCC or **SBC-13STATE**, respectively, as the providers of the computer, network or information in question.

9.4.2 It is each Party's responsibility to notify its employees, contractors and vendors who will have access to the other Party's network, on the proper security responsibilities identified within this Attachment. Adherence to these policies is a requirement for continued access to the other Party's

systems, networks or information. Exceptions to the policies must be requested in writing and approved by the other Party's information security organization.

9.5 **General Policies**

9.5.1 Each Party's resources are for approved business purposes only.

9.5.2 Each Party may exercise at any time its right to inspect, record, and/or remove all information contained in its systems, and take appropriate action should unauthorized or improper usage be discovered.

9.5.3 Individuals will only be given access to resources that they are authorized to receive and which they need to perform their job duties. Users must not attempt to access resources for which they are not authorized.

9.5.4 Authorized users must not develop, copy or use any program or code which circumvents or bypasses system security or privilege mechanism or distorts accountability or audit mechanisms.

9.5.5 Actual or suspected unauthorized access events must be reported immediately to each Party's security organization or to an alternate contact identified by that Party. Each Party shall provide its respective security contact information to the other.

9.6 **User Identification**

9.6.1 Access to each Party's corporate resources will be based on identifying and authenticating individual users in order to maintain clear and personal accountability for each user's actions.

9.6.2 User identification shall be accomplished by the assignment of a unique, permanent user id, and each user id shall have an associated identification number for security purposes.

9.6.3 User ids will be revalidated on a monthly basis.

9.7 **User Authentication**

9.7.1 Users will usually be authenticated by use of a password. Strong authentication methods (e.g. one-time passwords, digital signatures, etc.) may be required in the future.

9.7.2 Passwords must not be stored in script files.

9.7.3 Passwords must be entered by the user in real time.

9.7.4 Passwords must be at least 6-8 characters in length, not blank or a repeat of the user id; contain at least one letter, and at least one number or special character must be in a position other than the first or last one. This format will ensure that the password is hard to guess. Most systems are capable of being configured to automatically enforce these requirements. Where a system does not mechanically require this format, the users must manually follow the format.

9.7.5 Systems will require users to change their passwords regularly (usually every 31 days).

9.7.6 Systems are to be configured to prevent users from reusing the same password for 6 changes/months.

9.7.7 Personal passwords must not be shared. A user who has shared his password is responsible for any use made of the password.

9.8 Access and Session Control

9.8.1 Destination restrictions will be enforced at remote access facilities used for access to OSS Interfaces. These connections must be approved by each Party's corporate security organization.

9.8.2 Terminals or other input devices must not be left unattended while they may be used for system access. Upon completion of each work session, terminals or workstations must be properly logged off.

9.9 User Authorization

9.9.1 On the destination system, users are granted access to specific resources (e.g. databases, files, transactions, etc.). These permissions will usually be defined for an individual user (or user group) when a user id is approved for access to the system.

9.10 Software And Data Integrity

9.10.1 Each Party shall use a comparable degree of care to protect the other Party's software and data from unauthorized access, additions, changes and deletions as it uses to protect its own similar software and data. This may be accomplished by physical security at the work location and by access control software on the workstation.

9.10.2 Untrusted software or data shall be scanned for viruses before use on a Party's corporate facilities that can be accessed through the direct connection or dial up access to OSS interfaces.

9.10.3 Unauthorized use of copyrighted software is prohibited on each Party's corporate systems that can be access through the direct connection or dial up access to OSS Interfaces.

9.10.4 Proprietary software or information (whether electronic or paper) of a Party shall not be given by the other Party to unauthorized individuals. When it is no longer needed, each Party's proprietary software or information shall be returned by the other Party or disposed of securely. Paper copies shall be shredded. Electronic copies shall be overwritten or degaussed.

9.11 **Monitoring And Audit**

9.11.1 To deter unauthorized access events, a warning or no trespassing message will be displayed at the point of initial entry (i.e., network entry or applications with direct entry points). Each Party should have several approved versions of this message. Users should expect to see a warning message similar to this one:

"This is a (SBC-13STATE or SCC) system restricted to Company official business and subject to being monitored at any time. Anyone using this system expressly consents to such monitoring and to any evidence of unauthorized access, use, or modification being used for criminal prosecution."

9.11.2 After successful authentication, each session will display the last logon date/time and the number of unsuccessful logon attempts. The user is responsible for reporting discrepancies.

10. OPERATIONAL READINESS TEST (ORT) FOR ORDERING/PROVISIONING AND REPAIR/ MAINTENANCE INTERFACES

10.1 Prior to live access to interface functionality, the Parties must conduct Operational Readiness Testing (ORT), which will allow for the testing of the systems, interfaces, and processes for the OSS functions. ORT will be completed in conformance with agreed upon processes and implementation dates.

10.2 Prior to live system usage, SCC must complete user education classes for **SBC-13STATE**-provided interfaces that affect the **SBC-13STATE** network. Course descriptions for all available classes by region are posted on the CLEC website in the Customer Education section. CLEC Training schedules by region are also available on the CLEC website and are subject to change, with class lengths varying. Classes are train-the-trainer format to enable SCC to devise its own course work for its own employees. Charges as specified below will apply for each class:

Training Rates	5 day class	4.5 day class	4 day class	3.5 day class	3 day class	2.5 day class	2 day class	1.5 day class	1 day class	1/2 day class
1 to 5 students	$4,050	$3,650	$3,240	$2,835	$2,430	$2,025	$1,620	$1,215	$810	$405
6 students	$4,860	$4,380	$3,890	$3,402	$2,915	$2,430	$1,945	$1,455	$970	$490
7 students	$5,670	$5,100	$4,535	$3,969	$3,400	$2,835	$2,270	$1,705	$1,135	$570
8 students	$6,480	$5,830	$5,185	$4,536	$3,890	$3,240	$2,590	$1,950	$1,300	$650
9 students	$7,290	$6,570	$5,830	$5,103	$4,375	$3,645	$2,915	$2,190	$1,460	$730
10 students	$8,100	$7,300	$6,480	$5,670	$4,860	$4,050	$3,240	$2,430	$1,620	$810
11 students	$8,910	$8,030	$7,130	$6,237	$5,345	$4,455	$3,565	$2,670	$1,780	$890
12 students	$9,720	$8,760	$7,780	$6,804	$5,830	$4,860	$3,890	$2,920	$1,945	$970

10.3 A separate agreement will be required as a commitment to pay for a specific number of SCC students in each class. SCC agrees that charges will be billed by **SBC-13STATE** and SCC payment is due thirty (30) days following the bill date. SCC agrees that personnel from other competitive Local Service Providers may be scheduled into any class to fill any seats for which the SCC has not contracted. Class availability is first-come, first served with priority given to CLECs who have not yet attended the specific class.

10.4 Class dates will be based upon **SBC-13STATE** availability and will be coordinated among SCC, SCC's **SBC-13STATE** Account Manager, and **SBC-13STATE** Industry Markets CLEC Training Product Management.

10.5 SCC agrees to pay the cancellation fee of the full price noted in the separate agreement if SCC cancels scheduled classes less than two (2) weeks prior to the scheduled start date. SCC agrees to provide to **SBC-13STATE** completed registration forms for each student no later than one week prior to the scheduled training class.

10.6 SCC agrees that SCC personnel attending classes are to utilize only training databases and training presented to them in class. Attempts to access any other **SBC-13STATE** system are strictly prohibited.

10.7 SCC further agrees that training material, manuals and instructor guides can be duplicated only for internal use for the purpose of training employees to utilize the capabilities of SBC-**13STATE**'s OSS in accordance with this Appendix and shall be deemed "Proprietary Information" and subject to the terms, conditions and limitations of Section 20 of the General Terms and Conditions.

11. MISCELLANEOUS CHARGES

11.1 For **SBC-SWBT** region only, should SCC request the Bill Plus™, as described in 7.2.1, SCC agrees to pay applicable tariffed rate, less Resale discount.

11.2 For SBC-7STATE, should SCC request the billing function for Usage Billable Records, as described in 7.2.4 and 7.3.3, SCC agrees to pay established rates pursuant to Appendix Pricing.

11.3 For SBC-7STATE, should SCC request the Local Disconnect Report, as described in 7.2.5 and 7.3.4, SCC agrees to pay established rates pursuant to Appendix Pricing.

11.4 For SBC-13STATE, should SCC request custom development of an exclusive interface to support OSS functions, such development will be considered by SBC-13STATE on an Individual Case Basis (ICB) and priced as such.

11.5 SNET will charge for the Billing Detail File, Daily Usage Feed, and Loss Notification File at rates filed and approved by DPUC.

12. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

12.1 Every interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each interconnection, service and network element provided hereunder: definitions, interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries; expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

APPENDIX PERFORMANCE MEASUREMENTS

1. INTRODUCTION

1.8 As used herein, **Service Bureau Provider** means a company which has been engaged by SCC to act as its agent for purposes of accessing SBC-LEC's OSS application-to-application interfaces.

1.9 The performance measurements contained herein, notwithstanding any provisions in any other appendix in this Agreement, are not intended to create, modify or otherwise affect parties' rights and obligations with respect to OSS access. The existence of any particular performance measure, or the language describing that measure, is not evidence that SCC is entitled to any particular manner of access, nor is it evidence that SBC-13STATE is limited to providing any particular manner of access. The parties' rights and obligations to such access are defined elsewhere, including the relevant laws, FCC and PUC decisions/regulations, tariffs, and within this interconnection agreement.

2. SOLE REMEDY

2.1 These liquidated damages shall be the sole and exclusive remedy of SCC for SBC 13-STATE's failure to meet specified performance measures and shall be in lieu of any other damages SCC might otherwise seek for such breach through any claim or suit brought under any contract or tariff.

3. DEFINITIONS

3.1 When used in this Appendix, the following terms will have the meanings indicated:

3.1.1 Performance Criteria

3.1.1.1 The target level of SBC-13STATE performance specified for each Performance Measurement. Generally, the Performance Measurements contained in this Appendix specify performance equal to that which SBC-13STATE achieves for itself in providing equivalent end user service as the Performance Criterion. Parity exists when the measured results in a single month (whether in the form of means, proportions, or rates) for the same measure, at equivalent disaggregation for both SBC-13STATE and SCC are used to calculate an appropriate test statistic and the resulting test value has an associated probability that is no less than the critical probability indicated in the Table of Critical Values shown in Section 9.

3.1.1.2 Performance Measurements for which parity calculations are not possible have a specified *standard* as the Performance Criterion. Compliance is assessed by comparing the result obtained by SCC with the applicable standard using an appropriate statistical test. The result is compliant if the probability associated with the test statistic is no less than the critical probability indicated in the Table of Critical Values shown in Section 9.

3.1.2 Performance Measures

3.1.2.1 The set of measures listed in all of Section 14 of this Appendix.

3.1.3 Non-compliance

3.1.3.1 The failure by SBC-13STATE to meet the Performance Criteria for any performance measure identified as an available measurement type in Section 14.

4. SPECIFIED PERFORMANCE STANDARDS

4.1 SBC-13STATE shall not be obligated to pay liquidated damages or assessments for noncompliance with a performance measurement to the extent that such noncompliance was the result of actions or events beyond SBC-13STATE's control, including but not limited to the following: (i) a Force Majeure event; (ii) an act or omission by SCC that is contrary to any of its obligations under its interconnection agreement with SBC-13STATE or law; (iii) environmental events beyond SBC-13STATE's control even though not considered "Force Majeure"; and (iv) problems associated with third-party systems or equipment including systems, equipment and services provided by Service Bureau Provider, which could not be avoided by SBC-13STATE through the exercise of reasonable diligence, regardless of whether or not such third-party systems or equipment were sold to or otherwise being provided to SBC-13STATE.

5. OCCURRENCE OF A SPECIFIED PERFORMANCE BREACH

5.1 In recognition of either: 1) the loss of End User opportunities, revenues and goodwill which SCC might sustain in the event of a Specified Performance Breach; 2) the uncertainty, in the event of a Specified Performance Breach, of SCC having available to its End User opportunities similar to those opportunities available to SBC-13STATE at the time of a breach; or 3) the difficulty of accurately ascertaining the amount of damages SCC would sustain if a Specified Performance Breach occurs, SBC-13STATE agrees to pay SCC Liquidated Damages, subject to Section 6.1 below.

6. LIQUIDATED DAMAGES AS FORM OF REMEDY

6.1 The Parties agree and acknowledge that a) the Liquidated Damages are not a penalty and have been determined based upon the facts and circumstances known by the Parties at the time of the negotiation and entering into this Agreement, with due consideration given to the performance expectations of each Party; b) the Liquidated Damages constitute a reasonable approximation of the damages SCC would sustain if its damages were readily ascertainable; c) neither Party will be required to provide any proof of Liquidated Damages; and d) the Liquidated Damages provided herein will constitute full compensation for any failure of SBC-13STATE to meet a specified performance commitment in this Attachment and any specific time commitments for the same activity contained in any other Attachments or Appendices.

7. LIQUIDATED DAMAGES PAYMENT PLAN; GENERALLY

7.1 Liquidated damages apply to the available, non-diagnostic measurements of the FCC Merger Conditions designated in Section 14 below, when SBC-13STATE delivers non-complaint performance as defined in 3.1.3. In no event shall SBC-13STATE be required to pay liquidated damages for any performance which was at parity or in compliance with the applicable benchmark at the time that the performance occurred.

7.2 The Table of Critical Values (Section 9) gives the maximum number, F, of measurements of those required to be reported to SCC that may fail the Performance Criteria in any month. Liquidated damages apply to Non-compliant measures that are in excess of the applicable value of F.

7.3 None of the liquidated damages provisions set forth in this proposal will apply during the first three months after SCC first purchases the type of service or unbundled network element(s) associated with a particular performance measurement or introduction of a new measure.

7.4 There are two kinds of failures of the Performance Criteria. *Ordinary* failures are failures on a measure for one month or two consecutive months. *Chronic* failures are failures on a measure for three consecutive months. Ordinary failures may be excused up to the applicable value of F from the Table of Critical Values. Chronic failures may not be excused in that manner. $500 is paid for each ordinary failure in excess of F. $2,500 is paid for each Chronic failure. For example, if the value of F is 8 and there are 10 Ordinary failures and 1 Chronic failure in a month, then the Liquidated Damages for that month would be (10-8)*$500 + $2,500 = $3,500. If there were 7 Ordinary failures and no Chronic failures, no Liquidated Damages would be paid.

8. LIQUIDATED DAMAGES; METHOD OF CALCULATION

8.1 SBC-13STATE and SCC agree to use the following as statistical tests for evaluating the compliance of SCC results with the Performance Criterion. These tests are applicable if the number of data points for each of SBC-13STATE and SCC is greater than or equal to 30 for a given measurement.

8.2 The following list describes the tests to be used in evaluating the performance criterion. In each test, the important concept is the probability that SCC's results are significantly worse than either the comparable result for SBC-13STATE or the benchmark (whichever is relevant to the test). This probability is compared with the P value from the Table of Critical Values to decide if the measure meets the Performance Criterion. Probabilities that are less than the P value are deemed to have failed the test.

For parity measures that are expressed as Averages or Means, the following (Modified) Z test applies:

$z = (DIFF) / \delta_{DIFF}$

Where;
$DIFF = M_{ILEC} - M_{CLEC}$
M_{ILEC} = ILEC Average
M_{CLEC} = CLEC Average
$\delta_{DIFF} = SQRT [\delta^2_{ILEC} (1/n_{CLEC} + 1/n_{ILEC})]$
δ^2_{ILEC} = Calculated variance for ILEC.
n_{ILEC} = number of observations or samples used in ILEC measurement
n_{CLEC} = number of observations or samples used in CLEC measurement

The probability of the Z statistic is obtained from a standard normal distribution.

For parity measures that are expressed as Percentages or Proportions:

$z = (DIFF) / \delta_{DIFF}$

Where;
$DIFF = P_{ILEC} - P_{CLEC}$
P_{ILEC} = ILEC Proportion
P_{CLEC} = CLEC Proportion
$\delta_{DIFF} = SQRT [\delta^2_{ILEC} (1/n_{CLEC} + 1/n_{ILEC})]$
$\delta^2_{ILEC} = P_{ILEC} (1 - P_{ILEC})$.
n_{ILEC} = number of observations or samples used in ILEC measurement
n_{CLEC} = number of observations or samples used in CLEC measurement

The probability of the Z statistic is obtained from a standard normal distribution.

In the event that $P_{ILEC} = 0$ (and low values are associated with good service), the above test cannot be used. In such cases, Fisher's Exact Test is used to calculate the probability, P_{FE}, of the data given the hypothesis of parity.:

$$P_{FE} = 1 - \sum_{x=0}^{H_{CLEC}-1} \frac{\binom{n_{CLEC}}{x}\binom{n_{ILEC}}{H_{CLEC}+H_{ILEC}-x}}{\binom{n_{CLEC}+n_{ILEC}}{H_{CLEC}+H_{ILEC}}}$$

Where;
$H_{CLEC} = P_{CLEC} n_{CLEC}$
$H_{ILEC} = P_{ILEC} n_{ILEC}$.

If $P_{ILEC} = 1$ (and high values are associated with good service), the same formula is used with the following interpretation:

$H_{CLEC} = n_{CLEC} - P_{CLEC}n_{CLEC}$
$H_{ILEC} = n_{ILEC} - P_{ILEC}n_{ILEC}$

Of course if it is also true that $H_{CLEC} = 0$, then $P_{FE} = 1$ because the results are at parity.

For parity measures that are expressed as Rates or Ratios: a binomial test is used to calculate the probability of the data given the hypothesis of parity:

$$P_{Rate} = 1 - \sum_{x=0}^{H_{CLEC}-1} \binom{N}{x} p^x (1-p)^{N-x}$$

Where;
H_{CLEC} = numerator for the CLEC
H_{ILEC} = numerator for the ILEC
$N = H_{CLEC} + H_{ILEC}$
D_{CLEC} = denominator for CLEC
D_{ILEC} = denominator for ILEC
$p = D_{CLEC} / (D_{CLEC} + D_{ILEC})$

In calculating the difference between the performances the formulae given above apply when a larger CLEC value indicates a higher quality of performance. For cases in which a smaller CLEC value indicates a higher quality of performance the order of subtraction should be reversed (i.e., $M_{CLEC} - M_{ILEC}$, $P_{CLEC} - P_{ILEC}$).

For measures with benchmarks that are expressed as Averages or Means:

$t = (DIFF) / \delta_{DIFF}$

Where;
$DIFF = M_{CLEC} - BM$
M_{CLEC} = CLEC Average
BM = Benchmark
$\delta_{DIFF} = SQRT [\delta^2_{CLEC} (1/ n_{CLEC})]$
δ^2_{CLEC} = Calculated variance for CLEC.
n_{CLEC} = number of observations or samples used in CLEC measurement

The probability of the t statistic is obtained from Student's distribution with $n_{CLEC} - 1$ degrees of freedom.

For measures with benchmarks that are expressed as Percentages or Proportions:

When high proportions designate good service, the probability of the CLEC result is given by

$$\sum_{x=0}^{K}\binom{N}{x}B^{x}(1-B)^{N-x}$$

Where

K = PN

P = CLEC proportion

N = number of observations or samples used in CLEC measurement

B = benchmark expressed as a proportion

When low proportions designate good service, the probability of the CLEC result is given by

$$1-\sum_{x=0}^{K-1}\binom{N}{x}B^{x}(1-B)^{N-x}$$

with the same definition of symbols as is given above.

8.3 The following table will be used for determining the critical probabilities that define the Performance Criterion as well as the number of non-compliant measures that may be excused in a given month. The table is read as follows: (1) determine the number of measures to which Liquidated Damages are applicable and which have sample sizes greater than or equal to 30 cases. Let this number be M. (2) Find the value of M in the columns of the table with the heading "M". (3 To the immediate right of the value of M, find the value in the column labeled "F". This is the maximum number of measures that may be failed when there are M measures being evaluated. (4)) To the immediate right of F in the column labeled "P" is the critical probability for determining compliance in each statistical test performed on the M measures Statistical tests that yield probabilities less than this value indicate failures for the sub-measure.

9. TABLE OF CRITICAL VALUES

M	F	P	M	F	P	M	F	P	M	F	P	M	F	P	M	F	P

10. LIMITATIONS

10.1 SBC-13STATE will not be excused from payment of liquidated damages, as calculated by the rules set forth herein, on any grounds, except by application of the procedure provided for under Section 11.5. Any dispute regarding whether a SBC-13STATE performance failure is excused under that paragraph will be resolved, through negotiation, through a dispute resolution proceeding under applicable Commission rules or, if the parties agree, through commercial arbitration with the American Arbitration Association.

10.2 SBC-13STATE shall not be obligated to pay liquidated damages or assessments for noncompliance with a performance measurement to the extent that such noncompliance was the result of actions or events beyond SBC-13STATE's control, including but not limited to the following: (i) a Force Majeure event; (ii) an act or omission by SCC that is contrary to any of its obligations under its interconnection agreement with SBC-13STATE or law; (iii) environmental events beyond SBC-13STATE's control even though not considered "Force Majeure"; (iv) problems associated with third-party systems or equipment which could not be

avoided by SBC-13STATE through the exercise of reasonable diligence, regardless of whether or not such third-party systems or equipment were sold to or otherwise being provided to SBC-13STATE and (v) delays or other problems resulting from actions of a Service Bureau Provider acting on SCC's behalf for connection to SBC-LEC's OSS, including Service Bureau Provider processes, services, systems or connectivity.

10.3 If a Delaying Event (i) prevents a Party from performing an activity, then such activity will be excluded from the calculation of SBC-13STATE's compliance with the Performance Criteria, or (ii) only suspends SBC-13STATE's ability to timely perform the activity, the applicable time frame in which SBC-13STATE's compliance with the Performance Criteria is measured will be extended on an hour-for-hour or day-for-day basis, as applicable, equal to the duration of the Delaying Event.

11. RECORDS AND REPORTS

11.1 SBC-13STATE will not levy a separate charge for provision of the data to SCC called for under this Appendix. Notwithstanding other provisions of this Agreement, the Parties agree that such data and associated records will be deemed Proprietary Information.

11.2 Reports are to be made available to SCC by the 20th day following the close of the calendar month. If the 20th day falls on a weekend or holiday, the reports will be made available the next business day.

11.3 SCC will have access to monthly reports through an interactive Website.

11.4 SBC-13STATE will provide billing credits for the associated liquidated damages on or before the 30th day following the due date of the performance report for the month in which the obligation arose.

11.5 The measurement data herein shall be collected, reported and used to calculate payments or penalties on a per CLEC operating entity basis. The results of multiple CLEC affiliates shall not be combined for any purpose under this Appendix.

11.6 SBC-13STATE will not pay liquidated damages in excess of the monthly maximum amounts listed in the table below. These thresholds are based on the aggregate damages to all CLECs in the designated state.

State	Monthly Maximum
Arkansas	$.072M

California	$1.26M
Connecticut	$.168M
Illinois	$.51M
Indiana	$.165M
Kansas	$.101M
Michigan	$.392M
Missouri	$.189M
Nevada	$.024M
Ohio	$.296M
Oklahoma	$.120M
Texas	$.713M
Wisconsin	$.158M

12. AUDITS

12.1 SCC and SBC-13STATE will consult with one another and attempt in good faith to resolve any issues regarding the accuracy or integrity of data collected, generated, and reported pursuant to this Appendix. In the event that SCC requests such consultation and the issues raised by SCC have not been resolved within 30 days after SCC's request for consultation, then SBC-13STATE will allow SCC to commence a mini-audit, at SCC's expense, upon providing SBC-13STATE 5 days advance written notice (including e-mail).

12.2 SCC is limited to auditing three (3) single measures/submeasures during the year (hereafter, "Mini-Audits"). No more than three (3) Mini-Audits will be conducted simultaneously for all CLECs, unless more than one CLEC wants the same measure/sub-measure audited at the same time, in which case, Mini-Audits of the same measure/submeasure shall count as one Mini-Audit for the purposes of this paragraph only.

12.3 SCC will bear the expense of the mini-audits, unless SBC-13STATE is found to be "materially" misreporting or misrepresenting data or to have non-compliant procedures, in which case, SBC-13STATE will pay for the costs of the third party auditor. "Materially" at fault means that a reported successful measure changes as a consequence of the audit to a missed measure, or there is a change from an ordinary missed measure to another category, if such exists. Each party to the mini-audit shall bear its own internal costs, regardless of which party ultimately bears the costs of the third party auditor. The major service categories are listed below:

Pre-Ordering/Ordering
Provisioning
Maintenance

Interconnection
Coordinated Conversions
Collocation
Billing

13. INITIAL IMPLEMENTATION

13.1 The Parties agree that none of the liquidated damages provisions set forth in this Appendix will apply during the first three months after first purchases of the a new type of service or unbundled network element(s) associated with a particular Performance Measurement or after the introduction of a new measure. During this three month period the Parties agree to consider in good faith any adjustments that may be warranted to the Performance Criteria for that Performance Measurement.

14. PERFORMANCE MEASUREMENTS

14.1 SBC-13STATE will provide Performance Measurements under this Agreement, in accordance with the Business Rules and associated implementation timelines contained in paragraphs 23 and 24 of the FCC Merger Conditions, and its associated Attachments. Except as otherwise provided herein, the Performance Measure Business Rules contained in the FCC Merger Conditions, including any subsequent additions, modifications and/or deletions to the Business Rules adopted pursuant to FCC Merger Conditions, Attachment A, paragraph 4, shall also be incorporated into this Agreement by reference. As provided in Section 7.1 herein, liquidated damages apply to available, non-diagnostic measurements of the FCC Merger Conditions, when SBC-13STATE delivers non-compliant performance as defined in 3.1.3. SBC-13STATE will also report results for any measurements that have been ordered by the state commission that approved this agreement, although liquidated damages shall not apply to such measurements. SBC-13STATE performance shall be measured by the Business Rules in effect on the first date of each month in which the activity subject to measurement occurred.

APPENDIX PHYSICAL COLLOCATION

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions for Collocation provided by the applicable SBC Communications Inc. (SBC) owned Incumbent Local Exchange Carrier (ILEC) and SCC.

2. DEFINITIONS

2.1 **"Active Central Office Space"** *denotes the* existing, central office switchroom space, which can be designated for physical collocation, with sufficient infrastructure systems. Also denotes central office space that may contain obsolete and unused equipment.

2.2 **"Adjacent Structure"** is a Collocator provided structure at **SBC-13STATE**'s Premises adjacent to an Eligible Structure. This arrangement is only permitted when space is legitimately exhausted inside the Eligible Structure and to the extent technically feasible.

2.3 **"Application Fee"** includes the costs incurred by **SBC-13STATE** to process the Collocator's application for physical collocation arrangements.

2.4 **"Approved Vendor"** is a vendor who is qualified by **SBC-13STATE** for installation, and/or removal of central office equipment, which is administered by **SBC** Procurement on a state by state basis.

2.5 **"Augment"** is a request from the Collocator to add equipment, cable, and/or Collocation services to (1) a pending Physical Collocation arrangement which is more than fifteen (15) calendar days into the construction interval or (2) an existing Physical Collocation arrangement.

2.6 **"Caged Physical Collocation"** is a cage or similar structure (not including a top) enclosing Collocator's physical collocation space in which a Collocator may install its telecommunications equipment.

2.7 **"Cageless Physical Collocation"** is a Collocation arrangement, provided in single bay increments, and does not require the construction of a cage or similar structure.

2.8 **"Collocation Area for Physical Collocation"** is the common area providing access to an area surrounding the Collocator's Physical Collocation Space ***as well as the Physical Collocation Space dedicated to Collocators.***

2.9 **"Collocation Interconnection Power Panel (CIPP)"** is a DC Power panel for Power termination. ***Two DC Power panels are available: (1) A DC power panel designed to provide either 20, 40 or 50 (Maximum) AMPS (redundant) of DC voltage, (2) A DC Power Panel designed to provide either 100 or 200 (Maximum) AMPS (redundant) of DC voltage*** See also 9.6.6.

2.10 **"COBO"** the Central Office Build Out that represents the typical conditioning costs (not to include Extraordinary build out Expenses) to make an unused Premises space suitable for a collocation arrangement (Physical Collocation Space) in **SBC-AMERITECH**.

2.11 **"Collocator"** is any individual, partnership, association, joint-stock company, trust corporation, or governmental entity or any other entity who is collocated in **SBC-13STATE** location, for purposes of Interconnection with **SBC-13STATE** or access to Unbundled Network Elements (UNE). For purposes of this Appendix, unless otherwise indicated, SCC is the Collocator.

2.12 **"Delivery Date"** is the date upon which the Collocator or Requesting Carrier will be provided the collocated space or Dedicated Collocation Space in **SBC-AMERITECH**.

2.13 **"Eligible Structure"** is (1) a **SBC-13STATE** central office, serving wire center or tandem office, or (2) a building or similar structure owned or leased by **SBC-13STATE** that houses its network facilities, or (3) a structure that houses **SBC-13STATE** transmission facilities on public rights-of-way (i.e. CEVs, Huts and Cabinets).

2.14 **"Engineering Design Charge"** is the cost for **SBC-MOKA** employees to perform the central office survey for caged and cageless serving arrangements and to implement the collocation area.

2.15 **"Entrance Fiber Facility"** is an arrangement when a Collocator provided single mode fire retardant dielectric fiber optic cable that extends from the **SBC-13STATE** designated manhole into the **SBC-13STATE** Eligible Structure designated splice point. It is used as a transmission medium to the designated splice point. Collocator shall be permitted no more than two (2) entrance routes into the **SBC-13STATE** Eligible Structure, if available.

2.16 **"Extraordinary Costs"** or extraordinary expenses include such items as asbestos removal, fire suppression system or containment, modifications or expansion of cable entry facility, individualized DC power system infrastructure needs, increasing the capacity of the AC system, or the existing commercial power facility requirements, installation, maintenance, repair, monitoring of securing measures, conversion of non-collocation space, compliance with federal and state

requirements or other modifications required by local ordinances in SBC-AMERITECH.

2.17 **"Individual Case Basis (ICB)"** is a pricing method used for services that are not tariffed or are not standard offerings or configurations.

2.18 **"Infrastructure Systems"** - Infrastructure systems include, but are not limited to, structural components, such as floors capable of supporting equipment loads, frames, heating, ventilating and air conditioning ("HVAC") systems, electrical systems (AC power), DC Power, power distribution via frames or bays, high efficiency filtration, humidity controls, remote alarms, compartmentation, and smoke purge.

2.19 **"Interconnector's Collocation Services Handbook"** or like document is a publication provided to the Collocators, which provides information on how to order collocation arrangements and the processes and requirements for collocation in the SBC-13STATEs which is located on either the web-site (http://tcnet.ameritech.com/) or (https://clec.sbc.com/).

2.20 **"Non Standard Collocation Request (NSCR)"** in SBC-AMERITECH, is a pricing method used for services that are not tariffed or are not standard offerings or configurations.

2.21 **"Occupancy date"** is the date that SBC-AMERITECH may begin billing recurring charges and the Dedicated Collocation Space is made available for occupancy by the Collocator or Requesting Carrier.

2.22 **"Other Central Office Space"** denotes the space within the central office which can be designated for physical collocation where infrastructure systems do not currently exist and must be constructed.

2.23 **"Physical Collocation"** is as defined in Section 4 of this Appendix.

2.24 **"Physical Collocation Space"** is the space provided for the Collocator's physical collocation arrangement located within a SBC-13STATE Eligible Structure.

2.25 **"Point of Termination (POT)"** denotes the point of demarcation, within an Eligible Structure at which the SBC-13STATE responsibility for the provisioning of service ends.

2.26 **"Premises"** means SBC-13STATE's Eligible Structures and all land owned, leased or otherwise controlled by SBC-13STATE that is adjacent to these Eligible Structures.

2.27 **"Preparation Charges"** are the charges applicable to the preparation of SBC-AMERITECH Premises for Collocation, including any COBO charges, cage enclosure charges, and extraordinary charges or expense.

2.28 **"Project Management Fee"** reflects SBC-13STATE's labor costs to manage the provisioning of the individual Collocator's space requirements for a particular Physical Collocation Space request. This fee is applicable upon the submission of an application.

2.29 **"Shared Physical Collocation Cage"** is a caged Physical Collocation Space that is shared by two or more Collocators within the SBC-13STATE's Eligible Structure.

2.30 **Technically Feasible** – is as defined in 47 C.F.R. § 51.5. Deployment by any incumbent LEC of a collocation arrangement gives rise to a rebuttable presumption in favor of a Collocator seeking collocation in SBC-13STATE's Eligible Structures that such an arrangement is technically feasible.

2.31 **"Unbundled Network Element (UNE)"** is As Defined in the Act.

2.32 **"Unused Space"** denotes any space in the Eligible Structure which is not occupied by SBC-13STATE personnel and/or occupied by or reserved for SBC-13STATE network equipment including affiliates and third parties. Denotes space that is vacant and does not contain SBC-13STATE equipment, is not reserved for growth, is not used for administrative or other functions, and is not needed for access to, egress from, or work within occupied or reserved space. May also be used to denote space within a specific Collocator's area that is not occupied by or reserved for Collocator's equipment. (See also sections 4.1.2.1 and 4.1.3.1).

3. PURPOSE AND SCOPE OF APPENDIX

3.1 The purpose of this Appendix is to set forth the terms and conditions, including pricing, in which SBC-13STATE will provide Physical Collocation to Collocator.

3.2 Preparation Prior to Regulatory Approval

3.2.1 Upon the written request of Collocator, SBC-13STATE shall consider an application for collocation space submitted prior to receiving the approval. Upon such an election, this Appendix shall become effective but only insofar as to be applicable to the consideration of an application for collocation space. In the event that the Appendix does not become fully effective as contemplated by this Section, Collocator shall not be entitled to any refund or return of any such payments beyond any portion of the charges paid but not attributable to costs incurred by SBC-13STATE. To the extent that SBC-13STATE has incurred preparation costs not included

within any payment made by Collocator, Collocator shall pay those costs within thirty (30) calendar days of notice by SBC-13STATE.

3.2.2 Collocator is responsible for obtaining an approved Interconnection Agreement (ICA) and meeting the State Certification requirements. The following shall apply:

3.2.2.1 If the State Commission has not approved the ICA prior to completion of the build-out, SBC-13STATE will not process service orders for interconnection or access to UNEs. However, the requested space will be turned over to the Collocator if the final non-recurring costs have been received. Monthly recurring charges will commence when space is turned over.

3.2.2.2 If the Collocator has not received its State Certification prior to completion of the build-out, SBC-13STATE will not process service orders for interconnection or access to UNEs. However, the requested space will be turned over to the Collocator if the final non-recurring costs have been received. Monthly recurring charges will commence when space is turned over.

3.2.2.3 If the Collocator has not received their State Certification or the State Commission has not approved the ICA by Day one hundred eighty (180) after space turnover, then the Collocator (forfeits) all charges collected to date by SBC-13STATE and the collocation space. The Collocator will have thirty (30) calendar days to remove any equipment and bays placed by the Collocator in the premise.

3.2.3 The Parties agree that billing for all costs incurred in the establishment of Physical Collocation for the Collocator will be provided to the Collocator within one hundred eighty (180) calendar days of the billing cycle. Billing will be subject to true up if interim rates are pending State or Federal Commission approval.

4. GENERAL OFFERINGS

4.1 Except where Physical Collocation is not practical for technical reasons or because of space limitations, SBC-13STATE will provide Physical Collocation to Collocator for the purpose of interconnecting to SBC-13STATE network or for obtaining access to SBC-13STATE Unbundled Network Elements ("UNEs") for the provision of a telecommunications service pursuant to 47 U.S.C. §251 (c)(3) of the Act. Physical Collocation will be provided on a "first come, first served" basis, in accordance with the requirements of the Act (including 47 U.S.C. 251(c)(6) of the Act).

4.1.1 Caged Physical Collocation

4.1.1.1 In SBC-13STATE, Collocator may apply for Caged Physical Collocation in initial and subsequent increments of fifty (50) square feet. Space totaling less than fifty (50) square feet will be provided where technically feasible. The caged serving arrangement is an area designated by SBC-13STATE within an Eligible Structure to be used by a Collocator for the sole purpose of installing, maintaining and operating Collocator provided equipment. SBC-13STATE will provide floor space, floor space conditioning, cage common systems and safety and security on a per square foot basis. SBC-13STATE will prorate the charge for site conditioning and preparation undertaken to construct or condition the collocation space so the first Collocator in an SBC-13STATE premise will not be responsible for the entire cost of site preparation.

4.1.2 Shared Caged Collocation

4.1.2.1 Upon request, SBC-13STATE shall provide Collocator Shared Caged Collocation in any Unused Space. **"Shared Caged Collocation"** is caged Physical Collocation Space shared by Collocator and one or more other Collocators pursuant to terms and conditions agreed upon by such carriers.

4.1.2.1.1 A Collocator may request that SBC-13STATE provide Shared Caged Collocation via a new request for Physical Collocation whereby the Collocator requesting such space allocates the requested space among the number of Collocators initially requesting such space (**"New Shared Collocation"**) or a request by Collocator to enter into a sublease arrangement with another Resident Collocators(s) in Collocator's existing Physical Collocation (**"Subleased Shared Collocation"**). In each Shared Caged Collocation arrangement, SBC-13STATE's single point of contact (SPOC) with respect to such arrangement shall be referred to as the **"Primary Collocator"**. For New Shared Collocation, the Primary Collocator shall be the single Collocator that submits the request for New Shared Collocation on behalf of the other Resident Collocators. For Subleased Shared Collocation, the Primary Collocator shall be the Collocator that

originally requested and occupied such space and is the sublessor in such arrangement. For purposes of this section, each Collocator (including Resident Collocator(s) and the Primary Collocator) to a Shared Caged Collocation arrangement is sometimes referred to as a **"Resident Collocator"**. An order for Shared Caged Collocation shall include blanket letters of authorization signed by the Primary Collocator that authorize each other Resident Collocator to utilize the Connecting Facility Assignments associated with the Primary Collocator and signed by each Resident Collocator that authorize the Primary Collocator to request and place firm orders for Shared Caged Collocation and facilities on behalf of such Resident Collocators.

4.1.2.1.2 New Shared Collocation is available in minimum increments of fifty (50) square feet (per caged space dimensions, not per Collocator). Space totaling less than fifty (50) square feet will be provided where technically feasible. Resident Collocators may request space in single bay increments. Resident Collocators shall request New Shared Collocation from **SBC-13STATE** in a single application. A request and any subsequent order for New Shared Collocation shall be submitted by the Primary Collocator. When making New Shared Collocation available, **SBC-13STATE** shall not, except as otherwise specifically required to accommodate a Resident Carrier's specific instructions, increase the Preparation Charges above the cost of provisioning a cage of similar dimensions and materials to a single collocating Collocator. **SBC-13STATE** will prorate the Preparation Charges incurred by **SBC-13STATE** to construct the shared Collocation cage or condition the space for Collocation use among the Resident Collocators utilizing the New Shared Collocation space, by determining the total preparation charges to make that space available and allocating that charge to each Resident Collocator based on the percentage attributable to each Resident Collocator as provided on the Collocation order by the Primary Collocator, provided that the percentage divided among the Resident Collocators in a New Shared Collocation space equals one

hundred percent (100%) of such Preparation Charges. SBC-13STATE will prorate the charge for site conditioning and preparation undertaken to construct or condition the collocation space so the first Collocator in a SBC-13STATE premise will not be responsible for the entire cost of site preparation. Allocation of Preparation Charges shall occur only upon the initial delivery of New Shared Collocation and SBC-13STATE shall not be required to adjust such allocation if another Resident Collocator subsequently shares such space. Except with respect to prorated Preparation Charges, SBC-13STATE shall bill only the Primary Collocator for, and the Primary Collocator shall be the primary obligor with respect to the payment of, all charges other than Preparation Charges billed on New Shared Collocation. It is the Primary Collocator's responsibility to recover from each other Resident Collocator such Collocator's proportionate share of such other charges billed to the Primary Collocator for the New Shared Cage Collocation. If Collocator is a Resident Collocator but not the Primary Collocator in a New Shared Collocation arrangement, Collocator agrees that the rates, terms and conditions of the Collocation provisions of the Primary Collocator's Section 251/252 agreement shall apply to its New Shared Collocation arrangement in lieu of those set forth herein. Further, if Collocator is the Primary Collocator in a New Shared Collocation arrangement, as a condition of ordering New Shared Allocation, Collocator shall require its Resident Collocator(s) to execute an agreement prior to the Delivery Date that, inter alia, requires such Resident Collocator(s)' compliance with the terms, conditions and restrictions relating to Collocation contained in this Agreement and designates SBC-13STATE as a third party beneficiary of such agreement. Collocator, acting in its capacity as Primary Collocator, shall notify its Resident Collocator(s) of the obligation to comply with the Collocation provisions of this Agreement and shall be responsible for any breach of such provisions by the Resident Collocator(s).

4.1.2.1.3 For Subleased Shared Collocation, if the Collocator is the Primary Collocator, then that (Primary) Collocator shall be responsible for its and its Resident Collocator's compliance with the terms, conditions and restrictions of this Agreement. As a condition to permitting another Collocator to sublease space from Collocator, Collocator shall require such other Collocator(s) to execute a sublease agreement prior to the Delivery Date that, inter alia, requires such Collocator's compliance with the terms, conditions and restrictions relating to Collocation contained in this Agreement and designates SBC-13STATE as a third party beneficiary of such agreement. Collocator, acting in its capacity as Primary Collocator, shall notify its Resident Collocator(s) of the obligation to comply with the Collocation provisions of this Agreement and shall be responsible for any breach of such provisions by the Resident Collocator(s). If Collocator is the sublessee (i.e., not the Primary Collocator) in a Subleased Shared Collocation arrangement, Collocator agrees that the rates, terms and conditions of the Collocation provisions of the Primary Collocator's Section 251/252 agreement shall apply to its Subleased Shared Collocation arrangement in lieu of those set forth herein.

4.1.2.1.4 The Primary Collocator represents and warrants to SBC-13STATE that each Resident Collocator with which it shares Shared Caged Collocation space shall Collocate equipment only as permitted by 6.1 and which is necessary to Interconnect with SBC-13STATE or for access to SBC-13STATE's unbundled Network Elements. SBC-13STATE shall provide Collocator access to SBC-13STATE's unbundled Network Elements and permit Collocator to Interconnect its network with SBC-13STATE from Shared Caged Collocation, regardless if Collocator was the original Collocator. Collocator, however, shall have no right to request and SBC-13STATE shall have no obligation to provide Collocator's Resident Collocators access to SBC-13STATE's unbundled Network Elements or SBC-13STATE's network. Instead, a Resident Collocator's rights shall be as determined by such Resident Collocator's contractual arrangement (Section

251/252 agreement or tariff, as applicable) with SBC-13STATE.

4.1.2.1.5 As a condition of entering into Shared Caged Collocation, Collocator agrees that if it is not the Primary Collocator in a New Shared Collocation, or if it is the sublessee in a Subleased Shared Collocation arrangement, it unconditionally and irrevocably undertakes and guarantees SBC-13STATE the prompt and full payment of any charges assessed on the Shared Caged Collocation. If the Primary Collocator in a Shared Caged Collocation arrangement no longer occupies the space, the other Resident Collocators must immediately identify a new Primary Collocator. If only one Collocator remains in the Shared Cage Collocation, that Collocator shall become the Primary Collocator. SBC-13STATE shall bill the new Primary Collocator any applicable charges to change SBC-13STATE's records and databases to reflect such new Primary Collocator.

4.1.3 Cageless Physical Collocation

4.1.3.1 Subject to technical feasibility and security requirements, SBC-13STATE will allow Collocator to collocate in any Unused Space in SBC-13STATE's Eligible Structure (eg. Central Office, CEV, Hut or Cabinet containing Telecommunications Equipment), without requiring the construction of a cage or similar structure, and without requiring the creation of a separate entrance to Collocator's Physical Collocation Space. SBC-13STATE will designate the space to be used for cageless collocation. SBC-13STATE may require Collocator to use a central entrance to the building in which the cageless collocation is provided, but may not require construction of a new entrance for Collocator's use, and once inside the building, SBC-13STATE must permit Collocator to have direct access to their equipment.

4.1.3.2 Collocator will install their own bay(s) by an SBC-13STATE Approved Vendor. SBC-13STATE will provide space for the bay(s) in either a Standard Bay arrangement of 10 sq. ft. or a Non-Standard Bay arrangement of 18 sq. ft. The standard bay and non-standard bay dimensions are as follows:

4.1.3.3 Standard bay dimensions cannot exceed 7'0" high, and 23" interior width, 26" exterior width, and up to 15" deep.

4.1.3.4 Non-standard bay dimensions cannot exceed 7'0" high, 36" in width, and up to 36" in depth.

4.1.3.5 SBC-13STATE prefers that the equipment mounted in the bay be flush mounted with the front of the bay, however the equipment must not be mounted beyond the lower front kick plate (normally 5") for appropriate egress. The total depth of bay, including equipment, should not exceed 15" for a standard bay.

4.1.3.6 SBC-13STATE may not require Collocator to use an intermediate interconnection arrangement (i.e., a POT bay) that simply increases collocation costs without a concomitant benefit to incumbents, in lieu of direct connection to SBC-13STATE's network if technically feasible. SBC-13STATE may take reasonable steps to protect its own equipment, such as, but not limited to, enclosing SBC-13STATE equipment in its own cage, and other reasonable security measures examples of which are described herein. 4.1.3.3 SBC-13STATE must make cageless collocation space available in single-bay increments, meaning that Collocator can purchase space in single bay increments. SBC-13STATE will prorate the charge for site conditioning and preparation undertaken to construct or condition the collocation space so the first Collocator in a SBC-13STATE premise will not be responsible for the entire cost of site preparation. SBC-13STATE will provide collocation space in CEV's, Huts or Cabinets in increments of "rack inches" (the amount of vertical rack space required to mount the Collocator's equipment including any space required for equipment separation and heat dissipation).

4.1.4 Adjacent Structure Collocation

4.1.4.1 When space is legitimately exhausted inside an SBC-13STATE Eligible Structure, SBC-13STATE will permit Collocator to physically collocate in an Adjacent Structure (e.g. controlled environmental vaults, controlled environmental huts or similar structures such as those used by SBC-13STATE to house telecommunications equipment) located at SBC-13STATE's Premises to the extent technically feasible. SBC-13STATE will permit Collocator or a third party to construct or otherwise procure such Adjacent Structure, subject to reasonable safety and maintenance requirements, zoning and other state and local

regulations, and SBC-13STATE's right to exercise reasonable control over the design, construction, and placement of such Adjacent Structures. SBC-13STATE will allow the Collocator to provide equipment installed within the Adjacent Structure subject to all the requirements set forth in this Appendix. Collocator will be responsible for securing the required licenses and permits, the required site preparations, and will retain responsibility for building and site maintenance associated with placing the Adjacent Structure. SBC-13STATE may reserve reasonable amounts of space adjacent to its Eligible Structure needed to expand its Eligible Structure to meet building growth requirements. SBC-13STATE will assign the location where the Adjacent Structure will be placed.

4.1.4.2 When requested, SBC-13STATE will provide up to 100 AMPS of AC power to the Adjacent Structure when Central Office Switchboard AC capacity exists and up to 200 AMPS of DC power to the Adjacent Structure up to 50 cable feet from the Central Office power source. When power requirements are beyond these office capacities and distance limitations, SBC-13STATE will treat the requirements as a non-standard request (ICB or NSCR) and coordinate a mutually agreeable solution for provisioning power with Collocator. At its option, Collocator may choose to provide its own AC and DC power to the Adjacent Structure. SBC-13STATE will provide power and physical collocation services and facilities to such Adjacent Structures, subject to the same nondiscrimination requirements as other physical collocation arrangements in this Agreement

4.1.4.3 If Physical Collocation Space becomes available in a previously exhausted Eligible Structure, SBC-13STATE will not require Collocator to move or prohibit Collocator from moving, a collocation arrangement into that structure. Instead SBC-13STATE will continue to allow the Collocator to collocate in any Adjacent Structure that the Collocator has constructed or otherwise procured.

4.2 All requests for other Physical Collocation arrangements will be considered on a case-by-case basis (Unique Collocation Arrangement or NSCR). When a Collocator requests a particular Physical Collocation arrangement, the Collocator is entitled to a rebuttable presumption that such arrangement is technically feasible if any incumbent LEC has deployed such collocation arrangement in any incumbent LEC Physical Collocation Space. If SBC-13STATE refuses to provide a Physical Collocation arrangement, or an equally cost effective arrangement, it may do so if it rebuts the presumption before the state commission that the particular premises

in question cannot support the arrangement because of either technical reasons or lack of space.

4.3 The Collocator's SBC-13STATE Approved Vendor will be permitted access to the SBC-13STATE Main Distribution Frame and/or other interconnection points for placement and termination of interconnection cabling and the cabling arrangement to provide grounding for equipment. Collocator must use an SBC-13STATE Approved Power Installation Vendor place power cable leads from the Collocator's dedicated space to SBC-13STATE's Battery Distribution Fuse Bay (BDFB) or Power Plant, whichever is applicable. Check sections 10.5.4 and 10.6 of this appendix for further requirements.

4.4 SBC-13STATE shall permit Collocator to place its own connecting transmission facilities within SBC-13STATE's Eligible Structure in the Physical Collocation space, without requiring the Collocator to purchase any equipment or connecting facilities solely from SBC-13STATE, subject to reasonable safety limitations.

4.5 SBC-13STATE shall allow a direct cable connection between one Collocator provided facility to a separate Collocator provided facility within the same SBC-13STATE wire center provided the Collocators are interconnected with SBC-13STATE network. Available connections include copper cable, coaxial cable, and fiber optic cable.

4.5.1 SBC-13STATE will designate the route, place cable racking (if applicable) and provide space to be used for such facilities. SBC-13STATE shall permit Collocator's SBC-13STATE Approved Vendor to construct such facilities using copper or optical fiber facilities subject to the same reasonable safety requirements that SBC-13STATE imposes on its own equipment and facilities, without requiring the Collocator to purchase any equipment or connecting facilities solely from SBC-13STATE.

5. SPACE AVAILABILITY

5.1 At the request of Collocator, SBC-13STATE will provide space for Physical Collocation as described above. SBC-13STATE is not required to provide Physical Collocation at a particular Eligible Structure if it demonstrates that Physical Collocation is not practical for technical reasons or because of space limitations. In such cases and with the qualifications set forth above, SBC-13STATE will provide Adjacent Structure Collocation as described above or Virtual Collocation, as described in the Appendix Virtual Collocation, except where SBC-13STATE proves that Adjacent Structure Collocation and/or Virtual Collocation is not technically feasible. If Adjacent Structure Collocation or Virtual Collocation is not technically feasible, SBC-13STATE will make a good faith effort to negotiate other methods of interconnection and access to unbundled

network elements to the extent technically feasible.

5.2 SBC-13STATE will provide physical collocation arrangements in Eligible Structures and on its Premises on a "first-come, first-served" basis. The determination whether there is sufficient space to accommodate Physical Collocation at a particular Eligible Structure or at a particular Premise will be made initially by SBC-13STATE. SBC-13STATE will notify Collocator as to whether its request for space is been granted or denied due to a lack of space within ten (10) calendar days from receipt of a Collocator's accurate and complete Physical Collocation application. If SBC-13STATE determines that Collocator's Physical Collocation application is unacceptable, SBC-13STATE shall advise Collocator of any deficiencies within this ten (10) day period. SBC-13STATE shall provide Collocator with sufficient detail so that Collocator has a reasonable opportunity to cure each deficiency. To retain its place in the queue to obtain the Physical Collocation arrangement, Collocator must cure any deficiencies in its application and resubmit such application within ten (10) calendar days after being advised of deficiencies. Any changes to the amount or type of floor space, interconnection terminations, and power requested from the originally submitted Physical Collocation application will not be considered a deficiency, but rather as a new Physical Collocation application with a new ten (10) day space notification and delivery interval.

5.2.1 When space for Physical Collocation in a particular Eligible Structure is not available, SBC-13STATE shall place Collocator on the waiting list for collocation in a particular Eligible Structure according to the date Collocator submitted its application for Physical Collocation in that Eligible Structure.

5.3 If SBC-13STATE contends space for Physical Collocation is not available in a Eligible Structure, SBC-13STATE must allow Collocator to tour the entire central office or other Eligible Structure in question, not just the area in which space was denied, without charge, within ten (10) business days, or such later date as mutually agreed, of the receipt of SBC-13STATE's denial of space. Prior to taking a tour, each representative must execute and deliver to SBC-13STATE a standard nondisclosure agreement. In no event shall any camera or other video/audio-recording device be brought on or utilized during any tour of an SBC-13STATE's Eligible Structure.

5.3.1 If Collocator disputes SBC-13STATE's determination, Collocator can elect a review to be made by a mutually agreed to third party engineer or a Commission designate, under a non-disclosure agreement. All costs of the third-party inspection including, but not limited to, all payments to the third-party engineer or Commission designate in connection with the inspection, shall be shared equally by SBC-13STATE and the Collocator. The engineer shall take into consideration SBC-13STATE's planned use

for the Eligible Structure under review and, to the extent it can be determined Collocator space and how it is used.

5.3.2 If SBC-13STATE denies a Collocator's request for Physical Collocation because of space limitations and, after touring the applicable Eligible Structure, the Parties are unable to resolve the issue of whether the denial of space was proper, SBC-13STATE shall, in connection with any complaint filed by Collocator, file with the appropriate Commission detailed floor plans or diagrams of such Eligible Structure along with whatever additional information has been ordered by such Commission, subject to protective order. These floor plans or diagrams must show what space, if any, SBC-13STATE or any of its affiliates has reserved for future use, and must describe in detail the specific future uses for which the space has been reserved and the length of time for each reservation.

5.4 SBC-13STATE will maintain a publicly available document, posted for viewing on SBC-13STATE's Internet site(s), indicating all Eligible Structures that are full, and will update such a document within ten (10) calendar days of the date at which an Eligible Structure runs out of Physical Collocation space.

5.5 Upon request, SBC-13STATE must submit to the Requesting Carrier within ten (10) calendar days of the submission of the request a report indicating the available collocation space in a particular SBC-13STATE Eligible Structure. This report will specify the amount of collocation space available at each requested Eligible Structure, the number of Collocators, and any modifications in the use of the space since the last report. This report will also include measures that SBC-13STATE is taking to make additional space available for collocation. SBC-13STATE will provide a report for one (1) to five (5) requests in ten (10) business days and six (6) to twenty (20) requests in twenty-five (25) business days. Should the Collocator submit more than twenty (20) requests at once for central offices where there is no current collocation or collocation forecasted, SBC-13STATE will provide the information on a scheduled basis of ten (10) additional offices every ten (10) business days.

5.5.1 In SBC-13STATE, reports shall be ordered via the Collocation order form and shall specifically identify the CLLI code of each Eligible Structure for which a report is ordered.

5.5.2 SBC-13STATE shall recover costs for the implementation of these reporting measures in a reasonable manner.

5.6 SBC-13STATE is not required to lease or construct additional space to provide for Physical Collocation when existing space has been exhausted. Moreover, SBC-13STATE is not required to, nor shall this Appendix create any obligation or expectation, to relinquish used, or forecasted space to undertake the construction

of new quarters or to construct additions to existing quarters in order to satisfy any request for additional space or the placement of Collocator equipment or facilities, whether through an initial request for Physical Collocation or a subsequent request for more space in an Eligible Structure. SBC-13STATE and Collocator shall not unreasonably warehouse forecasted space.

5.7 To the extent possible, SBC-13STATE will make contiguous space available to a Collocator if a Collocator seeks to expand an existing Physical Collocation arrangement and such request meets SBC-13STATE's non-discriminatory practices regarding efficient space utilization.

5.8 When planning renovations of existing Eligible Structures or constructing or leasing new Eligible Structures, SBC-13STATE will take into account future demand based upon its knowledge of Collocator demand for Collocation. Collocator will provide SBC-13STATE with a two (2)-year rolling forecast of its requirements for Collocation that will be reviewed jointly on a yearly basis by the Parties.

5.9 SBC-13STATE may retain a limited amount of floor space for SBC-13STATE's own specific future uses; provided , however that neither SBC-13STATE nor any of its affiliates may reserve space for future use for like equipment on terms more favorable than those that apply to other telecommunications carriers, including Collocator, seeking to reserve Collocation space for their own future use. Except for space needed for switching equipment "turnaround" (e.g., the installation of new switching equipment to replace then-existing switching equipment), other telecommunications equipment and infrastructure, if any, and/or otherwise permitted or directed by applicable rule or order, SBC-13STATE will relinquish any space held for future use before denying a request for Virtual Collocation on grounds of space limitations, unless SBC-13STATE proves to the Commission that Virtual Collocation at that point is not technically feasible, including that space does not exist. In any such event, SBC-13STATE and the Collocator will attempt to reach a mutually agreeable alternative method of interconnection.

5.10 At the request of the Commission or Collocator, SBC-13STATE shall remove any obsolete and unused equipment (e.g., retired in-place") from its Eligible Structures. SBC-13STATE shall be permitted to recover the cost of removal and/or relocation of such equipment if SBC-13STATE incurs expenses that would not otherwise have been incurred (at the time of the request or subsequent thereto) except to increase the amount of space available for collocation (e.g., costs to expedite removal of equipment or store equipment for reuse).

5.11 SBC-13STATE may impose reasonable restrictions on its provision of additional Unused Space available for Collocation (so-called "warehousing") as described in paragraph 586 of the First Report and Order (96-325); provided, however, that SBC-13STATE shall not set a maximum space limitation on Collocator unless

SBC-13STATE proves to the Commission that space constraints make such restrictions necessary.

6. ELIGIBLE EQUIPMENT FOR COLLOCATION

6.1 In accordance with Section 251(c)(6) of the Act, SCC may collocate equipment "necessary for interconnection or access to unbundled network elements." For purposes of this section, "necessary" means directly related to and thus necessary, required, or indispensable to interconnection or access to unbundled network elements. Such uses are limited to interconnection to SBC-13STATE's network "for the transmission and routing of telephone exchange service or exchange access," or for access to SBC-13STATE's unbundled network elements "for the provision of a telecommunications service." Equipment that may be collocated solely for these purposes includes: (1) transmission equipment including, but not limited to, optical terminating equipment and multiplexers; and (2) equipment being collocated to terminate basic transmission facilities pursuant to sections 64.1401 and 64.1402 of 47 C.F.R. (Expanded Interconnection) as of August 1, 1996.

6.2 Collocator may not collocate Multifunctional Equipment except as expressly and specifically allowed, on a voluntary basis, in this Section or mutually agreed to by SBC-13STATE and Collocator. For purposes of this section, "Multifunctional Equipment," means equipment that has both (1) functions that make the equipment "necessary for interconnection or access to unbundled network elements" and (2) additional functions that are not "necessary" for these purposes. Such additional functions include, but are not limited to, switching and enhanced service functions.

6.3 SBC-13STATE permits SCC collocation, on a non-discriminatory basis, of complete pieces or units of equipment specified in the definition of "Advanced Services Equipment" in section 1.3.d of the SBC/Ameritech Merger Conditions. To the extent that certain complete units of Advanced Services Equipment are not "necessary" for interconnection or access to unbundled network elements because they are Multifunctional Equipment and for other reasons, SBC-13STATE voluntarily allows such SCC collocation. Under the SBC/Ameritech Merger Conditions, "Advanced Services Equipment" is defined as, and limited to, the following equipment: "(1) DSLAMs or functionally equivalent equipment; (2) spectrum splitters that are used solely in the provision of Advanced Services; (3) packet switches and multiplexers such as ATMs and Frame Relay engines used to provide Advanced Services; (4) modems used in the provision of packetized data; and (5) DACS frames used only in the provision of Advanced Services. Spectrum splitters (or the equivalent functionality) used to separate the voice grade channel from the Advanced Services channel shall not be considered Advanced Services Equipment; any such splitters installed after the Merger Closing Date that are located at the customer premises shall be considered network terminating equipment." To qualify for collocation, the complete units of Advanced Services

Equipment must either (A) be solely of the types, and exclusively for the uses, included in this definition or (B) be of such types, and for such uses, combined solely with additional functions that are "necessary for interconnection or access to unbundled network elements." For instance, additional switching use, except as included below, or enhanced services functionality would disqualify the equipment from collocation. SBC-13STATE voluntarily allows Collocator to collocate Optical Concentrator Devices ("OCDs") or functionally equivalent equipment used to provide Advanced Services.

6.4 To qualify for collocation, the equipment must be a complete piece, unit, or item of such equipment, not a piece-part or sub-component (such as a line card) of a complete unit of equipment. Collocator may not collocate, or place into SBC-13STATE's equipment, Collocator's equipment sub-components or piece-parts.

6.5 SBC-13STATE does not allow collocation of other Multifunctional Equipment, except that SBC-13STATE voluntarily allows SCC collocation, on a non-discriminatory basis, of remote switch modules ("RSMs") solely under the following conditions: (1) the RSM may not be used as a stand-alone switch; the RSM must report back to and be controlled by an SCC identified and controlled (*i.e.*, SCC owned or leased) host switch, and direct trunking to the RSM will not be permitted, and (2) the RSM must be used only for the purpose of interconnection with the SBC-13STATE's network for the transmission and routing of telephone exchange service or exchange access or for access to the SBC-13STATE's unbundled network elements for the provision of a telecommunications service. SBC-13STATE voluntarily will allow Collocator to collocate, on a non-discriminatory basis, other multi-functional equipment only if SBC-13STATE and Collocator mutually agree to such collocation.

6.6 SBC-13STATE will not allow collocation of stand-alone switching equipment, equipment used solely for switching, or any enhanced services equipment. For purposes of this section, "stand-alone" is defined as any equipment that can perform switching independently of other switches or switching systems. "Stand-alone switching equipment" includes, but is not limited to, the following examples: (1) equipment with switching capabilities included in 47 C.F.R. section 51.319(c); (2) equipment that is used to obtain circuit switching capabilities, without reliance upon a host switch, regardless of other functionality that also may be combined in the equipment; (3) equipment with the functionality of a class 4 or 5 switch including, without limitation, the following: Lucent Pathstar, 5E, 4E, or 1A switch; DMS 10, 100, 200, or 250 switch; Ericsson AXE-10 switch; Siemens EWSD; and any such switch combined with other functionality.

6.7 Ancillary equipment is not "necessary" for interconnection or access to unbundled network elements. SBC-13STATE voluntarily allows Collocators to place in its premises certain ancillary equipment solely to support and be used with equipment that the Collocator has legitimately collocated in the same premises. Solely for this

purpose, cross-connect and other simple frames, routers, portable test equipment, equipment racks and bays, cabinets for spares, and potential other ancillary equipment may be placed in SBC-13STATE's premises, on a non-discriminatory basis, only if SBC-13STATE and Collocator mutually agree to such placement. Collocator may not place in SBC-13STATE premises types of ancillary equipment, including but not limited to Batter Distribution Fuse Bays ("BDFBs"), that would duplicate equipment used by SBC-13STATE, and/or that would duplicate functions performed by SBC-13STATE, as part of its provision of infrastructure systems for collocation. Such placement would waste space and other resources and, in at least some cases (such as BDFBs) harm SBC-13STATE's ability to plan for and provide service to other customers including, but not limited to, other Collocators. Infrastructure systems include, but are not limited to, structural components, such as floors capable of supporting equipment loads, frames, heating, ventilating and air conditioning ("HVAC") systems, electrical systems (AC power), DS power, power distribution via frames or bays, high efficiency filtration, humidity controls, remote alarms, compartmentation, and smoke purge.

6.8 Pending the FCC's reasonably timely remand proceedings in accordance with the Court's Opinion in *GTE Service Corporation v. FCC*, 205 F.3d 416 (D.C. Cir. 2000) ("*GTE Opinion*"), SBC-13STATE voluntarily will not disturb (1) equipment and (2) connection arrangements between different collocators' equipment in an SBC-13STATE premises, that prior to the May 11, 2000 effective date of the *GTE Opinion* (1) were in place in SBC-13STATES or (2) were requested by SCC and accepted by SBC-13STATE on the same basis as under the FCC's original, pre-partially-vacated Collocation Order (*Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket No. 98-147, *First Report and Order* (FCC 99-48), 14 FCC Rcd 4761 (1999)). SBC-13STATE's agreement not to disturb these collocation arrangements pending timely completion of the remand proceedings will immediately expire if a federal or state court or regulatory agency (1) attempts to apply any of the most favored nation provisions of the Act, of any state Merger Conditions, or of the FCC SBC/Ameritech Merger Conditions to such arrangements or (2) deems such arrangements to be discriminatory vis-à-vis other carriers.

6.9 SBC-13STATE does not assume any responsibility for the installation, furnishing, designing, engineering, or performance of the Collocator's equipment and facilities.

6.10 All types of equipment placed in SBC-13STATE Eligible Structures or on its Premises by Collocators must meet the SBC-13STATE minimum safety standards. The minimum safety standards are as follows: (1) equipment complying with SBC-13STATE LEC document TP76200MP; network equipment power, grounding, environmental, and physical design requirements, Level 1 safety requirements except in Texas, and any other state that has adopted the same approach as Texas, where Collocator's equipment must meet Telcordia Level 1

safety requirements as set forth in Telcordia documents SR-3580 and GR-63-CORE. Network Equipment Building Systems (NEBS); or, (2) Collocator must demonstrate that its equipment has a history of safe operation defined by installation in an ILEC (including SBC-13STATE) prior to January 1, 1998 with no known history of safety problems.

6.11 SBC-13STATE will not object to the collocation of equipment on the grounds that the equipment does not comply with safety or engineering standards that are more stringent than the safety or engineering standards that SBC-13STATE applies to its own network equipment. SBC-13STATE will not object to the collocation of equipment on the ground that the equipment fails to comply with Network Equipment and Building Specifications performance standards or any other performance standards.

6.12 In the event that SBC-13STATE denies Collocation of Collocator's equipment, citing minimum safety standards, SBC-13STATE will provide within five (5) business days of Collocator's written request to SBC-13STATE representative(s), a list of SBC-13STATE equipment placed since January 1, 1998 within the network areas of the Eligible Premise for which Collocation was denied together with an affidavit attesting that all of such SBC-13STATE equipment met or exceeded the then current minimum safety standards when such equipment was placed in the Eligible Premise.

6.13 In the event Collocator submits an application requesting collocation of certain equipment and SBC-13STATE determines that such equipment is not necessary for interconnection or access to UNEs or does not meet the minimum safety standards or any other requirements of this Appendix, the Collocator must not collocate the equipment. If Collocator disputes such determination by SBC-13STATE, Collocator may not collocate such equipment unless and until the dispute is resolved in its favor. If SBC-13STATE determines that Collocator has already collocated equipment which is not necessary for interconnection or access to UNEs or does not meet the minimum safety requirements or any other requirements of this Appendix, the Collocator must remove the equipment from the collocation space within ten (10) business days of written notice from SBC-13STATE. Collocator will be responsible for the removal and all resulting damages. If Collocator disputes such determination, Collocator must remove such equipment pending the resolution of the dispute. If the Parties do not resolve the dispute, SBC-13STATE or Collocator may file a complaint at the Commission seeking a formal resolution of the dispute.

7. PHYSICAL COLLOCATION SPACE CHARGES

7.1 Physical Collocation Space

7.1.1 For each Eligible Structure in which Collocator desires to physically

collocate equipment, Collocator must submit a Physical Collocation Application with the applicable Application and Project Management Fees. A copy of the Physical Collocation Application may be obtained from the SBC-13STATE Collocation Services Account Manager or from the SBC-13STATE web-site(s). The Physical Collocation application must also be used for each subsequent request to place equipment in an Eligible Structure.

7.2 SBC-13STATE will contract for and perform the construction and preparation activities necessary to prepare the Physical Collocation Space, using the same or consistent practices that are used by SBC-13STATE for other construction and preparation work performed in the Eligible Structure.

7.3 Recurring/Non-Recurring charges - Collocator shall pay SBC-13STATE all associated non-recurring and (recurring) charges per month for use of the Physical Collocation Space. These charges may be generated on an ICB/NSCR basis or may be contained in the state specific Appendix Pricing. The recurring monthly charges for each Physical Collocation Space shall stay fixed for the term of this Appendix unless modified upon re-negotiation of the Interconnection Agreement and/or pursuant to a Commission order.

7.3.1 An ICB/NSCR quote is prepared by SBC-13STATE to estimate non-recurring and recurring charges associated with the requested Physical Collocation Space where a state specific Appendix Pricing rate element does not exist. This ICB/NSCR quote is prepared specifically for collocation requests and is not associated in any way with the Bona Fide Request (BFR) process used to request UNEs or other unique items not contained in a Collocator's ICA. The ICB/NSCR will be subject to true-up one hundred-twenty (120) calendar days following the job completion date.

7.4 Collocator shall pay its proportionate share of any reasonable security arrangements SBC-13STATE employs to protect SBC-13STATE equipment and ensure network reliability.

7.5 Payment of Preparation/Site Preparation/COBO Charge - Prior to any obligation on SBC-13STATE to start any preparation of the Physical Collocation space, Collocator shall pay SBC-13STATE fifty percent (50%) of the Preparation/Site Preparation/COBO Charge and eighty-five percent (85%) of any custom work charge required to create or vacate any entrance facility for the Collocator ("Custom Work"). Collocator also has the option of submitting a surety bond to cover these charges, in lieu of a check. The remainder of the Preparation Charge and any Custom Work charge are due upon completion and prior to occupancy by the Collocator.

7.6 Occupancy Conditioned on Payment - SBC-13STATE shall not permit Collocator

to have access to the Physical Collocation Space for any purpose other than inspection during construction of Collocator's Physical Collocation Space until SBC-13STATE *is in receipt of complete payment of the Preparation Charge and* any Custom Work charges and/or applicable COBO.

7.7 Breach Prior to Commencement Date - In the event that the Collocator materially breaches this Agreement by purporting to terminate this Agreement after SBC-13STATE has begun preparation of the Physical Collocation Space but before SBC-13STATE has been paid the entire amounts due under this Appendix, then in addition to any other remedies that SBC-13STATE might have, the Collocator shall be liable in the amount equal to the non-recoverable costs less estimated net salvage. Non-recoverable costs include the non-recoverable cost of equipment and material ordered, provided or used; the non-recoverable cost of installation and removal including the costs of equipment and material ordered, provided or used; labor; transportation and any other associated costs.

7.8 Late Payment Charge - In the event that any charge is not paid when due, the unpaid amounts shall bear interest in accordance with the terms and conditions set forth in SBC-13STATE's intrastate tariff late payment provision(s) applicable to access services for the State in which the Physical Collocation Space is located, or the highest rate permitted by law, whichever is lower, from the due date until paid.

7.9 Charges will begin to accrue on the Effective Billing Date - The Effective Billing Date is the date SBC-13STATE made the Physical Collocation Space available to Collocator.

7.9.1 PACIFIC/NEVADA: The charges for a Physical Collocation arrangement in an Eligible Structure where interstate expanded interconnection is required to be provided pursuant to 47 C.F.R. 64.1401(a), 64.1401(b) shall be as set forth in the applicable Tariff(s). To the extent that any of those charges are subject to appeal, the result of any such appeal shall be retroactively applied to any Physical Collocation arrangement ordered or provided under any such charge. To the extent that rates are not provided in the applicable Tariff(s), rates shall be determined on Individual Case Basis "ICB." Any ICB quote shall be included as part of the quote provided to the Collocator in response to its Physical Collocation application.

7.10 The monthly recurring charge(s) shall begin to apply, no later than thirty (30) calendar days from the date that SBC-13STATE has turned over the Physical Collocation Space to the Collocator, Physical Collocation Space regardless of any failure by Collocators to complete its work. The fact that SBC-13STATE may have additional work to perform after Collocator does complete its work shall not bar the start of such charges.

7.11 The charges for an Adjacent Structure Collocation and for a Physical Collocation arrangement that is provided in Eligible Structures other than Central Offices shall be determined on Individual Case Basis (ICB/NSCR) in **SBC-13STATE**.

7.12 **NEVADA**: In the event that any Collocator telecommunications equipment that is to be placed in the Eligible Structure was not contemplated by that interstate tariff (which was based upon the requirements of 47 C.F.R. § 64.1401), Collocator may be subject to charges under an ICB if **NEVADA**'s costs of providing the necessary Premises requirements (e.g., space, power, environmental, grounding) for any such Collocator telecommunications equipment is not recovered by those tariffed rates. Any ICB quote shall be included as part of the quote provided to the Collocator in response to its Physical Collocation application.

8. USE OF PHYSICAL COLLOCATION SPACE

8.1 **SBC-13STATE** shall ensure that the Physical Collocation Space and the Eligible Structure comply with all applicable fire and safety codes. The preparation shall be arranged by **SBC-13STATE** in compliance with all applicable codes, ordinances, resolutions, regulations and laws.

8.2 Restroom access and parking will be provided on a reasonable basis in **SBC-13STATE**.

8.3 A list of all Collocator equipment that will be placed within the Physical Collocation Space shall be set forth on the Collocator's Physical Collocation Application, which includes associated power requirements, floor loading, and heat release of each piece of Collocator's equipment. Collocator warrants and represents that the Physical Collocation Application contains a complete and accurate list of such Collocator equipment. Collocator's **SBC-13STATE** Approved Vendor shall not place or leave any other equipment or facilities within the Physical Collocation Space without the express written consent of **SBC-13STATE**.

8.4 In the event that subsequent to the submission of the Physical Collocation Application and its list of the Collocator's equipment with the required technical information, Collocator desires to place in the Physical Collocation Space any telecommunications equipment or such ancillary telecommunications facilities not so set forth in the Physical Collocation Application, Collocator shall furnish to **SBC-13STATE** a new Physical Collocation Application and any applicable charges to cover such equipment or facilities. Thereafter, consistent with its obligations under the Act and applicable FCC and Commission rules, orders, and awards, **SBC-13STATE** may provide such written consent or may condition any such consent on additional charges arising from the request, including any applicable fees and any additional requirements such as power and environmental requirements for such requested telecommunications equipment and/or facilities.

Upon the execution by both SBC-13STATE and Collocator of a final list and description and receipt by SBC-13STATE of payment of any applicable non-recurring charges, the Physical Collocation arrangement shall be deemed to have been amended and such requested telecommunications equipment and/or facilities shall be included within "Collocator's Equipment."

8.5 Collocator's Equipment, operating practices, or other activities or conditions attributable to Collocator that represents a demonstrable threat to SBC-13STATE network, equipment, or facilities, including the Eligible Structure, or to the network, equipment, or facilities of any person or entity located in the Eligible Structure, are strictly prohibited.

8.6 Operation of any equipment, facilities or any other item placed in the Physical Collocation Space shall not interfere with or impair service over SBC-13STATE network, equipment, or facilities, or the network, equipment, or facilities of any other person or entity located in the Eligible Structure; create hazards for or cause damage to those networks, equipment, or facilities, the Physical Collocation Space, or the Eligible Structure; impair the privacy of any communications carried in, from, or through the network, equipment, facilities the Physical Collocation Space or the Eligible Structure; or create hazards or cause physical harm to any person, entity, or the public. Any of the foregoing events would be a material breach of this Appendix.

8.7 In no case shall the Collocator's SBC-13STATE Approved Vendor or any person or entity purporting to be acting through or on behalf of the Collocator make any significant rearrangement, modification, improvement, addition, repair, or other alteration to the Physical Collocation Space the Eligible Structure or the Adjacent Structure without the advance written permission or direction of SBC-13STATE. SBC-13STATE shall consider a modification, improvement, addition, repair, or other alteration requested by Collocator, provided that SBC-13STATE shall have the right to reject or modify any such request. If SBC-13STATE performs any such construction, and the associated cost shall be paid by Collocator in accordance with SBC-13STATE then-standard custom work order process, ICB or NSCR.

9. COLLOCATOR RESPONSIBILITIES

9.1 Consistent with the nature of the Eligible Structure, the Adjacent Structure and the environment of the Physical Collocation Space, Collocator shall not use the Physical Collocation Space for office, retail, or sales purposes. No signage or markings of any kind by Collocator shall be permitted on the Eligible Structure, on the grounds surrounding the building, or on the Adjacent Structure.

9.2 Collocator represents and warrants that each item of Collocator's Equipment meets SBC-13STATE minimum safety standards and are compliant with the other

requirements set forth in this Appendix. DISCLOSURE OF ANY NON-COMPLIANT EQUIPMENT OR FACILITIES TO SBC-13STATE IN A PHYSICAL COLLOCATION APPLICATION OR OTHERWISE SHALL NOT QUALIFY THIS ABSOLUTE CERTIFICATION REQUIREMENT IN ANY MANNER.

9.3 Procurement, placement and termination of interconnection cabling between Collocator's dedicated space and SBC-13STATE Main Distribution Frame and/or interconnection points by Collocator's SBC-13STATE Approved Vendor. Additional requirements relating to placements of power cable leads is set forth in Section 10.6 of this Appendix.

9.4 Procurement and placement of power cable leads by Collocator's SBC-13STATE Approved Power Installation Vendor from the dedicated space to SBC-13STATE's Battery Distribution Fuse Bay (BDFB) or power plant, whichever is applicable. Additional requirements relating to placements of power cable leads is set forth in Section 10.6 of this Appendix.

9.5 Collocator's employees, agents and contractors shall be permitted access to the Physical Collocation Space at all times, provided that Collocator's employees, agents and contractors comply with SBC-13STATE's policies and practices pertaining to fire, safety and security. Collocator agrees to comply promptly with all laws, ordinances and regulations affecting the use of the Physical Collocation Space.

9.6 Collocator is solely responsible for the design, engineering, testing, performance, and maintenance of the Collocator telecommunications equipment used by Collocator in the Physical Collocation Space. Collocator may not disassemble, remove or otherwise reconfigure the cage enclosure (Physical Collocation Space) at any time unless it has been provided by the Collocator. Collocator is also responsible for servicing, supplying, repairing, installing and maintaining the following facilities within the Physical Collocation Space in the SBC-13STATEs:

9.6.1 Its fiber optic cable(s);

9.6.2 Its Collocator telecommunications equipment;

9.6.3 Optional point of termination cross connects in its Physical Collocation space or the optional POT Frame/cabinet located in the collocation common area except if on SBC-8STATE's equipment.

9.6.4 Collocator requested dedicated point of termination frame maintenance, including replacement of fuses and circuit breaker restoration, to the extent that such fuses and circuit breakers are within Collocator's Physical Collocation space or in the optional POT frame located in the collocation

common area if and as required; and

9.6.5 The connection cable and associated equipment which may be required within Collocator's Physical Collocation space or in the optional POT frame/cabinet located in the collocation common area to the point(s) of termination of that cable within Collocator's Physical Collocation Space.

9.6.6 The Collocator is responsible for any power cabling required beyond the SBC-13STATE provided Collocation Interconnection Power Panel (CIPP) to Collocator's equipment. Either SBC-13STATE or SCC can provide the CIPP. SBC-13STATE requires that a Collocation Interconnect Power Panel (CIPP) must be used when the Physical Collocation arrangement is not served from SBC-13STATE's BDFB. No CIPP is required for 20, 40 or 50 amp arrangements which are served from SBC-13STATE's BDFB. The CIPPs are designed to provide 20, 40 , 50 or 100 (maximum) amp redundant increments of DC power. The CIPP is always required for 100 amp or greater power arrangements. The Collocator will furnish and install the (CIPP) within a Collocator-provided equipment bay designated by Collocator. The CIPP must meet TP 76200 MP Level 1 requirements.

9.7 Collocator will, whenever possible, place its telecommunications equipment in the Physical Collocation space within thirty (30) calendar days of space turnover. Collocator must complete placement of Collocator telecommunications equipment in the Physical Collocation Space and interconnect to SBC-13STATE's network or to its unbundled network elements within one hundred eighty (180) calendar days after space turnover. If Collocator fails to do so, SBC-13STATE may, upon ten (10) days prior written notice, terminate that Physical Collocation arrangement, and Collocator shall remove the equipment in accordance with Section 15.0. In addition Collocator shall be liable in an amount equal to the unpaid balance of the charges due under this Appendix for the terminated arrangement and, further, shall continue to be bound by the provisions of this Appendix, the terms or context of which indicate continued viability or applicability beyond termination. For purposes of this Section, Collocator telecommunications equipment is considered to be interconnected when physically connected to SBC-13STATE's network or a SBC-13STATE unbundled network element for the purpose of Collocator providing a telecommunications service.

9.8 Orders for additional space or additional Connecting Facility Assignments (CFAs), whether a new arrangement or an augment to an existing space or CFA, will not be accepted until each existing Dedicated Space or specific CFA type (i.e. DS0, DS1, Fiber, etc.) of the Collocator, in the requested Eligible Structure, is "efficiently used." "Efficiently used space" means all existing collocation space, caged and/or cageless, currently existing in a particular Eligible Structure, measured in "single bay" increments, except for one, must be at one hundred percent (100%)

utilization, with only one caged or cageless arrangement utilizing between sixty percent (60%) and one hundred percent (100%) of the assigned space. "Efficiently used CFA" means that at least sixty percent (60%) of the specific type of CFA (cable pairs, coaxial or fiber facilities) is currently being used. The determination as to whether this criterion is met is solely within the reasonable judgment of SBC-13STATE.

9.9 Subject to the limitations and restrictions of this Appendix, Collocator may place or install in or on the Physical Collocation Space such fixtures and unpowered facilities as it shall deem desirable for the proper use of the Physical Collocation Space as described above. Personal property, fixtures and unpowered facilities placed by Collocator in the Physical Collocation Space shall not become a part of the Physical Collocation Space, even if nailed, screwed or otherwise fastened to the Physical Collocation Space, but shall retain their status as personal property and may be removed by Collocator at any time. Any damage caused to the Physical Collocation Space by the removal of such property shall be repaired at Collocator's expense.

9.10 This Appendix and the Collocation provided hereunder is made available subject to and in accordance with Sections 9.10.1, 9.10.2, 9.10.3, and 9.10.4. Collocator shall strictly observe and abide by each in SBC-13STATE.

9.10.1 SBC Local Exchange Carriers TP 76200MP, Network Equipment: Power, Grounding, Environmental, and Physical Design Requirements, and any successor document(s), including as such may be modified at any time and from time to time;

9.10.2 SBC-13STATE's most current Interconnector's Collocation Services Handbook and any successor document(s), as may be modified from time to time as set forth below.

9.10.3 TP 76300MP, SBC Local Exchange Carriers Installation Requirements, and any successor documents should be followed in installing network equipment, and facilities within SBC-13STATE central offices and may be modified from time to time.

9.10.4 Any statutory and/or regulatory requirements in effect at the time of the submission of the Physical Collocation application or that subsequently become effective and then when effective.

10. COOPERATIVE RESPONSIBILITIES

10.1 SBC-13STATE will contract for and perform the construction and preparation activities necessary to prepare the Physical Collocation Space using the same or consistent practices that are used by SBC-13STATE for other construction and

preparation work performed in the Eligible Structure. SBC-13STATE will permit Collocator to subcontract the construction of Physical Collocation arrangements with contractors/vendors approved by SBC-13STATE, provided that SBC-13STATE will not unreasonably withhold approval of contractors.

10.2 SBC-13STATE will allow Collocator to select its own contractors for all required engineering and installation services associated with the Collocator telecommunications equipment (*e.g.*, SBC-13STATE shall not require Collocator to use SBC-13STATE's internal engineering or installation work forces for the engineering and installation of the Collocator telecommunications equipment). Installation of the Collocator telecommunications equipment in the Physical Collocation Space must nevertheless comply with TP76300MP. Collocator-selected contractors must agree to all policies and procedures in this Appendix. Access to the Eligible Structure or SBC-13STATE's Premises and the Physical Collocation Space for Collocator contractors is provided submit to the same requirements as the Collocator.

10.2.1 In SBC-13STATE, Collocator's contractors must be certified as required in the Interconnector's Collocation Handbook which is not incorporated herein but available on appropriate ILEC's website.

10.3 If the Interconnector's Collocation Services Handbook, Collocation website(s) or the TP 76200MP, is modified subsequent to the effective date of this agreement from the attached, the following shall apply:

10.3.1 If a modification is made after the date on which Collocator has or orders a Physical Collocation arrangement, SBC-13STATE shall provide Collocator with those modifications or with revised versions of such, listing or noting the modifications as appropriate. Any such modification shall become effective and thereafter applicable under this Appendix thirty (30) calendar days after such amendment is released by SBC-13STATE.

10.4 The terms and conditions expressly set forth in this Appendix shall control in the event of an irreconcilable conflict with the Collocation Services Handbook, Collocation website(s) and the TP 76300MP, or the TP76200MP in SBC-13STATE.

10.5 SBC-13STATE shall provide an interconnection point or points, physically accessible by both SBC-13STATE and Collocator (typically an SBC-13STATE manhole) at which a Collocator fiber optic cable can enter the Eligible Structure, provided that SBC-13STATE will designate interconnection points as close as reasonably possible to the Eligible Structure. SBC-13STATE will provide at least two such interconnection points at each Eligible Structure where there are at least two entry points for SBC-13STATE's cable facilities and at which space is available for new facilities in at least two of those entry points. Collocator shall use

a single mode dielectric, plenum rated, fire retardant fiber optic cable as a transmission medium to the Physical Collocation Space. Collocator shall be permitted no more than two (2) entrance routes into the Building, if available.

10.5.1 Collocator is responsible for bringing its fiber optic cable to an accessible point outside of the Eligible Structure designated by SBC-8STATE, and for leaving sufficient cable length in order for SBC-8STATE to fully extend such Collocator-provided cable to the Physical Collocation Space.

10.5.2 Collocator is responsible for bringing its fiber optic cable to an accessible point outside of the Eligible Structure designated by SBC-AMERITECH, and for leaving sufficient cable length in order for SBC-AMERITECH to extend such Collocator-provided cable to the cable vault.

10.5.3 SBC-13STATE will permit interconnection of copper or coaxial cable if first approved by the appropriate State Commission and will permit collocation of microwave transmission equipment along with the microwave entrance facility except where such collocation is not practical for technical reasons or because of space limitations.

10.5.4 SBC-13STATE will be responsible for determining equipment location within the Eligible Structure. Procurement, placement and termination of interconnection cabling between Collocator's dedicated space and SBC-13STATE Main Distribution Frame and/or other interconnection points will be installed by the Collocator's SBC-13STATE Approved Vendor. The Collocator's SBC-13STATE Approved Vendor must obtain an approved Method of Procedures (MOP) from SBC-13STATE and follow the SBC-13STATE's standards and requirements for installation of equipment and facilities. SBC-13STATE will install and stencil the termination blocks or panels at SBC-13STATE's Main Distribution Frame and/or other interconnection points for the hand off of the interconnection connection(s) to the Collocator.

10.6 Unless otherwise expressly agreed in writing, SBC-13STATE will provide for all AC and DC power requirements in the Eligible Structure. The Collocator is not permitted to, and will not, place any AC or DC power-generating or power-storing devices (including, for example but not limited to rectifiers, battery plants, AC or DC generators) in the Eligible Structure. Power will support Collocator telecommunications equipment at the specified DC and AC voltages. At a minimum, the Power and SBC-13STATE's associated performance, availability, restoration, and other operational characteristics shall be at parity with that provided to SBC-13STATE's substantially similar telecommunications equipment unless otherwise mutually agreed in writing. Loads specified by the Collocator represent the peak current that will be imposed on a power feeder at any voltage

within the emergency operating limits of the equipment and any normal operating condition (i.e. not a short circuit or other malfunction). Even though circuit design is based on peak current, DC power plant design sizing by SBC-13STATE is based on demand management. SBC-13STATE will engineer, design, and place cable racks for all power cable routes within the Eligible Structure. Collocator's SBC-13STATE Approved Power Installation Vendor will place the power cable leads from the dedicated space to SBC-13STATE's Battery Distribution Fuse Bay (BDFB) or Power Plant, whichever is applicable. SBC-13STATE will terminate the Collocator's power cable leads and place fuses at the BDFB or Power Plant, whichever is applicable. The Collocator must contact the assigned SBC-13STATE Project Manager five (5) business days prior to scheduling the power cable terminations and fuse placement. The Collocator's SBC-13STATE Approved Power Installation Vendor must obtain an approved Method of Procedures (MOP) from SBC-13STATE and follow the SBC-13STATE standards and requirements for installation of equipment and facilities.

10.7 SBC-13STATE will provide negative DC and AC power, back-up power, lighting, ventilation, heat, air conditioning and other environmental conditions necessary for the Collocator's equipment in the same manner and at the same standards that SBC-13STATE provides such conditions for its own substantially similar equipment or facilities within that Eligible Structure.

10.8 Regeneration of either DS-1 or DS-3 signal levels may be provided by Collocator or SBC-13STATE under its then-standard custom work order process or NSCR, including payment requirements prior to the installation of the regeneration equipment.

10.9 Collocator and SBC-13STATE are each responsible for providing to the other contact numbers for technical personnel who are readily accessible twenty-four (24) hours a day, seven (7) days a week.

10.10 SBC-13STATE shall maintain for the Eligible Structure customary building services, utilities (excluding telephone facilities), including janitor and elevator services, 24 hours a day.

10.11 SBC-13STATE agrees to make, at its expense, all changes and additions to the Eligible Structure required by laws, ordinances, orders or regulations of any municipality, county, state or other public authority including the furnishing of required sanitary facilities and fire protection facilities, except fire protection facilities specially required because of the installation of telephone or electronic equipment and fixtures in the Physical Collocation Space.

10.12 Collocator and SBC-13STATE are each responsible for providing trouble report status or any network trouble of problems when requested by the other.

10.13 In SBC-13STATE, each Party is responsible for immediate verbal notification to the other of significant outages or operations problems which could impact or degrade that other's network, equipment, facilities, or services, and for providing an estimated clearing time for restoration. In addition, written notification must be provided within twenty-four (24) hours.

10.14 In the event SBC-13STATE determines it necessary for Physical Collocation Space to be moved within the Eligible Structure in which the Physical Collocation Space is located or to another Eligible Structure, Collocator is required to do so. If such relocation arises from circumstances beyond the reasonable control of SBC-13STATE, including condemnation or government order or regulation that makes the continued occupancy of the Physical Collocation space or Eligible Structure too costly in SBC-13STATE's sole judgment, Collocator shall be responsible for the cost of preparing the new Physical Collocation Space at the new location. Otherwise SBC-13STATE shall be responsible for any reasonable preparation costs.

10.14.1 In the event that a Collocator requests that the Physical Collocation Space be moved within the SBC-13STATE Eligible Structure or to another Eligible Structure, SBC-13STATE shall permit the Collocator to relocate the Physical Collocation Space, subject to the availability of space and associated requirements. Collocator shall be responsible for all charges associated with the move, including the reinstallation of its equipment and facilities and the preparation of the new Physical Collocation Space and the new Wire Center as applicable.

10.15 Upon termination of the Physical Collocation arrangement, the Collocator will work cooperatively with SBC-13STATE to remove the Collocator's equipment and facilities from SBC-13STATE property subject to the condition that the removal of such equipment can be accomplished without damaging or endangering other equipment located in the central office. SBC-13STATE is not responsible for and will not guarantee the condition of such equipment. The Collocator is responsible for arranging for and paying for the removal of physically collocated equipment including all costs associated with equipment removal, packing and shipping. Arrangements for and the removal of the Collocator's physically collocated equipment must be made within thirty (30) business days after termination of the Physical Collocation arrangement, unless a different time period is mutually agreed upon. The Collocator will pay all arrangement monthly charges until all equipment is removed. If the Collocator has not removed the equipment within this timeframe, SBC-13STATE has the right to remove the equipment and bill the Collocator for any reasonable expense associated with removal of the equipment. SBC-13STATE shall be responsible for exercising reasonable caution when removing physically collocated equipment. SBC-13STATE will only be responsible for damage done to such equipment caused by gross negligence on the part of SBC-13STATE or its

contractors during the removal process. However, Collocators will indemnify and hold SBC-13STATE harmless for any damage done to physically collocated equipment if SBC-13STATE permits the Collocator to hire an SBC-13STATE approved contractor to remove physically collocated equipment. Any equipment not removed in this time frame may be removed by SBC-13STATE and stored in a non- SBC-13STATE location, at the expense of the Collocator.

10.16 Upon termination of the Physical Collocation, the Collocator must remove the fiber entrance cable used for the Physical Collocation. If the entrance cable is not scheduled for removal within seven (7) calendar days, SBC-13STATE may arrange for the removal, and the Collocator will be responsible for any charges incurred to remove the cable. SBC-13STATE and the Collocator will cooperatively manage the removal process. The Collocator is only responsible for physically removing entrance cables housed in conduits or inner-ducts and will only be required to do so when SBC-13STATE instructs the Collocator such removal can be accomplished without damaging or endangering other cables contained in a common duct or other equipment residing in the central office.

10.17 If Collocator fails to remove its equipment and facilities from the Physical Collocation Space within thirty (30) calendar days after discontinuance of use, SBC-13STATE may perform the removal and shall charge Collocator for any materials used in any such removal, and the time spent on such removal at the then-applicable hourly rate for custom work. Further, in addition to the other provisions herein, Collocator shall indemnify and hold SBC-13STATE harmless from any and all claims, expenses, fees, or other costs associated with any such removal by SBC-13STATE.

10.18 Other than the security restrictions described herein, SBC-13STATE shall place no restriction on access to Collocator's central office Physical Collocation Space by Collocator's employees and designated agents. Such space shall be available to Collocator designated agents twenty-four (24) hours per day each day of the week. SBC-13STATE will not impose unreasonable security restrictions for the Eligible Structure, including the Physical Collocation Space.

10.19 Demarcation Point – SBC-13STATE shall designate the point(s) of termination within the Eligible Structure as the point(s) of physical demarcation between Collocator's network and SBC-13STATE's network, with each being responsible for maintenance and other ownership obligations and responsibilities on its side of that demarcation point.

10.20 Collocator is responsible for testing, isolating and clearing trouble when the trouble has been isolated to inside the Physical Collocation Space, or to any piece of Collocator telecommunications equipment, or any other Collocator-provided facility or piece of equipment. If SBC-13STATE testing is also required, it will be provided at applicable charges.

10.21 Collocator is responsible for coordinating with SBC-13STATE to ensure that services are installed in accordance with a service request.

11. TESTING AND ACCEPTANCE

11.1 Collocator and SBC-13STATE will complete an acceptance walk-through of the Physical Collocation Space prior to SBC-13STATE turning the Physical Collocation Space over to Collocator. Exceptions that are noted during this acceptance walk-through shall be corrected by SBC-13STATE as soon as commercially reasonable after those exceptions are provided in writing, which exceptions shall be provided no more than five (5) business days after the walk through. The correction of these exceptions from Collocator's Physical Collocation request shall be at SBC-13STATE 's expense.

11.2 Once the Collocator's equipment installation is successfully completed, power must be turned up and tested, and connectivity must be tested. Power testing, and connectivity testing in certain situations, will require a cooperative test involving the Collocator, its SBC-13STATE approved installation contractor, SBC-13STATE, and/or SBC-13STATE vendor. To the extent possible, SBC-13STATE will work with the Collocator to coordinate testing to minimize the number of visits required by the Collocator and its contractor.

11.3 All installations of equipment must be in accordance with the SBC-13STATE technical publications and subject to review by an SBC-13STATE maintenance engineer for compliance. Should SBC-13STATE maintenance engineer determine during their review audit that the installation is not compliant with specifications, the Collocator or it's SBC-13STATE Approved Vendor must correct non-compliant items and schedule an additional review audit after corrective work has been performed.

11.4 Collocator shall be responsible for coordination with its SBC-13STATE Approved Vendor to be at the site for acceptance testing.

11.5 Once Collocator has accepted the facilities, the Collocator will order either interconnection or access to UNEs from SBC-13STATE to be connected to their equipment.

12. DELIVERY INTERVALS

12.1 The construction interval relates to the period in which SBC-13STATE shall construct and deliver to the Collocator the requested space. The construction interval begins on the date SBC-13STATE receives an accurate and complete Physical Collocation Application from the Collocator. The Collocator must provide the SBC-13STATE, within seven (7) days from the date of notification granting the

application request, a confirmatory response in writing to continue construction along with the 50% payment of non-recurring charges (unless payment was received with application) or the construction interval provided in table below will not commence until such time as SBC-13STATE has received such response and payment. If the Collocator has not provided the SBC-13STATE such response and payment by the twelfth (12) day after the date SBC-13STATE notified Collocator its request has been granted, the application will be canceled. Dedicated space is not reserved until SBC-13STATE's receipt of the confirmatory response in writing from the Collocator with applicable fees.

SBC-13STATE will complete construction of all Active Collocation Space requests for Physical Collocation in accordance to the following:

Number of Complete and Accurate Applications by One Collocator per state or metering region	Physical Construction Intervals
1 – 5	90 Days
6-10	95 Days
11-15	100 Days
16-20	105 Days

Should the Collocator submit twenty-one (21) or more applications within five (5) days, the construction interval will be increased by five (5) days for every five (5) additional applications or fraction thereof. Any material revision to an application will be treated as a new application and will be subject to the time intervals set forth above.

12.2 The second fifty percent (50%) payment must be received by SBC-13STATE prior to the space being turned over to the Collocator. The cable facility assignments or actual point of termination will not be given to the Collocator by SBC-13STATE until all applicable fees have been received and no earlier than fourteen (14) days before the space turn over due date. Augment cable facility assignments with less than sixty (60) day intervals will not be given to the Collocator by SBC-13STATE until due date.

12.3 Unless otherwise mutually agreed to by the Parties in writing, where power does not exist or in Other Central Office Space, SBC-13STATE will complete construction of requests for caged, shared, or cageless collocation within one hundred eighty (180) calendar days from receipt of Collocator's acceptance of the quotation or initial COBO (Central Office Build Out).

12.3.1 Should the Collocator submit six (6) or more applications within five (5) days the provisioning interval will be increased by five (5) days for every five (5) additional applications.

12.4 SBC-13STATE will provide reduced construction intervals for Collocators that request the following interconnection cabling Augments. The Collocator must submit a completed Physical Collocation Application. For this reduced construction interval to apply, this application must include an up-front payment of the Application Fee and fifty percent (50%) of all applicable non-recurring charges. In addition, the application must include an accurate front equipment view (rack elevation drawing) specifying bay(s) for the Collocator's point of termination for the requested cabling. Physical Collocation Application(s) received with the up-front payment and meeting the criteria below will not require a quote or response and the construction interval will not exceed sixty (60) Calendar days.

- 168 DS1 connections and/or
- 48 DS3 connections and/or
- 400 Copper (shielded or nonshielded) cable pair connections
- 12 fiber connections

These Augments will apply only when the Collocator provides a complete and accurate Physical Collocation Application and the applicable fees. The job must be an Augment for an existing Physical Collocation arrangement and consist only of connections listed above.

12.5 For Augments in which the Collocator requests power that exceeds current capacity ratings or augments that require placement of additional cable racks within the Active Central Office space, the construction interval will not exceed ninety (90) calendar days from receipt of accurate and complete application for such augment along with the Application Fee and fifty percent (50%) of all applicable nonrecurring charges. For all other augments, SBC-13STATE will work cooperatively with Collocator to negotiate mutually agreeable construction intervals.

12.6 SBC-13STATE and the Collocator will come to agreement regarding Collocator inspection visits during the construction of the Physical Collocation Space. These visits will be allowed during regular business hours only and will require that the Collocator be escorted by an SBC-13STATE employee. These visits will be jointly agreed upon by SBC-13STATE and the Collocator and will be determined on a case by case basis. SBC-13STATE shall not unreasonably withhold consent to Collocator inspection visits.

12.7 Adjacent Structure Collocation Delivery Intervals

12.7.1 SBC-13STATE Delivery Interval, rates, terms and conditions for Adjacent Structures Collocation will be determined on an individual case basis (ICB)/Non Standard Collocation Request (NSCR).

13. SECURITY

13.1 As provided herein, SBC-13STATE may require reasonable security arrangements to protect its equipment and ensure network reliability. SBC-13STATE may recover the costs of implementing security measures from Collocators in a reasonable manner via the appropriate State Commissions. Except as provided below, SBC-13STATE may only impose security arrangements that are as stringent as the security arrangements that SBC-13STATE maintains at its own premises for its own employees or authorized contractors. SBC-13STATE must allow Collocator to access its installed Physical Collocation equipment twenty-four (24) hours a day, seven (7) days a week, in SBC-13STATE Eligible Structures without requiring either a security escort of any kind or delaying a Collocator's employees' entry into SBC-13STATE's Eligible Structure. Reasonable security measures that SBC-13STATE may adopt include, but are not limited to, the following:

13.1.1 Installing security cameras or other monitoring systems; or

13.1.2 Requiring Collocator personnel to use badges with computerized tracking systems; or

13.1.3 Requiring Collocator employees to undergo the same level of security training, or its equivalent, that SBC-13STATE's own employees, or third party contractors providing similar functions, must undergo; provided, however, that SBC-13STATE may not require Collocator employees to receive such training from SBC-13STATE itself, but must provide information to Collocator on the specific type of training required so Collocator's employees can conduct their own training. Qualification program and security training details shall be included in SBC-13STATE's technical publications and/or Collocation website(s). SBC-13STATE does not use any information collected in the course of implementing or operating security arrangements "for any marketing or other purpose in aid of competing with collocators".

13.1.4 SBC-13STATE may take reasonable steps to protect its own equipment, such as enclosing the equipment in a cage. If SBC-13STATE chooses to construct an interior security partition around its own equipment, that partition may not interfere with Collocators' access to their own equipment, including equipment collocated directly adjacent to SBC-13STATE's equipment. SBC-13STATE's enclosure of its own equipment will not be a basis for a claim that space is exhausted.

13.2 Collocators and SBC-13STATE will each establish disciplinary procedures up to and including dismissal or denial of access to the Eligible Structure and other SBC-13STATE's property for certain specified actions that damage, or place the equipment, facilities, or the network or personnel of the Collocators or SBC-

13STATE in jeopardy. The following are actions that could damage or place the Eligible Structure, or the network or the personnel of the Collocators or SBC-13STATE, in jeopardy and may justify disciplinary action up to and including dismissal or the denial of access to the Eligible Structure and other SBC-13STATE property:

13.2.1 Theft or destruction of SBC-13STATE's or any Collocator's property.

13.2.2 Use or attempted use/sale of alcohol or illegal drugs on SBC-13STATE's property.

13.2.3 Industrial espionage.

13.2.4 Threats or violent acts against other persons on SBC-13STATE's property.

13.2.5 Knowing violations of any local, state or federal law on SBC-13STATE's property.

13.2.6 Permitting unauthorized persons access to SBC-13STATE's or Collocator's equipment on SBC-13STATE's property.

13.2.7 Carrying a weapon on SBC-13STATE's property.

13.3 In addition, the Collocator and SBC-13STATE will take appropriate disciplinary steps as determined by each party to address any violations reported by SBC-13STATE or the Collocator of SBC-13STATE's policies and practices on security, safety, network reliability, and business conduct as defined in SBC-13STATE's Interconnector's Collocation Services Handbook and/or Collocation website(s), provided the such information and any and all updates to it are timely provided to the Collocator.

13.4 Collocators will provide indemnification and insurance as set forth in this agreement to cover any damages caused by the Collocator's technicians at a level commensurate with the indemnification and insurance provided by SBC-13STATE's authorized contractors with equivalent access. The indemnification provisions and requirements are reciprocal to SBC-13STATE as well.

13.5 SBC-13STATE may use reasonable security measures to protect its equipment, including, but not limited to, enclosing its equipment in its own cage, the use of security cameras or other monitoring devices, badges with computerized tracking systems, identification swipe cards, keyed access, and/or logs, as appropriate for the Eligible Structures where physical collocation will take place.

14. CASUALTY LOSS

14.1 If the Eligible Structure or the Physical Collocation Space is damaged by fire or other casualty, and:

14.1.1 The Physical Collocation Space is not rendered untenantable in whole or in part, SBC-13STATE shall repair the same at its expense (as herein limited) and the recurring charges shall not be abated, or

14.1.2 The Physical Collocation Spaces is rendered untenantable in whole or in part and such damage or destruction can be repaired within ninety (90) calendar days, SBC-13STATE has the option to repair the Physical Collocation Space at its expense (as herein limited) and the recurring charges shall be proportionately abated to the extent and while Collocator was deprived of the use. If the Physical Collocation Space cannot be repaired within ninety (90) calendar days, or SBC-13STATE opts not to rebuild, then the Physical Collocation arrangement provided in the Physical Collocation Space shall (upon notice to Collocator within thirty (30) calendar days following such occurrence) terminate as of the date of such damage. SBC-13STATE shall endeavor to relocate Collocator equipment in alternative location, or assist Collocator in developing alternative to physical location.

14.2 Any obligation on the part of SBC-13STATE to repair the Physical Collocation Space shall be limited to repairing, restoring and rebuilding the Physical Collocation Space as originally prepared for Collocator and shall not include any obligation to repair, restore, rebuild or replace any alterations or improvements made by Collocator or by SBC-13STATE on request of Collocator; any Collocator telecommunications equipment; or other facilities or equipment located in the Physical Collocation Space by Collocator or by SBC-13STATE on request of Collocator.

14.3 In the event that the Eligible Structure shall be so damaged by fire or other casualty that closing, demolition or substantial alteration or reconstruction thereof shall be necessary then, notwithstanding that the Physical Collocation Space may be unaffected thereby, SBC-13STATE, at its option, may terminate any Physical Collocation arrangement in that Eligible Structure by giving Collocator ten (10) calendar days prior written notice within thirty (30) calendar days following the date of such occurrence, if at all possible.

15. REMOVAL OF EQUIPMENT

15.1 Unless otherwise set forth herein, if Collocator shall default in performance of any term or condition herein, and the default shall continue for thirty (30) calendar days after receipt of written notice, or if Collocator is declared bankrupt or insolvent or

makes an assignment for the benefit of creditors, **SBC-13STATE** may, immediately or at any time thereafter, without notice or demand, enter and repossess the Physical Collocation Space, expel Collocator and any claiming under Collocator, remove any Collocator telecommunications equipment and any other items in the Physical Collocation Space, forcibly if necessary, and thereupon such Physical Collocation arrangement shall terminate, without prejudice to any other remedies **SBC-13STATE** might have. **SBC-13STATE** may exercise this authority on a Physical Collocation Space-by-Physical Collocation Space basis. **SBC-13STATE** may also refuse additional applications for collocation and/or refuse to complete any pending orders for additional space or collocation by Collocator at any time thereafter.

16. LIMITATION OF LIABILITY

16.1 Third Parties – Collocator acknowledges and understands that **SBC-13STATE** may provide space in or access to the Eligible Structure to other persons or entities ("Others"), which may include competitors of Collocator; that such space may be close to the Physical Collocation Space, possibly including space adjacent to the Physical Collocation space and/or with access to the outside of the physical collocation space; and that if Collocator requests a cage around its equipment, the cage Physical Collocation Space is a permeable boundary that will not prevent the Others from observing or even damaging Collocator's equipment and facilities. In addition to any other applicable limitation, a Party shall have absolutely no liability with respect to any action or omission by any third party, regardless of the degree of culpability of any such third party or the other Party, and regardless of whether any claimed liability arises in tort or in contract. The Parties shall save and hold each other harmless from any and all costs, expenses, and claims associated with any such acts or omission by any third party acting for, through, or as a result of a Party.

17. INDEMNIFICATION

17.1 In addition to any indemnification obligations set forth in the General Terms and Conditions of this Agreement), the Parties shall indemnify and hold harmless each other and the agents, employees, officers, directors and shareholders of any of them ("Indemnities") from and against any and all liabilities, obligations, claims, causes of action, fines, penalties, losses, costs, expenses (including court costs and reasonable attorney's fees), damages, injuries, of any kind, (individually and collectively "Liabilities"), including but not limited to, Liabilities as a result of (a) injury to or death of any person; (b) damage to or loss or destruction of any property; or (c) Liabilities related in any manner to employee benefits, workers compensation, payroll tax, and any other employer obligations which may be asserted against a Party where such liabilities arise in connection with the other Party's use of persons that it classifies as an independent contractor or

subcontractor to perform obligations under this Agreement; (d) attachments, liens or claims of material persons or laborers, arising out of or resulting from or in connection with this Agreement or the performance of or failure to perform and directly or indirectly caused, in whole or part, by acts of omissions, negligent or otherwise, of a Party or a contractor or a representative of a Party or an employee of any one of them, except to the extent such Liabilities arise from the willful or intentional misconduct of SBC-13STATE or its employees.

18. OSHA STATEMENT

18.1 Collocator, in recognition of SBC-13STATE's status as an employer, agrees to abide by and to undertake the duty of compliance on behalf of SBC-13STATE with all federal, state and local laws, safety and health regulations relating to the Physical Collocation Space which Collocator has assumed the duty to maintain pursuant to this Agreement, and to indemnify and hold SBC-13STATE harmless for any judgments, citations, fines, or other penalties which are assessed against SBC-13STATE as the result of Collocator's failure to comply with any of the foregoing. SBC-13STATE, in its status as an employer, shall comply with all federal, state and local laws, safety and health standards and regulations with respect to the structural and those other portions of the Physical Collocation Space which SBC-13STATE has agreed to maintain pursuant hereto.

19. NOTICES

19.1 Except in emergency situations, SBC-13STATE shall provide Collocator with written notice five (5) business days prior to those instances where SBC-13STATE or its subcontractors may be undertaking a major construction project in the general area of the Physical Collocation Space or in the general area of the AC and DC power plants which support the Physical Collocation Space.

19.2 SBC-13STATE will inform Collocator by telephone of any emergency-related activity that SBC-13STATE or its subcontractors may be performing in the general area of the Physical Collocation Space occupied by Collocator or in the general area of the AC and DC power plants which support the Physical Collocation space. Notification of any emergency related activity should be made to Collocator as soon as reasonably possible so that Collocator can take any action required to monitor or protect its service.

19.3 SBC-13STATE will provide Collocator with written notification within ten (10) business days of any scheduled AC or DC power work or related activity in the Eligible Structure that will cause an outage or any type of power disruption to Collocator telecommunications equipment. SBC-13STATE shall provide Collocator immediate notification by telephone of any emergency power activity that would impact Collocator telecommunications equipment.

19.4 Except as may be specifically permitted in this Agreement, any notice or demand, given by one party to the other shall be in writing and shall be valid and sufficient if dispatched by registered or certified mail, return receipt requested, postage prepaid, in the United States mails, or by facsimile transmission; provided, however, that notices sent by such registered or certified mail shall be effective on the third business day after mailing and those sent by facsimile transmission shall only be effective on the date transmitted if such notice is also sent by such registered or certified mail no later than the next business day after transmission, all addressed as follows:

If to **(AR, CA, CT, KS, MO, NV, OK, TX)**

Account Manager - Collocation
2600 N. Central Expressway
6th Floor
Richardson, TX 75080

If to **(IL, IN, MI, OH, WI)**
Account Manager - Collocation
350 N. Orleans St., 5th Flr.
Chicago, Illinois 60654

If to Collocator: Gary A. Klug
Director – Regulatory Compliance
SCC Communications Corp.
6285 Lookout Road
Boulder, Colorado 80301

Either party hereto may change its address by written notice given to the other party hereto in the manner set forth above.

19.5 Except as may be specifically permitted in this Agreement, any payment desired or required to be given by one party to the other shall be dispatched by registered or certified mail, return receipt requested, postage prepaid, in the United States mails, and shall be addressed as follows:

If to **(AR, CA, CT, KS, MO, NV, OK, TX)**
CSC
2600 N. Central Expressway, 6th floor,
Richardson, Texas 75080

If to **(IL, IN, MI, OH, WI)**
Collocation Team
790 N. Milwaukee St., 3rd Floor

Milwaukee, Wisconsin 53202

If to Collocator: Patricia Gilbert
Controller
SCC Communications Corp.
6285 Lookout Road
Boulder, CO 80301

20. INSURANCE

20.1 Collocator shall furnish **SBC-13STATE** with certificates of insurance which evidence the minimum levels of insurance set forth in the General Terms and Conditions, and state the types of insurance and policy limits provided by Collocator. **SBC-13STATE** shall be named as an ADDITIONAL INSURED on general liability policy.

SHOULD ANY OF THE ABOVE DESCRIBED POLICIES BE CANCELLED OR MATERIALLY CHANGED, THE ISSUING COMPANY WILL MAIL THIRTY (30) CALENDAR DAYS WRITTEN NOTICE TO THE CERTIFICATE HOLDER (S).

20.1.1 In addition to the insurance requirements set forth in the General Terms and Conditions, Collocator must maintain all Risk Property coverage on a full replacement cost basis insuring all of Collocator's personal property situated on or within the Eligible Structure. Collocator releases **SBC-13STATE** from and waives any and all right of recovery, claim, action or cause of action against **SBC-13STATE**, its agents, directors, officers, employees, independent contractors, and other representatives for any loss or damage that may occur to equipment or any other personal property belonging to Collocator or located on or in the space at the request of Collocator when such loss or damage is by reason of fire or water or the elements or any other risks that would customarily be included in a standard all risk insurance policy covering such property, regardless of cause or origin, including negligence of **SBC-13STATE**, its agents, directors, officers, employees, independent contractors, and other representatives. Property insurance on Collocator's fixtures and other personal property shall contain a waiver of subrogation against **SBC-13STATE**, and any rights of Collocator against **SBC-13STATE** for damage to Collocator's fixtures or personal property are hereby waived. Collocator may also elect to purchase business interruption and contingent business interruption insurance, knowing that **SBC-13STATE** has no liability for loss of profit or revenues should an interruption of service occur that is attributable to any Physical Collocation arrangement provided under this Appendix.

20.2 The limits set forth in this Section may be increased by SBC-13STATE from time to time during the term of a Collocation arrangement to at least such minimum limits as shall then be customary in respect of comparable situations within the existing SBC-13STATE structure.

20.3 All policies purchased by Collocator shall be deemed to be primary and not contributing to or in excess of any similar coverage purchased by SBC-13STATE.

20.4 All insurance must be in effect on or before occupancy date and shall remain in force as long as any of Collocator's equipment or other Collocator facilities or equipment remain within the Eligible Structure.

20.5 Collocator shall submit certificates of insurance and policy binders reflecting the coverages specified above prior to, and as a condition of, SBC-13STATE's obligation to turn over the Physical Collocation Space to Collocator or to permit any Collocator-designated subcontractors into the Eligible Structure pursuant to Sections 3.7 and 3.7.3. Collocator shall arrange for SBC-13STATE to receive thirty-(30) calendar day's advance written notice from Collocator's insurance company(ies) of cancellation, non-renewal or substantial alteration of its terms.

20.6 Collocator must also conform to reasonable recommendations made by SBC-13STATE's Property Insurance Company, if any, unless a recommendation is also applicable to SBC-13STATE and SBC-13STATE does not so conform in the Eligible Structure where the Physical Collocations space is located.

20.7 Failure to comply with the provisions of this "Insurance" Section will be deemed a material breach of this Agreement.

21. PROTECTON OF SERVICE AND PROPERTY

21.1 SBC-13STATE shall use its existing power back-up and power recovery plan in accordance with its standard policies for the specific Central Office.

21.2 For the purpose of notice permitted or required by this Appendix, each Party shall provide the other Party a Single Point of Contact (SPOC) available twenty-four (24) hours a day, seven (7) days a week.

21.3 Except as may otherwise be provided:

21.3.1 SBC-13STATE and Collocator shall each exercise reasonable care to prevent harm or damage to the other Party, its employees, agents or customers, or their property; and

21.3.2 Each Party, its employees, agents, or representatives agree to take reasonable and prudent steps to ensure the adequate protection of property and services of the other Party.

21.3.3 Each Party shall restrict access to the Eligible Structure and the Physical Collocation Space to employees and authorized agents of that other Party to the extent necessary to perform their specific job function.

21.4 SBC-13STATE shall use electronic access controls to protect all spaces which house or contain Collocator equipment or equipment enclosures, but if electronic controls are not available, SBC-13STATE shall either furnish security guards at those SBC-13STATE locations already protected by security guards on a seven (7) day per week, twenty-four (24) hour a day basis; and if none, SBC-13STATE shall permit Collocator to install monitoring equipment in the collocation space to carry data back to Collocator's work center for analysis. Collocator agrees that Collocator is responsible for problems or alarms related to Collocator's equipment or equipment enclosures located on SBC-13STATE's Physical Collocation Space.

21.5 SBC-13STATE shall furnish Collocator with the identifying credentials to be carried by its employees and authorized agents to be paid for by the Collocator. The Collocator must maintain an updated list of all authorized employees and authorized agents on a Physical Collocation Space-by-Physical Collocation Space basis for every Eligible Structure where there are SBC-13STATE security guards.

21.6 Collocator shall comply with the security and safety procedures and requirements of SBC-13STATE, including but not limited to sign-in, and identification.

21.7 SBC-13STATE shall furnish Collocator with all keys, entry codes, lock combinations, or other materials or information that may be needed to gain entry into any secured Collocator space in central offices. In the event of an emergency, Collocator shall contact a SPOC provided by SBC-13STATE for access to spaces which house or contain Collocator equipment or equipment enclosures.

21.8 SBC-13STATE shall use reasonable measures to control unauthorized access from passenger and freight elevators to spaces which contain or house Collocator equipment or equipment enclosures.

21.9 SBC-13STATE shall use best efforts to provide notification within two (2) hours to designated Collocator personnel to indicate an actual security breach.

21.10 SBC-13STATE shall be responsible for the security of the Eligible Structure. If a security issue arises or if Collocator believes that SBC-13STATE's security measures are unreasonably lax, Collocator shall notify SBC-13STATE and the Parties shall work together to address the problem. SBC-13STATE shall, at a minimum, do the following:

21.10.1 Where a cage is used, SBC-13STATE shall design collocation cages to prevent unauthorized access; provided, however, that Collocator realizes and assents to the fact that the cage will be made of wire mesh.

21.10.2 SBC-13STATE shall establish procedures for controlling access to the collocation areas by employees, security guards and others. Those procedures shall limit access to the collocation areas to SBC-13STATE's employees, agents or invitees having a business need, such as a periodic review of the Physical Collocation space, to be in these areas. SBC-13STATE shall require all persons entering the collocation areas to wear identification badges.

21.10.3 SBC-13STATE shall provide card key access to all collocation equipment areas where a secured pathway to the collocation space is made available to Collocators, along with a positive key control system for each Collocator's caged Physical Collocation Space. SBC-13STATE shall respond immediately to reported problems with Collocator key cards.

21.10.4 In emergency situations, common courtesy will be extended between Collocator and SBC-13STATE's employees, including the provision of first aid and first aid supplies.

21.11 Collocator shall limit access to Collocator employees directly to and from the Physical Collocation Space and will not enter unauthorized areas under any circumstances.

22. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

22.1 Every interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each interconnection, service and network element provided hereunder: definitions, interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party

beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries; expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

APPENDIX SS7
APPENDIX FOR THE PROVISION OF SS7 SERVICE

1. INTRODUCTION

1.1 This Appendix sets forth the terms and conditions for non-discriminatory access to the Common Channel Signaling/Signaling System 7 (CCS/SS7) signaling network provided by the applicable SBC Communications Inc. (SBC)-owned Incumbent Local Exchange Carrier (ILEC) and SCC. CCS/SS7 is comprised of certain network elements, including Dedicated Signaling Links, Signaling Link Transport and Signaling Transfer Points (STP). In addition to such network elements, this Appendix provides for CCS/SS7 functionality and translations to support SS7 based services and applications.

1.2 SBC Communications Inc. (SBC) means the holding company which owns the following ILECs: Illinois Bell Telephone Company, Indiana Bell Telephone Company Incorporated, Michigan Bell Telephone Company, Nevada Bell Telephone Company, The Ohio Bell Telephone Company, Pacific Bell Telephone Company, The Southern New England Telephone Company, Southwestern Bell Telephone Company and/or Wisconsin Bell, Inc. d/b/a Ameritech Wisconsin.

1.3 As used herein, SBC-2STATE means the applicable above listed ILECs doing business in California and Nevada.

2. SERVICE DESCRIPTION

2.1 SNET does not offer access to the SS7 signaling network under this agreement. Rather, SS7 is available as described in DPUC ordered CT Access Service Tariff Section 18.2.8. SS7 interconnection arrangements between SNET and SCC will be on an individual case basis (ICB) due to the individual architectures of both SCC and SNET signaling networks and unique requirements of the individual parties.

2.2 SS7 Transport

2.2.1 SS7, as defined in this Appendix above, provides for the transporting of call setup (i.e. ISUP) signaling to each end-office subtended from the tandem in the LATA in which the interconnection occurs as outlined in this Agreement. SS7 Transport of SS7 Global Access or SS7 Access as defined in the SBC-12STATE below outlines the requirements by for interLATA signaling.

2.2.2 SS7 Transport provides for the routing and screening of SS7 messages from an SBC-7STATE pair of STPs (i.e., a mated pair) to another SBC-7STATE pair of STPs. In SBC-AMERITECH, due to the fact that state gateway STPs are not interconnected, SS7 Transport provides for the routing and screening of SS7 messages from a SBC-AMERITECH pair of designated Gateway STPs (i.e., a mated pair) to another SBC-AMERITECH pair of STPs within the same state only. The screening of messages provides for SCC designation of signaling points associated with SCC and controls which messages may be allowed by the SBC-12STATE STP pairs. The routing of messages provides for the transfer of a complete message between signaling links, and for a Global Title Translation (GTT) of the message address, if needed.

2.2.3 SS7 Transport provides routing of messages for all parts of the SS7 protocol. These messages may support other applications and services such as, for example, CLASS services, Message Waiting services, Toll Free Database services, Line Information Data Base (LIDB) Services, Calling Name (CNAM) Database services, Advanced Intelligent Network (AIN) services and Telecommunications Industry Association Interim Standard-41 (IS-41) services. SS7 Transport will route messages to the global title address or to the signaling point code address of the message based on the translation information of SBC-12STATE's STP.

2.3 Dedicated Signaling Links

2.3.1 Dedicated Signaling Links provide interconnection to SBC-12STATE's signaling network. Each signaling link is a set of dedicated 56Kbps (or higher speed) transmission paths between SCC STPs or switches and the SBC-12STATE STP mated pair. The SCC designated Signaling Points of Interconnection (SPOI) are at SBC-7STATE's STP, an SBC-7STATE serving wire center or are collocated in a SBC-12STATE wire center. In the SBC-AMERITECH the SPOI is always collocated in the SBC-AMERITECH STP serving office. This means of collocation is required in the SBC-AMERITECH for access to the SBC-AMERITECH STP. The links are fully dedicated to the use of SCC and provide the screening and routing usage for the SBC-12STATE STP to which the link is connected. Dedicated Signaling Links are available to SCC for its use in furnishing SS7-based services or applications to their end users or other users of SS7 signaling information.

2.4 Dedicated Signaling Links include the following elements:

2.4.1 SS7 Link Cross Connect

2.4.1.1 The SS7 Link Cross Connect provides a DS-0 or DS1 connection in the SBC-12STATE STP building and connects the STP Port Termination to the SCC SPOI.

2.4.2 STP Port Termination

2.4.2.1 The STP Port Termination is the physical termination of the signaling link (i.e. 56 kbps circuit) at a SBC-12STATE STP. A STP Port Termination is used for each 56 kbps SS7 Link Cross Connect terminated at a SBC-12STATE STP.

2.4.3 STP Access Link

2.4.3.1 The STP Access Link provides a 56-kilobit per second digital facility when SCC requires an interoffice facility to connect from the SCC SPOI to the STP building location.

2.5 SCC shall provide the portion of the signaling link from SCC's premises within the LATA to the SBC-12STATE STP location or the SCC SPOI. SCC shall identify the DS1 or channel of a DS1 that will be used for the signaling link.

2.6 SCC shall identify to SBC-12STATE the facility and channel to which the SS7 Link Cross Connect shall connect. If the facility does not terminate in the STP location SBC-12STATE shall provide a transport facility referred to as the STP Access Link. The STP Access Link will connect to the DS-0 cross connect at the STP location.

2.7 When SCC uses an alternative DS1 facility or arranges, or agrees to allow, a physical degree of diversity or performance that is not in accordance with the specifications of Telcordia technical publication, GR-905-CORE, SCC acknowledges that the performance and reliability of the SS7 protocol may be affected and the performance and reliability standards described in GR-905-CORE may be disqualified.

2.8 Dedicated Signaling Links are subject to SBC-12STATE compatibility testing and certification requirements pursuant to the Network Operations Forum Reference Document, GR-905-CORE and SBC-12STATE Technical Publication, TP76638. In the SBC-AMERITECH Technical Publication AM-TR-OAT-000069 will apply in addition to the documents referenced above. In SBC-2STATE PUB L-780023-SBC-2STATE may be substituted for TP76638 and first interconnections to PACIFIC's signaling network per CLEC and per signaling point type of equipment will require completion of PACIFIC's CCS/SS7 interconnection questionnaire. Each individual set of links from SCC switch to SBC-12STATE

STP will require a pre ordering meeting to exchange information and schedule testing for certification by SBC-12STATE.

2.9 Dedicated Signaling Links Technical Requirements

2.9.1 Unbundled Dedicated Signaling Links will perform in the following two ways:

2.9.1.1 as an "A-link", which is a connection between a switch and a home signaling transfer point (STP) mated pair; and

2.9.1.2 as a "B-link" or "D-link," which is an interconnection between STPs in different signaling networks.

2.9.2 When SCC provides its own switch or STP, SCC will provide DS1 (1.544 Mbps) interfaces at SCC-designated SPOIs. DS1 transport to the SPOI can be provided for, as previously indicated, via existing transport facilities or through SCC purchase of an SBC-12STATE dedicated transport facility, previously referred to as the "Access Connection". Each 56 Kbps transmission path will appear as a DS0 channel on the DS1 interface.

2.9.3 In each LATA in which SCC desires Dedicated Signaling Links for interconnection to the SBC-12STATE SS7 Signaling Network, SCC must purchase dedicated signaling links to each STP of a mated pair of STPs.

2.9.4 SCC assumes the responsibility to ensure diverse routing of SCC signaling links from SCC switch to SCC SPOI. SBC-12STATE will provide the same amount of diversity as it provides to itself in terms of diverse routing of interoffice facilities, should such facilities be necessary.

2.9.5 When SCC requests that SBC-12STATE add a Signaling Point Code (SPC), SCC will identify to SBC-12STATE the SPCs associated with the SCC set of links and will pay a non-recurring charge per STP pair at the rates set forth in Appendix PRICING UNE – Schedule of Prices, "Point Code Addition". This rate element will not apply in SBC-2STATE.

2.9.6 SCC will notify SBC-12STATE in writing thirty (30) days in advance of any material change in SCC's use of such SS7 signaling network, including but not limited to any change in SCC SS7 Dedicated Signaling Links, SS7 Transport and/or STP.

2.10 Signaling Transfer Points (STPs)

2.10.1 The STP element is a signaling network function that includes all of the capabilities provided by the STP switches which enable the exchange of SS7 messages between switching elements, database elements and signaling transfer point switches via associated signaling links. STP includes the associated link interfaces.

2.10.2 Use of the STP routes signaling traffic generated by action of SCC to the destination defined by PACIFIC's signaling network, excluding messages to and from an SBC-7STATE local switching unbundled network element. Integrated services digital network user (ISUP) and Translational Capabilities Application Part (TCAP) signaling traffic addressed to SPs associated with SCC set of links will be routed to SCC.

2.10.3 SS7 Transport will apply to SS7 messages transported on behalf of SCC from a SBC-12STATE designated STP pair to a to a SBC-12STATE STP pair located in a different LATA. In SBC-AMERITECH this arrangement will only be provided for STPs located in the same state. In the SBC-7STATE, the rate, per octet, will apply to octets comprising ISUP and TCAP messages. In SBC-AMERITECH the Signal Switching and Signal Transport rates will apply to ISUP and TCAP messages. In SBC-2STATE, SS7 transport is not available. However, transit signaling provides the ability for an interconnecting network (ICN) to pass signaling information through the SBC-2STATE network to a third party without requiring a trunking connection by a third party with SBC-2STATE.

2.10.4 In such instance as SCC utilizes SBC-12STATE's Local Switching Network Element, SCC does not separately order SS7 signaling under this method. SCC will be charged for the use of the SBC-12STATE SS7 signaling on a per call basis.

2.11 STP Technical Requirements

2.11.1 STPs will provide signaling connectivity to the following network elements connected to the SBC-12STATE SS7 network: SBC-12STATE Local Switching or Tandem Switching; SBC-12STATE Service Control Points/Call Related Databases; Third-Party local or tandem switching systems; and Third-party-provided STPs.

2.11.2 The Parties will indicate to each other the signaling point codes and other screening parameters associated with each Link Set ordered by SCC at the SBC-12STATE STPs, and where technically feasible, each Party will provision such link set in accordance with these parameters. SCC may specify screening parameters so as to allow transient messages to cross the SBC-12STATE SS7 Network. The Parties will identify to each other the

GTT type information for message routing. SCC will pay a non-recurring charge when SCC requests SBC-12STATE add GTT type information for message routing, in connection with its use of unbundled signaling.

2.12 Interface Requirements

2.12.1 SBC-12STATE will provide STP interfaces to terminate A-links, B-links, and D-links.

2.12.2 SCC will designate the SPOI for each link. SCC will provide a DS1 or higher rate transport interface at each SPOI. SBC-12STATE will provide intraoffice diversity to the same extent it provides itself such diversity between the SPOIs and the SBC-12STATE STPs.

2.12.3 SBC-12STATE will provide intraoffice diversity to the same extent it provides itself such diversity between the SPOIs and the SBC-SWBT STPs.

3. MANNER OF PROVISIONING

3.1 The following describes the manner of provisioning for SS7 services. Each Party will work cooperatively with the other Party and will each provide knowledgeable personnel in order to provision, test and install SS7 Service in a timely fashion.

3.2 SS7 Transport

3.2.1 SCC shall use SS7 Transport subject to the screening and routing information of the SBC-12STATE STPs. SBC-12STATE shall provide information to SCC on the routes and signaling point codes served by the SBC-12STATE STPs. SS7 Transport shall route ISUP messages for the purpose of establishing trunk voice paths between switching machines.

3.2.2 SS7 Transport shall route TCAP queries when feasible pursuant to the SS7 Protocol to the SBC-12STATE "regional" STP pair that directly serves the database of TCAP message. SS7 Transport shall route TCAP responses from a SBC-12STATE "regional" STP pair to another SBC-12STATE STP pair.

3.2.3 SS7 Transport provides a signaling route for messages only to signaling points to which SBC-12STATE has a route. SS7 Transport does not include the provision of a signaling route to every possible signaling point. When SBC-12STATE does establish a route to a signaling point in a mated pair of STPs, the route may not be available to other SBC-12STATE pairs of STPs, until ordered. When SBC-12STATE or SCC,

pursuant to a service order, arranges to establish a route to a signaling point, such route to the other signaling point or other signaling network will be used by all signaling points within, and connected to, the SBC-12STATE signaling network pursuant to the standard requirements of the SS7 protocol.

3.3 Disputes concerning the association of a signaling point among specific link sets associated with a SBC-12STATE mated STP will be resolved by consultation with the signaling point owner, as defined in the Local Exchange Routing Guide (LERG), Section 1, assignment of SPC.

3.4 Dedicated Signaling Links

3.4.1 SCC shall designate the signaling points and signaling point codes associated with SCC. SCC shall provide such information to SBC-12STATE to allow SBC-12STATE to translate SBC-12STATE STPs. The information shall define the screening and routing information for the signaling point codes of SCC and may include global title address, translation type and subsystem designations as needed.

3.4.2 Signaling links from SBC-12STATE mated pairs of STPs shall connect to SCC premises (including collocation locations) within the same LATA. A set of links can be either:

3.4.2.1 "A" Link Sets from SCC's Signaling Point (SP)/Service Switching Point (SSP). A minimum of two links will be required, one from the SP/SSP to each STP; or,

3.4.2.2 "B" Link Sets from SCC's STPs that are connected to SBC-12STATE's mated pair of STPs. A minimum of four links will be required (i.e. a "quad") between the two pairs of STPs. (This same arrangement is sometimes referred to as a set of "D" links.)

3.4.3 A STP Port Termination and SS7 Link Cross Connect is required for each 56-kbps access link utilized for the Service. STP locations are set forth in the National Exchange Carrier Association, Inc. (NECA) Tariff FCC No. 4.

3.4.4 A pre-order meeting will define the SBC-12STATE facility availability and the degree of diversity in both the SBC-12STATE physical network and the SCC physical network from signaling point to signaling point for the link.

3.4.5 When SCC requires a STP Access Link, SCC and SBC-12STATE shall jointly negotiate the degree of diversity provided among and between multiple dedicated signaling links. The negotiation shall consider the requirements of the SS7 standard protocol, the degree of diversity available in each network and the possible alternatives.

3.4.6 All applicable signaling point codes for each signaling link must be installed at each of SBC-12STATE's interconnecting STPs.

3.4.7 Call set-up times may be adversely affected when SCC, using SS7 signaling, employs Intermediate Access Tandems (IATs) in its network. SBC-12STATE makes no warranties with respect to call set-up times when multiple STP pairs are involved or when the signaling traffic is exchanged between two non-SBC-12STATE signaling points.

3.4.8 Provisioning of the SS7 Service is in accordance with SBC-7STATE TP76638 SBC-AMERITECH AM-TR-OAT-000069 and GR-905-CORE, as amended or SBC-2STATE PUB L780023-SBC-2STATE.

3.5 Use of the STP

3.5.1 When SCC orders SBC-12STATE unbundled Local Switching, the use of the STP shall apply. No order or provisioning by SCC is needed. The SBC-12STATE Local Switch will use the SBC-12STATE SS7 signaling network.

4. RESPONSIBILITIES OF SBC-12STATE

4.1 SBC-12STATE shall manage the network and, at its sole discretion, apply protective controls. Protective controls include actions taken to control or minimize the effect of network failures or occurrences, which include, but are not limited to, failure or overload of SBC-12STATE or SCC facilities, natural disasters, mass calling or national security demands.

4.2 SBC-12STATE shall determine the GTT route for messages routed to GTT, which are associated with SBC-12STATE signaling points.

4.3 SBC-12STATE shall define regional functions and local functions of its STPs. SBC-12STATE will route ISUP messages within the SBC-12STATE signaling network, subject to technical feasibility. Capacity limitations shall define a temporary technical infeasibility until the capacity limit can be resolved.

4.4 SBC-12STATE shall route messages generated by the action of SCC throughout the SBC-12STATE signaling network as specified within this Appendix. The

content of the messages is for the use of signaling points of origination and destination. SBC-12STATE will not use any information within messages for any purpose not required by or related to the use of the SBC-12STATE signaling network. SBC-12STATE will not divulge any message or any part of messages generated by SCC to any other party, except as required to manage the SBC-12STATE signaling network or as may be required by law.

5. RESPONSIBILITIES OF SCC

5.1 SCC shall provision the signaling links at SCC's premises and from SCC's premises to SBC-7STATE's STP location in a diverse, reliable and technically feasible manner. SCC shall identify to SBC-12STATE the SPC(s) associated with the SCC set of links.

5.2 SCC shall identify to SBC-12STATE the GTT information for messages that route to SCC.

5.3 When routing messages addressed to an SBC-12STATE Subsystem Number (SSN), SCC shall use the SBC-12STATE defined SSN designation of the SBC-12STATE mated STP pair to which the message is routed.

5.4 SCC shall transfer Calling Party Number Parameter information unchanged, including the "privacy indicator" information, when ISUP Initial Address Messages are interchanged with the SBC-12STATE signaling network.

5.5 SCC shall furnish to SBC-12STATE, at the time the SS7 Service is ordered and annually thereafter, an updated three (3) year forecast of usage of the SS7 Signaling network. The forecast shall include total annual volume and busy hour busy month volume. SBC-12STATE shall utilize the forecast in its own efforts to project further facility requirements.

5.6 SCC shall inform SBC-12STATE in writing thirty (30) days in advance of any change in SCC's use of such SS7 Service which alters by ten percent (10%) for any thirty (30) day period the volume of signaling transactions by individual SS7 service that are planned by SCC to be forwarded to SBC-12STATE's network. SCC shall provide in said notice the reason, by individual SS7 service, for the volume change.

6. BONAFIDE REQUEST PROCESS

6.1 Any request for SS7 service not addressed within this Appendix may be submitted to SBC-12STATE via the Bona Fide Request ("BFR") process set forth in Appendix UNE.

7. DESCRIPTION OF RATE ELEMENTS SBC-AMERITECH

7.1 There are three types of charges that apply for SS7 Access. They are recurring, usage and nonrecurring charges. Recurring and nonrecurring charges apply for each port that is established on a STP. Usage charges apply for each Initial Address Message (IAM) or TCAP (excluding LIDB Access Service, 800 Access Service TCAP messages and LNP Database Access Query TCAP messages) message that is switched by the local STP and transported to an SBC-AMERITECH end office or for each IAM and TCAP message that is switched by the local STP in a hubbing arrangement.

7.2 Nonrecurring charges apply for the establishment of Originating Point Codes (OPC) and Global Title Address (GTA) Translations. An OPC charge applies for each OPC established, as well as each OPC added or changed subsequent to the establishment of STP Access. The OPC charge applies on a per service basis. A GTA Translation charge applies for each service or application (excluding LIDB Access Service and 800 Carrier-ID-Only Service) that utilizes TCAP messages. A GTA Translation charge also applies for each service (excluding LIDB Access Service and 800 Carrier-ID-Only Service) added or changed subsequent to the initial establishment of STP Access.

7.3 Signal Formulation

7.3.1 An IAM Formulation usage charge will be assessed for each IAM message formulated at the SBC-AMERITECH tandem for SCC to SBC-AMERITECH terminated calls.

7.4 Signal Transport

7.4.1 An IAM Signal Transport usage charge will also be assessed for each IAM message that is transported from the local STP to the SBC-AMERITECH end office for terminating traffic. A TCAP Signal Transport usage charge will be assessed for each TCAP message that is transported from the local STP to the SBC-AMERITECH end office (excluding LIDB and 800 Access Service).

7.5 Signal Switching

7.5.1 An IAM Signal Switching usage charge will be assessed for each IAM message that is switched by the local STP for each IAM messages that is switched for direct routed terminating traffic. A TCAP Signal Switching usage charge will be assessed for each TCAP message that is switched by the local STP termination of non-call associated signaling messages (excluding LIDB and 800 Access Service).

7.6 Signal Tandem Switching

7.6.1 An IAM Signal Tandem Switching usage charge will be assessed for an IAM message that is switched by an SBC-AMERITECH STP and transported to an end office for tandem routed terminating traffic. When Signal Tandem Switching usage charges are assessed, Signal Switching and Signal Transport charges do not apply, except for SS7 Transport.

8. DESCRIPTION OF RATE ELEMENTS SBC-7STATE

8.1 The following rate elements apply to SBC-7STATE SS7 Service:

8.2 SS7 Transport

8.2.1 SS7 Transport shall be measured per octet of information screened and routed.

8.2.2 SCC shall pay SS7 Transport Per Octet rate element for the screening and routing of messages by each additional SBC-7STATE STP pair. A usage rate applies per octet generated by action of SCC.

8.2.3 SS7 Transport is not available in SBC-2STATE

8.3 Dedicated Signaling Links

8.3.1 SS7 Link Cross Connect

8.3.1.1 SCC shall pay the DS-0 or DS-1 rate for the SS7 Link Cross Connect at the STP location for each Dedicated Signaling Link. Rates are per DS-0 and DS-1 bandwidth and per connection to unbundled dedicated facility or connection to a collocation cage. Rates are per month and nonrecurring installation per first or additional cross connects ordered and shall apply on a per order basis.

8.3.2 STP Port Termination

8.3.2.1 SCC shall pay the STP Port Termination rate element for each termination of the SS7 Link Cross Connect at the SBC-7STATE STP. One STP Port Termination must be installed at SBC-7STATE's interconnecting STP for each Dedicated Signaling Link.

8.3.2.2 There are two charges that apply to the STP Port Termination, i.e., a fixed recurring monthly rate per port termination and a nonrecurring installation charge per port.

8.3.3 STP Access Link

8.3.3.1 SCC shall pay the STP Access Link rate element for each STP Access Link when the STP Access Link is provided. The charge includes a fixed rate per month plus a rate per mile per month.

8.4 Signaling Point Code Addition

8.4.1 SCC shall pay the Signaling Point Code Addition rate element for the establishment and translation of each applicable CCS network signaling point code at a SBC-7STATE STP. SCC shall pay a nonrecurring charge per SPC established at each STP.

8.5 Global Title Translation (GTT) Addition

8.5.1 SCC shall pay the GTT Addition rate element for the establishment of SCC's GTA, translation type or subsystem information in the SBC-7STATE STP translations. SCC shall pay a nonrecurring charge per GTT established at each STP.

8.6 Use of the STP Per Call

8.6.1 SCC shall pay the Use of the STP Per Call rate element for Use of the SBC-7STATE STP. The rate shall apply for each call originated by SCC subscribers using the SBC-7STATE Local Switching Network Element. The rate is based on an assumed mean quantity of 200 octets of signaling used for each originated call times the STP Transport rate element.

8.6.2 The Use of the STP Per Call is a surrogate for STP Transport and Dedicated Signaling Links when SCC uses the SBC-7STATE Local Switching network element.

9. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

9.1 Every Interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such Interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each Interconnection,

service and network element provided hereunder: definitions, interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries; expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

9. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS 9

APPENDIX ITR
(Interconnection Trunking Requirements)

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions for Interconnection provided by the applicable SBC Communications Inc. (SBC)-owned Incumbent Local Exchange Carrier (ILEC) and SCC.

1.2 This Appendix provides descriptions of the trunking requirements between SCC and SBC-13STATE solely for 911 traffic and requests for Emergency Services from Telematics Customers between the respective customers of the Parties pursuant to Section 251(c)(2) of the Act; provided, however, Interconnection may not be used solely for the purpose of originating a Party's own interexchange traffic. All references to incoming and outgoing trunk groups are from the perspective of SCC.

1.3 All traffic shall be originated by SCC's End Users, routed through SBC-13STATE's Selective Routing Tandem(s), and terminated to the SBC-13STATE End User PSAP or equivalent public safety agency.

2. DEFINITIONS

2.1 **"Network Interconnection Methods"** (NIM) designates facilities established between the Parties' Networks.

3. TRUNK GROUPS

3.1 E911 Trunk Group

3.1.1 A dedicated trunk group for each NPA shall be established to each appropriate Selective Routing Tandem within the local exchange area or LATA in which SCC offers exchange service. SCC will have administrative control for the purpose of issuing Access Service Request (ASR) on this one-way trunk group. Where the Parties utilize SS7 signaling and the necessary E911 technology is currently available and deployed, only one E911 trunk group will be established to handle multiple NPAs within the local exchange area or LATA. This trunk group shall be set up as one-way, outgoing only and shall utilize MF CAMA signaling or, where available, SS7 signaling.

3.1.2 SCC shall provide a minimum of two (2) one-way outgoing trunks on 9-1-1 trunk groups dedicated for originating 9-1-1 emergency service calls from the Point of Interconnection (POI) to the **SBC-13STATE** 9-1-1 Selective Routing Tandem. Unless otherwise agreed to by the Parties, the 9-1-1 trunk groups will be initially established as two (2) one-way CAMA MF trunk groups or SS7 connectivity where applicable.

3.1.3 The Parties will cooperate to promptly test all 9-1-1 trunks and facilities between SCC network and the **SBC-13STATE** 9-1-1 Selective Routing Tandem to assure proper functioning of 9-1-1 service. SCC will not turn-up live traffic until successful testing is completed by both Parties. The Parties will work diligently to complete testing in an expeditious manner and to avoid unreasonable delay in completing such testing.

4. FORECASTING RESPONSIBILITIES: SBC-13STATE

4.1 SCC agrees to provide an initial forecast for establishing the initial Interconnection facilities. **SBC-13STATE** shall review this forecast and if it has any additional information that will change the forecast shall provide this information to SCC. Subsequent forecasts shall be provided on a semi-annual basis, not later than January 1 and July 1 in order to be considered in the semi-annual publication of the **SBC-13STATE** General Trunk Forecast. This forecast should include yearly forecasted trunk quantities for all appropriate trunk groups described in this Appendix for a minimum of three years. Parties agree to the use of Common Language Location Identification (CLLI) coding and Common Language Circuit Identification for Message Trunk coding (CLCI-MSG) which is described in TELCORDIA TECHNOLOGIES documents BR795-100-100 and BR795-400-100 respectively. Inquiries pertaining to use of TELCORDIA TECHNOLOGIES Common Language Standards and document availability should be directed to TELCORDIA TECHNOLOGIES at 1-800-521-2673. Analysis of trunk group performance, and ordering of relief if required, will be performed on a monthly basis at a minimum (trunk servicing).

4.2 The semi-annual forecasts shall include:

4.2.1 Yearly forecasted trunk quantities for 911 trunk requirements for a minimum of three (current and plus 1 and plus 2) years; and

4.2.2 A description of major network projects anticipated for the following six months. Major network projects include trunking or network rearrangements, shifts in anticipated traffic patterns, orders greater than four (4) DS1's, or other activities that are reflected by a significant increase or decrease in trunking demand for the following forecasting period.

4.2.3 The Parties shall agree on a forecast provided above to ensure efficient utilization of trunks. Orders for trunks that exceed forecasted quantities for forecasted locations will be accommodated as facilities and/or equipment becomes available. Parties shall make all reasonable efforts and cooperate in good faith to develop alternative solutions to accommodate orders when facilities are not available.

4.3 SCC shall be responsible for forecasting and servicing the one way trunk groups terminating to **SBC-13STATE**, unless otherwise specified in this Appendix. Standard trunk traffic engineering methods will be used by the parties as described in Bell Communications Research, Inc. (TELCORDIA TECHNOLOGIES) document SR TAP 000191, Trunk Traffic Engineering Concepts and Applications.

4.4 If forecast quantities are in dispute, the Parties shall meet to reconcile the differences.

4.5 Each Party shall provide a specified point of contact for planning, forecasting and trunk servicing purposes.

5. TRUNK DESIGN BLOCKING CRITERIA: SBC-13STATE

5.1 Trunk requirements for forecasting and servicing shall be based on the blocking objectives shown in Table 1. Trunk requirements shall be based upon time consistent average busy season busy hour twenty (20) day averaged loads applied to industry standard Neal-Wilkinson Trunk Group Capacity algorithms (use Medium day-to-day Variation and 1.0 Peakedness factor until actual traffic data is available).

TABLE 1

Trunk Group Type	Design Blocking Objective
911	1%

*During implementation the Parties will mutually agree on an ECCS or some other means for the sizing of this trunk group.

6. TRUNK SERVICING: SBC-13STATE

6.1 Orders between the Parties to establish, add, change or disconnect trunks shall be processed by using an Access Service Request (ASR). SCC will have administrative control for the purpose of issuing ASRs on one-way trunk groups.

6.2 Both Parties will jointly manage the capacity of 911 trunk groups. Both Parties may send a Trunk Group Service Request (TGSR) to the other Party to trigger changes to the 911 Trunk Groups based on capacity assessment. The TGSR is a standard industry support interface developed by the Ordering and Billing Forum of the Carrier Liaison Committee of the Alliance for Telecommunications Solutions (ATIS) organization. TELCORDIA TECHNOLOGIES Special Report STS000316 describes the format and use of the TGSR. Contact TELCORDIA TECHNOLOGIES at 1-800-521-2673 regarding the documentation availability and use of this form.

6.3 In A Blocking Situation:

6.3.1 In a blocking final situation, a TGSR will be issued by SBC-13STATE when additional capacity is required to reduce measured blocking to objective design blocking levels based upon analysis of trunk group data. Either Party upon receipt of a TGSR in a blocking situation will issue an ASR to the other Party within three (3) business days after receipt of the TGSR, and upon review and in response to the TGSR received. SCC will note "Service Affecting" on the ASR.

6.4 Underutilization:

6.4.1 Underutilization of 911 trunks and facilities exists when provisioned capacity is greater than the current need. This over provisioning is an inefficient deployment and use of network resources and results in unnecessary costs. Those situations where more capacity exists than actual usage requires will be handled in the following manner:

6.4.1.1 If a 911 trunk group is consistently underutilized for each month of any three (3) consecutive months period, either Party may request the issuance of an order to resize the trunk group, which shall be left with not less than 25 percent (25%) excess capacity. In all cases grade of service objectives shall be maintained.

6.4.1.2 Either party may send a TGSR to the other Party to trigger changes to the 911 Trunk Groups based on capacity assessment. Upon receipt of a TGSR, the receiving Party will issue an ASR to the other Party within twenty (20) business days after receipt of the TGSR. (20 business days for PACIFIC/NEVADA , 10

business days for SBC-SWBT, SBC-AMERITECH, and SNET)

6.4.1.3 Upon review of the TGSR, if a Party does not agree with the resizing, the Parties will schedule a joint planning discussion within the twenty (20) business days. The Parties will meet to resolve and mutually agree to the disposition of the TGSR.

6.4.1.4 If SBC-13STATE does not receive an ASR, or if the SCC does not respond to the TGSR by scheduling a joint discussion within the twenty (20) business day period, SBC-13STATE will attempt to contact SCC to schedule a joint planning discussion. If SCC will not agree to meet within an additional five (5) business days and present adequate reason for keeping trunks operational, SBC-13STATE will issue an ASR to resize the Interconnection trunks and facilities.

6.5 In all cases except a blocking situation, either Party upon receipt of a TGSR will issue an ASR to the other Party:

6.5.1 Within twenty (20) business days after receipt of the TGSR, upon review of and in response to the TGSR received; or (20 business days for PACIFIC/NEVADA, 10 business days for SBC-SWBT, SBC-AMERITECH, and SNET)

6.5.2 At any time as a result of either Party's own capacity management assessment, in order to begin the provisioning process. The intervals used for the provisioning process will be the same as those used for SBC-13STATE's Switched Access service.

6.6 Major projects require the coordination and execution of multiple orders or related activities between and among SBC-13STATE and SCC work groups, including but not limited to the initial establishment of 911 trunk groups and service in an area, NXX code moves, re-homes, facility grooming, or network rearrangements.

6.6.1 Orders that comprise a project, i.e., greater than four (4) DS-1's, shall be submitted at the same time, and their implementation shall be jointly planned and coordinated.

6.7 SCC will be responsible for engineering its network on its side of the Point of Interconnection (POI). SBC-13STATE will be responsible for engineering its network on its side of the POI.

6.8 Due dates for the installation of 911 trunks covered by this Appendix shall be based on each of the SBC-13STATE's intrastate Switched Access intervals. If

SCC is unable to or not ready to perform Acceptance Tests, or is unable to accept the 911 trunk(s) by the due date, SCC will provide a requested revised service due date that is no more than thirty (30) calendar days beyond the original service due date. If SCC requests a service due date change which exceeds the allowable service due date change period, the ASR must be canceled by SCC. Should SCC fail to cancel such an ASR, SBC-13STATE shall treat that ASR as though it had been canceled.

6.9 TRUNK SERVICING – SBC-SWBT Exceptions:

6.9.1 The Parties will process trunk service requests submitted via a properly completed ASR within ten (10) business days of receipt of such ASR unless defined as a major project, as stated in 6.6. Incoming orders will be screened by SWBT trunk engineering personnel for reasonableness based upon current utilization and/or consistency with forecasts. If the nature and necessity of an order requires determination, the ASR will be placed in Held Status, and a Joint Planning discussion conducted. Parties agree to expedite this discussion in order to minimally delay order processing. Extension of this review and discussion process beyond two days from ASR receipt will require the ordering Party to Supplement the order with proportionally adjusted Customer Desired Due Dates. Facilities must also be in place before trunk orders can be completed.

6.10 Utilization shall be defined as Trunks Required as a percentage of Trunks In Service. Trunks Required shall be determined using methods described in section 6.0 using Design Blocking Objectives stated in section 7.1.

7. TRUNK DATA EXCHANGE: SBC-13STATE

7.1 Each Party agrees to service trunk groups to the foregoing blocking criteria in a timely manner when trunk groups exceed measured blocking thresholds on an average time consistent busy hour for a twenty (20) business day study period. The Parties agree that twenty (20) business days is the study period duration objective. However, a study period on occasion may be less than twenty (20) business days but at minimum must be at least three (3) business days to be utilized for engineering purposes, although with less statistical confidence.

7.2 Exchange of traffic data enables each Party to make accurate and independent assessments of trunk group service levels and requirements. Parties agree to establish a timeline for implementing an exchange of traffic data utilizing the DIXC process via a Network Data Mover (NDM) or FTP computer to computer file transfer process. Implementation shall be within three (3) months of the date, or such date as agreed upon, that the trunk groups begin passing live traffic. The

traffic data to be exchanged will be the Originating Attempt Peg Count, Usage (measured in Hundred Call Seconds), Overflow Peg Count, and Maintenance Usage (measured in Hundred Call Seconds on a seven (7) day per week, twenty-four (24) hour per day, fifty-two (52) weeks per year basis. These reports shall be made available at a minimum on a semi-annual basis upon request. Exchange of data on one-way groups is optional.

8. NETWORK MANAGEMENT: SBC-13STATE

8.1 Neither Party shall apply Network Management controls without consulting the E911 Authority.

9. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

9.1 Every Interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such Interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each Interconnection, service and network element provided hereunder: definitions; interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks, no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries; expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

APPENDIX UNE
(UNBUNDLED NETWORK ELEMENTS)

1. INTRODUCTION

1.1 This Appendix, Unbundled Network Elements (UNE), sets forth the terms and conditions pursuant to which the applicable SBC Communications Inc. (SBC) owned Incumbent Local Exchange Carrier (ILEC) agrees to furnish SCC with access to UNEs. Where SCC seeks to provide local exchange service to End Users as defined in the 911 Appendix, through use of multiple SBC-13STATE UNEs, SCC is responsible for performing the functions necessary to combine the Unbundled Network Elements it requests from SBC-13STATE. SCC shall not combine Unbundled Network Elements in a manner that will impair the ability of other Telecommunications Carriers to obtain access to Unbundled Network Elements or to Interconnect with SBC-13STATE's network. SBC-13STATE has no obligation under the Act to combine UNEs. For information regarding deposit, billing, payment, non-payment, disconnect, and dispute resolution, see the General Terms and Conditions of this Agreement.

1.2 The prices at which SBC-13STATE agrees to provide SCC with Unbundled Network Elements (UNE) are contained in the applicable Appendix Pricing and/or the applicable Commission ordered tariff where stated.

1.3 SBC-13STATE has no obligation to provide access to any Unbundled Network Element, or to provide terms and conditions associated with any Unbundled Network Element, other than expressly set forth in this Agreement, or as required by the Federal Communications Commission or applicable Commission .

2. TERMS AND CONDITIONS

2.1 SBC-13STATE and SCC may agree to connect SCC's facilities with SBC-13STATE's network at any technically feasible point for access to UNEs for the provision by SCC of a Telecommunications Service. ((Act, Section 251 (c)(2)(B); 47 CFR Section 51.305(a)(2)(vi)).

2.2 SBC-13STATE will provide SCC nondiscriminatory access to UNEs (Act, Section 251(c)(3), Act, and Section 271(c)(2)(B)(ii); 47 CFR Section 51.307(a)):

2.2.1 At any technically feasible point (Act, Section 251(c)(3); 47 CFR Section 51.307(a));

2.2.2 At the rates, terms, and conditions which are just, reasonable, and nondiscriminatory (Act, Section 251(c)(3); 47 CFR Section 51.307(a));

2.2.3 In a manner that allows SCC to provide a Telecommunications Service that may be offered by means of that UNE (Act, Section 251(c)(3); 47 CFR Section 51.307 (c);

2.2.4 In a manner that allows access to the facility or functionality of a requested Unbundled Network Element to be provided separately from access to other elements, and for a separate charge (47 CFR Section 51.307(d));

2.2.5 With technical information regarding SBC-13STATE's network facilities to enable SCC to achieve access to UNEs (47 CFR Section 51.307(e));

2.2.6 Without limitations, restrictions, or requirements on requests that would impair SCC's ability to provide a Telecommunications Service in a manner it intends (47 CFR Section 51.309(a));

2.2.7 In a manner that allows SCC purchasing access to UNEs to use such UNE to provide exchange access service to itself in order to provide interexchange services to customers (47 CFR Section 51.309(b));

2.2.8 Where applicable, terms and conditions of access to UNEs shall be no less favorable than terms and conditions under which SBC-13STATE provides such elements to itself (47 CFR Section 51.313(b)).

2.2.9 Only to the extent it has been determined that these elements are required by the "necessary" and "impair" standards of the Act (Act, Section 251 (d)(2)).

2.3 As provided for herein, SBC-13STATE will permit SCC exclusive use of an unbundled network facility for a period of time, and when CLEC is purchasing access to a feature, function, or capability of a facility, SBC-13STATE will provide use of that feature, function, or capability for a period of time (47 CFR § 51.309(c)).

2.4 SBC-13STATE will maintain, repair, or replace UNEs (47 CFR § 51.309(c)) as provided for in this Agreement.

2.5 Where technically feasible, the quality of the UNE and access to such UNE shall be at least equal to what SBC-13STATE provides itself or any subsidiary, affiliate, or other party (47 CFR § 51.311(a), (b)).

2.6 Each Party shall be solely responsible for the services it provides to its End Users, customers, and to other Telecommunications Carriers.

2.7 UNEs provided to SCC under the provisions of this Appendix shall remain the property of SBC-13STATE.

2.8 SBC-13STATE will not connect to or combine UNE's with any non-251 (c)(3) or other SBC-13STATE service offerings with the exception of tariffed Collocation services.

2.9 Provisioning/Maintenance of Unbundled Network Elements

2.9.1 Access to UNEs is provided under this Agreement over such routes, technologies, and facilities as SBC-13STATE may elect at its own discretion. SBC-13STATE will provide access to UNEs where technically feasible.

2.9.2 Subject to the terms herein, SBC-13STATE is responsible only for the installation, operation and maintenance of the Unbundled Network Elements it provides. SBC-13STATE is not otherwise responsible for the Telecommunications Services provided by SCC through the use of those UNEs.

2.9.3 Where UNEs provided to SCC are dedicated to a single End User, if such UNEs are for any reason disconnected they shall be made available to SBC-13STATE for future provisioning needs, unless such UNE is disconnected in error. SCC agrees to relinquish control of any such UNE concurrent with the disconnection of SCC's End User's service.

2.9.4 SCC shall make available at mutually agreeable times the UNEs provided pursuant to this Appendix in order to permit SBC-13STATE to test and make adjustments appropriate for maintaining the UNEs in satisfactory operating condition. No credit will be allowed for any interruptions involved during such testing and adjustments.

2.9.5 SCC's use of any SBC-13STATE UNE, or of its own equipment or facilities in conjunction with any SBC-13STATE network element, will not materially interfere with or impair service over any facilities of SBC-13STATE, its affiliated companies or its connecting and concurring carriers involved in its services, cause damage to their plant, impair the privacy of any communications carried over their facilities or create hazards to the employees of any of them or the public. Upon reasonable written notice and opportunity to cure, SBC-13STATE may discontinue or refuse service if SCC violates this provision, provided that such termination of service will be limited to SCC's use of the UNE(s) causing the violation.

2.9.6 When an SBC-13STATE provided tariffed or resold service is replaced by SCC's facility based service using any SBC-13STATE provided UNE(s), CLEC shall issue appropriate service requests, to both disconnect the

existing service and connect new service to SCC's End User. These requests will be processed by SBC-13STATE, and SCC will be charged the applicable UNE service order charge(s), in addition to the recurring and nonrecurring charges for each individual UNE and cross connect ordered. Similarly, when an End User served by one CLEC using SBC-13STATE provided UNEs is converted to a different CLEC's service which also uses any SBC-13STATE provided UNE, the requesting CLEC shall issue appropriate service requests to both disconnect the existing service and connect new service to the requesting CLEC's End User. These requests will be processed by SBC-13STATE and the CLEC will be charged the applicable service order charge(s), in addition to the recurring and nonrecurring charges for each individual UNE and cross connect ordered.

2.9.7 SCC shall connect equipment and facilities that are compatible with the SBC-13STATE Network Elements and shall use UNEs in accordance with the applicable regulatory standards and requirements referenced in this Agreement.

2.9.8 Unbundled Network Elements may not be connected to or combined with SBC-13STATE access services or other SBC-13STATE tariffed service offerings with the exception of tariffed Collocation services where available.

2.10 Performance of UNEs

2.10.1 Each UNE will be provided in accordance with SBC-13STATE Technical Publications or other written descriptions, if any, as changed from time to time by SBC-13STATE at its sole discretion.

2.10.2 Nothing in this Appendix will limit either Party's ability to modify its network through the incorporation of new equipment, new software or otherwise. SBC-13STATE will provide the SCC written notice of any upgrades in its network which will materially impact the SCC's service consistent with the timelines established by the FCC in the Second Report and Order, CC Docket 96-98.

2.10.3 SBC-13STATE may elect to conduct Central Office switch conversions for the improvement of its network. During such conversions, SCC orders for unbundled network elements from that switch shall be suspended for a period of three days prior and one day after the conversion date, consistent with the suspension SBC-13STATE places on itself for orders from its End Users.

2.10.4 SCC will be solely responsible, at its own expense, for the overall design of its telecommunications services and for any redesigning or rearrangement

of its telecommunications services which may be required because of changes in facilities, operations, or procedure of SBC-13STATE, minimum network protection criteria, or operating or maintenance characteristics of the facilities.

3. ACCESS TO UNE CONNECTION METHODS

3.1 This Section describes the connection methods under which SBC-13STATE agrees to provide SCC with access on an unbundled basis to loops, switch ports, and dedicated transport and the conditions under which SBC-13STATE makes these methods available. These methods provide SCC access to multiple SBC-13STATE UNEs which SCC may then combine. The methods listed below provide SCC with access to UNEs without compromising the security, integrity, and reliability of the public switched network, as well as to minimize potential service disruptions.

3.1.1 Subject to availability of space and equipment, SCC may use the methods listed below to access and combine loops, switch ports, and dedicated transport within a requested SBC-13STATE Central Office.

3.1.1.1 (Method 1)

SBC-13STATE will extend SBC-13STATE UNEs requiring cross connection to SCC's Physical Collocation Point of Termination (POT) when SCC is Physically Collocated, in a caged or shared cage arrangement, within the same Central Office where the UNEs which are to be combined are located.

3.1.1.2 (Method 2)

SBC-13STATE will extend SBC-13STATE UNEs that require cross connection to SCC's UNE frame located in the common room space, other than the Collocation common area, within the same Central Office where the UNEs which are to be combined are located.

3.1.1.3 (Method 3)

SBC-13STATE will extend SBC-13STATE UNEs to SCC's UNE frame that is located outside the SBC-13STATE Central Office where the UNEs are to combined in a closure such as a cabinet provided by SBC-13STATE on SBC-13STATE property.

3.2 The following terms and conditions apply to all methods when SBC-13STATE provides access pursuant to Sections 3.1.1.1 through 3.1.1.3:

3.2.1 Within ten (10) business days of receipt of a written request for access to UNEs involving three (3) or fewer Central Offices, SBC-13STATE will provide a written reply notifying SCC of the method(s) of access available in the requested Central Offices. For requests impacting four (4) or more Central Offices the Parties will agree to an implementation schedule for access to UNEs.

3.2.2 Access to UNEs via Method 1 is only available to Physically Collocated CLECs. Access to UNEs via Method 2 and Method 3 is available to both Collocated and Non-Collocated CLECs. Method 2 and Method 3 are subject to availability of SBC-13STATE Central Office space and equipment.

3.2.3 SCC may cancel the request at any time, but will pay SBC-13STATE's reasonable and demonstrable costs for modifying SBC-13STATE's Central Office up to the date of cancellation.

3.2.4 SCCs may elect to access SBC-13STATE's UNEs through Physical Collocation arrangements.

3.2.5 SCC shall be responsible for initial testing and trouble sectionalization of facilities containing SCC installed cross connects.

3.2.6 SCC shall refer trouble sectionalized in the SBC-13STATE UNE to SBC-13STATE.

3.2.7 Prior to SBC-13STATE providing access to UNEs under this Appendix, SCC and SBC-13STATE shall provide each other with a point of contact for overall coordination.

3.2.8 SCC shall provide all tools and materials required to place and remove the cross connects necessary to combine and disconnect UNEs.

3.2.9 All tools, procedures, and equipment used by SCC to connect to SBC-13STATE's network shall comply with technical standards set out in SBC Local Exchange Carrier Technical Document TP76299MP, to reduce the risk of damage to the network and customer disruption.

3.2.10 SCC shall be responsible for SCC's personnel observing SBC-13STATE's site rules and regulations, including but not limited to safety regulations and security requirements, and for working in harmony with others while present at the site. If SBC-13STATE for any reasonable and lawful reason requests SCC to discontinue furnishing any person provided by SCC for performing work on SBC-13STATE's premises, SCC shall immediately

comply with such request. Such person shall leave SBC-13STATE's premises promptly, and SCC shall not furnish such person again to perform work on SBC-13STATE's premises without SBC-13STATE's consent.

3.2.11 SCC shall provide positive written acknowledgment that the requirements stated in Section 3.2.10 have been satisfied for each employee requiring access to SBC-13STATE premises and/or facilities. SBC-13STATE identification cards will be issued for any SCC employees who are designated by CLEC as meeting the necessary requirements for access. Entry to SBC-13STATE premises will be granted only to SCC employees with such identification.

3.2.12 SCC shall designate each Unbundled Network Element being ordered from SBC-13STATE. SCC shall provide an interface to receive assignment information from SBC-13STATE regarding location of the extended UNEs. This interface may be manual or mechanized.

3.2.13 SBC-13STATE will provide SCC with contact numbers as necessary to resolve assignment conflicts encountered. All contact with SBC-13STATE shall be referred to such contact numbers.

3.2.14 SCC shall provide its own administrative Telecommunication Service at each facility and all materials needed by SCC at the work site. The use of cellular telephones is not permitted in SBC-13STATE equipment areas.

3.2.15 Certain construction and preparation activities may be required to modify a building or prepare the premises for access to UNEs.

3.2.15.1 Where applicable, costs for modifying a building or preparing the premises for access to SBC-13STATE UNEs will be made on an individual case basis (ICB).

3.2.15.2 SBC-13STATE will provide Access to UNEs (floor space, floor space conditioning, cage common systems materials, and safety and security charges) in increments of one (1) square foot. For this reason, SBC-13STATE will ensure that the first CLEC obtaining Access to UNEs in an SBC-13STATE premises will not be responsible for the entire cost of site preparation and security.

3.2.15.3 SBC-13STATE will contract for and perform the construction and preparation activities using same or consistent practices that are used by SBC-13STATE for other construction and preparation work performed in the building.

4.* ADJACENT LOCATION

4.1* This Section describes the Adjacent Location Method for accessing UNEs. This Section also provides the conditions in which **PACIFIC** offers the Adjacent Location Method.

4.2* The Adjacent Location Method allows SCC to access loops, switch ports, and dedicated transport for an SCC location adjacent to a **PACIFIC** Central Office as identified by **PACIFIC**. Under this method **PACIFIC** UNEs will be extended to the adjacent location, via copper cabling provided by SCC, which SCC can then utilize to provide Telecommunications Service.

4.3* This method requires SCC to provide copper cable, greater than 600 pairs, to the last manhole outside the **PACIFIC** Central Office. SCC shall provide enough slack for **PACIFIC** to pull the cable into the Central Office and terminate the cable on the Central Office Intermediate Distribution Frame (IDF).

4.4* SCC will obtain all necessary rights of way, easements, and other third party permissions.

4.5* The following terms and conditions apply when **PACIFIC** provides the adjacent location:

4.5.1 SCC is responsible for Spectrum Interference and is aware that not all pairs may be ADSL or POTS capable.

4.6* The installation interval applies on an individual application basis. SCC is responsible for paying all up front charges (nonrecurring and case preparation costs) before work will begin. This assumes that all necessary permits will be issued in a timely manner.

4.7* SCC will provide the excess cable length necessary to reach the **PACIFIC** IDF in the **PACIFIC** Central Office where SCC requests connection.

4.8* SCC will be responsible for testing and sectionalization of facilities from the customer's location to the entrance manhole.

---

* Section 4 is available only in the state of California. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS, Paragraph 2.10.1.

* Section 4 is available only in the state of California. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS, Paragraph 2.10.1.

4.9* SCC should refer any sectionalized trouble determined to be in PACIFIC's facilities to PACIFIC.

4.10* SCC's employees, agents and contractors will be permitted to have access to SCC's cable where it is delivered to PACIFIC (outside the entrance manhole). SCC is only able to enter the entrance manhole to splice under a duct lease agreement. If SCC leases ducts to get to the Central Office then SCC has the right to splice the manholes on the route, including the entrance manhole.

4.11* In order for PACIFIC to identify the entrance manhole for SCC, SCC must specify the direction from which the cable originates. PACIFIC will verify that a vacant sleeve or riser duct exists at the entrance manhole. If none exists, construction of one will be required. If a vacant access sleeve or riser duct does not exist, and one must be constructed, SCC will pay for the construction on an Outside Plant Custom Work Order.

4.12* SCC will retain all assignment control. PACIFIC will maintain TIRKS records for cable appearance information on the horizontal and vertical appearance on the PACIFIC frame.

4.13* SCC will pay Time and Materials charges when PACIFIC dispatches personnel and failure is in SCC's facility.

4.14* PACIFIC will not assume responsibility for the quality of service provided over this special interconnection arrangement. Service quality is the responsibility of SCC. PACIFIC limits SCC to two building entrances. Two entrances allow for SCC growth or a diverse path.

4.15* Prior to PACIFIC providing the Adjacent Location Method in this Appendix, SCC and PACIFIC shall provide each other with a single point of contact for overall coordination.

4.16* The Adjacent Location Method of Accessing UNEs only allows for copper cable termination.

5. BONA FIDE REQUEST

5.1 This Bona Fide Request process described in Item I of this Section 5 applies to each Bona Fide Request submitted in the SBC-SWBT, SBC-AMERITECH and NEVADA Territory. The Bona Fide Request process described in Item II of this Section 5 shall apply to each Bona Fide Request submitted in the SNET Territory and the Bona Fide Request Process described in Item III of this Section shall apply to each Bona Fide Request submitted in the PACIFIC Territory. If SCC submits the same Request in more than one Territory that requires such Request to be processed under more than one Item in this Section 5 (e.g., in Territories that have

different processes), separate BFRs shall be required. For purposes of this Appendix, a "Business Day means Monday through Friday, excluding Holidays observed by SBC-13STATE.

5.2 **ITEM I**
SBC-SWBT, SBC-AMERITECH, NEVADA
Bona Fide Request Process

5.2.1 A Bona Fide Request (**"BFR"**) is the process by which SCC may request SBC-SWBT, SBC-AMERITECH, NEVADA to provide SCC access to an additional or new, undefined UNE, (a "Request"), that is required to be provided by SBC-SWBT, SBC-AMERITECH, NEVADA under the Act or any associated, applicable FCC rules or regulations, but is not available under this Agreement or defined in a generic appendix at the time of SCC's request.

5.2.2 In the event that a UNE becomes available in SBC-13STATE pursuant to a Commission approved tariff, upon SCC's written request, the parties will negotiate a mutually acceptable amendment to this Agreement which will permit the SCC to purchase such tariffed UNE, in that state where such UNE is tariffed, in accordance with the terms and conditions of such tariff.

5.2.2 The BFR process set forth herein does not apply to those services requested pursuant to Report & Order and Notice of Proposed Rulemaking 91-141 (rel. Oct. 19, 1992) paragraph 259 and n. 603 and subsequent rulings.

5.2.3 All BFRs must be submitted with a BFR Application Form in accordance with the specifications and processes set forth in the sections of the (i) CLEC Handbook, if one of the Parties is SBC-SWBT, NEVADA, SNET and (ii) TCNet.ameritech.com, if one of the Parties is SBC-AMERITECH. Included with the Application SCC shall provide a technical description of each requested UNE or combination of UNEs, drawings when applicable, the location(s) where needed, the date required, and the projected quantity to be ordered with a 3 year forecast.

5.2.4 SCC is responsible for all costs incurred by SBC-SWBT, SBC-AMERITECH, NEVADA to review, analyze and process a BFR. When submitting a BFR Application Form, SCC has two options to compensate SBC-SWBT, SBC-AMERITECH, NEVADA for its costs incurred to complete the Preliminary Analysis of the BFR:

5.2.4.1 Include with its BFR Application Form a $2,000 deposit to cover SBC-SWBT, SBC-AMERITECH, NEVADA's preliminary

evaluation costs, in which case **SBC-SWBT, SBC-AMERITECH, NEVADA** may not charge SCC in excess of $2,000 to complete the Preliminary Analysis; or

5.2.4.2 Not make the $2,000 deposit, in which case SCC shall be responsible for all preliminary evaluation costs incurred by **SBC-SWBT, SBC-AMERITECH, NEVADA** to complete the preliminary Analysis (regardless of whether such costs are greater or less than $2,000).

5.2.5 If SCC submits a $2,000 deposit with its BFR, and **SBC-SWBT, SBC-AMERITECH, NEVADA** is not able to process the Request or determines that the Request does not qualify for BFR treatment, then **SBC-SWBT, SBC-AMERITECH, NEVADA** will return the $2,000 deposit to SCC. Similarly, if the costs incurred to complete the Preliminary Analysis are less than $2,000, the balance of the deposit will, at the option of SCC, either be refunded or credited toward additional developmental costs authorized by SCC.

5.2.6 Upon written notice, SCC may cancel a BFR at any time, but will pay **SBC-SWBT, SBC-AMERITECH, NEVADA** its reasonable and demonstrable costs of processing and/or implementing the BFR up to and including the date **SBC-SWBT, SBC-AMERITECH, NEVADA** received notice of cancellation. If cancellation occurs prior to completion of the preliminary evaluation, and a $2,000 deposit has been made by SCC, and the reasonable and demonstrable costs are less than $2,000, the remaining balance of the deposit will be, at the option of the SCC, either returned to SCC or credited toward additional developmental costs authorized by SCC.

5.2.7 **SBC-SWBT, SBC-AMERITECH, NEVADA** will promptly consider and analyze each BFR it receives. Within ten (10) Business Days of its receipt **SBC-SWBT, SBC-AMERITECH, NEVADA** will acknowledge receipt of the BFR and in such acknowledgement advise SCC of the need for any further information needed to process the Request. SCC acknowledges that the time intervals set forth in this Appendix begins once **SBC-SWBT, SBC-AMERITECH, NEVADA** has received a complete and accurate BFR Application Form and, if applicable, $2,000 deposit.

5.2.8 Except under extraordinary circumstances, within thirty (30) calendar days of its receipt of a complete and accurate BFR, **SBC-SWBT, SBC-AMERITECH, NEVADA** will provide to SCC a preliminary analysis of such Request (the **"Preliminary Analysis"**). The Preliminary Analysis will (i) indicate that **SBC-SWBT, SBC-AMERITECH, NEVADA** will offer the Request to SCC or (ii) advise SCC that **SBC-SWBT, SBC-**

AMERITECH, NEVADA will not offer the Request. If SBC-SWBT, SBC-AMERITECH, NEVADA indicates it will not offer the Request, SBC-SWBT, SBC-AMERITECH, NEVADA will provide a detailed explanation for the denial. Possible explanations may be, but are not limited to: i) access to the Request is not technically feasible, ii) that the Request is not required to be provided by SBC-SWBT, SBC-AMERITECH, NEVADA under the Act and/or, iii) that the BFR is not the correct process for the request.

5.2.9 If the Preliminary Analysis indicates that SBC-SWBT, SBC-AMERITECH, NEVADA will offer the Request, SCC may, at its discretion, provide written authorization for SBC-SWBT, SBC-AMERITECH, NEVADA to develop the Request and prepare a "BFR Quote". The BFR Quote shall, as applicable, include (i) the first date of availability, (ii) installation intervals, (iii) applicable rates (recurring, nonrecurring and other), (iv) BFR development and processing costs and (v) terms and conditions by which the Request shall be made available. SCC's written authorization to develop the BFR Quote must be received by SBC-SWBT, SBC-AMERITECH, NEVADA within thirty (30) calendar days of SCC's receipt of the Preliminary Analysis. If no authorization to proceed is received within such thirty (30) calendar day period, the BFR will be deemed canceled and SCC will pay to SBC-SWBT, SBC-AMERITECH, NEVADA all demonstrable costs as set forth above. Any request by SCC for SBC-SWBT, SBC-AMERITECH, NEVADA to proceed with a Request received after the thirty (30) calendar day window will require SCC to submit a new BFR.

5.2.10 As soon as feasible, but not more than ninety (90) calendar days after its receipt of authorization to develop the BFR Quote, SBC-SWBT, SBC-AMERITECH, NEVADA shall provide to SCC a BFR Quote.

5.2.11 Within thirty (30) calendar days of its receipt of the BFR Quote, SCC must either (i) confirm its order pursuant to the BFR Quote (ii) cancel its BFR and reimburse SBC-SWBT, SBC-AMERITECH, NEVADA for its costs incurred up to the date of cancellation, or (iii) if it believes the BFR Quote is inconsistent with the requirements of the Act and/or this Appendix, exercise its rights under Section 10 of the GTC. If SBC-SWBT, SBC-AMERITECH, NEVADA does not receive notice of any of the foregoing within such thirty (30) calendar day period, the BFR shall be deemed canceled. CLEC shall be responsible to reimburse SBC-SWBT, SBC-AMERITECH, NEVADA for its costs incurred up to the date of cancellation (whether affirmatively canceled or deemed canceled by SCC).

5.2.12 Unless SCC agrees otherwise, all rates and costs quoted or invoiced herein shall be consistent with the pricing principles of the Act.

5.2.13 If a Party believes that the other Party is not requesting, negotiating or processing a BFR in good faith and/or as required by the Act, or if a Party disputes a determination, or price or cost quote, such Party may seek relief pursuant to the Dispute Resolution Process set forward in the General Terms and Conditions section of this agreement.

5.3* **Item II**
SNET Bona Fide Request Process

5.3.1 The Bona Fide Request provisions set forth in Item I of Section 5 shall apply to BFRs submitted to SNET, with the following exceptions:

5.3.2 Section 5.2.1 is amended to add the following: SCC may submit a BFR to request new UNEs or Combinations of UNEs provided the request is not covered by one of the following conditions:

5.3.2.1 The UNEs or combinations requested have not previously been identified or defined by the Department of Public Utility Control (DPUC), the Federal Communications Commission, SCC's approved interconnection agreement, or in the listings of combinations in Docket No. 98-02-01, DPUC Investigation into Rebundling of Telephone Company Network Elements, August 17, 1998.

5.3.2.2 The UNEs or combinations requested are not currently deployed by an incumbent local exchange carrier in another jurisdiction or deemed acceptable for deployment by another state commission or an industry standards body.

5.3.2.3 The UNEs or combinations requested are not included in a Telco tariffed offering as an existing capability or functional equivalent.

5.3.2.4 If the request is covered by one of the conditions listed above, SNET will make these items generally available.

5.3.3 Section 5.2.4 and 5.2.5 are amended as follows: No charges apply for SNET to prepare the Preliminary Analysis.

• Section 5.3 is available only in the State of Connecticut. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS, Paragraph 2.10.1.

• Section 5.3 is available only in the State of Connecticut. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS, Paragraph 2.10.1.

5.3.4 Section 5.2.6 is amended as follows: Cancellation charges will not apply if the written notice of cancellation is received by SNET after SNET submits its Preliminary Analysis to SCC but before SCC's request for the BFR Quote. Cancellation charges will apply after SCC submits its request for SNET to provide a BFR Quote, but before the BFR Quote is provided to SCC. SCC shall be liable for reimbursement of all actual costs in connection with developing the BFR Quote incurred up to the time SNET receives the written notice of cancellation from SCC. However, if SNET receives notification from SCC for cancellation of the BFR after receipt by SCC of the BFR Quote, the cancellation charges shall not exceed the lesser of the actual costs incurred by SNET or the estimate in the BFR Quote plus twenty percent (20%).

5.3.5 Section 5.2.7 is amended as follows: SNET will promptly consider and analyze each BFR it receives. Within ten (10) Business Days of its receipt, SNET will acknowledge receipt of the BFR and in such acknowledgement advise SCC of the need for any further information needed to process the Request. SCC acknowledges that the time intervals set forth in this Appendix begin once SNET has received a complete and accurate BFR Application Form.

5.3.6 SNET will apply standard tariffed Processing Fees (BFR development costs) according to the Connecticut Access Service Tariff 4.11.

5.3.7 For SNET, under the Dispute Resolution Process (DRP), either Party may petition the Department for relief pursuant to its own processes and the Uniform Administrative Procedures Act regarding the issues raised during the BFR process. Upon request, a designated member of the Department staff may confer with both Parties orally or in person concerning the substance of the Parties' dispute, and may make such recommendations as he or she shall deem appropriate for consideration by both Parties to resolve expeditiously the issues in dispute. Any such participation by Department staff in such mediation shall not be construed in any subsequent proceeding as establishing precedent or any Formal position of Department on the matter in dispute.

5.4* **Item III**
Pacific Bona Fide Request Process

5.4.1 The Bona Fide Request provisions set forth in Item I of Section 5 shall apply to BFRs submitted to PACIFIC, with the following exceptions:

* Section 5.4 is available only in the State of California. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS, Paragraph 2.10.1.

5.4.2 Section 5.2.1 is amended as follows: A Bona Fide Request ("**BFR**") is the process by which SCC may request **PACIFIC** to provide SCC access to an additional or new, undefined UNE, or a combination of UNEs, interconnection arrangement, or other (a "Request"), that is required to be provided by **PACIFIC** under the Act but is not available under this Agreement or defined in a generic appendix at the time of SCC's request.

5.4.3 In the event that a UNE becomes available in **SBC-13STATE** pursuant to a Commission approved tariff, upon SCC's written request, the parties will negotiate a mutually acceptable amendment to this Agreement which will permit SCC to purchase such tariffed UNE, in that state where such UNE is tariffed, in accordance with the terms and conditions of such tariff.

5.4.4 Section 5.2.3 is amended as follows: All BFRs must be submitted with a BFR/Interconnection or Network Element Application Form in accordance with the specifications and processes set forth in the sections of the Handbook.

5.4.5 Section 5.2.8 is amended as follows: Except under extraordinary circumstances, within thirty (30) calendar days of its receipt of a complete and accurate BFR, **PACIFIC** will provide to SCC a Preliminary Analysis of such Request. The Preliminary Analysis will confirm that **PACIFIC** will offer the request. The Preliminary Analysis provided by **PACIFIC** will include cost categories (material, labor and other) and high level costs for the request. **PACIFIC** will attempt to provide a "yes" response earlier than thirty (30) calendar days if possible. SCC acknowledges that an earlier "yes" response will not include high level costs. The costs will be sent by the 30th calendar day. When wholesale construction is required, costs will be provided within an additional twenty-four (24) calendar days (i.e., by the 54th calendar day).

5.4.6 If the BFR is denied, **PACIFIC** will notify SCC within fifteen (15) calendar days. The reason for denial will accompany the notification. Reasons for denial may include, but are not limited to: 1) not technically feasible, 2) the BFR is not the appropriate process for the Request and there is a referral to the appropriate process, and/or 3) the Request does not qualify as a new UNE, combination of UNEs, or interconnection arrangement required by law.

---

* Section 5.4 is available only in the State of California. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS, Paragraph 2.10.1.

5.4.7 If PACIFIC refers SCC to an alternate process, the details of the provision of the alternate process will accompany the notification. The details may include an application form for the alternate process and other documentation required for SCC to submit the application for the alternate process.

6. NETWORK INTERFACE DEVICE

6.1 The Network Interface Device (NID) unbundled network element is defined as any means of interconnection of End User customer premises wiring to SBC-13STATE's distribution loop facilities, such as a cross connect device used for that purpose. Fundamentally, the NID establishes the final (and official) network demarcation point between the loop and the End User's inside wire. Maintenance and control of the End User's inside wiring (on the End User's side of the NID) is under the control of the End User. Conflicts between telephone service providers for access to the End User's inside wire must be resolved by the End User. Pursuant to applicable FCC rules, SBC-13STATE offers nondiscriminatory access to the NID on an unbundled basis to any requesting telecommunications carrier for the provision of a telecommunications service. SCC access to the NID is offered as specified below (SBC-12STATE) or by tariff (SNET).

6.2 SBC-12STATE will permit SCC to connect its local loop facilities to End Users' premises wiring through SBC-12STATE's NID, or at any other technically feasible point.

6.3 SCC may connect to the End User's premises wiring through the SBC-12STATE NID, as is, or at any other technically feasible point. Any repairs, upgrade and rearrangements to the NID required by CLEC will be performed by SBC-12STATE based on time and material charges. Such charges are reflected in the state specific Appendix Pricing. SBC-12STATE, at the request of CLEC, will disconnect the SBC-12STATE local loop from the NID, at charges reflected in the state specific Appendix Pricing.

6.4 With respect to multiple dwelling units or multiple-unit business premises, SCC will connect directly with the End User's premises wire, or may connect with the End User's premises wire via SBC-12STATE's NID where necessary.

6.5 The SBC-12STATE NIDs that SCC uses under this Appendix will be existing NIDs installed by SBC-12STATE to serve its End Users.

6.6 SCC shall not attach to or disconnect SBC-12STATE's ground. SCC shall not cut or disconnect SBC-12STATE's loop from the NID and/or its protector. SCC shall not cut any other leads in the NID.

7. LOCAL LOOP

7.1 Pursuant to applicable FCC rules, a local loop unbundled network element is a dedicated transmission facility between a distribution frame (or its equivalent) in an SBC-13STATE Central Office and the loop demarcation point at an End User premises. Where applicable, the local loop includes all wire within multiple dwelling and tenant buildings and campuses that provides access to End User premises wiring, provided such wire is owned and controlled by SBC13-STATE. The local loop Unbundled Network Element includes all features, functions and capabilities of the transmission facility, including attached electronics (except those electronics used for the provision of advanced services, such as Digital Subscriber Line Access Multiplexers), and line conditioning. The local loop Unbundled Network Element includes, but is not limited to DS1, DS3, fiber, and other high capacity loops to the extent required by applicable law, and where such loops are deployed in SBC-13STATE wire centers. SCC agrees to operate each loop type within the technical descriptions and parameters accepted within the industry.

7.2 The following types of local loop unbundled network elements will be provided at the rates, terms, and conditions set out in this Appendix (SBC-12STATE) or by tariff (SNET) and in the state specific Appendix Pricing (SBC-12STATE) or by tariff (SNET):

7.2.1 2-Wire Analog Loop

7.2.1.1 A 2-Wire analog loop is a transmission facility that supports analog voice frequency, voice band services with loop start signaling within the frequency spectrum of approximately 300 Hz and 3000 Hz.

7.2.1.2 If CLEC requests one or more unbundled loops serviced by Integrated Digital Loop Carrier (IDLC) SBC-12STATE will, where available, move the requested unbundled loop(s) to a spare, existing Physical or a universal digital loop carrier unbundled loop at no additional charge to CLEC. If, however, no spare unbundled loop is available, SBC-12STATE will within two (2) business days, excluding weekends and holidays, of CLEC's request, notify CLEC of the lack of available facilities.

7.2.2 4-Wire Analog Loop

7.2.2.1 A 4-Wire analog loop is a transmission facility that provides a non-signaling voice band frequency spectrum of approximately 300 Hz to 3000 Hz. The 4-Wire analog loop provides separate transmit and receive paths.

7.2.3 2-Wire Digital Loop

7.2.3.1 A 2-Wire 160 Kbps digital loop is a transmission facility that supports Basic Rate ISDN (BRI) digital exchange services. The 2-Wire digital loop 160 Kbps supports usable bandwidth up to 160 Kbps.

7.2.4 4-Wire Digital Loop

7.2.4.1 A 4-Wire 1.544 Mbps digital loop is a transmission facility that will support DS1 service including Primary Rate ISDN (PRI). The 4-wire digital loop 1.544 Mbps supports usable bandwidth up to 1.544 Mbps.

7.2.5 DS3 Digital Loop

7.2.5.1 The DS3 loop provides a digital, 45 Mbps transmission facility from the SBC-13STATE Central Office to the end user premises.

7.3 Unbundled DS1 and DS3 loops may not be employed in combination with transport facilities to replace special access services or facilities, except consistently with the certification and other requirements of the Supplemental Order released and adopted by the FCC on November 24, 1999 in Docket No. 96-98 ("In the Matter of the Implementation of the Local Competition Provisions of the Telecommunications Act of 1996"), including but not limited to the requirement that significant local exchange traffic, in addition to exchange access service, be provided to a particular customer over the facilities in compliance with the Supplemental Order, and with SBC-13STATE's processes implementing the Supplemental Order.

8. SUB-LOOP ELEMENTS

8.1 SBC-12STATE will provide sub-loop elements as unbundled network elements as set forth in this Appendix. Other than as specifically set out elsewhere in this agreement, SNET does not offer Subloop elements under this agreement. Rather, Subloop elements are available as described in Section 18 of the Connecticut Service Tariff.

8.1.1 A sub-loop unbundled network element is defined as any portion of the loop from SBC-12STATE's central office Main Distribution Frame (MDF) to the point at the customer premise that can be accessed at a terminal in SBC-12STATE's outside plant. An accessible terminal is a point on the loop where technicians can access the wire or fiber within the cable without removing a splice closure to reach the wire within.

8.2 Definitions pertaining to the Sub-Loop:

8.2.1 "Dead Count" refers to those binding posts which have cable spliced to them but which cable is not currently terminated to any terminal to provide service.

8.2.2 "Demarcation Point" is defined as the point on the loop where the ILEC's control of the wire ceases and the subscriber's control (or on the case of some multiunit premises, the landlord's control) of the wire begins.

8.2.3 "Digital Subloop" May be deployed on non-loaded copper cable pairs, channels of a digital loop carrier system, channels of a fiber optic transport system or other technologies suitable for the purpose of providing 160 Kbps and 1.544 Mbps subloop transport.

8.2.4 "Distribution Cable" is defined as the cable from the SAI/FDI to the terminals from which an end user can be connected to the ILEC's network. "Feeder cable" is defined as that cable from the MDF to a point where it is cross connected in a SAI/FDI for neighborhood distribution.

8.2.5 "MDF-to-SAI/FDI" is that portion of the loop from the MDF to the SAI/FDI.

8.2.6 "MDF-to-Term" is that portion of the loop from the MDF to an accessible terminal.

8.2.7 "Network Terminating Wire (NTW)" is the service wire that connects the ILEC's distribution cable to the NID at the demarcation point.

8.2.8 "SAI/FDI-to-Term" is that portion of the loop from the SAI/FDI to an accessible terminal.

8.2.9 "SAI/FDI-to-NID" is that portion of the loop from the SAI/FDI to the Network Interface Device (NID), which is located an end user's premise.

8.2.10 "SPOI" is defined as a Single Point of Interconnection. A SPOI will usually be located in a Multi-Tenant Environment as a single point of demarcation which will allow ILECs and CLECs to interconnect to wiring owned or controlled by the property owner or their agent.

8.2.11 "SAI/FDI" is defined as the point in the ILEC's network where feeder cable is cross connected to the distribution cable. "SAI" is Serving Area Interface. "FDI" is Feeder Distribution Interface. The terms are interchangeable.

8.2.12 "Term-to-NID" is that portion of the loop from an accessible terminal to the NID, which is located at an end user's premise. Term-to-NID includes use of the Network Terminating Wire (NTW).

8.3 SBC-12STATE will offer the following subloop types:

8.3.1 2-Wire Analog Subloop provides a 2-wire (one twisted pair cable or equivalent) capable of transporting analog signals in the frequency range of approximately 300 to 3000 hertz (voiceband).

8.3.2 4-Wire Analog Subloop provides a 4-wire (two twisted pair cables or equivalent, with separate transmit and receive paths) capable of transporting analog signals in the frequency range of approximately 300 to 3000 hertz (voiceband).

8.3.3 4-Wire DS1 Subloop provides a transmission path capable of supporting a 1.544 Mbps service that utilizes AMI or B8ZS line code modulation.

8.3.4 DS3 Subloop provides DS3 service from the central office MDF to an Interconnection Panel at the RT. The loop facility used to transport the DS3 signal will be a fiber optical facility.

8.3.5 2-Wire / 4-Wire Analog DSL Capable Subloop that supports an analog signal based DSL technology (such as ADSL). It will have twisted copper cable that may be loaded, have more than 2,500 feet of bridged tap, and may contain repeaters.

8.3.6 2-Wire / 4-Wire Digital DSL Capable Subloop that supports a digital signal based DSL technology (such as HDSL or IDSL). It will have twisted copper cable that may be loaded, have more than 2,500 feet of bridged tap, and may contain repeaters.

8.3.7 ISDN Subloop is a 2-Wire digital offering which provides a transmission path capable of supporting a 160 Kbps, Basic Rate ISDN (BRI) service that utilizes 2B1Q line code modulation with end user capacity up to 144 Kbps.

8.4 Subloops are not available for combination by SBC-12STATE with any Unbundled Network Elements or service.

8.5 Subloops are provided "as is" unless SCC requests loop conditioning on xDSL Subloops for the purpose of offering advanced services. xDSL subloop conditioning will be provided at the rates, terms, and conditions set out in the state specific Appendix Pricing.

8.6 A subloop unbundled network element is an existing spare portion of the loop that can be accessed via cross-connects at accessible terminals. An accessible terminal is a point on the loop where technicians can access the copper or fiber within the cable without removing a splice case to reach the copper or fiber within.

8.7 Twisted-pair Copper Subloops:

8.7.1 Access to terminals for twisted-pair copper subloops is defined to include:

- any technically feasible point near the customer premises accessible by a cross-connect (such as the pole or pedestal, the NID, or the minimum point of entry (MPOE) to the customer premises),
- the Feeder Distribution Interface (FDI) or Serving Area Interface (SAI), where the "feeder" leading back to the central office and the "distribution" plant branching out to the subscribers meet,
- the Main Distributing Frame (MDF),
- the Terminal (underground or aerial).

8.8 SCC may request access to the following twisted-pair copper subloop segments:

FROM:	TO:
1. Main Distributing Frame	Serving Area Interface or Feeder Distribution Interface
2. Main Distributing Frame	Terminal
3. Serving Area Interface or Feeder Distribution Interface	Terminal
4. Serving Area Interface or Feeder Distribution Interface	Network Interface Device
5. Terminal	Network Interface Device
6. NID	Stand Alone
7. *SPOI (Single Point of Interface)	Stand Alone

* Provided using the BFR Process. In addition, if SCC requests an Interconnection Point that has not been identified, SCC will need to submit a BFR.

8.9 High Capacity Subloops:

8.9.1 Access to terminals for high capacity subloops is defined to include:

- any technically feasible point near the customer premises accessible by a cross-connect (such as the pole or pedestal or the minimum point of entry (MPOE) to the customer premises),
- the Remote Terminal (RT), only when cross-connect access is available at that RT
- the Terminal (underground or aerial).

8.9.2 SCC may request access to the high-capacity subloop segment between the Central Office Point of Termination (POT) and the Remote Terminal Point of Termination (POT).

8.10 Unbundled DS1 and DS3 subloops may not be utilized in combination with transport facilities to replace special access services or facilities, except consistently with the certification and other requirements of the Supplemental Order released and adopted by the FCC on November 24, 1999 in Docket No. 96-98 ("In the Matter of the Implementation of the Local Competition Provisions of the Telecommunications Act of 1996"), including but not limited to the requirement that significant local exchange traffic in addition to exchange access service, be provided to a particular customer over the facilities in compliance with the Supplemental Order, and with processes implementing the Supplemental Order.

8.11 Provisioning:

8.11.1 Connecting Facility Arrangement (CFA) assignments must be in-place prior to ordering and assigning specific subloop circuit(s).

8.11.2 Spare subloop(s) will be assigned to SCC only when an LSR/ASR is processed. LSR/ASRs will be processed on a "first come first serve" basis.

8.11.3 Provisioning intervals for subloops shall be governed by the SCC state-specific contract interval for the stand-alone, full UNE element. For example, the provisioning interval for DSL-capable subloop shall be determined based upon the interval negotiated for the stand-alone DSL-capable loop.

8.12 Maintenance:

8.12.1 The Parties acknowledge that by separating switching, feeder plant and distribution plant, the ability to perform mechanized testing and monitoring of the subloop from the SBC-12STATE switch/testing equipment will be lost.

8.12.2 SCC shall isolate trouble to the SBC Subloop portion of SCC's service before reporting trouble to SBC-12STATE.

8.12.3 SBC12-STATE shall charge SCC a Maintenance of Service Charge (MSC) when CLEC dispatches SBC on a trouble report and the fault is determined to be in SCC's portion of the loop. Such charges may be found in the individual state pricing appendices or tariffs.

8.12.4 Once all subloop access arrangements have been completed and balance of payment due SBC-12STATE is received, SCC may place a LSR for subloops at this location. Prices at which SBC-12STATE agrees to provide SCC with Unbundled Network Elements (UNE) are contained in the state specific Appendix Pricing.

8.12.5 In the event of Catastrophic Damage to the RT, SAI/FDI, Terminal, or NID where SCC has a SAA, SBC-13 STATE repair forces will restore service in a non-discriminatory manner which will allow the greatest number of all customers to be restored in the least amount of time. Should SCC cabling require replacement, SBC-13STATE will provide prompt notification to SCC for SCC to provide the replacement cable to be terminated as necessary.

8.13 Subloop Access Arrangements:

8.13.1 Prior to ordering subloop facilities, SCC will establish Collocation using the Collocation process as set forth in the Collocation Appendix, or will establish a Subloop Access Arrangement utilizing the Special Construction Arrangement (SCA), either of which are necessary to interconnect to the SBC-12STATE subloop network.

8.13.2 The space available for collocating or obtaining various Subloop Access Arrangements will vary depending on the existing plant at a particular location. SCC will initiate an SCA by submitting a Sub-loop Access Arrangement Application.

8.13.3 Upon receipt of a complete and correct application, SBC-12STATE will provide to SCC within 30 days a written estimate for the actual construction, labor, materials, and related provisioning costs incurred to fulfill the SCA on a time and materials basis. When SCC submits a request to provide a written estimate for sub-loop(s) access, appropriate rates for the engineering and other associated costs performed will be charged.

8.13.4 The assignment of subloop facilities will incorporate reasonable practices used to administer outside plant loop facilities. For example, where SAI/FDI interfaces are currently administered in 25 pair cable

complements, this will continue to be the practice in assigning and administering subloop facilities.

8.13.5 Subloop inquiries do not serve to reserve subloop(s).

8.13.6 Several options exist for Collocation or Subloop Access Arrangements at technically feasible points. Sound engineering judgment will be utilized to ensure network security and integrity. Each situation will be analyzed on a case-by-case basis.

8.13.7 SCC will be responsible for obtaining rights of way from owners of property where SBC-12STATE has placed the equipment necessary for the SAA prior to submitting the request for SCA.

8.13.8 Prior to submitting the Sub-loop Access Arrangement Application for SCA, SCC should have the "Collocation" and "Poles, Conduit, and Row" appendices in the Agreement to provide the guidelines for both SCC and ILEC to successfully implement subloops, should collocation, access to poles/conduits or rights of way be required.

8.13.9 Construction of the Subloop Access Arrangement shall be completed within 90 days of SCC submitting to SBC-12STATE written approval and payment of not less than 50% of the total estimated construction costs and related provisioning costs after an estimate has been accepted by the carrier and before construction begins, with the balance payable upon completion. SBC-12STATE will not begin any construction under the SCA until SCC has provided proof that it has obtained necessary rights of way as defined in Section 9.3.

8.13.10 Upon completion of the construction activity, SCC will be allowed to test the installation with a SBC-12STATE technician. If SCC desires test access to the SAA, the CLEC should place its own test point in its cable prior to cable entry into SBC-12STATE's interconnection point.

8.13.11 A non-binding SCC forecast shall be required as a part of the request for SAA, identifying the subloops required for line-shared and non line-shared arrangements to each subtending SAI. This will allow SBC-12STATE to properly engineer access to each SAI and to ensure SBC-12STATE does not provide more available terminations than SCC expects to use.

8.13.12 In order to maximize the availability of terminations for all CLECs, SCC shall provide CFA for their subloop pairs utilizing the same 25-pair binder group. SCC would begin utilizing the second 25-pair binder group once the first 25-pair binder group reached its capacity.

8.13.13 Unused SCC terminations (in normal splicing increments such as 25-pair at SAI/FDI) that remain unused for a period of one year after the completion of construction shall be subject to removal at SCC expense.

8.13.14 In the event SCC elects to discontinue use of an existing SAA, or abandons such arrangement, SCC shall pay SBC-12STATE for removal of their facilities from the SAA.

8.14 Subloop Access Arrangement (SAA) Access Points:

8.14.1 SAI/FDI or Terminal

8.14.1.1 SCC cable to be terminated in a SBC-12STATE SAI/FDI, or Terminal, shall consist of 22 or 24-guage copper twisted pair cable bonded and grounded to the power company Multi Grounded Neutral (MGN). Cable may be filled if buried or buried to aerial riser cable. SCC's Aerial cables should be aircore.

8.14.1.2 SCC may elect to place their cable to within 3 feet of the SAA site and coil up an amount of cable, defined by the engineer in the design phase, that SBC-12STATE will terminate on available binding posts in the SAI/FDI or Terminal.

8.14.1.3 SCC may "stub" up a cable at a prearranged meet point, defined during the engineering site visit, and SBC will stub out a cable from the SAI/FDI or Terminal, which SBC-12STATE will splice to SCC cable at the meet point.

8.14.1.4 Dead counts will be offered as long as they have not been placed for expansion purposes planned within the 12 month period beginning on the date of the inquiry LSR.

8.14.1.5 Exhausted termination points in a SAI/FDI - When a SAI/FDI's termination points are all terminated to assignable cable pairs, SBC-12STATE may choose to increase capacity of the SAI/FDI by the method of it's choice, for which SCC will be charged a portion of the expense to be determined with the engineer, for the purpose of allowing SCC to terminate it's cable at the SAI/FDI.

8.14.1.6 Exhausted Termination Points in a Terminal- When a terminal's termination points are all terminated to assignable cable pairs, SBC-13STATE may choose to increase the capacity of the Terminal or to construct an adjacent termination facility to

accommodate SCC facilities for which SCC will be charged.

8.15 Relocation of Existing ILEC/SCC Facilities involved in a SAA at a RT, SAI/FDI, Terminal or NID:

8.15.1 **SBC-12STATE** shall notify SCC of pending relocation as soon as **SBC-12STATE** receives such notice.

8.15.2 SCC shall notify **SBC-12STATE** of SCC's intentions to remain, or not, in the SAA by way of a new Subloop Access Arrangement Application for a new SCA.

8.15.3 **SBC-12STATE** shall then provide SCC an estimate to terminate facilities as part of the relocation of the site including the applicable SAA. This process may require a site visit with SCC and a **SBC-12STATE** engineer.

8.15.4 SCC shall notify **SBC-12STATE** of acceptance or rejection of the new SCA within 10 business days of receipt of **SBC-12STATE**'s estimate.

8.15.5 Upon acceptance of the **SBC-12STATE** estimate, SCC shall pay at least 50% of the relocation costs at the same time that SCC notifies **SBC-12STATE** of SCC's acceptance of estimate costs.

8.15.6 Should SCC decide not to continue the SAA, SCC will notify SBC-12STATE as to the date that **SBC-12STATE** may remove SCC's facilities from that SAA. SCC will pay **SBC-12STATE** for all costs associated with the removal of the SCC's SAA.

8.15.7 In the event that SCC does not respond to **SBC-12STATE** in time to have their facilities relocated, **SBC-12STATE** shall move SCC facilities and submit a bill for payment to the SCC for the costs associated with the relocation. Should SCC elect not pay this bill, then SCC facilities will be removed from the site upon 30 days notice to the SCC.

8.16 RT (for DS3 Subloop):

8.16.1 SCC may elect to place their cable (fiber or coax) to within 3 feet of the RT and coil up an amount of cable, defined by the engineer in the design phase, that **SBC-12STATE** will terminate on a fiber/coax interconnection block to be constructed in the RT.

8.16.2 SCC may "stub" up a cable (fiber or coax) at a prearranged meet point, defined during the engineering site visit, and SBC will stub out a cable from the RT, which **SBC-12STATE** will splice to SCC cable at the meet point.

9. ENGINEERING CONTROLLED SPLICE (ECS)

9.1 Although under no obligation to do so at non-Pronto sites, as a voluntary offering, SBC-13STATE will also make available an Engineering Controlled Splice (ECS), which will be owned by SBC, for CLECs to gain access to subloops at or near remote terminals. This voluntary service is in addition to FCC UNE Remand requirements.

9.2 The ECS shall be made available for Subloop Access Arrangements (SAA) utilizing the Special Construction Arrangement (SCA).

9.2.1 Where SCC requests such a SCA, SCC shall pay all of the actual construction, labor, materials and related provisioning costs incurred to fulfill its SCA on a time and materials basis, provided that SBC-13STATE will construct any Subloop Access Arrangement requested by a telecommunications carrier in a cost-effective and efficient manner. If SBC-13STATE elects to incur additional costs for its own operating efficiencies and that are not necessary to satisfy an SCA in a cost-effective and efficient manner, the requesting telecommunications carrier will not be liable for such extra costs.

9.2.2 SCC shall be liable only for costs associated with cable pairs that it orders to be presented at an engineering controlled splice (regardless of whether the requesting carrier actually utilizes all such pairs), even if SBC/Ameritech places more pairs at the splice.

9.2.3 SBC-13STATE will either use existing copper or construct new copper facilities between the SAI(s) and the ECS, located in or at the remote terminal site. Although SBC-13STATE will construct the engineering controlled splice, the ECS may be owned by SBC-13STATE or SCC (depending on the specific arrangement) at the option of SBC-13STATE.

9.2.4 If more than one CLEC obtains space in expanded remote terminals or adjacent structures and obtains an SAA with the new copper interface point at the ECS, the initial telecommunications carrier which incurred the costs of construction of the engineering controlled splice and/or additional copper/fiber shall be reimbursed those costs in equal proportion to the space or lines used by the requesting carriers.

9.2.5 SBC-13STATE may require a separate SCA for each remote terminal site.

9.2.6 Written acceptance and at least 50% of payment for the SCA must be submitted at least 90 days before access to the copper subloop or dark fiber is to be provisioned. If an augment of cabling is required between the ECS

and the SAI, the interval for completion of the SCA will be determined on an individual case basis.

9.3 SCC will have two (2) options for implementing the ECS: a "Dedicated Facility Option" (DFO) and a "Cross-connected Facility Option" (CFO).

9.3.1 Dedicated Facility Option (DFO)

9.3.1.1 SCC may request SBC-13STATE splice the existing cabling between the ECS and the SAI to the CLEC's SAA facility. This facility will be "dedicated" to the CLEC for subsequent subloop orders.

9.3.1.2 SCC must designate the quantity of subloops SCC desires to access via this spliced, dedicated facility, specified by subtending SAI. This designation must differentiate cabling desired for access to the HFPL subloop from the cabling desired for access to non-line shared subloops.

9.3.1.3 SCC will compensate SBC-13STATE for each of the dedicated subloop facilities, based on recurring subloop charges, for the quantity of subloops dedicated to SCC between the ECS and the SAI.

9.3.2 Cross-connected Facility Option (CFO)

9.3.2.1 SCC may request SBC-13STATE build an ECS cross-connect junction on which to terminate SCC's SAA facility.

9.3.2.2 The SCA associated with this option will include the charges associated with constructing the cross-connect device, including the termination of SBC-13STATE cabling between the ECS and the RT and/or SAI, and the inventorying of that SBC-132STATE cabling.

9.3.2.3 SCC must designate the quantity of subloops they desire to access via this cross-connectable, dedicated facility, specified by subtending SAI. This designation must differentiate cabling desired for access to the HFPL subloop from the cabling desired for access to non-line shared subloops.

9.3.2.4 SCC will compensate SBC-13STATE for the charges incurred by SBC-13STATE derived from the SCC's request for the SCA.

10. PACKET SWITCHING

10.1 SBC-13STATE will provide SCC unbundled packet switching if all of the following conditions are satisfied:

10.1.1 SBC-13STATE has deployed digital loop carrier systems, including but not limited to, integrated digital loop carrier or universal digital loop carrier systems; or has deployed any other system in which fiber optic facilities replace copper facilities in the distribution section (e.g., end office to remote terminal, pedestal or environmentally controlled vault);

10.1.2 There are no spare copper loops capable of supporting the xDSL services the requesting carrier seeks to offer;

10.1.3 SBC-13STATE has not permitted a requesting carrier to deploy DSLAM at the remote terminal, pedestal or environmentally controlled vault or other interconnection point, nor has the requesting carrier obtained a virtual collocation arrangement at these sub-loop interconnection points as defined by 47 CFR §51.319(b); and

10.1.4 SBC-13STATE has deployed packet switching capability for its own use.

11. LOCAL SWITCHING

11.1 The Unbundled Local Switching (ULS) capability is defined as:

11.1.1 line-side facilities, which include the connection between a Loop termination at the Main Distribution Frame and a switch line card;

11.1.2 trunk-side facilities, which include the connection between trunk termination at a trunk-side cross-connect panel and a switch trunk card; and

11.1.3 all features, functions, and capabilities of the switch available from the specific port type (line side or trunk side port), which include:

11.1.3.1 the basic switching function of connecting lines to lines, lines to trunks, trunks to lines, and trunks to trunks, as well as the same basic capabilities made available to ILEC customers, such as a telephone number, white page listing, and dial tone;

11.1.3.2 access to OS/DA and 9-1-1; and

11.1.3.3 all other features that the switch provides, including custom calling, CLASS features and Centrex.

11.2 Specific Terms and Conditions for Unbundled Local Switching (ULS)

11.2.1 Unbundled Local Switching uses routing instructions resident in the SBC-12STATE switch to direct all CLEC traffic.

11.2.2 Vertical features, CLASS features, and other features resident in the SBC-12STATE switch providing the ULS port are available under ULS. Refer to state specific Appendix Pricing for SBC-12STATE and Section 18 of the Connecticut Service Tariff for SNET.

11.2.3 SBC-12STATE will allow CLEC to designate the features and functions that are available on a particular ULS port to the extent such features and functions are activated in that switch or as may be requested by the Bona Fide Request process. When CLEC purchases ULS in SBC-12STATE, CLEC will be required to designate the features and functions that are to be activated on each ULS port.

11.2.4 ULS as provided by SBC-12STATE includes standard Central Office treatments (e.g., busy tones, vacant codes, fast busy, etc.), supervision and announcements.

11.2.5 SBC-12STATE will control congestion points such as those caused by radio station call-ins and network routing abnormalities using appropriate network capabilities. CLEC agrees to respond to SBC-12STATE's notifications regarding network congestion.

11.2.6 SBC-12STATE will perform testing through ULS for CLECs in the same manner and frequency that it performs for its own customers for an equivalent service.

11.2.7 SBC-12STATE will repair and restore any SBC-12STATE equipment that may adversely impact ULS.

11.2.8 SBC-12STATE will provide usage detail for each ULS port via on a daily basis. Refer to state specific Appendix pricing.

11.2.9 SBC-12STATE will provide CLEC the functionality of blocking calls (e.g., 900 calls, international calls (IDDD), and toll calls) by line or trunk to the extent that SBC-12STATE provides such blocking capabilities to its End Users and to the extent required by federal and/or State law.

11.2.10 At SBC-13STATE's discretion and upon not less than ninety (90) days' written notice to CLEC, SBC-13STATE may elect to discontinue providing ULS or to provide ULS at market prices to CLECs serving end-users with four or more voice grade lines within any territory (each an "exception Territory") with respect to which SBC-13STATE can demonstrate that, as of the date on which CLEC receives notice (the "Exception Notice Date"), SBC-13STATE has satisfied each of the following conditions.

a) A territory shall constitute an "Exception Territory" if it constitutes the service area of SBC-13STATE offices that both are assigned to density zone 1 and are located within one of the Top 50 Metropolitan Statistical Areas ("MSAs"). The Parties shall determine density zone assignments by reference to the NECA Tariff No. 4, in effect on January 1, 1999. The Top 50 MSAs are those listed in Appendix B of the FCC Third Report and Order and Fourth Further Notice of Proposed Rulemaking in CC Docket 96-98 ("UNE Remand Order"); and

b) In the Exception Territory where SBC-13STATE elects to offer the Enhanced Extended Loop (EEL) in accordance with the UNE Remand Order, the EEL would be available to the CLEC in the Exception Territory at prices which are set in accordance with the pricing standards of Section 252 of the Act. Such prices would be specified in Appendix Pricing. SBC-13STATE may only exercise its rights to discontinue or market-price ULS under this Section for CLEC End Users involving four or more lines.

11.2.10.1 In determining whether SBC-13STATE may exercise its rights under this Section in any particular case, the CLEC shall be obligated to disclose customer account detail similar to customer service records that SBC-13STATE provides to the CLEC through pre-ordering process.

11.2.10.2 Nothing in this Section shall preclude CLEC from using its own facilities, resold services, or any other facilities, services or serving arrangements to provide additional services to an End-User customer account with respect to which SBC-13STATE may exercise its rights under this Section.

11.3 Customized Routing

11.3.1 Custom Routing is available upon SCC request to handle Operator Services, Directory Assistance, and/or other traffic as required by state

jurisdiction based upon switch limitations. SCC will pay the customized routing charges reflected in Appendix Pricing.

11.4 Unbundled Local Switching Usage Sensitive Rate Element

11.4.1 Usage rates will apply to Unbundled Local Switching on a per minute basis. See the Appendix Pricing for the state specific ULS rates (SBC-12STATE) and Section 18 of the Connecticut Service Tariff for SNET.

11.5 Switch Ports

11.5.1 In SBC-12STATE, a Switch Port is a termination point in the end office switch. The charges for Switch Ports are reflected in state specific Appendix Pricing.

11.5.1.1 Line Switch Ports – SBC-12STATE

11.5.1.1.1 The Analog Line Port is a line side switch connection available in either a loop or ground start signaling configuration used primarily for switched voice communications.

11.5.1.1.2 The Analog Line Port can be provisioned with Centrex-like features and capabilities. When SCC wants to provide the Centrex-like port, a system establishment charge is applicable to translate the common block and system features in the switch.

11.5.1.1.3 The Analog Line Port can be provisioned with two-way, one-way-out, and one-way-in, directionality for PBX business applications.

11.5.1.1.4 ISDN Basic Rate Interface (BRI) Port-Is a 2-wire line side switch connection which provides two 64 kbps "B" (bearer) channels for circuit switched voice and/or data and on 16 kpbs "D" (delta) channel for signaling.

11.5.1.2 Trunk Side Switch Ports – SBC-12STATE

11.5.1.2.1 The Analog DID Trunk Port is a 2-wire trunk side switch port that supports Direct Inward Dialing (DID) capability for PBX business applications.

11.5.1.2.2 ISDN Primary Rate Interface (PRI) Trunk Side Port - is a trunk side switch connection that provides twenty-

three 64 kbps "B" channels for digital voice and data and one 64 kbps "D" channel.

11.5.1.2.3 DS1 Trunk Port is a trunk side DS1 interface intended for digital PBX business applications. Also this ULS Trunk Port is used to terminate facilities associated with completing ULS Custom Routing calls in SBC-AMERITECH.

11.5.2 Switch Ports are available for SNET pursuant to the Connecticut Access Service Tariff.

11.6 Tandem Switching

11.6.1 Tandem Switching is defined as:

11.6.1.1 trunk-connect facilities, including but not limited to the connection between trunk termination at a cross-connect panel and a switch trunk card,

11.6.1.2 the basic switching function of connecting trunks to trunks; and

11.6.1.3 all technically feasible functions that are centralized in tandem switches (as distinguished from separate end-office switches), including but not limited to call recording, the routing of calls to operator services, and signaling conversion features.

11.6.2 The charges for Tandem Switching are reflected in Appendix Pricing (SBC-12STATE) and Section 18 of the Connecticut Service Tariff for SNET.

12. SHARED TRANSPORT

12.1 The Unbundled Shared Transport capability is defined as set forth in FCC Rule 51.319.

12.1.1 SBC-12STATE provides access to unbundled shared transport only when purchased in conjunction with a ULS port that SCC subscribes to for the purpose of delivering traffic from/to an SCC End User as set forth below.

12.1.1.1 Unbundled Local Switching is provided under Section 11 of this Appendix UNE.

12.1.1.2 "ULS-ST" refers to Unbundled Local Switching with Unbundled Shared Transport in SBC-AMERITECH. ULS-ST is provided on a per ULS port basis.

12.1.1.3 Unbundled Network Element – Local Switching with Shared Transport is available for SNET pursuant to the Connecticut Access Service Tariff

12.1.2 SBC-AMERITECH provides to CLECs subscribing to ULS the function of shared transport (as defined in the Third Order on Reconsideration and Further Notice of Proposed Rulemaking, *Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, 12 FCC Rcd 12460 (1997)), as described in Paragraph 56 of Attachment 1 in the August 27, 1999 *ex parte* to the FCC in *In the Matter of the SBC/Ameritech Merger*, CC Docket No. 98-141 ("FCC Conditions").

12.1.3 ULS-ST permits SCC to access the interoffice network of SBC-AMERITECH for the origination from and completion to the associated ULS port of End User local traffic to and from SBC-AMERITECH switches or third-party switches. ULS-ST also permits access to that network, using Common Transport and Tandem Switching, for the origination from and completion to the associated ULS port of End User toll traffic where a PIC'd/LPIC'd Interexchange Carrier for that ULS port is not directly connected to the SBC-AMERITECH switch providing that ULS port. SBC-AMERITECH will not require use of dedicated transport or customized routing to complete calls when using ULS-ST.

12.1.4 All SCC's local traffic between SBC-AMERITECH switches will use Shared Transport and all local SCC's traffic to non-SBC-12STATE switches will use the transit function of Shared Transport (with this transit function being referred to as "Shared Transport-Transit"). All interexchange traffic will be routed to the interLATA (PIC) or intraLATA toll (LPIC) Interexchange Carrier, as appropriate, selected for that ULS port.

12.1.5 The Unbundled Shared Transport rate is a blend of Shared Transport and Shared Transport-Transit. SBC-12STATE reserves the right to seek separate rates for Shared Transport and Shared Transport-Transit in future negotiations to amend or replace this Agreement.

12.1.6 SBC-12STATE's ability to provide ULS-ST is limited to existing switch and transmission facilities capacities of the SBC-STATE network.

12.1.7 In providing ULS-ST, SBC-12STATE will use the existing SBC-12STATE routing tables contained in SBC-12STATE switches, as SBC-

12STATE may change those tables from time to time including after SCC purchases ULS-ST.

12.1.8 SBC-12STATE will provide SS7 signaling on interswitch calls originating from an ULS port. SCC will be charged for the use of the SBC-12STATE signaling on a per- call basis.

12.2 Custom Routing of OS/DA with ULS-ST

12.2.1 CLEC can only mix ULS-ST and custom routing within a SBC-AMERITECH end office switch where SCC chooses to custom route all of its OS and/or all of its DA (OS/DA) traffic for its End Users served by SBC-AMERITECH's ULS-ST ports in that SBC-AMERITECH end office switch. If this custom routing for OS/DA is chosen in a given SBC-AMERITECH end office switch, then all End Users served via ULS-ST ports in that switch will have their OS/DA traffic routed over the same custom route designated by SCC.

12.2.2 SCC must provide SBC-AMERITECH routing instructions necessary to establish such custom routing of OS/DA traffic in those end offices where SCC has End Users served via ULS-ST ports. SCC will be charged by SBC-AMERITECH for the establishment of each custom route for OS or DA traffic in an end office switch.

12.2.3 SBC-AMERITECH will direct all custom routed local OS and/or local DA calls using the Advanced Intelligence Network programming developed to be compatible with ULS-ST to a specific trunk group associated with an ULS Trunk Port or over an existing dedicated trunk group designated by SCC.

12.2.4 SCC will request custom OS/DA routing for use with ULS-ST other than described in this Section via the Bona Fide Request process.

12.2.5 SCC will be required to provide custom branding for OS/DA calls via Service Provider Identification (SPID) branding for End Users served by SCC purchasing SBC-AMERITECH's ULS-ST ports. SPID branding must be addressed in a separate agreement between SCC and SBC-AMERITECH.

12.3 ULS-ST Usage-Sensitive Rating

12.3.1 SBC-12STATE will charge SCC ULS usage rates for intraswitch and interswitch traffic originating from an ULS port and for interswitch traffic terminating to an ULS port.

12.3.2 SBC-12STATE will charge SCC using SBC-12STATE's Shared Transport a usage-sensitive Blended Transport rate in addition to the originating ULS usage-sensitive rate for local interswitch calls. The Blended Transport rate is based upon a blend of direct and tandem-routed local traffic to/from either an SBC-12STATE end office or to/from a non-SBC-12STATE end office.

12.3.3 The charges for Shared Transport are reflected in Appendix Pricing (SBC-12STATE) and Section 18 of the Connecticut Service Tariff for SNET.

12.4 Reciprocal Compensation associated with ULS-ST

12.4.1 For the traffic to which reciprocal compensation applies and subject to the other provisions in this Agreement regarding reciprocal compensation:

12.4.2 As to ULS-ST only, SBC-AMERITECH will charge SCC using SBC-AMERITECH's ULS-ST a Reciprocal Compensation rate specific to ULS-ST for interswitch local traffic originated from a ULS-ST port and terminated to a SBC-AMERITECH end office.

12.4.3 As to ULS-ST only, SCC will reciprocally charge SBC-AMERITECH for interswitch local traffic originated from a SBC-AMERITECH end office and terminated to an ULS-ST port at the same rate as ULS usage rate associated with ULS-ST a Reciprocal Compensation rate.

12.4.4 SCC will be solely responsible for establishing compensation arrangements with all telecommunications carriers to which ULS-ST traffic is delivered or from which ULS-ST traffic is received, including all ULS-ST traffic carried by Shared Transport-Transit.

12.5 IntraLATA and InterLATA Toll Rate Application

12.5.1 When ULS-ST is used to make or receive interLATA (including PIC) or intraLATA (including LPIC) toll traffic and that traffic is routed through SBC-AMERITECH tandem switch(es) and transmission facilities, SBC-AMERITECH will charge usage-sensitive Common Transport and Tandem Switching Rates in addition to other applicable ULS-ST charges. However, when that traffic is routed to and/or from an Interexchange Carrier directly connected at the SBC-AMERITECH end office providing that ULS port, the Common Transport and Tandem Switching rates will not apply to such traffic.

12.5.2 The ULS-ST usage-sensitive charges (per minute of use) described in this Section are set forth in the Appendix Pricing.

12.6 Application of Usage Sensitive Charges for ULS-ST

12.6.1 ULS may include two usage sensitive components: originating ULS usage (ULS-O) and terminating ULS usage (ULS-T).

12.6.2 Intra Switch Calls - (calls originating and terminating in the same switch i.e., the same 11 digit Common Language Location Identifier (CLLI) end office):

12.6.2.1 SCC will be charged ULS-O usage charges of use for a call originating from an CLEC ULS line port or trunk port that terminates to a SBC-AMERITECH end user line, Resale line, or any unbundled line port or trunk port which is connected to the same end office switch.

12.6.2.2 SCC will be charged ULS-O usage charges for a Centrex-like ULS intercom call in which SCC's End User dials from one Centrex-like station to another Centrex-like station in the same common block defined system.

12.6.2.3 SBC-AMERITECH will not bill ULS-T usage charges for Intraswitch calls that terminate to an SCC ULS port.

12.6.3 Interswitch Calls - calls not originating and terminating in the same switch, i.e., not the same 11-digit Common Language Location Identifier (CLLI) end office:

12.6.3.1 Local Calls

12.6.3.1.1 General Principles

12.6.3.1.1.1 When a call originates from an SCC ULS-ST port, SCC will be charged ULS-O usage and SS7 signaling charges. If the call routes over SBC-AMERITECH's shared transport network, SCC will pay charges for Blended Transport usage in addition to ULS-O usage charges.

12.6.3.1.1.2 The Parties agree that, for local calls originated over ULS-ST, SBC-AMERITECH will not be required to record and will not bill actual tandem switching usage. Rather, SCC will be charged the rate shown on Appendix Pricing UNE - Schedule of unbundled shared transport Prices labeled

"ULS-ST Blended Transport," for each minute of use, whether or not the call actually traverses the tandem switch.

12.6.3.1.1.3 When a call terminates to an SCC ULS-ST port, SCC will pay ULS-T usage charges.

12.6.3.1.2 Illustrative Call Flows demonstrating the rate applications for ULS-ST are set forth in *Exhibit A*.

12.6.3.2 IntraLATA and InterLATA Toll Calls

12.6.3.2.1 General Principles

12.6.3.2.1.1 "1+" intraLATA calls from SCC ULS-ST ports will be routed to the originating End User's IntraLATA Primary Interexchange Carrier (LPIC) choice. When a "1+" interLATA call is initiated from an ULS-ST port, it will be routed to the End User's interLATA (PIC) choice.

12.6.3.2.1.2 When an intraLATA or interLATA toll call originates from an SCC ULS-ST port, **SBC-AMERITECH** will not charge originating access charges to SCC or the IXC except that **SBC-AMERITECH** may bill the IXC for the access transport (FGD), in accordance with its access tariff, in cases where the IXC has chosen **SBC-AMERITECH** as its transport provider.

12.6.3.2.1.3 When an intraLATA or interLATA toll call terminates to an SCC ULS-ST port, **SBC-AMERITECH** will not charge terminating access to SCC or the IXC except that **SBC-AMERITECH** may bill the IXC for the access transport (FGD), in accordance with its access tariff, in cases where the IXC has chosen **SBC-AMERITECH** as its transport provider.

12.6.3.2.1 Illustrative Call Flows demonstrating the rate applications for ULS-ST are set forth in *Exhibit A*.

12.6.3.3 Toll Free Calls

12.6.3.3.1 When SCC uses an ULS-ST port to initiate an intraLATA 800-type call, SBC-AMERITECH will perform the appropriate database query and will route the call to terminating SBC-AMERITECH "Success 800" subscriber. SCC will be charged the 800 database query, ULS-O usage, and SS7 signaling charges.

12.6.3.3.2 When SCC uses an ULS-ST port to initiate an 800-type call where the terminating port is not a SBC-AMERITECH "Success 800" subscriber, SBC-AMERITECH will perform the appropriate database query and route the call to the indicated IXC. SCC will pay the 800 database query, ULS-O usage, and SS7 signaling charges. If 800-type call is routed using SBC-AMERITECH tandem, then SBC-AMERITECH will also charge ULS-ST Common Transport and ULS-ST Tandem Switching usage charges. SBC-AMERITECH will not charge originating access charges to SCC or the IXC except that SBC-AMERITECH may bill the IXC for the access transport (FGD), in accordance with its access tariff, in cases where the IXC has chosen SBC-AMERITECH as its transport provider.

13. INTEROFFICE TRANSPORT

13.1 The Interoffice Transport (IOT) Unbundled Network Element is defined as SBC-12STATE interoffice transmission facilities dedicated to SCC that provide telecommunications between Wire Centers owned by SBC-12STATE, or SCC, or between switches owned by SBC-12STATE or SCC. IOT will be provided only where such facilities exist at the time of SCC request. Other than as specifically set out elsewhere in this agreement, SNET does not offer Interoffice Transport (IOT) under this agreement. Rather, IOT is available as described in Section 18 of the Connecticut Tariff FCC No. 39.

13.2 SBC-12STATE will be responsible for the engineering, provisioning, maintenance of the underlying equipment and facilities that are used to provide Interoffice Transport.

13.3 Unbundled Dedicated Transport

13.3.1 Unbundled Dedicated Transport (UDT) is an interoffice transmission path dedicated to SCC that provides telecommunications (when facilities exist and are technically feasible) between two Wire Centers or switches owned

by SBC-12STATE or between a Wire Center or switch owned by SBC-12STATE and SCC owned or provided switch.

13.3.2 SBC-12STATE will provide Dedicated Transport as a point to point circuit dedicated to SCC at the following speeds: DS1 (1.544 Mbps), DS3 (44.736 Mbps), OC3 (155.52 Mbps), OC12 (622.08 Mbps), and OC48 (2488.32 Mbps). SBC-12STATE will provide higher speeds to SCC as they are deployed in the SBC-12STATE network. SBC-12STATE provides OCN Dedicated Transport and Entrance Facilities as point to point bit rates, when and where facilities exist.

13.3.3 UDT includes the following elements:

13.3.3.1 Interoffice Transport – Is a circuit between two SBC12-STATE Wire Centers.

13.3.3.2 Entrance Facility – Is a circuit from SBC-12STATE serving Wire Center to the SCC's location.

13.3.3.3 Multiplexing – Is an option ordered in conjunction with dedicated transport which converts a circuit from higher to lower bandwidth, or from digital to voice grade. Multiplexing is only available when ordered at the same time as UDT entrance facility and/or interoffice transport.

13.3.3.4 Other Optional features are outlined in Appendix Pricing.

13.4 Diversity

13.4.1 When requested by SCC and only where such interoffice facilities exist at the time of SCC request, Physical diversity shall be provided for Unbundled Dedicated Transport. Physical diversity means that two circuits are provisioned in such a way that no single failure of facilities or equipment will cause a failure on both circuits.

13.4.2 SBC-12STATE shall provide the Physical separation between intra-office and inter-office transmission paths when technically and economically feasible. Physical diversity requested by SCC shall be subject to additional charges. When additional costs are incurred by SBC-12STATE for SCC specific diversity. SBC-12STATE will advise SCC of the applicable additional charges. SBC-12STATE will not process the request for diversity until SCC accepts such charges. Any applicable performance measures will be abated from the time diversity is requested until SCC accepts the additional charges.

13.5 When requested by SCC and only where such interoffice facilities exist at the time of SCC's request, Physical diversity shall be provided for Unbundled Dedicated Transport. Physical diversity means that two circuits are provisioned in such a way that no single failure of facilities or equipment will cause a failure on both circuits.

13.5.1 **SBC-12STATE** shall provide the Physical separation between intra-office and inter-office transmission paths when technically and economically feasible. Physical diversity requested by SCC shall be subject to additional charges. When additional costs are incurred by **SBC-12STATE** for SCC specific diversity. **SBC-12STATE** will advise SCC of the applicable additional charges. **SBC-12STATE** will not process the request for diversity until SCC accepts such charges. Any applicable performance measures will be abated from the time diversity is requested until SCC accepts the additional charges.

13.6 Digital Cross-Connect System (DCS)

13.6.1 **SBC-12STATE** will offer Digital Cross-Connect System (DCS) as part of the unbundled dedicated transport element with the same functionality that is offered to interexchange carriers. DCS requested by SCC shall be subject to additional charges as outlined in pricing schedule appendix.

13.7 Network Reconfiguration Service (NRS)

13.7.1 **SBC-12STATE** will offer reconfiguration service as part of the UDT element with the same functionality that is offered to interexchange carriers. Reconfiguration service requested by SCC shall be subject to additional charges as outlined in pricing schedule appendix.

13.8 **PACIFIC**

13.8.1 Cross Boundary UDT Meet Point Facilities Arrangements

13.8.1.1 Cross Boundary UDT Facilities are arrangements that involve shared ownership of the Unbundled Dedicated Local Interconnection Facilities between **PACIFIC** and another neighboring Incumbent Local Exchange Carrier (ILEC). **PACIFIC** will be a willing participant in SCC's efforts to midspan join an UDT Facility ordered from **PACIFIC** with one of the same ordered by SCC from the neighboring ILEC. It is SCC's responsibility to negotiate with each ILEC individually, and to order each piece of the Meet Point transmission facility from each individual ILEC separately in order to provide UDT from each ILEC's respective

Central Office to the meet point. UDT Cross Boundary Meet Point Transmission Facilities are available at DS1 and DS3 transmission speeds and only where facilities exist and are available at the time of SCC's order.

13.8.1.2 Rates: Charges applicable to Cross Boundary UDT Meet Point Facility arrangements are as follows:

13.8.1.2.1 Non Recurring Charges: 100% of **PACIFIC** existing UDT Non Recurring Charges, i.e. service order charge, install (connect) charges, disconnect charges, etc. for its side of the facilities and without any compensation to the other ILEC. Each of these charges are found in Appendix Pricing.

13.8.1.2.2 Monthly Charges: **PACIFIC** will charge full (100%) existing UDT monthly charges for the first (or Fixed) mile, plus 100% of the monthly charges for the additional miles in its territory. Each of these charges is found in Appendix Pricing. The additional miles are calculated by the total facility mileage multiplied by the percentage of the facilities that fall within **PACIFIC** territory, as determined by the NECA 4 tariff. There will not be any compensation to the other ILEC.

13.8.1.2.3 **PACIFIC**'s current intervals for the ordering and provisioning of the UDT will also be applicable to the ordering and provisioning of Cross Boundary UDT Meet Point Facilities. However, for end to end connectivity, the longer of the two ILEC's ordering and provisioning intervals will apply.

14. DARK FIBER

14.1 In **SBC-12STATE** Dark fiber is deployed, unlit fiber optic cable that connects two points within the incumbent LEC's network. Dark fiber is fiber that has not been activated through connection to the electronics that "light it", and thereby render it capable of carrying communications services. Other than as specifically set out elsewhere in this agreement, **SNET** does not offer Dark Fiber under this agreement. Rather, Dark Fiber is available as described in Section 18.2.1E of the Connecticut Service Tariff.

14.1.1 Dark Fiber is fiber that is spliced in all segments from end to end and would provide continuity or "light" end to end. SCC may only subscribe to dark

fiber that is considered "spare," as defined in Sections 12.4.1 and 12.5.1, below.

14.2 Interoffice Dark Fiber

14.2.1 SBC-12STATE will provide dark fiber in the dedicated interoffice transport segment of the network as an unbundled network element. Interoffice dark fiber is between two different SBC-12STATE Central Offices (CO's) and terminates on a fiber distribution frame, or equivalent, in the CO. SBC-12STATE will offer its dark fiber to SCC when SCC has collocation space in each SBC-12STATE CO where the fibers terminate.

14.3 Loop Fiber

14.3.1 SBC-12STATE will provide loop dark fiber as an unbundled network element. Loop dark fiber is a segment between a serving SBC-12STATE central office and an end user customer premise.

14.3.2 SBC-12STATE will provide sub-loop dark fiber as an unbundled network element. Sub-loop dark fiber is a segment between:

14.3.2.1 The serving SBC-12STATE central office and a remote terminal/CEV/Hut; or

14.3.2.2 a remote terminal/CEV/Hut and an end user customer premise.

14.3.3 At CO's the dark fiber terminates on a fiber distribution frame, or equivalent, in the CO. SCC access is provided pursuant Method One (Section 3.1.1.1, above).

14.3.4 At remote terminals, CEVs and Huts, SCC access to the dark fiber will be provided via the network demarcation point at the end user customer premises and via a fiber distribution frame at the remote terminal/CEV/Hut.

14.4 Spare Fiber Inventory Availability and Condition

14.4.1 All available spare dark fiber will be provided as is. No conditioning will be offered. Spare dark fiber is fiber that is spliced in all segments, point to point but not assigned, and spare dark fiber does not include maintenance spares, fibers set aside and documented for SBC-12STATE's forecasted growth, defective fibers, or fibers subscribed to by other carriers. SCC will not request any more than 25% of the spare dark fiber contained in the requested segment.

14.5 Determining Spare Fibers:

14.5.1 SBC-12STATE will inventory and track spare dark fibers. Spare fibers do not include the following:

14.5.1.1 Maintenance spares. Maintenance spares shall be kept in inventory like a working pair. Spare maintenance fibers are assigned as follows:

- Cables with 24 fibers and less: two maintenance spare fibers
- Cables with 36 and 48 fibers: four maintenance spare fibers
- Cables with 72 and 96 fibers: eight maintenance spare fibers
- Cables with 144 fibers: twelve maintenance spare fibers
- Cables with 216 fibers: 18 maintenance spares
- Cables with 288 fibers: 24 maintenance spares
- Cables with 432 fibers: 36 maintenance spares
- Cables with 864 fibers: 72 maintenance spares.

14.5.1.2 Defective fibers

14.5.1.3 SBC-12STATE growth fibers. Fibers documented as reserved by SBC-12STATE for utilization for growth within the 12 month–period following the carrier's request.

14.5.2 The appropriate SBC-12STATE engineering organization will maintain records on each fiber optic cable for which SCCs request dark fiber.

14.5.3 Defective fibers, if any, will be deducted from the total number of spare fibers that would otherwise be available to SCC for use under this Agreement.

14.6 Quantities and Time Frames for ordering Dark Fiber:

14.6.1 The minimum number of fiber strands that SCC can order is two, and fiber strands must be ordered in multiples of two. The maximum number of fiber strands that SCC can order is no greater than 25% of the spare facilities in the segment requested. Should spare fiber fall below 8 strands in a given location, SBC-12STATE will provide the remaining spares in quantities of 2 strands. (See definition of spare facilities set forth in Sections 12.4.1 and 12.5.1 above.)

14.6.2 If SCC wishes to request dark fiber, it must submit a dark fiber facility inquiry, providing SCC's specific point to point (A to Z) dark fiber requirements. When SCC submits a dark fiber facility inquiry, appropriate rates for the inquiry will be charged as outlined in state specific Appendix Pricing.

14.6.2.1 If spare dark fiber is available, as determined under this Agreement, SBC-12STATE will notify SCC and SCC may place an Access Service Request (ASR) for the dark fiber.

14.6.3 Dark fiber will be assigned to SCC only when an ASR is processed. ASRs will be processed on a first-come-first-served basis. Inquiry facility checks do not serve to reserve dark fiber. When SCC submits the ASR, the ASR will be processed and the dark fiber facilities assigned for the charges which will be established as set forth in paragraph 12.6.2.

14.7 Right of Revocation of Access to Dark Fiber

14.7.1 Should SCC not utilize the fiber strands subscribed to within the 12-month period following the date SBC-12STATE provided the fibers, SBC-12STATE may revoke SCC's access to the dark fiber and recover those fiber facilities and return them to SBC-12STATE inventory.

14.7.2 SBC-12STATE may reclaim from the SCC's the right to use dark fiber, whether or not the dark fiber is being utilized by SCC, upon twelve (12) months' written notice to the SCC. SBC-12STATE will provide an alternative facility for the SCC with the same bandwidth the SCC was using prior to reclaiming the facility. SBC-12STATE must also demonstrate to the SCC that the dark fiber will be needed to meet SBC-12STATE's bandwidth requirements within the 12 months following the revocation.

14.8 Access Methods specific to Dark Fiber

14.8.1 The demarcation point for dark fiber at central offices, remote terminals and customer premises will be in an SBC-12STATE approved splitter shelf. This arrangement allows for non-intrusive testing.

14.9 Installation and Maintenance for Dark Fiber

14.9.1 SBC-12STATE will install demarcations and place the fiber jumpers from the fiber optic terminals to the demarcation point. SCC will run its fiber jumpers from the demarcation point (1x2, 90-10 optical splitter) to the SCC equipment.

15. OPERATOR SERVICES AND DIRECTORY ASSISTANCE

15.1 SBC-13STATE will provide access to operator service and directory assistance databases where technically feasible. (47 CFR § 51.319(g)). Operator Services

and Directory Assistance (OS/DA) are available as described in Appendix DA, and Appendix OS.

16. SIGNALING NETWORKS AND CALL-RELATED DATABASES

16.1 Signaling Networks and Call-Related Databases are Network Elements that include Signaling Link Transport, Signaling Transfer Points, and Service Control Points and Call-Related Databases. Access to SBC-13STATE's signaling network and call related databases will be provided as described in the following Appendices: SS7, LIDB AS, LIDB Service, 800, and AIN (refer to General Terms and Conditions, Section 46.7.2).

17. OPERATIONS SUPPORT SYSTEMS FUNCTIONS

17.1 Operations Support Systems Functions consist of pre-ordering, ordering, provisioning, maintenance and repair, and billing functions supported by SBC-13STATE's databases and information. SBC-13STATE will provide SCC access to its Operations Support Systems Functions as outlined in Appendix OSS.

18. CROSS CONNECTS

18.1 The cross connect is the media between the SBC-7STATE UNE and an SCC designated point of access as described in various sections of this Appendix, or the media between a SBC-7STATE UNE and a Collocation area for the purpose of permitting SCC to connect the SBC-7STATE UNE to other UNEs or to the SCC's own facilities. Where SBC-7STATE has otherwise committed to connect one UNE to another UNE on behalf of SCC, or to leave connected one UNE to another UNE on behalf of SCC the cross connect is the media between one SBC-7STATE UNE and another SBC-7STATE UNE. Nothing in this section is a commitment to connect or leave connected any two or more UNEs.

18.2 SBC-7STATE will provide cross connects at the rates, terms, and conditions set forth in Appendix Pricing. Pricing for Sections 16.3, 16.4 and 16.5 for SBC-AMERITECH and SNET are provided as set forth in Appendix Pricing. For all other cross-connect pricing for SNET refer to the applicable state tariff.

18.3 The applicable Loop cross connects to point of access for the purpose of SCC combining a SBC-13STATE Loop with another SBC-13STATE UNE are as follows:

18.3.1 2-Wire Analog Loop to UNE Connection Methods point of access

18.3.2 4 -Wire Analog Loop to UNE Connection Methods point of access

18.3.3 2 -Wire Digital Loop to UNE Connection Methods point of access

18.3.4 4 -Wire Digital Loop to UNE Connection Methods point of access

18.4 The applicable Unbundled Dedicated Transport cross connects to the UNE Connection Methods point of access for the purpose of SCC combining. Unbundled Dedicated Transport to another **SBC-13STATE** UNE are as follows:

18.4.1 DS-1 to UNE Connection Methods point of access

18.5 The applicable Switch Port cross connects to the UNE Connection Methods point of access for the purpose of SCC combining Switch Ports to another **SBC-13STATE** UNE are as follows:

18.5.1 Analog Line Port to UNE Connection Methods point of access

18.5.2 ISDN Basic Rate Interface (BRI) Line Port to UNE Connection Methods point of access.

18.5.3 ISDN Primary Rate Interface (PRI) Trunk Port to UNE Connection Methods point of access

18.5.4 Analog DID Trunk Port to UNE Connection Methods point of access

18.5.5 DS-1 Trunk Port to UNE Connection Methods point of access

18.6 The applicable Loop cross connects for the purpose of SCC connecting a **SBC-SWBT** and **NEVADA** Loop UNE to SCC's Collocated facilities are as follows:

18.6.1 2-Wire Analog Loop to Collocation

18.6.2 2-Wire Analog Loop to Collocation (without testing)

18.6.3 4-Wire Analog Loop to Collocation

18.6.4 4-Wire Analog Loop to Collocation (without testing)

18.6.5 2-Wire Digital Loop to Collocation

18.6.6 2-Wire Digital Loop to Collocation (without testing)

18.6.7 4-Wire Digital Loop to Collocation

18.6.8 4-Wire Digital loop to Collocation (without testing)

18.6.9 DSL Shielded Cross Connect to Collocation

18.6.10 2-Wire DSL non-shielded cross connect to Collocation

18.6.11 4-Wire DSL non-shielded cross connect to Collocation

18.6.12 2-Wire Analog Loop to Collo/Mux (different C.O.)

18.6.13 2-Wire Analog Loop to Collo/Mux (without testing) (different C.O.)

18.6.14 4-Wire Analog Loop to Collo/Mux (different C.O.)

18.6.15 4-Wire Analog Loop to Collo/Mux (without testing) (different C.O.)

18.6.16 2-Wire Digital Loop to Collo/Mux (different C.O.)

18.6.17 2-Wire Digital Loop to Collo/Mux (without testing) (different C.O.)

18.6.18 4-Wire Digital Loop to Collo/Mux (different C.O.)

18.6.19 4-Wire Digital Loop to Collo/Mux (without testing) (different C.O.)

18.7 The applicable dedicated transport cross connects for the purpose of SCC connecting an **SBC-SWBT** and **NEVADA** dedicated transport UNE to SCC's Collocated facilities are as follows:

18.7.1 DS-1 to Collocation

18.7.2 DS-3 Collocation

18.7.3 OC-3 to Collocation

18.7.4 OC-12 to Collocation

18.7.5 OC-48 to Collocation

18.8 The applicable Port cross connects for the purpose of SCC connecting an **SBC-SWBT** and Port UNE to a SCC's Collocated facilities are as follows:

18.8.1 Analog Line Port to Collocation

18.8.2 ISDN Basic Rate Interface (BRI) Line Port to Collocation

18.8.3 Primary Rate Interface (PRI) Trunk Port to Collocation

18.8.4 Analog DID Trunk Port to Collocation

18.8.5 DS- Trunk Port to Collocation

18.9* The applicable cross connects for the purpose of SCC connecting a **PACIFIC** Loop, UDT or Port UNE to SCC's Collocated facility are as follows:

18.9.1 Voice Grade/ISDN EISCC

18.9.2 DS-0 EISCC

18.9.3 DS-1 EISCC

18.9.4 DS-3 EISCC

18.9.5 DSL Shielded Cross Connect to Collocation

18.10 The applicable cross connects for **SBC-AMERITECH** Loop, UDT or Port UNEs are as follows:

18.10.1 2-wire

18.10.2 4-wire

18.10.3 6-wire

18.10.4 8-wire

18.10.5 DS-1

18.10.6 DS-3

18.10.7 OC-3

18.10.8 OC-12

18.10.9 OC-48

18.10.10 LT1

18.10.11 LT3

* Sections 18.9, 18.11, 18.12 & 18.13 are available only in the State of California. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS Paragraph 2.10.1

* Sections 18.9, 18.11, 18.12 & 18.13 are available only in the State of California. Refer to INTERCONNECTION AGREEMENT: GENERAL TERMS AND CONDITIONS Paragraph 2.10.1

18.11* The applicable Loop cross connects to the Adjacent Location Method of Accessing UNEs for the purpose of SCC combining a **PACIFIC** Loop with SCC's own facilities for are as follows:

18.11.1 2 -Wire Analog Loop to Adjacent Location Method point of access

18.11.2 4 -Wire Analog Loop to Adjacent Location Method point of access

18.11.3 2 -Wire Digital Loop to Adjacent Location Method point of access

18.11.4 4 -Wire Digital Loop to Adjacent Location Method point of access

18.11.5 DSL shielded Cross Connect to Adjacent Location point of access

18.12* The applicable Unbundled Dedicated transport cross connects to the Adjacent Location Method of accessing UNEs for the purpose of SCC combining a **PACIFIC** Unbundled Dedicated Transport with SCC's own facilities as follows:

18.12.1 DS-1 to the Adjacent Location Method point of access

18.13* The applicable Switch Port cross connects to the Adjacent Location Method of Accessing UNEs for the purpose of SCC combining a **PACIFIC** Port with SCC's own facilities point of access are as follows:

18.13.1 Analog Line Port to Adjacent Location Method to point of access

18.13.2 ISDN BRI Port to Adjacent Location Method to point of access

18.13.3 ISDN PRI Trunk Port to Adjacent Location Method point of access

18.14 Cross Connects, required for the UNE platform, from UNE Loops to UNE Ports for the purpose of combining a **SWBT**, **NEVADA** and **PACIFIC** 2 -Wire Loop with a **SWBT**, **NEVADA** and **PACIFIC** Port are as follows:

18.14.1 2 -Wire Analog Loop to Analog line Port

18.14.2 2 -Wire Digital Loop to ISDN BRI Port

18.15 Maintenance of Elements

18.15.1 If trouble occurs with unbundled network elements provided by **SBC-13STATE**, SCC will first determine whether the trouble is in SCC's own equipment and/or facilities or those of the End User. If SCC determines the trouble is in **SBC-13STATE**'s equipment and/or facilities, SCC will issue a trouble report to **SBC-13STATE**.

18.15.2 SCC shall pay Time and Material charges (maintenance of service charges/additional labor charges) when SCC reports a suspected failure of a Unbundled Network Element and **SBC-13STATE** dispatches personnel to the End User's premises or an **SBC-13STATE** Central Office and trouble was not caused by **SBC-13STATE**'s facilities or equipment. Time and Material charges will include all technicians dispatched, including technicians dispatched to other locations for purposes of testing. Rates of Time and Material charges will be billed at amounts equal to those contained in the applicable state tariffs.

18.15.3 SCC shall pay Time and Material charges when **SBC-13STATE** dispatches personnel and the trouble is in equipment or communications systems provided an entity by other than **SBC-13STATE** or in detariffed CPE provided by **SBC-13STATE**, unless covered under a separate maintenance agreement.

18.15.4 SCC shall pay Maintenance of Service charges when the trouble clearance did not otherwise require dispatch, but dispatch was requested for repair verification or cooperative testing, and the circuit did not exceed maintenance limits.

18.15.5 If SCC issues a trouble report allowing **SBC-13STATE** access to the End User's premises and **SBC-13STATE** personnel are dispatched but denied access to the premises, then Time and Material charges will apply for the period of time that **SBC-13STATE** personnel are dispatched. Subsequently, if **SBC-13STATE** personnel are allowed access to the premises, these charges will still apply.

18.15.6 Time and Material charges apply on a first and additional basis for each half-hour or fraction thereof. If more than one technician is dispatched in conjunction with the same trouble report, the total time for all technicians dispatched will be aggregated prior to the distribution of time between the "First Half Hour or Fraction Thereof" and "Each Additional Half Hour or Fraction Thereof" rate categories. Basic Time is work-related efforts of SBC-13STATE performed during normally scheduled working hours on a normally scheduled workday. Overtime is work-related efforts of SBC-13STATE performed on a normally scheduled workday, but outside of normally scheduled working hours. Premium Time is work related efforts of SBC-13STATE performed other than on a normally scheduled workday.

18.15.7 If SCC requests or approves a SBC-13STATE technician to perform services in excess of or not otherwise contemplated by the nonrecurring charges herein, SCC will pay Time and Material charges for any additional work to perform such services, including requests for installation or conversion outside of normally scheduled working hours.

19. RECONFIGURATION

19.1 SBC-13STATE will reconfigure existing qualifying special access services to combinations of unbundled loop and transport upon terms and conditions consistent with the Supplemental Order Clarification released by the FCC on June 2, 2000 *In the Matter of the Local Competition Provisions of the Telecommunications Act of 1996*, in CC Docket No. 96-98 (FCC 00-183) and with SBC-13STATE's processes to implement that Order, as set forth on the CLEC website.

20. RESERVATION OF RIGHTS

20.1 SBC-13STATE's provision of UNEs identified in this Agreement is subject to the provisions of the Federal Act, including but not limited to, Section 251(d). The Parties acknowledge and agree that on November 5, 1999, the FCC issued its Third Report and Order and Fourth Further Notice of Proposed Rulemaking in CC Docket No. 96-96 (FCC 99-238), including the FCC's Supplemental Order issued *In the Matter of the Local Competition Provisions of the Telecommunications Act of 1996*, in CC Docket No. 96-98 (FCC 99-370) (rel. November 24, 1999), ("the UNE Remand Order"), portions of which become effective thirty (30) days following publication of such Order in the Federal Register (February 17, 2000) and other portions of which become effective 120 days following publication of such Order in the Federal Register (May 17, 2000). By entering into this Agreement which makes available certain UNEs, or any Amendment to this Agreement to conform such Agreement to the UNE Remand Order within the time frames specified in such Order, neither Party waives any of its rights to seek legal

review or a stay pending appeal of the Order. In addition, both Parties reserve the right to dispute whether any UNEs identified in the Agreement must be provided under Section 251(c)(3) and Section 251(d) of the Act, and under this Agreement. UNEs described in this Agreement or any Amendment to this Agreement that are provided in accordance with the UNE Remand Order will be provided in accordance with the effective dates set forth in the Order (i.e. February 17, 2000 or May 17, 2000, as applicable). In the event that the FCC, a state regulatory agency or a court of competent jurisdiction, in any proceeding, based upon any action by any telecommunications carrier, finds, rules and/or otherwise orders ("order") that any of the UNEs and/or UNE combinations provided for under this Agreement do not meet the necessary and impair standards set forth in Section 251(d)(2) of the Act, the affected provision will be invalidated, modified or stayed as required to immediately effectuate the subject order upon written request of either Party. In such event, the Parties shall expend diligent efforts to arrive at an agreement on the modifications required to the Agreement to immediately effectuate such order. If negotiations fail, disputes between the Parties concerning the interpretations of the actions required or the provisions affected by such order shall be handled under the Dispute Resolution Procedures set forth in this Agreement. In addition, the Parties
agree that in the event the UNE Remand Order is stayed pending appeal, neither Party shall be obligated to implement the terms of such Order until such time as the stay is lifted.

21. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

21.1 Every interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each interconnection, service and network element provided hereunder: definitions, interpretation, construction and severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries;

expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

APPENDIX VIRTUAL COLLOCATION

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions for Virtual Collocation provided by the applicable SBC Communications Inc. (SBC) owned Incumbent Local Exchange Carrier (ILEC) and Collocator.

2. DEFINITIONS

2.1 **"Approved Vendor"** is a vendor who is qualified by SBC-13STATE for installation, and/or removal of central office equipment, which is administered by SBC Procurement on a state by state basis.

2.2 **"Active Central Office Space"** denotes the existing, central office switch room space, which can be designated for virtual collocation, with sufficient infrastructure systems. Also, denotes central office space that may contain obsolete unused equipment.

2.3 **"Application Fee"** includes the costs incurred by SBC-13STATE to process the Collocator's application for virtual collocation arrangements.

2.4 **"Augment"** is a request from the Collocator to add equipment, cable, and/or Collocation services to (1) a pending Virtual Collocation arrangement which is more than fifteen (15) calendar days into the construction interval or (2) an existing Virtual Collocation arrangement.

2.5 **"Collocator"** is any individual, partnership, association, joint-stock company, trust corporation, or governmental entity or any other entity who is collocated in SBC-13STATE location, for purposes of Interconnection with SBC-13STATE or access to Unbundled Network Elements (UNEs). For purposes of this Appendix, unless otherwise indicated, SCC is the Collocator.

2.6 **"Delivery Date"** is the date upon which the Collocator or Requesting Carrier will be provided the collocated space by SBC-13STATE.

2.7 **"Eligible Structure"** is (1) a SBC-13STATE central office, serving wire center or tandem office, or (2) a building or similar structure owned or leased by SBC-13STATE that houses its network facilities, or (3) a structure that houses SBC-13STATE transmission facilities on public rights-of-way.

2.8 **"Entrance Fiber Facility"** is an arrangement when a Collocator provided single mode fire retardant dielectric fiber optic cable that extends from the SBC-13STATE

designated manhole into the SBC-13STATE Eligible Structure designated splice point. It is used as a transmission medium to the designated splice point. Collocator shall be permitted no more than two (2) entrance routes into the SBC-13STATE Eligible Structure, if available.

2.9 **"Fiber Distribution Frame (FDF)"** is an architecture which serves as the primary interface between outside plant (OSP) fiber optic facilities entering a Central Office structure and the fiber optic equipment installed within that same location. The FDF provides a centralized point for the organization and administration of the fiber optic facility and intra-building fiber equipment cables, provides a flexible platform for future fiber growth, and provides rearrangeable connections between any two terminations or appearances.

2.10 **"Individual Case Basis (ICB)"** is a pricing method used for services that are not tariffed or are not standard offerings or configurations.

2.11 **Infrastructure Systems** - Infrastructure systems include, but are not limited to, structural components, such as floors capable of supporting equipment loads, frames, heating, ventilating and air conditioning ("HVAC") systems, electrical systems (AC power), DC power, power distribution via frames or bays, high efficiency filtration, humidity controls, remote alarms, compartmentation, and smoke purge.

2.12 **"Interconnector's Collocation Services Handbook"** or like document is a publication provided to the Collocators, which provides information on how to order collocation arrangements and the processes and requirements for collocation in SBC-13STATE, which is located on the SBC-13STATE CLEC ONLINE Web-Site (https://clec.sbc.com).

2.13 **"Project Management Fee"** reflects SBC-13STATE labor costs to manage the provisioning of the individual Collocator's space requirements for a particular virtual collocation space request. This fee is applicable upon submission of an application.

2.14 **"Technically Feasible"** - is as defined in 47 CFR § 51.5. Deployment by any incumbent LEC of a collocation arrangement gives rise to a rebuttable presumption in favor of a Collocator seeking collocation in SBC-13STATE's Eligible Structures that such an arrangement is technically feasible.

2.15 **"Virtual Collocation"** is as defined in 4.2 of this Appendix.

3. PURPOSE AND SCOPE OF APPENDIX

3.1 The purpose of this Appendix is to set forth the terms and conditions, including pricing, in which SBC-13STATE will provide Virtual Collocation to Collocator.

3.2 Preparation Prior to Regulatory Approval

3.2.1 Upon the written request of Collocator, SBC-13STATE shall consider an application for collocation space submitted prior to receiving the approval. Upon such an election, this Appendix shall become effective but only insofar as to be applicable to the consideration of an application for collocation space. In the event that the Appendix does not become fully effective as contemplated by this Section, Collocator shall not be entitled to any refund or return of any such payments beyond any portion of the charges paid but not attributable to costs incurred by SBC-13STATE. To the extent that SBC-13STATE has incurred preparation costs not included within any payment made by Collocator, Collocator shall pay those costs within thirty (30) calendar days of notice by SBC-13STATE.

3.2.2 Collocator is responsible for obtaining an approved Interconnection Agreement (ICA) and meeting the State Certification requirements. The following shall apply:

3.2.2.1 If the State Commission has not approved the ICA prior to completion of the build-out, SBC-13STATE will not process service orders for interconnection or access to UNEs. However, the requested space will be turned over to the Collocator if the final non-recurring costs have been received. Monthly recurring charges will commence when space is turned over.

3.2.2.2 If the Collocator has not received its State Certification prior to completion of the build-out, SBC-13STATE will not process service orders for interconnection or access to UNEs. However, the requested space will be turned over to the Collocator if the final non-recurring costs have been received. Monthly recurring charges will commence when space is turned over.

3.2.2.3 If the Collocator has not received their State Certification or the State Commission has not approved the ICA by Day one hundred eighty (180) after space turnover, then the Collocator (forfeits) all charges collected to date by SBC-13STATE and the collocation space. The Collocator will have thirty (30) calendar days to remove any equipment and bays placed by the Collocator in the premise.

3.3 The Parties agree that billing for all costs incurred in the establishment of Virtual Collocation for the Collocator will be provided to the Collocator within one hundred eighty (180) days of the billing cycle. Billing will be subject to true up if interim rates are pending State or Federal Commission approval.

4. GENERAL OFFERINGS

4.1 Except where Virtual Collocation is not practical for technical reasons or because of space limitations, SBC-13STATE will provide Virtual Collocation to Collocator for the purpose of interconnecting to SBC-13STATE network or for obtaining access to SBC-13STATE Unbundled Network Elements ("UNEs") for the provision of a telecommunications service pursuant to 47 U.S.C. §251 (c)(3) of the Act. Virtual Collocation will be provided on a "first come, first served" basis, in accordance with the requirements of the Act (including 47 U.S.C. 251 (c)(6) of the Act.

4.2 In the case of SBC-13STATE Virtual Collocation, the Collocator is responsible for engineering and furnishing the virtually collocated equipment. It must use an SBC-13STATE Approved Vendor to perform the installation of such in the SBC-13STATE Eligible Structure. The Collocator's SBC-13STATE Approved Vendor will be permitted access to the SBC-13STATE Main Distribution Frame or its equivalent for placement and termination of interconnection cabling and the cabling arrangement to provide grounding for equipment. Collocator must use an SBC-13STATE Approved Power Installation Vendor to place power cable leads from the Collocator's dedicated space to SBC-13STATE's Battery Distribution Fuse Bay (BDFB) or Power Plant, whichever is applicable. Additional requirements relating to installation and placement of interconnection cabling and power cabling is set forth in Section 10.5 and 10.6 of this Appendix. SBC-13STATE will exercise physical control over, but not ownership of, the equipment installed by Collocator in a Virtual Collocation arrangement. The equipment and associated facilities will be maintained and repaired at the direction of the Collocator by SBC-13STATE.

4.2.1 Collocator will install their own bay(s) by an SBC-13STATE Approved Vendor. SBC-13STATE will provide space for the bay(s) in either a Standard Bay arrangement of 10 sq. ft. or a Non-Standard Bay arrangement of 18 sq. ft. The standard bay and non-standard bay dimensions are as follows:

4.2.1.1 Standard bay dimensions cannot exceed 7'0" high, and 23" interior width, 26" exterior width, and up to 15" deep.

4.2.1.2 Non-standard bay dimensions cannot exceed 7'0" high, 36" in width, and up to 36" in depth.

4.2.1.3 SBC-13STATE prefers that the equipment mounted in the bay be

flush mounted with the front of the bay, however the equipment must not be mounted beyond the lower front kick plate (normally 5") for appropriate egress. The total depth of bay, including equipment, should not exceed 15" for a standard bay.

4.2.1.4 At SBC-13STATE's option, where an individual standard bay owned by SBC-13STATE in a Central Office is shared with a Collocator, the standard bay will be apportioned on a quarter rack basis.

4.2.2 Virtual Collocation is available at SBC-13STATE Eligible Structures as specified in the National Exchange Carrier Association, Inc., Tariff FCC No. 4.

4.2.3 SBC-13STATE will exercise physical control, but not ownership, over any equipment deployed for the purposes of Virtual Collocation.

4.2.4 SBC-13STATE will designate upon request the floor space for the "occupancy" of a Collocator provided storage cabinet for circuit packs, plug-ins, test equipment, etc.

4.2.4.1 SBC-13STATE standard floor space for Collocator's provided storage cabinet is 10 sq. ft. that cannot exceed 7'0 high, 31" exterior width, up to 15" depth with a swing radius of (Front) aisle egress of 36" or (Rear) aisle egress of 30".

4.2.4.2 SBC-13STATE non-standard floor space for Collocator's provided storage cabinet is 18 sq. ft. that cannot exceed 7'0 high, 38" exterior width, and up to 36" depth with a swing radius of (Front) aisle egress of 36" or (Rear) aisle egress of 36".

4.2.5 Virtual Collocation is separate and distinct from Physical Collocation. Requests to convert from Virtual Collocation to Physical Collocation will require re-design and re-termination of the services to a physical collocation arrangement. Any requests to convert requires a new physical application be submitted, and the appropriate charges will apply.

4.2.6 The Collocator is responsible for all alarm monitoring of its virtually collocated equipment and all expenses associated. Since the maintenance of the Collocator's equipment is at the direction and control of the Collocator, SBC-13STATE will not be responsible for responding to alarms and will only conduct maintenance and repair activities at the direction of the Collocator.

4.2.7 Virtual Collocation is ordered as set forth in SBC-13STATE Virtual Interconnector's Collocation Services Handbook or like document found on

the SBC-13STATE CLEC ONLINE Web-Site for Virtual Collocation. SBC-13STATE will designate the location or locations within its wire centers, CEVs, Huts and Cabinets for the placement of all equipment and facilities associated with virtual collocation. Virtual Collocation does not involve the reservation of segregated Central Office or CEV, Hut and Cabinet space for the use of Collocators.

4.2.8 Virtual Collocation is available for the direct connection of one Collocator provided facility to a separate Collocator provided facility within the same SBC-13STATE wire center provided the Collocators are interconnected with SBC-13STATE network. Available connections include copper cable, coaxial cable, and fiber optic cable.

4.2.8.1 SBC-13STATE will designate the route, place cable racking (if applicable) and provide space to be used for such facilities. SBC-13STATE shall permit Collocator's SBC-13STATE Approved Vendor to construct such facilities using copper or optical fiber facilities subject to the same reasonable safety requirements that SBC-13STATE imposes on its own equipment and facilities, without requiring the Collocator to purchase any equipment or connecting facilities solely from SBC-13STATE.

5. SPACE AVAILABILITY

5.1 At the request of Collocator, SBC-13STATE will provide space for Virtual Collocation as described above. SBC-13STATE is not required to provide Virtual Collocation at a particular Eligible Structure, if it demonstrates that Virtual Collocation is not practical for technical reasons or because of space limitations. When Virtual Collocation is not technically feasible, SBC-13STATE will make a good faith effort to negotiate other methods of Interconnection and access to unbundled network elements to the extent technically feasible.

5.2 SBC-13STATE will provide Virtual Collocation arrangements in Eligible Structures on a "first-come, first-served" basis. The determination whether there is sufficient space to accommodate Virtual Collocation at a particular Eligible Structure will be made initially by SBC-13STATE. SBC-13STATE will notify Collocator as to whether its request for space has been granted or denied due to a lack of space within ten (10) days from receipt of a Collocator's accurate and complete Virtual Collocation Application. If SBC-13STATE determines that Collocator's Virtual Collocation Application is unacceptable, SBC-13STATE shall advise Collocator of any deficiencies within this ten (10) day period. SBC-13STATE shall provide Collocator with sufficient detail so that Collocator has a reasonable opportunity to cure each deficiency. To retain its place in the queue to obtain the Virtual Collocation arrangement, Collocator must cure any deficiencies in its Application

and resubmit such Application within ten (10) days after being advised of the deficiencies. Any changes to the amount or type of floor space, interconnection terminations, and power requested from the originally submitted Virtual Collocation Application will not be considered a deficiency, but rather as a new Virtual Collocation Application with a new ten (10) day space notification and delivery interval.

5.2.1 When space for Virtual Collocation in a particular Eligible Structure is not available, SBC-13STATE shall place Collocator on the waiting list for Virtual Collocation in a particular Eligible Structure according to the date the Collocator submitted its application for Virtual Collocation in that Eligible Structure.

6. ELIGIBLE EQUIPMENT FOR COLLOCATION

6.1 In accordance with Section 251(c)(6) of the Telecommunications Act, Collocator may collocate equipment "necessary for interconnection or access to unbundled network elements." For purposes of this section, "necessary" means directly related to and thus necessary, required, or indispensable to interconnection or access to unbundled network elements. Such uses are limited to interconnection to the SBC-13STATE's network "for the transmission and routing of telephone exchange service or exchange access," or for access to SBC-13STATE's unbundled network elements "for the provision of a telecommunications service." Equipment that may be collocated solely for these purposes includes: (1) transmission equipment including, but not limited to, optical terminating equipment and multiplexers; and (2) equipment being collocated to terminate basic transmission facilities pursuant to sections 64.1401 and 64.1402 of 47 C.F.R. (Expanded Interconnection) as of August 1, 1996.

6.2 Collocator may not collocate Multifunctional Equipment except as expressly and specifically allowed, on a voluntary basis, in this Section or mutually agreed to by SBC-13STATE and Collocator. For purposes of this section, "Multifunctional Equipment," means equipment that has both (1) functions that make the equipment "necessary for interconnection or access to unbundled network elements" and (2) additional functions that are not "necessary" for these purposes. Such additional functions include, but are not limited to, switching and enhanced service functions.

6.3 SBC-13STATE permits Collocator collocation, on a non-discriminatory basis, of complete pieces or units of equipment specified in the definition of "Advanced Services Equipment" in section 1.3.d of the SBC/Ameritech Merger Conditions. To the extent that certain complete units of Advanced Services Equipment are not "necessary" for interconnection or access to unbundled network elements because they are Multifunctional Equipment and for other reasons, SBC-13STATE voluntarily allows such Collocator collocation. Under the SBC/Ameritech Merger

Conditions, "Advanced Services Equipment" is defined as, and limited to, the following equipment: "(1) DSLAMs or functionally equivalent equipment; (2) spectrum splitters that are used solely in the provision of Advanced Services; (3) packet switches and multiplexers such as ATMs and Frame Relay engines used to provide Advanced Services; (4) modems used in the provision of packetized data; and (5) DACS frames used only in the provision of Advanced Services. Spectrum splitters (or the equivalent functionality) used to separate the voice grade channel from the Advanced Services channel shall not be considered Advanced Services Equipment; any such splitters installed after the Merger Closing Date that are located at the customer premises shall be considered network terminating equipment." To qualify for collocation, the complete units of Advanced Services Equipment must either (A) be solely of the types, and exclusively for the uses, included in this definition or (B) be of such types, and for such uses, combined solely with additional functions that are "necessary for interconnection or access to unbundled network elements." For instance, additional switching use, except as included below, or enhanced services functionality would disqualify the equipment from collocation. **SBC-13STATE** voluntarily allows Collocator to collocate Optical Concentrator Devices ("OCDs") or functionally equivalent equipment used to provide Advanced Services.

6.4 To qualify for collocation, the equipment must be a complete piece, unit, or item of such equipment, not a piece-part or sub-component (such as a line card) of a complete unit of equipment. Collocator may not collocate, or place into **SBC-13STATE**'s equipment, Collocator's equipment sub-components or piece-parts.

6.5 **SBC-13STATE** does not allow collocation of other Multifunctional Equipment, except that **SBC-13STATE** voluntarily allows Collocator collocation, on a non-discriminatory basis, of remote switch modules ("RSMs") solely under the following conditions: (1) the RSM may not be used as a stand-alone switch; the RSM must report back to and be controlled by a Collocator identified and controlled (*i.e.*, SCC owned or leased) host switch, and direct trunking to the RSM will not be permitted, and (2) the RSM must be used only for the purpose of interconnection with the **SBC-13STATE**'s network for the transmission and routing of telephone exchange service or exchange access or for access to the **SBC-13STATE**'s unbundled network elements for the provision of a telecommunications service. **SBC-13STATE** voluntarily will allow Collocator to collocate, on a non-discriminatory basis, other multi-functional equipment only if **SBC-13STATE** and Collocator mutually agree to such collocation.

6.6 **SBC-13STATE** will not allow collocation of stand-alone switching equipment, equipment used solely for switching, or any enhanced services equipment. For purposes of this section, "stand-alone" is defined as any equipment that can perform switching independently of other switches or switching systems. "Stand-alone switching equipment" includes, but is not limited to, the following examples: (1)

equipment with switching capabilities included in 47 C.F.R. section 51.319(c); (2) equipment that is used to obtain circuit switching capabilities, without reliance upon a host switch, regardless of other functionality that also may be combined in the equipment; (3) equipment with the functionality of a class 4 or 5 switch including, without limitation, the following: Lucent Pathstar, 5E, 4E, or 1A switch; DMS 10, 100, 200, or 250 switch; Ericsson AXE-10 switch; Siemens EWSD; and any such switch combined with other functionality.

6.7 Ancillary equipment is not "necessary" for interconnection or access to unbundled network elements. SBC-13STATE voluntarily allows Collocator's to place in SBC-13STATE Eligible Structure certain ancillary equipment solely to support and be used with equipment that the Collocator has legitimately collocated in the same premises. Solely for this purpose, cross-connect and other simple frames, routers, portable test equipment, equipment racks and bays, cabinets for spares, and potential other ancillary equipment may be placed in SBC-13STATE's Eligible Structure, on a non-discriminatory basis, only if SBC-13STATE and Collocator mutually agree to such placement. Collocator may not place in SBC-13STATE's premises types of ancillary equipment, including but not limited to Battery Distribution Fuse Bays ("BDFB"), that would duplicate equipment used by SBC-13STATE, and/or that would duplicate functions performed by SBC-13STATE, as part of its provision of infrastructure systems for collocation. Such placement would waste space and other resources and, in at least some cases, (such as BDFBs), harm SBC-13STATE's ability to plan for and provide service to other customers including, but not limited to, other Collocator's.

6.8 Pending the FCC's reasonably timely remand proceedings in accordance with the Court's Opinion in *GTE Service Corporation v. FCC*, 205 F.3d 416 (D.C. Cir. 2000) ("*GTE Opinion*"), SBC-13STATE voluntarily will not disturb (1) equipment and (2) connection arrangements between different Collocators' equipment in an SBC-13STATE premises, that prior to the May 11, 2000 effective date of the *GTE Opinion* (1) were in place in SBC-13STATE or (2) were requested by Collocator and accepted by SBC-13STATE on the same basis as under the FCC's original, pre-partially-vacated Collocation Order (*Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket No. 98-147, *First Report and Order* (FCC 99-48), 14 FCC Rcd 4761 (1999)). SBC-13STATE's agreement not to disturb these collocation arrangements pending timely completion of the remand proceedings will immediately expire if a federal or state court or regulatory agency (1) attempts to apply any of the most favored nation provisions of the Act, of any state Merger Conditions, or of the FCC SBC/Ameritech Merger Conditions to such arrangements or (2) deems such arrangements to be discriminatory vis-à-vis other carriers.

6.9 SBC-13STATE does not assume any responsibility for the installation, furnishing, designing, engineering, or performance of the Collocator's equipment and facilities.

6.10 All types of equipment placed in SBC-13STATE Eligible Structures by Collocators must meet the SBC-13 STATE minimum safety standards. The minimum safety standards are as follows: (1) equipment complying with SBC-13STATE LEC document TP76200MP; network equipment power, grounding, environmental, and physical design requirements, Level 1 safety requirements except in Texas, and any other state that has adopted the same approach as Texas, where Collocator's equipment must meet Telcordia Level 1 safety requirements as set forth in Telcordia documents SR-3580 and GR-63-CORE, Network Equipment Building Systems (NEBS); or, (2) Collocator must demonstrate that its equipment has a history of safe operation defined by installation in an ILEC (including SBC-13STATE) prior to January 1, 1998 with no known history of safety problems.

6.11 SBC-13STATE will not object to the collocation of equipment on the grounds that the equipment does not comply with safety or engineering standards that are more stringent than the safety or engineering standards that SBC-13STATE applies to its own network equipment. SBC-13STATE will not object to the collocation of equipment on the ground that the equipment fails to comply with Network Equipment and Building Specifications performance standards or any other performance standards.

6.12 In the event that SBC-13STATE denies Collocation of Collocator's equipment, citing minimum safety standards, SBC-13STATE will provide within five (5) business days of Collocator's written request to SBC-13STATE representative(s), a list of SBC-13STATE equipment placed since January 1, 1998 within the network areas of the Eligible Premise for which Collocation was denied together with an affidavit attesting that all of such SBC-13STATE equipment met or exceeded the then current minimum safety standards when such equipment was placed in the Eligible Premise.

6.13 In the event Collocator submits an application requesting collocation of certain equipment and SBC-13STATE determines that such equipment is not necessary for interconnection or access to UNEs or does not meet the minimum safety standards or any other requirements of this Appendix, the Collocator must not collocate the equipment. If Collocator disputes such determination by SBC-13STATE, Collocator may not collocate such equipment unless and until the dispute is resolved in its favor. If SBC-13STATE determines that Collocator has already collocated equipment which is not necessary for interconnection or access to UNEs or does not meet the minimum safety requirements or any other requirements of this Appendix, the Collocator must remove the equipment from the collocation space within ten (10) business days of written notice from SBC-13STATE. Collocator will be responsible for the removal and all resulting damages. If Collocator disputes such determination, Collocator must remove such equipment pending the resolution of the dispute. If the Parties do not resolve the dispute, SBC-13STATE or Collocator may file a complaint at the Commission seeking a formal resolution of the dispute.

6.14 Collocation equipment or operating practices representing a significant demonstrable technical or physical threat to SBC-13STATE personnel, network or facilities, including the Eligible Structure or those of others is strictly prohibited. Notwithstanding any other provision herein, the characteristics and methods of operation of any equipment or facilities placed in the Virtual Collocation space shall not create hazards for or cause damage to those facilities, the Virtual Collocation space, or the Eligible Structure in which the Virtual Collocation space is located; impair the privacy of any communications carried in, from, or through the Eligible Structure in which the Virtual Collocation space is located; or create hazards or cause physical harm to any individual or the public. Any of the foregoing would be in violation of this Appendix.

7. VIRTUAL COLLOCATION SPACE CHARGES

7.1 Virtual Collocation Space

7.1.1 For each Eligible Structure in which Collocator desires to virtually collocate equipment, Collocator must submit a Virtual Collocation Application with the applicable Application and Project Management Fees. A copy of the Virtual Collocation Application may be obtained from the SBC-13STATE Collocation Services Account Manager or from the SBC-13STATE CLEC ONLINE Web-Site. The Virtual Collocation Application must also be used for each subsequent request to place equipment in an Eligible Structure.

7.2 SBC-13STATE will contract for and perform the construction and preparation activities necessary to prepare the Virtual Collocation Space, using the same or consistent practices that are used by SBC-13STATE for other construction and preparation work performed in the Eligible Structure.

7.3 Recurring/Non-Recurring charges - Collocator shall pay SBC-13STATE all associated non-recurring and recurring charges for use of the Virtual Collocation Space. These charges may be generated on an ICB basis or may be contained in the state specific Appendix Pricing attached. The recurring monthly charges for each Virtual Collocation space shall stay fixed for the term of this Agreement unless modified upon re-negotiation of the Interconnection Agreement and/or pursuant to a Commission order.

7.3.1 An ICB quote is prepared by SBC-13STATE to estimate non-recurring and recurring charges associated with the requested Virtual Collocation Space where a state specific rate element does not exist in the attached Appendix Pricing. This ICB quote is prepared specifically for collocation requests and is not associated in any way with the Bona Fide Request (BFR) process used to request UNEs or other unique items not contained in a Collocator's ICA. The ICB will be subject to true-up one hundred-twenty (120) days following

the job completion date.

7.4 Payment of Space Preparation/Site Preparation - Prior to any obligation on SBC-13STATE to start any preparation of the Virtual Collocation space, Collocator shall pay SBC-13STATE fifty percent (50%) of the non-recurring charges and eighty-five percent (85%) of any custom work charge required to create or vacate any entrance facility for the Collocator ("Custom Work"). Collocator also has the option of submitting a surety bond to cover these charges, in lieu of a check. The remainder of the non-recurring charges and any custom work charge are due upon completion and prior to occupancy by the Collocator.

7.5 Occupancy Conditioned on Payment - SBC-13STATE shall not permit Collocator's SBC-13STATE Approved Vendor to have access to the Virtual Collocation space for any purpose during construction of the Collocator's Virtual Collocation space until SBC-13STATE is in receipt of complete payment of the non-recurring and any custom work charges.

7.6 Breach Prior to Commencement Date - In the event that the Collocator materially breaches this Agreement by purporting to terminate this Agreement after SBC-13STATE has begun preparation of the Virtual Collocation space but before SBC-13STATE has been paid the entire amounts due under this Article, then in addition to any other remedies that SBC-13STATE might have, the Collocator shall be liable in the amount equal to the non-recoverable costs less estimated net salvage. Non-recoverable costs include the non-recoverable cost of equipment and material ordered, provided or used; the non-recoverable cost of installation and removal, including the costs of equipment and material ordered, provided or used; labor; transportation and any other associated costs.

7.7 Late Payment Charge - In the event that any charge, when billed in a timely manner, is not paid when due, the unpaid amounts shall bear interest in accordance with the terms and conditions set forth in the General Terms and Conditions (GT&C) attached.

7.8 Charges will begin to accrue on the Effective Billing Date - The Effective Billing Date is the date SBC-13STATE made the Virtual Collocation Space available to Collocator.

7.9 The monthly recurring charge(s) shall begin to apply within, but no later than five (5) days from the date that SBC-13STATE made the Virtual Collocation space available to the Collocator. The fact that SBC-13STATE may have additional work to perform after Collocator does complete its work shall not bar the start of such charges.

7.10 SBC-13STATE shall ensure that the Virtual Collocation space and the Eligible Structure comply with all applicable fire and safety codes. The preparation shall be

arranged by SBC-13STATE in compliance with all applicable codes, ordinances, resolutions, regulations and laws.

8. USE OF VIRTUAL COLLOCATION SPACE

8.1 A list of all Collocator equipment that will be placed within the Virtual Collocation Space shall be set forth on the Collocator's Virtual Collocation Application, which includes associated power requirements, floor loading, and heat release of each piece of Collocator's equipment. Collocator warrants and represents that the Virtual Collocation Application contains a complete and accurate list of such Collocator equipment. Collocator's SBC-13STATE Approved Vendor shall not place or leave any other equipment or facilities within the Virtual Collocation space without the express written consent of SBC-13STATE.

8.2 In the event that subsequent to the submission of the Virtual Collocation Application and its list of the Collocator's equipment with the required technical information, Collocator desires to place in the Virtual Collocation Space any telecommunications equipment or such ancillary telecommunications facilities not so set forth in the Virtual Collocation Application, Collocator shall furnish to SBC-13STATE a new Virtual Collocation Application and any applicable charges to cover such equipment or facilities. Thereafter, consistent with its obligations under the Act and applicable FCC and Commission rules, orders, and awards, SBC-13STATE may provide such written consent or may condition any such consent on additional charges arising from the request, including any applicable fees and any additional requirements such as power and environmental requirements for such requested telecommunications equipment and/or facilities. Upon the execution by both SBC-13STATE and Collocator of a final list and description and receipt by SBC-13STATE of payment of any applicable non-recurring charges, the Virtual Collocation arrangement shall be deemed to have been amended and such requested telecommunications equipment and/or facilities shall be included within "Collocator's Equipment."

8.3 Collocator's equipment, operating practices, or other activities or conditions attributable to Collocator that represents a demonstrable threat to SBC-13STATE network, equipment, or facilities, including the Eligible Structure, or to the network, equipment, or facilities of any person or entity located in the Eligible Structure, are strictly prohibited.

8.4 Operation of any equipment, facilities or any other item placed in the Virtual Collocation space shall not interfere with or impair service over SBC-13STATE network, equipment, or facilities, or the network, equipment, or facilities of any other person or entity located in the Eligible Structure; create hazards for or cause damage to those networks, equipment, or facilities, the Virtual Collocation space, or the Eligible Structure; impair the privacy of any communications carried in, from, or through the network, equipment, facilities the Virtual Collocation space or the Eligible Structure; or create hazards or cause physical harm to any person, entity, or

the public. Any of the foregoing events would be a material breach of this Appendix.

8.5 In no case shall Collocator's SBC-13STATE Approved Vendor or any person or entity purporting to be acting through or on behalf of Collocator make any significant rearrangement, modification, improvement, addition, repair, or other alteration to the Virtual Collocation space or the Eligible Structure without the advance written permission or direction of SBC-13STATE. SBC-13STATE shall consider a modification, improvement, addition, repair, or other alteration requested by Collocator, provided that SBC-13STATE shall have the right to reject or modify any such request. SBC-13STATE will perform any such construction, and the associated cost shall be paid by Collocator in accordance with SBC-13STATE then-standard custom work order process or ICB.

9. COLLOCATOR RESPONSIBILITIES

9.1 The Collocator will provide at its expense, all facilities and equipment necessary to facilitate interconnection and access to SBC-13STATE UNEs including, without limitation, the following:

9.1.1 All plug-ins and/or circuit packs (working, spare, and replacements).

9.1.2 All provisioning of virtually collocated equipment.

9.1.3 Any ancillary equipment and cabling used for remote monitoring alarms and control.

9.1.4 Any technical publications and updates associated with all Collocator-owned and provided equipment.

9.1.5 Any Product Change Notice (PCN) modifications, upgrades, and/or changes to the Collocator's equipment that requires the work to be performed within the Eligible Structure must be completed by an SBC-13STATE Approved Vendor or Manufacturer. Escort charges will apply.

9.1.6 All training as specified in Section 9.14.

9.1.7 All defective hard-wired equipment upgrades or changes within the Eligible Structure must be completed by an SBC-13STATE Approved Vendor or Manufacturer. Escort charges will apply.

9.1.8 A storage cabinet for the storage of Collocator's spare circuit packs, unique tools, test equipment, etc. used by SBC-13STATE to maintain and repair virtually collocated equipment.

9.1.9 Procurement, placement and termination of interconnection cabling between

Collocator's dedicated space and SWBT Main Distribution Frame or its equivalent by Collocator's SBC-13STATE Approved Vendor. Additional requirements relating to placement and termination of interconnection cabling is set forth in Section 10.5 of this Appendix.

9.1.10 Procurement and placement of power cable leads by Collocator's SBC-13STATE Approved Power Installation Vendor from the dedicated space to SBC-13STATE's Battery Distribution Fuse Bay (BDFB) or Power Plant, whichever is applicable. Additional requirements relating to placements of power cable leads is set forth in Section 10.6 of this Appendix.

9.2 The Collocator is responsible for coordinating with the Local Operations Center (LOC) in arranging mutually agreed upon visits to the Eligible Structure during the following timeframes and escort charges will apply.

9.2.1 Once when beginning the initial equipment installation.

9.2.2 Once during the middle of the equipment installation.

9.2.3 Once at turn-up completion of such equipment installation.

9.2.4 One (1) general visit per calendar year.

9.2.5 Additional mutually agreed upon visits. (Examples: Acceptance of Virtual Collocation space and the purpose of performing an audit on the installed equipment completed by an SBC-13STATE Approved Vendor prior to turn-up.)

9.2.6 These visits must be arranged ten (10) business days in advance with the LOC. The LOC will generate the appropriate trouble ticket as described in Section 14. A maximum of two (2) Collocator's representatives per escort may participate in any one (1) of the site visits.

9.3 Collocator's SBC-13STATE Approved Vendor shall install all plug-ins and/or circuit packs (working and spare) for fully equipped bays. As an alternative to fully equipped bays, Collocator shall equip the bay(s) with sufficient common equipment and cabling for a minimum of one year's projected growth.

9.4 When Collocator requires additional capacity, a collocation augment application is required. For augments of this type, Collocator may fully equip the additional bay, or may equip the additional bay as described below.

9.4.1 For either an initial installation or an augment as described above, when a bay is in place but Collocator has elected under Section 9.3 above not to fully

equip the bay.

9.4.2 All bays will be powered, cabled, and equipped with sufficient common plugs, so that joint test and acceptance can be completed.

9.4.3 Collocator will pay the monthly recurring charges for the space occupied by the bay regardless of how many shelves are filled.

9.4.4 Collocator will be responsible for capacity management of the equipment placed.

9.5 After the initial installation, or an augment, SBC-13STATE shall only install additional plug-ins and circuit packs for a minimum of one (1) shelf at a time upon the Collocator's request. Collocator may use an SBC-13STATE Approved Vendor for installing plug-ins and circuit packs when less than one full shelf is required. Access for such services will be arranged by the Collocator by contacting the LOC. The LOC will generate appropriate trouble ticket as described in Section 14 for SBC-13STATE to perform the installation, routine maintenance, or to escort the SBC-13STATE Approved Vendor, whichever applies. If the Collocator's SBC-13STATE Approved Vendor has a current existing Installation Agreement (IA) in a central office, then escort charges will not apply.

9.6 In circumstances where shelves only capable of single use plug-in(s) and/or circuit pack(s), the Collocator shall, within thirty (30) calendar days, fully populate the shelf to which the plug-in(s) or circuit pack(s) will be added.

9.7 Standard offered interval for installation of plug-ins and/or circuit packs that involves no more than plugging in the circuit packs or plug-ins will be performed by SBC-13STATE as described in Section 14.

9.8 Non-standard offered interval request for the installation of plug-ins and/or circuit packs performed by SBC-13STATE that is less than the minimum standard requirement described in Section 9.5 and involves no more than plugging in the circuit packs and/or plug-ins will be charged a minimum of a 4-hour holiday call-out. This will be a mutual agreed arrangement with the LOC and the Collocator. The LOC will generate appropriate trouble ticket as described in Section 14 of this Appendix for SBC-13STATE to perform the installation and the shipment of the circuit packs and/or plug-ins will be arranged by the Collocator. If the interval exceeds the 4-hour call-out, the additional hours will be charged at 2.5 times the labor rate for the state the request is generated.

9.9 The Collocator must provide, at its expense, replacements for any recalled, obsolete, defective, or damaged interconnection or entrance cables, equipment, plug-ins, circuit packs, unique tools, test equipment, or any other item or material provided by

the Collocator for placement in/on SBC-13STATE property. Collocator shall provide a stock of such items (excluding unique tools and test equipment) to SBC-13STATE to replace non-functioning items when needed, with a goal of shipping replacement stock no more frequently than once per quarter. SBC-13STATE shall notify Collocator as it uses packs from the stock so that Collocator may replenish the stock. Collocator will provide pre-addressed postage paid mailing packages for return shipment of non-functioning circuit pack(s), plug-in(s), or any other item or material being used by SBC-13STATE to repair and maintain Collocator's virtually collocated equipment. SBC-13STATE shall notify Collocator when any other types of replacement parts or equipment are required. During repair calls, SBC-13STATE technician shall confirm to Collocator representative when SBC-13STATE has used a circuit pack/plug-in or other types of replacement parts or equipment. SBC-13STATE shall notify Collocator upon discovery that test equipment or tools are damaged or otherwise not functioning properly. Notification shall be given to the Collocator personnel participating in the repair efforts if the discovery is made during the course of a repair, or to a contact specified by the Collocator if the discovery is made at some other time.

9.10 The Collocator is responsible for providing the appropriate number of usable equipment spares. Arranging movement of any circuit pack(s) or plug-in(s) between Eligible Structures will be at the Collocator's expense and their responsibility. Replacements must be delivered to the SBC-13STATE central office or SBC-13STATE designated location using the equipment spare within five (5) business days of notification that a spare was used or tested defective.

9.11 The Collocator must provide identification markings on all circuit packs, spares, test equipment, equipment, bays, and any other Collocator owned property provided to SBC-13STATE for Virtual Collocation.

9.12 The Collocator will provide at the initial Method and Procedure (MOP) meeting the following:

9.12.1 Escalation documentation.

9.12.2 Test and acceptance package as described in the SBC ILEC's installation testing standards and requirements located on the SBC-13STATE CLEC ONLINE Web-Site.

9.12.3 Contact names and numbers to arrange for return shipment of defective circuit packs and plug-ins. Collocator will keep this information current.

9.12.4 Functional contacts for the virtual collocation arrangements, including names, telephone numbers, and each person's responsibilities (e.g.), augments, trouble reports, emergency contact). Collocator will keep this information current.

9.13 To the extent known, the Collocator can provide forecasted information to SBC-13STATE on anticipated additional Virtual Collocation requirements. Forecasts are for planning purposes only and will not be used for provisioning space or interconnection arrangements.

SBC-13STATE will identify the training needs of SBC-13STATE personnel from the list of equipment received by the Collocator on the SBC-13STATE Virtual Application Form. The Collocator will be responsible for training SBC-13STATE personnel on the repair and maintenance of the Collocator's equipment, unless: (a) the equipment is already used by SBC-13STATE in the Eligible Structure; or (b) SBC-13STATE technicians assigned to the Eligible Structure have already been trained on the repair and maintenance of that type of equipment. Notwithstanding the foregoing, if the equipment is already used by SBC-13STATE, but Collocator uses the equipment in a different configuration, Collocator will be responsible for any additional training required for repair and maintenance of the equipment in the configuration used by the Collocator. SBC-13STATE will contact Collocator with the required number of SBC-13STATE personnel to be trained and the contact name for the Collocator to coordinate training schedules. The Collocator will be responsible for the following:

9.14.1 Arrange and pay to the training supplier, all costs for the training sessions, including required course material, transportation, and lodging.

9.14.2 Pay all costs associated with lodging, transportation, employees labor rate for time away from job, and per diem, if applicable that is required for SBC-13STATE employee to attend training.

9.14.3 SBC-13STATE may require additional training requirements to adequately provide 7 X 24 hour coverage on the Collocator's virtually collocated equipment when labor resources change for a particular Eligible Structure. SBC-13STATE will notify the Collocator when applicable.

9.14.4 Training may be provided on-site when possible.

9.14.5 The training for which the Collocator will be responsible includes training for the following functions to the extent such functions will be performed by SBC-13STATE and additional training is necessary.

9.14.5.1 Installation, repair, and maintenance of any unique cabling and circuits inside the bay of equipment.

9.14.5.2 Use of on-line documentation or schematics unique to the equipment and unlike that commonly used by SBC-13STATE.

9.14.5.3 Any testing, repair methods, and procedure documents utilized by Collocator, consistent with the manufacturer's operations and maintenance (O&M) manual.

9.14.5.4 Training when updates of technical publications or equipment information are issued.

9.14.5.5 SBC-13STATE will work cooperatively with Collocator to schedule and complete the training requirements prior to Collocator's equipment turn-up. When Collocator provides scheduled training, SBC-13STATE is responsible for employee attendance.

9.15 Collocator will provide remote, real-time network technical support, guidance and direction to SBC-13STATE for all collocated facilities and equipment using on-line telephone support.

9.16 Collocator is responsible for coordinating with SBC-13STATE to ensure that services are installed in accordance with a service request.

9.17 Collocator's SBC-13STATE Approved Vendor will, whenever possible, install the Collocator's equipment in the Virtual Collocation space within thirty (30) calendar days of space turnover. Collocator's SBC-13STATE Approved Vendor must complete installation of Collocator equipment in the Virtual Collocation Space and interconnect to SBC-13STATE network or to its UNEs within one hundred eighty (180) calendar days after space turnover. If Collocator fails to do so, SBC-13STATE may, upon notice, terminate that Virtual Collocation arrangement, and Collocator shall be liable in an amount equal to the unpaid balance of the charges due under and, further, shall continue to be bound by the provisions of this Appendix, the terms or context of which indicate continued viability or applicability beyond termination. For purposes of this Section, Collocator equipment is considered to be interconnected when physically connected to SBC-13STATE network or a SBC-13STATE UNE for the purpose of Collocator providing a telecommunications service.

10. COOPERATIVE RESPONSIBILITIES

10.1 SBC-13STATE will work cooperatively with the Collocator to develop implementation plans including timelines associated with the following:

10.1.1 Ensuring that the Collocator's SBC-13STATE Approved Vendor meets required safety standards as contained in TP76200MP and SBC ILEC's standards and requirements for equipment and facility installations.

10.1.2 SBC-13STATE placement of Collocator's fiber into an SBC-13STATE Eligible Structure.

10.1.3 Location and completion of all splicing.

10.1.4 Completion of installation of equipment and facilities.

10.1.5 Removal of above facilities and equipment.

10.2 This Appendix and the Collocation provided hereunder is made available subject to and in accordance with Sections 10.2.1, 10.2.2, 10.2.3, 10.2.4 and 10.2.5. Collocator shall strictly observe and abide by each.

10.2.1 SBC ILEC's TP 76200MP standards for network equipment, power, grounding, environmental, and virtual design, and any successor document(s), including as such may be modified at any time and from time to time.

10.2.2 SBC ILEC's Interconnector's Collocation Services Handbook or like document, and any successor document(s), as may be modified from time to time as set forth below in Section 10.3.

10.2.3 SBC ILEC's standards and requirements for equipment and facility installations, and any successor document(s) within SBC-13STATE central offices and may be modified from time to time.

10.2.4 Any statutory and/or regulatory requirements in effect at the time of the submission of the Virtual Collocation Application or that subsequently become effective and then when effective.

10.2.5 The SBC ILEC's Interconnector's Collocation Services Handbook or like document, standards and requirements for equipment and facility installations, and the TP 76200MP standards are not incorporated herein but are available on the appropriate SBC-13STATE CLEC ONLINE Web-Site.

10.3 If the SBC ILEC's Interconnector's Collocation Services Handbook or like document, standards and requirements for equipment and facility installations, and the TP 76200MP standards are modified subsequent to the effective date of this Appendix from the attached, the following shall apply:

10.3.1 If a modification is made after the date on which Collocator has or orders a Virtual Collocation arrangement, SBC-13STATE shall provide Collocator with those modifications or with revised versions of such, listing or noting the modifications as appropriate. Any such modification shall become effective and thereafter applicable under this Appendix thirty (30) days after such

amendment is released by SBC-13STATE, except for those specific amendments to which Collocator objects to within thirty (30) days of receipt, providing therewith an explanation for each such objection. The Parties shall pursue such objections informally with each other and, if not resolved within forty-five (45) days, either Party will have fourteen (14) days to invoke the dispute resolution procedures set forth in the GT&C. If neither Party invokes those procedures, the modification is deemed effective and applicable.

10.3.2 If a modification is made after this Agreement becomes part of an effective "Statement of Generally Available Terms and Conditions" or similar document for SBC-13STATE (and the modification has not been included in a change to that "Statement" or this Appendix), then SBC-13STATE will provide Collocator with a copy of such modifications or the most recent version or revision of the particular document promptly after receipt of Collocator's Virtual Collocation Application. Any Collocator objection to those modifications must be received by SBC-13STATE by the thirtieth (30th) day after their receipt by Collocator. Thereafter, the same process and procedure (including timelines) for resolving any objection made under Section 10.3.1 shall apply.

10.3.3 Notwithstanding Sections 10.3.1 and/or 10.3.2, any modification made to address situations potentially harmful to SBC-13STATE or another's network, equipment, or facilities, the Eligible Structure, the Virtual Collocation space, or to comply with statutory or regulatory requirements shall become effective immediately and shall not be subject to objection. SBC-13STATE will immediately notify Collocator of any such modification.

10.4 SBC-13STATE shall provide an interconnection point or points, physically accessible by both SBC-13STATE and Collocator (typically an SBC-13STATE manhole) at which a Collocator fiber optic cable can enter the Eligible Structure, provided that SBC-13STATE will designate interconnection points as close as reasonably possible to the Eligible Structure. The Collocator's fiber must be a single mode fire retardant dielectric fiber optic cable used as a transmission medium to the dedicated splice point. The fiber cable will be spliced to a fiber cable tail at the dedicated splice point by SBC-13STATE and terminated to the Fiber Distribution Frame (FDF) or panel. All fiber termination requests will be distributed from the FDF or panel to the Collocator's designated bay per the Front Equipment Drawing by fiber cross-connects with sufficient slack for the Collocator to terminate in their equipment. Collocator shall be permitted no more than two (2) entrance routes into the Eligible Structure, if available; SBC-13STATE will provide at least two such interconnection points at each Eligible Structure where there are at least two entry points for SBC-13STATE cable facilities and at which space is available for new facilities in at least two of those entry points.

10.4.1 Collocator is responsible for bringing its fiber optic cable to an accessible point outside of the Eligible Structure designated by SBC-13STATE, and for leaving sufficient cable length in order for SBC-13STATE to fully extend such Collocator-provided cable to the vault.

10.4.2 SBC-13STATE will permit interconnection of copper or coaxial cable if first approved by the appropriate State Commission and will permit collocation of microwave transmission equipment along with the microwave entrance facility except where such collocation is not practical for technical reasons or because of space limitations.

10.5 SBC-13STATE will be responsible for determining equipment location within the Eligible Structure. Procurement, placement and termination of interconnection cabling between Collocator's dedicated space and SWBT Main Distribution Frame or its equivalent will be installed by the Collocator's SBC-13STATE Approved Vendor. The Collocator's SBC-13STATE Approved Vendor must obtain an approved Method of Procedures (MOP) from SBC-13STATE and follow the SBC ILEC's standards and requirements for installation of equipment and facilities. SBC-13STATE will install and stencil termination blocks or panels at SBC-13STATE's Main Distribution Frame or its equivalents for the hand off of the Actual Point of Termination (APOT) Connection(s) to the Collocator.

10.6 Unless otherwise expressly agreed in writing, SBC-13STATE will provide for all AC and DC power requirements in the Eligible Structure. The Collocator Approved Vendor is not permitted to, and will not, place any AC or DC power-generating or power-storing devices (including, for example but not limited to rectifiers, battery plants, AC or DC generators) in the Eligible Structure. Power will support Collocator's equipment at the specified DC and AC voltages. At a minimum, the Power and SBC-13STATE associated performance, availability, restoration, and other operational characteristics shall be at parity with that provided to SBC-13STATE substantially similar telecommunications equipment unless otherwise mutually agreed in writing. Loads specified by the Collocator represent the peak current that will be imposed on a power feeder at any voltage within the emergency operating limits of the equipment and any normal operating condition (i.e. not a short circuit or other malfunction). Even though circuit design is based on peak current, DC power plant design sizing by the SBC-13STATE is based on demand management. SBC-13STATE will engineer, design, and place cable racks for all power cable routes within the Eligible Structure. Collocator's SBC-13STATE Approved Power Installation Vendor will place the power cable leads from the dedicated space to SBC-13STATE's Battery Distribution Fuse Bay (BDFB) or Power Plant, whichever is applicable. SBC-13STATE will terminate the Collocator's power cable leads and place fuses at the BDFB or Power Plant, whichever is applicable. The Collocator must contact the assigned SBC-13STATE Project Manager five (5) business days prior to scheduling the power cable terminations and

fuse placement. The Collocator's SBC-13STATE Approved Power Installation Vendor must obtain an approved Method of Procedures (MOP) from SBC-13STATE and follow the SBC ILEC's standards and requirements for installation of equipment and facilities.

10.7 SBC-13STATE will provide negative DC and AC power, back-up power, lighting, ventilation, heat, air conditioning and other environmental conditions necessary for the Collocator's equipment in the same manner and at the same standards that SBC-13STATE provides such conditions for its own substantially similar equipment or facilities within that Eligible Structure.

10.8 Regeneration of either DS-1 or DS-3 signal levels may be provided by Collocator or SBC-13STATE under the custom work order process or ICB, including payment requirements prior to the installation of the regeneration equipment.

10.9 Collocator and SBC-13STATE are each responsible for providing to the other contact numbers for technical personnel who are readily accessible twenty-four (24) hours a day, seven (7) days a week.

10.10 SBC-13STATE shall maintain for the Eligible Structure customary building services, utilities (excluding telephone facilities), including janitor and elevator services, 24 hours a day.

10.11 SBC-13STATE agrees to make, at its expense, all changes and additions to the Eligible Structure required by laws, ordinances, orders or regulations of any municipality, county, state or other public authority including the furnishing of required sanitary facilities and fire protection facilities, except fire protection facilities specially required because of the installation of telephone or electronic equipment and fixtures in the Virtual Collocation space.

10.12 Collocator and SBC-13STATE are each responsible for providing trouble report status or any network trouble of problems when requested by the other.

10.13 Each Party is responsible for immediate verbal notification to the other of significant outages or operations problems which could impact or degrade that other's network, equipment, facilities, or services, and for providing an estimated clearing time for restoration. In addition, written notification must be provided within twenty-four (24) hours.

10.14 In the event SBC-13STATE determines it necessary for the Virtual Collocation space to be moved within the Eligible Structure in which the Virtual Collocation space is located or to another Eligible Structure, Collocator is required to do so. If such relocation arises from circumstances beyond the reasonable control of SBC-13STATE, including condemnation or government order or regulation that makes

the continued occupancy of the Virtual Collocation space or Eligible Structure too costly in SBC-13STATE's sole judgment, Collocator shall be responsible for the cost of preparing the new Virtual Collocation Space at the new location. Otherwise SBC-13STATE shall be responsible for any reasonable preparation costs.

10.15 Upon termination of the Virtual Collocation arrangement, the Collocator will work cooperatively with SBC-13STATE to remove the Collocator's equipment and facilities from SBC-13STATE property subject to the condition that the removal of such equipment can be accomplished without damaging or endangering other equipment located in the central office. SBC-13STATE is not responsible for and will not guarantee the condition of such equipment. The Collocator is responsible for arranging for and paying for the removal of virtually collocated equipment including all costs associated with equipment removal, packing and shipping. Arrangements for and the removal of the Collocator virtually collocated equipment must be made within thirty (30) business days after termination of the virtual collocation arrangement, unless a different time period is mutually agreed upon. The Collocator will pay all arrangement monthly charges until all equipment is removed. If the Collocator has not removed the equipment within this timeframe, SBC-13STATE has the right to remove the equipment and bill the Collocator for any reasonable expense associated with removal of the equipment. SBC-13STATE shall be responsible for exercising reasonable caution when removing virtually collocated equipment. SBC-13STATE will only be responsible for damage done to such equipment caused by gross negligence on the part of SBC-13STATE or its contractors during the removal process. However, Collocators will indemnify and hold SBC-13STATE harmless for any damage done to virtually collocated equipment if SBC-13STATE permits the Collocator to hire an SBC-13STATE approved contractor to remove virtually collocated equipment. Any equipment not removed in this time frame may be removed by SBC-13STATE and stored in a non- SBC-13STATE location, at the expense of the Collocator.

10.16 Upon termination of the Virtual Collocation, the Collocator must remove the fiber entrance cable used for the Virtual Collocation. If the entrance cable is not scheduled for removal within seven (7) days, SBC-13STATE may arrange for the removal, and the Collocator will be responsible for any charges incurred to remove the cable. SBC-13STATE and the Collocator will cooperatively manage the removal process. The Collocator is only responsible for physically removing entrance cables housed in conduits or inner-ducts and will only be required to do so when SBC-13STATE instructs the Collocator such removal can be accomplished without damaging or endangering other cables contained in a common duct or other equipment residing in the central office.

10.17 If Collocator fails to remove its equipment and facilities from the Virtual Collocation space within thirty (30) days after discontinuance of use, SBC-13STATE may perform the removal and shall charge Collocator for any materials used in any such

removal, and the time spent on such removal at the then-applicable hourly rate for custom work. Further, in addition to the other provisions herein, Collocator shall indemnify and hold SBC-13STATE harmless from any and all claims, expenses, fees, or other costs associated with any such removal by SBC-13STATE.

11. TEST AND ACCEPTANCE

11.1 Collocator and SBC-13STATE will complete an acceptance walk-through visit of the Virtual Collocator's space prior to turning the Virtual Collocation space over to the Collocator's SBC-13STATE Approved Vendor. Exceptions that are noted during this acceptance walk-through visit shall be corrected by SBC-13STATE as soon as commercially reasonable after those exceptions are provided in writing, which exceptions shall be provided no more than five (5) business days after the walk through. The correction of these exceptions from Collocator's Virtual Collocation request shall be at SBC-13STATE expense.

11.2 Prior to Collocator's installation vendor powering up equipment, and after the frame connections and equipment has been installed, Collocator will schedule a pre-performance audit visit with the LOC as specified in Section 9.2.5. The Collocator is responsible for auditing the installation and to assure compliance with technical publication specifications. This visit shall be scheduled to take place within ten (10) business days after Collocator's request and shall take no longer than eight (8) hours. Should Collocator determine during the audit that the installation is not compliant with specifications, Collocator may schedule an additional audit after corrective work has been performed. Collocator shall be responsible for coordination with its vendor to be at the site for audit acceptance testing and, when necessary, corrective work.

11.3 Two (2) business days prior to scheduled turn-up of the collocated equipment, the Collocator will arrange to deliver to the SBC-13STATE Central Office, or other pre-designated location by SBC-13STATE, any spare plug-ins, circuit packs, tests sets, unique tools, circuit design information, technical publications, and any other necessary items that are needed to maintain and repair the Collocator's equipment. It is the Collocator's responsibility to arrange with their SBC-13STATE Approved Vendor to place any of the items provided into the Collocator's designated storage cabinet or shelf, if applicable.

11.4 Once the Collocator's equipment installation audit is successfully completed, power must be turned up and tested, the virtually collocated equipment and remote monitoring capabilities must be tested, and connectivity must be tested. Power testing, and connectivity testing in certain situations, will require a cooperative test involving the Collocator, its SBC-13STATE approved installation contractor, SBC-13STATE, and/or SBC-13STATE vendor. Collocator and its installation contractor will perform the equipment and remote monitoring testing. To the extent

possible, SBC-13STATE will work with Collocator to coordinate testing to minimize the number of visits required by Collocator and its contractor.

11.5 All installations of equipment must be in accordance with the SBC ILEC's standards and requirements for equipment and facility installations and subject to review by an SBC-13STATE maintenance engineer for compliance. Should SBC-13STATE maintenance engineer determine during their review audit that the installation is not compliant with specifications, Collocator may schedule an additional audit after corrective work has been performed.

11.6 Collocator shall be responsible of coordination with its SBC-13STATE Approved Vendor to be at the site for acceptance testing.

11.7 Upon successful completion of the testing as described in Section 11.4 above, SBC-13STATE shall provide Collocator with written acceptance notification no more than five (5) business days after turnup of the virtually collocated equipment. Immediately following this notification, SBC-13STATE will begin to maintain and repair the virtual collocated equipment at the direction of the Collocator, if all training requirements have been met.

11.8 Collocator shall accept the installation of equipment and facilities prior to the installation of services using the equipment. Once the equipment is installed and accepted, Collocator will either order Interconnection or network elements from SBC-13STATE to connect to the equipment.

12. DELIVERY INTERVALS

12.1 The delivery interval relates to the period in which SBC-13STATE shall construct and deliver to the Collocator the requested space. The delivery interval begins on the date SBC-13STATE receives an accurate and complete Virtual Collocation Application from the Collocator. The Collocator must provide the SBC-13STATE, within seven (7) days from the date of notification granting the application request, a confirmatory response in writing to continue construction along with the fifty percent (50%) payment of non-recurring charges (unless payment was received with application) or the construction interval provided in table below will not commence until such time as SBC-13STATE has received such response and payment. If the Collocator has not provided the SBC-13STATE such response and payment by the twelfth (12th) day after the date SBC-13STATE notified Collocator its request has been granted, the application will be canceled. Dedicated space is not reserved until SBC-13STATE's receipt of the confirmatory response in writing from the

connections listed above.

For Augments in which the Collocator requests power that exceeds current capacity ratings or augments that require placement of additional cable racks within the Active Central Office space, the construction interval will not exceed ninety (90) days from receipt of accurate and complete application for such augment along with the Application Fee and fifty percent (50%) of all applicable nonrecurring charges. For all other Augments, SBC-13STATE will work cooperatively with Collocator to negotiate mutually agreeable construction intervals.

13. REPAIR AND MAINTENANCE OF EQUIPMENT

13.1 Except in emergency situations, and/or except when SBC-13STATE network reliability is at risk, Collocator will initiate the repair and maintenance process by contacting SBC-13STATE LOC. Collocator-owned fiber optic facilities and central office terminating equipment will be repaired and maintained only upon the request and direction of the Collocator. In an emergency, SBC-13STATE may perform necessary repairs without prior notification or both Parties agree to delineate methods and procedures for emergency notification handling with the LOC. The labor rates applicable to Virtual Collocation are contained within the state specific Appendix Pricing that apply to SBC-13STATE central offices and SBC-13STATE CEVs, Huts and Cabinets for all maintenance and repairs performed at the direction of the Collocator by SBC-13STATE.

13.2 When initiating repair or maintenance requests of Collocator provided virtually collocated equipment, Collocator shall provide the LOC with the following:

13.2.1 Notification that the purpose of the call is to establish a virtual collocation trouble ticket;

13.2.2 SBC-13STATE Eligible Structure's CLLI, circuit identification and/or telephone number;

13.2.3 Location of virtually collocated equipment (Bay, frame, shelf, circuit pack, location and type);

13.2.4 A detailed description of the trouble;

13.2.5 The name and telephone number of the Collocator's employee who will cooperatively test with SBC-13STATE at no charge to SBC-13STATE; and

13.2.6 The type of the trouble.

13.3 When an SBC-13STATE technician calls the Collocator to perform repair/maintenance initiated by a trouble ticket, the Collocator will provide the SBC-13STATE technician with the proper sequencing of repair tasks, including any testing necessary to determine needed repairs.

13.4 SBC-13STATE is not obligated to provide any test equipment to support the Collocator's equipment. To the extent that test equipment owned by SBC-13STATE is located in the central office with the Collocator's equipment, is compatible with Collocator's equipment and is not currently being used to repair SBC-13STATE owned equipment, SBC-13STATE can use this test equipment for test operations directed by the Collocator. SBC-13STATE assumes no liability for damage to Collocator's equipment caused by using SBC-13STATE test equipment. SBC-13STATE is not obligated to move test equipment from one central office to another or to provide any test equipment specifically for use on Collocator's equipment. SBC-13STATE is under no obligation to provide lists of test equipment available at central offices and availability is not implied or guaranteed. Test set availability can only be guaranteed by the Collocator providing test equipment for their exclusive use in maintaining their equipment.

13.5 Upon mutual agreement, when service affecting reports cannot be restored and it is determined support is necessary, the Collocator's SBC-13STATE Approved Vendor may enter the Eligible Structure to assist in troubleshooting and resolving problems associated with the trouble report. If SBC-13STATE, working with the Collocator believes that it would be helpful to have them on site to aid in troubleshooting, it will so request. Charges for an escort will apply in either situation.

13.6 The Collocator may request SBC-13STATE to perform routine maintenance and scheduled events, at mutually agreed upon times, which will be billed on a time and material basis and performed on a case by case basis. When requesting maintenance on Collocator owned equipment, the Collocator shall provide SBC-13STATE with location and identification of the equipment, a detailed description of the maintenance requested, and the estimated time required performing the routine maintenance.

13.7 For routine maintenance, product upgrades, PCN's, Engineering Complaints, and generic upgrades, etc., the Collocator will contact the LOC to arrange access for the Manufacturer or Collocator's SBC-13STATE Approved Vendor to perform the necessary work and escort charges will apply as described in Section 14. For service affecting problems covered by the Manufacturer's warranty, SBC-13STATE shall perform repairs as described in Section 14 of this Appendix.

13.8 SBC-13STATE is responsible for maintaining 7 X 24 maintenance and repair schedule for the Collocator's virtual collocation equipment at the direction of the Collocator on at a time and material basis, however, maintenance and repair will only

be provided on a 7 X 24 basis if the Collocator trains the adequate number of SBC-13STATE personnel provided to the Collocator per Eligible Structure.

14. MEAN TIME RESPONSE INTERVAL (MTRI)

14.1 SBC-13STATE will be responsible for repairing/maintaining Collocator's virtually collocated equipment at the direction of the Collocator with the same diligence it repairs/maintains its own equipment. At a minimum, SBC-13STATE agrees to meet service response interval for installation, repair, and/or maintenance as defined below. Collocator will advise the LOC verbally, of the priority level for each trouble report based on the criteria below. The response interval is defined as the time from the conclusion of a trouble report call from Collocator to the LOC, to the time a SBC-13STATE technician notifies the Collocator's technical support center from the specified trouble location, of the Collocator's virtually collocated equipment that the technician is ready to begin repairs. The Mean Time Response Intervals (MTRIs) for each priority level follows:

14.1.1 **Priority 1 Tickets.** The MTRI for a Priority 1 Ticket is as follows: two (2) hours Monday through Friday between the hours of 8:00 a.m. and 5:00 p.m. for Manned Offices; four (4) hours Monday through Friday between the hours of 5:01 p.m. to 7:59 a.m., Saturday and Sunday. A Priority 1 Ticket is issued for the following reasons:

14.1.1.1 Any network trouble reports where equipment and associated cabling indicates service degradation. This could include LOS (Loss of Signal), LOF (Loss of Frame), LOP (Loss of Pointer) or excessive errors.

14.1.1.2 Telemetry problems causing the loss of surveillance.

14.1.1.3 Remote access to the virtually collocated equipment.

14.1.2 **Priority 2 Tickets**—The MTRI for a Priority 2 Ticket is twenty-four (24) hours. A Priority 2 Ticket is issued for the following reasons:

14.1.2.1 All other non-service affecting report that is not a threat to customer service over night. Also, issue this type of priority ticket when a non-standard installation of plug-in(s) and/or circuit pack(s) is requested by the Collocator as described in Section 9.8.

14.1.3 **Priority 3 Tickets**—The MTRI for a Priority 3 Ticket is seventy-two (72) hours. A Priority 3 Ticket is issued for the following reasons:

14.1.3.1 Minor reports that have been determined not to be an immediate threat to customer service.

14.1.4 **Priority 4 Tickets**—The MTRI for a Priority 4 Ticket is four (4) business days. A Priority 4 Ticket is issued for the following reasons:

14.1.4.1 Installation of plug-ins or circuit packs, routine maintenance, etc. as described in Section 9.5 and 13.7. When installation is performed by Collocator's SBC-13STATE Approved Vendor or Manufacturer, the Collocator will make arrangements with the LOC for a mutual agreed arrangement and escort charges will apply, unless the Collocator's SBC-13STATE Approved Vendor has a current existing Installation Agreement (IA) for the job in a central office. All jobs as described above that are to be performed by SBC-13STATE shall be requested through the LOC by the Collocator and completed at the direction of the Collocator.

14.2 Charges to install, repair, maintain and cooperatively test Collocator's equipment will be on a time and material basis.

15. CASUALTY LOSS

15.1 If the Eligible Structure is damaged by fire or other casualty, and:

15.1.1 The Virtual Collocation space is rendered non-tenantable in whole or in part, SBC-13STATE shall repair the same at its expense (as herein limited) and the recurring charges shall not be abated; or

15.1.2 The Virtual Collocation space is rendered non-tenantable in whole or in part and such damage or destruction can be repaired within ninety (90) calendar days, SBC-13STATE has the option to repair the collocation space at its expense (as herein limited) and the recurring charges shall be proportionately abated to the extent and while Collocator was deprived of the use. If the collocation space cannot be repaired within ninety (90) calendar days, or SBC-13STATE opts not to rebuild, then the collocation arrangement provided shall (upon notice to Collocator within thirty (30) calendar days following such occurrence) terminate as the date of such damage. SBC-13STATE shall endeavor to relocate Collocator equipment to an alternative location.

15.2 Any obligation on the part of SBC-13STATE to repair the collocation space shall be limited to repairing, restoring, and rebuilding the collocation space as originally prepared for Collocator and shall not include any obligation to repair, restore, rebuild or replace any Collocator equipment; or other facilities or equipment located in the Virtual Collocation space. Upon mutual agreement, when Collocator's space or

equipment is damaged, the Collocator may arrange a visit to inspect the condition and escort charges will apply.

15.3 In the event the Eligible Structure shall be so damaged by fire or other casualty that closing, demolition or substantial alteration or reconstruction thereof shall be necessary then, notwithstanding that the collocation space may be unaffected thereby, SBC-13STATE at its option, may terminate any collocation arrangement in that Eligible Structure by giving Collocator ten (10) business days prior written notice within thirty (30) business days following the date of such occurrence, if at all possible.

16. REMOVAL OF EQUIPMENT

16.1 Unless otherwise set forth herein, if Collocator shall default in performance of any term or condition herein, and the default shall continue for thirty (30) days after receipt of written notice, or if Collocator is declared bankrupt or insolvent or makes an assignment for the benefit of creditors, SBC-13STATE may, immediately or at any time thereafter, without notice or demand, expel Collocator and any claiming under Collocator, remove any Collocator equipment and any other items in the Virtual Collocation space, forcibly if necessary, and there upon such Virtual Collocation arrangement shall terminate, without prejudice to any other remedies SBC-13STATE. might have. SBC-13STATE may exercise this authority on an individual collocation space basis. SBC-13STATE may also refuse additional applications for collocation and/or refuse to complete any pending orders for additional space or collocation by Collocator at any time thereafter.

17. LIMITATION OF LIABILITY

17.1 Collocator acknowledges and understands that SBC-13STATE may provide space in or access to the Eligible Structure to other persons or entities ("Others"), which may include competitors of Collocator's; that such space may be close to the Virtual Collocation Space, possibly including space adjacent to the Virtual Collocation Space and/or with access to the outside of the Virtual Collocation Space. In addition to any other applicable limitation, a Party shall have absolutely no liability with respect to any action or omission by any third party, regardless of the degree of culpability of any such third party or the other Party, and regardless of whether any claimed liability arises in tort or in contract. The Parties shall save and hold each other harmless from any and all costs, expenses, and claims associated with any such acts or omission by any Other acting for, through, or as a result of a Party.

18. INDEMNIFICATION

18.1 In addition to any indemnification obligations set forth in the General Terms and Conditions of this Agreement, the Parties shall indemnify and hold harmless each other, their agents, employees, officers, directors and shareholders ("Indemnities"),

from and against any and all liabilities, obligations, claims, causes of action, fines, penalties, losses, costs, expenses (including court costs and reasonable attorney's fees), damages, injuries, of any kind, (individually and collectively "Liabilities"), including but not limited to, Liabilities as a result of (a) injury to or death of any person; (b) damage to or loss or destruction of any property; or (c) Liabilities related in any manner to employee benefits, workers compensation, payroll tax, and any other employer obligations which may be asserted against a Party where such liabilities arise in connection with the other Party's use of persons that it classifies as an independent contractor or subcontractor to perform obligations under this Agreement; (d) attachments, liens or claims of material persons or laborers, arising out of or resulting from or in connection with this Agreement or the performance of or failure to perform and directly or indirectly caused, in whole or part, by acts of omissions, negligent or otherwise, of the other Party or a contractor or a representative of the Party or an employee of any one of them, except to the extent such Liabilities arise from the willful or intentional misconduct of SBC-13STATE or its employees.

19. NOTICES

19.1 Except in emergency situations, SBC-13STATE shall provide Collocator with written notice five (5) business days prior to those instances where SBC-13STATE or its subcontractors may be undertaking a major construction project in the general area of the Virtual Collocation space or in the general area of the AC and DC power plants which support the Virtual Collocation space.

19.2 SBC-13STATE will inform Collocator by telephone of any emergency-related activity that SBC-13STATE or its subcontractors may be performing in the general area of the Virtual Collocation space occupied by Collocator or in the general area of the AC and DC power plants which support the Virtual Collocation space. Notification of any emergency related activity should be made to Collocator as soon as reasonably possible so that Collocator can take any action required monitoring or protecting its service.

19.3 SBC-13STATE will provide Collocator with written notification within ten (10) business days of any scheduled AC or DC power work or related activity in the Eligible Structure that will cause an outage or any type of power disruption to Collocator's equipment. SBC-13STATE shall provide Collocator immediate notification by telephone of any emergency power activity that would impact Collocator's equipment.

19.4 Except as may be specifically permitted in this Agreement, any notice or demand, given by one party to the other shall be in writing and shall be valid and sufficient if dispatched by registered or certified mail, return receipt requested, postage prepaid, in the United States mails, or by facsimile transmission; provided, however, that

notices sent by such registered or certified mail shall be effective on the third business day after mailing and those sent by facsimile transmission shall only be effective on the date transmitted if such notice is also sent by such registered or certified mail no later than the next business day after transmission, all addressed as follows:

If to (AR, CA, CT, KS, MO, NV, OK, TX)
Account Manager - Collocation
2600 N. Central Expressway
6th Floor
Richardson, TX 75080

If to (IL, IN, MI, OH, WI)
Account Manager - Collocation
350 N. Orleans St., 5th Flr.
Chicago, Illinois 60654

If to Collocator: Gary A. Klug
Director – Regulatory Compliance
SCC Communications Corp.
6285 Lookout Road
Boulder, CO 80301

Either party hereto may change its address by written notice given to the other party hereto in the manner set forth above.

19.5 Except as may be specifically permitted in this Agreement, any payment desired or required to be given by one party to the other shall be dispatched by registered or certified mail, return receipt requested, postage prepaid, in the United States mails, and shall be addressed as follows:

If to (AR, CA, CT, KS, MO, NV, OK, TX)
CSC
2600 North Central Expressway,
6th floor,
Richardson, Texas 75080

If to (IL, IN, MI, OH, WI)
Collocation Team
790 N. Milwaukee St., 3rd Floor
Milwaukee, Wisconsin 53202

If to Collocator: Patricia Gilbert
Controller
SCC Communications Corp.
6285 Lookout Road
Boulder, CO 80301

20. INSURANCE

20.1 Collocator shall furnish SBC-13STATE with certificates of insurance which evidence the minimum levels of insurance set forth in the General Terms and Conditions, and state the types of insurance and policy limits provided by Collocator. SBC-13STATE shall be named as an ADDITIONAL INSURED on general liability policy.

SHOULD ANY OF THE ABOVE DESCRIBED POLICIES BE CANCELLED OR MATERIALLY CHANGED, THE ISSUING COMPANY WILL MAIL THIRTY (30) CALENDAR DAYS WRITTEN NOTICE TO THE CERTIFICATE HOLDER (S)

20.1.1 In addition to the insurance requirements set forth in the General Terms and Conditions, Collocator must maintain all Risk Property coverage on a full replacement cost basis insuring all of Collocator's personal property situated on or within the Eligible Structure. Collocator releases SBC-13STATE from and waives any and all right of recovery, claim, action or cause of action against SBC-13STATE, its agents, directors, officers, employees, independent contractors, and other representatives for any loss or damage that may occur to equipment or any other personal property belonging to Collocator or located on or in the space at the request of Collocator when such loss or damage is by reason of fire or water or the elements or any other risks that would customarily be included in a standard all risk insurance policy covering such property, regardless of cause or origin, including negligence of SBC-13STATE, its agents, directors, officers, employees, independent contractors, and other representatives. Property insurance on Collocator's fixtures and other personal property shall contain a waiver of subrogation against SBC-13STATE, and any rights of Collocator against SBC-13STATE for damage to Collocator's fixtures or personal property are hereby waived. Collocator may also elect to purchase business interruption and contingent business interruption insurance, knowing that SBC-13STATE has no liability for loss of profit or revenues should an interruption of service occur that is attributable to any Virtual Collocation arrangement provided under this Appendix.

20.2 The limits set forth in this Section may be increased by SBC-13STATE from time to

time during the term of a Collocation arrangement to at least such minimum limits as shall then be customary in respect of comparable situations within the existing SBC-13STATE structure.

20.3 All policies purchased by Collocator shall be deemed to be primary and not contributing to or in excess of any similar coverage purchased by SBC-13STATE.

20.4 All insurance must be in effect on or before occupancy date and shall remain in force as long as any of Collocator's equipment or other Collocator facilities or equipment remain within the Eligible Structure.

20.5 Collocator shall submit certificates of insurance and policy binders reflecting the coverages specified above prior to, and as a condition of, SBC-13STATE's obligation to turn over the Physical Collocation Space to Collocator or to permit any Collocator-designated subcontractors into the Eligible Structure pursuant to Sections 3.7 and 3.7.3. Collocator shall arrange for SBC-13STATE to receive thirty-(30) calendar day's advance written notice from Collocator's insurance company(ies) of cancellation, non-renewal or substantial alteration of its terms.

20.6 Collocator must also conform to reasonable recommendations made by SBC-13STATE's Property Insurance Company, if any, unless a recommendation is also applicable to SBC-13STATE and SBC-13STATE does not so conform in the Eligible Structure where the Virtual Collocation space is located.

20.7 Failure to comply with the provisions of this "Insurance" Section will be deemed a material breach of this Agreement.

21. PROTECTON OF SERVICE AND PROPERTY

21.1 SBC-13STATE shall use its existing power back-up and power recovery plan in accordance with its standard policies for the specific Central Office.

21.2 For the purpose of notice permitted or required by this Appendix, each Party shall provide the other Party a Single Point of Contact (SPOC) available twenty-four (24) hours a day, seven (7) days a week.

22. APPLICABILITY OF OTHER RATES, TERMS AND CONDITIONS

22.1 Every interconnection, service and network element provided hereunder, shall be subject to all rates, terms and conditions contained in this Agreement which are legitimately related to such interconnection, service or network element. Without limiting the general applicability of the foregoing, the following terms and conditions of the General Terms and Conditions are specifically agreed by the Parties to be legitimately related to, and to be applicable to, each interconnection, service and network element provided hereunder: definitions, interpretation, construction and

severability; notice of changes; general responsibilities of the Parties; effective date, term and termination; fraud; deposits; billing and payment of charges; non-payment and procedures for disconnection; dispute resolution; audits; disclaimer of representations and warranties; limitation of liability; indemnification; remedies; intellectual property; publicity and use of trademarks or service marks; no license; confidentiality; intervening law; governing law; regulatory approval; changes in End User local exchange service provider selection; compliance and certification; law enforcement; no third party beneficiaries; disclaimer of agency; relationship of the Parties/independent contractor; subcontracting; assignment; responsibility for environmental contamination; force majeure; taxes; non-waiver; network maintenance and management; signaling; transmission of traffic to third parties; customer inquiries; expenses; conflicts of interest; survival; scope of agreement; amendments and modifications; and entire agreement.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition by Intrado Communications, Inc. for arbitration of certain rates, terms, and conditions for interconnection and related arrangements with BellSouth Telecommunications, Inc. d/b/a AT&T Florida, pursuant to Section 252(b) of the Communications Act of 1934, as amended, and Sections 120.80(13), 120.57(1), 364.15, 364.16, 364.161, and 364.162, F.S., and Rule 28-106.201, F.A.C.	DOCKET NO. 070736-TP DATED: JUNE 11, 2008

2008 JUN 12 AM 10:29
COMMISSION CLERK

INTRADO COMMUNICATIONS INC.'S RESPONSES TO FPSC STAFF'S SECOND REQUEST FOR PRODUCTION OF DOCUMENTS (Nos. 4-18)

Intrado Communications Inc. ("Intrado Comm"), by its attorneys, hereby respectfully responds to the Florida Public Service Commission ("Commission") Staff's Second Request for Production of Documents (Nos. 4-18) as follows:

REQUEST FOR PRODUCTION OF DOCUMENTS

4. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 44.**

Intrado Comm relied upon the following documents in the preparation of its response to Staff Interrogatory No. 44:

47 U.S.C. § 153(26)
47 U.S.C. § 153(47)
47 U.S.C. § 251(c)(2)
Deployment of Wireline Services Offering Advanced Telecommunications Capability, 15 FCC Rcd 385, ¶¶ 30-31 (1999) (Attachment 4a)
Federal-State Joint Board on Universal Service, 13 FCC Rcd 11501, ¶ 54 (1998) (Attachment 4b)
364.02(14), Florida Statutes
364.02(13), Florida Statutes
364.171(2), Florida Statutes
364.172(2)(d), Florida Statutes
47 C.F.R. § 51.5

5. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 45.**

Intrado Comm relied upon the following documents in the preparation of its response to Staff Interrogatory No. 45:

Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, 22 FCC Rcd 10541 (2007) (Attachment 5a)
NENA 911 Tutorial (January 19, 2000) at page 13 (Attachment 5b)
NRIC Best Practice (Attachment 5c)
NRIC Public Safety Best Practices for Public Safety:
https://www.fcc.gov/nors/outage/bestpractice/ProcessBestPractice.cfm?RequestTimeout=500

6. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 46.**

Intrado Comm relied upon the following documents in the preparation of its response to Staff Interrogatory No. 46:

Local Competition Order, 11 FCC Rcd 15499, 15779-782 (1996) (Attachment 6)
Local Competition Order ¶¶ 167-68 (requiring existing agreements between neighboring non-competing LECs to be filed) (Attachment 6)

7. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 47.**

Intrado Comm relied upon the following documents in the preparation of its response to Staff Interrogatory No. 47:

NENA 911 Tutorial (January 19, 2000) at page 13 (Attachment 5b)
Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, 22 FCC Rcd 10541 (2007) (Attachment 5a)
NRIC Best Practice (Attachment 5c)
NRIC Best Practices for Public Safety found at:
https://www.fcc.gov/nors/outage/bestpractice/ProcessBestPractice.cfm?RequestTimeout=500

8. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 48.**

Intrado Comm is unable to obtain any existing agreements between ILECs addressing the transport of 911 calls between them. While Ms. Pellerin indicates these are "commercial" agreements that do not appear to be filed with the Commission (Pellerin Pre-Filed Testimony at 10, line 4), the FCC deems these ILEC arrangements as subject to Section 252 of the Act and required to be filed. Intrado Comm relied upon the following documents in preparation of its response to Staff Interrogatory No. 48:

Qwest Communications International Inc. Petition for Declaratory Ruling on the Scope of the Duty to File and Obtain Prior Approval of Negotiated Contractual Arrangements under Section 252(a)(1), 17 FCC Rcd 19337, ¶ 8 (2002) (Attachment 8)
Local Competition Order ¶¶ 167-68 (Attachment 6)

9. **Please identify and provide a copy of any FCC orders and other documents that support Intrado's response to Interrogatory No. 49.**

The reliability, flexibility, diversity, and redundnacy mandated by the FCC in the *Katrina Order* cannot be achieved without a network design having the attributes of that developed by Intrado Comm. In addition to general NRIC Public Safety Best Practices, Intrado Comm relied upon the following documents in preparation of its response to Staff Interrogatory No. 49:

Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, 22 FCC Rcd 10541 (2007) (Attachment 5a)
FCC Interoperability Order, 11 FCC Rcd 19392, ¶ 178 (relevant portions in Attachment 9)

10. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 51.**

The current draft of the Parties' interconnection agreement reflecting this language is attached as Attachment 10 (see Section 6.1). AT&T has also verbally stated this position in the negotiation calls.

11. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 52.**

Intrado Comm relied upon the following documents in preparation of its response to Staff Interrogatory No. 52:

FCC Interoperability Order, 11 FCC Rcd 19392, ¶ 178 (relevant portions in Attachment 9)
Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, 22 FCC Rcd 10541 (2007) (Attachment 5a)

12. **Please identify and provide a copy of any FCC orders and other documents that support Intrado's response to Interrogatory No. 53.**

Intrado Comm relied upon the following documents in preparation of its response to Staff Interrogatory No. 53:

Local Competition Order, 11 FCC Rcd 15499, 15779-782 (1996) (Attachment 6)

13. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 54.**

Intrado Comm relied upon the following documents in preparation of its response to Staff Interrogatory No. 54:

Local Competition Order, 11 FCC Rcd 15499, 15779-782 (1996) (Attachment 6)

14. **Please identify and provide a copy of any documents that support Intrado's response to Interrogatory No. 55.**

Intrado Comm relied upon the following documents in preparation of its response to Staff Interrogatory No. 55:

47 U.S.C. § 251(c)(2)
47 C.F.R. § 51.305(a) ("[a]n incumbent LEC shall provide, for the facilities and equipment of any requesting telecommunications carrier, interconnection with the incumbent LEC's network . . . at any technically feasible point within the incumbent LEC's network")
Petition of WorldCom, Inc. Pursuant to Section 252(e)(5) of the Communications Act for Preemption of the Jurisdiction of the Virginia State Corporation Commission Regarding Interconnection Disputes with Verizon Virginia Inc., and for Expedited Arbitration, et al., 17 FCC Rcd 27039, ¶ 52 (2002) ("*Virginia Arbitration Order*") ("competitive LECs may request interconnection at any technically feasible point"), *app. for review pending* (filed Nov. 7, 2002) (relevant portions Attachment 14a)
Developing a Unified Intercarrier Compensation Regime, 16 FCC Rcd 9610, ¶ 112 (2001) ("*Intercarrier Compensation NPRM*") ("an [incumbent carrier] must allow a requesting telecommunications carrier to interconnect at any technically feasible point") (relevant portions Attachment 14b)

ORDER ON REMAND

Adopted: December 23, 1999 **Released: December 23, 1999**

By the Commission: Commissioner Furchtgott-Roth approving in part, dissenting in part and issuing a statement.

I. INTRODUCTION AND OVERVIEW

1. Among the fundamental goals of the Telecommunications Act of 1996 (1996 Act)[1] is the promotion of innovation, investment and competition among all participants and for all services in the telecommunications marketplace, including advanced services.[2] The Commission has issued three orders in this proceeding to date and most recently took an additional step toward implementing Congress's goals for the deployment of competitive advanced services by instituting line sharing obligations for incumbent LECs pursuant to section 251, and establishing spectrum management policies

[1] Telecommunications Act of 1996, Pub. L. 104-104, Feb. 8, 1996, 110 Stat. 56, codified at 47 U.S.C. § 151 et seq. (1996 Act). The 1996 Act amended the Communications Act of 1934. We refer to the Communications Act of 1934, as amended as the "Communications Act" or "the Act."

[2] Joint Statement of Managers, S. Conf. Rep. No. 104-230, 104th Cong. 2d Sess. 1 (1996) *(Joint Explanatory Statement)*. For purposes of this order, we use the term "advanced services" to mean high speed, switched, broadband, wireline telecommunications capability that enables users to originate and receive high-quality voice, data, graphics and video telecommunications. The term "broadband" is generally used to convey sufficient capacity – or bandwidth – to transport large amounts of information. As technology evolves, the concept of "broadband" will evolve with it: we may consider today's "broadband" services to be "narrowband" services when tomorrow's technologies appear.

and rules.[3]

2. Central to Congress' goal of widespread deployment of advanced services is section 251 of the 1996 Act. Congress made clear that the 1996 Act is technologically neutral and is designed to ensure competition in all telecommunications markets.[4] In the *Advanced Services Memorandum Opinion and Order*, we determined, among other things, that incumbent LECs were subject to the obligations imposed by section 251 in connection with the offering of advanced services that employ packet-switching or other specific technologies such as digital subscriber line (xDSL) technologies.[5] At that time, we found that xDSL-based advanced services were "either" telephone exchange service or exchange access service.[6] Following adoption of the *Advanced Services Memorandum Opinion and Order*, US WEST Communications, Inc., (US WEST) sought review in the United States Court of Appeals for the District of Columbia Circuit, seeking reversal of the Commission's holding that advanced services are either telephone exchange service or exchange access.

3. Upon review of the record we determine that US WEST may not avoid the obligations placed on incumbent LECs under section 251(c) of the Act in connection with the provision of advanced services. We also affirm our initial view in the *Advanced Services Memorandum Opinion and Order* that xDSL-based advanced services are either telephone exchange service or exchange access. We clarify that whether xDSL-based advanced services constitute telephone exchange service or exchange access depends on how such technology is used. We find that when xDSL-based advanced services both originate and terminate "within a telephone exchange," and provide subscribers with the capability of communicating with other subscribers in that same exchange, they are properly classified as "telephone exchange service." We also find that xDSL-based advanced services constitute "exchange access" when they provide subscribers with the ability to communicate across exchange boundaries. We find that "information access service" is not a category separate and distinct from telephone exchange service and exchange access. Therefore, even if xDSL-based advanced services are considered "information access services," this does not remove them from the classifications of

[3] *Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket No. 98-147, Memorandum Opinion and Order and Notice of Proposed Rulemaking, 13 FCC Rcd 24012 (1998) (*Advanced Services Memorandum Opinion and Order*); *Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket No. 98-147, First Report and Order and Further Notice of Proposed Rulemaking, 14 FCC Rcd 4761 (1999) (*Advanced Services First Report and Order and FNPRM*); *Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket No. 98-147, Second Report and Order, FCC 99-330 (rel. Nov. 9, 1999) (*Advanced Services Second Report and Order*); *Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket No. 98-147, Third Report and Order, FCC 99-355 (rel. December 9, 1999) (*Advanced Services Third Report and Order*).

000352

telephone exchange service and exchange access.

4. In the *Advanced Services Memorandum Opinion and Order*, we determined, among other things, that incumbent LECs were subject to the obligations imposed by section 251 in connection with the offering of advanced services that employ packet-switching or other specific technologies such as digital subscriber line (xDSL) technologies.[7] At that time, we found that xDSL-based advanced services were "either" telephone exchange service or exchange access service.[8] We found it unnecessary at the time to determine into which of the two service categories the advanced services fell, noting that related issues were pending in other proceedings.[9]

5. In response, the Commission requested the opportunity to consider further the issues raised by US WEST because some of the statutory construction arguments advanced by US WEST in its appellate brief had been presented only summarily and in truncated form before the Commission. The Commission asked that the court grant it the opportunity to address the threshold question of statutory interpretation based on a more complete administrative record. On August 25, 1999, the court granted the Commission's request and remanded the matter back to the Commission.[10] Consequently, on September 9, 1999 the Common Carrier Bureau issued a *Public Notice* seeking comment on the issues raised by US WEST.[11]

6. In response to this *Public Notice*, nineteen comments and twenty replies were filed.[12] The majority of the commenters maintain that the Commission should affirm its holding that xDSL-based advanced services are either telephone exchange service or exchange access.[13] Some commenters maintain, however, that xDSL-based advanced services are telephone exchange service, but not exchange access.[14] Others

maintain that such services fall within the definition of exchange access, but not telephone exchange service.[15] A few commenters argue that xDSL-based advanced services are neither telephone exchange service or exchange access, but are more properly classified as "information access" services.[16]

II. US WEST is an Incumbent LEC and May Not Avoid Section 251 Obligations When Providing Advanced Services

7. Sections 251(a) and 251(b) of the Communications Act impose on all LECs certain duties regarding interconnection, resale of telecommunications services, number portability, dialing parity, access to rights-of-way, and reciprocal compensation.[17] Section 251(c) requires incumbent LECs to meet certain additional obligations to potential competitors with respect to interconnection, access to unbundled network elements, resale of their retail services, notification of interoperability changes to their facilities or networks, collocation, and good faith negotiation.[18]

8. US West and other commenters make several arguments in support of the contention that xDSL based advanced services are not subject to the unbundling obligations under section 251(c)(3). US West argues that when a LEC is providing something other than telephone exchange service or exchange access (or network elements used to provide such services), it is not acting as a LEC and therefore is not subject to the obligations of section 251(c)(3). In addition, US WEST argues that if we require access to network elements on an unbundled basis for the provision of advanced services, that could result in unlimited access to all of an incumbent LEC's facilities.[19] None of these arguments has merit. For the reasons set forth below, we conclude that section 251(c)(3) requires incumbent LECs (as defined in section 251(h)) to provide nondiscriminatory access to network elements used to provide all telecommunications services, including advanced services.

9. At the outset, we affirm our prior conclusion that xDSL-based advanced services constitute telecommunications services as defined by section 3(46) of the Act.[20] Although US WEST has argued that these services are neither exchange access nor

[17] *See* 47 U.S.C. §§ 251(a), 251(b). The interconnection obligation contained in section 251(a) applies to all telecommunications carriers, including LECs. The obligations of section 251(b) apply only to LECs.

[18] *See* 47 U.S.C. § 251(c).

[19] US WEST Reply Comments at 8-9

[20] *See Advanced Services Memorandum Opinion and Order*, 13 FCC Rcd 24012 at ¶¶ 35-36.

telephone exchange services,[21] even US WEST has expressly conceded that advanced services fall within the broad ambit of telecommunications services. In its comments, US WEST has stated that "a telephone company's obligation to provide access to unbundled elements is not dependent on the requester's provision of telephone exchange service or exchange access; rather, unbundled elements must be made available to providers of any telecommunications service, *including advanced services*."[22] Although US WEST has acknowledged that advanced services constitute a type of telecommunications service, US WEST nonetheless argues that the requirements of section 251(c) (3) are not triggered when a carrier provides access to network elements used solely for the provision of advanced services.[23] It contends that when an entity that is otherwise an incumbent LEC is providing something other than telephone exchange service or exchange access service (or network elements used to provide such services), it is not acting as an incumbent LEC and therefore is not subject to the obligations of section 251(c)(3).[24] We reject that assertion.

10. We find no support for US WEST's position in the language of section 251. Nor has US WEST shown how the purposes of the section or the Act would be furthered by making section 251(h) subject to further constraints.[25] Congress has specifically defined an incumbent LEC for purposes of section 251. Pursuant to section 251(h), an incumbent local exchange carrier for any area means the local exchange carrier that "(A) on the date of enactment of the Telecommunications Act of 1996, provided telephone exchange service in such area" and (B) was a member of NECA, the exchange carrier association under section 69.601(b) of the Commission's regulations, or a successor or assign of such a member. Thus, the relevant inquiry for purposes of determining who is an incumbent LEC pursuant to section 251(c) is whether a carrier provided telephone exchange and exchange access service in a given service area on February 8, 1996. There can be no dispute that US WEST provided both telephone exchange and exchange access service on that date. US WEST thus satisfies the statutory definition in section 251(h) and is an incumbent LEC for purposes of section 251. Therefore, because advanced services are telecommunications services, an incumbent LEC (as defined in section 251(h)) must provide nondiscriminatory access to network elements used to provide xDSL-based advanced services consistent with the requirements of section 251(c)(3). We further agree with those commenters who argue that if Congress intended to remove xDSL-based advanced services from the reach of section 251(c), Congress would have done so in a more explicit fashion.[26] For example, in section

[21] *See* ¶¶18-19 infra.

[26] *See* Joint CLEC Comments at 11.

000355

251(c)(2) Congress provided that the interconnection obligations thereunder are triggered not for all telecommunications service, but only "for the transmission and routing of telephone exchange service and exchange access."[27]

11. In fact, as demonstrated by section 251, Congress elected to impose different and increasingly more rigorous obligations on "telecommunications carriers," "local exchange carriers," and "incumbent local exchange carriers." The statutory construction proferred by various incumbent LECs would effectively eliminate these distinctions. Congress used these statutory definitions as a means of assigning carriers to the appropriate section 251 "box," or of exempting them from section 251 entirely.[28] Once a carrier is classified as an incumbent LEC pursuant to section 251(h), the extent to which the individual duties established by the provisions of section 251(c) apply to its various services and facilities is determined by the specific provision in which the duty is set forth.[29] For example, because we determine below that xDSL-based advanced services are exchange access or telephone exchange services, incumbent LECs must provide requesting carriers with interconnection pursuant to section 251(c)(2). Pursuant to section 251(c)(3), incumbent LECs must unbundle facilities used to provide xDSL-based advanced services because these services constitute telecommunications services.

12. Moreover, neither US WEST, SBC, nor any other party has explained how exempting xDSL-based advanced services from section 251(c) would further the purposes of this section or the 1996 Act. We find no evidence that Congress intended to eliminate the Commission's authority to require access to network elements used to provide advanced services -- a result which is at odds with the technology neutral goals of the Act and with Congress' aim to encourage competition in all telecommunications markets.[30]

13. Finally, we reject US WEST's contention that if we consider a carrier to be an incumbent LEC under section 251 when it provides a service other than telephone exchange service or exchange access service, then such a reading of section 251 would inevitably require GTE and Sprint, acting in their capacity as incumbent LECs, to unbundle all their facilities, including their long distance facilities.[31] We find no merit to this contention because it ignores the limitations Congress has established in section 251(d)(2).

[30] *See* Federal State Joint Board on Universal Service, *Report and Order*, CC Docket No. 96-45; 12 FCC Rcd. 8776, 8802-8803 (noting the importance of competitive and technological neutrality to promote competition).

[31] US WEST Reply Comments at 8-9.

14. Section 251(d)(2) imposes a limitation on an incumbent LEC's unbundling obligation pursuant to section 251(c)(3). In a recent rulemaking proceeding, we set forth the standards the Commission will apply to determine which network elements should be unbundled.[32] With regard to non-proprietary elements, a requesting carrier typically may access unbundled network elements if the failure to provide such access would impair the ability of a requesting carrier to provide the services it seeks to offer. With regard to proprietary network elements, a requesting carrier typically may obtain unbundled access to an incumbent LEC's network element if such access is necessary. Pursuant to this standard, the Commission has declined to require incumbent LECs to provide unbundled access to their packet switches.[33] These standards provide ample protection that the unbundling obligations under section 251(c) are consistent with section 251's underlying goal of opening the local market to competition.

III. Statutory Classification of xDSL-Based Advanced Services

15. As noted above, certain obligations set forth in section 251 are specific to the provision of "telephone exchange service" or "exchange access." The primary distinction between these two services is that, while telephone exchange services permit communication "within a telephone exchange" or "within a connected system of telephone exchanges within the same exchange area,"[34] exchange access refers to access to telephone exchange services or facilities for the purpose of originating or terminating communications that travel outside an exchange.[35] Thus, in order to determine into which category xDSL-based services fall, we must determine, as a threshold matter, whether such traffic originates and terminates within the equivalent of an exchange area, in which case it may be classified as "telephone exchange service," or whether such traffic originates in one exchange and terminates in another, in which case it is properly classified as "exchange access."[36]

16. The Commission traditionally has determined the nature of communications by looking to the end points of the communication, and has consistently rejected attempts to divide communications at any intermediate points of switching or

[32] *See Implementation of the Local Competition Provisions of the Telecommunications Act of 1996;* Third Report and Order, CC Docket No. 96-98; FCC 99-238 at ¶ 49 (rel. November 5, 1999) (*Local Competition Third Report and Order*).

[33] *See Local Competition Third Report and Order*, at ¶ 306.

[34] 47 U.S.C. § 3(47)(A).

[35] 47 U.S.C. § 3(16).

[36] We note that our conclusion that whether advanced, packet-switched services constitute "telephone exchange service" or "exchange access" depends on the circumstances in which they are provided, is no different from the conclusion that circuit-switched services constitute either telephone exchange service or telephone toll service, depending upon the end points of the communication. *See* Joint CLEC Commenters Comments at 8.

000357

exchanges between carriers.[37] With respect to xDSL-based advanced services used to connect Internet Service Providers (ISPs) with their dial-in subscribers, the Commission has determined that such traffic does not terminate at the ISP's local server, but instead terminates at Internet websites that are often located in other exchanges, states or even foreign countries.[38] Consistent with this determination, we conclude that typically ISP-bound traffic does not originate and terminate within an exchange and, therefore, does not constitute telephone exchange service within the meaning of the Act. As explained more fully below, such traffic is properly classified as "exchange access." In contrast, work-at-home applications and other non-Internet communications may be properly classified as "telephone exchange service" if they originate and terminate within a local exchange area.[39]

A. xDSL-Based Advanced Services May be Classified as Telephone Exchange Services

1. Background

17. We first address whether a service that employs xDSL technology may be classified as telephone exchange service within the meaning of the Act.[40] The 1996 Act provides two alternative definitions for the term "telephone exchange service."[41] The

[37] *Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Inter-Carrier Compensation for ISP-Bound Traffic*, CC Docket Nos. 96-98 and 99-68, , Declaratory Ruling and Notice of Proposed Rulemaking, 14 FCC Rcd 3689, 3695-3696 at ¶10 (1999)("*Reciprocal Compensation Order*).

[38] In reaching this conclusion, the Commission acknowledged the difficulty of identifying a point of "termination" in the packet-switched network environment of the Internet. The Commission noted, for example, that, in a single Internet communication, an Internet user may access websites that reside on servers in various states or foreign countries, communicate directly with another Internet user, or chat on-line with a group of Internet users located either in the same local exchange or in another country. *Id.*

[39] As we noted in the *GTE ADSL Tariffing Order*, xDSL-based technology is used to support variety of applications that are potentially local in nature, such as certain "work-at-home" applications. In the *GTE ADSL Tariffing Order*, we noted that such "work-at-home" applications are "intrastate" and, therefore, should be tariffed at the state level. *GTE ADSL Tariffing Order* at ¶ 27.

[40] We note that xDSL itself is not a service. Rather, xDSL is a technology used to provide transmission services.

[41] A "telephone exchange service" is a type of "telecommunications service." *See Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, CC Docket No. 96-98, First Report and Order, 11 FCC Rcd 15499, 15636 (1996) (*Local Competition Order*), motion for stay denied, 11 FCC Rcd 11754 (1996), Order on Reconsideration, 11 FCC Rcd 13042 (1996), Second Order on Reconsideration, 11 FCC Rcd 19738 (1996). The statutory definition of "telecommunications service" requires the offering of service "for a fee directly to the public, or to such classes of users as to be effectively available directly to the public, regardless of the facilities used." 47 U.S.C. § 3(46). The Commission has previously stated that the phrase "for a fee" in section 3(46) of the Act "means services rendered in exchange for something of value or a monetary payment." *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Report and Order, FCC 97-157, at ¶ 784 (rel. May 8, 1997), Erratum, CC Docket No. 96- 45, FCC 97-157 (rel. June 4, 1997).

000358

first definition, which is codified in section 3(47)(A), provides that telephone exchange service includes "service within a telephone exchange, or within a connected system of telephone exchanges within the same exchange area operated to furnish to subscribers intercommunicating service of the character ordinarily furnished by a single exchange, and which is covered by the exchange service charge."[42] The second definition, which is codified in section 3(47)(B), provides that the term also includes "comparable service provided through a system of switches, transmission equipment, or other facilities (or combination thereof) by which a subscriber can originate and terminate a telecommunications service."[43] In the *Advanced Services Memorandum Opinion and Order*, we noted that section 3(47)(B) was added to ensure that the definition of telephone exchange service was not limited to traditional voice telephony, but included non-traditional "means of communicating information within a local area."[44]

18. U S WEST contends that prior decisions by the Commission establish that three characteristics must be present before a service may fall within the scope of the "telephone exchange service" definition. First, the service must begin and end "within a telephone exchange" or "within a connected system of telephone exchanges."[45] Second, the service must permit "intercommunication," which U S WEST describes as the ability of every subscriber to communicate with every other subscriber connected to switched network within a particular exchange area.[46] Third, the service must be covered by "the exchange service charge." U S WEST argues that xDSL-based services do not encompass any of the foregoing characteristics and, therefore, do not constitute telephone exchange services within the meaning of the Act.[47]

---

[42] 47 U.S.C. § 153(47)(A). The United States Court of Appeals for the Fourth Circuit explains that "telephone exchange service" is a "statutory term of art ... [that] means service within a discrete local exchange system...." *North Carolina Util. Comm'n v. FCC*, 552 F.2d 1036, 1045 Cir.1976, *cert. denied*, 434 U.S. 874 (1977). The term "exchange service" generally refers to service within local calling areas which is covered by an exchange service charge, as distinct from "toll service" between exchanges for which there is a separate additional charge. *See In the Matter of Declaratory Ruling on the Application of Section 2(b)(2) of the Communications Act of 1934 to Bell Operating Companies*, CC Docket No. 85-197, FCC 87-53, Memorandum Opinion And Order, 2 FCC Rcd 1750, at ¶ 27 n.47.

[43] 47 U.S.C. § 153(47)(B).

[44] *Advanced Services Order* at ¶ 41 (citing Comments of Senators Stevens and Burns, *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45 (*January 1998 Report to Congress*) (filed Jan. 26, 1998), at 2, n.1).

[45] U S WEST Brief at 19 (citing 47 U.S.C. § 153(47)(A).

[46] U S WEST Brief at 19-20 (citing *BellSouth Louisiana II Order*, 13 FCC Rcd. At 20622; *General Tel. Co. of Calif.*, 13 FCC Rcd. 448, 460 (1968); *Offshore Tel. Co.*, 3 FCC Rcd. 4137, 4142 (1988).

[47] U S WEST Brief at 19 (citing *GTE ADSL Order*, 13 FCC Rcd. At 22470-72; *Bell Atlantic Tel. Cos.*, 13 FCC Rcd. 23667, 23668 (1998)). U S WEST contends, for example, that DSL-based services do not originate and terminate within the equivalent of a local exchange area, but instead terminate at destinations located around the world. U S WEST further argues that, in contrast to traditional telephone exchange service, DSL-based services do not interconnect with the traditional circuit-switched network and,

19. U S WEST acknowledges that section 3(47)(B) may expand the range of services that constitute "telephone exchange service" within the meaning of the Act.[48] It argues, however, that the 1996 Amendment extends only to "those services that are functionally similar to and can substitute for the switched local services" described in section 3(47)(A).[49] According to U S WEST, support for this interpretation of section 3(47)(B) can be found in at least two prior Commission orders. It notes, for example, that the Commission previously has construed the term "comparable" as referring to: (1) services that could become "true economic substitutes for wireline local exchange service;"[50] and (2) the provision of local exchange service over alternative facilities, such as substitutes for the copper loop.[51]

2. Discussion

a) Section 3(47)(A)

20. We conclude that xDSL-based advanced services, when used to permit communications among subscribers within an exchange, or within a connected system of exchanges, constitute telephone exchange services within the meaning of section 3(47)(A) of the Act. U S WEST correctly notes that, in cases involving voice communication, the Commission has long interpreted the traditional telephone exchange definition to refer to "the provision of individual two-way voice communication by means of a central switching complex to interconnect all subscribers within a geographic area."[52] Contrary to U S WEST's contention, however, the Commission has never suggested that the telephone exchange service definition is limited to voice communications provided over the public circuit-switched network.

21. As we noted in the *Advanced Services Memorandum Opinion and Order*, neither the statutory language nor the legislative history accompanying section 3(47) limits the term "telephone exchange service" to the provision of voice services.[53] Moreover, we note that the local public switched network has been used for dial-up

access to data transmission services for many years.[54] For example, whenever a facsimilie is sent from a home or office to another party within the local area, the transmission is a data transmission rather than a voice transmission, but such transmissions nevertheless constitute telephone exchange service. Consistent with this, the Commission has expressly made the rules governing basic telephone exchange service equally applicable to LEC provision of data and voice services.[55] The parties have not persuaded us that we should depart from this long-standing practice. Indeed, in this era of converging technologies, limiting the telephone exchange service definition to voice-based communications would undermine a central goal of the 1996 Act--opening local markets to competition to all telecommunications services. We thus conclude, consistent with past practice, that the term "telephone exchange service" encompasses voice and data services.

22. We further disagree with U S WEST that the statutory language or Commission precedent suggest that the term "telephone exchange service" is limited to services that employ circuit-switching technology. Although the definition of what constitutes an "exchange" traditionally has been linked to the area served by a switch, or by an interconnected system of switches,[56] the statutory language does not support a conclusion that only services that employ circuit-switching technology constitute telephone exchange service within the meaning of the Act.[57] Indeed, we have previously noted that the "[t]he concept of an exchange is based on geography and regulation, not equipment."[58] Thus, the interconnection obligations set forth in section 251(c)(2) apply to packet-switched services as well as circuit-switched services.

23. Although we reject the contention that the term telephone exchange service is limited to voice communications, we agree with U S WEST that the statutory text and Commission precedent support a conclusion that telephone exchange services

[54] *See e.g.*, CoreComm Comments at 8.

Petition for Declaratory Ruling that Southern Bell Telephone and Telegraph Company Offer its Local Area Data Transport Service on an Unbundled and Detariffed Basis Pursuant to Section 64.702 of the Commission's Rules*, FCC 86-122, ENF 83-34, Memorandum Opinion and Order on Reconsideration (1986); *see also Advanced Services Order* at ¶ 47 (noting that the interconnection obligations set forth in section 251 apply equally to voice and data services). Some commenters point out that at least four state commissions have concluded that certain packet-switched services, such as frame-relay service, constitute "telephone exchange services," within the meaning of the Act. *See e.g.*, Joint CLEC Commenters Comments at 17-18.

[56] *See* U S WEST Brief at 7 (citing Harry Newton, NEWTON'S TELECOM DICTIONARY 301 (15th ed. 1999).

[57] We note that in the "pre-switching" era, plugs and cords, not circuit switches, were used to provide the original "telephone service, and this original telephone service actually established a "private line" between two parties. This was the typical arrangement in 1934, the year of the adoption of the original Communications Act.

[58] *BellSouth Louisiana II Order* at ¶ 30 & n.68 (citing H. Newton, NEWTON'S TELECOM DICTIONARY (1998) at 277.

000361

must permit "intercommunication" among subscribers within the equivalent of a local exchange area.[59] The term "intercommunication" is not defined in the Act or the Commission's rules. Commission precedent establishes, however, that, as used in section 3(47)(A), "intercommunication" refers to a service that "permits a community of interconnected customers to make calls to one another over a switched network."[60] We, therefore, find that a service satisfies the "intercommunication" requirement of section 3(47)(A) as long as it provides customers with the capability of intercommunicating with other subscribers.

24. U S WEST contends that because an xDSL-based advanced service subscriber must specify the ISP or third party with whom his or her computer is connected, such services do not permit the type of "intercommunication" described in section 3(47)(A). We find, however, that U S WEST's narrow focus on the manner in which xDSL-based advanced services are provisioned is misplaced. In classifying a particular service the relevant inquiry is broader. We find that although a customer must designate the ISP or third party to whom his or her high-speed data transmissions are directed, once on the packet-switched network, a customer may rearrange the service to communicate with any other subscriber located on that network through the use of packet-switching technology. We thus conclude that xDSL-based services provide end-users with the type of intercommunicating capability envisioned by section 3(47)(A).

25. We further find the cases cited by U S WEST to support its contention that services offered over a predesignated transmission path do not constitute telephone exchange service to be readily distinguishable from the xDSL-based services we consider here. Indeed, the services at issue in each of those proceedings were offered over private lines.[61] Private line service is defined as "a service whereby facilities for

[59] *See In the Matter of General Telephone Company Of California (formerly California Water and Telephone Company) The Associated Bell System Companies; The General Telephone System And United Utilities, Inc. Companies Applicability of Section 214 of the Communications Act with Regard to Tariffs for ChannelService for Use by Community Antenna Television Systems,* Docket No. 17333, FCC 68-658, 13 Rad. Reg. 2d (P & F) 667, Decision, at ¶ 24. ("Manifestly, the phrase [telephone exchange service] is intended primarily to apply to a telephone or comparable service involving 'intercommunication,' *i.e.*, a two-way communication, not the one-way transmission of signals which takes place with respect to CATV channel service".).

[60] *Offshore Tel. Co.*, 3 FCC Rcd. 4137, 4142 (1988); see also *BellSouth Louisiana II Order*, 13 FCC Rcd. at 20621 (noting that telephone exchange service involves "a central switching complex which interconnects all subscribers within a geographic area"); *see also General Tel. Co. of Cal.*, 13 FCC 2d 448, 460, ¶ 24 (1968) ("Manifestly, the phrase [telephone exchange service] is intended primarily to apply to a telephone or comparable service involving 'intercommunication,' *i.e.*, a two-way communication, not the one-way transmission of signals which takes place with respect to CATV channel service".).

[61] *Midwest Corp.* involved a one-way television service used by commercial and institutional subscribers for the simultaneous reception of specialized communications. *Midwest Corp.* 53 FCC 2d at 300, ¶ 10. *Cox Cable Communications* involved digital transmission services (DTS) offered on a non-switched basis to particular institutions and private businesses, rather than services offered to the public indiscriminately. Unlike non-switched, private line type services, DSL-based services involve packet switching, which allows DSL subscribers to communicate with any other subscriber on the packet-switched network. In addition to the services being offered over private lines, the cases cited by U S WEST involved factual

000362

communications between two or more designated points are set aside for the exclusive use or availability of a particular customer and authorized users during stated periods of time."[62] The xDSL-based services we consider in the instant proceeding function differently than private line services. Although an xDSL-based advanced service subscriber typically will predesignate the ISP or third party to whom his or her high-speed data transmissions are directed, the customer may, with relative ease, designate that his or her traffic be directed to a different ISP or third party. Changing the destination of the permanent virtual connection (PVC) can be done administratively, without disconnecting the customer's service.[63] Customers subscribing to private line service, in contrast, may communicate only between those specific, predetermined points set aside for that customer's exclusive use. If a private line customer wishes to communicate with a second end-point, the customer (unlike a xDSL-based advanced service subscriber) must order another private line. Similarly, if the customer wishes to have only one private line, the customer must have the first line disconnected. Thus, other than the fact that both services involve an initial connection between an end-user and a service provider, xDSL-based advanced services are readily distinguishable from private line service in ways critical to our application of the "telephone exchange service" classification.[64]

26. We recognize that, in the *GTE ADSL Tariffing Order*, the Commission noted that a dedicated connection between an end-user and a service provider's point of presence is similar to private line service.[65] We do not find, however, that such an observation is relevant with respect to determining whether services that employ xDSL

---

circumstances substantially different from those here. *Offshore Telephone*, for example, involved a dispute relating to pre-divestiture toll sharing, in which Offshore, a specialized radio communications carrier, complained that AT&T had engaged in unlawful discrimination by refusing to enter into toll sharing arrangements with Offshore while, at the same time, extending such arrangements to local exchange carriers. The Commission found that Offshore had failed to prove that it was a local exchange carrier and, therefore, was not similarly situated with local exchange carriers participating in the toll sharing. The Commission found it relevant that: (1) "Offshore's subscribers were a limited group of specialized business customers that used dedicated private lines to make long distance calls to and from offshore rigs and platforms;" (2) Offshore was not certified as a local exchange carrier; (3) Offshore classified its revenues as private line service revenues derived from interstate toll, not "local service revenues;" and (4) Offshore did not itself provide exchange switching. *Offshore at ¶ 11.* In contrast the record in the instant proceeding indicates that providers of xDSL-based services are certified as local exchange carriers and serve a broad base of customers. *See e.g.*, MGC Communications Comments at 1; DSLnet Comments at 2. Moreover, such carriers typically have deployed their own packet-switched networks and use their own facilities to route their subscribers' communications.

000383

technology may constitute telephone exchange service within the meaning of the Act. Rather, the key criterion for determining whether a service falls within the scope of the telephone exchange service definition is whether it permits "intercommunication." As noted above, in this regard, xDSL-based advanced service and private line service are distinguishable in that xDSL-based services permit intercommunication and private line services do not.

27. The final requirement in section 3(47)(A) is that telephone exchange services be covered by "the exchange service charge."[66] Although this term is not defined in the Act or the Commission's rules we glean its meaning from the context in which the phrase is used. We agree with those commenters who argue that the phrase implies that an end-user obtains the ability to communicate within the equivalent of an exchange area as a result of entering into a service and payment agreement with a provider of a telephone exchange service.[67] Specifically, we concur with AT&T that the "covered by the exchange service charge" clause comes into play only for the purposes of distinguishing whether or not a service is a local (telephone exchange) service, by virtue of being part of a "connected system of exchanges," and not a "toll" service.[68] Any other interpretation would confer upon LECs the ability to remove services at will from the definition of "telephone exchange services" simply by calling charges for these services something other than "exchange service charges" on their bills. We thus find that any charges that a LEC assesses for originating and terminating xDSL-based advanced services within the equivalent of an exchange area would be covered by the "exchange service charge."

28. We thus reject U S WEST's contention that, because the price of xDSL-based services is not included within the price of basic local telephone service, such services are not covered by "the exchange service charge." Indeed, we note that, in a competitive environment, where there are multiple local service providers and multiple services, there will be no single "exchange service charge."[69] We further note that, if a service otherwise satisfies the telephone exchange service definition, a LEC has the option of including the price of that service within the price it charges consumers for basic local telephone service. The fact that U S WEST, or any other LEC, chooses to list the charge for basic local telephone service and xDSL-based advanced service separately

[66] 47 U.S.C. § 3(47)(A).

[67] The Webster's Third New International Dictionary defines the verb to "subscribe" as "to agree to take and pay for something (as stock) by signing one's name to a formal agreement." A subscriber is defined as "one that subscribes." [69] *See* Level 3 Communications Comments at 5.

000364

on end-users' bills is not relevant to a determination of whether the price for the xDSL-based advanced service offering is covered by the exchange service charge.

(b) Section 3(47)(B)

29. We conclude that a service falls within the scope of section 3(47)(B) if it permits intercommunication within the equivalent of a local exchange area and is covered by the exchange service charge. In setting forth the types of services that may fall within the scope of section 3(47)(B), Congress determined, as an initial matter, that such services must be "comparable" to the services described in section 3(47)(A). Although the term "comparable" is not defined in the Act, it is generally understood to mean "having enough like characteristics and qualities to make comparison appropriate."[70] The xDSL-based advanced services at issue here, when they originate and terminate within an exchange area, satisfy the statutory definition of telephone exchange service under clause (B) of section 3(47) as well, and that clause provides an alternative basis for our conclusion that these services may constitute telephone exchange services. We note that neither the statutory text nor the legislative history accompanying section 3(47)(B) provides guidance on which characteristics and qualities must be present in order for a service to fall within the scope of section 3(47)(B). In these circumstances, we presume that Congress sought to provide the Commission with discretion in determining whether a particular telecommunications service is sufficiently "comparable" to the services described in section 3(47)(A) to constitute telephone exchange service within the meaning of the Act.[71]

30. We agree with U S WEST that the term "comparable," as used in section 3(47)(B), means that the services described therein share some of the same characteristics and qualities as the services described in section 3(47)(A). Because we find that the term "comparable" means that the services retain the key characteristics and qualities of the telephone exchange service definition under subparagraph (A), we reject the argument that subparagraph (B) eliminates the requirement that telephone exchange service permit "intercommunication" among subscribers within a local exchange area. As prior Commission precedent indicates, a key component of telephone exchange service is "intercommunication" among subscribers within a local exchange area.[72]

---

[70] WEBSTER'S THIRD INTERNATIONAL DICTIONARY (1976); *see also* MCI Comments at 18; Sprint Comments at 4; U S WEST Brief at 24.

[71] *See United States v. Haggar Apparel Company*, 119 S.Ct. 1392, 1400 (1999) ("Here Congress has authorized the agency to issue rules so that the [statute] may be applied to unforeseen situations and changing circumstances in a manner consistent with general intent."); *see also* RCN Telecom Comments at 5-6; Level 3 Comments at 6.

[72] If section 3(47)(B) were interpreted as eliminating an "intercommunication" requirement, private line services would fall squarely within the definition of telephone exchange service, thus subjecting private line carriers to regulation as LECs. We do not find that, by amending the statute, Congress intended to extend the telephone exchange definition to encompass carriers that historically have been excluded from common carrier regulation. Indeed, in this regard, we agree with U S WEST that section 3(47)(B) was intended to expressly encompass the provision of telephone exchange service over facilities separate from the public switched network, such as packet-switching. Section 3(47)(B) provides, for example, that the

000365

31. We reject U S WEST's contention, however, that section 3(47)(B) is limited to services that are "market substitutes" for two-way switched voice service. We recognize that, in the *Local Competition Order*, the Commission determined that section 3(47)(B) includes cellular and other wireless services because such services provide two-way voice communication that could "become...true economic substitute[s]" for traditional two-way switched voice services. Contrary to U S WEST's contention, however, the Commission never suggested that the telephone exchange service definition is limited to voice services or that substitutability is a necessary criterion for determining whether a particular telecommunications service falls within the scope of section 3(47)(B). We note however that xDSL-based services, in fact, are being used to replace local dial-up traffic to ISPs and third parties.

32. Other provisions in the Act support a conclusion that, although the services described in subsection (A) and subsection (B) of the telephone exchange service share some of the same characteristics and qualities, they are not necessarily identical services. Section 271, in particular, states that, in order for a BOC to obtain authorization to provide in-region, interLATA service, it must demonstrate that it is providing access and interconnection to "one or more unaffiliated competing providers" of the type of telephone exchange service described in section 3(47)(A) to residential and business subscribers. A BOC does not satisfy the requirements of section 271 on the basis of a competing provider of the type of services described in section 3(47)(B). Congress's decision to specifically limit section 271 authorization to the types of services described in section 3(47)(A) suggests that, while the services described in subsection (B) and subsection (A) share similar qualities, they are not necessarily identical service offerings.

B. xDSL-Based Services May Be Classified as Exchange Access

1. Background

33. The next question we address is whether, and under what circumstances, xDSL-based advanced services may be classified as exchange access under the Act. As we have previously found in the *Reciprocal Compensation Order*, xDSL-based advanced services that are used to connect ISPs with their subscribers to facilitate Internet bound traffic typically constitute exchange access service because the call initiated by the subscriber terminates at Internet websites located in other exchanges, states, or foreign countries.[73] The mechanics of the Internet bound call are critical to our determination

services described therein may be provided "through a system of switches, transmission equipment, or *other facilities* (or combination thereof)."

[73] *Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Inter-Carrier Compensation for ISP-Bound Traffic*, CC Docket Nos. 96-98 and 99-68, , Declaratory Ruling and Notice of Proposed Rulemaking, 14 FCC Rcd 3689 (1999)("*Reciprocal Compensation Order*"). In reaching the determination that calls to ISPs are typically exchange access, the Commission rejected the contention that ISP-bound traffic consists of "two calls," one of which typically originates and terminates within an exchange area, because "'*both court and Commission decisions* have considered the end-to-end nature of the communications more significant than the facilities used to complete such communications'." Id. at ¶11(citations omitted). The Commission explained that it has consistently "rejected attempts to

000366

that the xDSL-based advanced service provided by the local exchange carrier indeed is exchange access. For that reason, we briefly review the manner in which the call is executed.

34. An ISP is an entity that provides its customers with the ability to obtain a variety of on-line information through the Internet. However, ISPs typically own no telecommunications facilities. In order to provide those components of Internet access services that involve information transport, ISPs lease lines, and otherwise acquire telecommunications, from telecommunications providers - - LECs, CLECs, IXCs and others.[74] ISP's purchase use of analog and digital lines from LECs to connect to their dial-in subscribers. Under one typical arrangement, an ISP customer dials a seven-digit number to reach the ISP server in the same local calling area. To provide transport within its network, the ISP may purchase interexchange telecommunications services from telecommunications carriers, and for transport beyond its network, the ISP either purchases additional interexchange telecommunications from telecommunications carriers, or makes arrangements to interconnect its leased facilities with one or more Internet backbone providers.[75] Thus, the information service is provisioned by the ISP "via telecommunications" including interexchange telecommunications although the Internet service itself is an "information service" under section 3(2) of the Act, rather than a telecommunications service.[76]

2. Discussion

35. The issue we address here is whether xDSL-based services may constitute

---

divide communications at any intermediate points of switching or exchanges between carriers," id. at ¶10 - 11, citing *BellSouth MemoryCall* (rejecting the argument that a call answered by a voice mail service should be treated as a call to the number dialed followed by an information service call from that number to the voice mail address); *Teleconnect* (rejecting the argument that Teleconnect's 800 service should be treated as a call to Teleconnect followed by a call from Teleconnect to the number dialed); *Southwestern Bell* (rejecting the argument that a credit card call should be treated as a call from the card user to an interexchange carrier followed by a second call). *See Petition for Emergency Relief and Declaratory Ruling Filed by BellSouth Corporation*, 7 FCC Rcd 1619 (1992)("*BellSouth MemoryCall*"); *Teleconnect Co. v. Bell Telephone Co. of Penn.*, E-88-83, 10 FCC Rcd 1626 (1995)("*Teleconnect*"), *aff'd sub nom. Southwestern Bell Tel. Co. v. FCC*, 116 F.3d 593 (D.C. Cir. 1997); and *In the Matter of Southwestern Bell Tel. Co.*, CC Docket No. 88-180, Order Designating Issues for Investigation, 3 FCC Rcd 2339, 2341 (1988) ("Southwestern Bell")

[74] See Federal – State Joint Board on Universal Service, CC Docket No. 96-45, *Report to Congress*, 13 FCC Rcd at 11540, ¶ 81 (1998)(hereinafter "Universal Service Report to Congress").

[75] Id. at 13 FCC Rcd 11532-11533, ¶ 66.

[76] Id. at 11536, ¶73. In fact, a service would not satisfy the definition of "information service" unless it had an underlying "telecommunications" component. Further, the telecommunications inputs underlying Internet services are subject to the universal service contribution mechanism. As the Commission has previously explained, "Companies that are in the business of offering basic interstate telecommunications functionality to end users are 'telecommunications carriers,' and therefore are covered under the relevant provisions of sections 251 and 254 of the Act. Id. at ¶105

000367

exchange access under the Act. This question arises primarily in the context of services provided to ISPs to facilitate their provision of Internet access services. Applying the definitions contained in section 3 of the Act, we conclude that the service provided by the local exchange carrier to the ISP is ordinarily exchange access service because it enables the ISP to transport the communication initiated by the end-user subscriber located in one exchange to its ultimate destination in another exchange, using both the services of the local exchange carrier and in the typical case the telephone toll service of the telecommunications carrier responsible for the interexchange transport.[77]

36. We evaluate two relevant definitions contained in the Act. Section 3(16), a new provision of the Act, defines "exchange access" as the offering of access to telephone exchange services or facilities for the purpose of the origination or termination of *telephone toll service*." (emphasis added) Section 3(48), which was in the original Act, in turn defines "telephone toll service" as "telephone service between stations in different exchanges for which there is made a separate charge."[78] We conclude that because the local exchange carrier provides access permitting the ISP to complete the transmission from its subscriber's location to a destination in another exchange using the toll service it typically has purchased from the interexchange carrier, the access service provided by the local exchange carrier is for the "origination or termination of telephone toll service" within the meaning of the statutory definition. In reaching this conclusion, we further find that the interexchange carrier that provides the interexchange telecommunications to the ISP charges the ISP for those telecommunications and that charge is separate from the exchange service charge that the ISP or end user pays to the LEC. As a result, the "separate charge" requirement of section 3(48) is satisfied with respect to the underlying interexchange telecommunications.

37. We therefore reject the argument of those commenters who suggest that the *only* service originated or terminated by the local exchange carrier, when it provides access to the ISP, is an information service.[79] We previously rejected a similar argument in the *Universal Service Report to Congress*, where we held that carriers that offer basic interstate telecommunications functionality to end users (such as ISP subscribers) are

[77] These services are "telephone exchange service" when they originate and terminate within an exchange area and "exchange access" when they originate in one exchange and terminate in another. In the *Reciprocal Compensation Order*, we stated that ISPs are "users of access service." *Reciprocal Compensation Order at ¶17.* We did not mean to suggest there that calls involving ISPs are never "telephone exchange service." To the contrary, we expressly recognized that "ISP-bound traffic is jurisdictionally mixed" (*id.* at ¶19). In concluding in the *Reciprocal Compensation Order* that ISP-bound traffic is not subject to section 251(b)(5), we were focusing on the "substantial portion of Internet traffic" that "involves accessing interstate or foreign websites" (*id.* at ¶18). In particular, we rejected the argument that ISP-bound traffic must be subject to section 251(b)(5) because *all* ISP-bound traffic allegedly consists of "two calls." Consistent with Commission precedent, in the *Reciprocal Compensation Order* we rejected the "two-call" argument and determined that a call from an end users subscriber to an Internet destination constitutes but a single call. *See supra, note 69.*

[78] 47 U.S.C. §(3)(48).

[79] SBC Comments at 9; GTE Reply Comments at 8.

000368

"telecommunications carriers" covered by the relevant provisions of section 251 and 254 of the Act "regardless of the underlying technology those service providers employ, *and regardless of the applications that ride on top of their services.*"[80] In other words, even though the access provided to the ISP by the local exchange carrier facilitates the delivery of an information service because of the "applications that ride on top" of the telecommunications service, that same access necessarily facilitates the origination of the underlying telephone toll service used to transport the ISP's Internet access service. Therefore, while some commenters object that the LECs' services cannot be "exchange access" because there is no origination and termination of traffic to and from a telecommunications carrier, their argument fails whenever the ISP effectuates its transmission using the telephone toll service of a telecommunications carrier, as it generally does.

38. We recognize that this analysis with respect to "exchange access" does not by its terms cover traffic jointly carried by an incumbent LEC and a competitive LEC to an ISP where the ISP self-provides the transport component of its internet service. We leave for another day the question of whether the LEC-provided portion of such traffic (which we believe to be rare) falls within the definition of "exchange access" in section 3(16) and whether, as a result, the incumbent LEC would be subject to the interconnection obligations of section 251(c)(2) with respect to such traffic. We find, however, that even if such traffic traveling over the facilities of an incumbent LEC and a competitive LEC to an ISP falls outside the scope of section 3(16) and is not covered by section 251(c)(2), the ILEC would nevertheless be subject to interconnection obligations imposed by section 251(a) and (to the extent that the service is interstate) section 201(a). Moreover, we note that, to the extent that the LEC-provided portion of such traffic may not fall within the definition of "exchange access," the predominantly inter-exchange end-to-end nature of such traffic nevertheless renders it largely non-local for purposes of reciprocal compensation obligations of section 251(b)(5). In light of our authority to require interconnection under sections 201(a) and 251(a) even in the ISP self-provisioning context, we expect incumbent LECs to continue providing interconnection to competitive LECs without imposing tariff, certification or other requirements on competitive LECs requesting interconnection. We encourage parties alleging the imposition of such requirements to file complaints pursuant to section 208 of the Act.

39. We also reject US WEST's argument that xDSL-based advanced services are not encompassed within the definition of exchange access because such services may not connect one "telephone" to another.[81] US WEST argues that because "telephone toll service" is defined as "*telephone* service *between stations* in different exchange," use of computers or other facilities than telephones as "stations" should remove a service from the classification of telephone toll service. Based on this premise, US WEST further argues that "telephone toll service" should be narrowly construed and that only ordinary telephone to telephone long distance calling can be classified as telephone toll service. We reject these contentions for several reasons.

[80] *Universal Service Report to Congress*, 13 FCC Rcd at 11520, ¶ 39.

[81] US WEST Comments at 8.

40. First, nothing in the Act or legislative history equates the term "station" with any particular type of facility. As several commenters point out, Commission precedent supports the conclusion that the term "station" in section 3(48) refers to *any* device used by an end-user to receive and terminate telecommunications.[82] For example, long distance facsimile transmissions (which clearly involve data) have long been considered telephone toll service; yet those transmissions often are effectuated without the use of a "telephone" device. Rather, as with computers, the facsimile machine is plugged into a telephone jack, and then uses the phone wires for the transmission. US WEST's argument ignores this longstanding precedent. Moreover, a narrow, technology-specific interpretation of the term "station" is not articulated in the Act itself and would be at odds with its "technology neutral" objectives.[83] US WEST would ask us to conclude that Congress intended to ignore the fact that facilities and equipment used to provide telecommunications services evolve over time. We conclude that US WEST's interpretation is neither a "plain meaning," as it asserts, nor, in our view, a reasonable interpretation.

41. Similarly, we reject US WEST's assertion that "telephone service" is limited to voice communications.[84] The local switched network has been used for the origination and termination of interstate data communications for many years. As noted above, the network has long been used to transmit facsimile communications, which are data communications. In fact, in its arbitration with e-spire before the Arizona Corporation Commission, US WEST acknowledged that it is offering the equivalent of exchange access when it permits access to its network for the origination or termination of interstate frame relay services.[85] Similar to xDSL-based services, frame relay service is a high-speed packet switching technology that is used to transmit digital data.[86]

42. We recognize that we did hold, in the *Non-Accounting Safeguards Order*, that ISPs do not receive "exchange access services in connection with their provision of

[82] In addition, Part 68 of the Commission's rules adopts an expansive interpretation of equipment connected to the Public Switched Telephone Network to included a broad array of customer premesis equipment in addition to analog telephones. *See e.g.*, 47 C.F.R. 68.308; Paradyne Corporation Petition for Waiver of the Signal Power Limitations contained in Section 68.308(e) of the Commission's Rules, *Order*, File Nos.: NSD-L-98-93, DA 99-599 (rel. unregulated information services because of their status as non-carriers."[87] However, that Order constitutes a departure from other Commission precedent on this matter. In a contemporaneous Commission decision, the *Local Competition Order*, we specifically stated that, although "[t]he vast majority" of exchange access service purchasers are telecommunications carriers, non-carriers "do occasionally purchase" such services.[88] In fact, when the *Non-Accounting Safeguards Order* was issued, the question of whether an xDSL-based service offering directed at ISPs could be "exchange access" or "telephone exchange service" was not before the Commission. Indeed, such service was first offered more than a year after release of that Order.

43. On a more complete record in this proceeding, we correct the inconsistency in our prior orders and overrule the determination made in the *Non-Accounting Safeguards Order* that non-carriers may not use exchange access and affirm our determination in the *Local Competition Order* that non-carriers may be purchasers of those services. We find that this conclusion is consistent with the Commission's longstanding characterization of the service that LECs offer to enhanced services providers (which include ISPs) as exchange access. In *MTS and WATS Markets Structure Order*, the Commission held that "[a]mong the variety of users of access service are...enhanced service providers."[89] As recognized in that case, the Commission has always required LECs to offer access services to parties that may not be common carriers.[90] Similarly, we noted in the *Amendment of Part 69 of the Commission's Rules Relating to Enhanced Service Providers* that enhanced service providers use "exchange access service"[91] More recently, in *the GTE ADSL Tariffing Order*, we noted that "[t]he Commission traditionally has characterized the link from an end user to an ESP as an interstate access service."[92]

44. These holdings comport with the conclusion in *the Local Competition Order* that non-carriers may purchase exchange access services.[93] This historical treatment properly serves as a lens through which to view Congress's intent in codifying a definition of "exchange access" in the 1996 Act.[94] Nothing in the new definition of the

Act or in its history suggests that Congress intended to narrow, for the first time, the availability of exchange access service to certain telecommunications service providers. For these reasons, we overrule our statements in the *Non-Accounting Safeguards Order* that non-carriers may not use exchange access, which we find to be inconsistent with our own precedent, and with the structure of the Act.

45. Finally, we reject U S WEST's contention that including DSL-based advanced services within the definition of "exchange access" would be inconsistent with the Commission's prior determination that such services constitute "special access." Rather, we find that, with respect to access to the local network for the purpose of originating or terminating an interexchange communication, any service that otherwise constitutes "special access" also falls within the definition of "exchange access." We note that "special access" refers to a dedicated path between an end-user and a service provider's point of presence.[95] We agree that special access, which provides access to the exchange through dedicated facilities, is different than switched access, which provides access to the exchange using switches. Both forms of access, however, provide access to exchange facilities, which is the pertinent point under the statutory definition of "exchange access."

C. "Information Access Service" is Not a Statutory Classification Separate and Distinct from Telephone Exchange Service and Exchange Access

46. US WEST contends that it is not subject to section 251(c) for its provision of xDSL-based advanced services because such services are "information access" services, which it considers a category distinct from both "telephone exchange services" and "exchange access" services.[96] US WEST argues that the category of "information access" in the Modification of Final Judgement (MFJ) should be extended to the Communications Act, notwithstanding that "information access" is not a defined term under the Act, and is cross-referenced in only two transitional provisions. SBC and GTE join US West's argument that advanced services are "information access," which they assert is a category of service distinct from telephone exchange or exchange access under the Communications Act.[97] A number of parties question whether Congress intended to establish "information access" as a separate category of services that are not subject to section 251 requirements.[98] We disagree with US WEST and the commenters who argue that information access services are a separate category of services not subject to section

000372

251(c). For the reasons set forth below, we decline to find that information access services are a separate category of services, distinct from, and mutually exclusive with, telephone exchange services or exchange access services.

47. Although Congress made a number of changes to the definitional provisions of the Act in the 1996 Act it did not include a definition for the term "information access." That omission is not surprising in light of the fact that this term is referenced only twice in the Act, and only for the purposes of transitioning from the MFJ. In contrast, the 1996 Act did provide for new or modified definitions of several terms critical to the statute, including both "exchange access" and "telephone exchange service," terms that appear throughout the Act. The term "information access" first appears in sections 251(g). That provision is a transitional enforcement mechanism that obligates the incumbent LECs to continue to abide by equal access and nondiscriminatory interconnection requirements of the MFJ when such carriers "provide exchange access, information access and exchange services for such access to interexchange carriers and information service providers...." Because the provision incorporates into the Act, on a transitional basis, these MFJ requirements, the Act uses the MFJ terminology in this section.[99] However, this provision is merely a continuation of the equal access and nondiscrimination provisions of the Consent Decree until superseded by subsequent regulations of the Commission.[100]

48. The reference to "information access" in section 274(h)(2)(A) adds little more to US West's argument. That section states that the term "electronic publishing," which section 274 prohibits BOCs form providing for four years, does not include "information access" as defined in the MFJ. The cross-reference to the MFJ reflects the fact that although a BOC would be precluded for a time from engaging in electronic publishing, that prohibition would not encompass other offerings related to information services, including "information access," that otherwise were permitted by the divestiture court. Yet again, in this transitional four-year provision, Congress was merely reconciling certain aspects of the MFJ with the new law. Equally significant, nothing in this provision suggests that "information access" is a category of services mutually exclusive with exchange access or telephone exchange service.

49. For the reasons set forth above, we find that the requirements Congress set forth in section 251 apply to incumbent LECs providing xDSL-based advanced services

[99] In addition to our disagreement with US WEST as to the significance of the MFJ terminology, we question US WEST's underlying premise that the MFJ court considered "information access" to be a category separate and distinct from telephone exchange services and exchange access. In that regard, we note that the MFJ itself defined information access as "the provision of specialized exchange telecommunications services by a BOC in an exchange area...," thus indicating that information access was but a subcategory of a broader category of services. *See United States v. American Tel. & Tel. Co.*, 552 F. Supp. 131 (D.D.C 1982), *aff'd sub nom. Maryland v. United States*, 460 U.S. 1001 (1983).

[100] *See, e.g. United States v. Western Electric Co.*, 741 F.Supp. 1,3 (D.D.C. 1988) ("All information services are provided directly via the telecommunications network. The Operating Companies would therefore have the same incentives and the same ability to discriminate against competing information service providers that they would have with respect to competing interexchange carriers").

000373

and that these services are either telephone exchange or exchange access.

IV. ORDERING CLAUSES

50. Accordingly, IT IS ORDERED that, pursuant to the authority contained in Sections 1-4, 7, 10, 201-205, 251-254, 256, 271, and 303(r) of the Communications Act of 1934, as amended, 47 U.S.C. §§ 151-154, 157, 160, 201-205, 251-254, 256, 271, and 303(r), this *Order on Remand* IS ADOPTED.

51. IT IS FURTHER ORDERED that the Commission's holding in its *Advanced Services Opinion and Order*, that incumbent local exchange carriers are subject to the obligations imposed by section 251 of the Communications Act in connection with the offering of advanced services that employ packet switching or other specific technologies such as digital subscriber line technologies, IS AFFIRMED except to the extent that the Commission has deferred a determination on the narrow question set forth in paragraph 38.

STATEMENT OF COMMISSIONER HAROLD FURCHTGOTT-ROTH APPROVING IN PART & DISSENTING IN PART

Re: Deployment of Wireline Services Offering Advanced Telecommunications Capability, Order on Remand, CC Docket Nos. 98-147, 98-11, 98-26, 98-32, 98-78, 98-91.

I agree with the Commission's decision that US WEST is an incumbent local exchange carrier and may not avoid the obligations imposed by section 251(c)(3) when providing advanced services. I also agree with its conclusion that "information access service" is not a statutory classification separate and distinct from telephone exchange service and exchange access. I cannot, however, approve of the Commission's conclusions that advanced services are either telephone exchange service or exchange access, and I dissent from this aspect of its order.

The statute supplies two definitions of "telephone exchange service." It is either a "service within a telephone exchange, or within a connected system of telephone exchanges within the same exchange area operated to furnish to subscribers intercommunicating service of the character ordinarily furnished by a single exchange, and which is covered by the exchange service charge," or it is a "comparable service provided through a system of switches, transmission equipment, or other facilities (or combination thereof) by which a subscriber can originate and terminate a telecommunications service." 47 U.S.C. § 3(47). Exchange access means "the offering of access to telephone exchange services or facilities for the purpose of the origination or termination of telephone toll services." *Id.* § 3(16).

At the outset, I recognize that these definitions are hardly models of clarity. They incorporate terms better suited to the traditional circuit-switched network, some of which are left undefined in the statute, such as "telephone exchange," "intercommunicating," "the exchange service charge," "origination," and "termination."

Although I agree with the Commission that "telephone exchange service" is not limited to the provision of voice services, I do not think that all advanced services can necessarily be shoehorned into the definition of "telephone exchange service." In my view, some advanced services do not permit the type of "intercommunication" contemplated by section 3(47)(A).

For example, as the Commission acknowledges,[101] an end-user's communication using an xDSL-based service is with an Internet service provider ("ISP") or other third party to which the end-user subscribes. It is not with –and thus not in intercommunication with–other subscribers to a local telephone exchange network, or with subscribers on a different telephone exchange network, or even with the party to whom the end-user's Internet traffic is ultimately directed.

---

[101] *See, e.g., supra* at para. 24 (noting that "a customer must designate the ISP or third party to whom his or her high-speed data transmissions are directed").

000377

Because communication with an advanced service such as xDSL is with and through an ISP, I find it difficult to classify such services as either telephone exchange service or access service. *First*, as I explained in the reciprocal compensation order, I believe that traffic to an ISP, whether dial-up traffic or provided through an advance service, terminates at a the ISP.[102] The so-called "two-call theory" was properly advanced by the Commission before January of this year and then improperly abandoned to provide a short-term remedy to reciprocal compensation issues. As I view local exchange traffic as terminating at an ISP, I consequently cannot view traffic subsequently routed by an ISP as part of a single call, or part of a telephone exchange service.

Second, the Commission has long held that an ISP is not a telecommunications carrier or telecommunications provider.[103] Thus, even under a single-call theory for ISP-bound traffic, it is hard to explain how traffic handled and routed by an ISP could, end-to-end, be an identifiable telecommunications service. How does one characterize the role and identity of the non-telecommunications ISP in a communication that it routes or delivers? This paradox applies for both dial-up traffic and traffic by means of advanced services.

Third, communications through ISPs do not in most instances "terminate" at the facilities of other subscribers. Rather, messages are stored at remote servers, in region or out of region, but not with the ultimate addressee. The addressee, in turn, retrieves the message from the remote server. All of the activities of sending, storing, and retrieving messages are conducted on facilities that the Commission has not suggested are associated with a particular telecommunications service, much less with a particular telephone exchange service or exchange access service.

Fourth, the current use of xDSL services appears fundamentally at odds with the concept of "intercommunication." The end-user cannot change the ISP to whom his high-speed data communications are directed without first disconnecting from that ISP and designating a replacement ISP. Whatever "intercommunication" is occurring in this scenario is between the end-user and the ISP, and I therefore do not think that the end-user is employing advanced services for "intercommunication" with other subscribers within the meaning of section 3(47)(A). Moreover, because the end-user is not

---

[102] *See* Separate Statement of Commissioner Harold W. Furchtgott-Roth, *Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Inter-Carrier Compensation for ISP-Bound Traffic*, 14 FCC Rcd. 3689 (1999).

[103] *See, e.g.*, Universal Service Report to Congress, 13 FCC Rcd 11501, 11522-23 (1998) (describing prior conclusions that ISPs do not to offer "telecommunications service" and thus are not "telecommunications carriers").

000378

"intercommunicating" with other subscribers, I do not agree that advanced services can be deemed "comparable services" under section 3(47)(B).

For similar reasons, I do not believe that advanced services may be classified as "exchange access," which the statute defines as the offering of access to telephone exchange services or facilities for the purpose of the origination or termination of telephone toll services. 47 U.S.C. § 3(16). In the first place, I do not see how an xDSL-based communication is used in the origination or termination of a "telephone toll service," which is a "telephone service between stations in different exchange areas for which there is made a separate charge not include in contracts with subscribers for exchange access," *Id.* §3(48). In any event, as indicated above, I disagree with the Commission's theory regarding the jurisdictional nature of Internet traffic. In my view, an xDSL-based communication to an ISP terminates with the ISP, and so such traffic is not properly classified as "exchange access."

V. WHO CONTRIBUTES TO UNIVERSAL SERVICE MECHANISMS 53
- A. Overview 53
- B. Background 53
- C. Discussion 60

51. Senators Stevens and Burns raise a substantial point. The conference committee's decision not to adopt language explicitly classifying services employing protocol processing as information services supports the inference that the conferees did not intend that classification. We note, however, that the House language, adopted by the conference committee, was derived from the MFJ, and that services employing protocol processing were treated as information services under the MFJ.[107] Furthermore, as noted above, services offering net protocol conversion appear to fall within the statutory language, because they offer a capability for "transforming [and] processing" information. In light of these considerations, we recognize that the issue of the regulatory treatment of protocol processing is a difficult one.

52. We find, however, little to no discussion of this issue in the record. Accordingly, we do not believe that we have an adequate basis for resolving this matter in this Report. Moreover, we believe that we need not resolve the issue in order to address the important issues raised by the Appropriations Act. The regulatory classification of protocol processing is significant to the provision of universal service only to the extent that it affects the appropriate classification of Internet access service and IP telephony. We find, however, for the reasons explained below, that Internet access services are appropriately classed as information services without regard to our treatment of protocol processing.[108] Similarly, our discussion of the regulatory status of phone-to-phone IP telephony is not affected by our resolution of the protocol processing issue.[109] The protocol processing that takes place incident to phone-to-phone IP telephony does not affect the service's classification, under the Commission's current approach, because it results in no net protocol conversion to the end user.[110] Finally, when a facilities owner provides leased lines to an Internet access or backbone provider, it does not provide protocol processing.

3. "Telephone Exchange Service" and "Local Exchange Carrier" Definitions

53. The 1996 Act redefined "telephone exchange service" to include not only "service within a telephone exchange, or within a connected system of telephone exchanges within the same exchange area operated to furnish to subscribers interconnecting service of the character ordinarily furnished by a single exchange," but also "comparable service provided through a system of switches, transmission equipment, or other facilities (or combination thereof) by which a subscriber can originate and terminate a telecommunications

[108] *See infra* Section IV.D.2.

[109] *See infra* Section IV.D.3.

[110] *See supra* note 102.

000381

service."[111] It defined "local exchange carrier" to include "any person that is engaged in the provision of telephone exchange service or exchange access." The definition excludes persons "engaged in the provision of a commercial mobile service . . . except to the extent the Commission finds that such service should be included in the definition of such term."[112]

54. Our review indicates that the legislative history does not provide guidance on the meaning of these provisions. It appears from the legislative text that Congress' redefinition of "telephone exchange service" was intended to include in that term not only the provision of traditional local exchange service (via facilities ownership or resale), but also the provision of alternative local loops for telecommunications services, separate from the public switched telephone network, in a manner "comparable" to the provision of local loops by a traditional local telephone exchange carrier. The record contains very little discussion of these definitions. We do not believe, however, that the 1996 Act's modification of the "telephone exchange service" definition, or its addition of the "local exchange carrier" definition, undercuts the analysis we present in this Report.

IV. APPLICATION OF DEFINITIONS

A. Overview

55. We have been directed by Congress to describe in detail the application of the definitions considered in the previous section to "mixed or hybrid services."[113] Congress has also directed that we explain "the impact of such application on universal service definitions and support, and the consistency of the Commission's application."[114] Under the statute, all "telecommunications carriers" that provide interstate telecommunications services must contribute to federal universal service mechanisms, and any company that otherwise provides interstate telecommunications may be required to contribute. Companies that use other providers' telecommunications networks to provide the communications path underlying their own information services do not contribute directly, but they support universal service indirectly through the telecommunications services they purchase. We conclude that entities providing pure transmission capacity to Internet access or backbone providers provide interstate "telecommunications." Internet service providers themselves generally do not provide telecommunications. In those cases where an Internet service provider owns transmission facilities, and engages in data transport over those facilities in order to provide an information service, we do not currently require it to contribute to universal service mechanisms. We believe it may be appropriate to reconsider that result, as it would appear in such a case that the Internet service provider is furnishing raw transmission capacity to itself. Finally, we consider the regulatory status of various forms of "phone-to-phone IP telephony" service mentioned generally in the record. The record currently before us suggests that

[112] *Id.* § 3(26).

[113] Appropriations Act, § 623(b)(2).

[114] *Id.*

000382

we have explained above, we find that Congress intended to leave this general approach intact when it adopted the 1996 Act.

59. This functional approach is consistent with Congress's direction that the classification of a provider should not depend on the type of facilities used.[119] A telecommunications service is a telecommunications service regardless of whether it is provided using wireline, wireless, cable, satellite, or some other infrastructure. Its classification depends rather on the nature of the service being offered to customers. Stated another way, if the user can receive nothing more than pure transmission, the service is a telecommunications service. If the user can receive enhanced functionality, such as manipulation of information and interaction with stored data, the service is an information service. A functional analysis would be required even were we to adopt an overlapping definition of "telecommunications service" and "information service." If we decided that any offering that "included telecommunications" was a telecommunications service, we would need some test to determine whether the transmission component was "included" as part of the service. Based on our analysis of the statutory definitions, we conclude that an approach in which "telecommunications" and "information service" are mutually exclusive categories is most faithful to both the 1996 Act and the policy goals of competition, deregulation, and universal service.

60. We recognize that the question may not always be straightforward whether, on the one hand, an entity is providing a single information service with communications and computing components, or, on the other hand, is providing two distinct services, one of which is a telecommunications service. It is plain, for example, that an incumbent local exchange carrier cannot escape Title II regulation of its residential local exchange service simply by packaging that service with voice mail.[120] Since *Computer II*, we have made it clear that offerings by non-facilities-based providers combining communications and computing components should always be deemed enhanced.[121] But the matter is more complicated when it comes to offerings by facilities-based providers. We noted recently in the *Universal Service Fourth Order on Reconsideration*, considering a related question, that "[t]he issue is whether, functionally, the consumer is receiving two separate and distinct services."[122]

C. Background on Internet Services

[119] *See* 47 U.S.C. § 3(46) (defining "telecommunications service" to include "the offering of telecommunications for a fee directly to the public . . . regardless of the facilities used").

I. INTRODUCTION

1. In this Order, we direct the Public Safety and Homeland Security Bureau (PSHSB) to implement several of the recommendations made by the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks (Katrina Panel). We further order PSHSB to report to us on its efforts three months from the date of release of this Order and nine months from the date of release of this Order. We also adopt rules requiring some communications providers to have emergency/back-up power and to conduct analyses and submit reports on the redundancy and resiliency of their 911 and E911 networks. Finally, we

extend limited regulatory relief from Section 272 of the Communications Act of 1934, as amended, accorded last year by the Wireline Competition Bureau (WCB).

II. BACKGROUND

2. Hurricane Katrina struck the Gulf Coast of the United States on Monday, August 29, 2005, causing extraordinary destruction to communications companies' facilities and communications services upon which citizens rely, in Alabama, Louisiana, and Mississippi. Hurricane Katrina knocked out more than three million customer phone lines in the region. The wireline telecommunications network sustained enormous damage – dozens of central offices and countless miles of outside plant were damaged or destroyed as a result of the hurricane or the subsequent flooding. Local wireless networks also sustained considerable damage – more than a thousand cell sites were knocked out of service by the hurricane. In the aftermath of the hurricane, more than thirty-five Public Safety Answering Points (PSAPs) were out of service, and some parishes in Louisiana remained without 911 or enhanced 911 (E911) service for weeks.[1]

3. In the aftermath of Hurricane Katrina, the Commission took a number of steps to assist the public safety community and the industry to restore communications. For example, the Commission staff reached out to industry to assess the status of their operations and coordinated with other federal agencies to address FCC licensees' needs with respect to restoration of their systems. In addition, the Commission instituted an expedited process of approving requests for Special Temporary Authority, waivers and other regulatory relief to FCC licensees.

4. In January 2006, Chairman Kevin J. Martin established the Katrina Panel pursuant to the Federal Advisory Committee Act, Public Law 92-463, as amended.[2] The mission of the Katrina Panel was to review the impact of Hurricane Katrina on communications infrastructure in the areas affected by the hurricane and to make recommendations to the Commission regarding ways to improve disaster preparedness, network reliability and communications among first responders such as police, fire fighters, and emergency medical personnel.[3]

5. The Katrina Panel submitted its report on June 12, 2006. The Katrina Panel's report described the impact of the worst natural disaster in the Nation's history, as well as the overall public and private response and recovery efforts. The Commission's goal is to take the lessons learned from that disaster and build upon them to promote more effective, efficient response and recovery efforts, as well as heightened readiness and preparedness.

6. To accomplish this goal, the Commission issued a Notice of Proposed Rulemaking (*Notice*) on June 19, 2006 inviting comment on what actions the Commission

---

[1] *See generally* Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, *Report and Recommendations to the Federal Communications Commission*, 5-31 (Katrina Panel Report); *see also* Federal-State Joint Board on Universal Service, Order, 20 FCC Rcd 16883, para. 2 (2005) (*Katrina USF Order*).

[2] 5 U.S.C. App. 2 (1988).

[3] *See* the Katrina Panel Charter *available at* http://www.fcc.gov/eb/hkip/HKIPCharter.pdf (last visited June 15, 2006); *see also* the Notice of Establishment of the Commission's Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, 71 Fed. Reg. 933 (2006).

should take to address the Katrina Panel's recommendations.[4] Noting that several of the Katrina Panel's recommendations involved Commission actions that were not dependent on a rulemaking or measures that may not fall within the Commission's statutory authority and jurisdiction, the *Notice* asked commenters to note what actions would fall within the Commission's statutory authority and jurisdiction, and what the Commission could do to encourage the appropriate entities to take action. The *Notice* also generally sought comment on whether, in adopting any of the Katrina Panel's recommendations, any additional safeguards should be implemented to limit disclosure of sensitive infrastructure information or commercial information to prevent exposing potential targets to wrongdoers and subjecting regulated entities to competitive harm. In addition, the *Notice* asked whether the Commission, in implementing the Panel's recommendations, should rely on voluntary consensus recommendations as advocated by the Panel or whether it should rely on other measures for enhancing readiness and promoting more effective response efforts. The *Notice* also sought comment on whether and how the Commission can assist organizations whose primary business is not communications (*e.g.*, hospitals, nursing homes, day care facilities, and so forth) with developing communications plans for an emergency.

7. On July 26, 2006, the Commission issued a Public Notice asking commenters to address the applicability of the Katrina Panel's recommendations to all types of natural disasters (*e.g.*, earthquakes, tornadoes, hurricanes, forest fires) as well as other types of incidents (*e.g.*, terrorist attacks, influenza pandemic, industrial accidents). The Public Notice also asked parties to address whether the Panel's recommendations are broad enough to take into account the diverse topography of our Nation, the susceptibility of a region to a particular type of disaster, and the multitude of communications capabilities a region may possess. The Commission received over 100 comments and reply comments in response to the *Notice*.

III. DISCUSSION

A. Preparation for Disasters

8. Readiness Checklists. The Katrina Panel recommended that the Commission work with and encourage each industry sector, through their organizations or associations, to develop and publicize sector-specific readiness recommendations. This recommendation further stated that "such a checklist should be based upon relevant industry best practices as set forth by groups such as the Media Security and Reliability Council ("MSRC") and the Network Reliability and Interoperability Council ("NRIC"). The Katrina Panel also stated that such checklists should include: (1) developing and implementing business continuity plans; (2) conducting exercises to evaluate business continuity plans and train personnel; (3) developing and practicing a communications plan to identify "key players" and multiple means of contacting them; and (4) routinely archiving critical system backups and providing for their storage in "secure off-site" facilities.[5]

[4] *Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks*, Notice of Proposed Rulemaking, EB Docket No. 06-119, 21 FCC Rcd 7320 (2006) ("*Notice*").

[5] *Katrina Panel Report* at 31.

000386

9. Commenters generally supported the creation of voluntary sector-based readiness checklists with input from industry.[6] Some commenters specifically encouraged development by industry trade associations with encouragement from the Commission.[7] In fact, one such readiness checklist has already been developed for the telecommunications industry by the Alliance for Telecommunication Industry Solutions ("ATIS") Network Reliability Steering Committee ("NRSC").[8]

10. Testimony before the Katrina Panel revealed that industry sectors had not adequately prepared for a disaster of Hurricane Katrina's magnitude. We find that implementation of the Panel's recommendations in this area will improve the security and reliability of the Nation's communications infrastructure. Hence, we direct the Public Safety & Homeland Security Bureau to work with the industry to develop voluntary industry-sector readiness checklists to ensure that industry is better prepared for future disasters and emergencies, including an influenza pandemic. MSRC and NRIC best practices and other materials should serve as a foundation for developing these checklists. To ensure that the checklists take into account the needs of different types of companies, we direct the Bureau to reach out to a variety of trade organizations including those representing small communications companies. The Bureau should also publicize and promote implementation of the readiness checklists once developed, for example, by placing the readiness checklists on the Bureau's website and encouraging use of these checklists at summits and conferences.

11. Awareness Program on Alternative Technologies. In the *Notice*, we sought comment on the Katrina Panel's recommendation that we act to enhance the public safety community's awareness of non-traditional emergency alternative technologies that might be of value as back-up communications systems in a crisis. In particular, the Panel mentioned satellite systems and two-way paging systems as especially resilient to disaster. Other technologies, such as WiFi and WiMAX, were cited for their ability to restore service rapidly. In addition to a lack of knowledge about these alternatives, the Panel described the need that members of the public safety community be trained in their use prior to disasters.[9] The Katrina Panel suggested that the

[6] Some commenters noted that providers should be afforded the flexibility to create practices tailored to their unique circumstances. *See, e.g.*, BellSouth Comments at 8-9; T-Mobile USA Reply Comments at 4-5; United States Telecom Association Comments at 9-12. Some commenters asserted that the Commission should require that regulated communications entities develop and maintain business continuity plans for significant disruptions. *See* AT&T Comments at 4-5; Adolph Holmes Comments at 3. However, several others opposed this and encourage industry self regulation regarding development of business continuity plans. *See, e.g.*, Sprint Nextel Comments at 7-8.

[7] *See, e.g.*, Motorola Comments at 3-4; NAB Comments at 5-6.

[8] On October 19, 2006, the NRSC adopted a Hurricane Checklist and submitted that checklist in the docket for the Katrina Panel NPRM (EB Docket 06-119). *See* http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6518531475. Commenters noted that NRSC had been developing readiness checklists for the telecommunications industry.

[9] The Katrina Panel learned that a variety of non-traditional, alternative technologies could have served as effective, back-up communications for public safety until primary systems were repaired during Hurricane Katrina. The Katrina Panel noted that satellite infrastructure was generally unaffected by the storm and could have provided a viable back-up system. Two-way paging operations also remained generally operational during the storm. These paging operations did provide communications capabilities for some police, fire emergency medical personnel and could have been more widely utilized. The Katrina Panel noted that other types of non-traditional but easily deployable technology, such as WiFi and WiMax, or self-contained communications vehicles, could also have been

(continued....)

000387

lack of such training may have contributed to these technologies being overlooked during Katrina, and such training would have to occur prior to a crisis since the days following such an event are consumed with far more pressing issues.

12. Commenting parties favored the Katrina Panel's recommendation that the Commission work to enhance the public safety community's awareness of alternative communications technologies. Many emphasized the importance of satellite technologies,[10] with most of these commenters stressing the need for training in alternative technologies before disaster strikes.[11] Motorola also emphasizes that "... these important technologies will be of little help unless public safety trains on them frequently."[12] SIA and USA Mobility suggested that the Commission improve awareness through a combination of fact sheets and web site distribution of relevant information about alternative technologies.[13] Several commenters suggested that the public safety community be educated about the applicability of amateur radio in a crisis.[14] MAET observed that digital television datacasting is an alternative technology that should not be overlooked for emergency communications.[15]

13. The Commission agrees that improving the public safety community's knowledge of, and training in, alternative technologies would improve preparedness for future crises. We direct PSHSB to develop and implement an awareness program to educate public safety agencies about alternative technologies and to encourage agencies to provide regular training on any alternative technologies to be used. The program could include: (1) web pages describing alternative technologies and how they work; (2) hosting summits and conferences that include discussion of alternative technologies; (3) educating public safety agencies about alternative technologies at events sponsored by third parties; and (4) making staff available to provide advice to public safety agencies on issues regarding specific technologies.[16] Commenters have suggested a number of technologies be included in this program, including two-way paging, satellite, IP-based systems, WiFi and WiMAX. We agree that these technologies as well as others to be determined by PSHSB should be included.

14. Outreach Program for Emergency Medical and Other Communities. The Katrina Panel recommended that the Commission work to assist the emergency medical community to facilitate the resiliency and effectiveness of their emergency communications systems. Specifically, the Katrina Panel stated that the Commission should: (1) educate the emergency

---

(...continued from previous page)
effectively utilized. The Katrina Panel noted that these technologies appear deserving of exploration as back-up communications options to primary public safety systems. *Katrina Panel Report* at 24.

[12] Motorola Comments at 4.

[13] SIA Comments at 9-10; USA Mobility Comments at 10-12.

[14] Society for Preservation of Amateur Radio Comments at 4; Whitman Comments at 3.

[15] Mississippi Authority for Educational Television (MAET) Comments at 4-5.

[16] As suggested by one commenter, PSHSB should also encourage public safety entities to consider whether pooling communications funds could help better prepare for future emergencies. *See* Globalstar Comment at 7.

medical community about emergency communications and help to coordinate this sector's emergency communications efforts; (2) work with Congress and other appropriate federal departments and agencies to ensure emergency medical personnel are treated as public safety personnel under the Stafford Act; and (3) support the U.S. Department of Homeland Security's (DHS) efforts to make emergency medical providers eligible for funding for emergency communications equipment under the State Homeland Security Grant Program.[17] In the *Notice*, we also sought comment on whether and how the Commission can assist organizations whose primary business is not communications (*e.g.* hospitals, nursing homes, day care facilities) with developing communications plans for an emergency.[18] Commenters generally support these recommendations.

15. The PSHSB provides guidance and assistance to state and local governments, health care providers and law enforcement agencies on the use of Land Mobile Radio (LMR) equipment and systems, licensing requirements, and spectrum and frequency use for public safety emergency communications. The PSHSB continues to provide assistance to various stakeholder groups in their efforts to ensure that they have operable, reliable, resilient and redundant emergency communications systems in place. In 2006, several state and regional hospital associations ran on-line articles describing the Commission's expanded outreach to the health care sector regarding emergency communications, noting that the PSHSB is committed to working closely with the nation's health care providers to further strengthen emergency response capabilities and preparedness.[19] As discussed further *infra* at paragraphs 45–48 the Commission has also conducted outreach to encourage the emergency medical community and others to enroll in priority communications service programs.

16. We direct PSHSB to continue these efforts, including its coordination with the Department of Health and Human Services (HHS) in the area of health care emergency preparedness as it relates to communications. PSHSB should continue to educate and encourage the ability of health care providers to employ a plurality of communications systems (*e.g.*, land mobile relay systems, satellite communications, and/or high frequency communications) on premises, outside of their facility, and facility-to-facility. PSHSB should also work with DHS and other federal agencies to ensure emergency medical personnel are treated as public safety personnel under the Stafford Act. This recommendation is critical because the medical sector will be supporting first responders and potential disaster victims.

17. We further direct PSHSB to work with the Nation's health care, education and business communities to include, in their business continuity planning, robust emergency communication plans that ensure that these entities will be able to function during emergencies such as an influenza pandemic.[20] Such emergencies could result in sudden and significant

[17] The Katrina Panel also recommended that the Commission educate the emergency medical community about the various priority communications services (*i.e.*, GETS, WPS and TSP) and urge them to subscribe. This recommendation is addressed *infra* at ¶¶45-48.

[18] *Notice* at para. 10.

[19] *http://mhancwsnow.typepad.com/prepared/.*

[20] A pandemic influenza occurs when a novel strain of the virus appears that causes readily transmissible human illness for which most of the population lacks immunity. History shows that influenza pandemics typically occur with very little warning and hit wide geographic areas in multiple waves, lasting two to three months at a time. *See* (continued....)

shortages of personnel, changes in communications traffic, possible disruptions to communications networks (*i.e.*, due to increased telecommuting by the nation's workforce and society in general during an influenza pandemic), and lack of manpower to immediately repair affected communications networks. PSHSB has already begun efforts to establish a new federal advisory committee that will replace NRIC and MSRC and will address, *inter alia*, communications issues related to an influenza pandemic. PSHSB has also started to assemble information regarding pandemic influenza to place on its website. We direct PSHSB to continue with these efforts. In particular, PSHSB should update its website as soon as possible to include information that addresses pandemic influenza and how to prepare communications systems for such an emergency. The website should include links to other relevant government websites, such as http://www.pandemicflu.gov.

18. Monitoring of Situational Awareness During Disasters. The Katrina Panel observed that there was often a lack of clarity about which federal agency was responsible for collecting outage information and that competing requests for such information at the federal, state and local levels was distracting to restoration efforts and added to confusion about agency roles.[21] In the *Notice*, we sought comment on the Katrina Panel's recommendation that the Commission coordinate all federal outage and infrastructure reporting requirements in times of crisis, functioning as a single repository and contact with consistent data collection procedures. We asked parties to comment on the appropriate content of such emergency outage reports, their format, frequency, distribution and related issues. We also asked parties to comment on whether additional safeguards should be put into effect to address the potential disclosure of commercially sensitive information to avoid potential harm to communications providers or others.[22]

19. The vast majority of commenting parties agreed with the Katrina Panel's recommendation that the Commission serve as a single repository for outage information and implement appropriate safeguards to protect sensitive information that would be provided in such instances.[23] DHS agrees that a central repository for network outage information during a disaster is necessary and suggests that a rulemaking is necessary to facilitate outage reporting to such a repository to improve NS/EP programs.[24] The National Telecommunications and Information Administration (NTIA) supports the Panel's recommendation to the extent that it does not include Federal communications system outages and suggests that the outage database be maintained by the Commission representative to the Joint Field Office (JFO).[25] Several

[25] NTIA Ex Parte at 2.

commenting parties urged the Commission to ensure that the data collection effort is coordinated with the National Communications System (NCS) and the National Coordinating Center for Telecommunications[26] (NCC) and conducted in a way that does not alter the NCC's role as the "primary entity in the federal government for coordinating communications network recovery and information sharing among affected industry members."[27] Commenting parties urged the Commission to implement the steps necessary to protect network outage information from unauthorized disclosure.[28] Commenters also encouraged the Commission to work proactively with state and local entities on a process to share outage information that preserves appropriate confidentiality safeguards, thereby minimizing duplicative requests for such information from different sources.[29] Others encouraged the Commission to work with industry prior to the onset of a disaster to select data fields that are necessary to support emergency management and systems that facilitate data collection,[30] and asserted that the decisions about what data to collect should be balanced against the burden that it would impose on communications providers that are actively engaged in restoration efforts.[31] SIA suggested that reporting entities maintain a method of submitting outage data to the Commission during a disaster even if their primary reporting facility is impaired and urges the Commission to encourage the use of satellite technology for this purpose.[32] NENA suggests that the Commission conduct detailed analyses of the 911 outage data that it routinely collects pursuant to Part 4 and ". . . work with appropriate entities to mitigate these conditions where appropriate."[33]

20. We agree with the Katrina Panel that the Commission should serve as the central point of contact for communications outage information during major events and should provide access to this information to other agencies. The Commission has extensive experience in this area both through its collection of outage information pursuant to Part 4 of the Commission's rules (outage reporting requirements) and from its efforts to collect situational awareness information from licensees in the aftermath of the 2005 hurricanes. Moreover, we note that, prior to the Katrina Panel's Report, PSHSB staff had already begun working with the communications industry and the NCS on ways to streamline the process used to collect situational awareness information from FCC licensees during emergencies. Indeed, PSHSB is now in the late stages of developing a system and process for collection of this information. Under the process contemplated by the PSHSB staff, communications companies serving areas affected by disasters could voluntarily submit information regarding, *inter alia*, the status of their operations, the status of their restoration efforts, their power status (i.e., are they operating based

[26] ATIS Comments at 5; Qwest Comments at 6-7; Union Telephone Reply Comments at 8-9; DHS Comments at 5-6.

[27] AT&T Comments at 5. We note that NCC is not part of the Federal government.

[32] SIA Comments at 10-11.

[33] NENA Comments at 17.

on commercial power, a generator or battery power) and their use of fuel. The information submitted would be accorded confidential treatment, and would be shared with NCS on a *confidential basis. This information* would allow the Commission and other governmental agencies to not only track the status of communications companies' operations in the aftermath of a disaster, but also their restoration status. The information could also be used to determine communications companies' needs (*e.g.*, generator, fuel).[34]

21. We direct PSHSB to continue working with NCS and the communications industry, including the broadcast and cable industries, to resolve any outstanding issues in order to facilitate the activation of the system as soon as possible. The Bureau should also work to obtain any necessary regulatory approvals for collection of this information as soon as possible.[35] Finally, we direct the Bureau to work with the communications industry, NCS and state government agencies to address whether information submitted by the industry should be shared with state governments.[36]

22. We decline to initiate a rulemaking at this time to make the outage reporting process mandatory. The voluntary process that was put in place during Katrina provided the necessary information on a timely basis. Furthermore, a mandatory process would be less flexible and would not adapt well to the unique needs of a particular crisis. For these reasons we find that a voluntary situational awareness process is more effective during disasters. Finally, we note that PSHSB currently conducts the analyses of 911 outage data recommended by NENA, including coordination with appropriate entities and industry bodies to effectuate improvements in 911 reliability where appropriate.

23. Automatic Special Temporary Authority and Waiver Relief. The *Notice* sought comment on the Katrina Panel's recommendation that the Commission establish a prioritized system by which affected parties could automatically be granted waivers of certain regulatory requirements, or be granted automatic Special Temporary Authority (STA) in a particular geographic area if the President declares that area to be a "disaster area."[37] The Katrina Panel stated that, as a condition of such waivers or STAs, the Commission could require verbal or written notification to Commission staff contemporaneously with activation or promptly after the fact. The Katrina Panel also recommended that the Commission examine expanding the on-line filing opportunities for STA requests. In this recommendation, the Katrina Panel also included a list of "possible rule waivers and STAs to study for this treatment."[38] For the reasons indicated below, we have concluded not to automate the waiver and STA process.

24. Although most commenters supported this recommendation, few commented on how such an automatic waiver/STA process would work or be structured. Further no commenter

[34] This process is separate from the mandatory reporting requirements that apply to certain communications carriers under Part 4 of the Commission's rules, 47 C.F.R. Part 4.

[35] *See, e.g.*, Paperwork Reduction Act, 44 U.S.C. § 3501, *et seq.*

[36] We take no action on SIA's recommendation that the Commission urge terrestrial carriers to apply satellite technology as a back-up to their primary reporting facilities, noting that terrestrial carriers are likely to be aware of a number of alternative reporting mechanisms that could be so applied and will use the ones that best suit their needs.

[37] *See Notice*, 21 FCC Rcd at 7320, ¶9; *Katrina Panel Report* at 32.

[38] *See Katrina Panel Report* at 32-33.

asserted that the manner in which the Commission expedited the grant of waivers and STAs during the 2005 hurricanes was not effective.[39] We believe that, on balance, public safety would be better served by an expedited review, rather than a fully automated system. Although we wish to relieve all licensees of unnecessary regulatory burdens during an emergency, we are concerned that a general policy of allowing the automatic grant of STAs and waivers of operational requirements could have serious consequences.

25. For example, without minimal Commission review, an automatic STA could allow operations of a new facility using spectrum already in use by an essential communications provider and thereby inadvertently cause essential communications to fail. We believe that it would be far easier, and more consistent with public safety to grant expedited review of an STA application than to try to undo an automatic STA once operations have begun. Further, the declaration of a "presidential disaster area" does not appear to be a sufficient basis, by itself, to grant an STA or waiver, whether automatically or otherwise.[40] For example, there could be instances where the communications infrastructure in a Presidentially declared disaster area remains intact. In such a case, an STA or waiver may be unwarranted. On the other hand, there may be situations where there is damage to a telecommunications carrier's infrastructure in an area that is never declared a disaster area. Thus, an automatic STA or waiver process based on a Presidentially declared disaster area could be overinclusive in some cases and underinclusive in others. For the same reason we disagree that the triggering by a licensee of its emergency plan generally should act as a trigger for automatic STAs or waivers. There may also be legal impediments to automatic STAs for Title III authorizations under Sections 308(a) and 309(f) of the Communications Act. Finally, we agree with NTIA that, in an emergency, the close coordination that is required between the Commission and NTIA regarding the use of shared Federal/non-Federal bands and shared spectrum management responsibilities precludes a fully automated waiver/STA process.[41] Accordingly, we conclude that some level of Commission review is necessary during an emergency to ensure that STAs or waivers are properly granted.

26. We believe, at this time, the best approach would be to use an expedited process for acting on requests for STAs, waivers and other regulatory relief based on the particular circumstances of the disaster at hand. An expedited process would allow the Commission to ensure that there is a link between the relief being requested and the emergency at issue. During Hurricane Katrina, the Commission publicized its procedures for seeking regulatory relief, granted some relief on its own motion and otherwise processed requests for relief on an expedited basis. Many of these requests were processed within four hours and all were processed within 24 hours.[42] Additionally, Commission rules permit the suspension or waiver of

[39] Rather, commenters such as the Association of Public Television Stations (APTS) noted that "[t]he Commission was particularly responsive to these kinds of waiver requests in the aftermath of Katrina . . ." APTS Comments at 12.

[40] We note that in certain specific instances, it may be appropriate to allow automatic relief of certain regulations based on a Presidentially declared disaster or the activation of a licensee's emergency plan. In fact, there may be circumstances where licensees have received certain types of regulatory relief based on these triggers. Our concerns here relate to establishing a general policy of automatic relief that would apply across the board. We will continue to consider specific requests for regulatory relief based on the underlying facts supporting these requests.

[41] NTIA Ex Parte at 2.

[42] The Commission granted more than 90 STA requests and more than 100 temporary frequency authorizations for emergency workers, organizations and companies to provide wireless and broadcast service in the affected areas and shelters around the country. *See* Written Statement of Kevin J. Martin, Chairman, Federal Communications

(continued....)

rule requirements on its own motion, STA requests by telephone during emergencies and the grant of station licenses, modification, renewal or STAs without the filing of formal applications in certain emergency situations.[43] Other rules provide additional flexibility for licensees to adjust operations during emergency situations.[44] Therefore, the Commission has procedures in place to ensure that waivers and STAs are promptly reviewed and granted during an emergency. Accordingly, we direct PSHSB to work with other Bureaus and Offices, as necessary, to publicize emergency-related rules and procedures prior to disaster. This could be done by, among other things, providing relevant information on PSHSB's website as well as through outreach programs directed at public safety agencies and the industry.[45]

27. Other Pre-Positioning Recommendations From Commenters. Several commenters submitted additional suggestions for improving network resiliency and redundancy.

28. *Permanent Relief from InterLATA Restrictions.* BellSouth[46] recommends that the Commission grant the Bell Operating Companies (BOCs) permanent relief from interLATA boundary restrictions. It argues that such action would enhance network resiliency and redundancy. The BOCs have already raised the issue of relief from Section 272 and its implementing rules in a number of pending forbearance petitions and waiver requests. Accordingly, we will consider this issue in those proceedings as appropriate.

29. *One Year Section 272 Relief.* Last year, WCB granted a one-year Special Temporary Authority from enforcement of Section 272 and its implementing rules to BOCs in order to allow them to share non-public, BOC network information with their Section 272 and other affiliates to engage in disaster planning.[47] In addition, WCB granted Verizon a one-year

(...continued from previous page)
Commission at Hearing on Public Safety Communications from 9/11 to Katrina: Critical Public Policy Lessons, Before the Subcommittee on Telecommunications and the Internet, Committee on Energy and Commerce, U.S. House of Representatives (September 29, 2005).

[43] *See, e.g.*, 47 C.F.R. §§ 1.3, 1.915(b), 1.925, 1.931(b)(5).

[44] *See, e.g.*, 47 C.F.R. § 90.407 (providing a self-actuating mechanism whereby private land mobile and public safety licensees may utilize their radio stations for emergency communications in a manner other than that specified in the station authorization or in the rules and regulations governing the operation of such stations, during a period of emergency in which the normal communication facilities are disrupted as a result of hurricane, flood, earthquake or similar disaster).

[45] Verizon noted that the Commission granted Verizon Wireless authority to lease spectrum temporarily to vendors operating on CMRS equipment to assist the Department of Defense in the Hurricane Katrina recovery effort. Verizon suggested that the Commission adopt an expedited procedure for temporary spectrum leases. Verizon Comments at 16. However, no such action is necessary because the Commission already has an expedited process for granting short-term leases which allows the grant of leases overnight. *See* 47 C.F.R. § 1.9035(e) (immediate approval procedures for short-term de facto leasing arrangements). Verizon has not shown that this process is insufficient.

[46] We note that, subsequent to filing its comments in this proceeding, BellSouth merged with AT&T. For purposes of this Order, we will refer to BellSouth's comments separately from those filed by AT&T.

[47] *See Petition of AT&T Inc. for Special Temporary Authority and Waiver To Support Disaster Planning and Response*, Order, WC Docket No. 06-63, 21 FCC Rcd 4306 (Wireline Comp. Bur. 2006); *Petition of BellSouth Corporation for Special Temporary Authority and Waiver To Support Disaster Planning and Response, Petition of Verizon for Special Temporary Authority and Waiver To Support Disaster Planning and Response, Petition of Qwest Communications International Inc. for Special Temporary Authority and Waiver To Support Disaster Planning and Response*, Order, WC Docket No. 06-63, 21 FCC Rcd 6518 (Wireline Comp. Bur. 2006).

000394

waiver of Part 64 requirements to allow Verizon to engage in disaster planning with its former GTE company affiliates. The relief for disaster planning ends April 20, 2007 for AT&T[48] and June 9, 2007 for BellSouth, Qwest and Verizon. Verizon and BellSouth argue that the Commission should reconsider the one-year limitation of this relief or change its rules so that an STA or waiver is not necessary. Verizon, for example, states that it will need to conduct disaster planning well beyond June 2007 to prepare for, among other things, next summer's hurricane season.[49]

30. In light of the upcoming hurricane season and the separate tornadoes that recently struck parts of Kansas and Alabama, we grant an extension of the regulatory relief granted by WCB last year to AT&T, Qwest and Verizon for a period of one-year from the date the originally-granted relief is due to expire.[50] Specifically, we grant AT&T, Verizon and Qwest a one-year STA and waiver of Section 272 of the Act and the Commission's accounting and non-accounting structural separation safeguards. We also extend for an additional year, a waiver previously issued to Verizon to engage in integrated disaster recovery planning with its former GTE affiliates. Under the STA and waiver, AT&T, Qwest and Verizon will continue to be permitted to share non-public BOC network information with its Section 272 affiliates (as well as other affiliates that adhere to the Section 272-like safeguards), as necessary to engage in integrated disaster planning.[51]

31. We find that an extension of the regulatory relief previously accorded these carriers serves the public interest. The unique circumstances of a hurricane, tornado or other disaster warrant a deviation from Section 272 and the accompanying rules, and such deviation

[48] The Public Safety & Homeland Security Bureau extended the STA to April 27, 2007. *See* Letter from Derek Poarch, Chief, Public Safety & Homeland Security Bureau, FCC, to Frank Simone, Executive Director, Federal Regulatory, AT&T Services, Inc., WC Docket No. 06-63 (issued April 23, 2007).

[49] Verizon Comments at 16.

[50] We note that a broader request for extension of this regulatory relief remains pending. *See* Letter from Terri L. Hoskins, Senior Counsel, AT&T Services, Inc. to Marlene H. Dortch, Secretary, FCC, WC Docket No. 06-63 (filed March 9, 2007) (seeking a two-year extension of the Special Temporary Relief and waiver that the Commission granted AT&T for disaster recovery purposes). In its request, AT&T states that as a result of its merger with BellSouth, BellSouth is an affiliate of AT&T and is included in its request for an extension of the STA and waive relief. *Id*, at 2.

[51] While the Section 272 requirements have sunset for AT&T, Verizon and Qwest, AT&T and Verizon may continue to provide in-region, interstate, interLATA telecommunications services through Section 272 separate affiliates, and these affiliates should be treated as nondominant in the provision of such services. *See Regulatory Treatment of LEC Provision of Interexchange Services Originating in the LEC's Local Exchange Area and Policy and Rules Concerning the Interstate, Interexchange Marketplace*, CC Docket No. 96-149 and 96-61, Second Report and Order in CC Docket No. 96-149 and Third Report and Order in CC Docket No. 96-61, 12 FCC Rcd 15756, 15834-35, paras. 133-34 (1997), recon. denied, Second Order on Reconsideration and Memorandum Opinion and Order, 14 FCC Rcd 10771 (1999). In addition, we understand that Qwest has begun implementing the relief granted by the Commission to provide in-region, interstate, interLATA telecommunications services on an integrated basis subject to nondominant carrier regulation. Qwest may be able to benefit from the relief granted here to engage in disaster recovery planning and implementation during its transition from section 272 separation to integrated provisioning and therefore, we continue to include Qwest in granting this relief. *See Petition of Qwest Communications, Inc. for Forbearance form Enforcement of the Commission's Dominant Carrier Rules as They Apply After Section 272 Sunsets*, Memorandum Opinion and Order, WC Docket No. 05-333, 22 FCC Rcd 5207 (2007); *see also* Letter from Boucher, Corporate Counsel, Qwest, to Marlene H. Dortch, Secretary, FCC, CC Docket No. 00-175 and WC Docket No. 05-333 (filed May 22, 2007).

will better serve the public interest in a time of emergency. This relief will allow AT&T, Verizon and Qwest to continue to develop risk mitigation strategies and contingency plans that will reduce the likelihood and duration of any service outage and will permit these carriers' networks to continue to operate in the event a "choke point" is compromised.

B. Recovery Coordination

32. Credentialing Guidelines. In the *Notice*, we sought comment on the Katrina Panel's recommendation that the Commission work with other appropriate federal departments and agencies and the communications industry to promptly develop national credentialing requirements and process guidelines to enable communications infrastructure providers and their contracted workers access to affected areas after a disaster. The President's National Security Telecommunications Advisory Committee's (NSTAC's)[52] made similar recommendations to the President last year.[53] The Panel advocated, however, expanding the NSTAC's credentialing recommendations to include repair workers of all communications infrastructure (*e.g.*, wireline, wireless, Wireless Internet Service Providers (WISPs), cable, broadcasting, and satellite). Further, the Katrina Panel recommended that the Commission work with the communications industry to develop an appropriate basic NIMS training course for communications repair workers that can be completed online as a requirement for credentialing. Additionally, the Katrina Panel recommended that the Commission should: (1) encourage states to develop and implement a credentialing program consistent with NSTAC guidelines as promptly as possible and encourage appropriate communications industry members to secure any necessary credentialing; (2) encourage states to recognize and accept credentials issued by other states; and (3) encourage, but not require, each regional, state and local EOC or JFO to develop credentialing requirements and procedures, consistent with any national credentialing guidelines, for purposes of allowing communications infrastructure providers, their contracted workers and private security teams, if any, access to the affected areas post-disaster.[54]

33. Most commenters generally supported credentialing communications personnel to access affected areas post-disaster. Many stressed that credentialing recommendations should apply to all communications providers, including their contracted workers. In fact, DHS noted that it is making significant efforts to advance the implementation of a national standard for the credentialing of telecommunications repair workers.[55] Commenters were split regarding whether NIMS training should be required as a requirement for credentialing.

34. The Commission's experience with Hurricane Katrina and the record in this proceeding reveal that access to affected areas post-disaster was one of the most critical issues

---

[52] Bechtel suggests that the Commission spearhead the transfer of network resilience and reliability work currently performed by voluntary bodies like NSTAC or NCC to a formal and professional cross-disciplinary entity with hands-on experience supported by government professionals. Bechtel Comments at 8-9. The Commission does not have authority to transfer work currently performed by NSTAC, a Presidential committee established by Executive Order, or NCC which is organized by NCS. The Commission should continue to work with these entities to support their efforts.

[53] The President's National Security Telecommunications Advisory Committee Trusted Access Task Force, *Screening, Credentialing, and Perimeter Access Controls*, p. 9 (January 19, 2005).

[54] *See Katrina Panel Report* at 34.

[55] *See* DHS Comments at 7-8.

000396

for the communications industry. As the National Response Plan[56] makes clear, DHS has primary responsibility to coordinate federal incident management activities, including disaster site access and credentialing, for all emergency personnel. As such DHS, rather than the FCC, has jurisdiction and authority to adopt credentialing guidelines that apply to the communications industry.

35. DHS and the states have taken a number of steps to develop credentialing guidelines that would allow communications providers access to disaster areas. For example, DHS/NCS worked with the State of Georgia and BellSouth to develop a pilot access program focused on priority access for critical response personnel, including telecommunications, which resulted in the publication of a Georgia Standard Operating Procedure (SOP) for emergency access.[57] This SOP has been distributed as suggested protocol to all 50 states and the territories.[58] DHS/Federal Emergency Management Agency (FEMA) is also working on an access pilot program to give telecommunication repair crews better access to disaster areas and is aggregating documentation for emergency personnel nationwide into a National Emergency Responder Credentialing Program that DHS/FEMA expects to make operational this year.

36. PSHSB staff is already working with DHS to help ensure that any credentialing program would encompass critical communications infrastructure repair crews and their contracting support staff and to support coordination with regional, state and local officials regarding the development of consistent credentialing programs for communications providers. We believe the issue of whether to require NIMS training as a requirement for credentialing is best addressed by DHS/NCS and regional, state and local authorities as they develop their credentialing programs. We agree with DHS's assertion that the Commission's credentialing efforts should complement, not supersede or duplicate, those of DHS/NCS.[59] We direct PSHSB to continue to work with DHS and the states on these efforts.

37. Emergency Responder Status for Communications Infrastructure Providers. In the *Notice*, we sought comment on the Katrina Panel's recommendations that the Commission work with Congress and appropriate federal departments and agencies to afford all communications infrastructure providers, including wireline, wireless, WISPs, satellite, cable and broadcast infrastructure providers and their contracted workers emergency responder status under the Stafford Act and to incorporate this designation into the National Response Plan ("NRP") and state and local emergency response plans.[60] Most commenters supported this recommendation and stressed that the emergency responder status should be afforded to all communications service providers.

---

[56] *See* NRP, paragraph 15.

[57] *See* DHS Comments at 7.

[58] *Id.*

[59] *See* DHS Comments at 8.

[60] The Panel "support[ed] the NSTAC's recommendation that telecommunications infrastructure providers and their contracted workers be afforded emergency responder status under the Stafford Act and that this designation be incorporated into the NRP, as well as state and local emergency response plans." *See Katrina Report* at 35. However, the Katrina Panel recommended that this be broadened to include all communications infrastructure providers.

38. Section 607 of the recently enacted Warning, Alert and Response Network Act (WARN Act) amended the Stafford Act to add the term "essential service provider" which includes entities that provide telecommunications service.[61] This section of the WARN Act also states that, unless exceptional circumstances apply, in an emergency or major disaster, the head of a Federal agency, to the greatest extent practicable, shall not deny or impede access to the disaster site to an essential service provider whose access is necessary to restore and repair an essential service and shall not impede the restoration or repair of telecommunications services.[62] We direct PSHSB to work with DHS, and all other relevant federal, state, tribal and local government agencies, to facilitate: (1) access to disaster areas for communications provider personnel so that recovery efforts can be expedited; and (2) the incorporation into the NRP and state, tribal and local emergency response plans of the designation of telecommunications service providers as "essential service providers." PSHSB should also encourage DHS to seek Congressional action, if necessary, to ensure that the term "essential service provider" includes all communications service providers.

39. Utilization of State/Regional Coordination Bodies. The Katrina Panel recommended that the Commission work with state and local governments and the communications industry (including wireline, wireless, WISP, satellite, cable and broadcasting) to better utilize the coordinating capabilities at regional, state and local Emergency Operations Centers (EOCs), as well as the Joint Field Office (JFO). In particular, the Panel recommended that the Commission encourage, but not require, each regional, state and local EOC and JFO to: (1) facilitate coordination between communications infrastructure providers and state and local emergency preparedness officials (such as the state EOC) in the state or region at the EOC or JFO; (2) develop and facilitate inclusion in state emergency preparedness plans, where appropriate, one or more clearly identified post-disaster coordination areas for communications infrastructure providers, their contracted workers, and private security teams to gather post-disaster where credentialing, security, escorts and further coordination can be achieved; and (3) share information and coordinate resources to facilitate repair of key communications infrastructure post-disaster.

40. Commenters generally support the recommendation that the Commission work with state and local governments and the communications industry to better facilitate coordination between emergency responders and the communications infrastructure providers. In its comments CTIA recommended that the Commission work with Federal, state and local governments to create a process to establish embarkation points for communications recovery efforts in the wake of a disaster.[63] DHS agrees that it would be advantageous to engage the EOCs and JFOs in support of greater communications crisis preparedness and more effective response planning.[64] DHS asserts, however, that it would be more appropriate, and consistent with mission responsibilities and existing relationships between the entities, for such activities to be coordinated jointly by NCS and DHS/FEMA in the first instance rather than by the FCC. Cingular asserts that the Commission should urge states to refrain from imposing emergency

[61] Title VI of the Security and Accountability for Every Port Act of 2006, Pub. L. 109-347, § 607 (October 13, 2006) (Warning Alert and Response Network Act, or the "WARN Act").

[62] *Id.*

[63] CTIA Comments at 18.

[64] DHS Comments at 8.

preparedness requirements on the industry.[65] Cingular states that the adoption of state specific requirements, while well intended, hinder recovery efforts by eliminating flexibility and creating a patchwork of inconsistent requirements that carriers must follow.[66]

41. These recommendations generally fall under the jurisdiction of the NCS which, as the coordinator and primary agency for ESF #2 (Communications) of the NRP, performs these functions. The Commission supports these efforts in its role as an ESF #2 support agency. ESF #2 coordinates Federal actions for the restoration of the telecommunications infrastructure and ensures the provision of Federal communications support to Federal, state, tribal, local and private sector response during an Incident of National Significance. NCS assists in the coordination of planning and provision of emergency preparedness communications for the Federal government under all circumstances, including crisis or emergency, attack, recovery and reconstitution. The Commission and other government agencies such as FEMA have also taken a number of steps in this area. The Commission reached out to its licensees to determine their status and needs and provided the collected information to the NCS. The Commission then helped coordinate ESF #2 response efforts to aid the Commission's licensees (*e.g.*, arranged for helicopter overflights, fuel shipments, access, curfew and airport information). The Commission is also working with DHS/NCS to encourage regional, state and local EOCs and/or JFOs to identify post-disaster coordination areas for communications providers and their contract workers and to create a process to establish embarkation points for communications recovery efforts. For example, the Commission assisted DHS with developing proposals making federal property available as a staging area for communications infrastructure providers under the Stafford Act.

42. We direct PSHSB to continue to work with DHS, state, tribal and local governments and the communications industry on these issues. However, we decline to take action to urge the states to refrain from imposing emergency preparedness requirements on the communications industry as Cingular advocates.[67]

43. Priority Utility Restoration for Communications Providers. In its report, the Katrina Panel recommended that the Commission encourage, but not require, each regional, state and local EOC and JFO to facilitate electric and other utilities' maintenance of priority lists that include commercial communications providers for commercial power restoration. The Katrina Panel stated that power restoration activities should be coordinated with communications restoration. The majority of commenters support this recommendation.

44. Other agencies, such as DHS, the Department of Energy, and state agencies, have primary jurisdiction and authority over this matter. Loss of power is a critical failure that DHS/NCS is aware of and focused on. For example, NCS coordinates priority lists with the agencies responsible for NRP's Emergency Support Function #12 - Energy. The communications sector is number two on the ESF #12 priority lists. NCS also has tools that can identify communication sites. The agencies responsible for ESF#12 have tools that can locate energy sites near communications providers and determine whether there have been critical

[65] Cingular Comments at 7.

[66] *Id.*

[67] Cingular Comments at 9-10.

failures. Coordination of these priority lists between Emergency Support Functions 2 and 12 is ongoing. We direct PSHSB to support DHS/NCS and the other agencies addressing this issue in their efforts to ensure priority power and other relevant utility restoration for commercial communications providers during and after disasters.

45. Expanding and Publicizing Priority Communications Service Programs. The Katrina Panel recommended that the Commission work with the NCS to promote the use of existing priority communications services, such as Telecommunications Service Priority (TSP), Government Emergency Telecommunications Service (GETS) and Wireless Priority Service (WPS), to all eligible entities, particularly eligible government, public safety, emergency medical community, and critical industry groups.[68] Further, the Katrina Panel stated that the Commission should work with NCS to clarify whether broadcast, WISP, satellite, and cable company repair crews are currently eligible for GETS and WPS and, if so, should also promote the availability of those priority services to those entities. The Katrina Panel also recommended that the Commission work with NCS and industry to establish and promote best practices to ensure that all WPS, GETS, and TSP subscribers are properly trained in how to use these services. Finally, the Katrina Panel recommended that the Commission work with NCS to explore whether it is technically and financially feasible for WPS calls to automatically receive GETS treatment when they reach landline facilities, thus avoiding the need for a WPS caller to also enter GETS information.[69]

46. DHS fully supports the Katrina Panel's recommendation that the Commission work with NCS to promote wider use of GETS, WPS and TSP programs among government, public safety, and critical industry groups.[70] Broadcasters that provided comments support granting broadcasters access to GETS and WPS.[71] Other commenters state that promotion of these programs must be coordinated with industry to ensure that providers can absorb additional demands placed on their networks through increased participation in the programs.[72]

47. PSHSB staff members are actively engaged in priority services outreach. For example, PSHSB staff recently worked with the NCS TSP Program Office, various telecommunications carriers, and the State of New York to enroll over 2,000 circuits into the TSP program. Additionally, PSHSB staff is closely coordinating with the HHS to increase awareness among health care providers, particularly hospitals, about the benefits of enrollment and participation in federal priority service programs. This initiative includes expanded outreach in the health care sector and with state health departments to increase their understanding of TSP, GETS and WPS during and in the aftermath of a natural disaster or other emergency, such as an influenza pandemic. HHS is considering options to better incorporate support for these federal priority service programs into their emergency preparedness funding streams. The Commission is also working with hospital associations to educate the medical community about priority

[68] *See Katrina Panel Report* at 36.

[69] *Id.*

[70] DHS Comments at 8, n.13.

[71] Gulf States Broadcasters Comments at 6; National Association of Broadcasters Comments at 13.

[72] Cox Reply Comments at 21; NCTA *et al* Comments at 15.

communications services.[73] In addition, PSHSB is working with NCS to enhance WPS and resolve the issue of whether it is feasible for WPS calls to automatically receive GETS treatment when they reach landline facilities.

48. We direct PSHSB to continue to work with DHS, including the NCS Committee of Principal's Priority Services Working Group (PSWG), to promote the priority communications services to all eligible entities, particularly eligible government, public safety, emergency medical community, and critical industry groups, including repair crews which could qualify under the eligibility criteria for both WPS and GETS under the category of disaster recovery. PSHSB should work with DHS to ensure that communications systems' capabilities are not overwhelmed by increased demands placed on networks by increased participation in these programs. We also direct PSHSB to support the creation and promotion of best practices to ensure proper training in how to use these services. Finally, we direct PSHSB to continue working with DHS and NCS's PSWG to enhance WPS and resolve the issue of whether it is feasible for WPS calls to automatically receive GETS treatment when they reach landline facilities.

49. Broadening NCC to Include All Communications Infrastructure Sectors. The Katrina Panel recommended that the Commission work with the NCS to broaden the membership of the NCC to include adequate representation of all types of communications systems, including broadcast, cable, satellite and other new technologies, as appropriate. The NCC is a government and industry organization within DHS/NCS. It functions at the operational level and assists in initiating, coordinating, restoring and reconstituting national security and emergency preparedness (NS/EP) telecommunications services or facilities under all conditions of crises and disasters.

50. In January 2000, the NCC was designated an Information Sharing and Analysis Center (ISAC) for Telecommunications in accordance with Presidential Decision Directive 63.[74] The NCC-ISAC facilitates the exchange among government and industry participants regarding vulnerability, threat, intrusion, and anomaly information affecting the telecommunications infrastructure. Since its creation, the NCC has coordinated the restoration and provisioning of national security and emergency preparedness telecommunication services and facilities during natural disasters and armed conflicts. The NCC leverages its unique joint government/industry structure and all-hazard emergency response capabilities to coordinate the initiation, restoration, and reconstitution of United States government national security and emergency preparedness telecommunications services both nationally and internationally.[75]

51. DHS fully supports the Katrina Panel's recommendation that the Commission work with NCS to broaden the membership of the NCC.[76] DHS states that NCS is already working with the members of industry to explore expansion of NCC membership and would

[73] *See supra* at para. 15, for more information regarding the PSHSB's outreach to hospital associations and the emergency medical community regarding emergency communications.

[74] The Clinton Administration's Policy on Critical Infrastructure Protection: Presidential Decision Directive 63, White Paper (May 22, 1998).

[75] *See* http://www.ncs.gov/ncc.

[76] DHS Comments at 8, n.13.

welcome the Commission's engagement in this area.[77] Several additional commenters support this recommendation.[78]

52. In coordination with DHS/NCS, PSHSB is currently engaged in efforts to make the NCC more of an overall communications information sharing and analysis center instead of one focused solely on telecommunications. The Commission is working with communications trade groups and broadcasters, among others, to encourage them to consider NCC membership. Recently, a fiber optic provider the Commission introduced to the NCC signed up for membership as did APCO, COMPTEL, Global Crossing, and Cox Cable. We direct PSHSB to continue its efforts in this area.

53. Website for Emergency Coordination. The Katrina Panel recommended that the Commission create a website identifying the key state emergency management contacts, particularly for communications coordinating bodies, and post-disaster coordination areas for communications providers. Some commenters support the proposal that the Commission create a disaster response website for communications providers; other commenters state that this function is best suited for other agencies, such as FEMA or DHS.

54. FEMA and many states already have publicly available information identifying key state emergency management contacts. FEMA's website has a compilation of state emergency contacts (http://www.fema.gov/about/contact/statedr.shtm) and the NCC website (http://www.ncs.gov/ncc) has links to federal agencies. Accordingly, we do not believe it is necessary for the Commission to create a similar website.

55. To facilitate access to this information by communications companies, we direct PSHSB to coordinate with FEMA to provide updated links to the relevant state emergency contact information contained on the FEMA website. Specifically, PSHSB should create a link on its website to FEMA's listing of state emergency contact information.

56. FCC Website for Emergency Response Team Information. The Katrina Panel recommended that the Commission create a website to publicize the Commission's emergency response team's contact information and procedures for facilitating disaster response and outage recovery. Commenters unanimously support the Katrina Panel's recommendation. Commenters contend that the Commission should maximize existing resources by developing and posting on the Commission's website the Commission's emergency response team's contact information and procedures.

57. We agree that a website providing emergency contact information, procedures for facilitating disaster response and outage recovery, and procedures for obtaining regulatory relief during emergencies would be helpful. We direct PSHSB to work with other Bureaus and Offices, as appropriate, to do so.

58. Other Recovery Coordination Recommendations. Commenters submitted the following suggestions for improving the recovery coordination process:

[77] *Id.*

[78] *See, e.g.*, Gulf State Broadcasters Comments at 3-4; AT&T Comments at 5; Cox Reply Comments at 20-21; Motorola Comments at 9; NCTA *et al* Comments at 10-11; PRT Comments at 10; Qwest Comments at10; SIA Comments at 13; USA Mobility Comments at 15; Verizon Comments at 21.

59. *Expedited Importation of Essential Communications Technology.* Iridium Satellite LLC suggests that the Commission work with other federal agencies to establish a system that facilitates the delivery of replacement infrastructure and equipment during a disaster.[79] Additionally, Inmarsat asserts that, as part of creating redundancy, the federal government should recognize the importance of, and encourage the building of, mobile units that can be deployed as needed to any given disaster zone to assist in rapid restoration of vital communications using Mobile Satellite Service.[80] These functions are covered by ESF #2. The Commission is already working with other agencies to support these functions and will continue to coordinate with DHS/NCS and other agencies regarding these matters. Inmarsat also asserts that the Commission should work with U.S. Customs to ensure that bottlenecks do not slow the importation of essential communications technology in the aftermath of a disaster.[81] Inmarsat and other satellite operators apparently experienced a sharp rise in demand after Hurricane Katrina that could not be met by the existing stock of satellite terminals in the U.S.[82] We direct PSHSB to coordinate with DHS/NCS, U.S. Customs and other appropriate agencies to develop a systematic approach toward the importation of communications equipment needed for disaster response in the wake of disasters.

60. *Real Time Tracking of Progress and Shared Experiences.* Champaign Urbana Wireless Network, The Texas ISP Association, The Association for Community Networking, and Acorn Active Media (CUWN, et al.) suggest that the Commission provide a means by which communications responders could record their progress, share experiences in real time and avoid accidental conflicts. This function is primarily a responsibility of DHS/NCS under ESF #2 and PSHSB should continue to coordinate with DHS/NCS regarding these matters.

C. First Responder Communications

61. Emergency Restoration Supply Cache and Alternative Inventory. To facilitate the restoration of public safety communications, the Panel recommended that the Commission: (1) support the ongoing efforts of the NCC to develop and maintain a database of state and local public safety system information, including frequency usage, to allow for more efficient spectrum sharing, rapid on-site frequency coordination, and emergency provision of supplemental equipment in the event of system failures; (2) support the efforts of the NCC to develop an inventory of available communications assets (including local, state, federal civilian and military) that can be rapidly deployed in the event of a catastrophic event[83] and work with the NCC and the appropriate agencies to educate key state and local emergency response personnel on the availability of these assets and how to request them; and (3) coordinate with the NCS/NCC to assure that, immediately following any large disaster, there is an efficient means by which federal, state and local officials can identify and locate private sector communications assets that can be made rapidly available to first responders and relief organizations. The Katrina

[79] Iridium Comments at 6-7.

[80] Inmarsat Comments at 8.

[81] *Id.* at 7.

[82] *Id.*

[83] The Katrina Panel stated that the list should include land mobile radios, portable infrastructure equipment, bridging technologies/gateways, and backup power system components and the information should include the steps necessary for requesting the deployment of these assets. *See Katrina Panel Report* at 38.

Panel noted that one means by which to identify and locate private sector communications assets would be a website maintained by either the FCC or NCC through which the private sector could register available assets along with product information and stated that such a website should be designed with a special area for registering available equipment to assist persons with disabilities in their communications needs.[84]

62. *Support NCC Efforts to Develop a Database of State and Local Public Safety System Information.* PSHSB has already provided support for the NCC's ongoing efforts to develop and maintain a database of state and local public safety system information. With assistance from PSHSB, the NCC has developed a public safety first responder frequency sharing guide. PSHSB consulted private frequency coordinators and collected and coordinated information from them for this effort. Additionally, although it was only developed for the states affected by Hurricane Katrina, FEMA recently developed a Gulf Coast communications plan for use during emergencies that identifies all public safety equipment and spectrum currently in use.

63. *Coordinate with NCC to Facilitate the Availability of Communications Assets for First Responders Post-Disaster.* The Commission already coordinates with the NCS/NCC to assure that, following any large disaster, there is an efficient means by which federal, state and local officials can identify and locate private sector communications assets that can be made rapidly available to first responders and relief organizations. PSHSB has been providing a supporting role to FEMA on this issue. For example, per FEMA's request, PSHSB recently set up a meeting between FEMA and communications industry representatives to discuss, among other things, contingency contracts for equipment and the identification of equipment that can be airlifted through the Department of Defense. PSHSB already supports the efforts of the NCC to develop an inventory of available communications assets, in 2006 the NCS began development of an inventory database of government and industry assets. This inventory database of available government and industry communications assets developed by NCC and available to ESF #2 addresses this recommendation. Regarding a website, a function already exists whereby industry can report their available assets directly to the NCC.[85]

64. We direct PSHSB to continue to work with DHS, NCS, NCC, FEMA, state governments, and industry on these issues. We also direct PSHSB to continue to work with NCC to address the Katrina Panel recommendation regarding the identification of private sector communications assets, including specifically identifying equipment available to assist persons with disabilities in their communications needs.

65. *Equipment Cache.* Another Katrina Panel recommendation intended to facilitate the restoration of public safety communications includes that the Commission encourage state and local jurisdictions to retain and maintain, including through arrangements with the private sector, a cache of equipment components that would be needed to immediately restore existing public safety communications within hours of a disaster. The Katrina Panel stated that the cache should: (1) include the necessary equipment to quickly restore communications capabilities on all relevant mutual aid channels; (2) be maintained as a regional or state-wide resource, and located in areas protected from disaster impacts; and (3) be included as an element of the NRP.

[84] *Katrina Panel Report* at 38.

[85] For security purposes, industry groups or entities advise the NCC of assets and the NCC inputs the information directly into the database.

Further, the Katrina Panel recommended that the Commission encourage state and local jurisdictions to utilize the cache through training exercises on a regular basis.[86]

66. In its comments, DHS stated that it has reservations about the recommendation concerning the stockpiling of equipment. DHS noted that already limited budgets do not provide funding to procure additional equipment and, in many cases, the redundant equipment for network restoration is often unavailable because the systems at issue are legacy systems that are obsolete and no longer supported by manufacturers.[87] We agree. The Commission is reluctant to encourage state and local jurisdictions to maintain such a cache of equipment unless funding for such an effort has been specifically identified. Many local jurisdictions do not have the requisite funds for this effort. Although some states have such equipment under "mutual aid agreements," most states do not have funds for equipment not in use; their funds are used for equipment intended for immediate use. Further, there are already a number of training exercises for responders. For example, there are regional annual training exercises held to demonstrate equipment in a disaster and to show options for restoration.[88]

67. Facilitating First Responder Communications Capabilities. To facilitate interoperability among first responder communications, the Katrina Panel recommended that the Commission: (1) maintain the schedule for commencing commercial spectrum auctions by January 28, 2008 to fully fund the $1 billion public safety interoperability program, consistent with recent legislation; (2) work with NTIA and DHS to establish appropriate criteria for the distribution of the $1 billion in a manner that best promotes interoperability with the 700 MHz band - among other things, such criteria should mandate that any radios purchased with grant monies must be capable of operating on 700 MHz and 800 MHz channels established for mutual aid and interoperability voice communications; (3) encourage the expeditious development of regional plans for the use of 700 MHz systems and move promptly to review and approve such plans; (4) expeditiously approve any requests by broadcasters to terminate analog service in the 700 MHz band before the end of the digital television transition in 2009 in order to allow public safety users immediate access to this spectrum; (5) work with the NTIA and DHS to develop strategies and policies to expedite allowing Federal (including the military), state and local agencies to share spectrum for emergency response purposes, particularly the Federal incident response channels and channels established for mutual aid and interoperability; and (6) publicize interoperability successes and/or best practices by public safety entities to serve as models to further interoperability.

68. *Schedule for 700 MHz Spectrum Auction.* We agree that the Commission should, consistent with recent legislation, maintain the schedule for commencing commercial spectrum auctions in the 700 MHz bands by January 28, 2008.[89] Accordingly, the Commission should proceed with current plans for developing auction rules and procedures, including the conclusion

[86] *Katrina Panel Report* at 37.

[87] DHS Comments at 9.

[88] E.g., National Communications System's Emergency Support Function 2 Training Conference, Homestead Air Reserve Base, Homestead, Florida (May 20-26, 2006).

[89] The Commission is required, under the Digital Television Transition and Public Safety Act of 2005, to commence the auction no later than January 28, 2008. *See* 47 U.S.C. § 309(j)(15)(C)(v), (vi), as enacted by the Digital Television Transition and Public Safety Act of 2005, Title III of the Deficit Reduction Act of 2005, Pub. L. No. 109-171, 120 Stat. 4, 22, § 3003(a)(2)(2006) ("Digital Television Transition and Public Safety Act of 2005").

of a pending rulemaking addressing the commercial 700 MHz spectrum. The Commission will commence auction of this spectrum in a manner consistent with the Digital Television Transition and Public Safety Act of 2005.

69. *Criteria for the Distribution of the $1 Billion Public Safety Interoperability Program.* We direct PSHSB to offer to work with NTIA and DHS, as appropriate, to establish criteria for the distribution of the $1 billion interoperability fund in a manner that best promotes interoperability with the 700 MHz band. No commenter opposed the idea of the FCC offering to work with NTIA and DHS in this regard. Although the statute places responsibility for implementing this grant program upon NTIA and DHS, the Commission could provide helpful input. We believe, however, that such funds should not be limited to the 700 MHz and 800 MHz bands and that the PSHSB should encourage NTIA and DHS to explore ways to use IP technology to facilitate interoperability with VHF and UHF. An IP-based approach would allow legacy systems to evolve into a broadband communications system. Additionally, any action relating to the 700 MHz band should include consideration of DHS' concern that the Katrina Panel's recommendations are focused only on state and local communications with little standardization across regions and, therefore, fail to address the need to incorporate federal coordination with state and local first responders into the solution.

70. *Expeditious Development, Review and Approval of Regional Plans.* We direct PSHSB to encourage, as part of their outreach efforts, the expeditious development of regional plans for use of 700 MHz systems and to promptly review and, where possible, approve such plans when submitted. This received strong support in the record. PSHSB should initiate outreach efforts to encourage states, tribal governments and localities to participate in the regional planning processes. PSHSB can work with regional planning committees in their efforts to develop regional plans and coordinate their plans with adjacent regions.

71. *Requests by Broadcasters to Terminate Analog Service in the 700 MHz Band.* Although we understand the importance of ensuring access to this spectrum by public safety agencies as quickly as possible, we must balance this goal with the need to protect consumers who could potentially lose service if they have not yet obtained digital televisions or converters. Accordingly, although we will endeavor to process requests from broadcasters to terminate analog service as quickly as possible, we will continue to review such requests pursuant to the policies previously adopted in *Upper 700 MHz Memorandum Opinion and Order and Further Notice of Proposed Rulemaking.*[90]

72. *Sharing of Spectrum.* We agree that implementation of the recommendation that the Commission work with NTIA and DHS to develop strategies and policies to expedite allowing Federal, state and local agencies to share spectrum for emergency response purposes would serve the public interest. We direct PSHSB, together with the Office of Engineering and Technology, to work with NTIA and DHS on this issue. There is record support for the Commission working with NTIA and DHS to allow Federal and non-Federal spectrum sharing

[90] Service Rules for the 746-764 and 776-794 MHz Bands and Revisions to Part 27 of the Commission's Rules, Carriage of the Transmissions of Digital Television Broadcast Stations, Review of the Commission's Rules and Policies Affecting the Conversion to Digital Television, *Memorandum Opinion and Order and Further Notice of Proposed Rulemaking*, WT Docket No. 99-168, CS Docket No. 98-120, MM Docket No. 00-83, 15 FCC Rcd 20845, 20871, ¶ 62 (2000).

for emergency response purposes, both in spectrum allocated for Federal and non-Federal uses.[91] NTIA states in its comments that it and the Interdepartment Radio Advisory Committee ("IRAC") already are considering a proposal to revise current rules to allow more flexible use by state and local governments, and to simplify the regulations governing the use of Federal interoperability channels.[92] The Commission should assist in these ongoing efforts in the IRAC and its subcommittees and should consider other possible solutions for making spectrum available for shared use by federal, state, tribal and local agencies for emergency response purposes.

73. *Publicizing Interoperability Successes and Best Practices.* We direct PSHSB to work with other federal agencies, the public safety community and the industry, as appropriate, to develop best practices to promote interoperability. In addition, PSHSB should encourage public safety organizations to provide interoperability success stories and make this information available on its website.

74. Resiliency and Restoration of E-911 Infrastructure and PSAPs. In order to ensure a more robust 911 and E-911 service, the Katrina Panel recommended that the Commission encourage the implementation of the following three best practices issued by the Network Reliability and Interoperability Council (NRIC):

> (1) Service providers and network operators should consider placing and maintaining 911 circuits over diverse interoffice transport facilities (*e.g.*, geographically diverse facility routes, automatically invoked standby routing, diverse digital cross-connect system services, self-healing fiber ring topologies, or any combination thereof).[93]
>
> (2) Network operators, service providers, equipment suppliers and public safety authorities should establish alternative methods of communication for critical personnel.[94]
>
> (3) Service providers, network operators and property managers should ensure availability of emergency/backup power (*e.g.*, batteries, generators, fuel cells) to maintain critical communications services during times of commercial power failures, including natural and manmade occurrences (*e.g.*, earthquakes, floods, fires, power brown/blackouts, terrorism). The emergency/backup power generators should be located onsite, when appropriate.[95]

75. We agree that PSHSB should be proactive in encouraging implementation of the first two of these NRIC recommendations, for example, through additional outreach efforts which could include, *inter alia*, NRIC best practice outreach efforts, promoting industry guidelines on its website, and working with FEMA to educate PSAP managers in disaster

[91] *See, e.g.*, BellSouth Comments at 20.

[93] *See NRIC VII Recommendation 7-7-0566*

[94] *See NRIC VII Recommendation 7-7-1011.*

[95] *See NRIC VII Recommendation 7-7-5204.*

management, PSAP rerouting, and the National Incident Management System. This is consistent with the recommendations of both NRIC and the Katrina Panel that these best practices be encouraged, but not required. No commenters asserted that there is a need to make these best practices mandatory at this time. Additionally, there may be legitimate concerns that implementation of diverse 911 circuits would be cost-prohibitive in certain cases.

76. NENA recommends that "the FCC or the state commissions, as appropriate, require all telephone central offices to have an emergency back-up power source."[96] St. Tammany's Parish Communications District 1 emphasizes the need for wireline providers to have backup procedures in place.[97] Several commenters supported this voluntary best practice and indicated that they have backup power available at their facilities. For example, AT&T agrees that it is important to have backup power to ensure the continued operation of the nation's 911 system during disasters and states that it looks forward to helping implement the Katrina Panel's recommendation that the Commission encourage the implementation of the NRIC backup power best practice.[98] AT&T reported that all of its central offices are equipped with backup batteries and/or diesel generators.[99] Verizon also stated that every critical component in its networks is protected by automatic power back-up systems.[100]

77. We agree with NENA's and St. Tammany Parish's suggestion and find that adoption of this requirement serves the public interest. Accordingly, pursuant to our authority under Section 1 of the Communications Act, as amended,[101] we will require all local exchange carriers (LECs), including incumbent LECs (ILECs) and competitive LECs (CLECs), as well as commercial mobile radio service (CMRS) providers to have an emergency back-up power source for all assets that are normally powered from local AC commercial power including those inside central offices, cell sites, remote switches and digital loop carrier system remote terminals. LECs and CMRS providers should maintain emergency back-up power for a minimum of 24 hours for assets inside central offices and eight hours for cell sites, remote switches and digital loop carrier system remote terminals that normally are powered from local AC commercial power.

78. Our expectation is that this requirement will not create an undue burden since several reported in their comments that they already maintain emergency back-up power. We realize, however, that this requirement may present a financial burden to some small carriers. Accordingly, we will not impose this requirement on LECs (including both ILECs and CLECs) that meet the definition of a Class B company as set forth in Section 32.11(b)(2) of the

[96] NENA Comments at 6.

[97] St. Tammany's Parish Communications District 1 asserts that "it is imperative that the LEC, CLECs, and wireless telephone providers be required to demonstrate they have adequate backup procedures in place." St. Tammany Parish Communications District 1 Comments at 2.

000408

Commission's rules.[102] We will also not apply this requirement to non-nationwide CMRS providers with no more than 500,000 subscribers.[103]

79. For the same reasons set forth in ¶75, we find that PSHSB should be proactive in encouraging implementation, by all other communications providers, of the third NRIC recommendation set forth above in ¶74 which states that communications service providers, network operators and property managers should ensure the availability of emergency/backup power.

80. The Katrina Panel also recommended that the Commission encourage the implementation of an NRIC best practice that states that network operators should consider deploying dual active 911 selective router architectures to enable circuits from the caller's serving end office to be split between two selective routers in order to eliminate single points of failure. This NRIC best practice further states that diversity should also be considered on interoffice transport facilities connecting each 911 selective router to the PSAP serving end office.[104] Some commenters asserted that selective routers represent technology whose time has passed.[105] NENA contends that deployment of a dual selective router at this point should be done only if particular circumstances strongly favor such an approach.[106]

81. PSHSB should neither encourage nor mandate implementation of this NRIC best practice. We agree with the many commenters who advocated that public safety communications planning, including the 911 infrastructure, instead should move to incorporate IP-based technologies.[107] This will enable the public safety community to focus on future needs rather than requiring more from legacy systems, offer more redundancy and flexibility, and contribute greatly to improving compatibility between public safety systems that operate using different proprietary standards.

82. *Grant Eligibility.* We agree with the recommendation of the Katrina Panel that the FCC urge federal grant programs to permit state or local 911 commissions or emergency communications districts that provide 911 or public safety communications services to be

---

[102] Section 32.11 provides that Class B companies are those companies that have annual revenues from regulated telecommunications operations that are less than the indexed revenue threshold. 47 C.F.R. § 32.11. The Wireline Competition Bureau recently announced that the 2006 revenue threshold for Class A to Class B companies is $134 million. *Public Notice*, "Annual Adjustment of Revenue Thresholds," DA 07-1706 (WCB, April 12, 2007). Although Section 32.11, by its terms, applies only to ILECs, we are applying the same revenue categories to CLECs for the purpose of the exception to this requirement.

[103] Although this standard is based on the Tier III CMRS definition which is defined as non-nationwide CMRS providers with no more than 500,000 subscribers as of the end of 2001, we note that we are not exempting from this requirement those non-nationwide CMRS providers that have grown to exceed the 500,000 subscriber threshold since 2001 as we believe that such providers are at a size where they should be able to comply with the emergency back-up power rule.

[105] AT&T Comments at 12-14; Cisco Comments at 4-7.

[106] NENA Comments at 4-5.

[107] AT&T Comments at 12-14; Cisco Comments at 4-7; NENA Comments at 3-5; St. Tammany Parish Communications District 1 Comments at 3; Texas Commission on State Emergency Communications and the Texas 9-1-1 Alliance (Texas 9-1-1 Entities) Comments at 2-5; TDI Reply Comment at 15-16.

eligible to apply for 911 enhancement and communications enhancement/interoperability grants. This recommendation also received strong support from APCO and NENA. We, therefore, direct PSHSB to consult with DHS and administrators of other applicable federal grant programs to explore this possibility. We caution, however, that PSHSB refrain from advocating any particular funding approach for state, tribal or local 911 commissions. Our goal is to support state, tribal and local 911 commissions in their efforts to enhance the redundancy, interoperability, and resiliency of their operations.

83. *Secondary Back-Up PSAPS.* The Katrina Panel also stated that the Commission should recommend the designation of a secondary back-up PSAP that is more than 200 miles away to answer calls when the primary and secondary PSAPs are disabled.[108] Most commenters, including APCO and NENA, did not support this recommendation.[109] APCO asserts that PSAPs 200 miles away would have difficulties with dispatch and that a better approach would be to have "mirrored" telephone central offices at remote locations. We decline to implement this Katrina Panel recommendation. Use of back-up PSAPs should be based on capabilities, common vulnerabilities and technical capabilities, not an arbitrary distance. Geographic remoteness is only one consideration; other considerations include the probability of disaster affecting both PSAPs, size of the PSAPs, the level of technology used at both PSAPs, radio interoperability, availability of operating support systems, and logistics for transporting and staffing PSAP personnel familiar with the geographic area covered by the disaster.

84. Other Recommendations Regarding First Responder Communications. Various commenters submitted additional recommendations for addressing first responder communications issues. We will address those issues below.

85. *Relocation of Existing Licensees on Interoperability Channels.* The Tennessee Statewide Interoperability Executive (the Tennessee SIEC) asserts that the Commission should move existing licensees on the VHF and UHF interoperability channels so that such channels are available for interoperability usage and do not have to compete with grandfathered dispatch operations or secondary telemetry, etc. The Tennessee SIEC also suggested that the Commission eliminate licensing of the interoperability channels for any purpose other than interoperability.

86. When the Commission designated the VHF and UHF interoperability channels, it sought to balance the need for improved interoperability capabilities below 512 MHz with the need to minimize the impact on incumbent licensees. The Commission therefore "grandfathered" incumbent licensees on a secondary basis only to interoperability communication rather than ordering them to vacate the channels or use them exclusively for interoperability purposes.[110] With regard to new licenses, the rules provide that these frequencies

[108] *Katrina Panel Report* at 39. The Panel noted that this "requires the FCC to eliminate any regulatory prohibition against the transport of 911 across LATA boundaries. As noted supra at ¶28 with respect to whether the Commission should grant carriers permanent relief from interLATA boundary restrictions as a way to enhance network resiliency, the BOCs have already raised the issue of relief from Section 272 and its implementing rules in a number of pending forbearance petitions and waiver requests. We will consider this issue in those proceedings as appropriate.

[109] *See, e.g.,* APCO comments at 5; NENA comments at 7-8.

[110] *The Development of Operational, Technical and Spectrum Requirements for Meeting Federal, State and Local Public Safety Agency Communication Requirements Through the Year 2010, Establishment of Rules and*

(continued....)

will be available primarily for interoperability-only communications.[111] We decline to amend our rules at this time to move existing licensees on the VHF and UHF interoperability channels. Instead, we find that a prudent approach would be first to consult with public safety coordinators. Accordingly, we direct PSHSB to consult the public safety frequency coordinator community through the Public Safety Communications Council to determine the extent of the problem, if any, and whether moving grandfathered licensees at this time would be feasible, and if so, how.

87. *Use of a Standard Continuous Tone Coded Squelch System.* The Tennessee SEIC suggested that the Commission mandate the use of a standard Continuous Tone Coded Squelch System ("CTCSS") to promote interoperability and minimize disruption at a disaster scene. We decline to initiate a rulemaking to implement Tennessee SEIC's suggestion at this time. The Commission has designated 5 VHF frequencies and 4 UHF channel pairs for interoperability use nationwide. Generally, VHF and UHF *analog* public safety radios include the CTCSS feature. Each radio "listens" for CTCSS tones transmitted by base stations, mobiles, or portables. If the tone is present, the user hears the communications directed to him/her, but other transmissions on the same frequency using a different CTCSS tone (or lacking a tone) are muted (squelched). Because these frequencies also have grandfathered, non-interoperable licensees, mandated use of a standard CTCSS on these channels would exclude (*i.e.*, tune out) these incumbents. Use of different tone coded squelch frequencies on the interoperability channels could prohibit units from different jurisdictions from communicating at the scene of a disaster, which undermines the purpose of interoperability. Mandating a common CTCSS tone could impose unwarranted economic burdens by requiring the purchase of additional equipment or modification of existing equipment to employ such a tone. A mandated, common CTCSS also could adversely impact grandfathered licensees operating on the VHF and UHF interoperability channels.

88. There is not enough information in the record to recommend a rulemaking at this point. However, it would be prudent to consult with the public safety frequency coordinators to ascertain the scope of the problem and determine whether Commission action is warranted. We therefore direct PSHSB to consult with public safety frequency coordinators and ask them to study this proposal and provide further input to the Commission.

89. *Statewide Channels.* The Tennessee SIEC advocates that, in order to help states keep their statewide channels clear, the Commission should allow state agencies to provide FCC designated frequency coordinators with a list of FCC designated "Statewide" channels for protection within 35 to 50 miles of the state border depending upon terrain protection.[112] We direct PSHSB to consult with public safety coordinators on the problem of keeping statewide channels clear.

90. *Licensees Adjacent to Interoperability Channels.* The Tennessee SIEC also advocates that the Commission mandate that the wideband licensees adjacent to the VHF/UHF interoperability channels move to narrowband emission to minimize interference to

[112] *See* Tennessee SEIC Comments at 1 (July 31, 2006).

interoperability channels. We note our rules already require that this be done.[113] Accordingly, no further action is necessary at this time.

91. *Designation of 155.370 MHz as a Nationwide Inter-agency Channel.* The Tennessee SIEC also advocates that the Commission designate 155.370 MHz as a nationwide inter-agency channel and implement a CTCSS tone to minimize interference.[114] We refrain, at this time, from initiating a rulemaking to amend our rules to designate 155.370 MHz as an inter-agency channel nationwide and implement a CTCSS tone to minimize interference. Designating this public safety frequency as an inter-agency channel nationwide may have a significant impact on existing incumbents on this frequency and adjacent channel incumbents. Overcoming interference concerns, particularly since VHF spectrum is traditionally congested, may prove challenging. The potential impact on existing licensees, including increased equipment costs, outweighs any benefits of designating a sixth VHF frequency for interoperability. We also note that the existing nationwide inter-agency channels were recommended by the four public safety coordinators and were adopted by the Commission partly because these were the "least licensed."

92. *Common Nomenclature.* The Tennessee Statewide Interoperability Executive and others recommend that the Commission mandate a common nomenclature for the designated interoperability channels and require each state to have a functional Statewide Interoperability Executive Council.[115] These issues were raised in the 7th NPRM in WT Docket No. 96-86 and we will address them in that proceeding.[116]

93. *Mutual Aid Channels.* The Tennessee SIEC also stated that the Commission should encourage public safety frequency coordinators to keep designated Fire mutual aid channels (*i.e.* 154.265, 154.280, 154.295 MHz) and their narrowband counterparts and the National Law Enforcement Channel (*i.e.* 155.475 MHz) for mutual aid only.[117] We refrain from concluding that the Commission should encourage public safety frequency coordinators to keep designated mutual aid channels for aid only, until the Commission can engage the public safety frequency coordinator community further on this issue. These frequencies have special limitations that make them available for specified mutual aid purposes, but the Tennessee SIEC suggests that the public safety frequency coordinators currently approve the use of these frequencies for non-mutual aid purposes. In order to evaluate the merits of this proposal, the Commission should consult with the public safety frequency coordinator community through the Public Safety Communications Council. Accordingly, we direct PSHSB to engage in such consultation and provide a recommendation on this issue.

---

[116] *See Development of Operational, Technical and Spectrum Requirements for Meeting Federal, State and Local Public Safety Communications Requirements Through the Year 2010*, WT Docket No. 96-86, Fifth Memorandum Opinion and Order, Sixth Report and Order and Seventh Notice of Proposed Rulemaking, 20 FCC Rcd 831, 854-58, ¶¶ 57-61, 64-68 (2005).

[117] Tennessee State Interoperability Executive Committee Reply Comments at 1 (July 31, 2006).

94. *911 Analysis.* NENA asserts that the Commission should require all 911 system service providers (SSPs) to analyze and provide detailed information on the redundancy, resiliency, and dependability of 911 networks and to provide detailed information to the Commission on areas where these issues are treated in the network and areas where there are gaps.[118] NENA states that all 9-1-1 SSPs should be required to submit a plan to the Commission outlining this information and steps they intend to take to ensure diversity and dependability in the network, including any plans they have to migrate their network to an IP-based platform that will enable the migration from the existing 911 system to next generation 911 architecture. NENA also argues that these plans should be made available to leading public safety organizations.[119]

95. AT&T asserts that NENA's proposal is misdirected because it is the PSAP, not the service provider, that must determine the best way to mitigate single points of failure within its 911 network in a cost effective manner.[120] Similarly, the United States Telecom Association (US Telecom) argues that ILECs do not own 911 networks, but merely provide inputs for them and should not, therefore, be required to report to the Commission regarding the dependability of these networks.[121] US Telecom argues that ILECs do not need to be burdened with additional reporting requirements and regulatory mandates, but rather need flexibility to create redundancies in their networks not mandates requiring them to do so where it is unnecessary.[122] AT&T also asserts that the NENA fails to explain how the Commission could make use of such detailed information in any manner that does not duplicate how 911 service providers already interact with PSAPs and state regulatory authorities.[123] AT&T and US Telecom assert that requiring the unnecessary further dissemination of this information could have serious adverse consequences for service providers, for whom those proprietary data have substantial competitive value, and for the general public if that information is compromised and comes into possession of persons and groups with criminal intentions.[124]

96. We agree that the Commission should require the analysis of 911 and E911 networks and the submission of reports regarding the status of these networks. Although NENA's proposal appears to be limited to 911 SSPs, which are typically incumbent local exchange carriers (ILECs), we believe that, with the exceptions described below, this requirement should apply all LECs, including ILECs and CLECs, CMRS providers required to comply with the wireless 911 rules[125] and interconnected Voice over Internet Protocol (VoIP)

[118] NENA Comments at 5-6; St. Tammany Parish Communications District 1 Comments at 2.

[119] *Id.*

[120] AT&T Reply Comments at 3-4. AT&T recommends that PSAPs "routinely review their 911 networks with the service providers and identify points where facilities are not diverse." AT&T Comments at 12-13; AT&T Reply Comments at 3-4.

[121] US Telecom Reply Comments at 8-9.

[122] US Telecom Reply Comments at 8-9.

[123] In support of this assertion, AT&T cites Public Utility Commission of Texas Rules, Section 26.433, *available at* www.puc.state.tx.us/rules/subrules/telecom/26.433/26.433.pdf.

[124] AT&T Reply Comments at 3-4; US Telecom Reply Comments at 8-9.

[125] *See* 47 C.F.R. § 20.18.

000413

service providers.[126] It is critical that Americans have access to a resilient and reliable 911 system irrespective of the technology used to provide the service. Therefore, we will require LECs, including both ILECs and CLECs, CMRS providers required to comply with the wireless 911 rules and interconnected VoIP service providers analyze and provide detailed reports on the redundancy, resiliency, and dependability of their 911 and E911 networks and systems. Where relevant, the reports should include steps the service provider intends to take to ensure diversity and dependability in the network and/or system, including any plans they have to migrate their network to a next generation IP-based E911 platform. This requirement will serve the public interest and further the Commission's statutory mandate to promote the safety of life and property through the use of wire and radio communication.[127]

97. We are mindful that this requirement may cause a financial burden to certain small carriers. Accordingly, we will not impose this reporting requirement on LECs, including ILECs and CLECs, that meet the definition of a Class B company set forth in Section 32.11(b)(2) of the Commission's rules.[128] We will also not impose this reporting requirement on Tier III CMRS carriers.[129] Interconnected VoIP service providers will be exempt from this requirement if their annual revenues fall below the revenue threshold established pursuant to Section 32.11 of the Commission's rules. NENA recommends that these reports be shared with "leading public safety organizations." Although we believe there is some benefit to sharing these reports with certain public safety organizations, we also understand that these reports will likely contain competitive and other information that should be accorded confidential treatment under our rules. To balance these concerns, we will share these reports with NENA, APCO, and The National Association of State 9-1-1 Administrators, the public safety organizations that previously have been provided copies of 911-related reports, but only pursuant to a protective order consistent with the model protective order previously adopted by the Commission.[130] We delegate authority to PSHSB to issue such protective orders.

[126] "Interconnected VoIP services" are services that (1) enable real-time, two-way voice communications; (2) require a broadband connection from the user's location; (3) require IP-compatible customer premises equipment; and (4) permit users to receive calls from and terminate calls to the public switched telephone network. *See IP-Enabled Services; E911 Requirements for IP-Enabled Service Providers*, WC Docket No. 06-36, 05-196, First Report and Order and Notice of Proposed Rulemaking, 20 FCC Rcd 10245, 10257-58 ¶ 24 (2005), *aff'd, Nuvio Corp v. FCC*, 473 F.3d 302 (D.C Cir. 2006) (*VoIP 911 Order*).

[127] *See* 47 U.S.C. § 151.

[128] Section 32.11 of the Commission's rules defines Class B companies as "[c]ompanies having annual revenues from regulated telecommunications operations that are less than the indexed revenue threshold." 47 C.F.R. § 32.11 (b)(2). The Wireline Competition Bureau recently announced that the 2006 revenue threshold for Class A to Class B companies is $134 million. *Annual Adjustment of Revenue Thresholds*, Public Notice, DA 07-1706 (WCB, April 12, 2007). Although Section 32.11, by its terms, applies only to ILECs, we are applying the same revenue categories to CLECs for the purpose of the exception to this requirement.

[129] Tier III carriers are non-nationwide CMRS providers with no more than 500,000 subscribers at the end of 2001. *See Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems; Phase II Compliance Deadlines for Non-Nationwide Carriers*, CC Docket No. 97-102, Order to Stay, 17 FCC Rcd 14841, 14848 ¶ 22 (2002).

[130] *See In the Matter of Examination of Current Policy Concerning the Treatment of Confidential Information Submitted to the Commission*, Report and Order, GC Docket No. 96-55, 13 FCC Rcd 24816 (1998).

98. AT&T and US Telecom argue that this should not be the duty of SSPs which are typically ILECs, suggesting that PSAPs are better situated to perform such an analysis. PSAPs know whether they have alternative facilities into their buildings and whether they have backup/alternative PSAP sites. However, carriers, not PSAPs, know about the selective routers, the routing between selective routers and the central offices from which customers may call, and the diversity in the interoffice facilities between the selective router and the central office serving the PSAP. PSAPs should know whether they ordered facility diversity, but they do not have insight regarding how, or even if, this was provisioned. US Telecom also argued that ILECs should not be subject to mandates requiring them to create redundancies in their networks; however, the rule we adopt requires only an analysis and report, it does not require carriers to create additional network redundancies.

99. Accordingly, pursuant to our authority under Section 403 of the Communications Act, as amended,[131] we will require LECs, CMRS providers required to comply with the wireless 911 rules and interconnected VoIP service providers, except those exempted above, to conduct an analysis of the resiliency and reliability of their 911 networks or systems and to submit a report to the Commission. We delegate to PSHSB the authority to implement and activate a process through which these reports will be submitted, including the authority to establish the specific data that will be required from each category of communications provider. We also direct PSHSB to make efforts to ensure that carriers subject to state regulations requiring the reporting of similar information are afforded the opportunity to meet this requirement by submitting the state report. The report will be due 120 days from the date that the Commission or its staff announces activation of the 911 network and system reporting process.

100. We also note that NRIC VII developed best practices that could address this issue. Accordingly, we direct PSHSB to continue to encourage industry to implement NRIC's best practices in this area, to continue to encourage industry to develop best practices in this area specific to their locale, and to continue to work to see that such recommendations, and any resulting adopted best practices, are made available on the Commission's website.

101. *Two-Way Paging Initiative.* Commenters recommended that the Commission permit the use of 900 MHz B/ILT pool of spectrum for two-way paging systems either owned by public safety users or dedicated to the provision of emergency communications.[132] We direct PSHSB, in coordination with WTB, to consider this issue and to determine what action, if any, should be implemented.

102. *McVey Petition for Rulemaking.* In his comments, W. Lee McVey requests that the Commission initiate a rulemaking to create a new radio service in the 148-150 MHz band "to facilitate interoperability between different first responders during and following a national emergency."[133] We note that the 148-149.9 band is allocated on a primary basis for federal Fixed, Mobile and Mobile Satellite (Earth-to-Space) service and the 149-150.05 MHz segment is allocated on a co-primary basis for federal and non-federal Mobile Satellite (Earth-to-space) and Radio navigation Satellite Services, and that the petition does not address this use nor does it

[131] 47 U.S.C. § 403.

[132] *See e.g.*, AAPC Comments.

[133] McVey Petition at 22.

explain what rules would be necessary to govern access to this spectrum. Given the potential impact of McVey's proposal to spectrum allocated for federal use, we direct PSHSB, together with OET, to seek feedback from NTIA on this petition. Upon receiving such feedback, we direct PSHSB and OET to make a determination on the appropriate action to be taken on this petition.

D. Emergency Communications to the Public

103. Revitalize and Publicize the Emergency Alert System. The Katrina Panel suggests a number of recommendations to revitalize and publicize the existing Emergency Alert System ("EAS"). To facilitate and complement the use of the existing EAS, the Katrina Panel recommends that the Commission should: (a) educate state and local officials about EAS, its benefits, and how it can be best utilized; (b) develop a program for educating the public about the EAS and promote community awareness of potential mechanisms for accessing those alerts sent during power outages or broadcast transmission failures; (c) move expeditiously to complete its proceeding to explore the technical and financial viability of expanding the EAS to other technologies, such as wireless services and the Internet, recognizing that changes to communications networks and equipment take time to implement; (d) consistent with proposed legislation, work with Congress and other appropriate federal departments and agencies to explore the technical and financial viability of establishing a comprehensive national warning system that complements existing systems and allows local officials to increase the penetration of warnings to the public as well as target, when necessary, alerts to a particular area; (e) work with the DHS and other appropriate federal agencies on pilot programs that would allow more immediate evaluation and testing of new notification technologies; and (f) work with the Department of Commerce to expand the distribution of certain critical non-weather emergency warnings over National Oceanic and Atmospheric Administration (NOAA) weather radios to supplement the EAS.[134]

104. We agree that we should encourage state, tribal and local governments to use EAS as a mechanism to deliver emergency alerts. Accordingly, we direct PSHSB to engage in outreach efforts to educate state, tribal and local governments about the EAS. In addition, we direct PSHSB to take steps to educate the public about EAS. We also note that PSHSB has coordinated with DHS on EAS issues, including issues related to the development of a state-of-the-art public alert and warning system. We direct PSHSB to continue those efforts.

105. Finally, on the issue of expanding the scope of EAS to include new technologies, as the Katrina Panel acknowledges, this issue is already the subject of our ongoing EAS rulemaking proceeding.[135] In addition, pursuant to the recently enacted WARN Act,[136] the Commission established an advisory committee – the Commercial Mobile Service Alert

[134] *Katrina Panel Report* at 40.

[135] *Review of the Emergency Alert System*, First Report and Order and Further Notice of Proposed Rulemaking, EB Docket No. 04-296, 20 FCC Rcd 18625 (2005). We note that, in a separate action on May 31, 2007, the Commission adopted a Second Report and Order and Further Notice of Proposed Rulemaking in the EAS proceeding that addresses some of the Katrina Panel's recommendations. *See* FCC Takes Action To Further Strengthen Nation's Emergency Alert System, *News Release*, (May 31, 2007) (*"EAS News Release"*).

[136] The Warn Act establishes a framework by which commercial mobile service providers may voluntarily transmit emergency alerts.

Advisory Committee – to develop and recommend technical standards and protocols by which commercial mobile service (CMS) providers may voluntarily transmit emergency alerts. The Committee has a diverse membership, including over forty representatives from the wireless and broadcast industries, public safety, equipment manufacturers, organizations representing people with disabilities and the elderly, FEMA and NOAA. Thus far, the Committee has held three full Committee meetings and a number of informal working group meetings. The Commission expects that the Committee will meet its statutory deadline of submitting recommendations to the Commission by October 12, 2007.

106. Ensuring that People with Disabilities and Non-English Speaking Persons Receive Alerts. The Katrina Panel recommended that the Commission promptly find a mechanism to resolve technical and financial hurdles in the EAS system to ensure that non-English speaking people or people with disabilities have access to public warnings, if readily achievable.[137] The Panel also recommended that the Commission work with trade associations and the disability community to create and publicize best practices for serving persons with disabilities and non-English-speaking Americans and encourage state and local government agencies that provide emergency information to take steps to make this information accessible to persons with disabilities and non-English speaking Americans.[138]

107. We note that the issue of making EAS alerts accessible to people with disabilities and to those who do not speak English is already the subject of the EAS rulemaking proceeding.[139] Moreover, the Commercial Mobile Service Alert Advisory Committee will consider these issues in the context of wireless carriers' participation in emergency alerts. On the broader issue of ensuring that emergency information reaches people with disabilities and non-English speaking Americans, we direct PSHSB, along with Consumer & Government Affairs Bureau (CGB) as appropriate, to work with the industry, state, tribal and local governments and organizations representing people with disability and non-English speaking persons on these issues.[140]

108. Ensuring Consistent and Reliable Emergency Information Through a Consolidated and Coordinated Public Information Program. The Katrina Panel recommended that public information functions should be coordinated and integrated across jurisdictions and across functional agencies, among federal state, local and tribal partners, and with private sector and non-governmental organizations.[141] The Panel recommended that the Commission work with involved parties to facilitate the integration of media representatives into the development of disaster communications plans (Emergency Support Function #2).[142] The Panel also urged the designation of a public information officer at each Emergency Operations Center to handle

[137] *Katrina Panel Report* at 41.

[138] *Id.*

[139] We note that, in the Further Notice of Proposed Rulemaking adopted in the EAS proceeding on May 31, 2007, the Commission sought further comment on these issues. *See EAS News Release, supra.*

[140] In addition, in the EAS Second Report and Order, the Commission directed PSHSB to convene a meeting, or a series of meetings, as soon as possible to address providing emergency information to non-English speakers. *See EAS News Release, supra.*

[141] *Katrina Panel Report* at 41.

[142] *Id.*

media and public inquiries, emergency public information and warning, and other functions. The Panel advocates the formation of a Joint Information Center ("JIC") during large scale disasters.[143] The JIC would collocate representatives from federal, regional, state, local and/or tribal EOCs responsible for primary incident coordination responsibilities. The JIC would provide a mechanism to integrate public information activities from various jurisdictions and organizations and would include media operations.

109. We believe this issue is thoroughly addressed by the National Response Plan under Emergency Support Function #15—External Affairs and the Public Affairs Support Annex. ESF #15 ensures that sufficient federal assets are deployed to the field during a potential or actual Incident of National Significance to provide accurate, coordinated, and timely information to government, media, the private section and the local populace. This provides the resource support and mechanisms to implement the NRP Incident Communications Emergency Policy and Procedures described in the NRP Public Affairs Support Annex. The NRP Public Support Annex describes the interagency policies and procedures used to rapidly mobilize federal assets to prepare and deliver coordinated and sustained messages to the public in response to Incidents of National significance and other major domestic emergencies. In addition, the NRP Public Affairs Support Annex specifically addresses the formation of JICs.

110. The Katrina Panel recommended that the Commission should work with federal, state, and local agencies to ensure consistent and reliable emergency information through a consolidated and coordinated public information program. We note that state, tribal and local officials play a key role in forming messages as they are sent to the public. Nonetheless, we direct PSHSB to continue to work with DHS and state, tribal and local governments on the consolidation and coordination of public information as part of its supporting role under the NRP's ESF #15 and the Public Affairs Annex.[144]

E. Other Recommendations

111. Amateur Initiatives. Several amateur radio operators recommended changes to Part 97 of the Commission's rules which govern amateur radio. Many of the changes have already been implemented and thus require no further action. For example, the Commission recently eliminated Morse Code proficiency as a license qualification requirement,[145] an action supported by several commenters in this proceeding.[146] The Commission also previously decided to phase out RACES station licenses,[147] making proposed changes to rules relevant to

[143] *Id.* at 41-42.

[144] The Commission is a Support Agency for the NRP's ESF #2 which addresses communications. ESF #2 ensures the provision of Federal communications support to Federal, State, local, tribal and private-sector response efforts during an Incident of National Significance. This Emergency Support Function supplements the provisions of the National Plan for Telecommunications Support in On-Wartime Emergencies. Coordination of public information is not a function assigned to ESF #2.

[145] Amendment of Part 97 of the Commission's Rules to Implement WRC-03 Regulations Applicable to Requirements for Operator Licenses in the Amateur Radio Service, *Report and Order and Order on Reconsideration*, WT Docket No. 05-235, FCC 06-178 (released December 19, 2006).

[146] *See e.g.*,, Cline Comments at 1; Creal Comments, at 1; Walz Comments, at 1; Flynn Comments at 1; Wade Comments at 1-2; Sewell Comment at 1.

[147] *1998 Biennial Regulatory Review — Amendment of Part 97 of the Commission's Amateur Service Rules*, Report and Order, WT Docket No. 98-143, 15 FCC Rcd 315, 351, ¶63 (1999).

(continued....)

these licenses moot. Finally, the Commission previously clarified that Part 97 does not prohibit amateur radio operators who are emergency personnel engaged in disaster relief from using their amateur radio bands while in a paid duty status.[148] We also note that several recommendations made by amateur radio operators remain pending before the Commission and, accordingly, we take no action on those in this proceeding.[149] We do note that the amateur radio community played an important role in the aftermath of Hurricane Katrina and other disasters. Accordingly, we order PSHSB to include the amateur radio community in its outreach efforts.[150]

112. Low Power Broadcast Service Initiatives. Prometheus Radio Project and Amherst Alliance submitted a number of recommendations regarding the Low Power FM service as well as other low power broadcast services. Specifically, these commenters recommended that the Commission: (1) remind Congress that it has previously recommended that the statutory restrictions on adjacent channel spacing of Low Power FM stations should be repealed; (2) open a filing window for 10 watt LPFM license applications; (3) establish 250 watt LPFM stations; and (4) establish Low Power AM stations; and (5) resolve the LPFM rulemaking proceeding.[151] We will refer these issues to the Media Bureau for handling as appropriate.

113. Modification of "Substantial Service" Policies for NPCS Channels. The American Association of Paging Carriers (AAPC) asserts that the Commission should "modify its 'substantial service' policies governing Part 24 NPCS channels so that licensees leasing, disaggregating or partitioning NPCS spectrum for use by two-way paging systems for emergency communications, including leasing, disaggregating or partitioning spectrum for 'back haul' channels that can be paired with traditional 929/931 MHz paging channels, also will be deemed to be providing 'substantial service' on the spectrum retained by the NPCS licensee."[152] Because this issue relates to general construction policy, we will refer this issue to the Wireless Telecommunications Bureau for appropriate handling.

114. Designation of 700 MHz Spectrum for Critical Infrastructure. Some commenters recommend that the Commission designate a portion of the 700 MHz band for use by critical

---

(...continued from previous page)

[148] Amendment of Part 97 of the Commission's Rules Governing the Amateur Radio Services, *Report and Order*, WT Docket No. 04-140, FCC 06-149 at para. 52 (released October 10, 2006).

[149] For example, we note that some commenters requested that the Commission adopt rules overriding bands of antennas used by amateur radio operators who are trained as emergency communicators. *See, e.g.*, Amherst Alliance Reply Comments at 8-11. We note that a petition for rulemaking has been filed separately on this issue and we will address this issue in the context of that filing. Other commenters raised issues that are part of the Commission's pending consideration of a Petition for Rulemaking filed by ARRL (RM 11306). Those issues will be addressed in that proceeding.

[150] We decline to take regulatory steps to protect the communications infrastructure from Electromagnetic Pulse ("EMP") attacks as recommended by amateur radio operators Nicholas Leggett and Donald Schellhardt. *See Leggett, et al. Comments*, at 1-12. The Commission has previously addressed and rejected such requests by Mr. Leggett and Mr. Schellhardt. Other government agencies, such as DHS and the National Institute of Standards and Technology are examining issues relating to EMP threats.

[151] *See e.g.*, Prometheus Radio Comments at 12-13; Amherst Alliance Reply Comments at 2-6.

[152] AAPC Comments at ii.

infrastructure industry use.[153] We will address this issue in the context of our 700 MHz proceedings.

115. CALEA Exemption for Temporary Ad Hoc Networks. Champaign Urbana Wireless Network *et al* asks that the Commission clarify that volunteers who build ad hoc networks in response to an emergency need not comply with CALEA. They state that, in response to Hurricane Katrina, volunteers created numerous wireless networks to provide needed Internet connectivity for Red Cross shelters and others in areas where Katrina destroyed or substantially degraded existing infrastructure. On completing construction of these ad hoc networks, the volunteers turned these networks over to local operators and move on to help others.

116. Champaign Urbana *et al* states that many of these ad hoc networks remained in operation for months and may still remain in operation today. They state that volunteers who generally did not maintain contact or provide any services for these networks once they turn them over to local operators. They state that these volunteers are not telecommunications carriers to whom CALEA generally applies and that these volunteers do not provide these services for hire. In addition, they state that these volunteers do not fall under the "substantial replacement provision" of the Act.

117. They request that the Commission establish a blanket waiver for *ad hoc* wireless networks created in response to a state of emergency; and that any liability that might arise for failure to comply with CALEA if the networks remain in operation after the emergency would not lie with those who created the network so long as they turned control over the network to others. To the extent the Commission determines that these volunteers are subject to CALEA, Champaign Urbana *et al* requests that the Commission provide a general waiver pursuant to its authority to exempt any "class or category of telecommunications carrier."

118. We do not have sufficient information in the record to justify grant of a blanket waiver as Champaign Urbana suggests. First it is not clear whether Champaign Urbana's request is for a blanket waiver of ad hoc temporary networks in all cases of emergencies, including those involving terrorist attacks. If so, such a waiver could actually impede law enforcement and thus hinder the purposes of CALEA. Moreover, we note that CALEA exemptions may only be granted after formal consultation with the U.S. Attorney General and that the Federal Bureau of Investigation (which formally has been designated by the Attorney General to handle CALEA obligations) has previously opposed granting blanket CALEA exemptions. For these reasons, we decline to issue a blanket waiver for these types of networks. Rather, we think the appropriate approach would be to review requests for exemptions of these types of networks (and the volunteers who construct them) on a case-by-case basis.

119. Closed Captioning and Telecommunications Relay Service Issues. Telecommunications for the Deaf and Hard of Hearing (TDI) recommends that: (1) broadcasters establish contracts or cooperative agreements among captioning providers to ensure that broadcasts can be captioned in the event of emergencies regardless of the emergency's

[153] UTC Reply Comments at 6.

location;[154] (2) captioning services personnel should be designated as essential personnel;[155] (3) the Commission require all Telecommunications Relay Service ("TRS") providers to have back-up power ready to operate for a minimum of 72 hours;[156] (4) the Commission should require that all TRS providers have contingency plans for transfer of calls from TRS centers that may be unable to operate due to catastrophic damage or overwhelming volume of calls from other centers;[157] and (5) all TRS personnel should be deemed essential personnel during emergencies.[158]

120. We direct CGB to consider these issues in an appropriate proceeding. In this regard, we note that, on December 29, 2006, the Commission released a Public Notice that provides steps that video programming distributors may take to obtain closed captioning services quickly in the event of an emergency.[159] With respect to TDI items (2) and (5), we note that the FCC has no jurisdiction over who is declared an "essential service provider," nonetheless we will direct PSHSB to work with DHS on this issue.

121. The American Association of People with Disabilities (AAPD) suggests that the Commission consider encouraging IP Relay and Video Relay Service (VRS) providers to develop solutions for handling emergency calls through TRS.[160] This issue was raised in the November 30, 2005 VRS 9-1-1 NPRM,[161] has been the subject of an E9-1-1 Disability Access Summit held at the Commission on November 15, 2006, and is pending before the Commission. CGB's Disability Rights Office and PSHSB will continue to work with the disability community and Internet-based TRS providers on these issues.[162]

---

[154] Telecommunications for the Deaf and Hard of Hearing, Incorporated; American Association of People with Disabilities; Association of Late-Deafened Adults; California Coalition of Agencies Serving the Deaf and Hard of Hearing; Deaf & Hard of Hearing Consumer Advocacy Network; and National Association of the Deaf Reply Comments ("TDI Reply Comments") at 7.

[155] TDI Reply Comments at 14.

[156] The rules currently require that most TRS providers operate, 24 hours a day, seven days a week and that they have redundancy features similar to those in central offices, including uninterruptible power for emergency use. *See* 47 C.F.R. § 64.604(b)(4)(i-ii).

[157] TDI Comments at 14.

[158] *Id.*

[159] *See Obligation Of Video Programming Distributors To Make Emergency Information Accessible To Persons With Hearing Disabilities Using Closed Captioning*, DA 06-2627 (Public Notice) (released December 29, 2006).

[160] AAPD Comments at 2-3.

[161] *In the Matter of Telecommunications Relay Services and Speech-to-Speech Services for Individuals with Hearing and Speech Disabilities*, (Notice of Proposed Rulemaking), CG Docket No. 03-123, 20 FCC Rcd 19476 (2005).

[162] Citing Section 255 of the Communications Act, AAPD urges the Commission to consider requiring captioning for PDAs, cell phones and other "converged" devices that have the ability to display text along with video. AAPD Comments at 2-3. Section 255, however, is restricted to "telecommunications service and equipment" devices, and not equipment such as televisions, iPods, etc. We also believe that extension of the closed captioning requirements to the types of devices mentioned by AAPD would require an amendment to the Television Decoder Circuitry Act of 1990, or other legislation by Congress.

IV. PROCEDURAL MATTERS

A. Final Regulatory Flexibility Act Analysis

122. As required by Section 603 of the Regulatory Flexibility Act (RFA), 5 U.S.C. § 604, the Commission has prepared a Final Regulatory Flexibility Analysis of the possible impact of the rule changes contained in this Order on small entities. The Final Regulatory Flexibility Act analysis is set forth in Appendix C, *infra*. The Commission's Consumer & Government Affairs Bureau, Reference Information Center, will send a copy of this Order, including the Final Regulatory Flexibility Act Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

B. Final Paperwork Reduction Act of 1995 Analysis

123. This Order contains new information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public, the Office of Management and Budget ("OMB") and other Federal agencies to comment on the information collection requirements contained in this Order, as required by the Paperwork Reduction Act of 1995, Public Law 104-13. Public and agency comments are due 60 days from date of publication of the Order in the Federal Register. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, *see* 44 U.S.C. 3506(c)(4), we previously sought specific comment on how the Commission might "further reduce the information collection burden for small business concerns with fewer than 25 employees." In this present document, we have assessed the effects of requiring the analysis of 911 and E911 networks and the submission of a report on the resiliency and reliability of those networks, by LECs, CMRS providers required to comply with the wireless 911 rules, and interconnected VoIP service providers. We have specifically exempt LECs that meet the definition of a Class B company set forth in Section 32.11(b)(2) of our rules,[163] Tier III CMRS carriers, and interconnected VoIP service providers with annual revenues below the revenue threshold established pursuant to Section 32.11 of our rules from these requirements.[164] We find that this imposes minimal regulation on small entities to the extent consistent with our goal of advancing our public safety mission.

C. Congressional Review Act Analysis

124. The Commission will send a copy of this Order in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

D. Alternative Formats

125. Alternative formats (computer diskette, large print, audio cassette, and Braille) are available to persons with disabilities by sending an e-mail to FCC504@fcc.gov or calling the Consumer and Governmental Affairs Bureau at (202) 418-0530, TTY (202) 418-0432.

[163] *See supra* n.102 and n.128.

[164] *See supra* n.103 and n.129.

000422

V. ORDERING CLAUSES

126. Accordingly, IT IS ORDERED, pursuant to the authority contained in Sections 1, 4(i)-(k), 4(o), 5(c), 201, 214(a), 218, 219, 271, 272, 301, 303(g), 303(j), 303(r), 332, 403, 621(b)(3), and 621(d) of the Communications Act of 1934, as amended, 47 U.S.C. §§ 151, 154(i)-(k), 154(o), 155(c), 201, 214(a), 218, 219, 271, 272, 301, 303(g), 303(j), 303(r), 332, 403, 541(b)(3), and 541(d), that this Order in EB Docket No. 06-119 and WC Docket No. 06-63 IS ADOPTED and that the Commission's Rules are amended as set forth in Appendix B. The rules adopted in this Order shall become effective 30 days after publication in the Federal Register, except that the new information collection requirement contained in Appendix B will not become effective prior to OMB approval. The reports on the redundancy, resiliency and reliability of 911 and E911 networks are due 120 days from the date that the Commission or its staff announces activation of the OMB-approved reporting process. The remainder of this Order shall become effective upon the release date of this Order, except as noted in ¶ 128.

127. IT IS FURTHER ORDERED that the Commission's Public Safety and Homeland Security Bureau, Consumer and Governmental Affairs Bureau and Office of Engineering and Technology take action as directed in this Order. The Commission's Public Safety and Homeland Security Bureau shall report to the Commission on its efforts three months from the date of release of this Order and nine months from the date of release of this Order.

128. IT IS FURTHER ORDERED that the Special Temporary Authority and waiver of Section 272 of the Act and its implementing rules to allow AT&T, Verizon and Qwest to share non-public, Bell Operating Company (BOC) network information with their Section 272 and other affiliates, as necessary to engage in integrated disaster recovery planning, IS EXTENDED to a one year period ending April 20, 2008 for AT&T[165] and to June 9, 2008 for Verizon and Qwest, effective on the date of release of this Order.

[165] AT&T's relief was originally scheduled to expire on April 20, 2007, but was extended by PSHSB to April 27, 2007. In light of this, we grant AT&T's extension *nunc pro tunc* back to April 27, 2007.

129. IT IS FURTHER ORDERED that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, SHALL SEND a copy of this Order, including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

FEDERAL COMMUNICATIONS COMMISSION

Marlene Dortch

APPENDIX B

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission creates new Part 12 of Chapter I of Title 47 of the Code of Federal Regulations (C.F.R.) as follows:

PART 12 – REDUNDANCY OF COMMUNICATIONS SYSTEMS

12.1 Purpose.

12.2 Backup Power.

12.3 911 and E911 Analyses and Reports

Authority: Sections 1, 4(i), 4(j), 4(o), 5(c), 218, 219, 301, 303(g), 303(j), 303(r), 332, 403, 621(b)(3), and 621(d) of the Communications Act of 1934, as amended, 47 U.S.C. §§ 151, 154(i), 154(j), 154(o), 155(c), 218, 219, 301, 303(g), 303(j), 303(r), 332, 403, 621(b)(3), and 621(d), unless otherwise noted.

§ 12.1 Purpose.

These rules include requirements that will help ensure the resiliency, redundancy and reliability of communications systems, particularly 911 and E911 networks and/or systems.

§ 12.2 Backup Power.

Local exchange carriers (LECs), including incumbent LECS (ILECs) and competitive LECs (CLECs), and commercial mobile radio service (CMRS) providers must have an emergency backup power source for all assets that are normally powered from local AC commercial power,

including those inside central offices, cell sites, remote switches and digital loop carrier system remote terminals. LECs and CMRS providers should maintain emergency back-up power for a minimum of 24 hours for assets inside central offices and eight hours for cell sites, remote switches and digital loop carrier system remote terminals that are normally powered from local AC commercial power. LECs that meet the definition of a Class B company as set forth in Section 32.11(b)(2) of the Commission's rules and non-nationwide CMRS providers with no more than 500,000 subscribers are exempt from this rule.

§ 12.3 911 and E911 Analyses and Reports.

The following entities must analyze their 911 and E911 networks and/or systems and provide a detailed report to the Commission on the redundancy, resiliency, and reliability of those networks and/or systems: (1) local exchange carriers (LECs), including incumbent LECs (ILECS) and competitive LECs (CLECs); (2) commercial mobile radio service providers required to comply with the wireless 911 rules set forth in Section 20.18 of the Commission's rules; and (3) interconnected Voice over Internet Protocol (VoIP) service providers. LECs that meet the definition of a Class B company set forth in Section 32.11(b)(2) of the Commission's rules, non-nationwide commercial mobile radio service providers with no more than 500,000 subscribers at the end of 2001, and interconnected VoIP service providers with annual revenues below the revenue threshold established pursuant to Section 32.11 of the Commission's rules are exempt from this rule.

(a) The Public Safety and Homeland Security Bureau (PSHSB) has the delegated authority to implement and activate a process through which these reports will be submitted, including the authority to establish the specific data that will be required. Where relevant, these reports should include descriptions of the steps the service providers intend to take to ensure

diversity and dependability in their 911 and E911 networks and/or systems, including any plans they have to migrate those networks and/or systems to a next generation Internet Protocol-based E911 platform.

(b) These reports are due 120 days from the date that the Commission or its staff announces activation of the 911 network and system reporting process.

(c) Reports filed under this Part will be presumed to be confidential. These reports will be shared with The National Emergency Number Association, The Association of Public Safety Communications Officials, and The National Association of State 9-1-1 Administrators only pursuant to a protective order. PSHSB has the delegated authority to issue such protective orders. All other access to these reports must be sought pursuant to procedures set forth in 47 C.F.R. § 0.461. Notice of any requests for inspection of these reports will be provided to the filers of the reports pursuant to 47 C.F.R. § 0.461(d)(3).

APPENDIX C

Final Regulatory Flexibility Analysis

1. As required by the Regulatory Flexibility Act of 1980, as amended (RFA),[1] an Initial Regulatory Flexibility Analysis (IRFA) was incorporated in the Notice of Proposed Rulemaking *(Notice)* in EB Docket No. 06-119.[2] The Commission sought written public comment on the proposals in this docket, including comment on the IRFA. This Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.[3]

A. Need for, and Objectives of, the Rules

2. In this Order, we adopt a rule that requires local exchange carriers (LECs), other than those that meet the definition of a Class B company as set forth in Section 32.11(b)(2) of the Commission's rules,[4] and commercial mobile radio service (CMRS) providers, other than non-nationwide CMRS providers with no more than 500,000 subscribers, to have an emergency backup power source for all assets that are normally powered from local AC commercial power, including those inside central offices, cell sites, remote switches and digital loop carrier system remote terminals. We also adopt a rule that requires the analysis of 911 and E911 networks and systems and detailed reporting to the Commission of the redundancy, resiliency and reliability of those networks and systems by: (1) LECs, including incumbent LECs (ILECs) and competitive LECs (CLECs); (2) commercial wirelesss service providers required to comply with the wireless 911 rules set forth in Section 20.18 of the Commission's rules;[5] and (3) interconnected Voice over Internet Protocol (VoIP) service providers. LECs that meet the definition of a Class B company set forth in Section 32.11(b)(2) of the Commission's rules, non-nationwide commercial mobile radio service providers with no more than 500,000 subscribers at the end of 2001, and interconnected VoIP service providers with annual revenues below the revenue threshold established pursuant to Section 32.11 of the Commission's rules are exempt from this rule.

3. These rules, which are part of a broader initiative taken with this Order to implement several of the recommendations made by the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks (Katrina Panel), will promote communications readiness and preparedness for future natural disasters and other emergencies. The measures taken today will also facilitate more effective and efficient recovery efforts in the

[1] *See* 5 U.S.C. § 603. The RFA, *see* 5 U.S.C. §§ 601-12, has been amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Pub. L. No. 104-121, Title II, 110 Stat. 857 (1996).

[2] *See* Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, *Notice of Proposed Rulemaking*, 21 FCC Rcd 7320, 7330, Appendix A. (2006).

[3] *See* 5 U.S.C. § 604.

[4] Section 32.11 provides that Class B companies are those companies that have annual revenues from regulated telecommunications operations that are less than the indexed revenue threshold. 47 C.F.R. § 32.11(b)(2). The Wireline Competition Bureau recently announced that the 2006 revenue threshold for Class A to Class B companies is $134 million. *Public Notice*, "Annual Adjustment of Revenue Thresholds," DA 07-1706 (WCB, April 12, 2007). Although Section 32.11, by its terms, applies only to ILECs, we are applying the same revenue categories to CLECs for the purpose of the exception to this requirement.

[5] 47 C.F.R. § 20.18.

wake of such events. These actions will advance efforts to save lives and protect property in the event of a natural disaster or other emergency.

B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

4. No comments specifically addressed the IRFA.

C. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply

5. The RFA directs agencies to provide a description of, and, where feasible, an estimate of, the number of small entities that may be affected by the rules adopted herein.[6] The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction."[7] In addition, the term "small business" has the same meaning as the term "small business concern" under the Small Business Act.[8] A "small business concern" is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).[9]

6. Nationwide, there are a total of approximately 22.4 million small businesses, according to SBA data.[10] A "small organization" is generally "any not-for-profit enterprise which is independently owned and operated and is not dominant in its field."[11] Nationwide, as of 2002, there were approximately 1.6 million small organizations.[12] The term "small governmental jurisdiction" is defined generally as "governments of cities, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand."[13] Census Bureau data for 2002 indicate that there were 87,525 local governmental jurisdictions in the United States.[14] We estimate that, of this total, 84,377 entities were "small governmental jurisdictions."[15] Thus, we estimate that most governmental jurisdictions are small.

[13] 5 U.S.C. § 601(5).

[14] U.S. Census Bureau, Statistical Abstract of the United States: 2006, Section 8, page 272, Table 415.

[15] We assume that the villages, school districts, and special districts are small, and total 48,558. *See* U.S. Census Bureau, Statistical Abstract of the United States: 2006, section 8, page 273, Table 417. For 2002, Census Bureau data indicate that the total number of county, municipal, and township governments nationwide was 38,967, of which 35,819 were small. *Id.*

7. In the following paragraphs, the Commission further describes and estimates the number of small entity licensees that may be affected by the rules the Commission adopts in this Order. The rule changes affect LECs, including both incumbent LECs (ILECS) and competitive LECs (CLECs), CMRS providers, and interconnected VoIP service providers.

8. Since this Order applies to multiple services, this FRFA analyzes the number of small entities affected on a service-by-service basis. In the case of CMRS providers, when identifying small entities that could be affected by the Commission's new rules, this FRFA provides information that describes auctions results, including the number of small entities that were winning bidders. However, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily reflect the total number of small entities currently in a particular service. The Commission does not generally require that licensees later provide business size information, except in the context of an assignment or a transfer of control application that involves unjust enrichment issues.

9. *Cellular Licensees.* The SBA has developed a small business size standard for small businesses in the category "Cellular and Other Wireless Telecommunications."[16] Under that SBA category, a business is small if it has 1,500 or fewer employees.[17] For the census category of "Cellular and Other Wireless Telecommunications," Census Bureau data for 2002 show that there were 1,397 firms in this category that operated for the entire year.[18] Of this total, 1,378 firms had employment of 999 or fewer employees, and 19 firms had employment of 1,000 employees or more.[19] Thus, under this category and size standard, the majority of firms can be considered small.

10. *Broadband Personal Communications Service.* The broadband Personal Communications Service (PCS) spectrum is divided into six frequency blocks designated A through F, and the Commission has held auctions for each block. The Commission has created a small business size standard for Blocks C and F as an entity that has average gross revenues of less than $40 million in the three previous calendar years.[20] For Block F, an additional small business size standard for "very small business" was added and is defined as an entity that, together with its affiliates, has average gross revenues of not more than $15 million for the preceding three calendar years.[21] These small business size standards, in the context of

[16] 13 C.F.R. § 121.201, North American Industry Classification System (NAICS) code 517212.

[17] *Id.*

[18] U.S. Census Bureau, 2002 Economic Census, Subject Series: Information, "Establishment and Firm Size (Including Legal Form of Organization," Table 5, NAICS code 517212 (issued Nov. 2005).

[19] *Id.* The census data do not provide a more precise estimate of the number of firms that have employment of 1,500 or fewer employees; the largest category provided is for firms with "1000 employees or more."

[20] *See* Amendment of Parts 20 and 24 of the Commission's Rules – Broadband PCS Competitive Bidding and the Commercial Mobile Radio Service Spectrum Cap, *Report and Order*, 11 FCC Rcd 7824, 7850-7852 ¶¶ 57-60 (1996); *see also* 47 C.F.R. § 24.720(b).

[21] *See* Amendment of Parts 20 and 24 of the Commission's Rules – Broadband PCS Competitive Bidding and the Commercial Mobile Radio Service Spectrum Cap, *Report and Order*, 11 FCC Rcd 7824, 7852 ¶ 60.

broadband PCS auctions, have been approved by the SBA.[22] No small businesses within the SBA-approved small business size standards bid successfully for licenses in Blocks A and B. There were 90 winning bidders that qualified as small entities in the C Block auctions. A total of 93 "small" and "very small" business bidders won approximately 40 percent of the 1,479 licenses for Blocks D, E, and F.[23] On March 23, 1999, the Commission reauctioned 155 C, D, E, and F Block licenses; there were 113 small business winning bidders.[24] On January 26, 2001, the Commission completed the auction of 422 C and F PCS licenses in Auction 35.[25] Of the 35 winning bidders in this auction, 29 qualified as "small" or "very small" businesses. Subsequent events concerning Auction 35, including judicial and agency determinations, resulted in a total of 163 C and F Block licenses being available for grant.

11. *Specialized Mobile Radio.* The Commission awards "small entity" bidding credits in auctions for Specialized Mobile Radio (SMR) geographic area licenses in the 800 MHz and 900 MHz bands to firms that had revenues of no more than $15 million in each of the three previous calendar years.[26] The Commission awards "very small entity" bidding credits to firms that had revenues of no more than $3 million in each of the three previous calendar years.[27] The SBA has approved these small business size standards for the 900 MHz Service.[28] The Commission has held auctions for geographic area licenses in the 800 MHz and 900 MHz bands. The 900 MHz SMR auction began on December 5, 1995, and closed on April 15, 1996. Sixty bidders claiming that they qualified as small businesses under the $15 million size standard won 263 geographic area licenses in the 900 MHz SMR band. The 800 MHz SMR auction for the upper 200 channels began on October 28, 1997, and was completed on December 8, 1997. Ten bidders claiming that they qualified as small businesses under the $15 million size standard won 38 geographic area licenses for the upper 200 channels in the 800 MHz SMR band.[29] A second auction for the 800 MHz band was held on January 10, 2002 and closed on January 17, 2002 and included 23 BEA licenses. One bidder claiming small business status won five licenses.[30]

12. The auction of the 1,050 800 MHz SMR geographic area licenses for the General Category channels began on August 16, 2000, and was completed on September 1, 2000. Eleven

[27] *Id.*

[28] *See* Letter to Thomas Sugrue, Chief, Wireless Telecommunications Bureau, Federal Communications Commission, from Aida Alvarez, Administrator, Small Business Administration, dated August 10, 1999. The Commission notes that, although a request was also sent to the SBA requesting approval for the small business size standard for 800 MHz, approval is still pending.

[29] *See* "Correction to Public Notice DA 96-586 'FCC Announces Winning Bidders in the Auction of 1020 Licenses to Provide 900 MHz SMR in Major Trading Areas,'" *Public Notice*, 18 FCC Rcd 18367 (WTB 1996).

[30] *See* "Multi-Radio Service Auction Closes," *Public Notice*, 17 FCC Rcd 1446 (WTB 2002).

bidders won 108 geographic area licenses for the General Category channels in the 800 MHz SMR band qualified as small businesses under the $15 million size standard. In an auction completed on December 5, 2000, a total of 2,800 Economic Area licenses in the lower 80 channels of the 800 MHz SMR service were sold. Of the 22 winning bidders, 19 claimed "small business" status and won 129 licenses. Thus, combining all three auctions, 40 winning bidders for geographic licenses in the 800 MHz SMR band claimed status as small business.

13. In addition, there are numerous incumbent site-by-site SMR licensees and licensees with extended implementation authorizations in the 800 and 900 MHz bands. The Commission does not know how many firms provide 800 MHz or 900 MHz geographic area SMR pursuant to extended implementation authorizations, nor how many of these providers have annual revenues of no more than $3 million or $15 million (the special small business size standards), or have no more than 1,500 employees (the generic SBA standard for wireless entities, discussed, *supra*). One firm has over $15 million in revenues. The Commission assumes, for purposes of this analysis, that all of the remaining existing extended implementation authorizations are held by small entities.

14. *Advanced Wireless Services.* In the *AWS-1 Report and Order*, the Commission adopted rules that affect applicants who wish to provide service in the 1710-1755 MHz and 2110-2155 MHz bands.[31] The *AWS-1 Report and Order* defines a "small business" as an entity with average annual gross revenues for the preceding three years not exceeding $40 million, and a "very small business" as an entity with average annual gross revenues for the preceding three years not exceeding $15 million. The *AWS-1 Report and Order* also provides small businesses with a bidding credit of 15 percent and very small businesses with a bidding credit of 25 percent.

15. *Incumbent Local Exchange Carriers (Incumbent LECs).* As noted above, a "small business" under the RFA is one that, *inter alia*, meets the pertinent small business size standard (*e.g.*, a telephone communications business having 1,500 or fewer employees), and "is not dominant in its field of operation."[32] The SBA's Office of Advocacy contends that, for RFA purposes, small incumbent LECs are not dominant in their field of operation because any such dominance is not "national" in scope.[33] We have therefore included small incumbent local exchange carriers in this RFA analysis, although we emphasize that this RFA action has no effect on Commission analyses and determinations in other, non-RFA contexts. Neither the Commission nor the SBA has developed a small business size standard specifically for incumbent local exchange services. The appropriate size standard under SBA rules is for the category Wired Telecommunications Carriers. Under that size standard, such a business is small if it has 1,500 or fewer employees.[34] According to Commission data,[35] 1,303 carriers have

[31] Service Rules for Advanced Wireless Services in the 1.7 GHz and 2.1 GHz Bands, WT Docket No. 02-353, *Report and Order*, 18 FCC Rcd 25162 (2003) (*AWS-1 Report and Order*).

[32] 15 U.S.C. § 632.

[33] Letter from Jere W. Glover, Chief Counsel for Advocacy, SBA, to William E. Kennard, Chairman, FCC (May 27, 1999). The Small Business Act contains a definition of "small-business concern," which the RFA incorporates into its own definition of "small business." *See* 15 U.S.C. § 632(a) (Small Business Act); 5 U.S.C. § 601(3) (RFA). SBA regulations interpret "small business concern" to include the concept of dominance on a national basis. *See* 13 C.F.R. § 121.102(b).

[34] 13 C.F.R. § 121.201, NAICS code 517110.

[35] *Trends in Telephone Service*, Table 5.3.

000437

reported that they are engaged in the provision of incumbent local exchange services. Of these 1,303 carriers, an estimated 1,020 have 1,500 or fewer employees and 283 have more than 1,500 employees. Consequently, the Commission estimates that most providers of incumbent local exchange service are small businesses that may be affected by our proposed rules.

16. *Competitive Local Exchange Carriers (Competitive LECs), Competitive Access Providers (CAPs), "Shared-Tenant Service Providers," and "Other Local Service Providers."* Neither the Commission nor the SBA has developed a small business size standard specifically for these service providers. The appropriate size standard under SBA rules is for the category Wired Telecommunications Carriers. Under that size standard, such a business is small if it has 1,500 or fewer employees.[36] According to Commission data,[37] 769 carriers have reported that they are engaged in the provision of either competitive access provider services or competitive local exchange carrier services. Of these 769 carriers, an estimated 676 have 1,500 or fewer employees and 93 have more than 1,500 employees. In addition, 12 carriers have reported that they are "Shared-Tenant Service Providers," and all 12 are estimated to have 1,500 or fewer employees. In addition, 39 carriers have reported that they are "Other Local Service Providers." Of the 39, an estimated 38 have 1,500 or fewer employees and one has more than 1,500 employees. Consequently, the Commission estimates that most providers of competitive local exchange service, competitive access providers, "Shared-Tenant Service Providers," and "Other Local Service Providers" are small entities that may be affected by our proposed rules.

17. *Cable and Other Program Distribution.* The Census Bureau defines this category as follows: "This industry comprises establishments primarily engaged as third-party distribution systems for broadcast programming. The establishments of this industry deliver visual, aural, or textual programming received from cable networks, local television stations, or radio networks to consumers via cable or direct-to-home satellite systems on a subscription or fee basis. These establishments do not generally originate programming material."[38] The SBA has developed a small business size standard for Cable and Other Program Distribution, which is: all such firms having $13.5 million or less in annual receipts.[39] According to Census Bureau data for 2002, there were a total of 1,191 firms in this category that operated for the entire year.[40] Of this total, 1,087 firms had annual receipts of under $10 million, and 43 firms had receipts of $10 million or more but less than $25 million.[41] Thus, under this size standard, the majority of firms can be considered small.

18. *Cable Companies and Systems.* The Commission has also developed its own small business size standards, for the purpose of cable rate regulation. Under the Commission's

[41] *Id.* An additional 61 firms had annual receipts of $25 million or more.

000438

rules, a "small cable company" is one serving 400,000 or fewer subscribers, nationwide.[42] Industry data indicate that, of 1,076 cable operators nationwide, all but eleven are small under this size standard.[43] In addition, under the Commission's rules, a "small system" is a cable system serving 15,000 or fewer subscribers.[44] Industry data indicate that, of 7,208 systems nationwide, 6,139 systems have under 10,000 subscribers, and an additional 379 systems have 10,000-19,999 subscribers.[45] Thus, under this second size standard, most cable systems are small.

19. *Cable System Operators.* The Communications Act of 1934, as amended, also contains a size standard for small cable system operators, which is "a cable operator that, directly or through an affiliate, serves in the aggregate fewer than 1 percent of all subscribers in the United States and is not affiliated with any entity or entities whose gross annual revenues in the aggregate exceed $250,000,000."[46] The Commission has determined that an operator serving fewer than 677,000 subscribers shall be deemed a small operator, if its annual revenues, when combined with the total annual revenues of all its affiliates, do not exceed $250 million in the aggregate.[47] Industry data indicate that, of 1,076 cable operators nationwide, all but ten are small under this size standard.[48] We note that the Commission neither requests nor collects information on whether cable system operators are affiliated with entities whose gross annual revenues exceed $250 million,[49] and therefore we are unable to estimate more accurately the number of cable system operators that would qualify as small under this size standard.

20. *Internet Service Providers.* The SBA has developed a small business size standard for Internet Service Providers (ISPs). ISPs "provide clients access to the Internet and generally provide related services such as web hosting, web page designing, and hardware or software consulting related to Internet connectivity."[50] Under the SBA size standard, such a

[42] 47 C.F.R. § 76.901(e). The Commission determined that this size standard equates approximately to a size standard of $100 million or less in annual revenues. *Implementation of Sections of the 1992 Cable Act: Rate Regulation*, Sixth Report and Order and Eleventh Order on Reconsideration, 10 FCC Rcd 7393, 7408 (1995).

[47] 47 C.F.R. § 76.901(f); *see* Public Notice, *FCC Announces New Subscriber Count for the Definition of Small Cable Operator*, DA 01-158 (Cable Services Bureau, Jan. 24, 2001).

[48] These data are derived from: R.R. Bowker, *Broadcasting & Cable Yearbook 2006*, "Top 25 Cable/Satellite Operators," pages A-8 & C-2 (data current as of June 30, 2005); Warren Communications News, *Television & Cable Factbook 2006*, "Ownership of Cable Systems in the United States," pages D-1805 to D-1857.

[49] The Commission does receive such information on a case-by-case basis if a cable operator appeals a local franchise authority's finding that the operator does not qualify as a small cable operator pursuant to § 76.901(f) of the Commission's rules. *See* 47 C.F.R. § 76.909(b).

[50] U.S. Census Bureau, "2002 NAICS Definitions: 518111 Internet Service Providers"; http://www.census.gov/epcd/naics02/def/NDEF518.HTM.

business is small if it has average annual receipts of $23 million or less.[51] According to Census Bureau data for 2002, there were 2,529 firms in this category that operated for the entire year.[52] Of these, 2,437 firms had annual receipts of under $10 million, and an additional 47 firms had receipts of between $10 million and $24, 999,999. Consequently, we estimate that the majority of these firms are small entities that may be affected by our action.

21. *Web Search Portals.* Our action pertains to interconnected VoIP services, which could be provided by entities that provide other services such as email, online gaming, web browsing, video conferencing, instant messaging, and other, similar IP-enabled services. The Commission has not adopted a size standard for entities that create or provide these types of services or applications. However, the Census Bureau has identified firms that "operate web sites that use a search engine to generate and maintain extensive databases of Internet addresses and content in an easily searchable format. Web search portals often provide additional Internet services, such as e-mail, connections to other web sites, auctions, news, and other limited content, and serve as a home base for Internet users."[53] The SBA has developed a small business size standard for this category; that size standard is $6.5 million or less in average annual receipts.[54] According to Census Bureau data for 2002, there were 342 firms in this category that operated for the entire year.[55] Of these, 303 had annual receipts of under $5 million, and an additional 15 firms had receipts of between $5 million and $9,999,999. Consequently, we estimate that the majority of these firms are small entities that may be affected by our action.

D. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

22. *911 System Information Collection.* The rules adopted in this Order require certain specified communications providers to analyze their 911 and E911 networks and systems and provide one-time detailed reports to the Commission regarding the redundancy, resiliency and reliability of those networks and systems. The communications providers subject to this rule are: (1) LECs, including ILECs and CLECs; (2) commercial wireless service providers required to comply with the wireless 911 rules set forth in Section 20.18 of the Commission's rules; and (3) interconnected Voice over Internet Protocol (VoIP) service providers. The Commission has delegated to the Chief, Public Safety and Homeland Security Bureau, the authority to implement and activate a process through which these reports will be submitted, including the authority to establish the specific data that will be required.

23. The reports required by this Order will be filed one time only and are due 120 days from the date that the Commission or its staff announces activation of the 911 network and system reporting process. Since most companies can be expected to have knowledge of their

[51] 13 C.F.R. § 121.201, NAICS code 518111.

[52] U.S. Census Bureau, 2002 Economic Census, Subject Series: Information, "Establishment and Firm Size (Including Legal Form of Organization)," Table 4, NAICS code 518111 (issued Nov. 2005).

[53] U.S. Census Bureau, "2002 NAICS Definitions: 518112 Web Search Portals"; http://www.census.gov/epcd/naics02/def/NDEF518.HTM.

[54] 13 C.F.R. § 121.201, NAICS code 518112.

[55] U.S. Census Bureau, 2002 Economic Census, Subject Series: Information, "Establishment and Firm Size (Including Legal Form of Organization)," Table 4, NAICS code 518112 (issued Nov. 2005).

network and/or system architecture, we estimate that for the great majority of entities the total time required to complete a filing with the Commission will be approximately eight to 24 hours, depending on the size and type of entity. In making our time estimate, we have taken into account that this report must be filed only once and that the report will likely be made electronically, through a "fill in the blank" template, thereby minimizing the burden on all reporting entities. Finally, in order to avoid imposing financial burden on small carriers, the Commission exempt the following from this rule: (1) LECs that meet the definition of a Class B company set forth in Section 32.11(b)(2) of the Commission's rules;[56] (2) non-nationwide commercial mobile radio service providers with no more than 500,000 subscribers at the end of 2001; and (3) interconnected VoIP service providers with annual revenues below the revenue threshold established pursuant to Section 32.11 of the Commission's rules.

24. *Back-Up Power Supply.* The Order also adopts a rule that requires LECs and CMRS providers to have an emergency back-up power source for all assets that are normally powered from local AC commercial power, including those inside central offices, cell sites, remote switches and digital loop carrier system remote terminals. The rule adopted provides that LECs and CMRS providers should maintain emergency back-up power for a minimum of 24 hours for assets inside central offices and eight hours for cell sites, remote switches and digital loop carrier system remote terminals that normally are powered from local AC commercial power. Our expectation is that this requirement will not create an undue burden since several communications providers reported in their comments that they already maintain emergency back-up power. Additionally, LECs that meet the definition of a Class B company as set forth in Section 32.11(b)(2) of the Commission's rules and non-nationwide CMRS providers with no more than 500,000 subscribers are exempt from this rule.

E. Steps Taken to Minimize the Significant Economic Impact on Small Entities, and Significant Alternatives Considered

25. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include (among others) the following four alternatives: (1) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.[57]

26. *911 System Information Collection.* In order to minimize any adverse impact of the 911 system information collection on small entities, we have exempted LECs (both ILECs and CLECs) that meet the definition of a Class B company that is set forth in Section 32.11(b)(2) of the Commission's rules.[58] We will also not impose this reporting requirement on Tier III

[56] Section 32.11 provides that Class B companies are those companies that have annual revenues from regulated telecommunications operations that are less than the indexed revenue threshold. 47 C.F.R. § 32.11(b)(2). The Wireline Competition Bureau recently announced that the 2006 revenue threshold for Class A to Class B companies is $134 million. *Public Notice*, "Annual Adjustment of Revenue Thresholds," DA 07-1706 (WCB, April 12, 2007). Although Section 32.11, by its terms, applies only to ILECs, we are applying the same revenue categories to CLECs for the purpose of the exception to this requirement.

[57] 5 U.S.C. § 603(c).

[58] *See supra* n. 224.

CMRS carriers.[59] Finally, interconnected VoIP service providers will be exempt from this requirement if their annual revenues fall below the revenue threshold established pursuant to Section 32.11 of the Commission's rules.

27. *Back-Up Power Supply.* We recognize that the provision of a backup power supply as directed by the rule adopted in this Order may be a significant financial hardship for certain small businesses. Accordingly, we will not impose this requirement on LECs (both ILECs and CLECs) that meet the definition of a Class B company as set forth in Section 32.11(b)(2) of the Commission's rules. We will also not apply this requirement to non-nationwide CMRS providers with no more than 500,000 subscribers.[60]

Report to Congress: The Commission will send a copy of the Order, including this FRFA, in a report to be sent to Congress pursuant to the Congressional Review Act.[61] In addition, the Commission will send a copy of the Order, including this FRFA, to the Chief Counsel for Advocacy of the SBA. A copy of the Order and FRFA (or summaries thereof) will also be published in the Federal Register.[62]

[59] Tier III carriers are non-nationwide CMRS providers with no more than 500,000 subscribers at the end of 2001. *See Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems; Phase II Compliance Deadlines for Non-Nationwide Carriers*, CC Docket No. 97-102, Order to Stay, 17 FCC Rcd 14841, 14848 ¶ 22 (2002).

[60] Although this standard is based on the Tier III CMRS definition which is defined as non-nationwide CMRS providers with no more than 500,000 subscribers as of the end of 2001, we note that we are not exempting from this requirement those non-nationwide CMRS providers that have grown to exceed the 500,000 subscriber threshold since 2001 as we believe that such providers are at a size where they should be able to comply with the emergency back-up power rule.

[61] *See* 5 U.S.C. § 801(a)(1)(A).

[62] *See* 5 U.S.C. § 604(b).

STATEMENT OF CHAIRMAN KEVIN J. MARTIN

Re: *Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, EB Docket No. 06-119 and Docket No. 06-63.*

Today, the Commission takes action to implement the recommendations of the Independent Katrina panel. Experts on the panel from all sectors of the communications industry and leading public safety organizations worked hard to study the impact of the disaster and focus the Commission's attention on proposals that would improve our response and recovery efforts for the future.

The recommendations we adopt today address a wide range of initiatives designed to improve disaster preparedness, network reliability and resilience, and communications among emergency responders. In particular, we require local exchange carriers and CMRS providers to have an emergency back-up power source for certain critical network facilities and we also require these service providers and VoIP providers file a report with the Commission on the resiliency and reliability of their 911 networks or systems.

I am pleased that, upon release of the Panel's final recommendations, the Public Safety Bureau moved quickly to begin the process of implementing many of these recommendations. I look forward to receiving the Bureau's first full progress report this fall, and commit to continue to work with my colleagues to ensure that this Commission remains vigilant to improve communications for the needs of emergency preparedness and response.

I would again like to thank all the members of the Katrina panel for their public service and dedication. The American public has benefited greatly from the thoughtful contributions made by all the industry and public safety participants who gave their time and effort in this endeavor.

I would also like to thank Nancy Victory for her leadership as Chair of the panel. Her knowledge and expertise helped guide the panel and ensure that it would deliver a quality work product within a very tight timeframe. Finally, I would also like to express my appreciation to my fellow Commissioners for their continued support of the work of the Panel, and the efforts of our Public Safety Bureau as it enacts the improvements we adopt today.

STATEMENT OF COMMISSIONER MICHAEL J. COPPS

Re: *Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks*, EB Docket No. 06-119 and WC Docket No. 06-63.

Hurricane season begins anew tomorrow. News programs are filled with predictions of how many and how intense this year's storms may be; stories about the extent of preparations that are being made to cope with the disruptions that might once again befall New Orleans, the Gulf Coast and other hurricane-prone areas of the country; and stories chronicling the thus-far disappointing reconstruction of the areas hit so hard by Hurricane Katrina. Our nation was a nation scarred by the images of suffering and destruction that were broadcast into our homes in the days and weeks following Katrina and also Hurricane Rita. I visited the Gulf Coast with Chairman Martin and other communications leaders in the days following the catastrophe, and I know that I will never forget the searing images of devastation we witnessed there.

The region's suffering was severely compounded by the almost total failure of public safety and commercial communications networks. For a week or more, more often than not, 911 calls went unanswered, broadcast stations were dark, public safety radio systems were seriously compromised, wireless phones were inoperable, and wireline phones had no dial tone. Most painful of all was that a significant portion of this failure was unnecessary and could have been prevented, or at least seriously ameliorated, by better pre-disaster planning and more coordinated public sector-private sector teamwork. I say this not to point fingers, but to point up our local, regional and national shortfalls in public safety and disaster preparedness. Part of our problem today, as a country, is our failure to come to grips with how much work remains to be done to build effective public safety communications. It is huge, it is expensive and it is totally necessary.

The Gulf Coast tragedy presented us with a solemn duty to sift through the shortfalls, in both the private and the public sectors; to grasp the harsh lessons that needed to be learned; and to enhance our preparedness for the next major cataclysm. As I hope we are all aware, there ***will*** be a next one—certainly other natural disasters or, even more terrifying if that is possible, more terrorist attacks.

The FCC undertook an active role in the days following the big storm. The Commission team, under Chairman Martin's leadership, worked around the clock, for days and weeks, to restore communications and provide assistance all along the Gulf Coast. Communications industries likewise worked long and hard to restore critical services and we owe them a large measure of gratitude, too. Subsequently an Independent Panel was established under former NTIA Administrator Nancy Victory to review thoroughly what had happened, what systems had worked and which had not, and to provide recommendations for the road ahead. Today, after putting these recommendations out for comment, the Commission takes a step forward.

But it is only that—another step forward. This is not a Report and Order that brings a proceeding to a close. It is an incremental step against the backdrop of a challenge that will continue to stalk us and might even get worse in coming years as climate changes suggest more frequent and more intense storms and disruptions across much of the country. There is so much left undone and so much yet to do.

I consider it a positive step that today's item announces two new regulations for carriers who fall under the Commission's jurisdiction. First, following the suggestion of the National Emergency Number Association (NENA), all carriers of a certain size must now ensure the availability of emergency/backup power in all their central offices. Second, they must file with the Commission an analysis of the redundancy, resiliency, and dependability of their 911 facilities.

These requirements will help improve the nation's readiness for the next disaster and I appreciate my colleagues' willingness to make these measures mandatory. Their adoption represents recognition by this Commission that we cannot rely exclusively on the workings of the free market and the sometimes-too-sanguine assurances of industry when it comes to assuring public safety. I am pleased that we seem to be on the cusp of realizing that a more proactive approach may be necessary. As Justice Frankfurter once observed, "Wisdom too often never comes, and so one ought not to reject it merely because it comes late."[1] It is important that the Commission is taking this up.

But I also think that record that was developed was too heavily skewed by the belief—I think the pernicious belief—that the FCC either ***will not*** or ***should not*** take a lead role in mandating network resiliency standards. I simply cannot accept this view. The nation's experience with 9/11 and Hurricane Katrina indicates to me that industry best practices and voluntary best efforts are not by themselves always going to get the job done. You don't have to take my word for it. The comments filed in this docket by St. Tammany Parish, one of the Louisiana areas most devastated by Hurricane Katrina, put it well: "Regarding the question of whether to 'rely on voluntary consensus or other measures for enhancing readiness and promoting more effective response efforts' we encourage the Commission to actively pursue positive results to the extent permitted. Voluntary consensus measures, while well intended, have fallen short many times."

I can't put it any better than that. The individual citizens who bore the brunt of Katrina's fury and the PSAPs who tried to cope with it certainly understand that some things need to be done, and done soon, and done on a mandatory basis if they are not going to be voluntarily implemented. These are the times when the Commission needs to step in and make it happen. Otherwise an effective system of public safety will never be achieved. So I hope that our willingness today to implement mandatory actions will be the beginning of a broader and more general reorientation of our approach to public safety issues. I am pleased we are beginning down this road and I hope we stay on it. I also hope and trust that the private sector realizes the public trust it has been given to aid in the protection of our citizens. The private sector played a critical role in the aftermath of Katrina and Rita, and still does, as it rebuilds the network infrastructure in that devastated region. The industry's continuing involvement in these efforts is essential if government and industry together are going to be successful next time. Our nation's citizens deserve, and expect, no less. Public safety is not something nice to have—it is a national imperative and the first obligation of all of us in this room as public servants.

Another role that I suggested for the Commission was to act as a clearinghouse for ideas that can better prepare organizations of all sizes for the next disaster. I am talking here about the

[1] *Henslee v. Union Planters Nat. Bank & Trust Co.*, 335 U.S. 595, 600 (1949) (Frankfurter, J., dissenting).

hundreds of thousands of public safety agencies, hospitals, nursing homes, charities, small businesses, and other organizations that lack the resources to come up with self-generated, custom-built and fully-tested disaster readiness plans. Why should each of these groups have to start from scratch and re-invent the public safety wheel? Wouldn't it be far better if they could come to the FCC to learn about what has worked for other organizations and what hasn't? After all, learning that your disaster plan doesn't work in the middle of a disaster is emphatically ***not*** the right time to make that discovery. The technologies and protocols that organizations rely upon in a crisis need to work every time.

Today's item instructs the Commission's new Public Safety and Homeland Security Bureau—under its new Bureau Chief, Derek Poarch—to take the lead role in building such a clearinghouse. As I have noted many times before, this is where the Commission should have gone six years ago, right after 9/11. I commend Chairman Martin's willingness to take a leadership role in this critically important area and I applaud his efforts to initiate processes that will hopefully put this agency in the forefront of communications readiness planning, exactly where it belongs.

As with all public safety initiatives, the proof will be in the pudding. In the weeks and months ahead, our new Bureau and Chief are tasked with developing readiness checklists for each industry sector; awareness programs on alternative technologies such as satellite and paging systems, Wi-Fi, and WiMAX; and outreach programs for emergency medical and other communities. It will require significant resources to realize these and many other objectives, such as developing and publicizing a first-rate website that communicates the Commission's latest learning on how to prepare for disasters. Commission outreach is so central to all this and I am pleased that the Bureau will issue regular reports detailing our outreach activities. I, for one, will be monitoring these reports closely to assure myself that the Bureau is doing everything that it can to reach those who can benefit from the FCC's research, experience and programs. I urge Chief Poarch to be aggressive in this task—to become a tireless advocate and proselytizer on this issue. It was never my idea that we would settle for rebuilding a communications system that was taken down by Katrina—a terrible storm, to be sure, but far less devastating than a direct hit from a Category 5 hurricane would have been. The good citizens of New Orleans and the Gulf Coast have a right to expect, and should settle for no less, than the best and most up-to-date communications systems that our country can provide.

So I vote to approve this item as a step along the way, but just a step, holding out the prospect of continuing commitment to see the job through and to deploy the full decision-making authority of this Commission to make it happen. Thanks to the Bureau, all the commenters, our hard-working bureau and staffs, and my colleagues for their efforts here.

STATEMENT OF COMMISSIONER JONATHAN S. ADELSTEIN

Re: Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks; EB Docket No. 06-119 and WC Docket No. 06-63.

Hurricane Katrina and the 2005 hurricane season represented one of the most challenging times our country has seen in recent years. Its memory should serve as ample reminder of the commitment that will be necessary to achieve disaster readiness and preparedness. All aspects of daily life in the Gulf Coast region were severely impacted by the devastation caused by these storms – telecommunications and media services were no exception. With such destruction of our communications infrastructure, Hurricane Katrina demonstrates in stark relief the essential role of communications during emergencies, whether citizens are trying to find out what is happening with their families, officials are trying to disseminate critical information, or emergency personnel are responding to an urgent situation.

The Katrina Panel Report confirmed that our nation's communications systems and our government's response capabilities were put to the test, with very mixed results. While our Order today achieves some limited gains, there is still much to be done before we face our next national test.

The Commission can and must play a key role in improving our nation's disaster preparedness, network reliability, and communications among first responders. Through our Public Safety and Homeland Security Bureau, the Commission must take a more active lead in coordinating with state, local and Tribal governments, public safety answering points (PSAPs), and first responders in advance of future disasters; in providing important outreach to our nation's emergency medical communities; and in working with other federal agencies to ensure that credentialing procedures and other requirements are developed in advance to ensure access by communications workers to affected areas post-disaster. This item sets out several important directives to our staff to meet these worthwhile objectives. These efforts are critical if the Commission is to establish and maintain a position of leadership. Many of these proposed outreach efforts were specifically recommended by the Hurricane Katrina Panel, so I want to extend again my thanks to Nancy Victory and the members of the Panel for investing their time and effort to draw out lessons from this disaster and to better prepare our communities for the future.

Unfortunately, we still have much work remaining to improve the country's communications preparedness in light of the events of 20 months ago. As the Order and the Hurricane Katrina Panel Report each point out, Hurricane Katrina knocked out more than three million customer phones in the region and more than a thousand cell sites. More than 35 PSAPs were off-line and unable to provide 911 or enhanced 911 services. The Katrina Panel Report identified three main problems that caused the majority of communications network interruptions: flooding; lack of power and/or fuel; and failure of redundant pathways.[1] I am pleased that we were able to improve the item by addressing these concerns through two modest provisions dealing with (1) emergency back-up power requirements, and (2) an obligation on

[1] *See* Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, *Report and Recommendations to the Federal Communications Commission* (Katrina Panel Report) at 13.

service providers to file 911 analysis reports. These are worthwhile efforts, but they alone will not be sufficient to ensure that our communications systems are ready to handle the high hurdles that disasters can bring.

Indeed, the larger focus of the item is on a series of aspirational objectives for our new Bureau rather than more concrete assurances for our nation's citizens and first responders. For example, one of the key findings in the Katrina Panel Report was the widespread damage caused by unprecedented flooding: "While communications infrastructure had been hardened to prepare against strong winds from a hurricane, the widespread flooding of long duration associated with Katrina destroyed or disabled substantial portions of the communications networks and impeded trained personnel from reaching and operating the facilities."[2] There may be no silver bullets to address the widespread flooding caused by a disaster such as Hurricane Katrina; yet, this Order does not in itself require any concrete actions to address this very real problem. The Commission needs to initiate a discussion of hardening the network to address flood related issues. While the Order directs the Bureau to encourage the development of voluntary checklists, it still leaves work to be done. Although outreach and voluntary measures can play a critical role, we must continue to push communications providers to go the extra mile to achieve a true level of preparedness. Without firm commitments, can we seriously tell the people of the Gulf Coast region that this Commission has taken all of the necessary steps to ensure that such a communications disaster will never happen again?

Similarly, the Katrina Panel Report analyzed extensively the problem of the failure of redundant pathways and the impact on communications networks throughout the region from the loss of switches, T1s, and other leased lines. "As an example, a major tandem switch in New Orleans was isolated, which meant that no communications from parts of New Orleans to outside the region could occur."[3] Once again, the Commission offers little in the way of solutions for a serious network shortfall that may well be present in many other communities. Rather, the item encourages carriers to adopt voluntary readiness checklists based on best practices advanced by the Network Reliability and Interoperability Council (NRIC) and the Media Security and Reliability Council (MSRC), our recently-terminated Federal Advisory Committees. I understand that neither group has met in well over a year, with NRIC VII holding its last meeting on December 16, 2005, just a couple of months after the hurricane season ended. Now that these committees have been replaced with a new combined reliability council, we will need to seek input more regularly if we are going to rely on a system of carrier commitments and best practices to effectuate network reliability changes.

To all of the affected citizens in the Gulf Coast area – and to the many diverse communities at risk for future catastrophic events – we owe an honest assessment of the performance of the telecommunications and media infrastructure during Hurricane Katrina and of our strengths, weaknesses, and commitment to preparedness going forward. Shortly after the storm, I had an opportunity to witness first hand some of the widespread destruction and personal loss in the Gulf Coast and to meet with communications workers and first responders, who labored around the clock to restore connectivity to the Gulf Coast, often at great personal sacrifice. It was humbling to see Americans act so selflessly when others are in need,

[2] *Id.*

[3] *Id.* at 14.

particularly when so many were themselves suffering the loss of homes, communities, or loved ones. We owe them not only deep gratitude but also a serious effort to develop real solutions to address identified weaknesses and holes in the preparation process. While we have made some limited advances in this Order, I believe our work is still far from over.

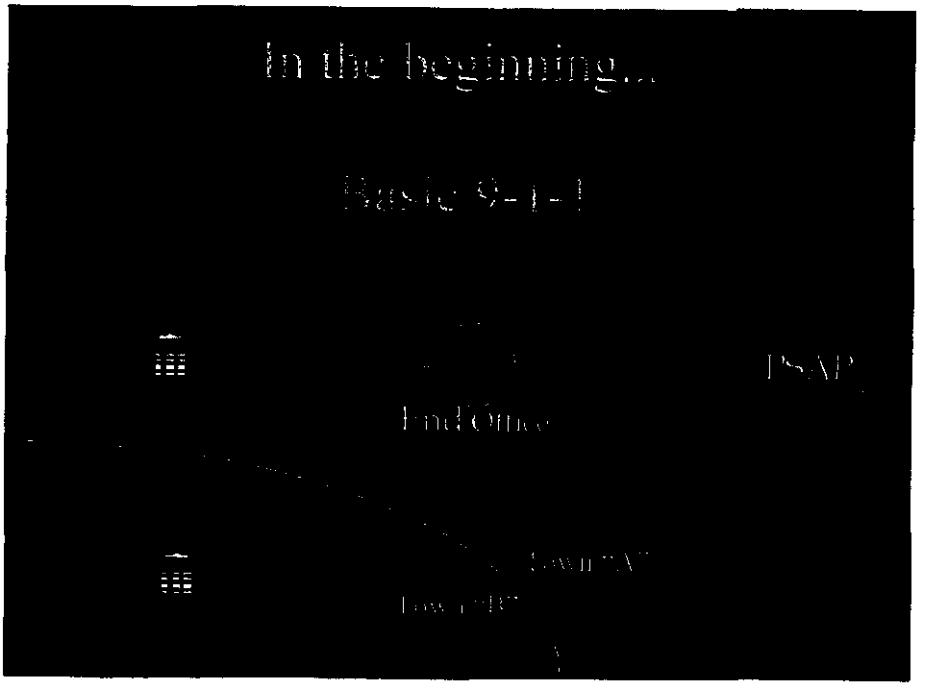
STATEMENT OF COMMISSIONER DEBORAH TAYLOR TATE

Re: *Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks*, EB Docket No. 06-119 and WC Docket No. 06-63.

Today's item marks an important step towards ensuring that the Commission and the industries it is responsible for are better prepared to respond in the face of natural disasters and other types of incidents, such as a pandemic, industrial accident, environmental incident, or terrorist attack. I am proud to vote in support of an item which, I believe, reflects the best aspects of the Independent Panel's report and the subsequent input from a diverse array of commenters.

When we released the Notice of Proposed Rulemaking that led to today's order, I specifically asked and encouraged industry to develop and share their thoughts, strategies and ideas on disaster preparedness and emergency system interoperability. While the industry certainly stepped to the plate, they were matched in their expertise, passion, and innovation by a diverse array of public safety agencies, federal and state government agencies, equipment manufacturers, and concerned citizens. This diversity and depth of participation in this proceeding created a record which led to an item which I think everyone should be proud of, and marks a standard which we should strive to achieve across the board.

Finally, I would like to again thank Nancy Victory and the members of the Independent Panel for all of their efforts. I hope and trust that they will take pride and, to some extent, comfort in the fact that they have played such a key role in helping to prepare our Nation for whatever challenge it faces next.



STATEMENT OF COMMISSIONER ROBERT M. McDOWELL

Re: Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, EB Docket No. 06-119 and WC Docket No. 06-63.

I support our action today to move forward on a number of the recommendations made by the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks (Hurricane Katrina Panel). Our work is particularly timely, given that the Atlantic Hurricane season begins tomorrow, June 1, and scientists at the National Oceanic and Atmospheric Administration (NOAA) Climate Prediction Center are projecting a 75 percent chance that hurricane activity will be above normal this year.

Moreover, it is particularly helpful that our efforts regarding emergency preparedness have broad applicability, given the need to plan for not only natural disasters such as hurricanes, but also for incidents like terrorist attacks, influenza pandemic outbreaks and industrial accidents. Any of these emergencies could result in sudden and significant shortages of personnel, a surge in communications traffic, possible disruptions to communications networks (due to increased telecommuting during an influenza pandemic, for example), and lack of manpower to immediately repair affected communications networks. I am pleased that we have built upon the lessons learned from the Hurricane Katrina disaster to promote more effective, efficient response and recovery efforts, as well as heightened readiness and preparedness. Thank you to all involved.

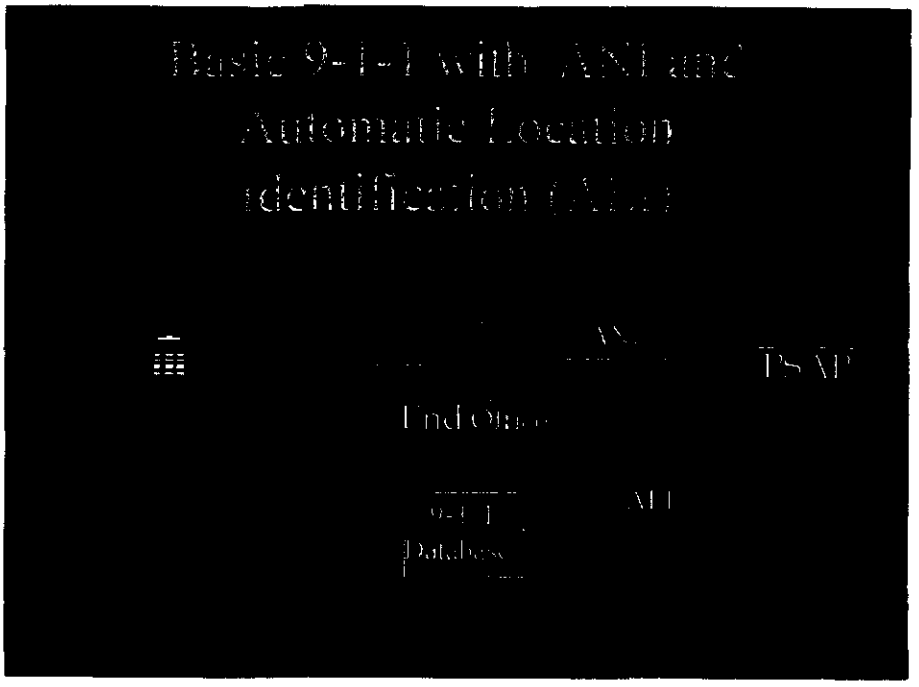
In the beginning, there was Basic 9-1-1. The telephone company end office (also known as a "central office" or "Class 5 office") is programmed to point all 9-1-1 calls to a single destination.

The good news is, all 9-1-1 calls from any telephones served by the end office will complete to the PSAP.

The bad news is, end office serving areas rarely line up with political jurisdictions. The office may serve subscribers in neighboring towns, or the end office may not serve all the residents of the town. These conditions are known, respectively, as overlap and underlap.

The original Basic systems (some of which are still in operation) provided no identification of the caller.

Basic 9-1-1 service, delivered in this configuration (via a local central office) will not support interconnection to any other telecommunications providers, including Independent telcos, ALECs or Wireless Carriers. Its days are numbered for that reason.

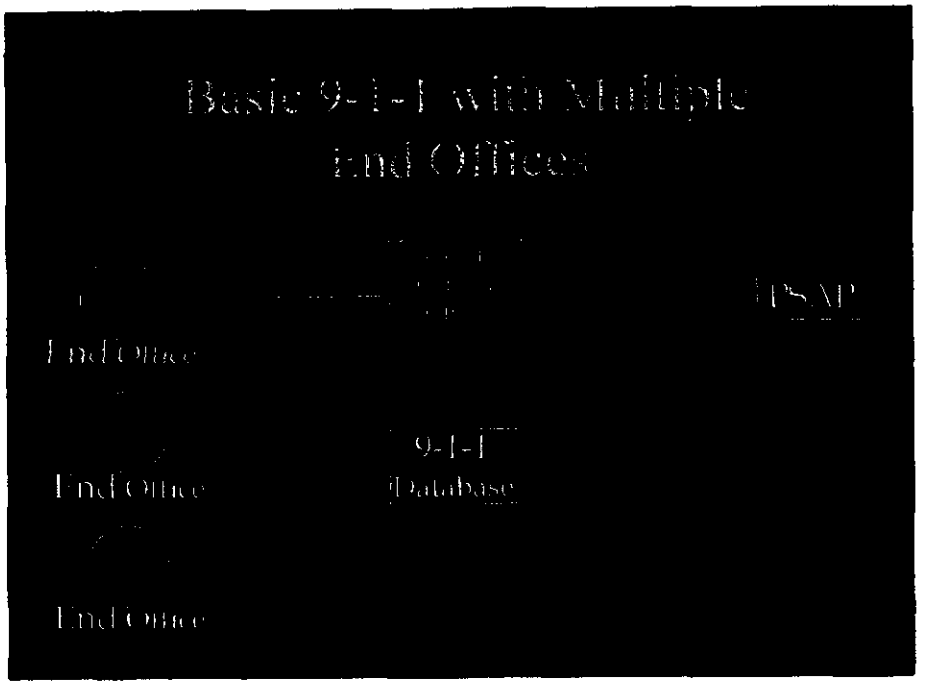


The introduction of ANI added a new dimension to 9-1-1 service. Now the caller's telephone number could be delivered with the call and displayed at the PSAP. It could be used to identify the caller, if the caller were unable to do so, and for callback.

A signaling scheme known as Centralized Automatic Message Accounting, or CAMA, originally used to identify the originator of a long distance call for billing purposes, was borrowed to facilitate ANI delivery to the PSAP. CAMA uses multi-frequency (MF) signaling to deliver eight digits to the PSAP. The first digit, called the Number Plan Digit or NPD, specifies one of four possible area codes. Digits 2-8 represent the caller's 7-digit telephone number. The ANI is framed with a "Keypulse" at the beginning and a "Start" at the end, in the format "KP-NPD-NXX-XXXX-ST".

A commonly asked question is, "The real name for Touch Tone dialing is "Dual Tone Multi-Frequency" or DTMF. Are DTMF and MF the same thing?"

The answer is no. Both use a combination of two specific tones to represent a digit or other character, but the tones are different. There are 16 DTMF tones (0-9,#,*,A,B,C,D) and a greater number of MF tones (including 0-9, KP, ST, ST', ST'' and others). The reason for the difference is that DTMF tones represent signals from a user to the network, and MF tones are control signals within the network.

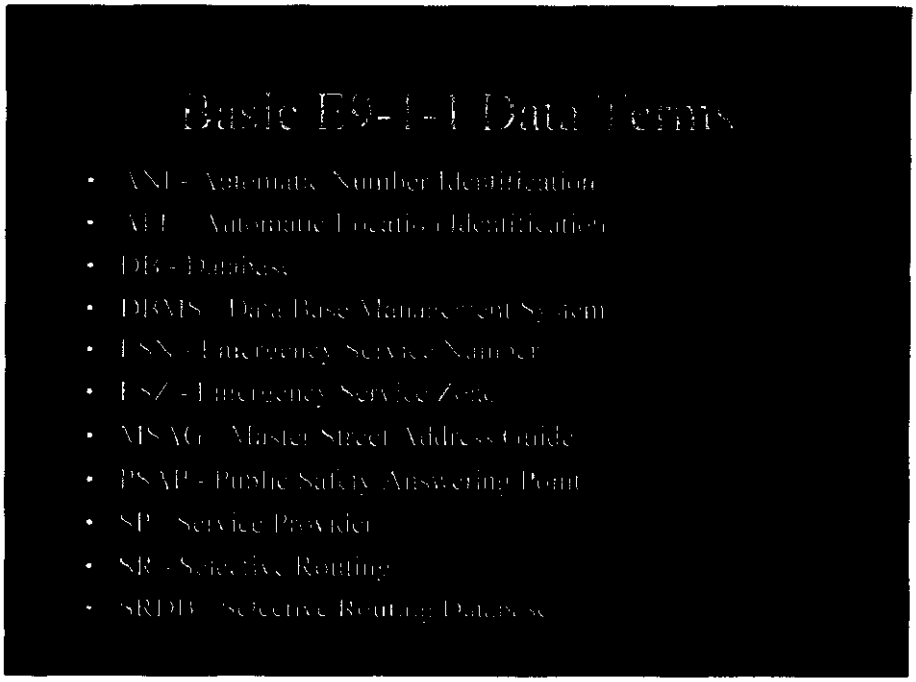


Once the caller's telephone number was available to the PSAP, name and address data could be accessed using it. After all, telephone companies store subscriber data based upon telephone number.

New equipment (and a new data circuit) at the PSAP takes the telephone number, wraps it in a data message, and uses it to query the ALI database, which has been specially constructed for this purpose. This configuration facilitates the automatic delivery of the name, address and telephone number of all 9-1-1 callers.

9-1-1 ALI databases are typically operated by the telephone company serving the PSAP. If there are multiple telephone companies, one may act as host for the others. There may also be multiple ALI databases (like in California), but that is the exception rather than the rule.

Don't be fooled! This is not Enhanced 9-1-1. This system identifies callers, but we are still only addressing a single end office serving area. What if there are several telephone company offices serving the town or county?



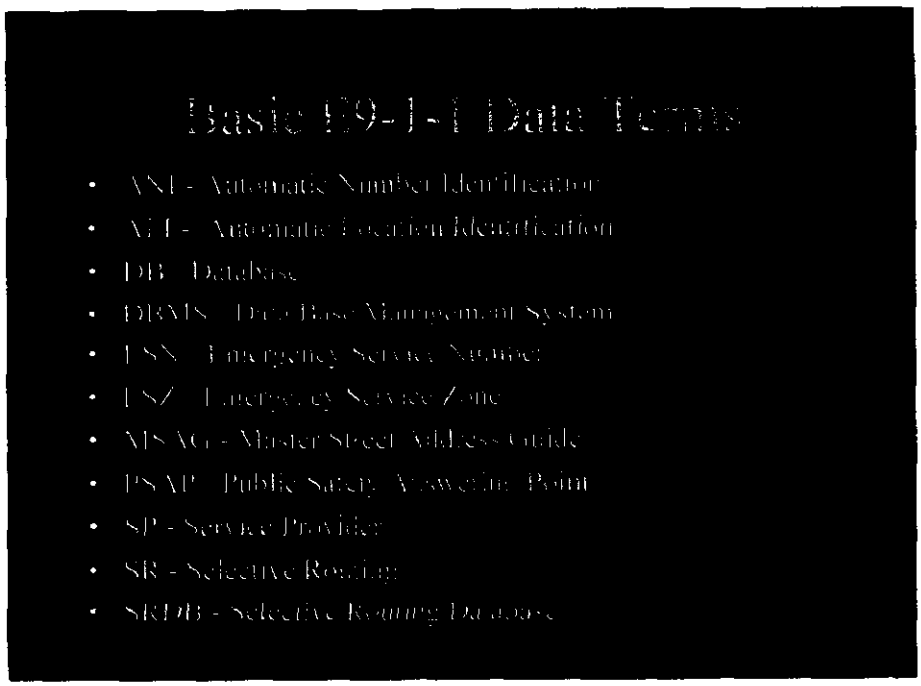
It is not efficient to build trunks from multiple central offices to a PSAP. Instead, trunks from the end offices are concentrated at a "tandem" office, from which a single trunk group serves the PSAP. This concentration reduces the size, and thereby the cost, of the PSAP telephone equipment.

A "tandem" is a telephone company switch that provides an intermediate concentration and switching point. Tandems are used for a number of purposes, including intra-LATA toll (sometimes called "short distance"), and access to other local exchange carriers (LECs), long distance carriers and telephone operators. A tandem office that provides Enhanced 9-1-1 services is known as an E9-1-1 Control Office.

This type of configuration has been used all over the country.

NOTE: From this point forward, the terms "end office" and "central office" may refer to offices operated by incumbent wireline telephone companies (ILECs), like Bell Atlantic and Sprint, or those operated by ALECs. Their function and connections are virtually identical. The main differences are that where an ILEC end office will serve a specific area with a pair of 9-1-1 trunk groups, an ALEC end office may serve an entire state with individual or pairs of 9-1-1 trunk groups for each county.

Also from this point forward, the terms E9-1-1 Control Office, Selective Router, Selective Routing Tandem, and 9-1-1 Tandem are used interchangeably. "E9-1-1 Control Office is the generic term, but it is called by many names across the country.



OK, lets take a short break from techy stuff to review some 9-1-1 terms associated with Enhanced 9-1-1 databases

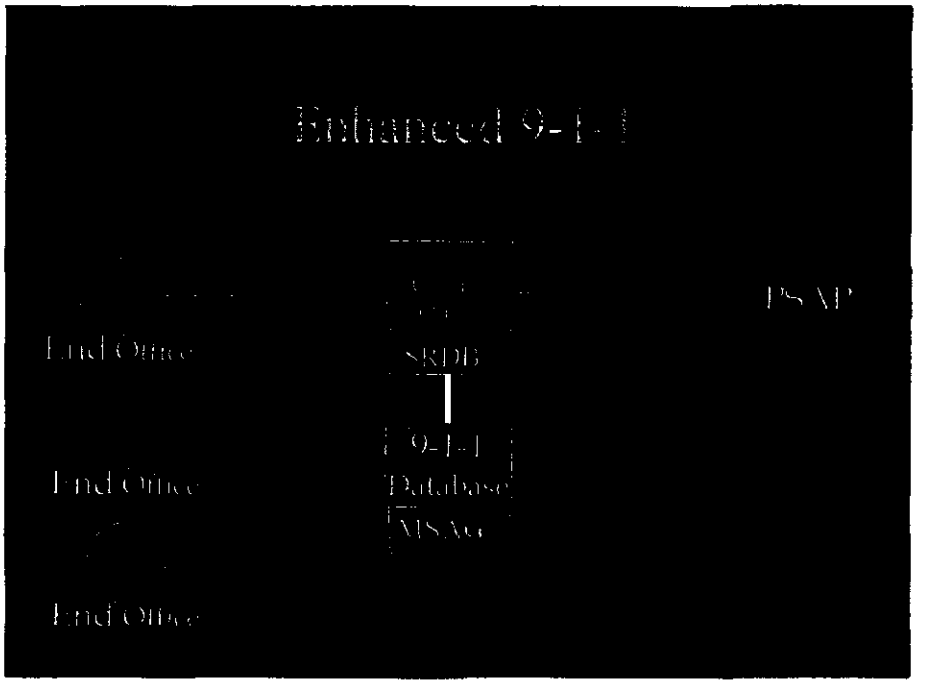
•Automatic Number Identification (commonly referred to as ANI) is the Telephone Number associated with the access line from which a call originates.

•Automatic Location Identification (commonly referred to as ALI) is the Automatic display at the PSAP of the caller's telephone number, the address/location of the telephone and supplementary emergency information.

•A Database (DB) is an organized collection of information, typically stored in computer systems, comprised of fields, records (data) and indexes. In 9-1-1, such databases include MSAG, telephone number/ESN and telephone customer records (commonly referred to as the ALI Database).

•The Data Base Management System (commonly referred to as DBMS) is a system of manual procedures and computer programs used to create, store and update the data required to provide Selective Routing and/or Automatic Location Identification (ALI) Data services.

•An Emergency Service Number (ESN) is a three to five digit number representing a unique combination of emergency service agencies (Law Enforcement, Fire and Emergency Medical Service) designated to serve a specific range of addresses within a particular geographical area, or Emergency Service Zone (ESZ). The ESN facilitates Selective Routing and selective transfer, if required, to the appropriate PSAP and the dispatching of the proper service agency(ies).



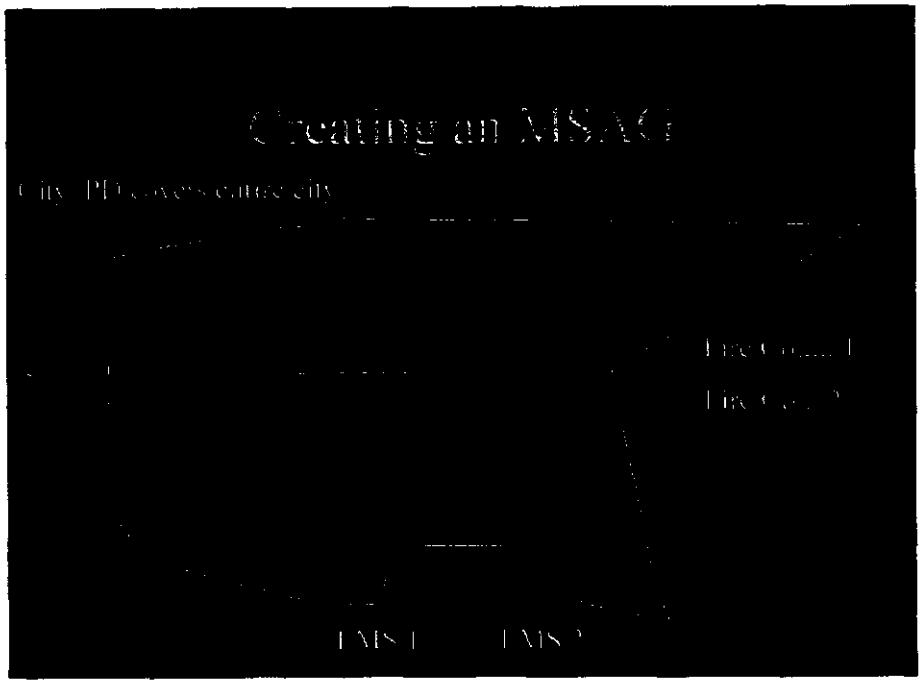
•A Master Street Address Guide (commonly referred to as an MSAG) is a database of street names and house number ranges within their associated communities defining Emergency Service Zones (ESZs) and their associated Emergency Service Numbers (ESNs) to enable proper routing of 9-1-1 calls.

•A Public Safety Answering Point (commonly referred to as a PSAP) is a facility equipped and staffed to receive 9-1-1 calls. A Primary PSAP receives the calls directly, If the call is relayed or transferred, the next receiving PSAP is designated as a Secondary

•A Service Provider (SP) is an entity providing one or more of the following 9-1-1 elements: Network, CPE, or Database service.

•Selective Routing is the routing of a 9-1-1 call to the proper PSAP based upon the location of the caller. Selective Routing is controlled by the ESN which is derived from the customer location.

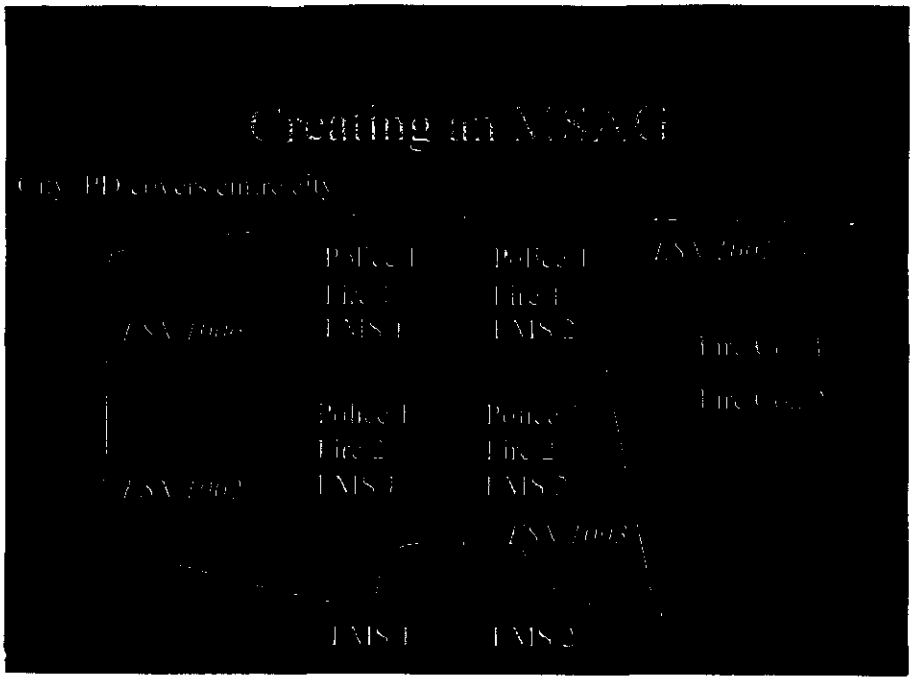
•The Selective Routing Database (commonly referred to as the SRDB) is the routing table that contains telephone number to ESN (TN/ESN) relationships which determine the routing of 9-1-1 calls.



The feature that separates Basic 9-1-1 from Enhanced 9-1-1 is Selective Routing. Basic systems may have both ANI and ALI, but are not considered Enhanced until Selective Routing is added.

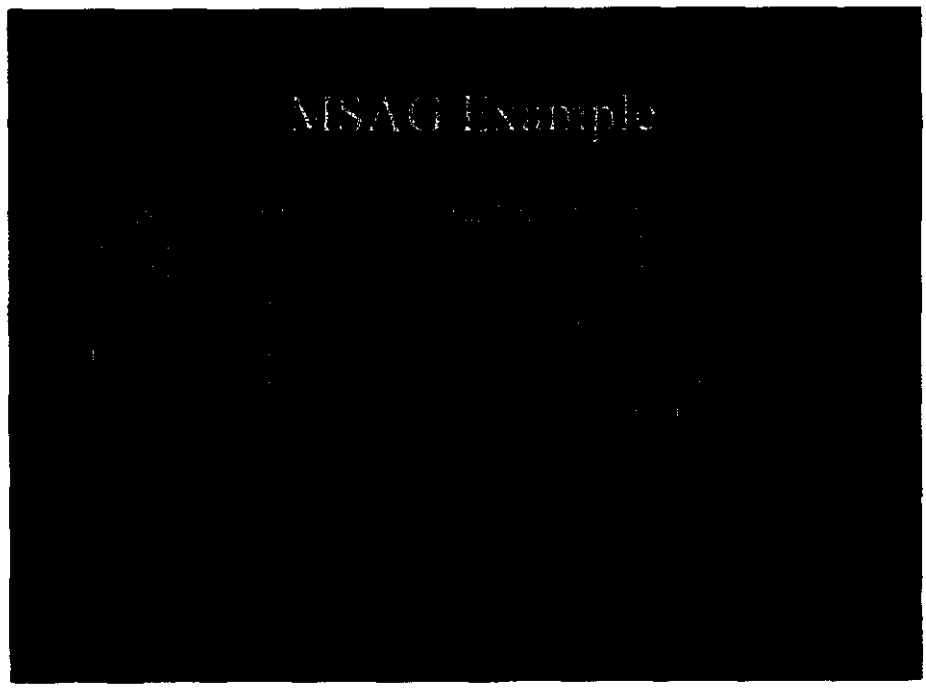
Generally speaking, Enhanced 9-1-1 systems will feature Selective Routing, ANI, ALI, Selective Transfer and Fixed Transfer. Selective Transfer enables one-button transfer capability to the Police, Fire and EMS agencies listed on the ALI display. Fixed Transfer is another name for speed dialing.

Enhanced 9-1-1 requires the addition of three components to our diagram - the Master Street Address Guide (MSAG), a link from the database to the 9-1-1 Selective Routing Tandem, and a Selective Routing Database (SRDB) associated with the tandem.



Selective Routing is the process by which 9-1-1 calls are delivered to a specific PSAP based upon the street address of the caller. Selective Routing Tandems (aka E9-1-1 Control Offices), however, don't understand addresses - they understand numbers. This means that street addresses have to be converted into numbers the Router can use.

For E 9-1-1, street address ranges are associated with Emergency Service Zones representing unique sets of Police, Fire, and EMS jurisdictions. These Zones are numbered with Emergency Service Numbers (ESNs), and DBMS processing then provides TN-ESN data relationships - the SRDB data that controls ANI-based call routing in the Selective Routing switch.

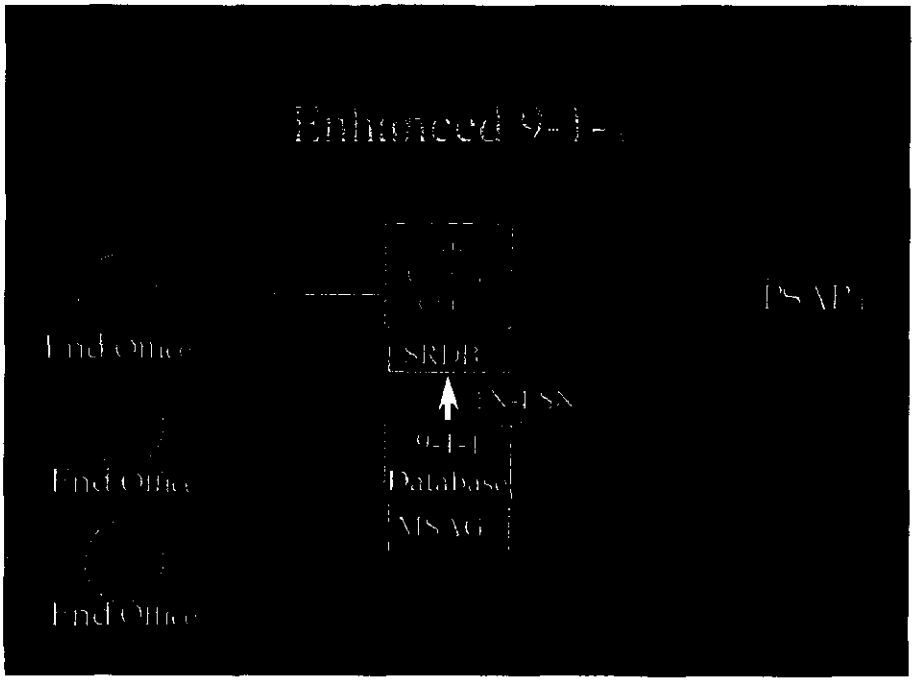


When the response areas of the agencies are overlaid, they form geographic zones, each served by one particular combination of Police, Fire and EMS agencies. These zones are called Emergency Service Zones or ESZ's. Each ESZ contains the set of street addresses served by the three agencies.

In our example above, the City Police Department serves the entire city. Fire Company 1 serves the northern half of the city and Fire Company 2 serves the southern half. EMS 1 and EMS 2 split the city on an east-west basis.

This configuration creates four Emergency Service Zones (ESZ), each having a distinct combination of emergency services within the municipal boundary. ESZs may be any size, from a single address to an entire municipality. Some particularly creative uses of ESZs have been developed to handle wireless, and will be discussed later.

The ESZs are now assigned three, four or five digit numbers. These numbers are called Emergency Service Numbers or ESNs.



Now that the ESZ's/ESN's have been identified the MSAG can be created. All of the address ranges within a specific ESZ are identified and assigned their ESN.

Each street range (Directional, street name, street suffix and community for example) is entered into the MSAG along with it's associated ESN. Once the MSAG is completed with street entries covering the entire service area, it is ready to be utilized for processing of the telephone company subscriber information.

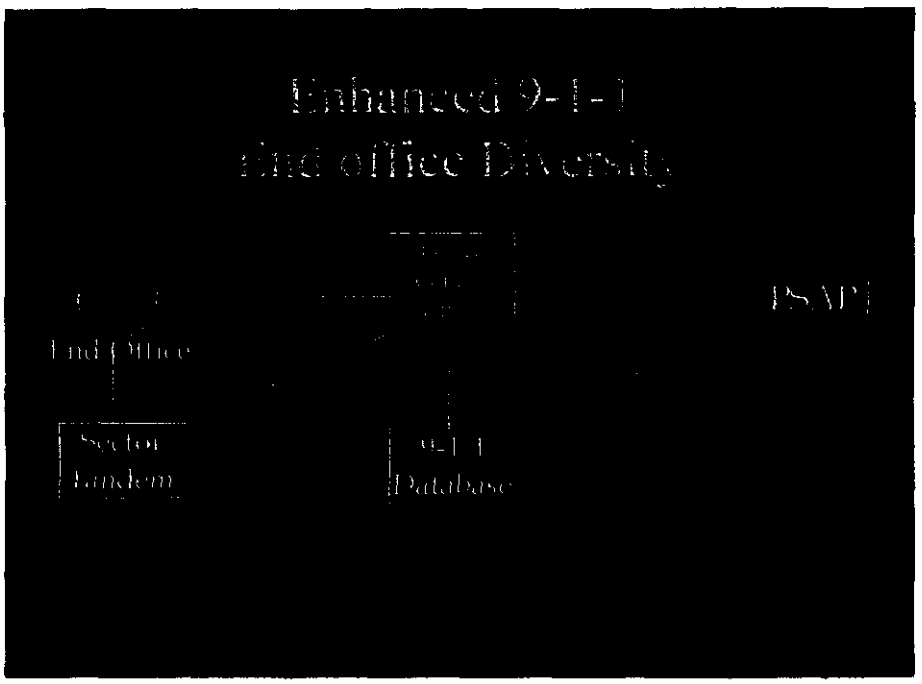
The processing of records performs edits on the data being processed and assigns the appropriate ESN to each telephone company record, if the record contains an address which finds an exact match of an street entry in the MSAG. This file of data is now known as the Automatic Location Identification (ALI) database.

If the record does not find an exact street name match in the MSAG the record is placed into an error file for further manual handling. ***The lesson here is that the telephone company record MUST have an MSAG valid address to be assigned the appropriate ESN for Selective Routing purposes and be added to the 9-1-1 ALI database.*** This is how the Selective Router knows where to send the 9-1-1 call.

Usually, a default ESN will be created for each municipality. Unrecognized addresses (no house number, number out of range, unknown street name) may be assigned the default ESN. In some systems, all default ESNs begin with a zero (0001-0999) to make them immediately identifiable.

An agency file (there are several names for this file "English Translations File" to name one) is created for each ESN. This file contains the names of the emergency agencies, may contain their telephone numbers, and will be delivered to the PSAP with any 9-1-1 calls from this ESZ.

Once the ALI database is created, a sub-set of that data is uploaded to the Selective Routing Data Base (SRDB). Depending upon the selective router used, the SRDB may be resident in the switch, in an adjunct processor, or in the ALI database.



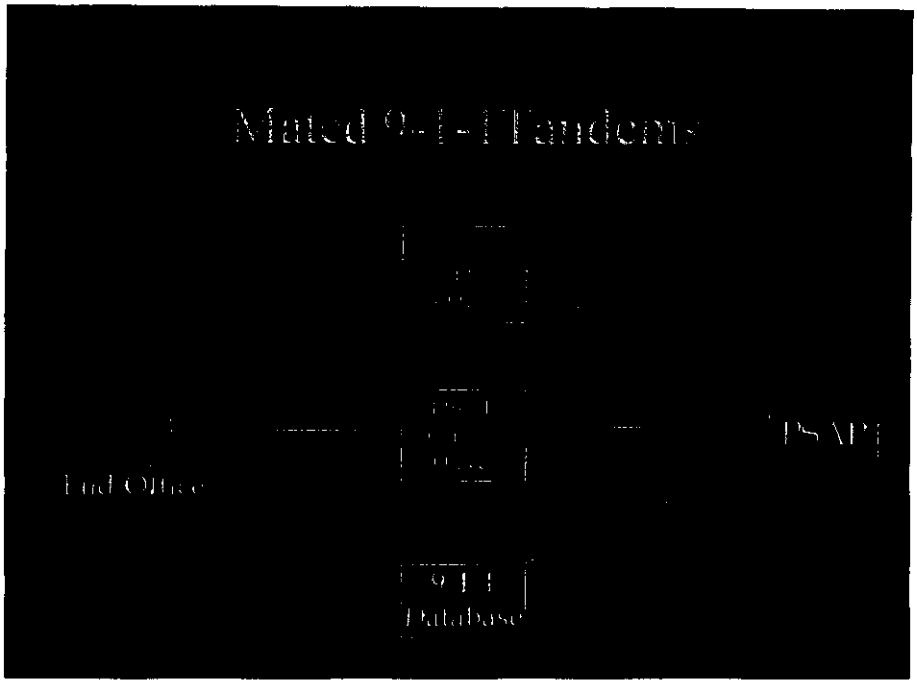
In the selective routing tandem, the ESN is used for several assignments:

1. Assignment to a specific Primary PSAP.

2. Programming of destinations for Police, Fire and EMS Selective Transfer keys.

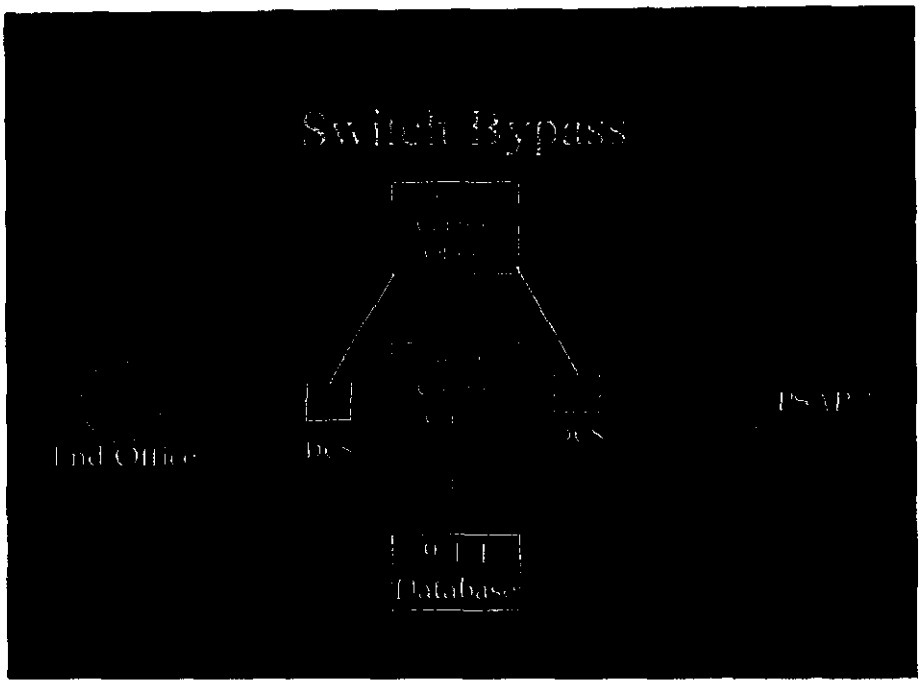
3. Assignment of alternate PSAPs (Optional).

At this point, a 9-1-1 call can be selectively routed to an assigned PSAP, the customer and emergency agency data can be transmitted to the PSAP, and the Selective Transfer keys are available for use.



9-1-1 systems are expected to function without interruption. However, expecting every network and PSAP component to work perfectly forever is unrealistic. Stuff happens - things break. Reliability, then, is achieved through diversity and redundancy.

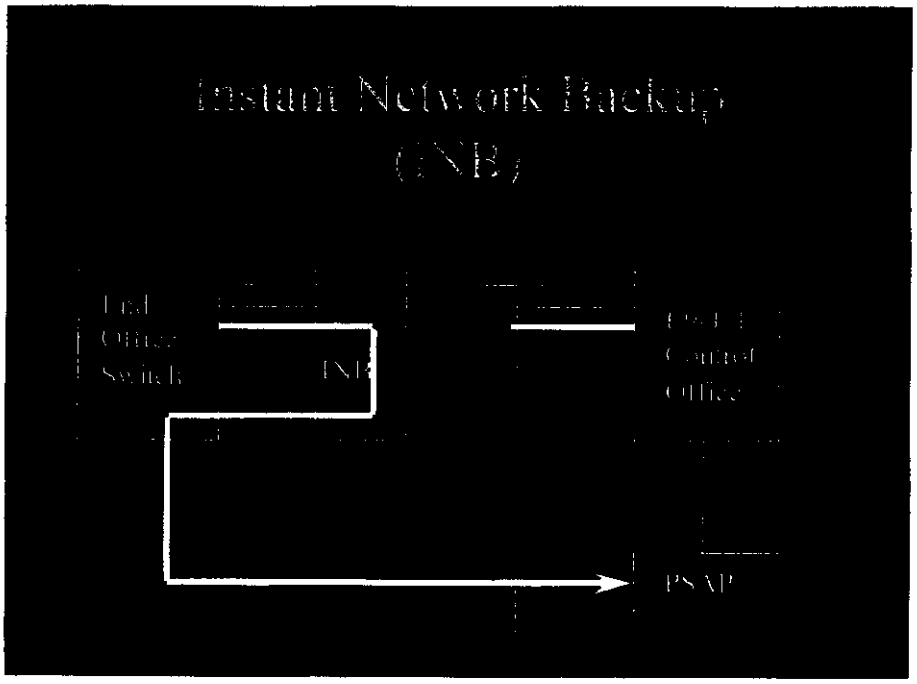
One method of achieving reliability is to build redundant, diversely routed trunk groups from each end office to its 9-1-1 tandem. Each trunk group should be large enough to carry the entire traffic load for that end office.



In this example, a primary 9-1-1 trunk group is built from the end office directly to the 9-1-1 tandem. A secondary, or overflow group, is built to the sector tandem that serves the end office. Many other end offices have overflow trunks to the sector tandem which, in turn, has a large common trunk group to the 9-1-1 tandem.

Depending upon local convention or regulation, the primary and overflow trunk groups may each be large enough to provide a P.01 grade of service, or may provide a P.01 grade of service in total. "P.01" means that, during the average busy hour of an average week, one call out of one hundred will be blocked due to an all-trunks-busy condition.

Yes, 9-1-1 calls sometimes get blocked. However, if trunk groups are engineered correctly, blocking will only occur under extraordinary circumstances that generate abnormal volumes of 9-1-1 calls - many of which are redundant. This "congestion control" (sometimes called "choking") is necessary to protect the rest of the network and the PSAPs.

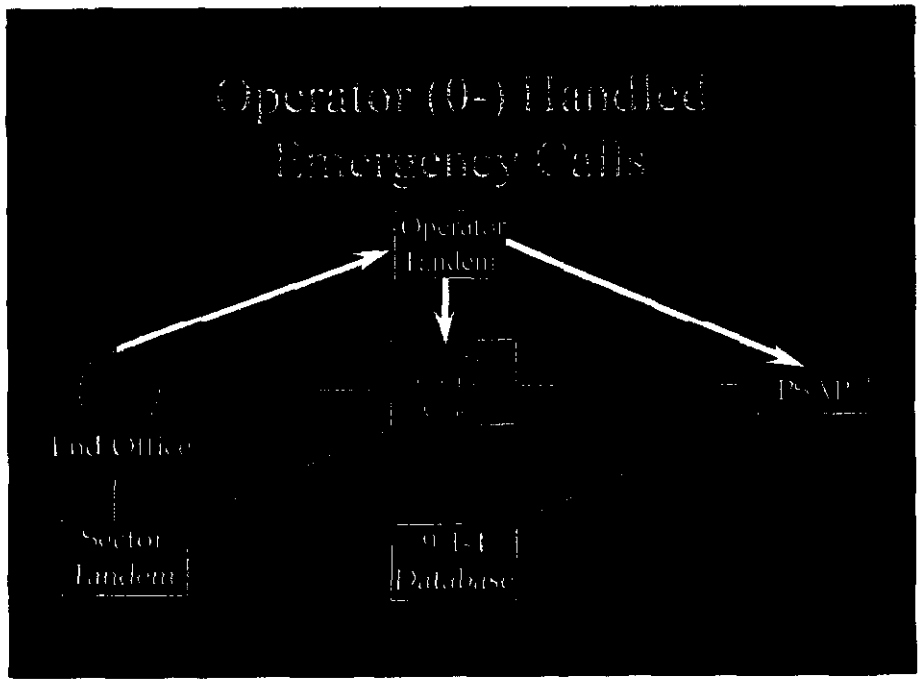


Many 9-1-1 tandems are "mated". Each end office is trunked to both tandems, and both tandems are connected to the PSAP. If one of the tandems fails, the PSAP remains in service. Call handling capacity is reduced by 50%, but there is no interruption of service.

Switch Bypass is another method to survive a tandem failure. If a tandem fails, end office trunks and PSAP circuits are moved, via digital cross-connect systems (DCS), from the failed tandem to a backup tandem. This switching is done at the DS-3 level. That means that 672 circuits are switched in a single motion. The backup tandem is a mirror image of its mate. A single command activates the ports on the backup tandem.

There is an interruption of service for a few minutes until the switchover is complete. Once completed, however, call handling capacity is restored to 100%.

New Jersey has the only system of this type. It is the only state that can lose two of four 9-1-1 tandems and still maintain 100% call handling capacity. The backup system, like all backup and disaster recovery systems should, is exercised several times per year to ensure it will work when really needed. A typical Switch Protection test will involve the movement, reconnection and reactivation of between 800 and 900 end office trunks, PSAP trunks and printer circuits, all in a matter of minutes.

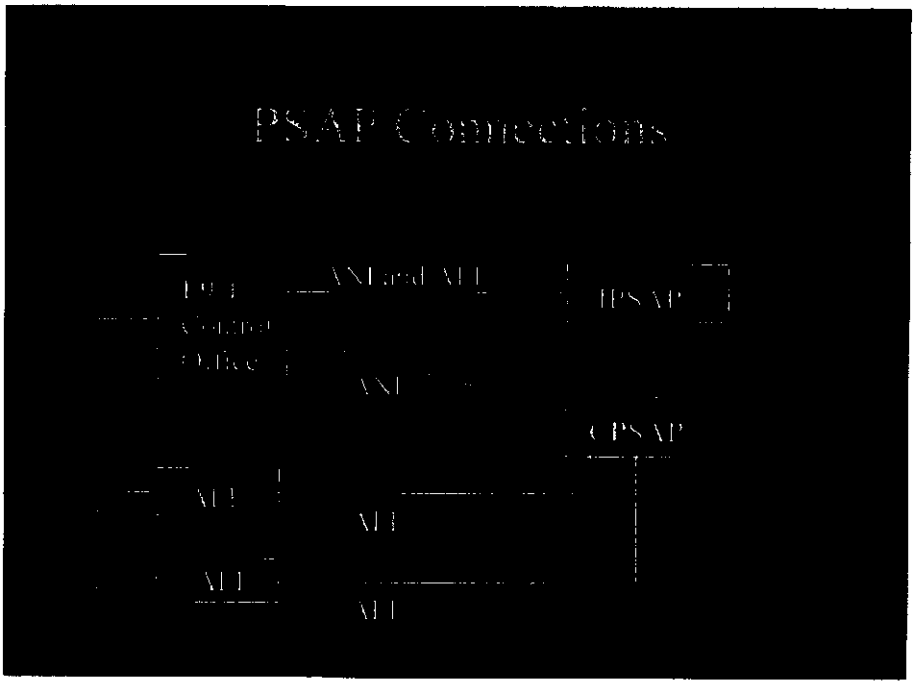


Another layer of network protection, sometimes called a "call diversion" system, is depicted above. One type is called an Instant Network Backup or INB system.

(NOTE: Proctor & Associates markets a unit called "9-1-1 INB". The reference in this tutorial to Instant Network Backup refers to the service in New Jersey for which the unit was originally built. It is not an endorsement or recommendation of the Proctor & Associates product. There are other manufacturers of this type of unit.)

The INB is a unit attached to the primary 9-1-1 trunk group at the LEC end office. It monitors the completion of 9-1-1 calls over that trunk group. If a call does not complete to the 9-1-1 network for any reason (trunk failure, facility problem, 9-1-1 tandem failure or port failure), the INB takes over and completes the call to a 7 or 10 digit number. ANI and ALI are not delivered, but the call is completed to a local public safety agency, usually the local PSAP.

Since the original development, INB technology has matured. INBs can now be purchased that will deliver ANI to a PSAP, or use cellular service to bypass the failed trunk and complete the call to the 9-1-1 tandem.

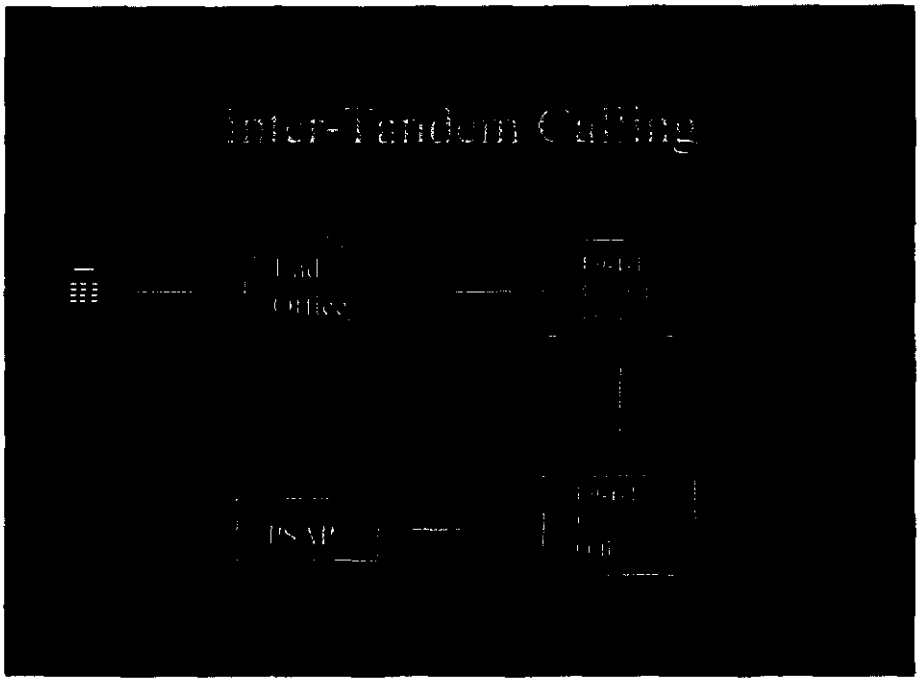


There are several ways for Operator handled calls to be completed to the PSAP. In at least two statewide networks, there is a direct connection between the Operator Tandem and the 9-1-1 Tandem. The operator forwards the call, with the caller's ANI, to the 9-1-1 Tandem. The 9-1-1 Tandem treats the call as if the caller had dialed 9-1-1.

A second way is through the use of pseudo numbers. A pseudo number is a telephone number that, when dialed, will reach a specific PSAP as a 9-1-1 call, and have some special ALI information associated with it. For example, there is a pseudo number associated with each municipality in a state. Dialing that number (usually from outside the lata) will generate a 9-1-1 call to the PSAP for that municipality. The ALI display will say that it is a third party conference call from an unknown address in that town. The caller is not identified, but the call goes to the PSAP for where the caller is believed, or claims, to be. These numbers can be used by ALEC operators who may be located anywhere in the country.

A third method is through the public switched telephone network, dialing the directory number for the PSAP. This is sometimes referred to as a "back-door" number by ALECs.

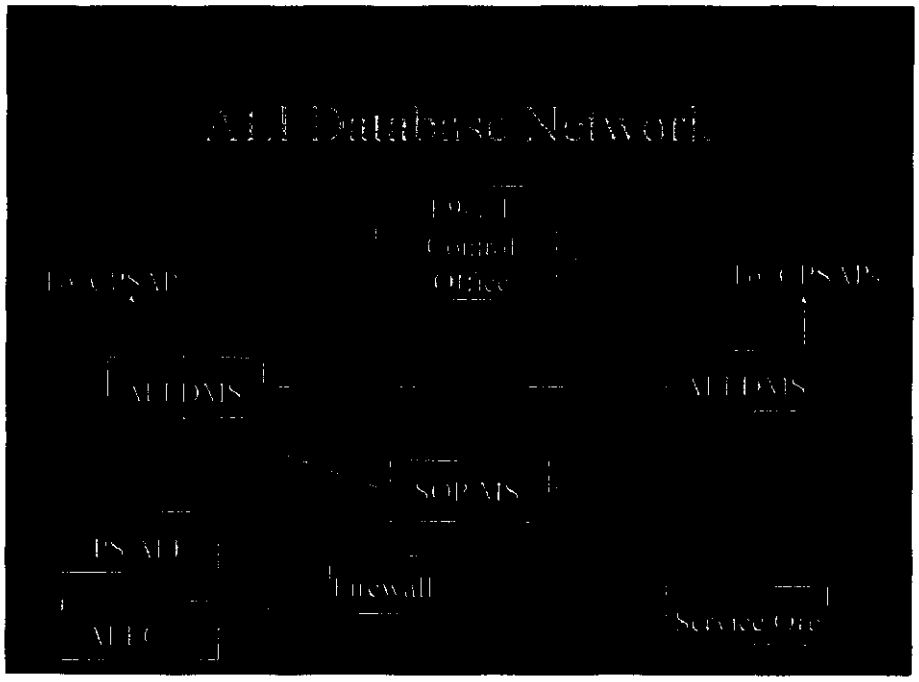
A fourth method, is for the operator to instruct the originating end office to generate a 9-1-1 call using the caller's ANI. This is under study by some of the switch manufacturers.



PSAP equipment falls into two basic types - Conventional and Integrated.

Conventional equipment (CPSAP) receives ANI over the voice trunk at the beginning of the call. The PSAP equipment sends a query (using the caller's ANI) to the ALI database system over dedicated data links. The ALI is returned over one or both of the links (This is dependent on the database configuration and the type of equipment at the PSAP. Most PSAP CPE can accept two responses.)

Examples of Conventional PSAPs are Plant Equipment, Lucent, Motorola, CML, Emergitech, Positron and TCI.



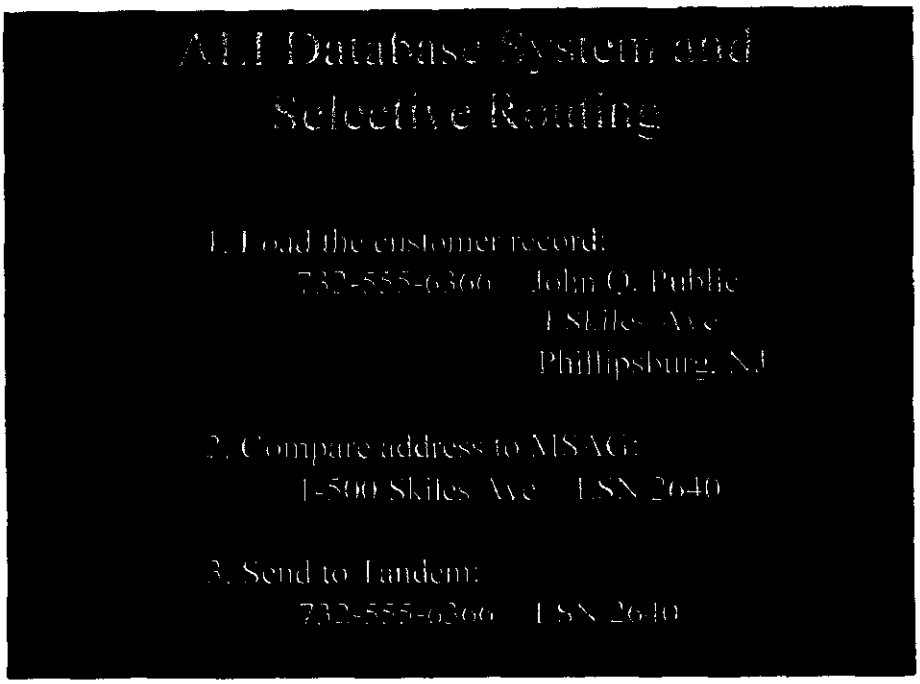
Integrated PSAPs receive both ANI and ALI from the 9-1-1 tandem. The tandem queries the ALI database as the call is processed. Depending on manufacturer, the connection between the tandem and the PSAP may be one circuit or two. Selection of Integrated PSAP equipment is dependent upon the tandem. Also, depending again on manufacturer, additional automatic call distribution (ACD) features (call queuing, announcements, equitable call distribution, management reports) may be provided by the tandem. Examples of Integrated PSAPs are Rockwell, KML, (which require a Rockwell tandem) CML (which requires a CML tandem) and NorTel (which requires a NorTel tandem).

As mentioned earlier, telephone network boundaries do not match with political boundaries. Some residents of the town may live in an area served by a different 9-1-1 tandem than the one that serves their local PSAP. There are two solutions. One is to build a trunk group from the "foreign" 9-1-1 tandem to the PSAP. This is expensive and inefficient, but sometimes unavoidable.

The other solution is inter-tandem networking. If the tandems are capable, calls from those subscribers travel from one tandem to the other on "inter-tandem" or "inter-machine" trunks (IMTs). This removes the 9-1-1 tandem boundaries as an obstacle to effective deployment of Enhanced 9-1-1.

IMTs are also often used to transfer calls between the PSAPs served by the two tandems.

This diagram depicts a specific ALI database network, but many networks use this type of architecture.

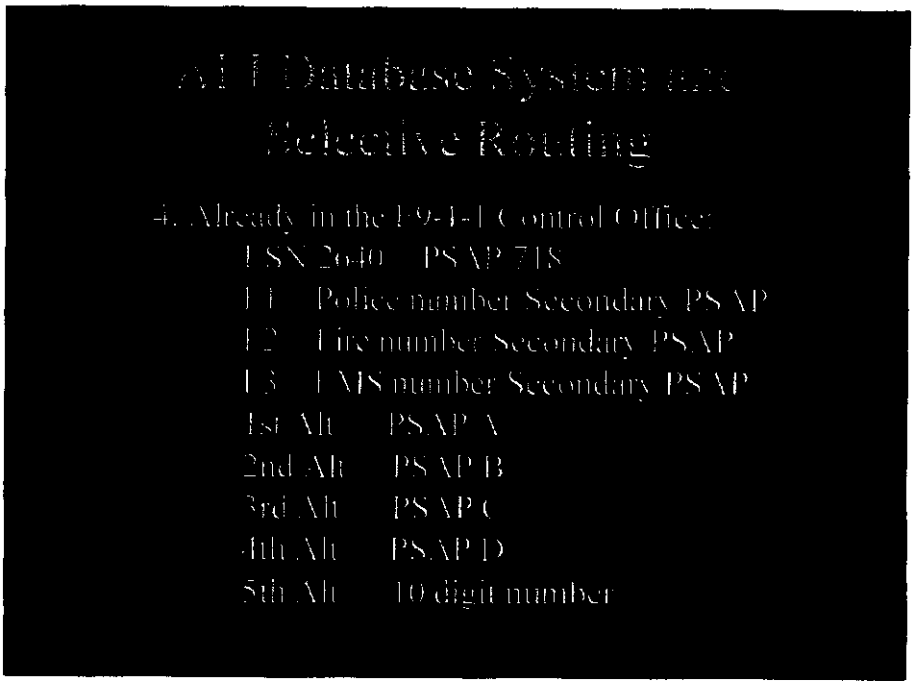


There are three sources of input to the 9-1-1 database system. The first is the service order system used by the incumbent telephone company. As customer orders for service are processed, the pertinent information is extracted from the service orders by a Service Order Processor (SOP) or Management System (MS). Exact names vary by vendor.

The second source of input is ALECs operating in the area. Their customer records are transmitted to the SOP, often through a secure access system (or "firewall") , in NENA standard format (Current standards are NENA-2 or NENA-3).

The third source is Private Switch ALI (PS/ALI) systems. These systems identify telephone stations behind PBX's and will be covered in more detail later. PS/ALI systems also transmit their records in NENA standard format.

The SOP processes the inputs and uploads the customer records to the ALI DMSs (database management systems). Usually, two "mirror image" ALI DMSs are deployed with redundant and diverse communications links. (Diversity + Redundancy = Reliability)

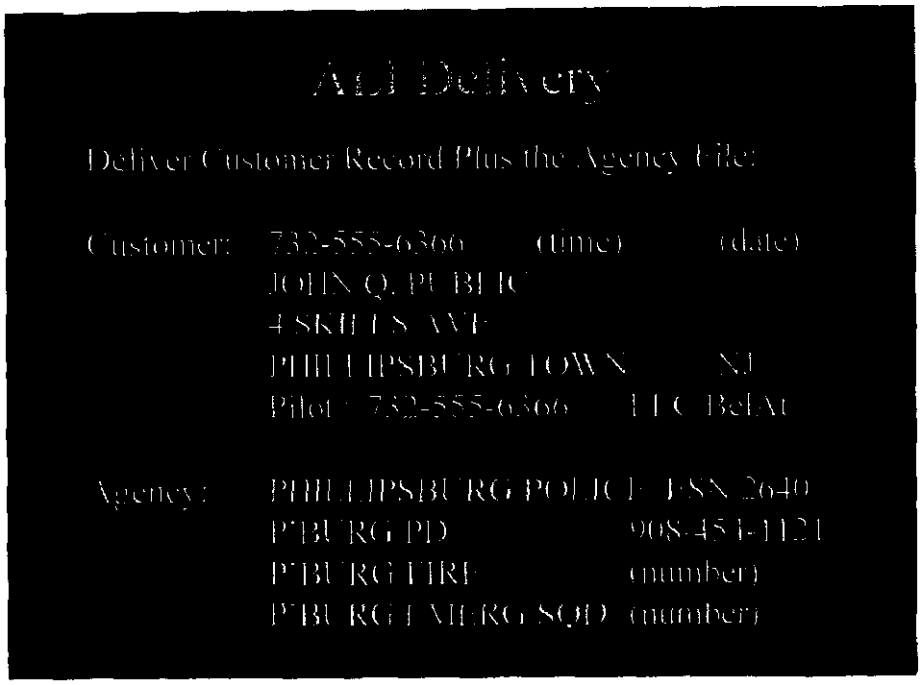


The ALI nodes transmit the telephone number-to-Emergency Services Number (TN-ESN) assignments to the 9-1-1 tandems. The ALI nodes also process ALI queries from the tandems (for Integrated PSAPs) and the Conventional PSAPs.

As discussed earlier, the first job in building an accurate selective routing system is the creation of the MSAG. Once the MSAG is complete and verified, database loading can begin.

When the customer record is loaded into the ALI database, (and this process is the same for ILEC, CLEC and wireless) the customer address is compared to MSAG. If the address does not match the MSAG, the load process stops and the record is returned to the originator. Either the customer address is wrong and must be corrected, or the MSAG is wrong and must be updated.

If the address does match the MSAG, the ESN for that address is assigned to the record and a message is sent to the selective routing database with the telephone number-to-ESN (TN-ESN) assignment. The selective routing database is usually resident in the tandem, but may be in an outboard processor or even in the ALI database.

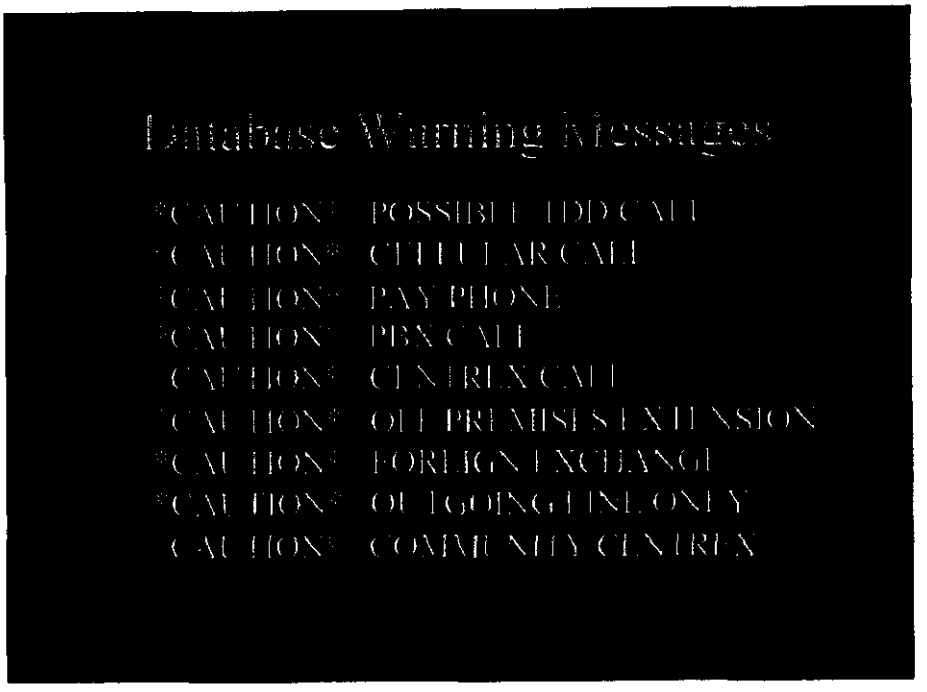


As part of the MSAG development process, the selective routing database has been loaded with (TN/ESN) assignments based upon the MSAG. These assignments include the Primary PSAP, the Selective Transfer Key assignments and Alternate Routing assignments.

Selective Transfer is the formal name of the feature that enables the use of the "Police", "Fire" and "EMS" transfer keys. As 9-1-1 calls are answered, they may be transferred to the dispatchers for the Police, Fire or Emergency Medical Services agencies listed on the ALI display, even though the agencies may change from one call to the next. Selective Transfer is like a speed dial button that is automatically reprogrammed with each incoming call. The feature gets its information from the ESN assignment in the selective routing database.

Depending on the network, and the extent of cooperation between PSAPs, the Primary PSAP may have one or more alternate answering points. These alternates may be other PSAPs or 10 digit numbers. Alternate routing normally takes place automatically when the PSAP is busy, set inactive (Night Service) or out of service.

Each PSAP should have at least one alternate PSAP. Additionally, depending on the 9-1-1 tandem, alternate routing assignments can be associated with either PSAPs or ESNs. A PSAP may have all of its calls routed to the same alternate PSAP, or may route calls to several alternates based on originating ESN.



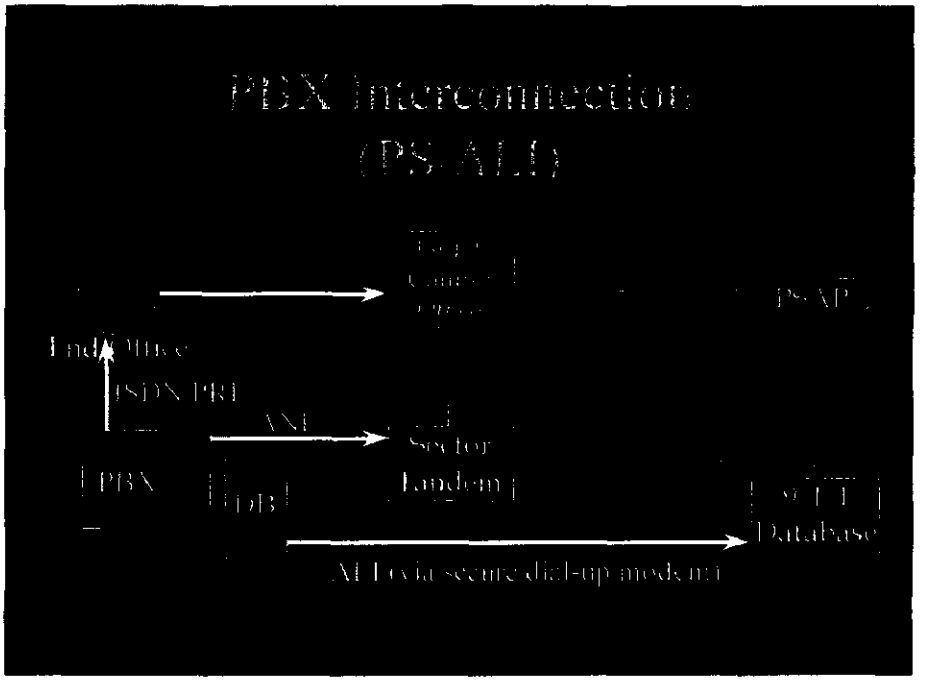
We've discussed how the ESN is used to facilitate Selective Routing, Selective Transfer and Alternate Routing within the selective routing tandem. It is also used again by the ALI database system during ALI delivery.

The agency information for each ESN (called the Agency File or English Translation), which includes the names (and, in some systems, phone numbers) of the PSAP, Police, Fire and Emergency Medical agencies, is the same for every subscriber located in that ESZ. It would not be efficient to include this data in each customer record - it would require more memory than really needed.

When a 9-1-1 call is made, the caller's ANI is used to query the ALI database. The telephone number accesses the customer information, which includes the ESN. The ESN is then used to access the Agency File. When the ALI is transmitted to the PSAP, it arrives as a single transmission, but is actually data from two separate files, sent to the PSAP in a prescribed format. These ALI PSAP displays come in as many different formats as there are PSAPs. The display pictured above is but one version of a format.

The other benefit to storing the agency data in its own file, is that agency data can be changed with the modification of a single file. If a Rescue Squad closes and another takes its place, or if a town using the State Police creates its own Police force, we only have to change the Agency File once, as opposed to changing thousands of subscriber records.

Where used, Database Warning Messages are triggered by the subscriber's Class of Service and can be displayed on the first line of the ALI display. Normally, they are displayed in inverse video to get the call taker's attention. The ASCII "bell" control character (BEL) may also be sent as part of the warning message. This causes the ALI display device to emit a bell sound or tone, if equipped to do so.



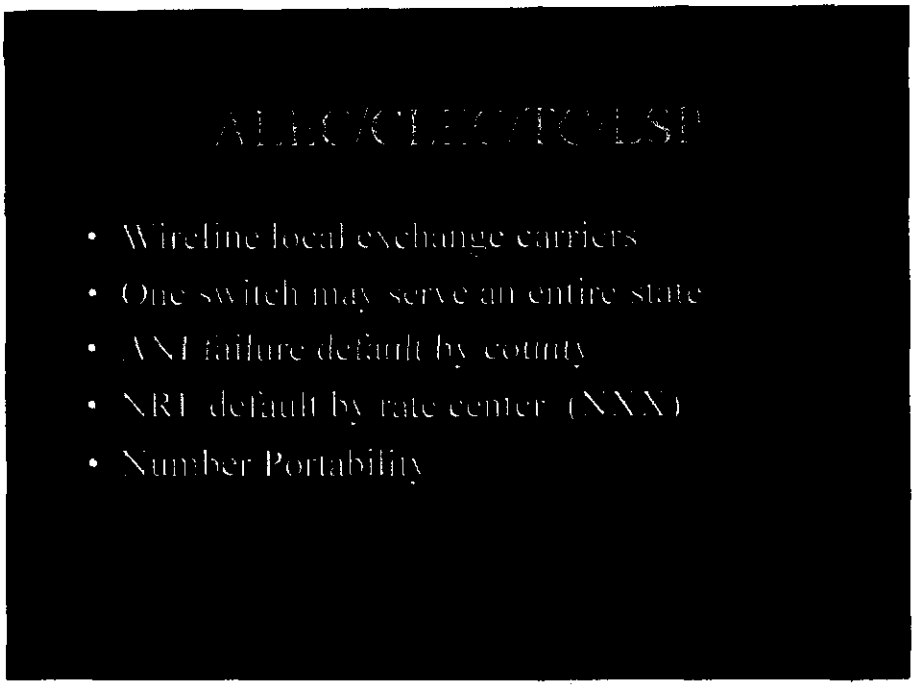
Database Warning Messages indicate to the call taker that special handling procedures may be required for this call:

"POSSIBLE TDD (TTY) CALL" indicates that the caller subscribes to the discount telephone companies offer to hearing and speech impaired people who need a TTY to communicate. It does NOT mean the caller is definitely using a TTY. (Remember: All silent calls should be treated as possible TTY calls, regardless of Warning Message.)

"OFF PREMISES EXTENSION, PBX CALL, CENTREX CALL, and COMMUNITY CENTREX" messages remind the call taker to use extra care in confirming the location of the caller, since they may not be at the address shown on the ALI display.

"OUTGOING LINE ONLY" tells the call taker that the line used to make the 9-1-1 call cannot be called back. Check the Pilot Number and confirm with the caller. This incoming call restriction also applies to many pay phones.

"FOREIGN EXCHANGE" is dial tone from a distant central office.

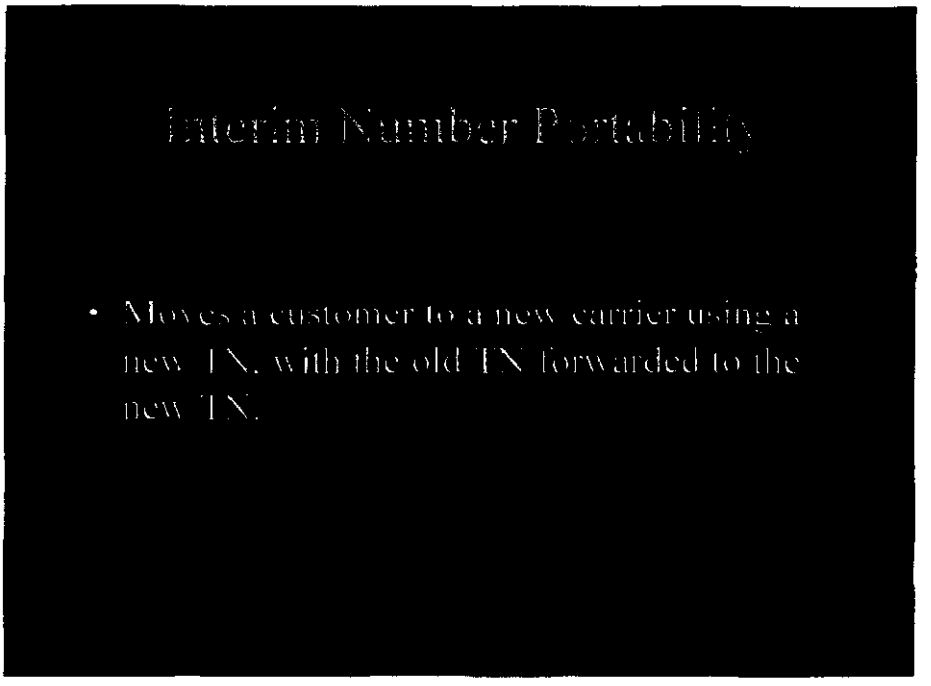


PBXs (Private Branch Exchange) create a special challenge for 9-1-1. Telephone stations behind a PBX don't normally have unique telephone numbers, and even if they did, the telephone company operating the 9-1-1 ALI database may have no idea what they are, and the PBX owner may not be obligated to tell them. 9-1-1 calls from PBXs will route to the PSAP that serves the address where the PBX is and only identify the PBX trunk used to make the call. The individual station is unknown. PS/ALI changes the way 9-1-1 calls are handled from a PBX.

First, directory numbers (typically Direct Inward Dialing [DID] numbers) are assigned to the PBX stations. The PBX owner is responsible for creating customer records, preferably in NENA standard format, that identify caller locations. These records are usually uploaded to the 9-1-1 SOP/MS via secure, dial-up modems. Essentially, PBXs use the same interface as ALECs.

Second, one of two network connection types is established. For newer PBXs, a Primary Rate ISDN connection can be used. The beauty of this service is that it can handle normal incoming and outgoing calls, but will generate individual ANIs for 9-1-1 calls. These calls enter the 9-1-1 network over the regular end office trunks.

For older PBXs, an adjunct unit is installed that uses dedicated 9-1-1 trunks that connect the PBX directly to the 9-1-1 tandem, or to a telephone company end office or sector tandem. Calls arrive at the PSAP with the customer-created ALI. Adjunct units are made by Telident, Proctor, Xtend and others.

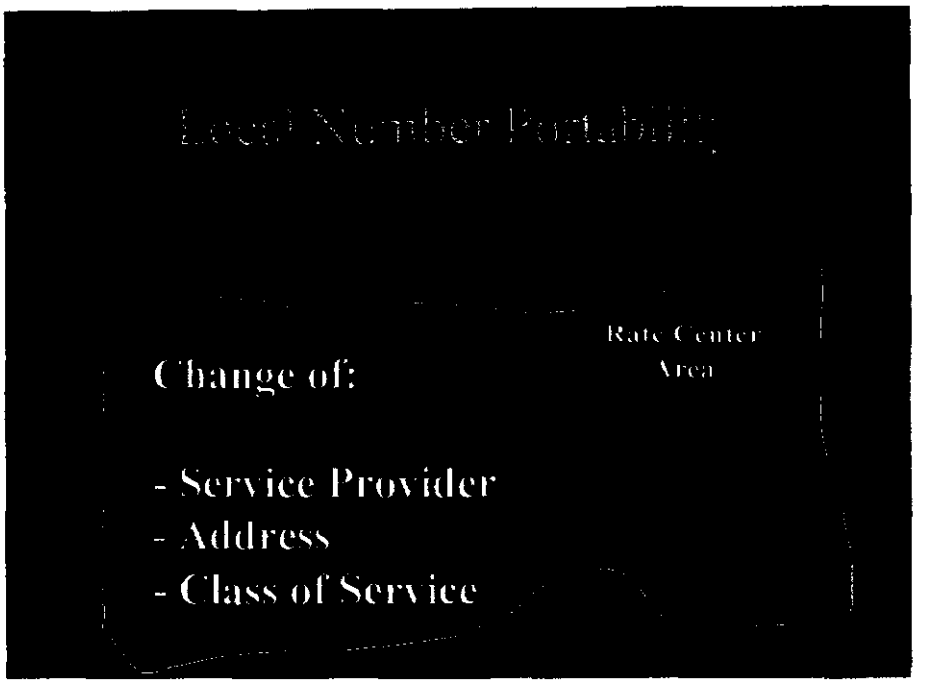


In most states, ALECs are required to connect to 9-1-1 tandems in a similar, if not identical, fashion to the incumbent LEC.

Where mated or backup 9-1-1 tandems are deployed, ALECs typically build a pair of diversely routed trunk groups per county. One trunk group is built to the primary 9-1-1 tandem that serves the particular county, and the other is built to the mated or backup 9-1-1 tandem. Either trunk group should be large enough to provide a P.01 grade of service by itself. It is also desirable to have diversified paths within each trunk group, where practical.

If the call cannot reach the primary 9-1-1 tandem due to a facility or tandem problem, the call can be automatically re-routed (route advanced) to the backup or mated tandem.

In the event of an ANI failure, calls are routed to a designated default PSAP for that county.

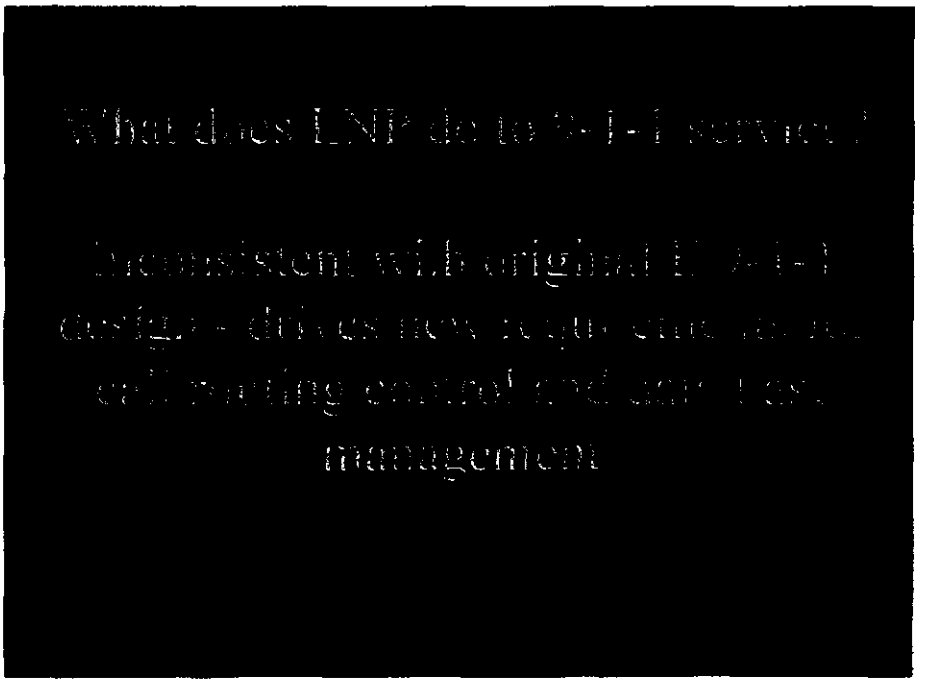


If the ANI is delivered but not recognized (no ALI record), the call may default based on the NXX code, which identifies the rate center. Right now, all LECs have dedicated NXX codes per rate center. This "default by NXX" will work until local (and later, geographic) number portability begins to significantly degrade accuracy by rate center. At that point, default routing must be based on trunk group only.

Local Number Portability Using Interim Number Portability

INP requires 2 switch numbers; the original customer's number and a new one at the new carrier. Calls to the original customer number are remote call forwarded to the new carrier number, where the customer has been provided new service by the new carrier. This technique has no direct effect on outbound 9-1-1 calls. However, it is desirable to display both the new ANI number and the old alternate number at the ALI screen, in order to lessen potential confusion about the caller's actual callback number.

INP transitions to full LNP, where the caller has only the original number, which is literally moved or 'ported' to the new carrier's end office switch.



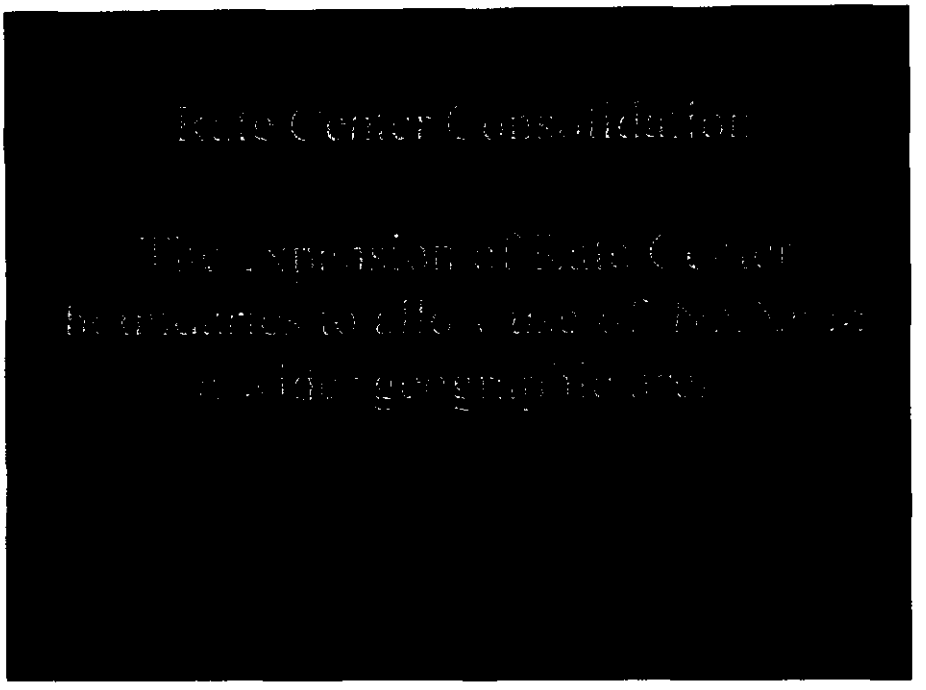
Local Number Portability is the ability to allow an end user to change their Service Provider without having to change their telephone number. This eases complications for the customer by allowing choice of local exchange carrier without requiring a number change.

Local Number Portability has three variations:

- Service Provider (change of local service provider)
- Location (move to a different address)
- Class of Service (change type of service, such as from wireline to wireless)

The geographic location of the number is limited to the Rate Center. A database dip from the switching system to a special LRN (Local Routing Number) database will occur to determine where to terminate a call (to what switch). 9-1-1 originated calls are not affected, since the originating central office sends these calls to its dedicated 9-1-1 trunk group.

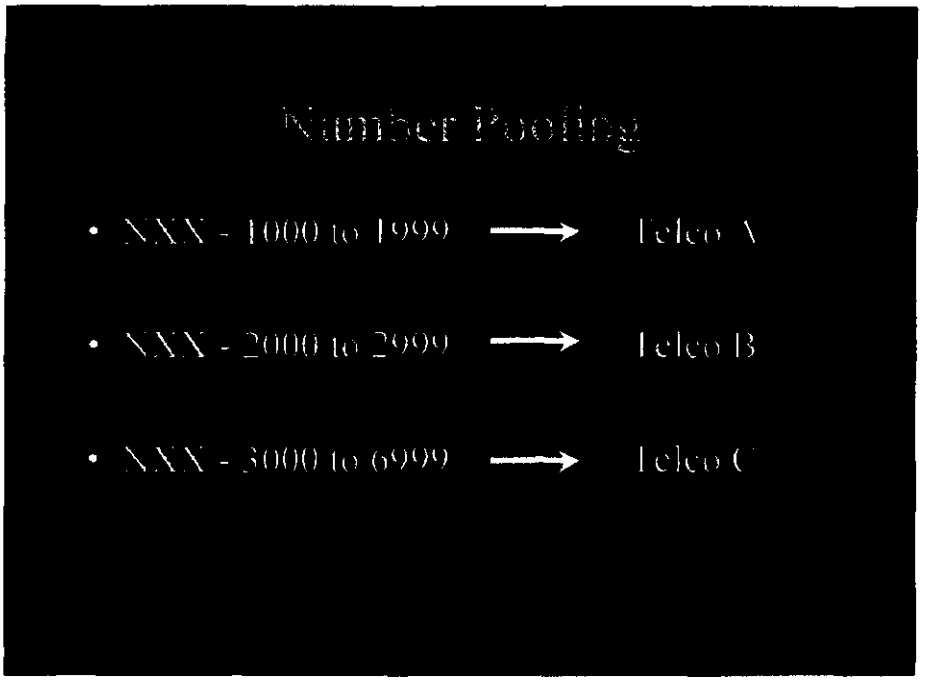
Impacts of LNP on 9-1-1



- Caller's TN (or ANI) information remains unchanged

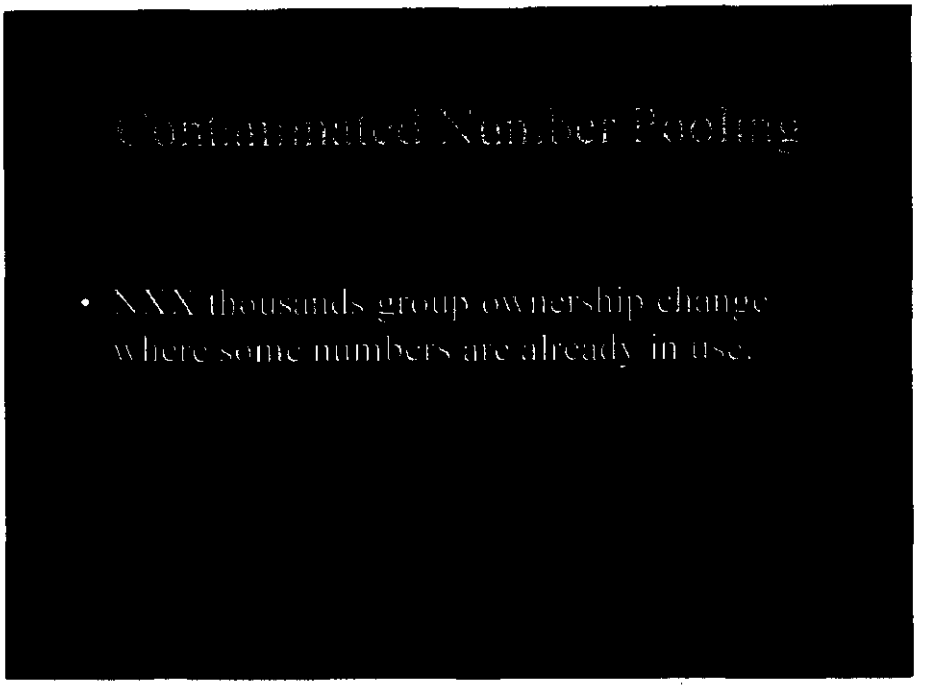
- Different Company ID & record responsibility in ALI Database

- PSAP needs access to or an updated list of Company IDs, 24X7 telephone numbers, and contact persons at carriers



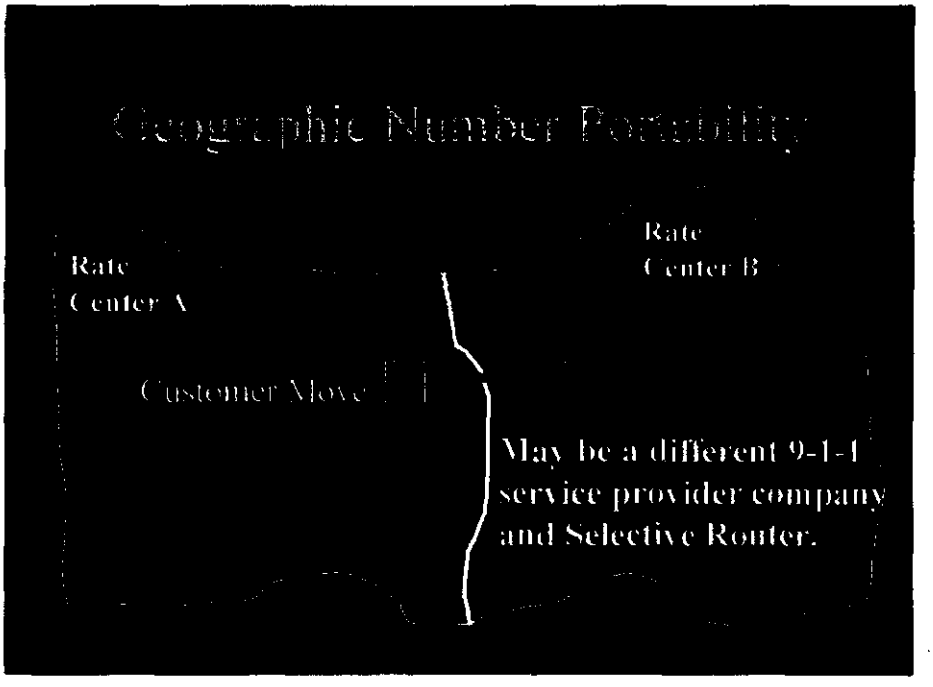
- PSAP will see addition of Company ID code on ALI screen display

- PSAP needs acccess to the NPAC IVR system, which indicates what company owns each ported TN



With Rate Center Consolidation, multiple traditional Rate Centers are formed into a new single Rate Center, or consodlidated. This allows a given NXX's 10,000 TNs to be utilized across a wider geographic area, and delays the need for new NXXs to be assigned.

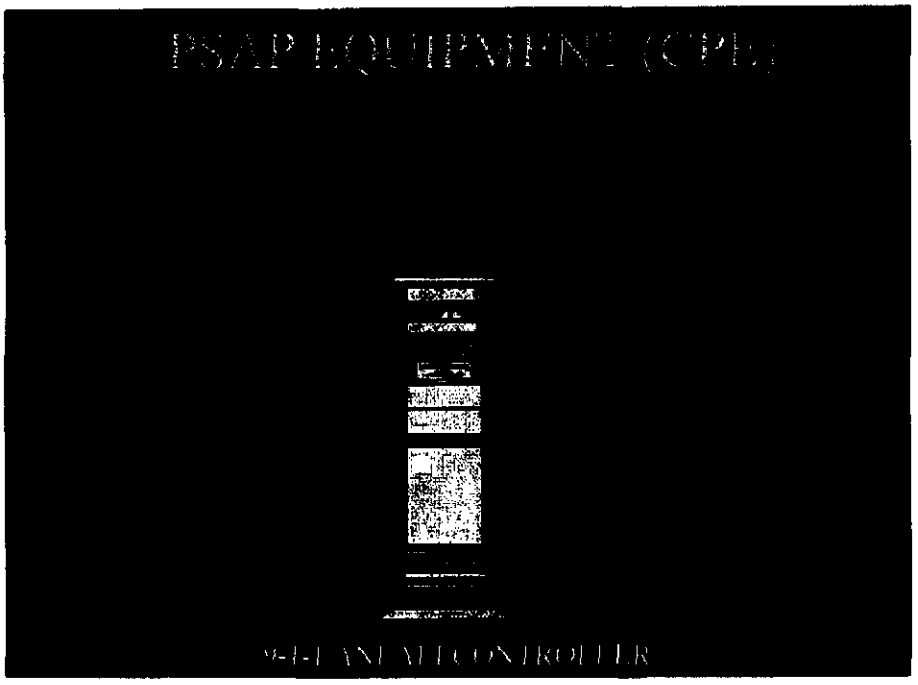
If this is done within the service boundaries of an E 9-1-1 Selective Router switch, the main impact on E 9-1-1 service is a significant complication in the management of call routing in the end office (class marking) and in default call control at the Selective Routing switch (ANI failure and No Record Found conditions). Class marking in the end office is typically a manual process, and error prone in comparison to mechanized Selective Routing control. And, when an NXX is no longer limited to a small geographic area, default call control at the NXX level for No Record Found Selective Routing situations is negatively impacted. This forces attempts to identify a PSAP to become the call taker for default calls across a much wider geographic area than before, with associated liability and call handling time concerns.



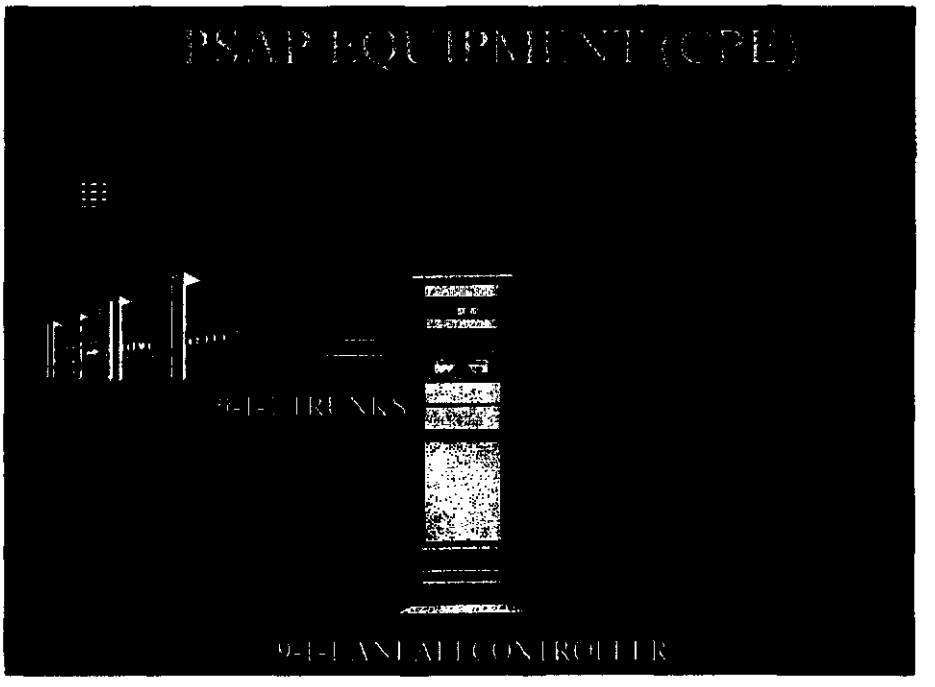
Number Pooling

This is a number conservation technique to make better use of available NNX number sets among carriers, so that requirements for new NPAs can be delayed. Basically, rather than a whole NXX of 10,000 numbers being assigned to a single carrier, each 1000s group is available for assignment to different carriers. This makes more efficient use of the number sets if service needs for a given carrier do not require all of the thousands groups from a full NXX.

'Contaminated' number pooling is a term used to describe a case where a 1000s number set is already in minimal use by a carrier, but a decision is made to reassign that 1000s group to another carrier. The general rule of thumb is that a 1000s group where the carrier is using less than 10% of the numbers can be available for reassignment. When this is done, the original carrier must use number portability techniques to 'bring their in-use numbers back' to their records. No impact on 9-1-1 data base is involved, since the customer has not changed and the Company ID has not changed.

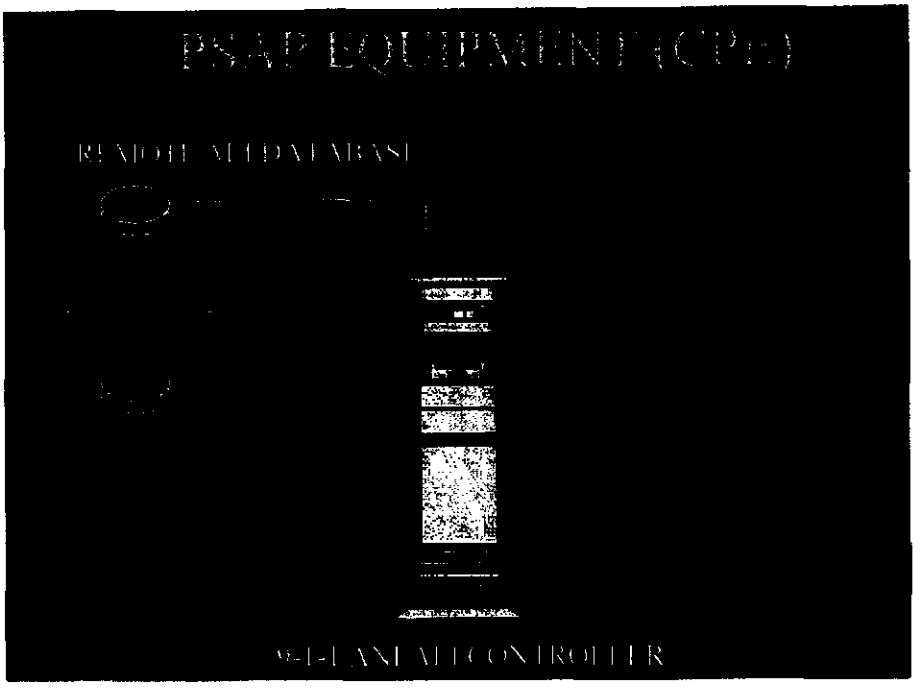


Geographic Number Portability



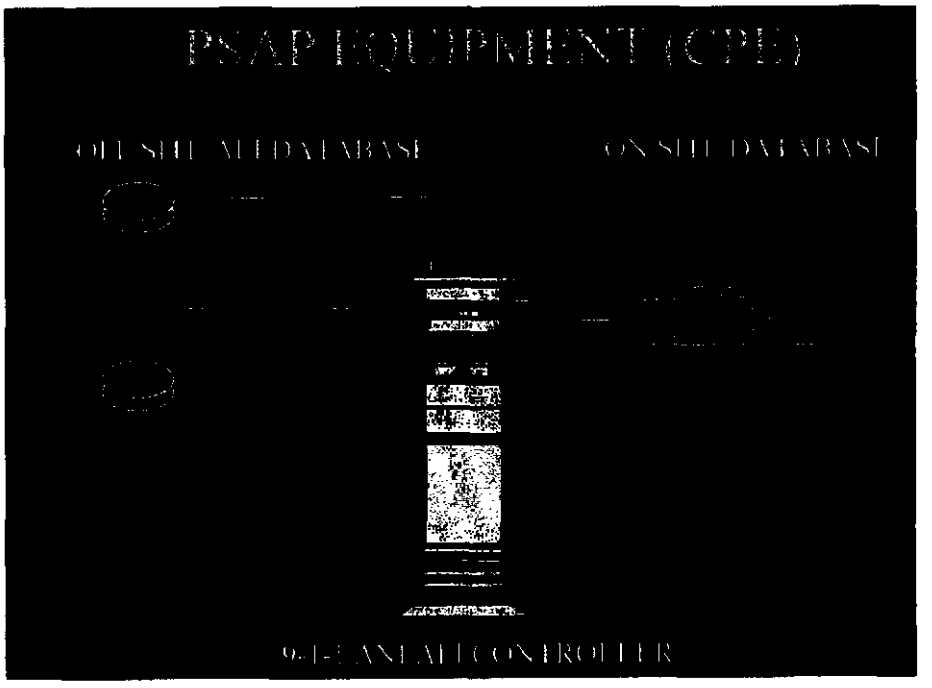
Geographic Number Portability is currently defined as number portability across more than one Rate Center, or the application of an NPA-NNX telephone number set among more than the Rate Center area originally assigned under the national numbering plan.

The implications for 9-1-1 include the need for additional end office to Selective Router trunk groups so that the originating end office can send calls to different 9-1-1 Selective Routing switches, based on the address of the caller. Under the current design of E 9-1-1 switching control, added trunking is forced. When 10 digit ANI for 9-1-1, and Intelligent Network components are available for use in 9-1-1 service, some of these additional requirements will be eased.



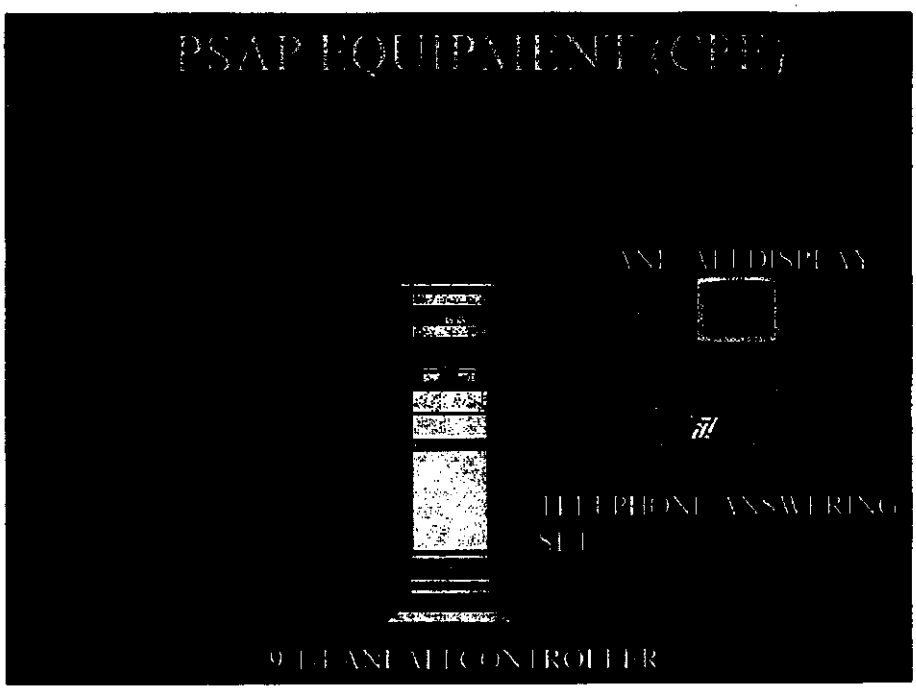
Since the customer could move to a different SR operated by a different 9-1-1 service provider, significant data base coordination will be involved for geographic number portability.

Equipment that is located at the customers location (on-premises) is usually called Customer Premises Equipment (CPE). The term "CPE" normally covers all equipment related to the receipt of a 9-1-1 call. Some of the common equipment considered to be CPE are ANI / ALI displays, printers, TDD/TTY equipment and telephone answering equipment.



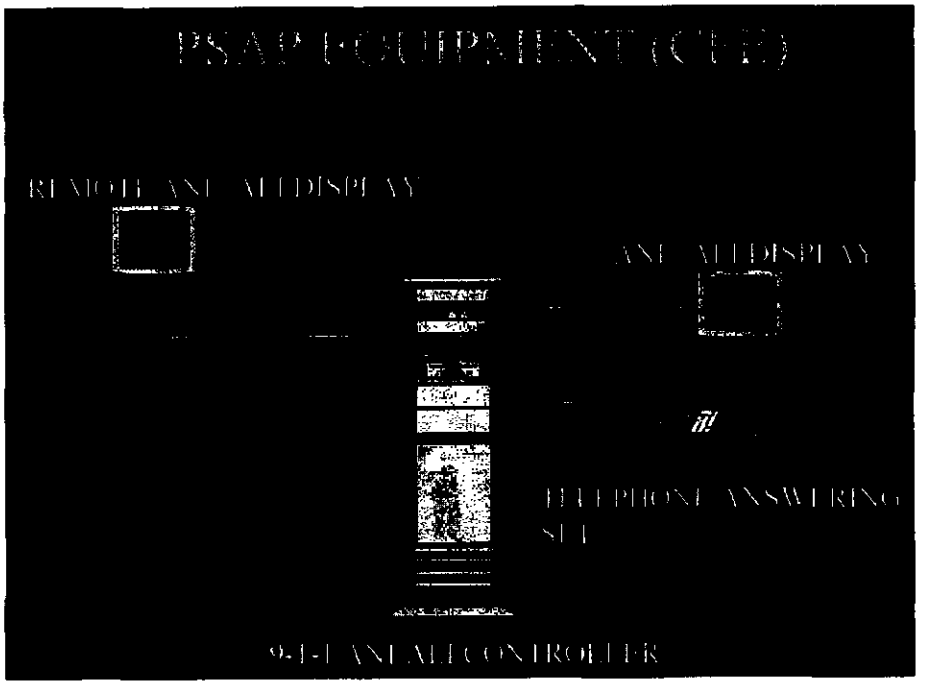
When a caller dials 9-1-1, the call is routed through a serving end-office, 9-1-1 tandem office, then to the PSAP. Trunks attached to the 9-1-1 ANI/ALI Controller are often called Emergency Management (EM) trunks. ANI and voice are delivered to the PSAP over these trunks.

There are multiple interfaces on the ANI/ALI Controller. The following slides will go through the different interfaces and equipment attached to the 9-1-1 controller.



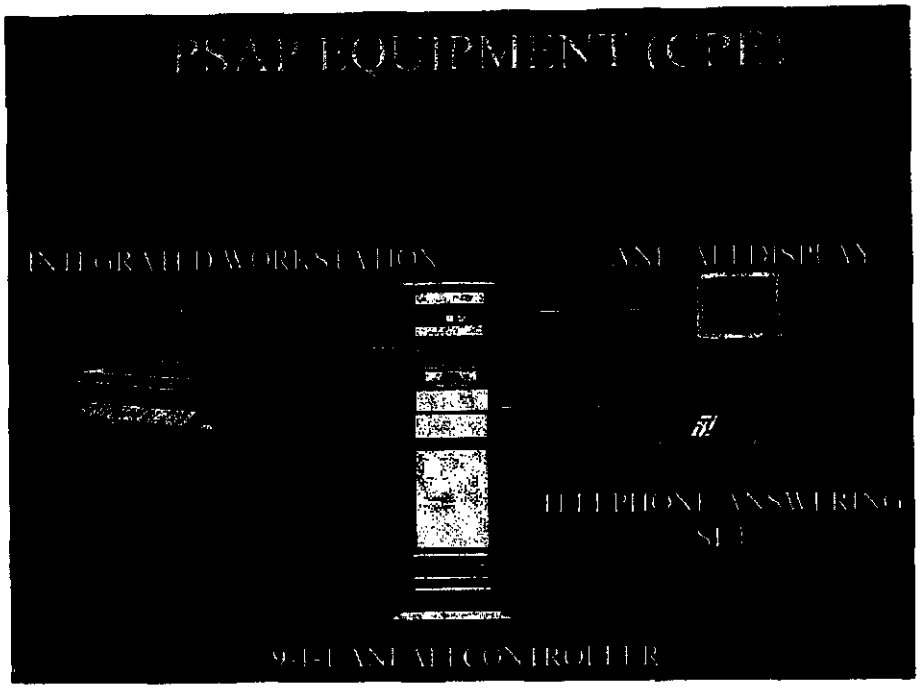
When ANI is received, the controller sends the number (ANI) to a database for an ALI look up. Typically, there are two data links going to redundant and diverse databases.

This drawing shows two diverse databases that are located off premises.

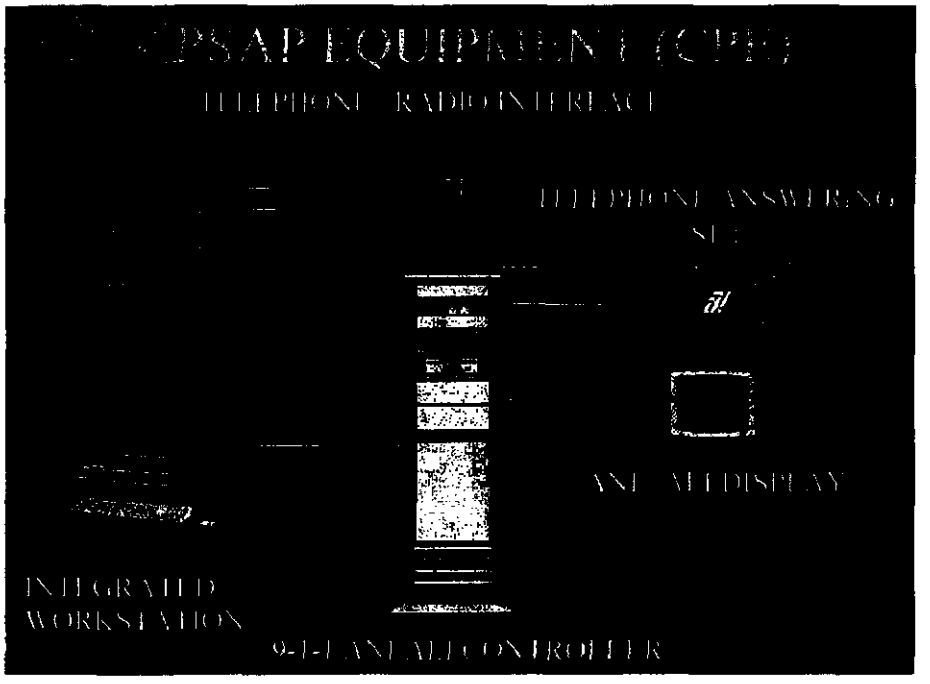


Some PSAP have an on-site database. Updates are sent via a dial-up or private line data circuit.

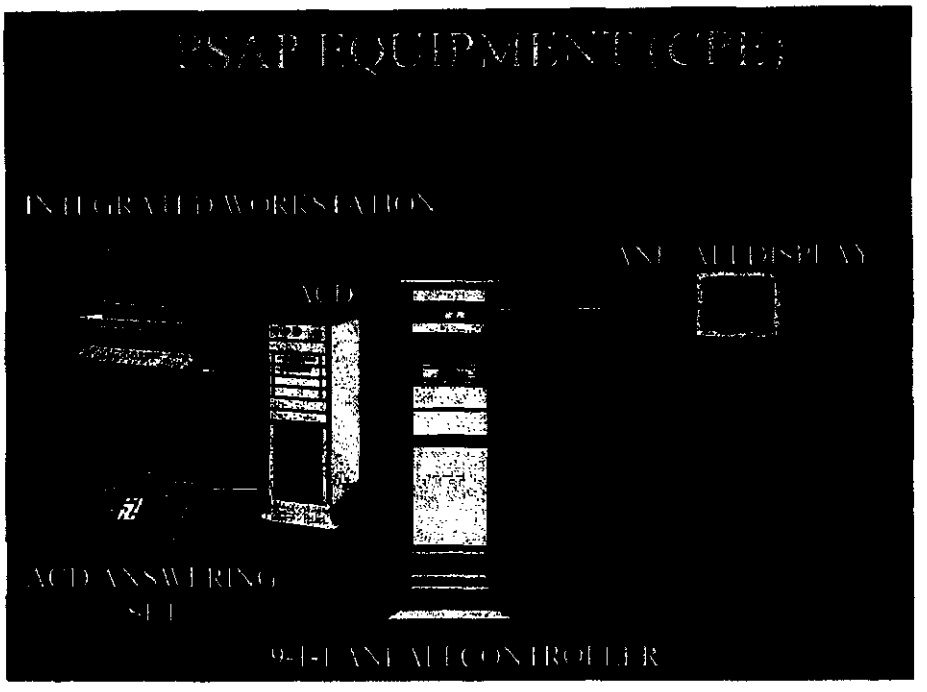
There are sites that may have connections to more than one data base. This arrangement may be required where there is more than one service provider.



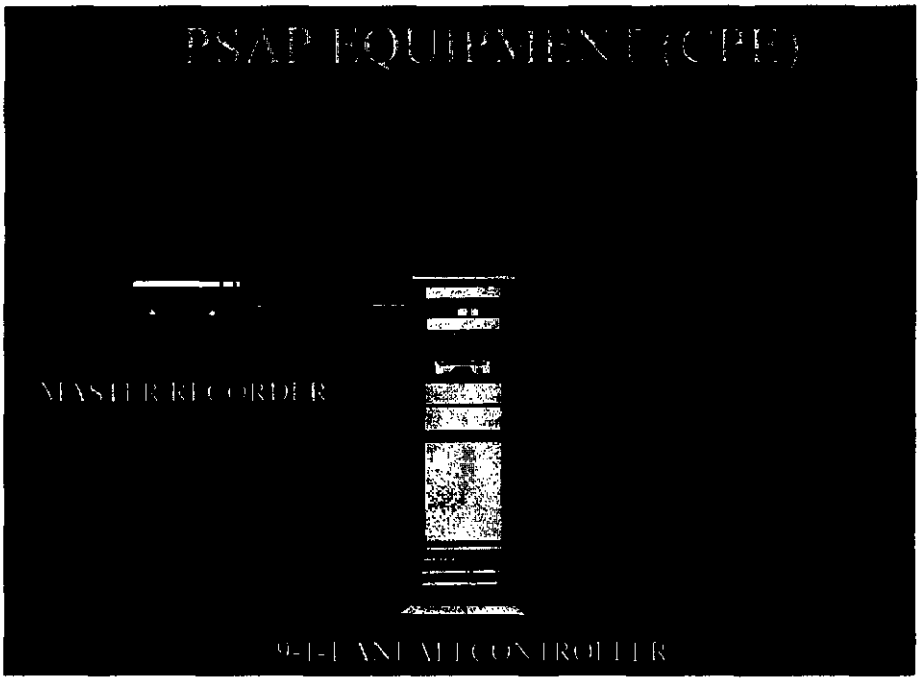
Each answering position has a Telephone Answering Set and an ANI / ALI Display connected to the controller.



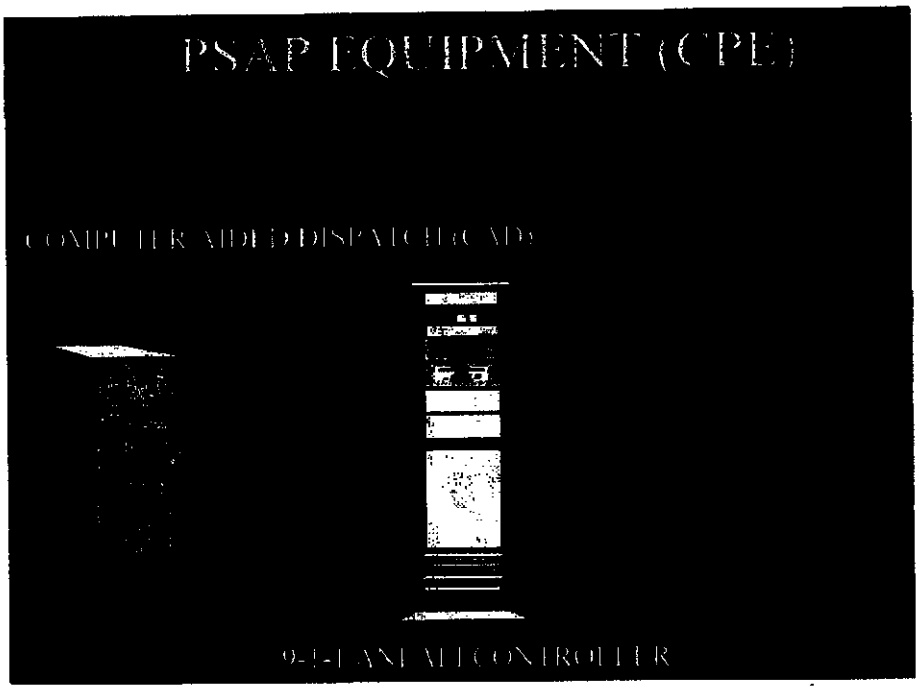
There may also be a remote ANI/ALI display. Call data can be sent to a remote location via a dial-up or private line data circuit. Typically, remote ANI/ALI displays are located at Fire Stations, EMS or other non 9-1-1 dispatch centers.



000490

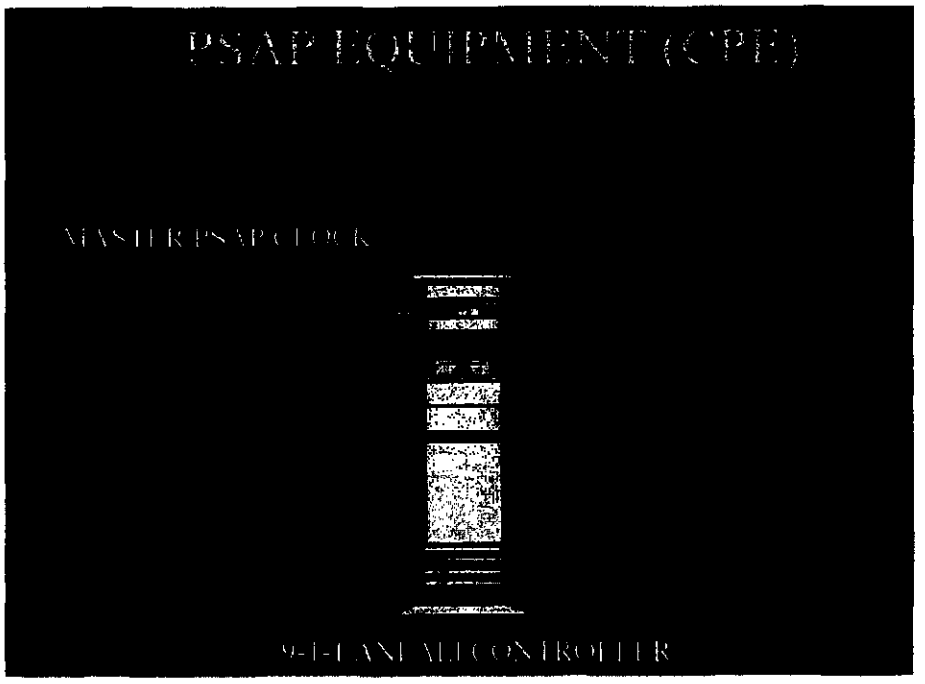


ANI/ALI Displays, Telephone Answering Sets and other call taker interfaces may be part of an Integrated Workstation. Integrated Workstations may also be called an Intelligent Workstation (IWS).



A Telephone/Radio Interfaces allows a call taker or dispatcher to wear one headset and communicate via both radio and telephone. Typically, radio traffic is present on the headset until a call is answered or placed via the telephone set. When the call taker or dispatcher is on the phone radio traffic is usually diverted to an external speaker on the radio. If the transmit is pressed on the radio while a call is in progress, the telephone transmitter is muted.

An Automatic Call Distributor (ACD) allows calls to be routed automatically to an available call taker. The ACD may be integrated with a workstation or may be located off premises in a central office, with a workstation at the PSAP. ACDs are normally only found in larger, high call volume PSAPs, although some smaller PSAPs do use ACDs.



Master Recorders are used to record all calls and radio traffic in the PSAP. Master recorders have multiple channels that can be set up to record each line on a telephone, each position's telephone, each radio channel or a combination of the different interfaces. In addition to the master recorder, instant recall recorders may be placed at each position to allow the call taker to instantly listen to previous few minutes of telephone calls or radio traffic.

The 9-1-1 controller sends the call takers position ID and ALI information to the CAD system via an asynchronous ASCII interface.

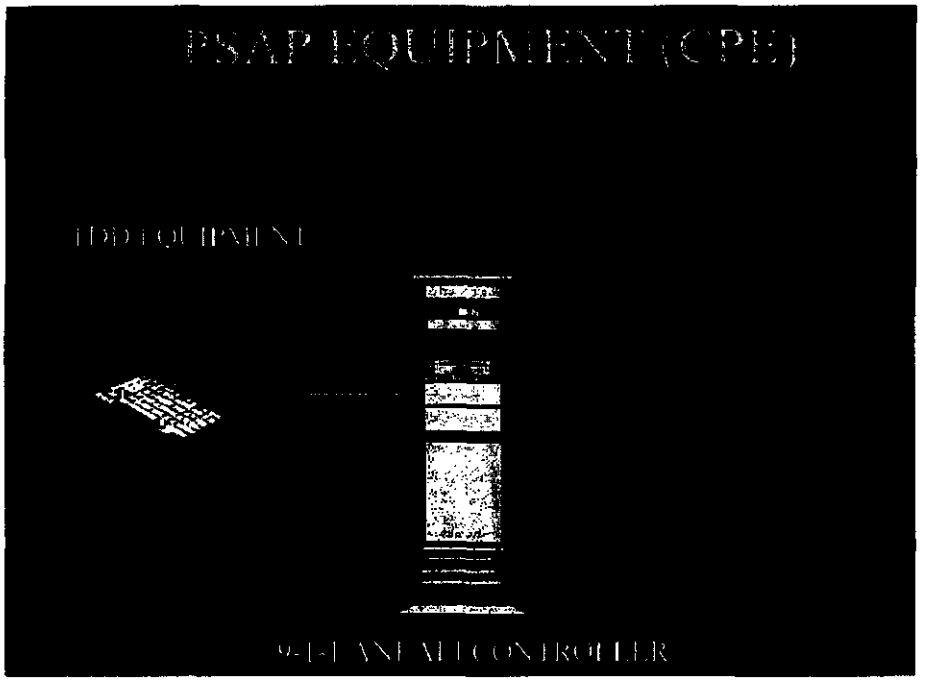
The Computer Aided Dispatch (CAD) system is used to log call information, track fire, police, EMS or other units that are dispatched or available. Some CAD systems can automatically assign units depending on the location of the call and automatically send the call to a CAD terminal in the unit being dispatched. The CAD terminal may be a separate terminal or integrated into an Intelligent Work Station.

To insure consistency of time stamps added to event records, reports and voice recordings, a common time stamp source is required to synchronize equipment such as CAD, ANI/ALI controllers, voice recorders, radio consoles, etc..

The Master PSAP Clock is traceable to Coordinated Universal Time (UTC).

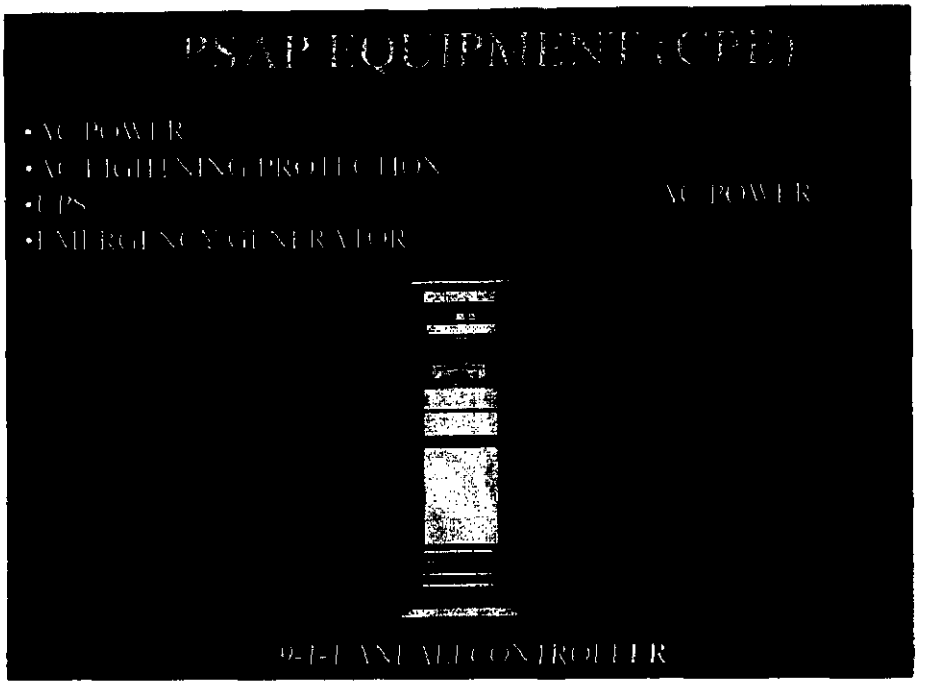
The Master PSAP clock provides outputs for RS-232 serial and Inter Range Instrument Group (IRIG) interfaces.

Additional master clock information is available in the "NENA PSAP Master Clock Standard" (NENA-04-002) document.



000496

Call Detail Report Printer (CDR) - The CDR printer provides a hard copy of call time stamps, ANI received, ALI received, trunk number call was presented to, position number that answered call and call disconnect time.



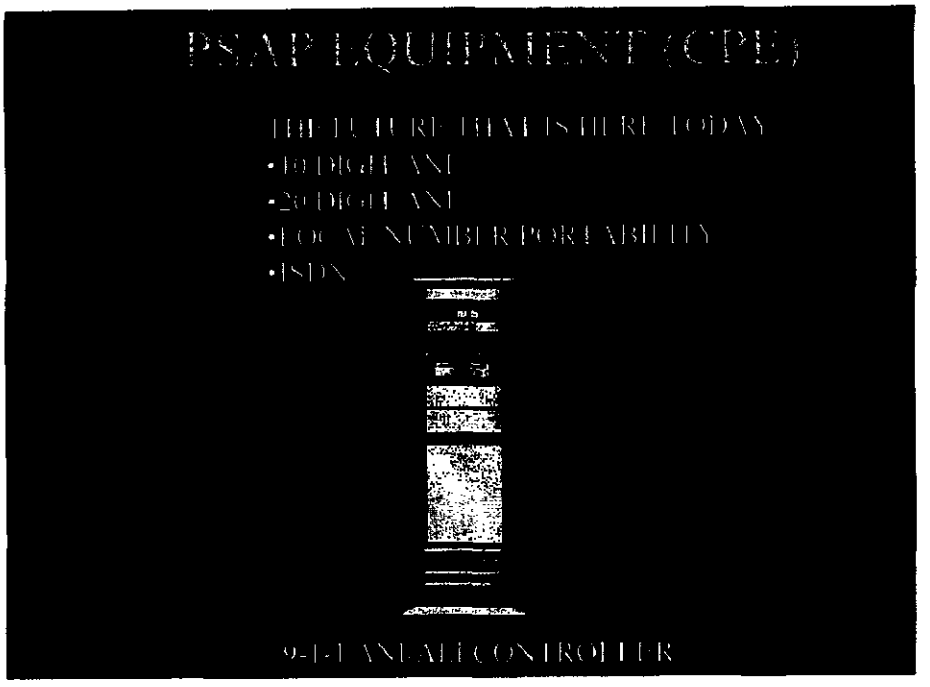
Note: The output may vary between the different PSAP manufacturers.

Maintenance Printer - The maintenance printer provides a hard copy of system alarms, call progress messages, system status messages and may also provide call count reports.

TDD/TTY equipment is used to communicate with the hearing and speech impaired. The TDD/TTY equipment may be:

- integrated into the 9-1-1 controller,
- attached to an interface on the telephone answering set,
- integrated in an Intelligent Work Station,
- directly connected to the emergency lines,
- acoustically coupled to a handset,
- a stand-a-lone unit with dial tone attached.

When a new PSAP site is being planned or a site review is performed, the AC power and protection is a critical area. In addition to the "normal" AC power, UPS (uninterruptable power source) and an emergency generator should be considered.

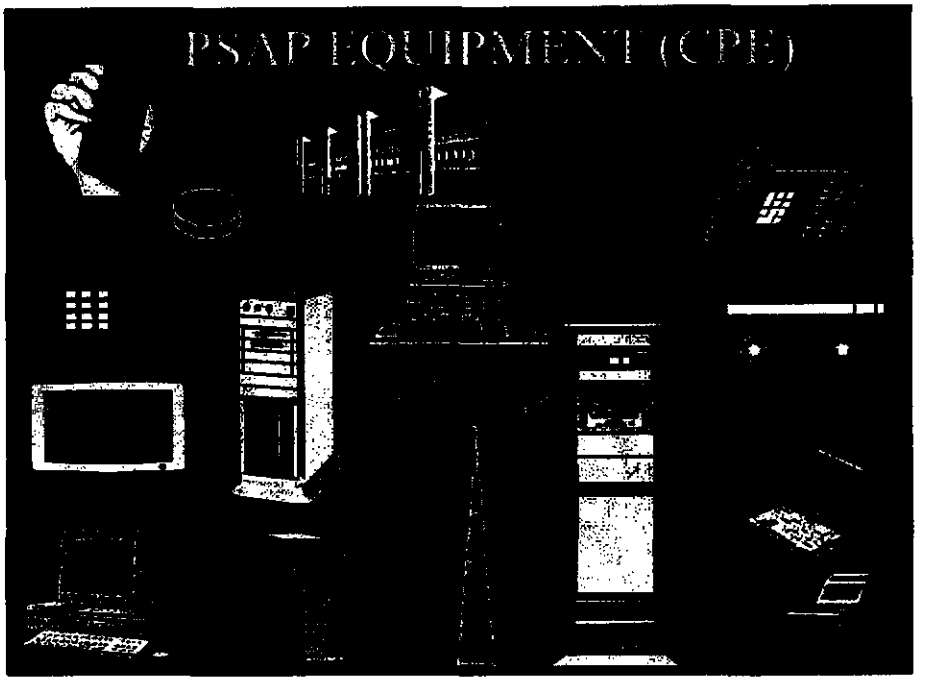


There are at least two different configurations for the emergency generator:

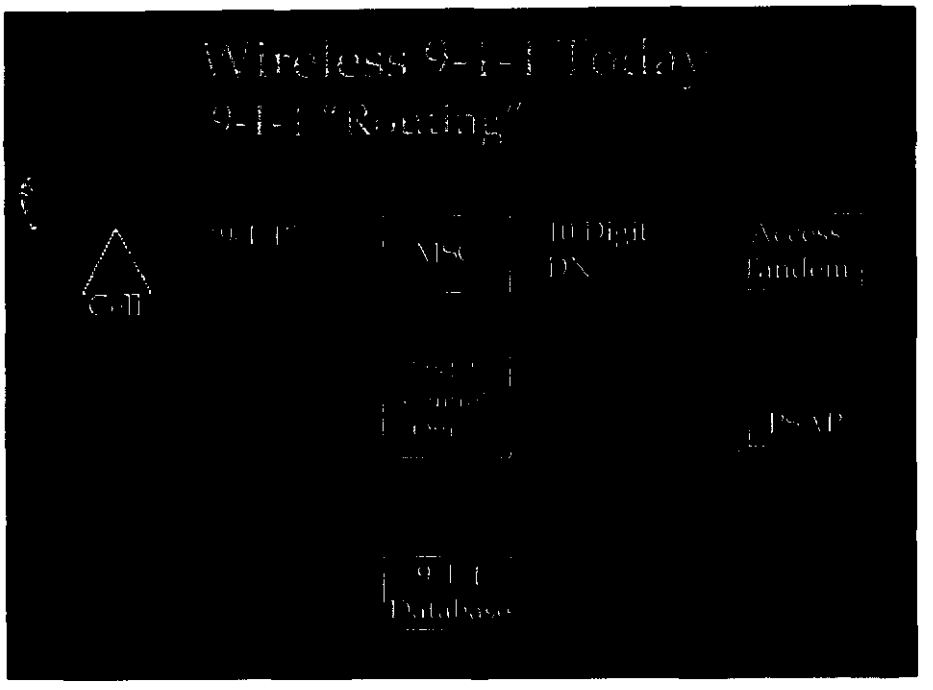
•Automatic start - When AC power is lost the generator automatically starts and provides the AC power.

•Manual Start - When AC power is lost someone has to manually start the generator and switch the AC panel to the generator.

•In both cases, power is disrupted until the generator is on line. If an in-line UPS is installed, the UPS provides uninterrupted power in the event AC power is lost. Normally, batteries in the UPS will provide power until the generator can be brought on line. Larger UPSs or additional run time can be added to an existing UPS if desired.

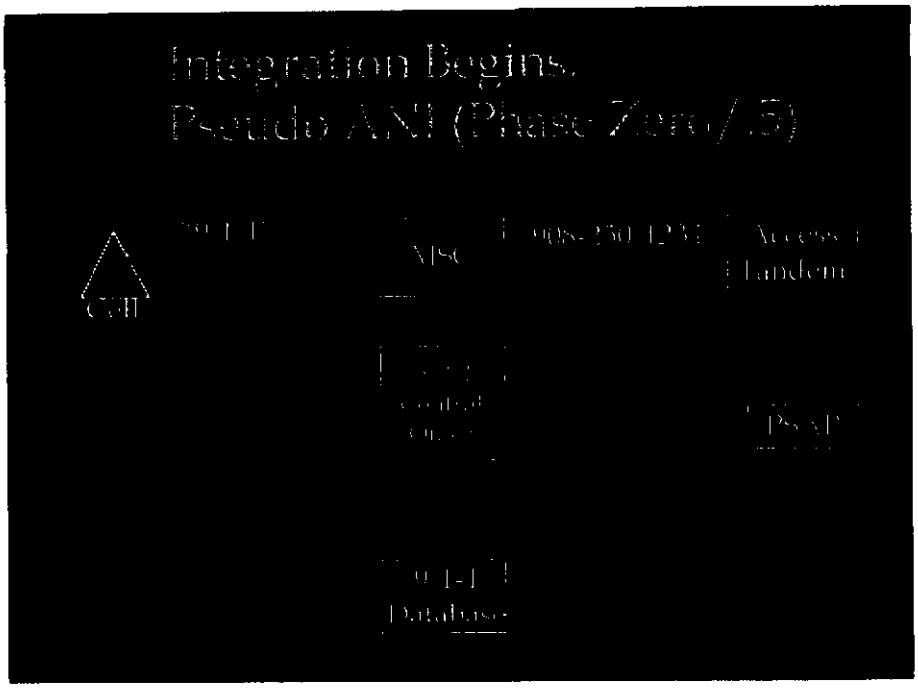


Different levels of AC surge protection are available. Primary protection can be installed at the main AC service panel, AC sub panel, or at the wall outlet. AC surge protection helps to prevent an AC over voltage surge or ground fault from damaging equipment in the PSAP.



The future is here today. PSAP directors have to deal with 10 and 20 digit ANI, LNP and ISDN.

Some existing 9-1-1 controllers is not capable of accepting 10 and 20 digit ANI. Equipment upgrade or replacement will be required.



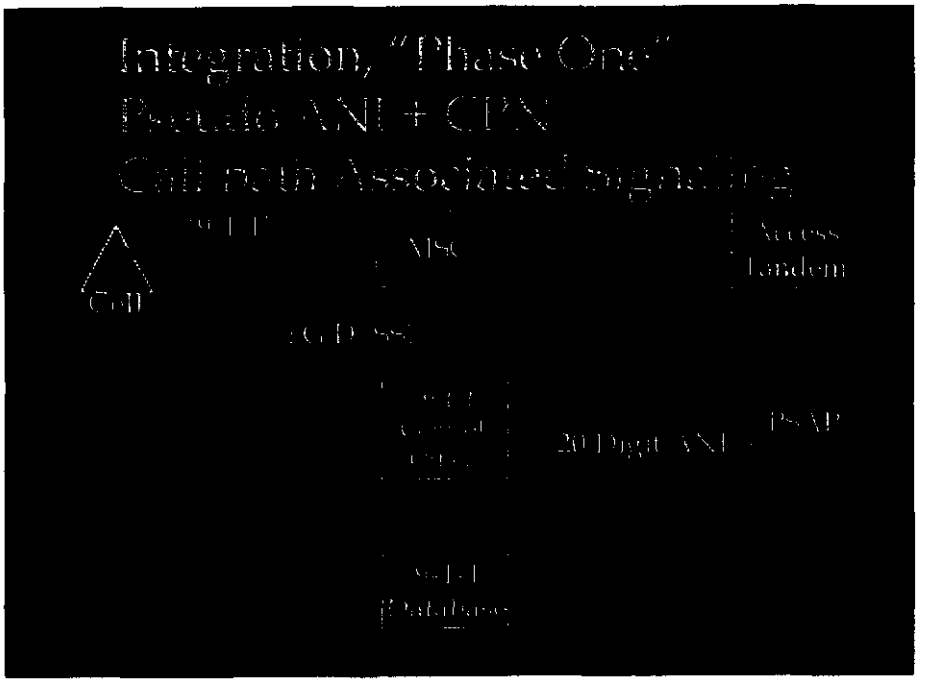
Additional database links may be required to receive ALI for ported callers. Additional 9-1-1 trunks may be required from an alternate provider's 9-1-1 tandem office.

There are multiple interfaces and equipment requirements that require standards to ensure all the piece parts will work together. The NENA Generic Standards for E9-1-1 PSAP Equipment (NENA-04-001) addresses these interfaces and provides manufacturers with an industry standard.

In most of North America, 9-1-1 calls from wireless phones are treated as if 9-1-1 was a speed dial code - 9-1-1 is translated by the Mobile Switching Center (MSC, the wireless equivalent of a central office) to a preset 7 or 10-digit number. Calls bypass the 9-1-1 network and arrive at the PSAP via the public switched telephone network. Some wireless carriers are now offering Caller ID, but typically, there is no information delivered with the call.

The use of pseudo numbers was discussed earlier as a method for telephone operators to access a specific PSAP based on the municipality of the caller.

Another way pseudo numbers, or pseudo ANIs (pANI) are used is to identify the cell tower and sector from which a wireless 9-1-1 call originated. In fact, this was the first use of pANIs.



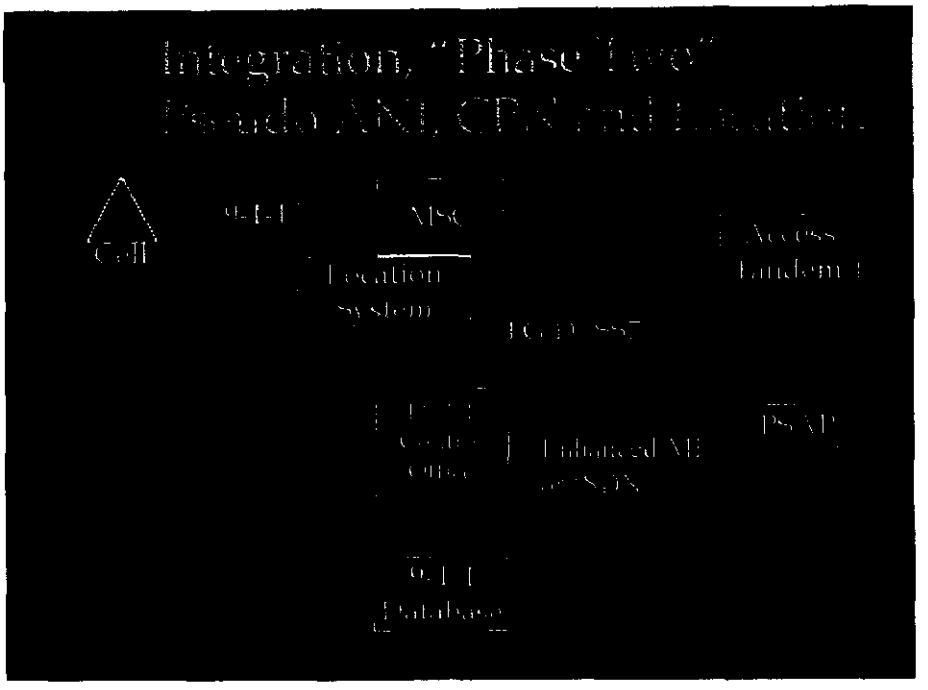
In most circles, the term pANI has been replaced with ESRD (Emergency Services Routing Digits) or ESRK (Emergency Services Routing Key), depending upon the implementation.

The typical wireless (cellular or PCS) antenna is triangular. Each face of the triangle is called a sector. The wireless MSC is aware of which sector the call originated from and is capable of translating 9-1-1 to a unique number based on that information.

By associating a unique pANI with each sector, the 9-1-1 tandem can be programmed to send calls from a specific cell sector to a specific PSAP. Since the pANI is unique, a "pseudo-ALI" record can be built in the ALI database that identifies the carrier, location of the cell and a general description of its serving area. This may include latitude/longitude of the tower; serving radius; compass bearing of sector; perhaps even a free form text description.

The location data still leaves much to be desired, but at least the PSAP knows the call is from a wireless phone and has a "hint" of what area the call came from.

This "hint" is sometimes referred to as the caller's "general location". This is a gross overstatement. To most people, "general location" means "at the mall", or "at the park". The area may actually be as large as 26 square miles.

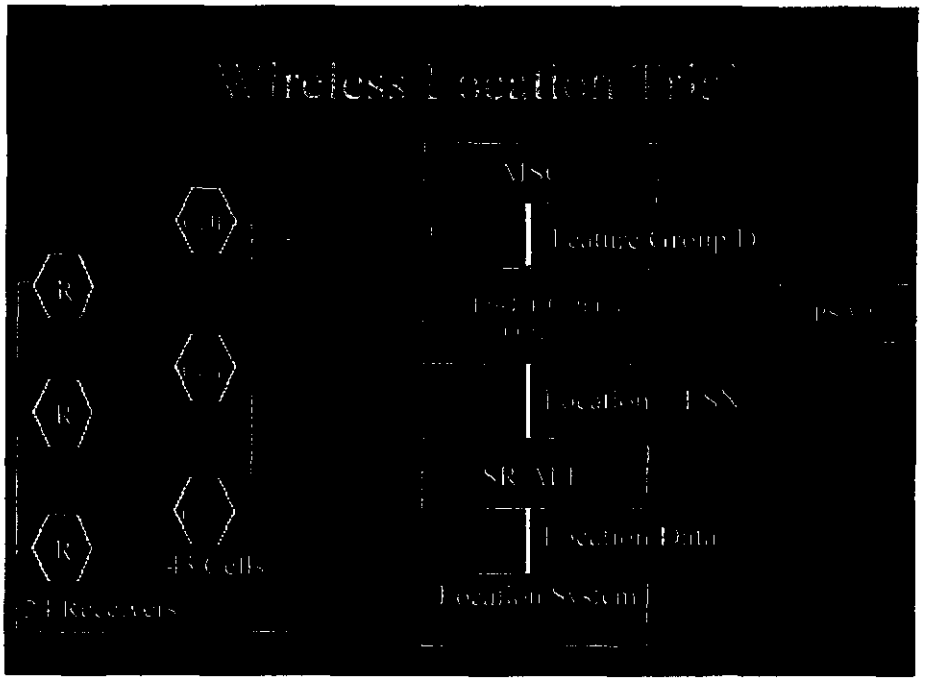


FCC Report and Order 96-264 requires that wireless 9-1-1 service be provided in two stages. Phase I, which carried a target date of April 1, 1998, calls for the delivery of cell/sector information, as discussed on the previous slide, plus a callback number for the mobile phone.

To accomplish this, the pANI plus the callback number must be delivered to the PSAP. However, the voice trunks typically used for 9-1-1 until now are only capable of delivering one, 8-digit number (NPD plus 7 digit ANI).

There are two choices for trunks that can carry two, ten-digit numbers from the MSC to the 9-1-1 tandem. Signaling System 7 (SS7) is the digital version and Feature Group D signaling (also referred to as Enhanced MF) is the analog version. Selection of one method over the other is based upon the capabilities of the two switches.

The signaling method between the 9-1-1 tandem and the PSAP also has to be upgraded to carry a minimum of 20 digits. The digital method, used today in a very small number of pilot PSAPs is ISDN. The analog version, developed by the NENA Network Technical Committee, is called Enhanced MF Signaling. This method is now being supported by all the major switch and CPE manufacturers.

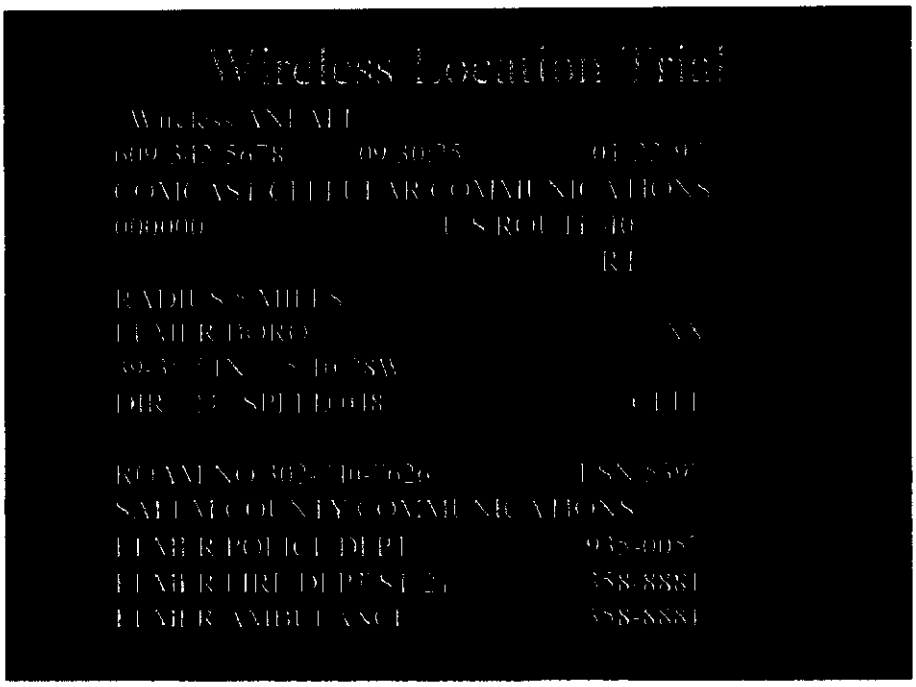


Once the two numbers are delivered to the PSAP, the pANI is used to query the ALI database for the cell/sector data, and the callback number is displayed to the call taker on the ANI display.

In Phase II, the caller's X and Y coordinates, with accuracy requirements set by the FCC, are delivered with the call. That data may come from location determination technology (LDT) associated with the wireless network, or directly from the handset. In either event, the location data must be delivered to the 9-1-1 tandem to be used for Selective Routing of the call. That delivery may be direct or via the ALI database.

For network based location systems, the accuracy requirement is within 100 meters 67% of the time and within 300 meters 95% of the time. For handset based location systems, the accuracy requirement is within 50 meters 67% of the time and 100 meters 95% of the time.

One of the advantages of SS7 is that it is capable of delivering pANI, callback number and coordinates with the voice call. Other methods require separate delivery paths for location data. Delivery to the PSAP may be via ISDN or through the ALI database



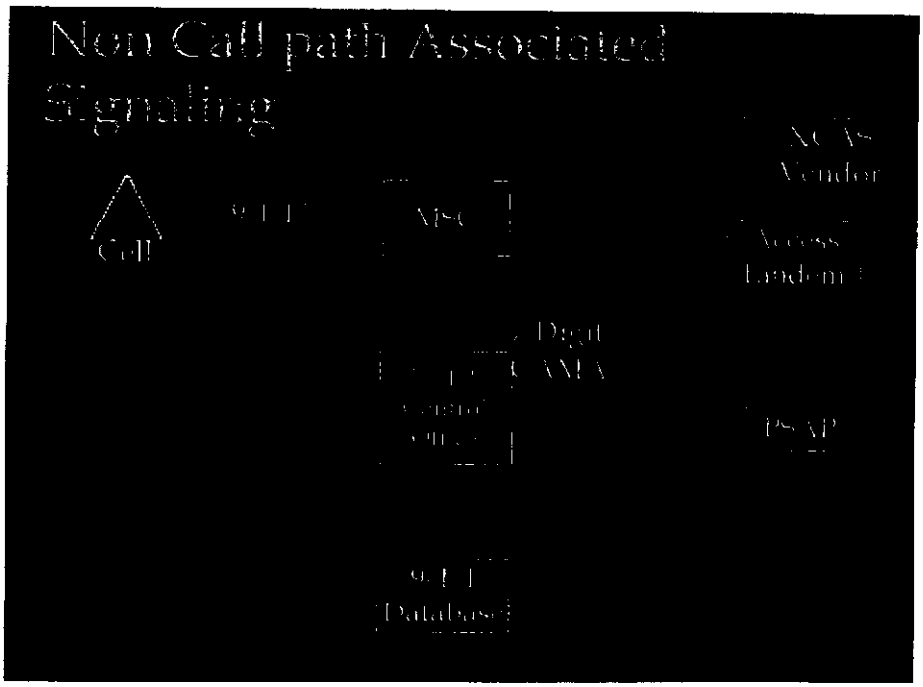
This slide shows the architecture of a wireless location trial that kicked-off in January of 1997.

Location receivers identified the location of the wireless 9-1-1 caller. That information was passed to a selective routing/ALI system which translated X,Y coordinates to ESN.

The SR/ALI system sent the ESN and pALI record to the 9-1-1 tandem. The tandem routed the call, which arrived at the tandem on Feature Group D type trunks with pANI and callback number, to one of three PSAPs based on the ESN provided by the SR/ALI system. A workstation at the PSAP drew a map of the area, complete with an "X marks the spot" for the X and Y coordinates delivered.

000506

This slide shows a sample of the ALI delivered during the trial.



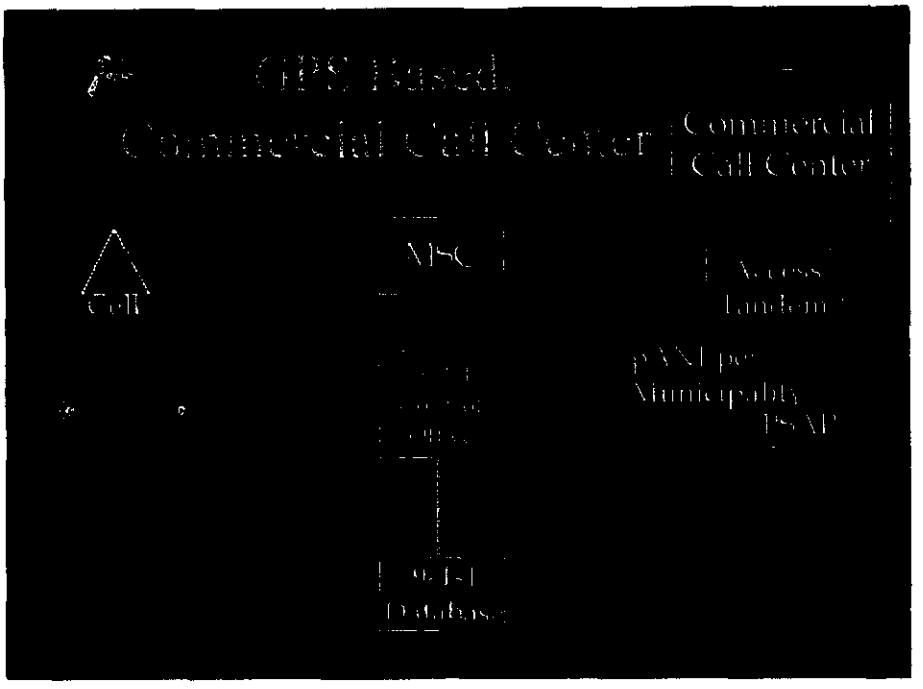
The warning message "Wireless ANI/ALI" identifies the call as coming from the trial area.

The callback number has been inserted into the telephone number field on line 2.

The street address data refers to the cell tower, but the latitude, longitude, direction and speed are associated with the caller.

The roam number is provided for the PSAP to use in calling back travelers that have "roamed" into the area (if required).

Notice that the state field shows "XX" instead of "NJ". Sometimes, cells are located on top of or next to buildings. Because the coverage area of the cell may extend into multiple jurisdictions, calls from the wireline phones in the building may need to route to one (municipal) PSAP while wireless calls from that cell need to go to another (county or state) PSAP. Since both have the same street address, which would result in the same ESN and PSAP assignment, we sometimes "fool" the network by creating an MSAG entry that uses the same street and municipality address, but uses the state of "XX". To the MSAG, this is a completely different ESZ and gets its own ESN.

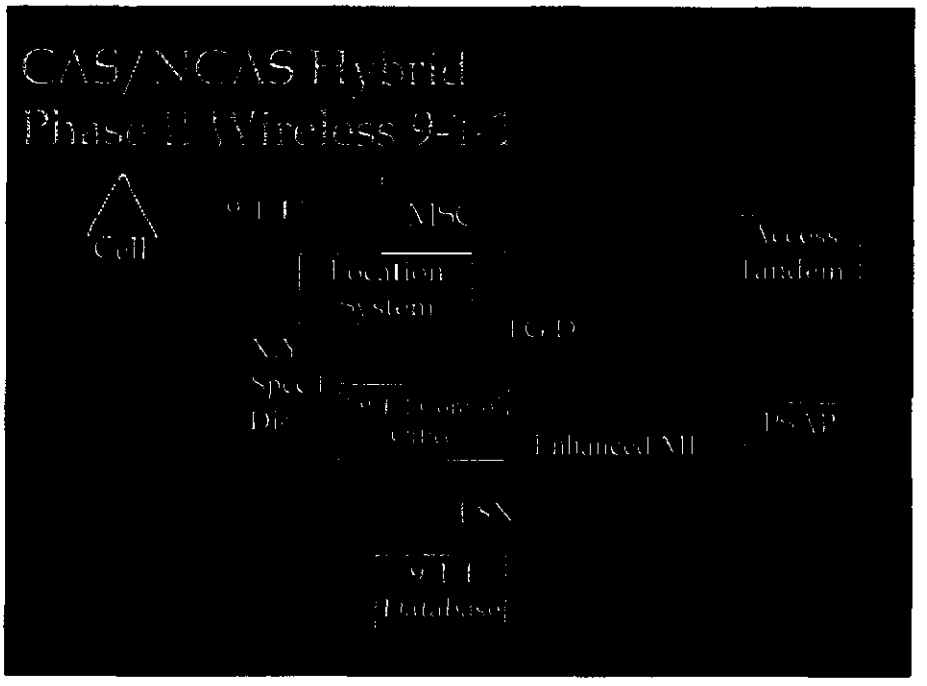


The delivery of pANI and callback number via SS7, Feature Group D signaling, ISDN and Enhanced MF is called "Call path Associated Signaling", or CAS. With CAS, the pANI that identifies the cell/sector and the callback number are delivered to the PSAP with the voice call.

An alternative is NCAS, or "Non-Call path Associated Signaling". NCAS was devised as a method to deliver the same information to a PSAP that could not afford upgrades to the selective router and PSAP, or where the selective router and/or PSAP were not upgradable. Instead, an upgrade is made to the ALI database to accept call related data from an outside source, "on the fly", for delivery to the PSAP.

When a wireless 9-1-1 call is placed, the MSC queries the third party vendor for routing information. The NCAS vendor supplies a routing number which is transmitted as a pseudo-ANI to the 9-1-1 tandem. This number may identify the cell/sector; may be one of a block of numbers associated with a cell/sector (ESRD); or may be one of a block of numbers that only identify the destination PSAP or ESN (ESRK). When the receiving PSAP queries the ALI database with that number, the pALI record and callback number, supplied by the vendor, is delivered to the PSAP.

The positive about NCAS is that it does not require upgrades to the 9-1-1 tandem and PSAP CPE, which may be expensive. The negatives are that the ANI delivered with the call may mean nothing if the ALI does not arrive, and that it supports wireless but does nothing for number portability or area code exhaust. ISDN and Enhanced MF support all three through the delivery of one or two full ten digit numbers.



Another group that has entered the wireless 9-1-1 arena are the "Commercial Call Centers". Systems like Lincoln Rescu and GM OnStar use a specially designed cellular telephone equipped with a Global Positioning Satellite (GPS) receiver. When a button in the vehicle is pushed, the cellular phone dials an 800 number to access the service bureau. Once connected, a microcomputer in the vehicle transmits GPS location data plus vehicle identification data. At the service bureau, call takers use a GIS system to identify the caller's location and local emergency services.

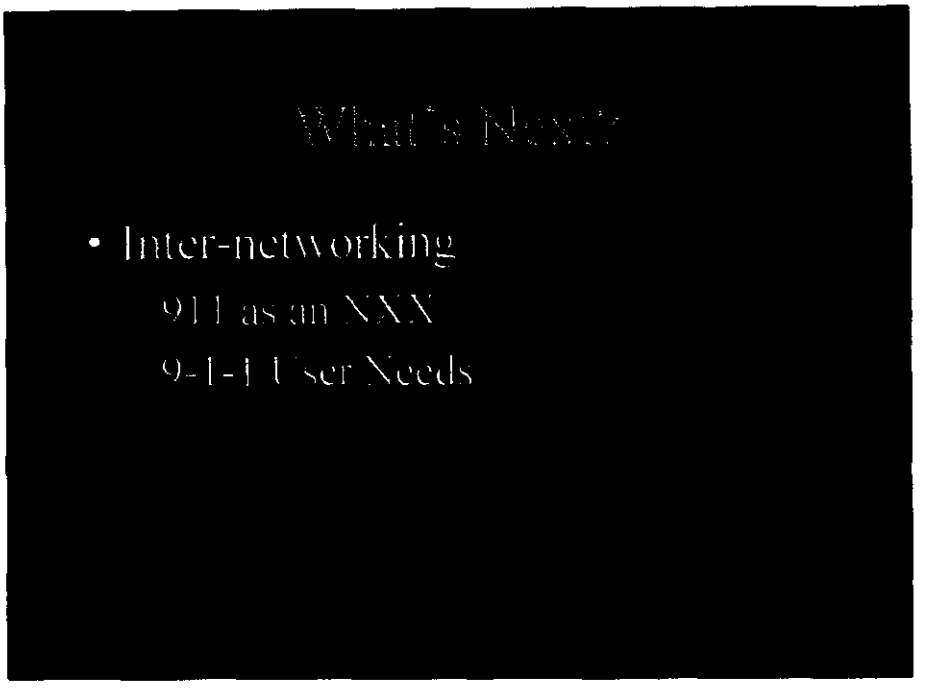
Remember the pseudo numbers used by operators to access specific PSAPs based on the caller's municipality? These same numbers can be used by the Commercial Call Center to connect to the PSAP that serves the municipality where the GPS/GIS systems have located the caller.

The real beauty of this system is that the pseudo numbers are associated with the municipality, not the PSAP. PSAPs can open, close, expand or consolidate but the municipal pANIs stay the same. If the PSAP for a town changes, that change is made in the 9-1-1 network. No changes are required at the Commercial Call Center. Never again will service be delayed because a relay service or operator service was not advised of a change in PSAP assignment and dialed a directory number that went to intercept.

Another benefit is that the call arrives at the PSAP as a 9-1-1 call, which guarantees priority handling over administrative lines.

Another scenario under consideration for deliver of Phas II service is a CAS/NCAS Hybrid. The Hybrid uses a CASarchitecture for delivery of Phase I service but delivers caller location data in an NCAS manner.

Feature Group D type or SS7 trunks will carry the voice call, pANI and callback number to the 9-1-1 tandem. The tandem will forward the two numbers to the 9-1-1 database. Simultaneously, the location determination system will transmit the caller's coordinates, speed and direction of travel to the 9-1-1 database(s). (If SS7 trunks are utilized, the location data may be passed over the SS7 trunks, through the E9-1-1 Control Office to the 9-1-1 Database system.)



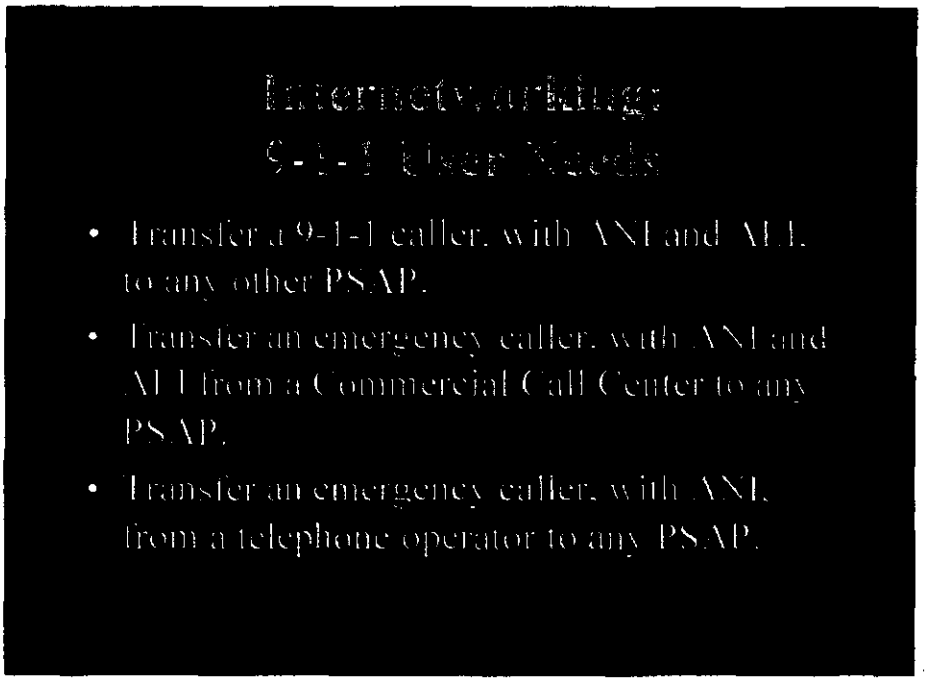
The 9-1-1 database will translate X and Y to ESN, and send the ESN to the tandem to be used for selective routing. The database will then retrieve the pALI (cell sector) record, insert the callback number and location data and wait for a query from the PSAP.

The tandem will use Enhanced MF Signaling to forward the voice call, pANI and callback number to the PSAP.

The PSAP then queries the 9-1-1 database using the callback number. The database delivers the record, with the caller's location data, to the PSAP.

A computer at the PSAP will display a map showing the caller's location.

000510



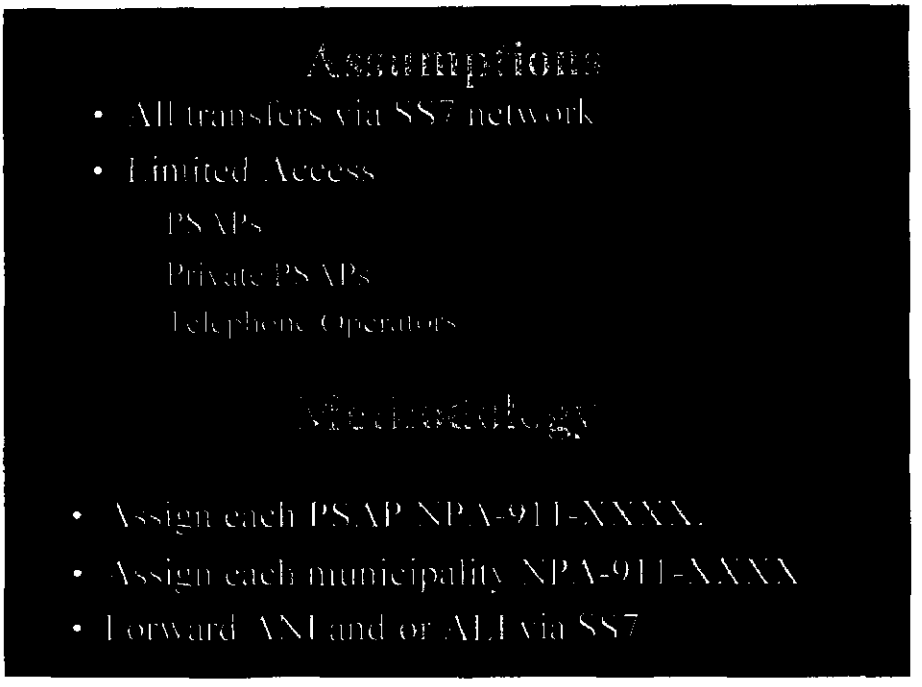
The implementation of Signaling System 7 across North America will present some new possibilities for 9-1-1. Two significant possibilities are; (1) the ability to transfer a 9-1-1 call, with ANI and ALI, to any PSAP in North America, and; (2) the ability to selectively connect to any PSAP from an operator position, emergency relay service or other authorized agency.

911 as an NXX

The NENA Network Technical Committee has petitioned the North American Numbering Plan Administrator to reserve 9-1-1 as an NXX code to be used for 9-1-1 inter-networking across North America.

Establishing 9-1-1 as an NXX in every area code yields 10,000 numbers in the form "NPA-911-0000 to 9999".

Each PSAP and each municipality would be assigned a unique number. The PSAP numbers would be used for PSAP to PSAP transfers. The municipal numbers would be used by authorized agencies (operators, relay services, poison control centers, medical insurance companies) to transfer callers to their respective PSAPs, based on the municipality in which they live. This represents the extension of today's pseudo numbers across the entire 9-1-1 community in North America.



PSAPs need the ability to transfer a 9-1-1 caller, with associated ANI and ALI, from one PSAP to any other, without regard to distance or network provider.

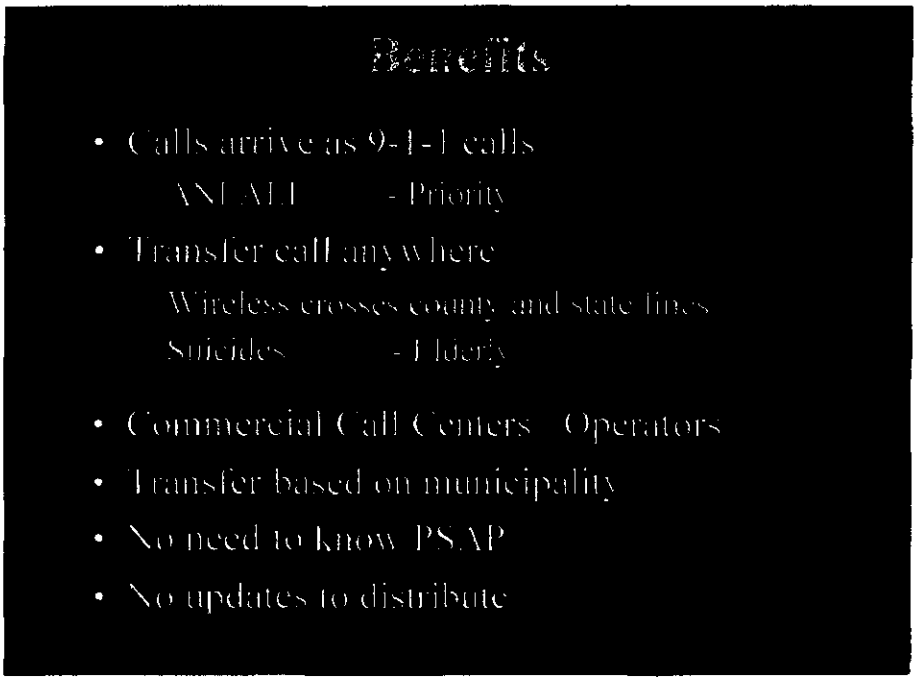
Terrestrial and satellite based wireless networks serve areas larger than PSAP jurisdictions. Attempted suicides sometimes require assistance from distant agencies. The elderly sometimes call their children instead of 9-1-1 when they need help.

Commercial Call Centers need the ability to transfer an emergency caller, with associated ANI, ALI and additional data (if available) to any PSAP in North America. Emergency calls from subscribers are answered at a single answering point. Examples: Lincoln Rescu, GM OnStar, MCS, Cross Country.

Telephone operators need the ability to transfer emergency callers, and their associated ANI, to any PSAP. ILEC telephone operators sometimes have direct access to 9-1-1 networks. This is not true for ALECs or long distance carriers. Sometimes, in their panic, people dial "0" or "00".

This proposal envisions the SS7 network as the vehicle with which to deliver 9-1-1 transfer capabilities. It assumes the eventual universal provision of 9-1-1 service via SS7, in an IN (Intelligent Network) or AIN (Advanced Intelligent Network) environment.

All locations capable of initiating or receiving transfers must be connected to the SS7 network. Only specified locations (PSAPs, Private PSAPs and telephone operators) would be able to initiate a transfer. The general public would not have access to NPA-911-XXXX.



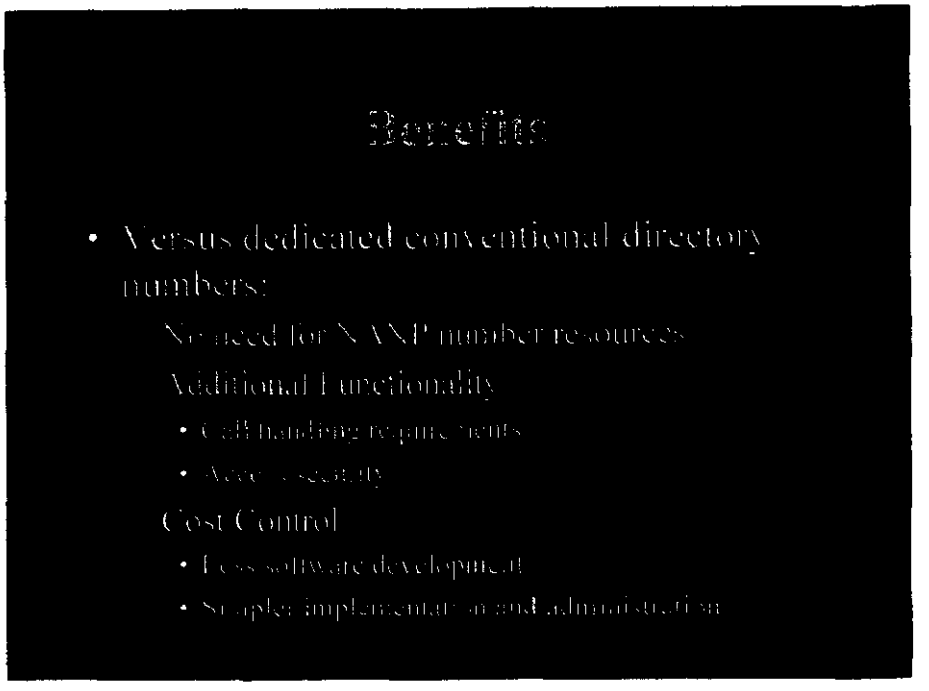
Methodology

Assign each PSAP in North America a directory number in the form NPA-911-XXXX. A directory will be maintained by NENA.

These numbers would be used by one PSAP to transfer calls to any other PSAP. The ANI and ALI associated with the emergency caller would be transferred with the call and displayed at the receiving PSAP.

Assign each municipality in North America a pseudo-ANI in the form NPA-911-XXXX. A directory will be maintained by NENA.

These numbers would be used by Private PSAPs, ILEC operators, ALEC operators and long distance operators to transfer emergency callers to a PSAP based upon the municipality from which the call originated. The call would arrive at the PSAP with the caller's ANI and an ALI message that indicates the call to be a three-way conference transfer of a caller at an unknown address in a specific municipality. Optionally, Private PSAPs will be able to forward location data.



All calls transferred in this fashion arrive at a PSAP as a 9-1-1 call, providing information about the caller and receiving priority handling. Calls delivered to administrative directory numbers receive no priority and carry no data.

Wireless (Cellular, PCS) calls from cells that serve more than one PSAP jurisdiction could be easily transferred to neighboring PSAPs, even across state lines. This is of particular value for satellite based systems, whose footprints can cover several states.

Sometimes, people attempting suicide and elderly people with a medical emergency, call a friend or family member who lives in an area served by a different PSAP than their own. This system would enable a 9-1-1 call from the friend or family member to be transferred to the PSAP serving the victim.

Emergency calls received by Commercial Call Centers can be transferred to the PSAP serving a specific community. Since these numbers are associated with the municipality, as opposed to the PSAP, no updating of the numbers is required. As PSAPs close, consolidate or expand, the local 9-1-1 service provider redirects the numbers to the proper PSAP. There is decreased danger of emergency response being delayed because the Private PSAP is using an outdated directory.

Emergency calls to telephone operators - ILEC, ALEC and long distance - can be forwarded to a specific PSAP. As with Private PSAPs, the operator need only ascertain the municipality from which the call originated

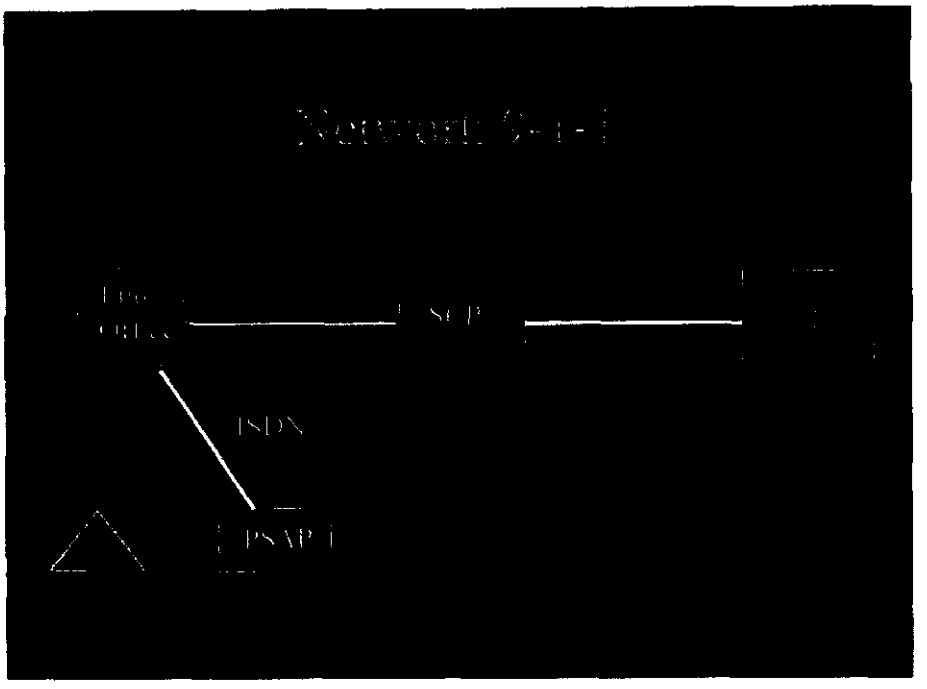
Versus dedicated conventional directory numbers installed at each PSAP:

Relieves demand for additional NANP numbers. Since 911 is not in use as an NXX today, the demand for NPA-911-XXXX numbers places no demand on NANP number resources.

Additional functionality requirements:

The translations required to enable ANI/ALI to be forwarded to one conventional directory number, but not another, would be cumbersome and difficult to administer. Using 911 as an NXX immediately identifies specific call handling requirements.

Easier to keep "private".



Using 911 as an NXX enables simple screening to ensure use by authorized agencies only.

Versus using some other routable, but non-dialable numbering scheme:

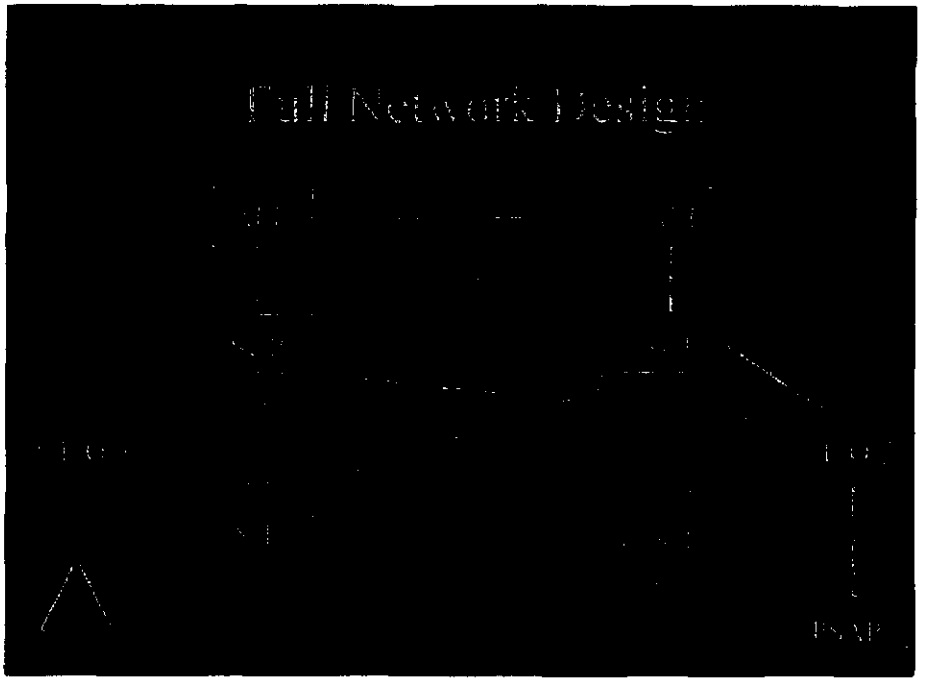
Some switches still cannot deal with NXX codes below "200." The only other codes available are the N11 codes. Since this is for access to 9-1-1 systems, why not use 911, which is already non-dialable as an NXX?

What's Next?

- Inter-networking
  - 9[illegible]XX
- Advanced Intelligent Network (AIN)
  - 9-1-1 Without Tandems

The public telephone network is evolving toward a model known as AIN or Advanced Intelligent Network. This is the architecture that will provide 9-1-1 service in the not too distant future.

In an AIN network, the functions of local central offices are controlled by Signal Transfer Points (STP, often implemented in the local central office) and Signal Control Points (SCP). These are computers that instruct the network switches how and when to construct, operate and delete network connections. AIN takes the architecture already being deployed with SS7, and adds additional intelligence.



The result is that end office switches require less intelligence and therefore become less expensive, and new features can be deployed faster since they are deployed in a much smaller number of SCPs.

For 9-1-1, AIN heralds several significant changes.

1. No more 9-1-1 tandems. The switching of 9-1-1 calls is handled by the end offices serving the subscriber and the PSAP, under the control of the SCP. The SCP tells the offices how to route the calls and what features to provide.

2. No more analog trunks. All trunks between end offices are digital SS7 trunks, which connect 40% faster with, virtually, zero ANI failures. PSAP trunks are digital ISDN (which means new CPE), carrying voice, ANI and ALI (including coordinates) to the PSAP all at once.

3. No more data links to the 9-1-1 ALI database. The databases still exist, but are connected to the SCPs, for selective routing and ALI delivery.

This diagram depicts a possible Advanced Intelligent Network configuration. The red lines represent voice paths (trunks). The yellow lines represent data paths over which call handling instructions and information may be transmitted. The drawing is intended to illustrate how the principles of redundancy and diversity could be applied in the delivery of "N9-1-1" (Network 9-1-1).

000518

Most people agree that wireless is taking over the world. As of early 1999, there are about 62 million wireless phones in America, and the number is growing steadily.

Wireless phones have evolved, in a very short time, from vehicle based units, to transportable ("bag phones"), to portable, pocket-sized handsets. Nippon Telephone sells a small "wristwatch" unit with speakerphone and voice activated dialing. Move over Dick Tracy!

The trend will be toward personal communicators that are worn, with the ability to transmit personal telemetry. Imagine receiving a 9-1-1 call from a wrist-mounted wireless phone that transmits the caller's pulse, blood pressure, body temperature, plus personal medical history and home address! The technology already exists.

The next logical step is semi-permanent implantation. Perhaps an ear implant and a transmitter in a hollowed tooth? How about sensors implanted in strategic organs, providing a complete medical picture of a 9-1-1 caller?

Who knows what the future holds? Stay tuned!

Network Reliability Council Focus Group IV

Essential Communications During Emergencies Team Report

Findings and Recommendations Pertaining to Emergency Service Network Reliability

January 12, 1996

Focus Group Leader: ***M. Michael Foster***
GTE Telephone Operations

Focus Group Mentor: **Arthur Prest**
Cellular Telecommunications Industry Association

6. Essential Services Best Practice Recommendations

Best Practices are those countermeasures (but not the only countermeasures) that go furthest in eliminating the root causes of outages. *Network Reliability: A Report to the Nation* contained a total of 27 Best Practices pertaining to 9-1-1. All 27 original Best Practices have been rewritten and expanded to include alternate technologies where appropriate. These 27, and new best practices ES28 through ES33, being introduced by the ECOMM Team are categorized as follows. The ECOMM Team believes implementation of these practices will improve the reliability of the Public Switched Telephone Network (PSTN) and minimize the potential for interruption to vital emergency communications.

Category	New Best Practice No.	Former Best Practice No.
6.1 Defensive Measures for Interoffice Facilities...		
6.1.1 Diverse Interoffice Transport Facilities	ES01	112
6.1.2 Diverse Interoffice Transport Facilities with Standby Protection	ES02	113
6.1.3 Diverse Interoffice Transport Facilities Using DCS	ES03	114
6.1.4 Fiber Ring Topologies for 9-1-1 Circuits	ES04	115
6.1.5 Red-Tagged Diverse Equipment	ES05	125
6.2 Alternate Path when the Primary 9-1-1 Interoffice Facility Fails...		
6.2.1 Alternate PSAPs from the 9-1-1 Tandem Switch	ES06	118
6.2.2 Alternate PSAPs from the Serving End Office	ES07	119
6.2.3 PSTN as a Backup for 9-1-1 Dedicated Trunks	ES08	121
6.2.4 Wireless Network as Backup for 9-1-1 Dedicated Trunks	ES09	122
6.2.5 Intraoffice 9-1-1 Termination to Mobile PSAP	ES10	123
6.2.6 Backup PSAP in the LECs Serving Office	ES11	124
6.3 Defensive Measures for 9-1-1 Tandem Switches...		
6.3.1 Dual Active 9-1-1 Tandem Switches	ES12	116
6.3.2 Re-home to backup 9-1-1 Tandem Switch	ES13	117
6.3.3 Redundant Paired 9-1-1 Tandems	ES14	126
6.3.4 Multiple Diverse Tandem Switches with Diverse DCSs	ES15	127
6.3.5 TOPS as a 9-1-1 Tandem Backup	ES16	120

6.16 Cable Television Services	ES32	New
6.17 Outage Reporting	ES33	New

Table 6-1 NRC Essential Service Best Practices

Some of the best practices are alternate solutions for improving network reliability, and implementation of one practice may negate the need to implement another. For example, if one

000522

were to implement Best Practice ES03, it would not be necessary to implement Best Practice ES01 since the concept of facility route diversity is achieved in both practices.

6.1 Defensive Measures for Interoffice Facilities

Best Practices ES01 through ES05 describe practices that promote safeguarding of network facility paths between the callers end office and the PSAP.

6.1. Best Practice ES01 Diverse Interoffice Transport Facilities

When all 9-1-1 circuits are carried over a common interoffice facility route, the PSAP has increased exposure to possible service interruptions related to a single point of failure (e.g., cable cut). The ECOMM Team recommends diversification of 9-1-1 circuits over multiple, diverse interoffice facilities.

Diversification may be attained by placing half of the essential communication circuits on one facility route, and the other half over another geographically diverse facility route (i.e., separate facility routes). Many LECs deploy diverse interoffice facility strategies when diverse facilities are already available. (See Figure 6-1)

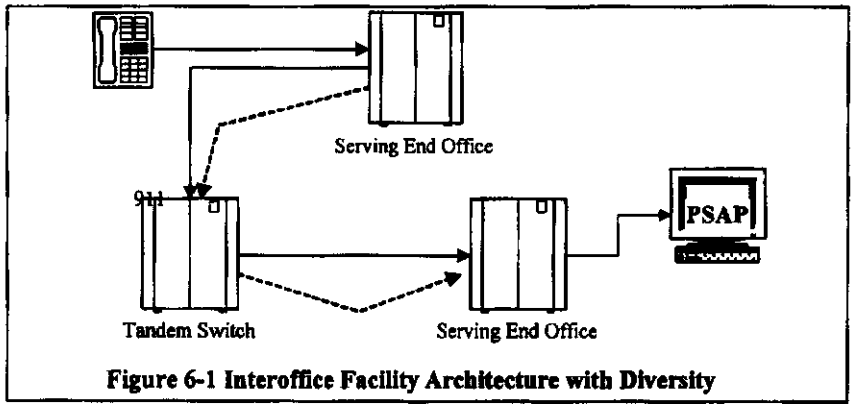

Figure 6-1 Interoffice Facility Architecture with Diversity

6.1.2 Best Practice ES02 Diverse Interoffice Transport Facilities with Standby Protection

A variation of the facility diversity architecture is deployment of a 1-by-1 facility transport system. This architecture is protected by a standby protection facility that is geographically diverse from the primary facility. Because no calls are lost while switching to the alternate transport facility during primary route failure, this architecture is considered self-healing.

6.1.3 Best Practice ES03 Diverse Interoffice Transport Facilities Using DCS

Earlier NRC Focus Group recommendations suggested using diverse interoffice transport facilities from the called serving end office via two diverse Digital Cross-connect Systems (DCS) for concentration. This approach provides diversity and, due to the concentration by the DCS network elements, offers a less costly network solution. Circuit rearrangement activity under this configuration will less likely result in the circuits being placed into non-diverse facilities. (See Figure 6-2)

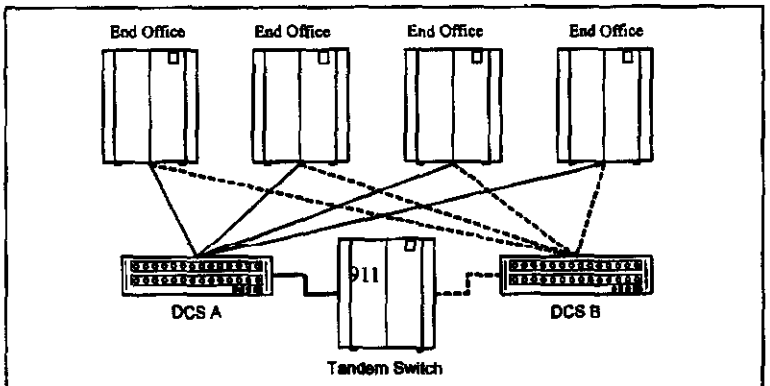

Figure 6-2 Interoffice Facility Architecture

6.1.4 Best Practice ES04 Fiber Ring Topologies for 9-1-1 Circuits

Fiber optic network elements offer network service providers the ability to aggregate large amounts of call traffic onto one transport facility. Traffic aggregation opposes the diverse facility transport recommendations defined in this document. However, fiber rings permit a collection of nodes to form a closed loop whereby each node is connected to two adjacent nodes via a duplex communications facility.

Fiber rings provide redundancy such that services may be automatically restored (self healing), allowing failure or degradation in a segment of the network without affecting service. Fiber rings are used in some metropolitan areas, ensuring essential communications service is unaffected by cuts to fibers riding on the ring. Ring features and functionality are part of the Synchronous Optical Network (SONET) technical requirements. The ECOMM Team believes

000524

when essential communications is placed on SONET rings, service interruptions are minimized due to the self-healing architecture employed. (See Figure 6-3)

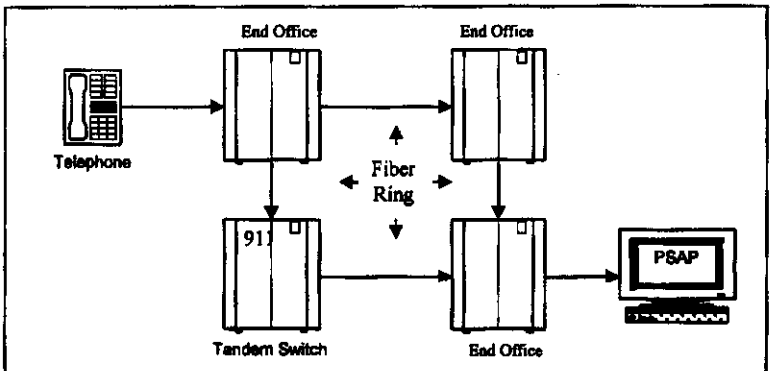

Figure 6-3 Interoffice Facility Architecture with Ring Diversity

6.1.5 Best Practice ES05 Red-Tagged Diverse Equipment

Depending on LEC provisioning practices, the equipment in the central office can represent single points of failure. The ECOMM Team supports the common LEC practice of spreading 9-1-1 circuits over similar pieces of equipment, and marking each plug-in-level component and frame termination with red tags. The red tags alert LEC maintenance personnel that the equipment is used for critical, essential services and is to be treated with a high level of care.

6.2 Alternate Path when the Primary 9-1-1 Interoffice Facility Fails

Best Practice ES06 through ES11 provide practices that promote establishment of alternate call paths between the caller's end office and the PSAP serving office.

6.2.1 Best Practice ES06 Alternate PSAPs from the 9-1-1 Tandem Switch

A common method of handling PSAP-to-Tandem transport facility interruptions is to program the 9-1-1 tandem switch for alternate route selection. If the 9-1-1 caller is unable to complete the call to the PSAP, the tandem switch would automatically complete the call to a pre-programmed directory number or alternate PSAP destination. The alternate PSAP may be either administrative telephones or another jurisdiction's PSAP positions, depending upon the primary PSAPs pre-arranged needs. (See Figure 6-4)

3. Discussion

165. We conclude that the 1996 Act requires all interconnection agreements, "including any interconnection agreement negotiated before the date of enactment of the Telecommunications Act of 1996," to be submitted to the state commission for approval pursuant to section 252(e).[322] The 1996 Act does not exempt certain categories of agreements from this requirement. When Congress sought to exclude preexisting contracts from provisions of the new law, it did so expressly. For example, section 276(b)(3) provides that "nothing in this section shall affect any existing contracts between location providers and payphone service providers or interLATA or intraLATA carriers that are in force and effect as of the date of enactment of the Telecommunications Act of 1996."[323] Nothing in the legislative history leads us to a contrary conclusion. Congress intended, in enacting sections 251 and 252, to create opportunities for local telephone competition. We believe that this pro-competitive goal is best effected by subjecting all agreements to state commission review.

166. The first sentence in section 252(a)(1) refers to requests for interconnection "pursuant to section 251."[324] The final sentence in section 252(a)(1) requires submission to the state commission of all negotiated agreements, including those negotiated *before* the enactment of the 1996 Act. Some parties have asserted that there is a tension between those two sentences. We conclude that the final sentence of section 252(a)(1), which requires that *any* interconnection agreement must be submitted to the state commission, can and should be read to be independent of the prior sentences in section 252(a)(1). The interpretation suggested by some commenters that preexisting contracts need only be filed if they are amended subsequent to the 1996 Act, or incorporated by reference into agreements negotiated pursuant to the 1996 Act, would force us to impose conditions that were not intended by Congress.

167. As a matter of policy, moreover, we believe that requiring filing of all interconnection agreements best promotes Congress's stated goals of opening up local markets to competition, and permitting interconnection on just, reasonable, and nondiscriminatory terms. State commissions should have the opportunity to review *all* agreements, including those that were negotiated before the new law was enacted, to ensure that such agreements do not discriminate against third parties, and are not contrary to the public interest. In particular, preexisting agreements may include provisions that violate or are inconsistent with the pro-

---

[322] 47 U.S.C. § 252(a).

[323] 47 U.S.C. § 276(b)(3) (addressing nondiscrimination safeguards and regulations regarding payphone service).

[324] 47 U.S.C. § 252(a)(1).

competitive goals of the 1996 Act, and states may elect to reject such agreements under section 252(e)(2)(A). Requiring all contracts to be filed also limits an incumbent LEC's ability to discriminate among carriers, for at least two reasons. First, requiring public filing of agreements enables carriers to have information about rates, terms, and conditions that an incumbent LEC makes available to others. Second, any interconnection, service or network element provided under an agreement approved by the state commission under section 252 must be made available to any other requesting telecommunications carrier upon the same terms and conditions, in accordance with section 252(i).[325] In addition, we believe that having the opportunity to review existing agreements may provide state commissions and potential competitors with a starting point for determining what is "technically feasible" for interconnection.[326]

168. Conversely, excluding certain agreements from public disclosure could have anticompetitive consequences. For example, such contracts could include agreements not to compete. In addition, if we exempt agreements between neighboring non-competing LECs, those parties might have a disincentive to compete with each other in the future, in order to preserve the terms of their preexisting agreements. Such a result runs counter to the goal of the 1996 Act to encourage local service competition. Moreover, preserving such "non-competing" agreements could effectively insulate those parties from competition by new entrants. For example, if a new entrant seeking to provide competitive local service in a rural community is unable to obtain from a neighboring BOC interconnection or transport and termination on terms that are as favorable as those the BOC offers to the incumbent LEC in the rural area, the new entrant cannot effectively compete.[327] This is because the new entrant will have to charge its subscribers higher rates than the incumbent LEC charges to place calls to subscribers of the neighboring BOC.

[325] *See infra*, Section XV.B.

[326] *See, e.g.*, 47 U.S.C. §§ 251(c)(2)(B) and 251(c)(3).

[327] This analysis does not address the separate question of whether an incumbent LEC in a rural area must offer interconnection, resale services, or unbundled network elements. As discussed *infra*, Section XII, Congress provided rural carriers with an exemption from section 251(c) requirements until the state commission removes such exemption. 47 U.S.C. § 251(f)(1).

169. We find that section 259 does not compel us to reach a different conclusion regarding the application of section 252 to agreements between neighboring LECs.[328] Section 259 is limited to agreements for infrastructure sharing between incumbent LECs and telecommunications carriers that lack "economies of scale or scope," as determined in accordance with regulations prescribed by the Commission.[329] We conclude that the purpose and scope of section 259 differ significantly from the purpose and scope of section 251.[330] Section 259 is a limited and discrete provision designed to bring the benefits of advanced infrastructure to additional subscribers, in the context of the pro-competitive goals and provisions of the 1996 Act. Moreover, section 259(b)(7) requires LECs to file with the Commission or the state "any tariffs, contracts or other arrangements showing the rates, terms, and conditions under which such carrier is making available public switched network infrastructure and functions under this section."[331] We believe that this language further supports our conclusion that Congress intended agreements between neighboring LECs to be filed and available for public inspection. Commenters also have failed to persuade us that universal service is jeopardized by our finding that agreements between neighboring LECs are subject to section 252 filing and review provisions. Concerns regarding universal service should be addressed by the Federal-State Joint Board, empaneled pursuant to section 254 of the 1996 Act.[332] The Joint Board has initiated a comprehensive review of universal service issues and is considering, among other matters, access to telecommunications and information services in rural and high cost areas.[333] In addition, as discussed in Section XII, *infra*, the 1996 Act provides for exemptions, suspension, or modification of some of the requirements in section 251 for rural or smaller carriers.

---

[328] Section 259 requires the Commission to prescribe, within one year after the date of enactment of the 1996 Act, regulations that require incumbent LECs "to make available to any qualifying carrier such public switched network infrastructure, technology, information, and telecommunications facilities and functions as may be requested by such qualifying carrier to provide telecommunications services, or to provide access to information services . . . " 47 U.S.C. § 259(a). A "qualifying carrier" is a telecommunications carrier that "lacks economies of scale or scope," and that offers telephone exchange service, exchange access, and any other service included in universal service to all consumers in the service area without preference. 47 U.S.C. § 259(d).

[329] 47 U.S.C. § 259(d)(1).

[330] The Commission plans to initiate a proceeding to establish regulations pursuant to section 259.

[331] 47 U.S.C. § 259(b)(7).

[332] *Universal Service NPRM, supra.*

[333] *See* 47 U.S.C. § 251(f).

170. Some parties have suggested that we provide parties an opportunity to renegotiate preexisting contracts. Parties, of course, may mutually agree to renegotiate agreements, but we decline to mandate that parties renegotiate existing contracts. In addition, as discussed below, commercial mobile radio service (CMRS) providers that are party to preexisting agreements with incumbent LECs that provide for non-mutual compensation have the option of renegotiating such agreements with no termination liabilities or contract penalties.[334] We believe that generally requiring renegotiation of preexisting contracts is unnecessary, however, because state commissions will review preexisting agreements, and may reject any negotiated agreement that "discriminates against a telecommunications carrier not a party to the agreement," or that "is not consistent with the public interest, convenience, and necessity."[335] We recognize that preexisting agreements were negotiated under very different circumstances, and may not provide a reasonable basis for interconnection agreements under the 1996 Act. For example, non-competing neighboring LECs may have negotiated terms that simply are not viable in a competitive market. It would not foster efficient long-term competition to force parties to make available to all requesting carriers interconnection on terms not sustainable in a competitive environment. In such circumstances, a state commission would have authority to reject a preexisting agreement as inconsistent with the public interest. If a state commission approves a preexisting agreement, that agreement will be available to other parties in accordance with section 252(i). Contrary to NYNEX's assertion, once a state approves an agreement under section 252(e), that agreement is "approved under" section 252.

171. We decline to require immediate filing of pre-existing agreements. States should establish procedures and reasonable time frames for requiring filing of preexisting agreements in a timely manner. We leave these procedures largely in the hands of the states in order to ensure that we do not impair some states' ability to carry out their other duties under the 1996 Act, especially if a large number of such agreements must be filed and approved by the state commission. We believe, nevertheless, that we should set an outer time period to file with the appropriate state commission agreements that Class A carriers have with other Class A carriers that pre-date the 1996 Act.[336] We conclude that setting such a time limit will ensure that third parties are not prevented indefinitely from reviewing and taking advantage of the terms of preexisting agreements. We are concerned, however, about the burden that a national filing deadline might impose on small telephone companies that have preexisting

---

[334] *See infra*, Section XI.A.

[335] 47 U.S.C. § 252(e)(2)(A).

[336] Class A companies are defined as companies "having annual revenues from regulated telecommunications operations of $100,000,000 or more." 47 C.F.R. § 32.11(a)(1).

agreements with Class A carriers or with other small carriers.[337] We therefore limit the filing deadline requirement to preexisting agreements between Class A carriers. We encourage all carriers to file preexisting contracts with the appropriate state commission no later than June 30, 1997, but impose this as a *requirement* only with respect to agreements between Class A carriers. We find that requiring preexisting agreements between Class A carriers to be filed no later than June 30, 1997 is unlikely to burden state commissions unduly, and will give parties a reasonable opportunity to renegotiate agreements if they so choose, while at the same time, establishing this outer time limit ensures that third parties will have access to the terms of such agreements, under section 252(i), within a reasonable period. We expect to have completed proceedings on universal service and access charges by this filing deadline. States may impose a shorter time period for filing preexisting agreements.

[337] *See* Regulatory Flexibility Act, 5 U.S.C. §§ 601 *et seq.*

000531

Commission or the states, but rather left to the negotiation process.[1338] PacTel argues that incumbent LECs should not be required to develop new network capabilities or expand current network facilities to interconnect with competitors.[1339]

3. Discussion

549. We conclude that, under sections 251(c)(2) and 251(c)(3), any requesting carrier may choose any method of technically feasible interconnection or access to unbundled elements at a particular point. Section 251(c)(2) imposes an interconnection duty at any technically feasible point; it does not limit that duty to a specific method of interconnection or access to unbundled elements.

550. Physical and virtual collocation are the only methods of interconnection or access specifically addressed in section 251. Under section 251(c)(6), incumbent LECs are under a duty to provide physical collocation of equipment necessary for interconnection unless the LEC can demonstrate that physical collocation is not practical for technical reasons or because of space limitations. In that event, the incumbent LEC is still obligated to provide virtual collocation of interconnection equipment. Under section 251, the only limitation on an incumbent LEC's duty to provide interconnection or access to unbundled elements at any technically feasible point is addressed in section 251(c)(6) regarding physical collocation. Unless a LEC can establish that the specific technical or space limitations in subsection (c)(6) are met with respect to physical collocation, we conclude that incumbent LECs must provide for any technically feasible method of interconnection or access requested by a competing carrier, including physical collocation.[1340] If, for example, we interpreted section 251(c)(6) to limit the means of interconnection available to requesting carriers to physical and virtual collocation, the requirement in section 251(c)(2) that interconnection be made available "at any technically feasible point" would be narrowed dramatically to mean that interconnection was required only at points where it was technically feasible to collocate equipment. We are not pursuaded that Congress intended to limit interconnection points to locations only where collocation is possible.

551. Section 251(c)(6) provides the Commission with explicit authority to mandate physical collocation as a method of providing interconnection or access to unbundled elements. Such authority was previously found lacking by the U.S. Court of Appeals for the

[1339] PacTel comments at 19.

[1340] Because we require incumbent LECs to offer virtual collocation in addition to physical collocation, we reject the suggestion of ACTA that the cost of converting from virtual to physical collocation be borne by the incumbent LEC. *See* ACTA comments at 16.

D.C. Circuit in *Bell Atlantic v. FCC*,[1341] which was decided prior to enactment of the 1996 Act. While section 251(c)(6) limits an incumbent LEC's duty to provide physical collocation in certain circumstances, we find that it does not limit our authority to require, under sections 251(c)(2) and (c)(3), the provision of virtual collocation. We note that under our *Expanded Interconnection* rules, that were amended subsequent to the Bell Atlantic decision, competitive entrants using physical collocation were required by many incumbent LECs to convert to virtual collocation. If the Commission concluded that subsection (c)(6) places a limitation on our authority to require virtual collocation, competitive providers would be required to undertake costly and burdensome actions to convert back to physical collocation even if they were satisfied with existing virtual collocation arrangements. We conclude that Congress did not intend to impose such a burden on requesting carriers that wish to continue to use virtual collocation for purposes of section 251(c). Further, the record indicates that this requirement would be costly and would delay competition.[1342] In short, we conclude that, in enacting section 251(c)(6), Congress intended to expand the interconnection choices available to requesting carriers, not to restrict them.

552. We also conclude that requiring incumbent LECs to provide virtual collocation and other technically feasible methods of interconnection or access to unbundled elements is consistent with Congress's desire to facilitate entry into the local telephone market by competitive carriers. In certain circumstances, competitive carriers may find, for example, that virtual collocation is less costly or more efficient than physical collocation. We believe that this may be particularly true for small carriers which lack the the financial resources to physically collocate equipment in a large number of incumbent LEC premises.[1343] Moreover, since requesting carriers will bear the costs of other methods of interconnection or access, this approach will not impose an undue burden on the incumbent LECs.

553. Consistent with this view, other methods of technically feasible interconnection or access to incumbent LEC networks, such as meet point arrangements, in addition to virtual

[1342] *See* Teleport comments at 32; ALTS comments at 23; Time Warner comments at 42-44 (objecting to non-recurring charges for the reconnection of existing interconnected virtual collocation services to a replacement physical collocation arrangement).

[1343] *See* Hyperion comments at 15.

000533

and physical collocation, must be available to new entrants upon request.[1344] Meet point arrangements (or mid-span meets), for example, are commonly used between neighboring LECs for the mutual exchange of traffic, and thus, in general, we believe such arrangements are technically feasible.[1345] Further, although the creation of meet point arrangements may require some build out of facilities by the incumbent LEC, we believe that such arrangements are within the scope of the obligations imposed by sections 251(c)(2) and 251(c)(3). In a meet point arrangement, the "point" of interconnection for purposes of sections 251(c)(2) and 251(c)(3) remains on "the local exchange carrier's network"[1346] (*e.g.*, main distribution frame, trunk-side of the switch), and the limited build-out of facilities from that point may then constitute an accommodation of interconnection.[1347] In a meet point arrangement each party pays its portion of the costs to build out the facilities to the meet point. We believe that, although the Commission has authority to require incumbent LECs to provide meet point arrangements upon request, such an arrangement only makes sense for interconnection pursuant to section 251(c)(2) but not for unbundled access under section 251(c)(3). New entrants will request interconnection pursuant to section 251(c)(2) for the purpose of exchanging traffic with incumbent LECs. In this situation, the incumbent and the new entrant are co-carriers and each gains value from the interconnection arrangement. Under these circumstances, it is reasonable to require each party to bear a reasonable portion of the economic costs of the arrangement. In an access arrangement pursuant to section 251(c)(3), however, the interconnection point will be a part of the new entrant's network and will be used to carry traffic from one element in the new entrant's network to another. We conclude that in a section 251(c)(3) access situation, the new entrant should pay all of the economic costs of a meet point arrangement. Regarding the distance from an incumbent LEC's premises that an incumbent should be required to build out facilities for meet point arrangements, we believe that the parties and state commissions are in a better position than the Commission to determine the appropriate distance that would constitute the required reasonable accommodation of interconnection.

[1347] *See, supra* Section IV.E., above, discussing accommodation of interconnection.

000534

554. Finally, in accordance with our interpretation of the term "technically feasible," we conclude that, if a particular method of interconnection is currently employed between two networks, or has been used successfully in the past, a rebuttable presumption is created that such a method is technically feasible for substantially similar network architectures. Moreover, because the obligation of incumbent LECs to provide interconnection or access to unbundled elements by any technically feasible means arises from sections 251(c)(2) and 251(c)(3), we conclude that incumbent LECs bear the burden of demonstrating the technical infeasibility of a particular method of interconnection or access at any individual point.

B. Collocation

1. Collocation Standards

a. Adoption of National Standards

(1). Background

555. In the NPRM we tentatively concluded that we should adopt national rules for virtual and physical collocation. This tentative conclusion was based on the belief that national standards would help to speed the development of competition.[1348] We also sought comment on specific national standards that we might adopt, and on whether any specific state approaches would serve as an appropriate model.[1349]

(2). Comments

556. Incumbent LECs and state commissions argue that collocation is a state matter and that terms and conditions for collocation should be negotiated between the parties[1350] or determined by the states.[1351] Some parties recommend that, to the extent national guidelines are necessary, the Commission should readopt the standards established in the *Expanded*

MEMORANDUM OPINION AND ORDER

Adopted: October 2, 2002 **Released:** October 4, 2002

By the Commission:

I. INTRODUCTION

1. On April 23, 2002, Qwest Communications International Inc. (Qwest) filed a petition for a declaratory ruling on the scope of the mandatory filing requirement set forth in section 252(a)(1) of the Communications Act of 1934, as amended (the Act).[1] Specifically, Qwest seeks guidance about the types of negotiated contractual arrangements between incumbent local exchange carriers (LECs) and competitive LECs that should be subject to the filing requirements of this section.[2] For the reasons explained below, we grant in part and deny in part Qwest's petition.

---

[1] 47 U.S.C. § 252(a)(1). *Qwest Communications International Inc. Petition for Declaratory Ruling on the Scope of the Duty to File and Obtain Prior Approval of Negotiated Contractual Arrangements under Section 252(a)(1)*, WC Docket No. 02-89 (filed April 23, 2002) (Qwest Petition).

[2] Qwest Petition at 3. The Commission requested and received comments on the Qwest Petition. *See* Pleading Cycle Established for Comments on Qwest Communications International Inc. Petition for Declaratory Ruling on the Scope of the Duty to File and Obtain Prior Approval of Negotiated Contractual Arrangements under Section 252(a)(1), WC Docket No. 02-89, *Public Notice*, DA 02-976 (rel. April 29, 2002). The following parties submitted comments: AT&T Corp. (AT&T); Office of the Attorney General of the State of New Mexico and the Iowa Office of Consumer Advocate; Focal Communications Corporation and Pac-West Telecomm, Inc.; Iowa Utilities Board; Minnesota Department of Commerce; Mpower Communications Corp. (Mpower); New Edge Network, Inc.; PageData; Sprint Corporation (Sprint); Touch America, Inc. (Touch America); and WorldCom, Inc. (WorldCom). The following parties filed reply comments: Association of Communications Enterprises; Association for Local Telecommunications Services (ALTS); PageData; Qwest; Sprint; Verizon; VoiceStream Wireless Corporation; and WorldCom.

II. BACKGROUND

2. Section 252(a)(1) of the Act states:

> Upon receiving a request for interconnection, services, or network elements pursuant to section 251, an incumbent local exchange carrier may negotiate and enter into a binding agreement with the requesting telecommunications carrier or carriers without regard to the standards set forth in subsections (b) and (c) of section 251. The agreement shall include a detailed schedule of itemized charges for interconnection and each service or network element included in the agreement. The agreement . . . shall be submitted to the State commission under subsection (e) of this section.[3]

Qwest argues that this section can most logically be read to mean that the mandatory filing and state commission approval process should apply only to the "rates and associated service descriptions for interconnection, services and network elements."[4] More precisely, Qwest contends that a negotiated agreement should be filed for state commission approval if it includes: (i) a description of the service or network element being offered; (ii) the various options available to the requesting carrier (*e.g.*, loop capacities) and any binding contractual commitments regarding the quality or performance of the service or network element; and (iii) the rate structures and rate levels associated with each such option (*e.g.*, recurring and non-recurring charges, volume or term commitments).[5]

3. According to Qwest, the following categories of incumbent LEC-competitive LEC arrangements should not be subject to section 252(a)(1): (i) agreements defining business relationships and business-to-business administrative procedures (*e.g.*, escalation clauses, dispute resolution provisions, arrangements regarding the mechanics of provisioning and billing, arrangements for contacts between the parties, and non-binding service quality or performance standards);[6] (ii) settlement agreements;[7] and (iii) agreements regarding matters not subject to sections 251 or 252 (*e.g.*, interstate access services, local retail services, intrastate long distance, and network elements that have been removed from the national list of elements subject to

---

[3] 47 U.S.C. § 252(a)(1).

[4] Qwest Petition at 10. Qwest contends that its interpretation of section 252(a)(1) is supported by the legislative history of the Telecommunications Act of 1996. *Id.* at 13-14.

[5] Qwest Petition at 29. Qwest also indicates that a description of basic operations support systems functionalities and options to which the parties have agreed should be filed and subjected to state commission approval. *Id.* at 29-30.

[6] Qwest Petition at 31-34.

[7] Qwest Petition at 34-36.

mandatory unbundling).[8]

4. Qwest states that a Commission ruling on this issue will eliminate the prospect of multiple, inconsistent rulings by state commissions and federal courts.[9] Qwest argues that a national policy concerning what must be filed under section 252(a)(1) is necessary to promote local competition, facilitate multi-state negotiations,[10] and prevent overbroad interpretations of this filing requirement.[11] According to Qwest, an overbroad interpretation would reduce the incentives of incumbents and competitive LECs to implement bilateral arrangements that could benefit both parties. For example, Qwest states that the public disclosure of contractual provisions such as settlements of past disputes might discourage the parties from entering into such arrangements.[12] Qwest also contends that an overbroad reading of section 252(a)(1) creates legal uncertainty with respect to the validity of agreements that have not gone through the prior state commission approval process.[13]

5. Most commenters oppose Qwest's petition,[14] arguing that it is unnecessary and that Qwest's proposal interprets too narrowly which agreements must be filed under section 252(a)(1).[15] For example, several commenters argue that service quality and performance standards relate to interconnection and are therefore appropriately included in interconnection agreements.[16] Commenters also contend that competitive LECs need dispute resolution, billing and provisioning provisions in their interconnection agreements.[17] The commenters also disagree with Qwest's view that only certain portions of agreements (related to section 251(b) or (c)) need to be filed for state commission approval and argue instead that the entire agreement

must be filed for state commission review and approval.[18]

6. The commenters dispute Qwest's assertions concerning the burden of "overfiling" agreements for state commission approval[19] and disagree with Qwest's interpretation of the legal status of agreements not filed under section 252 or not yet approved by state commissions under the same section.[20] Specifically, these commenters contend that nothing in section 252, or any other provision of the Act, provides that the parties are prohibited from abiding by the agreement's terms until a state commission completes its review of the negotiated agreement.[21] Moreover, according to AT&T, not only does the 90-day approval process not present any legal impediment to parties that would like to begin operating under the terms of a negotiated agreement prior to state commission approval, there is no practical impediment (*e.g.*, compliance jeopardy) because interconnection agreements are rarely rejected.[22]

III. DISCUSSION

7. We grant in part and deny in part Qwest's petition for a declaratory ruling. In issuing this decision, however, we believe that the state commissions should be responsible for applying, in the first instance, the statutory interpretation we set forth today to the terms and conditions of specific agreements. Indeed, we believe this is consistent with the structure of section 252, which vests in the states the authority to conduct fact-intensive determinations relating to interconnection agreements.[23]

8. We begin our analysis with the statutory language. Section 252(a)(1) provides that the binding agreement between the incumbent LEC and the requesting competitive LEC must include a "detailed schedule of itemized charges for interconnection and each service or network element included in the agreement."[24] In addition, section 251(c)(1) requires incumbent LECs to negotiate in good faith, in accordance with section 252, the particular terms and conditions of agreements to implement their duties set forth in sections 251(b) and (c).[25] Based on these

[18] AT&T Comments at 4, 6-9; Mpower Comments at 7; Sprint Comments at 3; WorldCom Comments at 6; ALTS Reply at 2.

[19] *See, e.g.*, AT&T Comments at 13; Sprint Comments at 3.

[20] AT&T Comments at 12; Minnesota Department of Commerce Comments at 38.

[21] AT&T Comments at 12; Minnesota Department of Commerce Comments at 38.

[22] AT&T Comments at 12-13, citing Qwest Petition at 9.

[23] As an example of the substantial implementation role given to the states, throughout the arbitration provisions of section 252, Congress committed to the states the fact-intensive determinations that are necessary to implement contested interconnection agreements. *See, e.g.*, 47 U.S.C. § 252(e)(5) (directing the Commission to preempt a state commission's jurisdiction only if that state commission fails to act to carry out its responsibility under section 252).

[24] 47 U.S.C. § 252(a)(1).

[25] 47 U.S.C. § 251(c)(1).

statutory provisions, we find that an agreement that creates an *ongoing* obligation pertaining to resale, number portability, dialing parity, access to rights-of-way, reciprocal compensation, interconnection, unbundled network elements, or collocation is an interconnection agreement that must be filed pursuant to section 252(a)(1).[26] This interpretation, which directly flows from the language of the Act, is consistent with the pro-competitive, deregulatory framework set forth in the Act. This standard recognizes the statutory balance between the rights of competitive LECs to obtain interconnection terms pursuant to section 252(i) and removing unnecessary regulatory impediments to commercial relations between incumbent and competitive LECs. We therefore disagree with Qwest that the content of interconnection agreements should be limited to the schedule of itemized charges and associated descriptions of the services to which the charges apply. Considering the many and complicated terms of interconnection typically established between an incumbent and competitive LEC, we do not believe that section 252(a)(1) can be given the cramped reading that Qwest proposes. Indeed, on its face, section 252(a)(1) does not further limit the types of agreements that carriers must submit to state commissions.

9. We are not persuaded by Qwest that dispute resolution and escalation provisions are *per se* outside the scope of section 252(a)(1).[27] Unless this information is generally available to carriers (*e.g.*, made available on an incumbent LEC's wholesale web site), we find that agreements addressing dispute resolution and escalation provisions relating to the obligations set forth in sections 251(b) and (c) are appropriately deemed interconnection agreements. The purpose of such clauses is to quickly and effectively resolve disputes regarding section 251(b) and (c) obligations. The means of doing so must be offered and provided on a nondiscriminatory basis if Congress' requirement that incumbent LECs behave in a nondiscriminatory manner is to have any meaning.[28]

10. Based on their statutory role provided by Congress and their experience to date, state commissions are well positioned to decide on a case-by-case basis whether a particular agreement is required to be filed as an "interconnection agreement" and, if so, whether it should be approved or rejected. Should competition-affecting inconsistencies in state decisions arise, those could be brought to our attention through, for example, petitions for declaratory ruling. The statute expressly contemplates that the section 252 filing process will occur with the states,

---

[26] We therefore disagree with the parties that advocate the filing of *all* agreements between an incumbent LEC and a requesting carrier. *See* Office of the New Mexico Attorney General and the Iowa Office of Consumer Advocate Comments at 5. Instead, we find that only those agreements that contain an ongoing obligation relating to section 251(b) or (c) must be filed under 252(a)(1). Similarly, we decline Touch America's suggestion to require Qwest to file with us, under section 211, all agreements with competitive LECs entered into as "settlements of disputes" and publish those terms as "generally available" terms for all competitive LECs. Touch America Comments at 10, citing 47 U.S.C. § 211.

[27] Qwest Petition at 31-33.

[28] We note that Qwest has filed for state commission approval agreements containing both dispute resolution provisions and escalation clauses. *See, e.g.*, Qwest Supplemental Reply, WC Docket No. 02-148, at 26-27 (filed Aug. 30, 2002). We incorporate by reference this document into the record in the instant proceeding.

and we are reluctant to interfere with their processes in this area. Therefore, we decline to establish an exhaustive, all-encompassing "interconnection agreement" standard. The guidance we articulate today flows directly from the statute and serves to define the basic class of agreements that should be filed. We encourage state commissions to take action to provide further clarity to incumbent LECs and requesting carriers concerning which agreements should be filed for their approval. At the same time, nothing in this declaratory ruling precludes state enforcement action relating to these issues.[29]

11. Consistent with our view that the states should determine in the first instance which sorts of agreements fall within the scope of the statutory standard, we decline to address all the possible hypothetical situations presented in the record before us. We are aware, however, of some disagreement concerning interconnection agreement issues raised recently in another proceeding previously before the Commission.[30] Consequently, we determine that additional, specific guidance on these issues would be helpful.

12. The first matter concerns which settlement agreements, if any, must be filed under section 252(a)(1). We disagree with the blanket statement made by Qwest in its petition that "[s]ettlement agreements that resolve disputes between ILECs and CLECs over billing or other matters are not interconnection agreements under Section 252."[31] Instead, and consistent with the guidance provided above, we find that a settlement agreement that contains an ongoing obligation relating to section 251(b) or (c) must be filed under section 252(a)(1). Merely inserting the term "settlement agreement" in a document does not excuse carriers of their filing obligation under section 252(a) or prevent a state commission from approving or rejecting the agreement as an interconnection agreement under section 252(e). However, we also agree with Qwest that those settlement agreements that simply provide for "backward-looking consideration" (*e.g.*, the settlement of a dispute in consideration for a cash payment or the cancellation of an unpaid bill) need not be filed.[32] That is, settlement contracts that do not affect

---

[29] This statement also applies to any state enforcement action involving previously unfiled interconnection agreements including those that are no longer in effect.

[30] *Application by Qwest Communications International Inc., Consolidated Application for Authority to Provide In-Region, InterLATA Services in Colorado, Idaho, Iowa, Nebraska and North Dakota*, WC 02-148 (filed June 13, 2002). *See also* Letter from Peter A. Rohrbach, Counsel for Qwest, to Marlene Dortch, Secretary, Federal Communications Commission, WC Docket Nos. 02-148, 02-189 (filed Sept. 10, 2002) (withdrawing Qwest's joint applications filed in both dockets); *Application by Qwest Communications International Inc., Consolidated Application for Provision of In-Region, InterLATA Services in Colorado, Idaho, Iowa, Nebraska and North Dakota*, WC Docket No. 02-148, *Application by Qwest Communications International Inc. for Authorization to Provide In-Region, InterLATA Services in the States of Montana, Utah, Washington and Wyoming*, WC Docket No. 02-189, Order, DA 02-2230 (rel. Sept. 10, 2002) (terminating both Qwest section 271 dockets).

[31] Qwest Petition at 34.

[32] Qwest Reply at 25-26. *See also* Minnesota Department of Commerce Comments at 6-7 (stating that it did not include in its complaint against Qwest filed with the Minnesota Public Utilities Commission "settlement agreements of what appear to be legitimate billing disputes").

an incumbent LEC's ongoing obligations relating to section 251 need not be filed.

13. Qwest has also argued, in another proceeding, that order and contract forms used by competitive LECs to request service do not need to be filed for state commission approval because such forms only memorialize the order of a specific service, the terms and conditions of which are set forth in a filed interconnection agreement.[33] We agree with Qwest that forms completed by carriers to obtain service pursuant to terms and conditions set forth in an interconnection agreement do not constitute either an amendment to that interconnection agreement or a new interconnection agreement that must be filed under section 252(a)(1).

14. Further, we agree with Qwest that agreements with bankrupt competitors that are entered into at the direction of a bankruptcy court or trustee and do not otherwise change the terms and conditions of the underlying interconnection agreement are not interconnection agreements or amendments to interconnection agreements that must be filed under section 252(a)(1) for state commission approval.[34] We are unaware of any carrier submitting such agreements for state commission approval under section 252. Directing carriers to do so has the potential to raise difficult jurisdictional issues between the bankruptcy court and regulators and could entangle carriers in inconsistent and, possibly, conflicting requirements imposed by state commissions, bankruptcy courts, and this Commission.

IV. ORDERING CLAUSE

15. Accordingly, IT IS ORDERED, pursuant to sections 4(i), 251, 252 of the Communications Act of 1934, as amended, 47 U.S.C. §§ 154(i), 251, 252, and section 1.2 of the Commission's rules, 47 C.F.R. § 1.2, that Qwest's Petition for Declaratory Ruling IS GRANTED IN PART and IS DENIED IN PART.

SECOND REPORT AND ORDER AND MEMORANDUM OPINION AND ORDER

Adopted: August 8, 1996 **Released: August 8, 1996**

By the Commission:

3. Definition of "Interoperability"

a. Background and Comments

177. The Commission tentatively concluded that the term "interoperability," as used in section 251(c)(5), should be defined as "the ability of two or more facilities, or networks, to be connected, to exchange information, and to use the information that has been exchanged."[390] This definition of "interoperability" was taken from the *IEEE Standard Dictionary of Electrical and Electronics Terms*.[391] Commenters, including incumbent LECs, interexchange carriers, state commissions, and industry associations, are unanimous in their support for our tentative conclusion.[392] The Ohio Commission also suggests that we expand our definition of "interoperability" to "recognize that the exchange of traffic between an [incumbent local exchange carrier] and an interconnector must be seamless and transparent to both parties' end users."[393] No alternative definitions for the term "interoperability" were proposed by commenting parties.

b. Discussion

178. We define the term "interoperability" as "the ability of two or more facilities, or networks, to be connected, to exchange information, and to use the information that has been exchanged." As this definition of "interoperability" was taken from the *IEEE Standard Dictionary of Electrical and Electronics Terms*, we believe that this well established and widely accepted industry standard can be applied easily and consistently. We find that the concepts of seamlessness and transparency are already adequately incorporated into this definition's specific interoperability criteria, and that further exposition of these concepts is not necessary.

APPENDIX 911

While AT&T responds to the redlines offered by Intrado it does so with this caveat: AT&T does not believe that Intrado is entitled to an interconnection agreement under federal law. *Intrado Comm disagrees.*

1. INTRODUCTION

1.1 This Appendix sets forth terms and conditions by which the applicable AT&T Inc. (AT&T)-owned Incumbent Local Exchange Carrier (ILEC) and CLEC will provide each other with access to the applicable 911 and E911 Databases and provide Interconnection and Call Routing for purposes of 911 call completion to Public Safety Answering Point (PSAPs) as required by Section 251 of the Act.

1.2 The Parties acknowledge and agree that the Parties can only provide 911/E911 Service in a territory where the Party is the E911 network provider, and then only that E911 Service configuration as purchased by the E911 Customer. The Parties' E911 Selective Routers and E911 Database Management System are by mutual agreement being provided under this Agreement on an "as is" basis.

1.3 Each Party shall provide access to its respective E911 Selective Routers as described herein only where a PSAP and/or E911 Customer served by the E911 Selective Routers has requested and approved the Party to carry E911 Emergency Services call, **which approval is subject to being revoked, conditioned, or modified by the PSAP and/or E911 Customer.**

1.4 If a 911/E911 Customer requests either Party to establish a PSAP to PSAP transfer arrangement, the Parties will ***discuss and establish operational procedures*** **negotiate such a separate agreement** consistent with the 911/E911 Customer 's request for such an arrangement. **The 911/E911 Customer will be a party to this separate agreement.**

2. DEFINITIONS

2.1 **"911 Service"** means a service that uses a universal telephone number to provide the public access to the PSAP by dialing 911. Basic 911 Service collects 911 calls from one or more local exchange switches that serve a geographic area.

2.2 **"911 System"** or **"E911 System"** means the set of network, database and customer premise equipment (CPE) components required to provide 911 Service.

2.3 **"911 Trunk"** or **"E911 Trunk"** means a trunk capable of transmitting Automatic Number Identification (ANI) associated with a call to 911 from **AT&T-(STATE)*'s End Office*** or CLEC 's switch to the E911 System.

2.4 **"911 Selective Router Trunk"** or "E911 Selective Router Trunk" means a trunk from a Selective Router capable of transmitting Automatic Number Identification (ANI) associated with an End User call to 911. The 911 Selective Router Trunk may be between a Selective Router and a PSAP or between Selective Routers. The latter configuration may also be known as an Inter-Selective Router Trunk.

2.5 **"Automatic Location Identification"** or **"ALI"** means the automatic display at the PSAP of the caller's telephone number, the address/location of the telephone and, in some cases, supplementary emergency services information.

2.6 **"Automatic Number Identification"** or **"ANI"** means the telephone number associated with a communications device that originates an emergency call, which is the number used to route an E911 call to the appropriate PSAP for use in retrieving the associated ALI record for display to the call taker, the access line from which a call to 911 originates.

2.7 **"Company Identifier"** or **"Company ID"** means a three to five (3 to 5) character identifier chosen by the Local Exchange Carrier that distinguishes the entity providing dial tone to the End-User. The Company Identifier is maintained by NENA in a nationally accessible database.

2.8 **"Database Management System"** or **"DBMS"** means a system of manual procedures and computer programs used to create, store and update the data required to provide Selective Routing and/or Automatic Location Identification for E911 Systems.

2.9 **"Designated 911/E911 Service Provider"** means the entity designated by the 911/E911 Customer to provide 911 services to the PSAPs in their jurisdictional serving area.

2.10 **"911/E911 Customer"** or **"PSAP"** means a municipality or other state or local government unit, or an authorized agent of one or more municipalities or other state or local government units to whom authority has been lawfully delegated to respond to public emergency telephone calls, at a minimum, for emergency police and fire services through the use of one telephone number, 911.

2.11 **"E911 Universal Emergency Number Service"** (also referred to as **"Enhanced 911 Service"**) or **"E911 Service"** is a communications service whereby a public safety answering point (PSAP) answers telephone calls placed by dialing the number 911. E911 includes the service provided by the lines and equipment associated with the service arrangement for the answering, transferring, and dispatching of public emergency telephone calls dialed to 911. E911 provides completion of a call to 911 via dedicated trunking facilities and includes Automatic Number Identification (ANI), Automatic Location Identification (ALI), and/or Selective Routing.

2.12 **"Emergency Services"** means police, fire, ambulance, rescue, and medical services.

2.13 **"Emergency Service Number"** or **"ESN"** means a three to five digit number representing a unique combination of emergency service agencies (Law Enforcement, Fire, and Emergency Medical Service) designated to serve a specific range of addresses within a particular geographical area. The ESN facilitates selective routing and selective transfer, if required, to the appropriate PSAP and the dispatching of the proper service agency(ies).

2.14 **"End Office"** or **"End Office Switch"** means a switching machine that directly terminates traffic to and receives traffic from End users purchasing local exchange services. A PBX is not considered an End Office Switch.

2.15 **"Master Street Address Guide"** means a database of street names and house number ranges within their associated communities defining Emergency Service Zones (ESZs) and their associated Emergency Service Numbers (ESNs) to enable proper routing of E911 calls.

2.16 **"National Emergency Number Association"** or **"NENA"** means the National Emergency Number Association is a not-for-profit corporation established in 1982 to further the goal of "One Nation-One Number". NENA is a networking source and promotes research, planning, and training. NENA strives to educate, recommend standards and provide certification programs, legislative representation and technical assistance for implementing and managing 911 systems.

2.17 **"Pseudo-ANI"** or **"pANI"** means a telephone number used to support routing of wireless 911 calls or nomadic VoIP 911 calls. It may identify a wireless cell, cell sector or PSAP to which the call should be routed. Pseudo-ANI is also known as routing number.

2.18 ***Intentionally Omitted.*** **"Point of Interconnection" or "POI" means a point on the AT&T-(STATE) network (E911 Selective Router building) identified by CLEC where the Parties deliver 911/E911 traffic to each other, and also serves as a demarcation point between the facilities to which each Party is responsible to provide.**

2.19 **"Public Safety Answering Point"** or **"PSAP"** means an answering location for 911 calls originating in a given area. The E911 Customer may designate a PSAP as primary or secondary, which refers to the order in which calls are directed for answering. Primary PSAPs answer calls; secondary PSAPs receive calls on a transfer basis. PSAPs are public safety agencies such as police, fire, emergency medical, etc., or a common bureau serving a group of such entities.

2.20 **"Selective Routing"** means the routing and equipment used at a **"E911 Selective Router"** or **"911/E911 Tandem"** to route a 911 call to the proper PSAP based upon the number and location of the caller. Selective Routing is controlled by an ESN, which is derived from the location of the access line from which the 911 call was placed.

2.21 **"Shell Records"** means those database records associated with Pseudo-ANI telephone numbers. Shell Records facilitate call delivery and the appropriate ALI display for wireless 9-1-1 calls and nomadic VoIP 911 calls.

2.22 **"Interconnected Voice over Internet Protocol Service"** or **"Interconnected VoIP Service"** means a service that: (1) enables real-time, two-way voice communications; (2) requires a broadband connection from the user's location; (3) requires IP-compatible customer premises equipment (CPE); and (4) permits users to generally receive calls that originate on the public switched telephone network and to terminate calls to the public switched telephone network.

3. AT&T-(STATE) RESPONSIBILITIES WHERE AT&T-(STATE) IS THE DESIGNATED 911/E911 SERVICE PROVIDER

3.1 **AT&T-(STATE)** shall provide and maintain such equipment at the **AT&T-(STATE)** E911 Selective Router and the DBMS as is necessary to provide CLEC E911 Emergency Services at parity with that of **AT&T-(STATE)** retail End Users. **AT&T-(STATE)** shall provide CLEC access to the **AT&T-(STATE)** 911 System as described in this section.

3.2 Call Routing

3.2.1 **AT&T-(STATE)** will route 911 calls from the **AT&T-(STATE)** E911 Selective Router to the designated primary PSAP or to designated alternate locations, according to routing criteria specified by the PSAP.

3.2.2 **AT&T-(STATE)** will forward the calling party number (ANI) it receives from CLEC and the associated 911 Address Location Identification (ALI) to the PSAP for display. If no ANI is forwarded by CLEC, **AT&T-(STATE)** will forward an Emergency Service Central Office (ESCO) identification code for display at the PSAP. If ANI is forwarded by the CLEC, but no ALI record is found in the E911 DBMS, **AT&T-(STATE)** will report this "No Record Found" condition to the CLEC in accordance with NENA standards.

3.3 Facilities and Trunking

3.3.1 **AT&T-(STATE)** shall provide and maintain sufficient dedicated E911 Selective Router Trunks from **AT&T-(STATE)**'s E911 Selective Router to the PSAP of the E911 Customer, according to provisions of the appropriate state Commission-approved tariff and documented specifications of the E911 Customer.

3.3.2 **AT&T-(STATE)** will, if requested, provide facilities to interconnect the CLEC to the **AT&T-(STATE)** ***POI*** **E911 Selective Router**, as specified in the applicable **AT&T-(STATE)** Appendix Pricing **or**

tariff. Additionally, when diverse facilities are requested by CLEC, **AT&T-(STATE)** will provide such diversity where technically feasible, as specified in Appendix Pricing **or at standard AT&T-(STATE) tariff rates**.

3.4 Database

3.4.1 Where **AT&T-(STATE)** is designated by the E911 Customer to manage the E911 Database **AT&T-(STATE)** shall provide CLEC access to the **AT&T-(STATE)** E911 Database to store CLEC's End User 911 Records (e.g., the name, address, and associated telephone number(s) for each of CLEC's End Users). CLEC or its representative(s) is responsible for electronically providing End User 911 Records and updating this information.

3.4.2 Where **AT&T-(STATE)** manages the E911 Database, **AT&T-(STATE)** shall coordinate access to the **AT&T-(STATE)** DBMS for the initial loading and updating of CLEC End User 911 Records by CLEC.

3.4.3 Where **AT&T-(STATE)** manages the E911 Database, **AT&T-(STATE)'s** E911 Database shall accept electronically transmitted files ***to support ALI interoperability*** that are based upon NENA recommended standards. Manual (i.e. facsimile) entry shall be utilized only in the event that the DBMS is not functioning properly.

3.4.4 Where **AT&T-(STATE)** manages the E911 Database, **AT&T-(STATE)** shall provide an initial MSAG load and updates to CLEC for use in submitting MSAG valid End User record information to **AT&T-(STATE)'s** DBMS for those E911 Selective Routers that CLEC has End Users. CLEC shall be responsible for accepting and maintaining the updates from **AT&T-(STATE)**. **AT&T-(STATE)** will make updates available as frequently as each state's system currently provides.

3.4.5 AT&T-(STATE) shall collaboratively work with CLEC to maintain the necessary steering tables to support exchange of ALI between the Parties' respective E911 Systems. **Intentionally Omitted.**

4. CLEC RESPONSIBILITIES WHERE AT&T-(STATE) IS THE DESIGNATED 911/E911 SERVICE PROVIDER

4.1 Call Routing

4.1.1 CLEC will transport 911 calls to each Point of Interconnection (POI). **AT&T-(STATE)** shall transport CLEC traffic from the POI(s) to the **AT&T-(STATE)** Selective Router.

4.1.2 CLEC will forward the ANI information of the party calling 911 to the **AT&T-(STATE)** E911 Selective Router.

4.2 Facilities and Trunking

4.2.1 CLEC shall ***arrange to deliver 911 traffic to*** **provide interconnection trunking at** each **AT&T-(STATE)** 911 Selective Router that serves the exchange areas in which CLEC is authorized to and will provide telephone exchange service.

4.2.2 CLEC acknowledges that its End Users in a single local calling scope may be served by different E911 Selective Routers and CLEC shall be responsible for providing interconnection facilities to route 911 calls from its End Users to the proper ***POI(s)*** **E911 Selective Router**.

4.2.3 CLEC shall provide a minimum of two (2) one-way outgoing E911 Trunk(s) dedicated for originating 911 emergency service calls to from the E911 Selective Router to the **AT&T-(STATE)** E911 Selective Router, where applicable. Where SS7 connectivity is available and required by the applicable E911 Customer, the Parties agree to implement Common Channel Signaling trunking rather than CAMA MF trunking.

AT&T-(state) proposed language is bolded and underlined
Intrado Comm proposed language is italicized and bolded

4.2.3.1 CLEC is responsible for providing a separate E911 Trunk group for each county or other geographic area that the CLEC serves if the E911 Customer for such county or geographic area has a specified varying default routing condition. Where MF signalling is used and PSAPs do not have the technical capability to receive 10-digit ANI, E911 traffic must be transmitted over a separate trunk group specific to the underlying technology. In addition, 911 traffic originating in one (1) NPA (area code) must be transmitted over a separate 911 Trunk group from 911 traffic originating in any other NPA (area code) 911.

4.2.3.2 CLEC shall segregate wireless traffic on separate E911 Trunk(s) groups following the same requirements outlined in 4.2.3 and 4.2.3.1.

4.2.4 CLEC shall maintain facility transport capacity sufficient to route 911 traffic over trunks dedicated for 911 interconnection between the CLEC switch and the **AT&T-(STATE)** ***POI(s)*** **E911 Selective Router.**

4.2.5 CLEC shall order via Access Service Request (ASR) sufficient trunking to route CLEC's originating 911 calls to the designated **AT&T-(STATE)** E911 Selective Router.

4.2.6 A diverse (i.e., separate) 911 Trunk is recommended and may be required by the E911 Customer. If required by the E911 Customer, diverse 911 Trunks shall be ordered in the same fashion as the primary 911 Trunks. CLEC is responsible for initiating trunking and facility orders for diverse routes for 911 interconnection.

4.2.7 CLEC is responsible for determining the proper quantity of trunks from its switch(es) to interconnect with the **AT&T-(STATE)** E911 Selective Router.

4.2.8 CLEC shall engineer its 911 Trunks to attain a minimum P.01 grade of service as measured using the "busy day/busy hour" criteria or, if higher, at such other minimum grade of service as required by Applicable Law.

4.2.9 CLEC shall monitor its 911 Trunks for the purpose of determining originating network traffic volumes. If CLEC's traffic study indicates that additional 911 trunks are needed to meet the current level of 911 call volumes, CLEC shall provision additional 911 Trunks for interconnection with AT&T-(STATE).

4.2.10 CLEC is responsible for the isolation, coordination and restoration of all 911 facility and trunking maintenance problems from CLEC's demarcation (for example, collocation) to the **AT&T-(STATE)** 911 Selective Router(s). CLEC is responsible for advising **AT&T-(STATE)** of the 911 Trunk identification and the fact that the trunks are dedicated for 911 traffic when notifying **AT&T-(STATE)** of a failure or outage. The Parties agree to work cooperatively and expeditiously to resolve any 911 outage. **AT&T-(STATE)** will refer network trouble to CLEC if no defect is found in **AT&T-(STATE)**'s 911 network. The Parties agree that 911 network problem will be managed expeditiously and the Parties will work cooperatively until problems are resolved.

4.3 Database

4.3.1 Once the 911 interconnection between CLEC and **AT&T-(STATE)** has been established and tested, CLEC or its representatives shall be responsible for providing CLEC's End User 911 Records to **AT&T-(STATE)** for inclusion in **AT&T-(STATE)**'s DBMS on a timely basis.

4.3.2 CLEC or its agent shall provide initial and ongoing updates of CLEC's End User 911 Records that are MSAG-valid in the electronic format established by **AT&T-(STATE)**.

4.3.3 CLEC shall adopt use of a Company ID on all CLEC End User 911 Records in accordance with industry standards.

4.3.4 CLEC is responsible for providing **AT&T-(STATE)** updates to the E911 database; in addition, CLEC is responsible for correcting any errors that may occur during the entry of its data to the **AT&T-(STATE)** 911 DBMS.

5. CLEC RESPONSIBILITIES WHERE CLEC IS DESIGNATED 911/E911 SERVICE PROVIDER

5.1 CLEC shall provide and maintain such equipment at the CLEC E911 Selective Router and the DBMS as is necessary to provide to **AT&T-(STATE)** E911 Emergency Services at parity with that of CLEC's **customers** ***End Users***. CLEC shall provide **AT&T-(STATE)** access to CLEC's 911 System as described in this Section.

5.2 Call Routing

5.2.1 CLEC will route 911 calls from the CLEC E911 Selective Router to the designated primary PSAP or to designated alternate locations, according to routing criteria specified by the PSAP.

5.2.2 CLEC will forward the calling party number (ANI) it receives from **AT&T-(STATE)** and the associated 911 Address Location Identification (ALI) to the PSAP for display. If no ANI is forwarded by **AT&T-(STATE)**, CLEC will forward an Emergency Service Central Office (ESCO) identification code for display at the PSAP. If ANI is forwarded by **AT&T-(STATE)**, but no ALI record is found in the E911 DBMS, CLEC will report this "No Record Found" condition to **AT&T-(STATE)** in accordance with NENA standards.

5.3 Facilities and Trunking

5.3.1 CLEC shall provide and maintain sufficient dedicated E911 Selective Router Trunks from CLEC's E911 Selective Router to the PSAP of the E911 Customer, according to provisions of the appropriate state Commission-approved tariff and documented specifications of the E911 Customer.

5.4 Database

5.4.1 Where CLEC manages the E911 Database, CLEC shall provide **AT&T-(STATE)** access to the E911 Database to store **AT&T-(STATE)**'s End User 911 Records (e.g., the name, address, and associated telephone number(s) for each of **AT&T-(STATE)**'s End Users). **AT&T-(STATE)** or its representative(s) is responsible for electronically providing End User 911 Records and updating this information.

5.4.2 Where CLEC manages the E911 Database, CLEC shall coordinate access to the CLEC DBMS for the initial loading and updating of **AT&T-(STATE)** End User 911 Records by **AT&T-(STATE)**.

5.4.3 Where CLEC manages the E911 Database, CLEC's E911 Database shall accept electronically transmitted files that are based upon NENA standards. Manual (i.e., facsimile) entry shall be utilized only in the event that the DBMS is not functioning properly.

5.4.4 Where CLEC manages the E911 Database, CLEC shall provide an initial MSAG load and daily updates to **AT&T-(STATE)** for use in submitting MSAG valid End User record information to CLEC's DBMS. **AT&T-(STATE)** shall be responsible for accepting and maintaining the daily updates from CLEC.

6. AT&T-(STATE) RESPONSIBILITIES WHERE CLEC IS THE DESIGNATED 911/E911 SERVICE PROVIDER

6.1 Call Routing

6.1.1 **AT&T-(STATE)** will transport 911 calls from its End Offices to the CLEC POI(s). This traffic may be aggregated but not switched after **AT&T-(STATE)** End Office origination and prior to delivery to the CLEC E911 Selective Router. In the event **AT&T-(STATE)'s** End Office has End Users served by more than one E911 Selective Router network, **AT&T-(STATE)** will transport 911 calls from its End Offices to the **AT&T-(STATE)** E911 Selective Router location. ***AT&T-(STATE) shall not deliver its End Users' 911 Service or E911 Service calls originating outside of CLEC's 911/E911 serving area to CLEC's network except as noted in this Section.***

6.1.1.1. ***Split Wire Center Call Delivery Exception – Where it is technically infeasible for AT&T-(STATE) to segregate its End Users' 911 Service or E911 Service call traffic associated with an End Office Wire Center and w***Where an End Office Wire Center serves End Users both within and outside of the CLEC network serving area, **AT&T-(STATE)** shall work cooperatively with CLEC and the affected E911 Customer(s) (i) to establish call routing and/or call handoff arrangements, (ii) to establish which E911 Service provider will ***sort the 911 Service and E911 Service traffic offered over direct trunking from the split End Office Wire Center to determine which calls must be handed-off*** **serve as the "primary" Selective Routing provider for direct trunking from the split wire center, determined by a clear majority based on the Number of Access Lines (NALs) served by the Designated Primary Wireline Service Provider;** and (iii) to establish which 911/E911 Service provider will **be serve as the "secondary" Selective Routing provider** receiving a call hand-off from ***the 911/E911 Service provider performing the call sorting function*** **the primary Selective Routing provider**.

~~6.1.1.2~~ **Intentionally Omitted.** ***Split Wire Center Call Delivery Cost – AT&T-(STATE) shall be responsible for any and all costs incurred by CLEC resulting from AT&T-(STATE)'s inability to segregate its End Users' 911 Service or E911 Service call traffic at an End Office level and resulting in call hand-offs from CLEC's network to another 911/E911 Service provider's network.***

~~6.1.1.3~~ **Intentionally Omitted.** ***Split Wire Center "Partially Deployed" 911 Exception – Where AT&T-(STATE) is technically incapable of segregating its End Users' 911 Service or E911 Service call traffic associated with a specific Wire Center and where the Wire Center serves End Users that are within CLEC's network serving area and E911 Customers that have not deployed 911 Services or E911 Services, 911 Service or E911 Service call traffic for the entire End Office shall be delivered to CLEC for call delivery to the appropriate E911 Customer.***

6.1.2 **AT&T-(STATE)** will forward the ANI information of the party calling 911 to the CLEC E911 Selective Router.

6.2 Facilities and Trunking

6.2.1 **AT&T-(STATE)** shall order via ASR E911 Trunking with each CLEC E911 Selective Router that serves the exchange areas in which **AT&T-(STATE)** is authorized to and will provide telephone exchange service.

6.2.2 **AT&T-(STATE)** acknowledges that its End Users in a Wire Center may be served by different E911 Selective Routers, and **AT&T-(STATE)** shall be responsible for providing interconnection facilities to route 911 calls from its End Users to the proper CLEC POI(s).

6.2.3 **AT&T-(STATE)** shall provide a minimum of two (2) one-way outgoing 911 Trunk(s) dedicated for originating 911 emergency service calls from its End Offices to each CLEC E911 Selective Router, where applicable. Where SS7 connectivity is available and required by the applicable E911 Customer, the Parties agree to implement Common Channel Signaling trunking rather than CAMA MF trunking.

6.2.3.1 **AT&T-(STATE)** is responsible for providing a separate E911 Trunk group for each county or other geographic area that **AT&T-(STATE)** serves if the E911 Customer for such county or geographic area has a specified varying default routing condition.

6.3 **AT&T-(STATE)** shall maintain facility transport capacity sufficient to route 911 traffic over trunks on dedicated 911 facilities between the **AT&T-(STATE)** switch and the ***CLEC POI(s)*** **AT&T-(STATE) E911 Selective Router location**.

6.3.1 **AT&T-(STATE)** shall provide sufficient trunking to route **AT&T-(STATE)**'s originating 911 calls to the designated CLEC E911 Selective Router. A diverse (i.e., separate) 911 Trunk is recommended and may be required by the E911 Customer. If required by the E911 Customer, diverse 911 Trunks shall be ordered in the same fashion as the primary 911 Trunks. **AT&T-(STATE)** is responsible for initiating trunking and facility orders for diverse routes for 911 interconnection.

6.3.2 **AT&T-(STATE)** is responsible for determining the proper quantity of trunks from its switch(es) to the CLEC E911 Selective Router. **AT&T-(STATE)** is responsible for determining the proper quantity of facilities from its switch(es) to the ***CLEC POI(s)*** **AT&T-(STATE) E911 Selective Router location**.

6.3.3 **AT&T-(STATE)** shall engineer its 911 Trunk to attain a minimum P.01 grade of service as measured using the "busy day/busy hour" criteria or, if higher, at such other minimum grade of service as required by Applicable Law.

6.3.4 **AT&T-(STATE)** shall monitor its 911 Trunks for the purpose of determining originating network traffic volumes. If **AT&T-(STATE)**'s traffic study indicates that additional 911 trunks are needed to meet the current level of 911 call volumes, **AT&T-(STATE)** shall provision additional 911 trunks for interconnection with CLEC.

6.3.5 **AT&T-(STATE)** is responsible for the isolation, coordination and restoration of all 911 facility and trunking maintenance problems on **AT&T-(STATE)**'s side of the POI. **AT&T-(STATE)** is responsible for advising CLEC of the 911 Trunk identification and the fact that the trunks are dedicated for 911 traffic when notifying CLEC of a failure or outage. The Parties agree to work cooperatively and expeditiously to resolve any 911 outage. CLEC will refer network trouble to **AT&T-(STATE)** if no defect is found in CLEC's 911 network. The Parties agree that 911 network problems will be managed expeditiously and the Parties will work cooperatively until problems are resolved.

6.4 Database

6.4.1 Once the 911 interconnection between **AT&T-(STATE)** and CLEC has been established and tested, **AT&T-(STATE)** or its representatives shall be responsible for providing **AT&T-(STATE)**'s End User 911 Records to CLEC for inclusion in CLEC's DBMS on a timely basis.

6.4.2 **AT&T-(STATE)** or its agent shall provide initial and ongoing updates of **AT&T-(STATE)**'s End User 911 Records that are MSAG-valid in electronic format based upon established NENA standards.

6.4.3 **AT&T-(STATE)** shall adopt use of a Company ID on all **AT&T-(STATE)** End User 911 Records in accordance with NENA standards

6.4.4 **AT&T-(STATE)** is responsible for providing CLEC updates to the E911 database; in addition, **AT&T-(STATE)** is responsible for correcting any errors that may occur during the entry of their data to the CLEC 911 DBMS.

7. RESPONSIBILITIES OF BOTH PARTIES

7.1 Both Parties shall jointly coordinate the provisioning of transport capacity sufficient to route originating E911 calls to the 911 Selective Router(s).

7.1.1 **AT&T-(STATE)** and CLEC will cooperate to promptly test all trunks and facilities between their network(s) and Selective Router(s). The Parties agree that they will not pass live traffic until successful testing is completed by both Parties.

7.2 911 Surcharge Remittance to PSAP

7.2.1 The Parties agree that:

7.2.1.1 Each Party is responsible for collecting and remitting applicable 911 surcharges or fees from their respective End Users directly to municipalities or government entities where such surcharges or fees are assessed by said municipality or government entity, and

7.2.1.2 Each Party collecting and remitting 911 surcharges from its respective End Users is responsible for providing the 911 Customer detailed monthly listings of the actual number of access lines, or breakdowns between the types of access lines (e.g., residential, business, payphone, Centrex, PBX, and exempt lines) in accordance with Applicable Law.

7.2.2 For CLEC as a Reseller, except where state law requires the ILEC to serve as a clearinghouse between Resellers and PSAPs, the Parties agree that:

7.2.2.1 CLEC shall be responsible for collecting and remitting all applicable 911 fees and surcharges on a per line basis to the appropriate PSAP or other governmental authority responsible for collection of such fees and surcharges.

7.2.2.2 **AT&T-(STATE)** shall include Reseller CLEC information when providing the 911 Customer with detailed monthly listings of the actual number of access lines, or breakdowns between the types of access lines (e.g., residential, business, payphone, Centrex, PBX, and exempt lines).

7.3 ALI Database Responsibilities

7.3.1 Where CLEC has been designated the 911 Service Provider for a 911 Customer contiguous to an **AT&T-(STATE)** 911 Customer, and where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer with ALI for dynamic ALI type calls (e.g., wireless 911 and nomadic VoIP calls), each Party shall load pANI Shell Records and update ALI steering tables in their respective ALI databases to support PSAP-to-PSAP call transfer with ALI for dynamic ALI type calls (e.g., wireless 911 and nomadic VoIP calls).

7.3.2. Intentionally Omitted.

7.3.3 Where CLEC has been designated the 911 Service Provider for a 911 Customer contiguous to an **AT&T-(STATE)** 911 Customer, and where each Party's respective 911 Customer has requested the ability for PSAP-to-PSAP call transfer the Parties shall work cooperatively to establish methods and procedures to support PSAP to PSAP call transfer with ALI for 911 calls.

7.4 Inter Selective Routing Trunks

7.4.1 Where CLEC is the E911 Service Provider for a 911 Customer that is contiguous to an **AT&T-(STATE)** 9-1-1 Customer, CLEC and **AT&T-(STATE)** may deploy bi-directional Inter-SR Trunking using one-way trunk configurations that will allow transfers between PSAPs subtending **AT&T-(STATE)** E911 Selective Routers and PSAPs subtending on CLEC Selective Routers. CLEC will be responsible for deploying and maintaining one-way trunks from CLEC's E911 routing network for PSAP call transfers from CLEC subtending PSAPs to **AT&T-(STATE)** subtending PSAPs. **AT&T-(STATE)** will be responsible for deploying and maintaining one-way trunks from the **AT&T-(STATE)** Selective Router for PSAP call transfers from the **AT&T-(STATE)** subtending PSAPs to CLEC subtending PSAPs.

7.4.1.1 Configuration of Inter-Selective Router Trunk groups shall be designed to support the existing E911 generic of the **AT&T-(STATE)** E911 Selective Router tandem. **AT&T-(STATE)** will notify CLEC of any upgrades to the **AT&T-(STATE)** E911 generic in the SR.

7.4.1.2 Each Party will have a sufficient number of inter-Selective Router Trunks to support simultaneous inter-Selective Router tandem PSAP call transfers such that a P.01 grade of service is attained.

7.4.1.3 Where technically feasible, each Party will establish and maintain appropriate Selective Routing Trunk routing translations as necessary to support inter-tandem E911 PSAP call transfer capability requested by the 911 Customer.

7.4.1.4 Each Party will provide the appropriate number of one-way outgoing 911 Selective Router Trunks over diversely routed facilities between Selective Routers to enable transfer of 911 calls between PSAPs served by CLEC's E911 routing network and PSAPs served by **AT&T-(STATE)**'s E911 routing network.

7.4.1.5 The Parties will maintain appropriate dial plans to support inter-Selective Router tandem transfer ***and each Party shall notify the other of changes, additions, or deletions to their respective inter-Selective Router dial plans.***

7.4.1.6 Each Party will be responsible for alarming and monitoring their respective originating E911 inter-Selective Routing Trunks. Each Party shall notify the other of any service outages on their respective inter-Selective Routing Trunk(s), and work cooperatively to restore service in accordance with federal, state and local 911 rules.

8. METHODS AND PRACTICES

8.1 With respect to all matters covered by this Appendix, each Party will comply with all of the following to the extent that they apply to access to 911 and E911 Databases: (i) all FCC and applicable state Commission rules and regulations, (ii) any requirements imposed by any Governmental Authority other than a Commission, (iii) the terms and conditions of the Party's Commission-ordered tariff(s), and (iv) the principles expressed in the recommended standards published by NENA.

9. CONTINGENCY

9.1 ***Intentionally Omitted.*** **The terms and conditions of this Appendix represent a negotiated plan for providing access to 911 and E911 Databases, and provide trunking and call routing for purposes of 911 call completion to a Public Safety Answering Point (PSAP) as required by Section 251 of the Act.**

9.2 The Parties agree that the 911 System is provided herein is for the use of the E911 Customer, and recognize the authority of the E911 Customer to establish service specifications and grant final approval (or denial) of service configurations offered by **AT&T-(STATE)** and CLEC. **Each Party's specifications shall be documented in a state specific form, if applicable. If applicable CLEC shall complete its portion**

of a state specific form and submit it to AT&T-(STATE) or appropriate E911 Authority, not later than forty-five (45) days prior to the passing of live traffic. AT&T-(STATE) shall complete its portion of a state specific form and return it to CLEC not later than forty-five (45) days prior to the passing of live traffic.

9.3 ***Intentionally Omitted.*** **The Parties must obtain documentation of approval of the completed state specific form from the appropriate E911 Customer(s) that have jurisdiction in the area(s) in which each Party's End Users are located. Each Party shall provide documentation of all requisite approval(s) to the other Party prior to use of the E911 connection for actual emergency calls.**

9.4 ***Intentionally Omitted.*** **Each Party has designated a representative who has the authority to complete any state specific forms to this Appendix when necessary to accommodate expansion of the geographic area of either Party into the jurisdiction of additional PSAP(s) or to increase the number of CAMA trunks. Each Party must obtain approval of each additional state specific form, as set forth in Section 9.2, and shall furnish documentation of all requisite approval(s) of each additional state specific form in accordance with Section 9.2.**

9.5 Intentionally Omitted.

10. BASIS OF COMPENSATION

10.1 Rates for access to the Parties' 911 and E911 Databases, trunking and call routing of E911 call completion to a Public Safety Answering Point (PSAP) as required by Section 251 of the Act as set forth in the **AT&T-(STATE)** Appendix Pricing **or the applicable Party's Commission-approved access tariff.**

11. LIABILITY

11.1 **AT&T-(STATE)**'s liability and potential damages, if any, for its gross negligence, recklessness or intentional misconduct, is not limited by any provision of this Appendix. **AT&T-(STATE)** shall not be liable to CLEC, its End Users or its E911 calling parties or any other parties or persons for any Loss arising out of the 911 System or any errors, interruptions, defects, failures or malfunctions of the 911 System, including any and all equipment and data processing systems associated therewith. Damages arising out of such interruptions, defects, failures or malfunctions of the system after **AT&T-(STATE)** has been notified and has had reasonable time to repair, shall in no event exceed an amount equivalent to any charges made for the service affected for the period following notice from CLEC until service is restored.

11.2 CLEC's liability and potential damages, if any, for its gross negligence, recklessness or intentional misconduct is not limited by any provision of this Appendix. In the event CLEC provides E911 Service to **AT&T-(STATE)**, CLEC shall not be liable to **AT&T-(STATE)**, its End Users or its E911 calling parties or any other parties or persons for any Loss arising out of the provision of E911 Service or any errors, interruptions, defects, failures or malfunctions of E911 Service, including any and all equipment and data processing systems associated therewith. Damages arising out of such interruptions, defects, failures or malfunctions of the system after CLEC has been notified and has had reasonable time to repair, shall in no event exceed an amount equivalent to any charges made for the service affected for the period following notice from **AT&T-(STATE)** until service is restored.

11.3 Each Party agrees to release, indemnify, defend and hold harmless the other Party from any and all Loss arising out of either Party's 911 System hereunder or out of either Party's customers' or End Users' use of the 911 System, whether suffered, made, instituted or asserted by their respective customers or End Users, or by any other parties or persons, for any personal injury or death of any person or persons, or for any loss, damage or destruction of any property, whether owned by their respective customers or End Users or others.

11.4 Each Party also agrees to release, indemnify, defend and hold harmless the other Party from any and all Loss involving an allegation of the infringement or invasion of the right of privacy or confidentiality of any

person or persons, caused or claimed to have been caused, directly or indirectly, by the installation, operation, failure to operate, maintenance, removal, presence, condition, occasion or use of the 911 System features and the equipment associated therewith, including but not limited to the identification of the telephone number, address or name associated with the telephone used by the calling party accessing the 911 System provided hereunder.

MEMORANDUM OPINION AND ORDER

Adopted: July 17, 2002 **Released: July 17, 2002**

By the Chief, Wireline Competition Bureau:

TABLE OF CONTENTS

PARAGRAPH

I. INTRODUCTION **1**

II. PROCEDURAL HISTORY **8**

section of the Act, Commission rule or order) and the petitioner's proposed language is a mere recitation of that Commission rule or order, we typically conclude that the petitioner's proposal adds little to no value to the contract. Simply memorializing a Commission requirement in an interconnection agreement is unnecessary to ensure a carrier's rights or make clear a carrier's obligations with respect to that requirement. Indeed, we find it unlikely that quoting or paraphrasing a Commission rule in the parties' contract would reduce the likelihood of disputes over interpretation of that rule.

34. Including language that requires Verizon to comply with all applicable law affords a petitioner the same contractual remedies that would be available if the contract paraphrased the relevant Commission rule. Moreover, for those issues that we arbitrate, quoting a Commission rule will not "grandfather" or insulate it from the contract's change of law clause. To be clear, pursuant to section 252(a), and subject to the disclosure requirements of section 252(h), parties are permitted to negotiate terms and conditions without regard to subsections (b) and (c) of section 251. [71] In other words, if they so choose, the parties may memorialize in the contract a Commission rule or directive and exempt it from the agreement's change of law language. Similarly, they may agree to terms that are not compelled by, or are even inconsistent with, sections 251(b) and (c) of the Act. However, if the parties have not reached such an understanding and have asked the Commission to arbitrate their dispute, we will do so based on existing law and expect that any change in that law will be reflected in the contract. Notwithstanding this general approach towards use of the term "applicable law," we find that language clarifying a particular rule, or adding details of how the rule should operate in a commercial environment, may well be appropriate for adoption, if the proposed language is consistent with the Commission's rules and the Act.[72]

35. Finally, we note briefly that, in addressing the parties' disputes, we attempt to dispose fully of the substantive issue that the parties have presented and to provide adequate direction on how the parties should memorialize our decision in their respective interconnection agreements. As discussed above, our decision may take the form of adopting or rejecting proffered language, or adopting one side's language in modified form. We emphasize, however, that we have largely restricted ourselves to addressing the issues and the contract language that the parties have directly placed at issue through their presentations during the hearings we conducted and, most importantly, through their post-hearing briefs. There may be instances in which we have not specifically spoken to particular contract language because neither party addressed it in their advocacy, although it may have appeared in the contracts that the parties submitted after the hearings or even have appeared under a particular issue number in the JDPL. In those cases, we expect that the parties will generally be able to apply the analysis of the relevant portion of this order and the Commission precedents discussed therein to resolve any remaining disputes that they may have relating to contract language that the parties – and therefore the Bureau – left unaddressed.

[71] *See* 47 U.S.C. § 252(a), (h).

[72] *See, e.g.*, Issue VI-3-B, *infra*.

(ii) Discussion

51. We adopt the petitioners' proposed interconnection language, rather than Verizon's proposed language implementing its "GRIPS" and "VGRIPS" proposals.[116] We find that petitioners' language more closely conforms to the Commission's current rules governing points of interconnection and reciprocal compensation than do Verizon's proposals. Because we adopt the petitioners' proposals, rather than Verizon's, we also determine that WorldCom's motion and Cox's objection are moot with respect to Issue I-1.

52. Under the Commission's rules, competitive LECs may request interconnection at any technically feasible point.[117] This includes the right to request a single point of interconnection in a LATA.[118] The Commission's rules implementing the reciprocal compensation provisions in section 252(d)(2)(A) prevent any LEC from assessing charges on another telecommunications carrier for telecommunications traffic subject to reciprocal compensation that originates on the LEC's network.[119] Furthermore, under these rules, to the extent an incumbent LEC delivers to the point of interconnection its own originating traffic that is subject to reciprocal compensation, the incumbent LEC is required to bear financial responsibility for that traffic. The interplay of these rules has raised questions about whether they lead to the deployment of inefficient or duplicative networks.[120] The Commission is currently examining the interplay of these rules in a pending rulemaking proceeding.[121] As the Commission recognized in that proceeding, incumbent LECs and competitive LECs have taken opposing views regarding application of the rules governing interconnection and reciprocal compensation.[122]

---

[116] With respect to AT&T, we adopt AT&T's November Proposed Agreement, §§ 4.1 *et seq.* and 4.2 *et seq.*, and Schedule 4 (except for certain provisions modified or rejected elsewhere in this Order, such as in Issue III-3/III-3-a and Issue V-1/V-8); and reject Verizon's November Proposed Agreement, §§ 1.45(a), 1.63, 4.1 *et seq.*, 4.2 *et seq.*, 5.7.3 and 5.7.6 *et seq.* With respect to Cox, we adopt Cox's November Proposed Agreement, § 4.2 *et seq.*; and reject Verizon's November Proposed Agreement, § 4.2.2 *et seq.* With respect to WorldCom, we adopt WorldCom's November Proposed Attachment IV, §§ 1.1 through 1.1.3.3, and 1.3 through 1.3.2; and reject Verizon's November Proposed Agreement, Part B, §§ 2.49 and 2.71, and Interconnection Attachment, §§ 2.1 *et seq.*, 2.5, 7.1 *et seq.* and 7.5 *et seq.*

[117] *See* 47 U.S.C. § 251(c)(2); 47 C.F.R. § 51.305(a)(2).

[122] *See id.*, 16 FCC Rcd at 9650, para. 112.

53. We find that the petitioners' proposed language more closely conforms to our existing rules and precedent than do Verizon's proposals.[123] Verizon's interconnection proposals require competitive LECs to bear Verizon's costs of delivering its originating traffic to a point of interconnection beyond the Verizon-specified financial demarcation point, the IP. Specifically, under Verizon's proposed language, the competitive LEC's financial responsibility for the further transport of Verizon's traffic to the competitive LEC's point of interconnection and onto the competitive LEC's network would begin at the Verizon-designated competitive LEC IP, rather than the point of interconnection.[124] By contrast, under the petitioners' proposals, each party would bear the cost of delivering its originating traffic to the point of interconnection designated by the competitive LEC. The petitioners' proposals, therefore, are more consistent with the Commission's rules for section 251(b)(5) traffic, which prohibit any LEC from charging any other carrier for traffic originating on that LEC's network; they are also more consistent with the right of competitive LECs to interconnect at any technically feasible point.[125] Accordingly, we adopt the petitioners' proposals.

54. Verizon raises serious concerns about the apportionment of costs caused by a competitive LEC's choice of points of interconnection, such as, for example, the apportionment of costs for virtual FX traffic transported to distant points of interconnection.[126] As we have noted, the Commission is currently examining similar concerns on an industry-wide basis in a pending rulemaking proceeding.[127] Should the Commission's rules governing interconnection and reciprocal compensation change during that proceeding, we expect the agreements' change of law provisions to apply. As we indicate above, however, in this proceeding, we will decide the issues presented based on the Commission's existing rules, and the petitioners' interconnection proposals more closely conform to those rules than do Verizon's proposals.

---

[123] We note that the Commission declined to find that policies similar to GRIPs and VGRIPs violated the Act in the *Verizon Pennsylvania 271 Order*. *See Application of Verizon Pennsylvania Inc., Verizon Long Distance, Verizon Enterprise Solutions, Verizon Global Networks, Inc., and Verizon Select Services, Inc. for Authorization to Provide In-Region, InterLATA Services in Pennsylvania*, Memorandum Opinion and Order, 16 FCC Rcd 17419, 17474-75, para. 100 (2001) (*Verizon Pennsylvania 271 Order*). The Commission has not, however, required that all "new and unresolved interpretive disputes about the precise content of an incumbent LEC's obligations" be resolved in a Bell Operating Company's (BOC) favor in order for the BOC's section 271 application to be granted. *See Joint Application by SBC Communications Inc., Southwestern Bell Tel. Co., and Southwestern Bell Communications Services, Inc., d/b/a Southwestern Bell Long Distance for Provision of In-Region, InterLATA Services in Kansas and Oklahoma*, Memorandum Opinion and Order, 16 FCC Rcd 6237, 6246-47, para. 19 (2001) (*SWBT Kansas/Oklahoma 271 Order*). Thus, the *Verizon Pennsylvania 271 Order* is not determinative of the question we address here, which is whether Verizon's or petitioners' language is more consistent with the Act and our rules.

[124] *See* Verizon Network Architecture Brief at 6. Verizon states that a competitive LEC could discharge that financial responsibility, for example, by purchasing UNE transport from Verizon. *See id.* at 6.

NOTICE OF PROPOSED RULEMAKING

Adopted: April 19, 2001 **Released:** April 27, 2001

Comment Date: 90 days after publication in the Federal Register
Reply Comment Date: 135 days after publication in the Federal Register

By the Commission: Chairman Powell and Commissioner Ness issuing separate statements; Commissioner Furchtgott-Roth concurring and issuing a statement

TABLE OF CONTENTS

Paragraph No.

I. INTRODUCTION 1

II. BACKGROUND 5

A. Existing Intercarrier Compensation Regimes 5

B. Issues Raised by Existing Interconnection Regulations 11

C. Economic Rationales for Intercarrier Compensation 19

1. Traditional Rationale for Calling-Party's-Network-Pays Regimes 19
2. New Approaches to Intercarrier Compensation 22

III. DISCUSSION 31

A. Appropriate Goals for Intercarrier Compensation Rules in Competitive Markets 31

B. Bill-and-Keep Arrangements 37

1. Policy Justifications for a Bill-and-Keep Regime 37
2. Re-examining the Efficiencies of Bill-and-Keep Arrangements 42
3. Bill and Keep as a Solution to Existing Interconnection Issues 52
4. Weighing the Potential Disadvantages of Bill-and-Keep Arrangements 58
5. Bill and Keep for ISP-Bound Traffic 66

of various implementation problems,[175] however, the Commission has never ordered a peak-load pricing rate structure, though it has permitted such rate structures. In implementing the reciprocal compensation provisions of the 1996 Act, for example, the Commission permitted states to adopt alternative rate structures, including: (1) a higher rate for peak periods; (2) a uniform per-minute rate; (3) a capacity-based rate; or (4) a bill-and-keep arrangement, provided that traffic is relatively balanced.[176] States, however, in applying the Commission's rules governing reciprocal compensation, have generally adopted average per-minute rates. Similarly, with respect to interstate access charges, the Commission has permitted ILECs to charge either a uniform per-minute rate to recover the costs of switching, or a two-part tariff consisting of a call setup charge and a per-minute charge.[177] The Commission has also sought comment on whether it should adopt capacity-based charges to recover switching costs.[178]

110. Our recent experience with ISP reciprocal compensation issues suggests certain questions about the use of uniform per-minute charges to recover the traffic-sensitive costs of termination. In particular, it appears that the Commission may have underestimated the inefficiencies associated with the use of uniform per-minute prices. Accordingly, we seek comment first on whether an average per-minute rate structure can efficiently recover the traffic sensitive costs of interconnection, whether for reciprocal compensation or for access charges. If parties believe that such a rate structure is inherently inefficient, then we ask them to propose alternative, more efficient rate structures. We also seek comment on whether the Commission overestimated the practical difficulties associated with peak-load pricing arrangements. In particular, we seek comment on: (1) how to deal with the practical, implementation problems associated with peak-load pricing; and (2) whether a peak-load pricing structure can eliminate the regulatory arbitrage opportunities of the existing interconnection pricing regimes.

111. We also invite comment on whether alternative rate structures would be more efficient, and whether they would eliminate some of the problems we are currently experiencing. For example, we ask parties to comment on the advantages and disadvantages of using a capacity-based rate structure, and a multi-part rate structure that includes both a call set-up charge and a per-minute charge. Finally, we invite parties to propose alternative rate structures that they believe would be more efficient, and to explain the basis for their belief.

c. Single Point of Interconnection Issues

112. As previously mentioned, an ILEC must allow a requesting telecommunications carrier to interconnect at any technically feasible point, including the option to interconnect at a

[175] The practical difficulties associated with peak-load pricing schemes include: (1) that peak traffic volumes may occur at different times in different areas (*e.g.*, between a downtown business area and a residential suburb); (2) that peak periods may change over time (*e.g.*, in response to increasing Internet use); and (3) that implementing a peak-load pricing scheme may cause a shift in the peak.

[176] *See* 47 C.F.R. §§ 51.507(c), 51.713; *Local Competition Order*, 11 FCC Rcd. at 15878-79 ¶¶ 755-757, 16028-29 ¶¶ 1063-64.

[177] *See* 47 C.F.R. § 69.106.

[178] *Pricing Flexibility Order and NPRM*, 14 FCC Rcd. at 14328-30 ¶¶ 211-16.

single POI per LATA.[179] Our current reciprocal compensation rules preclude an ILEC from charging carriers for local traffic that originates on the ILEC's network.[180] These rules also require that an ILEC compensate the other carrier for transport[181] and termination[182] for local traffic that originates on the network facilities of such other carrier.[183] Application of these rules has led to questions concerning which carrier should bear the cost of transport to the POI, and under what circumstances an interconnecting carrier should be able to recover from the other carrier the costs of transport from the POI to the switch serving its end user. In particular, carriers have raised the question whether a CLEC, establishing a single POI within a LATA, should pay the ILEC transport costs to compensate the ILEC for the greater transport burden it bears in carrying the traffic outside a particular local calling area to the distant single POI.[184] Some ILECs will interconnect at any POI within a local calling area; however, if a CLEC wishes to interconnect outside the local calling area, some LECs take the position that the CLEC must bear all costs for transport outside the local calling area.[185] CLECs hold the contrary view, that our rules simply require LECs to interconnect at any technically feasible point within a LATA, and that each carrier must bear its own transport costs on its side of the POI.[186]

113. If a carrier establishes a single POI in a LATA, should the ILEC be obligated to interconnect there and thus bear its own transport costs up to the single POI when the single POI is located outside the local calling area? Alternatively, should a carrier be required either to interconnect in every local calling area, or to pay the ILEC transport and/or access charges if the location of the single POI requires the ILEC to transport a call outside the local calling area? Further, if we should determine that a carrier establishing a single POI outside a local calling area must bear some portion of the ILEC's transport costs, do our regulations permit the imposition of access charges for calls that originate and terminate within one local calling area but cross local calling area boundaries due to the placement of the POI?[187]

[186] AT&T Comments in CC Docket No. 00-217, Attachment 2, Fettig Declaration, at 26-27.

[187] *See ISP Intercarrier Compensation Order* at ¶¶ 24-30 (discussing relationship between reciprocal compensation and access charges).

114. Finally, we are concerned that the interplay of our single POI rules and reciprocal compensation rules may lead to the deployment of inefficient or duplicative networks. By requiring an ILEC to interconnect with a requesting carrier at any technical feasible point in a LATA of that carrier's choosing, are we compelling inefficient network design by forcing the LEC to provision extra transport? Or, by requiring carriers to pay ILECs for transport outside a local calling area, are we forcing the competitive carrier into an inefficient replication of the ILEC network? Assuming that the ILEC receives reciprocal compensation for transporting terminating traffic, how precisely does a distant POI unfairly burden the LEC? Is the efficiency concern limited to those instances in which traffic between two networks is unbalanced and/or where transport is required beyond a certain distance? We seek comment on these questions, and any other issues related to the interplay between our single POI rules and our reciprocal compensation rules.

d. Virtual Central Office Codes

115. We seek comment on the use of virtual central office codes (NXXs),[188] and their effect on the reciprocal compensation and transport obligations of interconnected LECs. Commenters in this proceeding have indicated that some LECs are inappropriately using virtual NXXs to collect reciprocal compensation for traffic that the ILEC is then forced to transport outside of the local calling area.[189] We note that the Commission has delegated some of its authority to state public utility commissions in order that they may order the North American Numbering Plan Administrator (NANPA) to reclaim NXX codes that are not used in accordance with the Central Office Code Assignment Guidelines.[190] The Maine Public Utility Commission recently addressed the issue of virtual NXXs when it directed the NANPA to reclaim the NXX codes that Brooks Fiber used to provide "unauthorized interexchange service" as opposed to "facilities-based local exchange service."[191] In light of these developments, we seek comment on the following issues: (1) Under what circumstances should a LEC be entitled to use virtual NXX codes? (2) If LECs are permitted to use virtual NXX codes, what is the transport obligation of the originating LEC? (3) Should the LEC employing the virtual NXX code be required to provide transport from the central offices associated with those NXX codes?

2. Can CPNP Regimes Resolve the Existing Interconnection Issues and Will They Be Administratively Feasible?

116. We seek comment on how, if the Commission declines to adopt bill and keep, the existing CPNP regimes could be modified to deal with the issues presented by existing

[188] Virtual NXX codes are central office codes that correspond with a particular geographic area that are assigned to a customer located in a different geographic area.

APPENDIX INTERCARRIER COMPENSATION

1. SCOPE OF APPENDIX

1.1 This Appendix sets forth the terms and conditions for Intercarrier Compensation of intercarrier telecommunications traffic exchanged between the applicable AT&T Inc. (AT&T) owned Incumbent Local Exchange Carrier and CLEC, but only to the extent they are interconnected and exchanging calls pursuant to a fully executed, underlying Interconnection Agreement approved by the applicable state or federal regulatory agency for telecommunications traffic in the applicable state(s). This Appendix does not apply to 911 Service or E911 Service calls delivered to either AT&T-OHIO's 911 System or CLEC's 911 System.

1.2 The provisions of this Appendix apply to telecommunications traffic originated over the originating carrier's facilities or over local circuit switching purchased by CLEC from **AT&T-OHIO** on a wholesale basis (non-resale) and used in providing **wireline** local telephone exchange **(dialtone)** service to its ***e*End *u*User** customers.

1.3 The provisions of this Appendix do not apply to traffic originated over services provided under local Resale service. **AT&T-OHIO** will compensate the terminating carrier in accordance with this Appendix for Section 251(b)(5) Traffic, ISP-Bound Traffic, Optional EAS Traffic (also known as "Optional Calling Area Traffic") and IntraLATA Toll Traffic that originates from an End User that is served by a carrier providing telecommunications services utilizing **AT&T-OHIO**'s Resale Service.

1.4 Any inconsistencies between the provisions of this Appendix and other provisions of the underlying Interconnection Agreement shall be governed by the provisions of this Appendix.

2. ILEC DESIGNATIONS

2.1 **AT&T Inc. (AT&T)** means the holding company which directly or indirectly owns the following ILECs: Illinois Bell Telephone Company d/b/a AT&T Illinois, Indiana Bell Telephone Company Incorporated d/b/a AT&T Indiana, Michigan Bell Telephone Company d/b/a AT&T Michigan, Nevada Bell Telephone Company d/b/a AT&T Nevada, The Ohio Bell Telephone Company d/b/a AT&T Ohio, Pacific Bell Telephone Company d/b/a AT&T California, The Southern New England Telephone Company d/b/a AT&T Connecticut, Southwestern Bell Telephone Company d/b/a AT&T Arkansas, AT&T Kansas, AT&T Missouri, AT&T Oklahoma and/or AT&T Texas and/or Wisconsin Bell, Inc. d/b/a AT&T Wisconsin.

2.14 Intentionally Omitted.

2.15 Intentionally Omitted.

2.16 Intentionally Omitted.

2.17 Intentionally Omitted.

2.18 **AT&T OHIO** - As used herein, **AT&T OHIO** means The Ohio Bell Telephone Company d/b/a AT&T Ohio, the applicable AT&T-owned ILEC doing business in Ohio.

2.19 Intentionally Omitted.

2.20 Intentionally Omitted.

2.21 Intentionally Omitted.

2.22 Intentionally Omitted.

2.23 Intentionally Omitted.

3. RESPONSIBILITIES OF THE PARTIES

3.1 For all traffic originated on a Party's network including, without limitation, Switched Access Traffic such Party shall provide Calling Party Number (CPN) as defined in 47 C.F.R. § 64.1600(c) ("CPN") in accordance with Section 3.3 below. CPN shall, at a minimum, include information in an industry recognized standard format, consistent with the requirements of the North American Numbering Plan (NANP) containing a unique three digit area code (NPA) and seven digit (NXX-XXXX) telephone number. Each Party to this Agreement will be responsible for passing on any CPN it receives from a third party for traffic delivered to the other Party. In addition, each Party agrees that it shall not strip, alter, modify, add, delete, change, or incorrectly assign any CPN. *If either Party identifies improper, incorrect, or fraudulent use of local* exchange services (including, but not limited to PRI, ISDN and/or Smart Trunks), or identifies stripped, altered, modified, added, deleted, changed, and/or incorrectly assigned CPN, the Parties agree to cooperate with one another to investigate and take corrective action.

3.2 If one Party is passing CPN but the other Party is not properly receiving information, the Parties will work cooperatively to correct the problem.

3.3 For traffic which is delivered by one Party to be terminated on the other Party's network in **AT&T-OHIO**, if the percentage of such calls passed with CPN is greater than ninety percent (90%), all calls delivered by one Party to the other for termination without CPN will be billed as either Section 251(b)(5) Traffic or IntraLATA Toll Traffic in direct proportion to the total MOUs of calls delivered by one Party to the other with CPN. If the percentage of calls passed with CPN is less than 90%, all calls delivered by one Party to the other without CPN will be billed at Intrastate Switched Access rates.

3.4 Intentionally Omitted.

3.5 CLEC has the sole obligation to enter into intercarrier compensation arrangements with third party telecommunications carriers regarding CLEC's traffic and such other carriers' traffic, including without limitation anywhere either Party originates traffic to or terminates traffic from an *End User being served by a* third party telecommunications carrier who has purchased local switching from **AT&T-OHIO** on a wholesale basis (non-resale that is used by such telecommunications carrier to provide **wireline** local telephone exchange service **(dialtone)** to its End Users. In no event will **AT&T-OHIO** have any liability to CLEC or *any third party if CLEC fails to enter into such compensation arrangements.* In the event that traffic is exchanged with a third party carrier with whom CLEC does not have a traffic compensation agreement, CLEC will indemnify, defend and hold harmless **AT&T-OHIO** against any and all losses including without limitation, charges levied by such third party carrier. The third party carrier and CLEC will bill their respective charges directly to each other. **AT&T-OHIO** will not be required to function as a billing

FOR NEGOTIATION PURPOSES ONLY

intermediary, e.g., clearinghouse. AT&T-OHIO may provide information regarding such traffic to other telecommunications carriers or entities as appropriate to resolve traffic compensation issues.

3.6 The Parties agree that, notwithstanding the classification of traffic under this Appendix, either Party is free to define its own "local" calling area(s) for purposes of its provision of telecommunications services to its End Users.

3.7 For Section 251(b)(5) Traffic, ISP-Bound Traffic, Optional EAS Traffic, and IntraLATA Toll Traffic, the Party whose End User originates such traffic shall compensate the Party who terminates such traffic to its End User for the transport and termination of such traffic at the applicable rate(s) provided in this Appendix and Appendix Pricing and/or the applicable switched access tariffs.

3.8 To the extent that the Parties are not currently exchanging traffic in a given LATA or Local Calling Area, the Parties' obligation to pay intercarrier compensation to each other shall commence on the date the Parties agree that the interconnection is complete (i.e., each Party has established its originating trunks as well as all ancillary traffic trunking such as Operator Services or Mass Calling trunks) and is capable of fully supporting originating and terminating End User customers' traffic. In addition, the Parties agree that test traffic is not subject to compensation pursuant to this Appendix Intercarrier Compensation.

3.9 The Parties acknowledge that this Attachment addresses solely the method of compensation for traffic properly exchanged by the Parties under this Agreement. This Attachment is not meant to address whether the Parties are obligated to exchange any specific type of traffic, nor the types of services to be offered by the Parties pursuant to this agreement.

3.9.1 More specifically, and without limiting the foregoing Section 3.9, the Parties acknowledge that this Attachment does not address "Out of Exchange Traffic" with an "Out of Exchange-LEC." The Parties acknowledge that they have agreed upon terms and conditions for the exchange of such traffic, as provided for in Appendix OE-LEC hereto. For purposes of this Agreement, "Out of Exchange LEC" (OE-LEC) means a CLEC operating within AT&T-OHIO's incumbent local exchange area and also providing telecommunications services in another ILEC's incumbent local exchange area that shares mandatory or optional calling with AT&T-OHIO. For purposes of this Agreement, "Out of Exchange Traffic" is defined as Section 251(b)(5) Traffic, ISP-Bound Traffic, FX Traffic, Optional EAS Traffic, MCA Traffic, IntraLATA Toll Traffic and/or InterLATA Section 251(b)(5) Traffic exchanged pursuant to an FCC approved or court ordered InterLATA boundary waiver that:

(i) Originates from an OE-LEC End User located in another ILEC's incumbent local exchange area and terminates to an AT&T-OHIO End User located in an AT&T-OHIO local exchange area or;

(ii) Originates from an AT&T-OHIO End User located in an AT&T-OHIO local exchange area and terminates to an OE-LEC End User located in another ILEC's incumbent local exchange area.

4. RECIPROCAL COMPENSATION FOR TERMINATION OF SECTION 251(b)(5) TRAFFIC

4.1 Section 251(b)(5) Traffic ***is as defined by Applicable Law, including the rules, regulations, and orders of the FCC and courts of competent jurisdiction.*** **shall mean telecommunications traffic in which the originating End User of one Party and the terminating End User of the other Party are:**

a. both physically located in the same ILEC Local Exchange Area as defined by the ILEC Local (or "General") Exchange Tariff on file with the applicable state commission or regulatory agency; or

b. both physically located within neighboring ILEC Local Exchange Areas that are within the same common mandatory local calling area. This includes but is not limited to, mandatory Extended Area Service (EAS), mandatory Extended Local Calling Service (ELCS), or other types of mandatory expanded local calling scopes.

AT&T proposed language is bolded and underlined
Intrado Comm proposed language is italicized and bolded

FOR NEGOTIATION PURPOSES ONLY

4.2 AT&T-OHIO made an offer (the "Offer") to all telecommunications carriers to exchange Section 251(b)(5) Traffic and ISP-Bound Traffic on and after the designated dates provided below pursuant to the terms and conditions of the FCC's interim ISP terminating compensation plan of the FCC's Order on Remand and Report and Order, In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Intercarrier Compensation for ISP-Bound Traffic, FCC 01-131, CC Docket Nos. 96-98, 99-68 (rel. April 27, 2001)) ("FCC ISP Compensation Order") which was remanded but not vacated in *WorldCom, Inc. v. FCC*, No. 01-1218 (D.C. Cir. 2002).

AT&T-OHIO and CLEC agree to carry out the FCC's interim ISP terminating compensation plan on the date designated by AT&T-OHIO in a particular state without waiving, and expressly reserving, all appellate rights to contest FCC, judicial, legislative, or other regulatory rulings regarding ISP-Bound traffic, including but not limited to, appeals of the FCC's ISP Compensation Order. By agreeing to this Appendix, both Parties reserve the right to advocate their respective positions before courts, state or federal commissions, or legislative bodies.

4.2.1 Should a regulatory agency, court or legislature change or nullify the AT&T-OHIO's designated date to begin billing under the FCC's ISP terminating compensation plan, then the Parties also agree that any necessary billing true ups, reimbursements, or other accounting adjustments shall be made symmetrically and to the same date that the FCC terminating compensation plan was deemed applicable to all traffic in that state exchanged under Section 251(b)(5) of the Act. By way of interpretation, and without limiting the application of the foregoing, the Parties intend for retroactive compensation adjustments, to the extent they are ordered by Intervening Law, to apply uniformly to all traffic among AT&T-OHIO, CLEC and Commercial Mobile Radio Service (CMRS) carriers in the state where traffic is exchanged ***to which Intervening Law applies as local calls within the meaning of this Appendix***.

4.2.2 Intentionally Omitted.

4.3 In AT&T-OHIO the rates, terms and conditions for compensation of Section 251(b)(5) Traffic, as defined in Section 4.1 and ISP-Bound Traffic, as defined in Section 5.1 will be compensated at the FCC's interim ISP terminating compensation rate as set forth in Section 5.3.2 below in a specific state on the later of (i) the Effective Date of this Agreement and (ii) the effective date of the offer in a particular state. The Parties acknowledge that AT&T-OHIO has made such offer in its respective states of (i) Indiana, Ohio, Texas and Wisconsin effective on and after June 1, 2003; (ii) Arkansas and Michigan effective on and after July 6, 2003; (iii) California effective on and after August 1, 2003; (iv) Illinois effective on and after September 1, 2003; and (v) Kansas, Missouri, Oklahoma and Nevada on and after June 1, 2004.

4.4 In instances where the originating carrier is originating telecommunications traffic over its own facilities, (i.e., not leased or purchased from AT&T-OHIO), the following tandem serving rate elements are applicable on a terminating MOU basis and includes compensation for the following sub-elements:

4.4.1 Tandem Switching - compensation for the use of tandem switching only consisting of a duration (per minute) rate element.

4.4.2 Tandem Transport - compensation for the transmission of traffic between the local tandem and the end offices subtending that tandem consisting of a transport termination (per minute) rate element and transport facility mileage (per minute, per mile) rate element.

4.4.3 End Office Switching in a Tandem Serving Arrangement - compensation for the local end office switching and line termination necessary to complete the transmission in a tandem-served arrangement. It consists of a call set-up rate (per message) and a call duration (per minute) rate.

4.5 In instances where the originating carrier is originating telecommunications traffic over its own facilities, (i.e., not leased or purchased from AT&T-OHIO), the following end office switching rate elements are applicable on a terminating MOU basis::

FOR NEGOTIATION PURPOSES ONLY

4.5.1 End Office Switching - compensation for the local end office switching and line termination necessary to complete the transmission in an end office serving arrangement. It consists of a call set-up rate (per message) and a call duration (per minute) rate.

4.6 CLEC shall only be paid End Office Serving Rate Elements.

4.7 Intercarrier Compensation for Wholesale Local Switching Traffic

4.7.1 Where CLEC purchases local switching from **AT&T-OHIO** on a wholesale basis, CLEC will deal directly with third party carriers for purposes of reciprocal compensation for calls originated by or terminated to the End Users served by such arrangements. **AT&T-OHIO** is required to provide CLEC with timely, complete and correct information to enable CLEC to meet the requirements of this section.

4.7.2 The following reciprocal compensation terms shall apply to all traffic exchanged between **AT&T-OHIO** and CLECs when CLEC purchases local switching from **AT&T-OHIO** on a wholesale basis:

4.7.2.1 For intra-switch Section 251(b)(5) Traffic and ISP-Bound Traffic exchanged between **AT&T-OHIO** and CLEC, the Parties agree to impose no call termination charges pertaining to reciprocal compensation on each other.

4.7.2.2 For interswitch Section 251(b)(5) Traffic and ISP-Bound Traffic exchanged between **AT&T-OHIO** and CLEC where CLEC's End User originates a call that is terminated to a **AT&T-OHIO** End User, such traffic shall be paid for reciprocally at the FCC Plan rate set forth in Section 5.3.2 for the transport and termination of Section 251(b)(5) Traffic, and ISP-Bound Traffic.

4.7.3 Intentionally Omitted.

5. RATES, TERMS AND CONDITIONS OF FCC'S INTERIM ISP TERMINATING COMPENSATION PLAN

5.1 In accordance with the FCC's Order on Remand and Report and Order, In the Matter of Implementation of the Local Compensation Provisions in the Telecommunications Act of 1996, Intercarrier Compensation for ISP-Bound Traffic, FCC 01-131, CC Docket Nos. 96-98, 99-68 (rel. April, 27, 2001) ("FCC ISP Compensation Order"), "ISP-Bound Traffic" shall mean telecommunications traffic exchanged between CLEC and **AT&T-OHIO** ***as defined in the FCC ISP Compensation Order*** **in which the originating End User of one Party and the ISP served by the other Party are:**

a. **both physically located in the same ILEC Local Exchange Area as defined by the ILEC's Local (or "General") Exchange Tariff on file with the applicable state commission or regulatory agency; or**

b. **both physically located within neighboring ILEC Local Exchange Areas that are within the same common mandatory local calling area. This includes, but it is not limited to, mandatory Extended Area Service (EAS), mandatory Extended Local Calling Service (ELCS) or other types of mandatory expanded local calling scopes.**

In states in which **AT&T-OHIO** has offered to exchange Section 251(b)(5) Traffic and ISP-Bound traffic pursuant to the FCC's interim ISP terminating compensation plan set forth in the FCC ISP Compensation Order, traffic is presumed to be ISP-Bound Traffic in accordance with the rebuttable presumption set forth in Section 5.4 of this Appendix.

5.2 The Parties hereby agree that the following rates, terms and conditions set forth in Section 5 shall apply to the termination of all Section 251(b)(5) Traffic and all ISP-Bound Traffic exchanged between the Parties in each of the applicable state(s) **AT&T-OHIO** has made an offer as described in Section 4 above effective on the later of (i) the Effective Date of this Agreement and (ii) the effective date of the offer in the particular state and all ISP-Bound Traffic is subject to the rebuttable presumption.

AT&T proposed language is bolded and underlined
Intrado Comm proposed language is italicized and bolded

FOR NEGOTIATION PURPOSES ONLY

5.3 Intercarrier Compensation for all ISP-Bound Traffic and Section 251(b)(5) Traffic

5.3.1 The rates, terms, and conditions in Section 5 apply to the termination of all Section 251(b)(5) Traffic as defined in Section 4.1 and ISP-Bound Traffic as defined in Section 5.1 and ISP-Bound Traffic is subject to the rebuttable presumption.

5.3.2 The Parties agree to compensate each other for the transport and termination of all Section 251(b)(5) and ISP-Bound Traffic and traffic on a minute of use basis, at $.0007 per minute of use.

5.3.3 Payment of Intercarrier Compensation on ISP-Bound Traffic and Section 251(b)(5) Traffic will not vary according to whether the traffic is routed through a tandem switch or directly to an end office switch.

5.4 ISP-Bound Traffic Rebuttable Presumption

5.4.1 In accordance with Paragraph 79 of the FCC's ISP Compensation Order, the Parties agree that there is a rebuttable presumption that any of the combined Section 251(b)(5) Traffic and ISP-Bound Traffic exchanged between the Parties exceeding a 3:1 terminating to originating ratio is presumed to be ISP-Bound Traffic subject to the compensation terms in this Section 5.4. Either Party has the right to rebut the 3:1 ISP-Bound Traffic presumption by identifying the actual ISP-Bound Traffic by any means mutually agreed by the Parties, or by any method approved by the Commission. If a Party seeking to rebut the presumption takes appropriate action at the Commission pursuant to Section 252 of the Act and the Commission agrees that such Party has rebutted the presumption, the methodology and/or means approved by the Commission for use in determining the ratio shall be utilized by the Parties as of the date of the Commission approval. During the pendency of any such proceedings to rebut the presumption, the Parties will remain obligated to pay the rates set forth in Section 5.3.2 for Section 251(b)(5) Traffic and ISP-Bound Traffic.

5.5 For purposes of this Section 5.5, all Section 251(b)(5) Traffic and all ISP-Bound Traffic shall be referred to as "Billable Traffic" and will be billed in accordance with Section 13.0 below.

5.5.1 Each Party will invoice the other Party on a monthly basis for combined Section 251(b)(5) Traffic and ISP-Bound Traffic exchanged between the Parties at the rate set forth in Section 5.3.2.

6. OTHER TELECOMMUNICATIONS TRAFFIC

6.1 Except as set forth in Section 5 above, the terms of this appendix are not applicable to (i) interstate or intrastate Exchange Access traffic, (ii) Information Access traffic, or (iii) any other type of traffic found to be exempt from reciprocal compensation by the FCC or the Commission, with the exception of ISP-Bound Traffic which is addressed in this Appendix. All Exchange Access traffic and IntraLATA Toll Traffic shall continue to be governed by the terms and conditions of the applicable federal and state tariffs.

6.2 Foreign Exchange (FX) services are retail service offerings purchased by FX customers which allow such FX customers to obtain exchange service from a mandatory local calling area other than the mandatory local calling area where the FX customer is physically located, but within the same LATA as the number that is assigned. FX service enables particular end-user customers to avoid what might otherwise be toll calls between the FX customer's physical location and customers in the foreign exchange. FX Telephone Numbers" are those telephone numbers with rating and routing point that are different from those of the geographic area in which the End User is physically located. FX Telephone Numbers that deliver second dial tone and the ability for the calling party to enter access codes and an additional recipient telephone number remain classified as Feature Group A (FGA) calls, and are subject to the originating and terminating carrier's tariffed Switched Exchange Access rates (also known as "Meet Point Billed" compensation). There are two types of FX service:

6.2.1 "Dedicated FX Traffic" shall mean those calls routed by means of a physical, dedicated circuit delivering dial tone or otherwise serving an End User's station from a serving Central Office (also

FOR NEGOTIATION PURPOSES ONLY

known as End Office) located outside of that station's mandatory local calling area. Dedicated FX Service permits the End User physically located in one exchange to be assigned telephone numbers resident in the serving Central (or End) Office in another, "foreign," exchange, thereby creating a local presence in that "foreign" exchange.

6.2.2 "Virtual Foreign Exchange (FX) Traffic" and "FX-type Traffic" shall refer to those calls delivered to telephone numbers that are rated as local to the other telephone numbers in a given mandatory local calling area, but where the recipient End User's station assigned that telephone number is physically located outside of that mandatory local calling area. Virtual FX Service also permits an End User physically located in one exchange to be assigned telephone numbers resident in the serving Central (or End) Office in another, "foreign," exchange, thereby creating a local presence in the "foreign" exchange. Virtual FX Service differs from Dedicated FX Service, however, in that Virtual FX End Users continue to draw dial tone or are otherwise served from a Central (or End) Office which may provide service across more than one Commission-prescribed mandatory local calling area, whereas Dedicated FX Service End Users draw dial tone or are otherwise served from a Central (or End) Office located outside their mandatory calling area.

6.2.3 FX Traffic is not Section 251(b)(5) Traffic and instead the transport and termination compensation for FX Traffic is subject to a Bill and Keep arrangement in **AT&T-OHIO**.

6.2.3.1 To the extent that ISP-Bound Traffic is provisioned via an FX-type arrangement, such traffic is subject to a Bill and Keep arrangement. "Bill and Keep" refers to an arrangement in which neither of two interconnecting parties charges the other for terminating FX traffic that originates on the other party's network.

6.2.4 Intentionally left blank

6.2.5 Intentionally Omitted.

6.2.6 Segregating and Tracking FX Traffic

6.2.6.1 For **AT&T-OHIO**, the terminating carrier is responsible for separately identifying IntraLATA Virtual FX, Dedicated FX, and FX-type Traffic from other types of Intercarrier traffic for compensation purposes. The terminating carrier will be responsible for providing the originating carrier with an FX Usage Summary which includes a ten (10) digit telephone number level detail of the minutes of use terminated to FX Telephone Numbers on its network each month (or in each applicable billing period, if not billed monthly), or by any means mutually agreed by the Parties.

6.2.6.2 Terminating carrier will not assess compensation charges to the Voice FX MOU and ISP FX MOU in **AT&T-OHIO**.

6.2.6.3 Intentionally left blank

6.2.6.4 Intentionally Omitted.

6.2.6.5 Either Party may request an audit of the FX Usage Summary or the FX Factor on no fewer than thirty (30) business day's written notice and any audit shall be accomplished during normal business hours at the office of the Party being audited. Such audit must be performed by a mutually agreed-to auditor paid for by the Party requesting the audit. Such audits shall be requested within six months of having received the FX Usage Summary or the FX Factor and associated usage from the other Party and may not be requested more than twice per year, once per calendar year, unless the audit finds there has been a 20% or higher net error or variance in calculations, in which case a subsequent audit is required. Based upon the audit, previous compensation, billing and/or settlements will be adjusted for the past six (6) months.

AT&T proposed language is bolded and underlined
Intrado Comm proposed language is italicized and bolded

FOR NEGOTIATION PURPOSES ONLY

6.2.6.5.1 If the FX factor is adjusted based upon the audit results, the adjusted FX factor will apply for the six (6) month period following the completion of the audit. If, as a result of the audit, either Party has overstated the FX factor or underreported the FX Usage by twenty percent (20%) or more, that Party shall reimburse the auditing Party for the cost of the audit and will pay for the cost of a subsequent audit which is to happen within nine (9) months of the initial audit.

6.3 Private Line Services include private line-like and special access services and are not subject to intercarrier compensation. Private Line Services are defined as a digital point-to-point connection that provides a dedicated circuit of pre-subscribed bandwidth between any two points. Private Line Services are used to consolidate communications over one line for voice, data, video and multimedia.

6.4 The Parties recognize and agree that ISP and Internet traffic (excluding ISP-Bound Traffic as defined in Section 5.1) could also be exchanged outside of the applicable local calling scope, or routed in ways that could make the rates and rate structure in Sections 4 and 5 above not apply, including but not limited to ISP calls that fit the underlying Agreement's definitions of:

- FX Traffic
- Optional EAS Traffic
- IntraLATA Toll Traffic
- 800, 888, 877, ("8YY") Traffic
- Feature Group A Traffic
- MCA Traffic

6.5 The Parties agree that, for the purposes of this Appendix, either Party's End Users remain free to place ISP calls under any of the above classifications. Notwithstanding anything to the contrary herein, to the extent such ISP calls are placed, the Parties agree that Sections 4 and 5 above do not apply. The applicable rates, terms and conditions for: (a) FX Traffic are set forth in Section 6.2; (b) Optional EAS Traffic are set forth in Section 7; (c) 8YY Traffic are set forth in Section 10; (d) Feature Group A Traffic are set forth in Section 6.2; (e) IntraLATA Toll Traffic are set forth in Section 12; and/or (f) MCA Traffic are set forth in Section 8.

7. Intentionally Omitted.

8. Intentionally Omitted.

9. PRIMARY TOLL CARRIER ARRANGEMENTS

9.1 A Primary Toll Carrier (PTC) is a company that provides IntraLATA Toll Traffic Service for its own End User customers and potentially for a third party ILEC's End User customers. In this ILEC arrangement, the PTC would receive the ILEC End User IntraLATA toll traffic revenues and pay the ILEC for originating these toll calls (originating access and billing & collection charges). The PTC would also pay the terminating access charges on behalf of the ILEC. In those states wherein Primary Toll Carrier arrangements are mandated and **AT&T-OHIO** is functioning as the PTC for a third party ILEC's End User customers, the following provisions apply to the IntraLATA toll traffic which is subject to the PTC arrangement:

(i) **AT&T-OHIO** shall deliver such IntraLATA toll traffic that originated from that third party ILEC and terminated to CLEC as the terminating carrier in accordance with the terms and conditions of such PTC arrangement mandated by the respective state Commission. **AT&T-OHIO** shall pay the CLEC on behalf of the originating third party ILEC for the termination of such IntraLATA toll traffic at the terminating access rates as set forth in the CLEC's Intrastate Access Service Tariff, but such

FOR NEGOTIATION PURPOSES ONLY

compensation shall not exceed the compensation contained in the **AT&T-OHIO** Intrastate Access Service Tariff in the respective state; and/or

(ii) **AT&T-OHIO** shall deliver such IntraLATA toll traffic that originated from CLEC and terminated to third party ILEC in accordance with the terms and conditions of such PTC arrangement mandated by the respective state Commission. CLEC shall pay **AT&T-OHIO** for the use of its facilities at the rates set forth in **AT&T-OHIO**'s Intrastate Access Service Tariff. CLEC shall pay the ILEC for the termination of such traffic originated from CLEC.

10. INTRALATA 800 TRAFFIC

10.1 The Parties shall provide to each other IntraLATA 800 Access Detail Usage Data for Customer billing and IntraLATA 800 Copy Detail Usage Data for access billing in Exchange Message Interface (EMI) format. On a monthly basis the Parties agree to provide this data to each other at no charge. In the event of errors, omissions, or inaccuracies in data received from either Party, the liability of the Party providing such data shall be limited to the provision of corrected data only. If the originating Party does not send an End User billable record to the terminating Party, the originating Party will not bill the terminating Party any interconnection charges for this traffic.

10.2 IntraLATA 800 Traffic calls are billed to and paid for by the called or terminating Party, regardless of which Party performs the 800 query.

11. MEET POINT BILLING (MPB) AND SWITCHED ACCESS TRAFFIC COMPENSATION

11.1 Intercarrier compensation for Switched Access Traffic shall be on a Meet Point Billing ("MPB") basis as described below.

11.2 The Parties will establish MPB arrangements in order to provide Switched Access Services via the respective carrier's Tandem Office Switch in accordance with the MPB guidelines contained in the Ordering and Billing Forum's MECOD and MECAB documents, as amended from time to time.

11.3 Billing for the Switched Exchange Access Services jointly provided by the Parties via MPB arrangements shall be according to the multiple bill/single tariff method. As described in the MECAB document, each Party will render a bill in accordance with its own tariff for that portion of the service it provides. Each Party will bill its own network access service rates. The residual interconnection charge (RIC), if any, will be billed by the Party providing the end office function.

11.4 The Parties will maintain provisions in their respective federal and state access tariffs, or provisions within the National Exchange Carrier Association (NECA) Tariff No. 4, or any successor tariff, sufficient to reflect this MPB arrangement, including MPB percentages.

11.5 As detailed in the MECAB document, the Parties will exchange all information necessary to accurately, reliably and promptly bill third parties for Switched Access Services traffic jointly handled by the Parties via the Meet Point Billing arrangement. Information shall be exchanged in a mutually acceptable electronic file transfer protocol. Where the EMI records cannot be transferred due to a transmission failure, records can be provided via a mutually acceptable medium. The exchange of Access Usage Records ("AURs") to accommodate MPB will be on a reciprocal, no charge basis. Each Party agrees to provide the other Party with AURs based upon mutually agreed upon intervals.

11.6 MPB shall also apply to all jointly provided Switched Access MOU traffic bearing the 900, or toll free NPAs (e.g., 800, 877, 866, 888 NPAs, or any other non-geographic NPAs). The Party that performs the SSP function (launches the query to the 800 database) will bill the 800 Service Provider for this function.

11.7 Each Party will act as the Official Recording Company for switched access usage when it is jointly provided between the Parties. As described in the MECAB document, the Official Recording Company for tandem

FOR NEGOTIATION PURPOSES ONLY

routed traffic is: (1) the end office company for originating traffic, (2) the tandem company for terminating traffic and (3) the SSP company for originating 800 traffic.

11.8 AT&T-OHIO and CLEC agree to provide the other Party with notification of any discovered errors in the record exchange process within ten (10) business days of the discovery.

11.9 In the event of a loss of data, both Parties shall cooperate to reconstruct the lost data within sixty (60) days of notification and if such reconstruction is not possible, shall accept a reasonable estimate of the lost data, based upon no more than three (3) to twelve (12) consecutive months of prior usage data.

12. COMPENSATION FOR ORIGINATION AND TERMINATION OF INTERLATA TRAFFIC

12.1 Where a CLEC originates or terminates its own end user InterLATA Traffic not subject to Meet Point Billing, the CLEC must purchase feature group access service from AT&T-OHIO state or federal access tariffs, whichever is applicable, to carry such InterLATA Traffic.

13. INTRALATA TOLL TRAFFIC COMPENSATION

13.1 For intrastate IntraLATA Message Telephone Service (MTS) toll traffic, compensation for termination of such traffic will be at terminating access rates. For intrastate IntraLATA 800 Service, compensation for termination of such traffic will be at originating access rates, including the Carrier Common Line (CCL) charge where applicable. The appropriate access rates are set forth in each Party's Intrastate Access Service Tariff, but such compensation shall not exceed the compensation contained in an AT&T-OHIO's tariff in whose exchange area the End User is located.

13.2 For interstate IntraLATA MTS toll traffic, compensation for termination of such traffic will be at terminating access rates. For interstate IntraLATA 800 Service, compensation for termination of such traffic will be originating access rates, including the CCL charge where applicable. The appropriate access rates are set forth in each Party's interstate Access Service Tariff, but such compensation shall not exceed the compensation contained in the AT&T-OHIO's tariff in whose exchange area the End User is located.

14. BILLING ARRANGEMENTS FOR TERMINATION OF SECTION 251(b)(5) TRAFFIC, ISP-BOUND TRAFFIC, OPTIONAL EAS TRAFFIC AND INTRALATA TOLL TRAFFIC

14.1 In AT&T-OHIO, each Party, unless otherwise agreed, will calculate terminating interconnection minutes of use based on standard switch recordings made within the terminating carrier's network for Section 251(b)(5) Traffic, Optional EAS Traffic, ISP-Bound Traffic and IntraLATA Toll Traffic. These recordings are the basis for each Party to generate bills to the other Party.

14.1.1 Where CLEC is using terminating recordings to bill intercarrier compensation, AT&T-OHIO will provide the terminating Category 11-01-XX records by means of the Daily Usage File (DUF) to identify traffic that originates from an End User being served by a third party telecommunications carrier using an AT&T-OHIO non-resale offering whereby AT&T-OHIO provides the end office switching on a wholesale basis. Such records will contain the Operating Company Number (OCN) of the responsible LEC that originated the calls which CLEC may use to bill such originating carrier for MOUS terminated on CLEC's network.

14.2 Intentionally Omitted.

14.3 In states in which AT&T-OHIO has offered to exchange Section 251(b)(5) Traffic and ISP-Bound traffic pursuant to the FCC's interim ISP terminating compensation plan set forth in the FCC ISP Compensation Order, ISP-Bound Traffic will be calculated using the 3:1 Presumption as set forth in Section 5.4 of this Appendix.

14.4 The measurement of minutes of use over Local Interconnection Trunk Groups shall be in actual conversation seconds. The total conversation seconds over each individual Local Interconnection Trunk

FOR NEGOTIATION PURPOSES ONLY

Group will be totaled for the entire monthly bill and then rounded ~~using six (6) second increments~~ to the next whole minute.

14.5 All ISP-Bound Traffic for a given usage month shall be due and owing at the same time as payments for Section 251(b)(5) under this Appendix. The Parties agree that all terms and conditions regarding disputed minutes of use, nonpayment, partial payment, late payment, interest on outstanding balances, or other billing and payment terms shall apply to ISP-Bound Traffic the same as for Section 251(b)(5) Traffic under this Appendix.

14.6 For billing disputes arising from Intercarrier Compensation charges, the Party challenging the disputed amounts (the "Non-Paying Party") may withhold payment for the amounts in dispute (the "Disputed Amounts") from the Party rendering the bill (the "Billing Party") only for so long as the dispute remains pending pursuant to the dispute resolution procedures of the General Terms and Conditions. Late payment charges and interest will continue to accrue on the Disputed Amounts while the dispute remains pending. The Non-Paying Party need not pay late payment charges or interest on the Disputed Amounts for so long as the dispute remains pending pursuant to the dispute resolution procedures of the General Terms and Conditions. Upon resolution of the dispute pertaining to the Disputed Amounts in accordance with the dispute resolution provisions of the General Terms and Conditions: (1) the Non-Paying Party will remit the appropriate Disputed Amounts to the Billing Party, together with all related interest and late payment charges, to the Billing Party within ten (10) business days of the resolution of the dispute, if (and to the extent) the dispute is resolved in favor of the Billing Party; and/or (2) the Billing Party will render all appropriate credits and adjustments to the Non-Paying Party for the Disputed Amounts, together with all appropriate interest and late payment charges, within ten (10) business days of the resolution of the dispute, if (and to the extent) the dispute is resolved in favor of the Non-Paying Party.

14.7 In the event of a loss of data, both Parties shall cooperate to reconstruct the lost data within sixty (60) days of notification and if such reconstruction is not possible, shall accept a reasonable estimate of the lost data, based upon no more than three (3) to twelve (12) consecutive months of prior usage data.

15. RESERVATION OF RIGHTS AND SPECIFIC INTERVENING LAW TERMS

15.1 In the event the pricing scheme in the FCC's Interim ISP Compensation Order (defined in Section 5 of this Attachment) is modified, eliminated or replaced, then the Parties agree to negotiate an appropriate amendment to conform to such change in accordance with the Intervening Law provisions of this Agreement and such new or changed provisions will apply on a prospective basis, beginning with the effective date of the new order, unless a determination is made as to retroactive application in the decision rendering such modification, elimination or replacement, in which instance, the new or changed provisions will apply retroactively as set forth in the new order. Either Party may begin billing the other Party according to the terms of the new order, beginning sixty (60) days after delivering a request to negotiate the change. True-up of any retroactive application, for either the amendment negotiation period and/or for the retroactive application period that is provided for in the order, shall occur within one hundred and twenty (120) days of the effective date of the order, or be subject to dispute under Section 9 of the General Terms and Conditions of this Agreement.

16. SWITCHED ACCESS TRAFFIC

16.1 For purposes of this Agreement only, Switched Access Traffic shall ***be defined consistent with Applicable Law.*** **mean all traffic that originates from an End User physically located in one local exchange and delivered for termination to an End User physically located in a different local exchange (excluding traffic from exchanges sharing a common mandatory local calling area as defined in AT&T-13STATE's local exchange tariffs on file with the applicable state commission) including, without limitation, any traffic that (i) terminates over a Party's circuit switch (including traffic from a service that originates over a circuit switch and uses Internet Protocol (IP) transport**

FOR NEGOTIATION PURPOSES ONLY

technology (regardless of whether only one provider uses IP transport or multiple providers are involved in providing IP transport) and/or (ii) originates from the End User's premises in IP format and is transmitted to the switch of a provider of voice communication applications or services when such switch utilizes IP technology. Notwithstanding anything to the contrary in this Agreement To *the extent required by Applicable Law*, all Switched Access Traffic shall be delivered to the terminating Party over feature group access trunks per the terminating Party's access tariff(s) and shall be subject to applicable intrastate and interstate switched access charges; provided, however, the following categories of Switched Access Traffic are not subject to the above stated requirement relating to routing over feature group access trunks:

(i) IntraLATA toll Traffic or Optional EAS Traffic from a CLEC End User that obtains **local dial tone *telephone exchange service*** from CLEC where CLEC is both the Section 251(b)(5) Traffic provider and the IntraLATA toll provider,

(ii) IntraLATA toll Traffic or Optional EAS Traffic from an AT&T End User that obtains **local dial tone *telephone exchange service*** from AT&T where AT&T is both the Section 251(b)(5) Traffic provider and the IntraLATA toll provider;

(iii) Switched Access Traffic delivered to AT&T from an Interexchange Carrier (IXC) where the terminating number is ported to another CLEC and the IXC fails to perform the Local Number Portability (LNP) query; and/or

(iv) Switched Access Traffic delivered to either Party from a third party competitive local exchange carrier over interconnection trunk groups carrying Section 251(b)(5) Traffic and ISP-Bound Traffic (hereinafter referred to as "Local Interconnection Trunk Groups") destined to the other Party.

Notwithstanding anything to the contrary in this Agreement, each Party reserves it rights, remedies, and arguments relating to the application of switched access charges for traffic exchanged by the Parties prior to the Effective Date of this Agreement and described in the FCC's Order issued in the Petition for Declaratory Ruling that AT&T's Phone-to-Phone IP Telephony Services Exempt from Access Charges, WC Docket No. 01-361(Released April 21, 2004) **or any other FCC orders or applicable court decisions addressing the treatment of traffic for purposes of the charges applicable to Switched Access Traffic.**

16.2 In the limited circumstances in which a third party competitive local exchange carrier delivers Switched Access Traffic as described in Section 15.1 (iv) above to either Party over Local Interconnection Trunk Groups, such Party may deliver such Switched Access Traffic to the terminating Party over Local Interconnection Trunk Groups. If it is determined that such traffic has been delivered over Local Interconnection Trunk Groups ***inconsistent with Applicable Law***, the terminating Party may object to the delivery of such traffic by providing written notice to the delivering Party pursuant to the notice provisions set forth in the General Terms and Conditions and request removal of such traffic. The Parties will work cooperatively to identify the traffic with the goal of removing such traffic from the Local Interconnection Trunk Groups. **If the delivering Party has not removed or is unable to remove such Switched Access Traffic as described in Section 15.1(iv) above from the Local Interconnection Trunk Groups within sixty (60) days of receipt of notice from the other party, the Parties agree to jointly file a complaint or any other appropriate action with the applicable Commission to seek any necessary permission to remove the traffic from such interconnection trunks up to and including the right to block such traffic and to obtain compensation, if appropriate, from the third party competitive local exchange carrier delivering such traffic to the extent it is not blocked.**

17. ALTERNATE TANDEM PROVIDER

17.1 An Alternate Tandem Provider shall mean a Telecommunications Carrier, with no End Users, that provides tandem switching services to CLEC with whom it is directly interconnected for the purpose of delivering Third Party Originating Carrier traffic via direct interconnection arrangements with **AT&T-OHIO** to (i)

FOR NEGOTIATION PURPOSES ONLY

AT&T-OHIO's End User; (ii) to an End User of a Third Party Terminating Carrier that utilizes local switching from AT&T-OHIO purchased on a wholesale basis to provide service to its End Users; and/or (iii) a Third Party Terminating Carrier's End User.

17.2 "Third Party Originating Carrier" means a Competitive Local Exchange Carrier (CLEC), Incumbent Local Exchange Carrier (ILEC), Commercial Mobile Radio Service (CMRS) provider and/or Out-of Exchange Local Exchange Carrier (OE-LEC) that sends traffic originated by its End Users to an Alternate Tandem Provider.

17.3 Third Party Terminating Carrier shall mean Competitive Local Exchange Carrier (CLEC), Incumbent Local Exchange Carrier (ILEC), Commercial Mobile Radio Service (CMRS) provider, Out-of Exchange Local Exchange Carrier (OE-LEC), AT&T-OHIO as the Incumbent Local Exchange Carrier (ILEC) or a Carrier that utilizes local switching from AT&T-OHIO purchased on a wholesale basis to provide service to its End Users, to which traffic is terminated when CLEC uses an Alternate Tandem Provider.

17.4 When Alternate Tandem Provider sends Traffic originated by the End Users of CLEC functioning as the Third Party Originating Carrier to an End User of AT&T-OHIO who is functioning as the Third Party Terminating Carrier, CLEC is responsible for all Minutes of Use ("MOUs") billed by AT&T-OHIO for the termination of such traffic.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition by Intrado Communications, Inc. for arbitration of certain rates, terms, and conditions for interconnection and related arrangements with BellSouth Telecommunications, Inc. d/b/a AT&T Florida, pursuant to Section 252(b) of the Communications Act of 1934, as amended, and Sections 120.80(13), 120.57(1), 364.15, 364.16, 364.161, and 364.162, F.S., and Rule 28-106.201, F.A.C.	DOCKET NO. 070736-TP DATED: JULY 1, 2008

INTRADO COMMUNICATIONS INC.'S RESPONSES TO FPSC STAFF'S THIRD REQUEST FOR PRODUCTION OF DOCUMENTS (Nos. 19-36)

Intrado Communications Inc. ("Intrado Comm"), by its attorneys, hereby respectfully responds to the Florida Public Service Commission ("Commission") Staff's Third Request for Production of Documents (Nos. 19-36) as follows:

19. Please provide all source documents, including cost data and any assumptions, supporting the derivation of the rates contained in TH-8 attached to Intrado witness Hicks' rebuttal testimony.

None.

20. Please provide the D.C. Circuit review of the FCC's ISP Remand Order referenced in response to staff Interrogatory 9(a).

Based on Intrado Comm's assumption that this request pertains to Intrado Comm's response to Staff Interrogatory 8(a), the following documents are attached:

WorldCom, Inc. v. FCC, 288 F.3d 429 (D.C. Cir. 2002), *petition for reh'g and reh'g en banc denied* (Sept. 24, 2002), *cert. denied sub nom*, 123 S. Ct. 1927 (2003) (Attachment 20).

21. Please provide all documents referenced in response to staff Interrogatory 9(i).

Intrado Comm provides the following documents as indicated in its response to Staff Interrogatory 9(i):

Madison River Communications, LLC and Affiliated Companies, Order, 20 FCC Rcd 4295 (2005) (Attachment 21a)

000582

OCMC, Inc.; Apparent Liability for Forfeiture, Notice of Apparent Liability for Forfeiture, 20 FCC Rcd 14160 (2005) (Attachment 21b)

Bell Atlantic-Delaware, et al., Complainants, v. Frontier Communications Services, Inc., et al., Defendants; and Ameritech Illinois, Pacific Bell, et al., Complainants, v. Frontier Communications Services, Inc., Defendants, Order on Review, 15 FCC Rcd 7475 (2000) (Attachment 21c)

MGC Communications, Inc. v. AT&T Corp., 14 FCC Rcd 11647 (1999) (Attachment 21d)

In the Matter of Communique Telecommunications, Inc. d/b/a LOGICALL, Declaratory Ruling and Order, 10 FCC Rcd 10399 (1995) (Attachment 21e)

22. Please provide all documents responsive to staff Interrogatory 13(b).

is frivolous. The government sued both TDC and Monts as named defendants. *TDC I*, 24 F.3d at 294. In granting the government's motion for summary judgment as to liability, the district court in its March 2000 memorandum opinion and order referred only to TDC and neglected to mention Monts by name. However, in its February 2001 memorandum opinion awarding damages, the district court referenced its March 2000 memorandum and order on liability as granting summary judgment "against defendants TDC Management Corporation ('TDC') and T. Conrad Monts." Further, in granting the government's cross-motion in response to TDC's Rule 60 motion, the district court stated that the final judgment applied to both TDC and Monts, "each of whom shall be jointly and severally liable to the United States."

Accordingly, we affirm the grant of summary judgment to the government.

WORLDCOM, INC., Petitioner,

v.

FEDERAL COMMUNICATIONS COMMISSION and United States of America, Respondents.

Sprint Corporation, et al., Intervenors.

Nos. 01–1218, 01–1229, 01–1243, 01–1255 through 01–1257, 01–1267, 01–1274, 01–1310, 01–1311, 01–1313, 01–1319, 01–1321.

United States Court of Appeals, District of Columbia Circuit.

Argued Feb. 12, 2002.

Decided May 3, 2002.

Group of competitive local exchange carriers (LECs) that delivered calls to internet service providers (ISP), and group of states and state regulatory commissions, petitioned for review of Federal Communications Commission (FCC) order, 2001 WL 455869, creating exception to reciprocal compensation requirement under the Telecommunications Act for calls made to ISPs located within the caller's local calling area. The Court of Appeals, Stephen F. Williams, Senior Circuit Judge, held that order was not authorized by section of Act which provided for continued enforcement of certain pre-Act regulatory interconnection restrictions and obligations until they are superceded by FCC action.

Remanded.

Telecommunications ⇐267

Section of Telecommunications Act, which provided for continued enforcement of certain pre-Act regulatory interconnection restrictions and obligations until they are superceded by Federal Communications Commission (FCC) action, did not authorize FCC order creating exception to Act's reciprocal compensation requirement for calls made to ISPs located within the caller's local calling area. Communications Act of 1934, § 251(b)(5), (g), as amended, 47 U.S.C.A. § 251(b)(5), (g).

On Petitions for Review of an Order of the Federal Communications Commission.

Darryl M. Bradford argued the cause for Carrier petitioners and supporting intervenors. With him on the briefs were Thomas F. O'Neil III, William Single, IV, Brian J. Leske, John J. Hamill, Jodie L. Kelley, Mark C. Rosenblum, H. Richard Juhnke, John T. Nakahata, Timothy J. Simeone, Christopher W. Savage, David W.

Carpenter, David L. Lawson, Paul J. Zidlicky, Thomas Jones, Glenn B. Manishin, Genevieve Morelli, Richard J. Metzger, Brad Mutschelknaus, Richard M. Rindler, Charles C. Hunter, Catherine M. Hannan, Robert J. Aamoth, Deborah M. Royster and Albert H. Kramer. James P. Young entered an appearance.

James B. Ramsay argued the cause for State Commission petitioners and supporting intervenors. With him on the briefs were Gretchen Dumas, Ellen S. LeVine, Lawrence G. Malone, Diane T. Dean, Susan Stevens Miller, Tracey L. Stokes, Betty D. Montgomery, Attorney General, State of Ohio, Duane W. Luckey and Steven T. Nourse, Assistant Attorneys General. Carl F. Patka entered an appearance.

John A. Rogovin, Deputy General Counsel, Federal Communications Commission, argued the cause for respondents. With him on the brief were John E. Ingle, Deputy Associate General Counsel, and Laurence N. Bourne and Rodger D. Citron, Counsel. Catherine G. O'Sullivan and Nancy C. Garrison, Attorneys, U.S. Department of Justice, entered appearances.

Mark L. Evans argued the cause for intervenors BellSouth Corporation, et al. With him on the brief were Michael K. Kellogg, Sean A. Lev, Aaron M. Panner, Scott H. Angstreich, Roger K. Toppins, Gary L. Phillips, James D. Ellis, Michael E. Glover, Edward H. Shakin, John M. Goodman, Lawrence E. Sarjeant, Linda L. Kent, John W. Hunter and Julie E. Rones.

Howard J. Symons, Sara F. Leibman and Douglas I. Brandon were on the brief for intervenor AT&T Wireless Services, Inc. Michelle M. Mundt entered an appearance.

Before: SENTELLE and TATEL, Circuit Judges, and WILLIAMS, Senior Circuit Judge.

Opinion for the Court filed by Senior Circuit Judge WILLIAMS.

STEPHEN F. WILLIAMS, Senior Circuit Judge:

Section 251(b)(5) of the Telecommunications Act of 1996, 47 U.S.C. §§ 151–714 (the "1996 Act" or the "Act"), directs all local exchange carriers ("LECs") to "establish reciprocal compensation arrangements for the transport and termination of telecommunications." 47 U.S.C. § 251(b)(5). In the order before us the Federal Communications Commission held that under § 251(g) of the Act it was authorized to "carve out" from § 251(b)(5) calls made to internet service providers ("ISPs") located within the caller's local calling area. It relied entirely on § 251(g). Because that section is worded simply as a transitional device, preserving various LEC duties that antedated the 1996 Act until such time as the Commission should adopt new rules pursuant to the Act, we find the Commission's reliance on § 251(g) precluded. Thus we remand the case. Because there may well be other legal bases for adopting the rules chosen by the Commission for compensation between the originating and the terminating LECs in calls to ISPs, we neither vacate the order nor address petitioners' attacks on various interim provisions devised by the Commission.

* * *

Due in part to the 1996 Act, local telephone service areas are now typically (perhaps universally) served by more than one LEC. The reciprocal compensation requirement of § 251(b)(5), quoted above, is aimed at assuring compensation for the LEC that completes a call originating within the same area. Although its literal language purports to extend reciprocal compensation to *all* "telecommunications," the Commission has construed it as limited

to "local" traffic only. *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, 11 FCC Rcd 15499, 16012–13, ¶¶ 1033–34, 16015–16, ¶ 1040, 1996 WL 452885 (1996) ("*Local Competition Order*"); 47 C.F.R. § 51.701(a). For long distance calls, by contrast, the long-distance carrier collects from the user and pays both LECs—the one originating and the one terminating the call. *Local Competition Order*, 11 FCC Rcd at 16013, ¶ 1034.

In an earlier order, the Commission excluded ISP calls from the reach of § 251(b)(5) on the theory that they were indeed not "local." *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Inter-Carrier Compensation for ISP-Bound Traffic*, 14 FCC Rcd 3689, 1999 WL 98037 (1999) ("*Initial Order*"). It reached this conclusion by applying its "end-to-end" analysis, traditionally employed in determining whether a call was jurisdictionally interstate or not, stressing that ISP-bound traffic ultimately reaches websites that are typically located out-of state. See *id.* at 3689–90, ¶ 1, 3695–98, ¶¶ 10–12, 3703, ¶ 23 (1999). On review, we held that the order had failed to adequately explain why the traditional "end-to-end" jurisdictional analysis was relevant to deciding whether ISP calls fitted the local call or the long-distance call model, and vacated and remanded the order. *Bell Atlantic Tel. Cos. v. FCC*, 206 F.3d 1, 5, 8 (D.C.Cir.2000).

On remand, the FCC again reached the conclusion that the compensation between two LECs involved in delivering internet-bound traffic to an ISP should not be governed by the reciprocal compensation provision of § 251(b)(5). *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, Intercarrier Compensation for ISP-Bound Traffic*, 16 FCC Rcd 9151, 9152–53, ¶ 1 (2001) ("*Remand Order*"). This decision rested, as we said, on § 251(g). Having thus taken ISP calls out of § 251(b)(5)'s reciprocal compensation obligation, the FCC proceeded to establish what it believed was an appropriate cost recovery mechanism. *Remand Order*, 16 FCC Rcd at 9154, ¶ 4. The system adopted was "bill-and-keep," whereby each carrier recovers its costs from its own end-users. *Id.*

In reaching the bill-and-keep solution, the Commission pointed to a number of flaws in the prevailing intercarrier compensation mechanism for ISP calls, under which the originating LEC paid the LEC that served the ISP. Because ISPs typically generate large volumes of one-way traffic in their direction, the old system attracted LECs that entered the business simply to serve ISPs, making enough money from reciprocal compensation to pay their ISP customers for the privilege of completing the calls. The Commission saw this as leading, at least potentially, to ISPs' charging *their* customers below cost. *Remand Order*, 16 FCC Rcd at 9153, ¶ 2, 9154–55, ¶¶ 4–6, 9162, ¶¶ 19–21.

To smooth the transition to bill-and-keep (but without fully committing itself to it), the FCC adopted several interim cost-recovery rules that sought to limit arbitrage opportunities by lowering the amounts and capping the growth of ISP-related intercarrier payments. These tend to force ISP-serving LECs to recover an increasing portion of their costs from their own subscribers rather than from other LECs. *Remand Order*, 16 FCC Rcd at 9155–57, ¶¶ 7–8. The transitional rules take effect on the expiration of existing interconnection agreements. *Id.* at 9189, ¶ 82. Finally, the Commission specified that, having carved ISP-bound calls out of § 251(b)(5)

under § 251(g), it was establishing the interim compensation regime under its general authority to regulate the rates and terms of interstate telecommunications services and interconnections between carriers under § 201 of the Act; as a result, the state regulatory commissions would no longer have jurisdiction over ISP-bound traffic as part of their power to resolve LEC interconnection issues under § 252(e)(1) of the Act. *Id.*

Two sets of petitioners now challenge the Remand Order. One, headed by WorldCom (collectively "WorldCom"), consists of competitive LECs that deliver calls to ISPs, and thus stand to lose reciprocal compensation payments. These companies contend that the Commission erred in finding that § 251(g) authorized Commission exclusion of such calls from § 251(b)(5), and that, in any event, the interim compensation rules that the FCC adopted were not a product of reasoned decisionmaking and are contrary to the Act's terms. The other group, composed of several states and state regulatory commissions, complains that the order unlawfully preempts their authority to determine the compensation of ISP-serving LECs.

* * *

Section 251(g) reads as follows:

(g) Continued enforcement of exchange access and interconnection requirements.

On and after [the date of enactment of the Telecommunications Act of 1996,] each local exchange carrier, to the extent that it provides wireline services, shall provide exchange access, *information access*, and exchange services for such access *to interexchange carriers and information service providers in accordance with the same equal access and nondiscriminatory interconnection restrictions and obligations (including receipt of compensation) that apply to such carrier on the date immediately preceding [the date of enactment of the Telecommunications Act of 1996]* under any court order, consent decree, or regulation, order, or policy of the Commission, until such restrictions and obligations are explicitly superseded by regulations prescribed by the Commission after [such date of enactment]. During the period beginning on [such date of enactment] and until such restrictions and obligations are so superseded, such restrictions and obligations shall be enforceable in the same manner as regulations of the Commission.

47 U.S.C. § 251(g) (emphasis added). Both sides assume that *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984), is applicable, so that we must defer to any reasonable Commission interpretation not precluded by the language of the statute, read with the ordinary tools of statutory construction. We agree with petitioners that § 251(g) is not susceptible to the Commission's reading.

On its face, § 251(g) appears to provide simply for the "continued enforcement" of certain pre-Act regulatory "interconnection restrictions and obligations," including the ones contained in the consent decree that broke up the Bell System, until they are explicitly superceded by Commission action implementing the Act. As the Conference Report explained, "[b]ecause the [Act] completely eliminates the prospective effect of the AT&T Consent Decree, some provision is necessary to keep these requirements in place.... Accordingly, the conference agreement includes a new section 251(g)." H.R. Rep. 104–458, at 122–23 (1996), U.S.Code Cong. & Admin.News 1996, 10, 134.

On a prior occasion, the Commission also framed the scope of § 251(g) in similarly narrow terms:

> The term "information access" first appears [in the Act] in sections [sic] 251(g). That provision is a *transitional enforcement mechanism* that obligates the incumbent LECs to continue to abide by equal access and nondiscriminatory interconnection requirements of the [AT&T Consent Decree] when such carriers "provide exchange access, information access and exchange services for such access to interexchange carriers and information service providers...." Because the provision incorporates into the Act, on a transitional basis, these [AT&T Consent Decree] requirements, the Act uses [AT&T Consent Decree] terminology in this section. *However, this provision is merely a continuation of the equal access and nondiscrimination provisions of the Consent Decree until superseded by subsequent regulations of the Commission.*

In the Matter of Deployment of Wireline Services Offering Advanced Telecommunications Capability, 15 FCC Rcd 385, 407, ¶ 47, 1999 WL 1244007 (1999) (footnote omitted) (emphasis added).

Of course such explanatory language can't be assumed to be exclusive; legislative or agency explanations of a provision may naturally tend to focus on its most salient features. Thus, despite legislative history speaking only in terms of the Consent Decree, plainly the pre-existing "restrictions and obligations" covered by § 251(g) are *not* limited to Consent Decree obligations; the statute itself explicitly embraces preexisting obligations under a "regulation, order, or policy of the Commission." See also *Noland v. Shalala*, 12 F.3d 258, 262 (D.C.Cir.1994) ("Although the legislative history ... suggests an exclusive focus [of the statutory provision in question], the statutory language is broader and may permit [an alternative] construction."). But nothing in § 251(g) seems to invite the Commission's reading, under which (it seems) it could override virtually any provision of the 1996 Act so long as the rule it adopted were in some way, however remote, linked to LECs' pre-Act obligations.

We will assume without deciding that under § 251(g) the Commission might *modify* LECs' pre-Act "restrictions" or "obligations," pending full implementation of relevant sections of the Act. The Fifth Circuit appeared to make that assumption in *Texas Office of Public Utility Counsel v. FCC*, 265 F.3d 313 (5th Cir.2001), where it implicitly relied on § 251(g) (by quoting language from an Eighth Circuit case, *Competitive Telecom. Ass'n v. FCC*, 117 F.3d 1068, 1072 (8th Cir.1997)), in sustaining modifications of pre-Act regulations governing the access charges paid to LECs by inter-exchange carriers ("IXCs"). *Id.* at 324–25. But this assumption is not enough to justify the Commission's action here, as it seems uncontested—and the Commission declared in the Initial Order—that there had been *no* pre-Act obligation relating to intercarrier compensation for ISP-bound traffic. See *Initial Order*, 14 FCC Rcd at 3695, ¶ 9; see also *id.* at 3690, ¶ 1, 3707–3710, ¶¶ 28–36. The best the Commission can do on this score is to point to pre-existing LEC obligations to provide interstate access for ISPs. See, e.g., *Remand Order*, 16 FCC Rcd at 9164, ¶ 27; *In the Matter of MTS & WATS Market Structure*, 97 F.C.C.2d 682, 711–15, ¶¶ 77–83 (1983). Indeed, the Commission does not even point to any pre-Act, federally created obligation for LECs to interconnect to each other for ISP-bound calls. And even if this hurdle were overcome, there would remain the fact that § 251(g) speaks only of services provided "to interexchange carriers and information

service providers"; LECs' services to other LECs, even if en route to an ISP, are not "to" either an IXC or to an ISP.

Having found that § 251(g) does not provide a basis for the Commission's action, we make no further determinations. For example, as in *Bell Atlantic*, we do not decide whether handling calls to ISPs constitutes "telephone exchange service" or "exchange access" (as those terms are defined in the Act, 47 U.S.C. §§ 153(16), 153(47)) or neither, or whether those terms cover the universe to which such calls might belong. Nor do we decide the scope of the "telecommunications" covered by § 251(b)(5). Nor do we decide whether the Commission may adopt bill-and-keep for ISP-bound calls pursuant to § 251(b)(5); see § 252(d)(B)(i) (referring to bill-and-keep). Indeed these are only samples of the issues we do not decide, which are in fact all issues other than whether § 251(g) provided the authority claimed by the Commission for not applying § 251(b)(5).

Moreover, we do not decide petitioners' claims that the interim pricing limits imposed by the Commission are inadequately reasoned. Because we can't yet know the legal basis for the Commission's ultimate rules, or even what those rules may prove to be, we have no meaningful context in which to assess these explicitly transitional measures.

Finally, we do not vacate the order. Many of the petitioners themselves favor bill-and-keep, and there is plainly a non-trivial likelihood that the Commission has authority to elect such a system (perhaps under §§ 251(b)(5) and 252(d)(B)(i)). See, e.g., *Allied-Signal, Inc. v. U.S. Nuclear Regulatory Comm.*, 988 F.2d 146, 150–51 (D.C.Cir.1993) ("The decision whether to vacate depends on 'the seriousness of the order's deficiencies (and thus the extent of doubt whether the agency chose correctly) and the disruptive consequences of an interim change that may itself be changed.'"). Thus, we simply remand the case to the Commission for further proceedings.

So ordered.

DAIMLERCHRYSLER CORPORATION, *f/k/a* Chrysler Corporation, Petitioner,

v.

NATIONAL LABOR RELATIONS BOARD, Respondent.

No. 00–1518.

United States Court of Appeals, District of Columbia Circuit.

Argued March 5, 2002.

Decided May 7, 2002.

Employer petitioned for review of an order of the National Labor Relations Board (NLRB) declining to defer unfair labor practice charges to arbitration and finding that employer committed unfair labor practices when it failed to furnish union steward with requested relevant information concerning employee grievances and when it threatened steward with discharge for making further information requests. Board filed cross-application for enforcement. The Court of Appeals, Harry T. Edwards, Circuit Judge, held that: (1) employer violated the National Labor Relations Act (NLRA) when it failed to furnish the requested information pertaining to employee grievances; (2) steward's use of unusual language in making his informa-

ORDER

Adopted: March 3, 2005 **Released: March 3, 2005**

By the Chief, Enforcement Bureau:

1. In this Order, we adopt a Consent Decree terminating an investigation into the compliance of Madison River Communication, LLC, its parent company Madison River Telephone Company, LLC, and its affiliated companies under common control or ownership of Madison River Telephone Company, LLC ("Madison River") with section 201(b) of the Communications Act of 1934, as amended (the "Act"), 47 U.S.C. § 201(b).

2. The Enforcement Bureau ("Bureau") and Madison River have negotiated the terms of a Consent Decree that would terminate the Bureau's investigation. A copy of the Consent Decree is attached hereto and incorporated by reference.

3. We have reviewed the terms of the Consent Decree and evaluated the facts before us. We believe that the public interest would be served by approving the Consent Decree and terminating the investigation.

4. Accordingly, IT IS ORDERED, pursuant to section 4(i) of the Communications Act of 1934, as amended, 47 U.S.C. § 154(i), and the authority delegated by section 0.111 and 0.311 of the Commission's rules, 47 C.F.R. §§ 0.111, 0.311, that the attached Consent Decree IS ADOPTED.

5. IT IS FURTHER ORDERED that the above captioned investigation IS TERMINATED.

CONSENT DECREE

I. INTRODUCTION

1. The Enforcement Bureau ("Bureau") of the Federal Communications Commission (the "FCC" or the "Commission") and Madison River Communication, LLC on behalf of itself, its parent company Madison River Telephone Company, LLC, and its affiliated companies under common control or ownership of Madison River Telephone Company, LLC ("Madison River" or the "Company"), by their authorized representatives, hereby enter into this Consent Decree to resolve an investigation (the "Investigation") by the Bureau regarding Madison River's compliance with section 201(b) of the Communications Act of 1934, as amended,[1] with respect to the blocking of ports used for Voice over Internet Protocol ("VoIP") applications, thereby affecting customers' ability to use VoIP through one or more VoIP service providers. The Investigation was undertaken pursuant to sections 4(i), 4(j), 218, and 403 of the Communications Act.[2]

II. DEFINITIONS

2. For the Purposes of this Consent Decree, the following definitions shall apply:

(a) "Adopting Order" means an Order of the Bureau adopting the terms and conditions of this Consent Decree without change, addition or modification.

(b) "Madison River" or the "Company" means Madison River Communications, LLC, and any affiliate, d/b/a, predecessor-in-interest, parent companies and any direct or indirect subsidiaries of such parent companies, or other affiliated companies or businesses, and their successors and assigns, including but not limited to, Madison River Telephone Company, LLC, and its direct and indirect subsidiaries.

(c) "Bureau" means the Enforcement Bureau of the Federal Communications Commission.

(d) "Communications Act" or "Act" means the Communications Act of 1934, as amended, 47 U.S.C. § 151 *et seq.*

(e) "Effective Date" means the date on which the Bureau releases the Adopting Order.

(f) The "FCC" or the "Commission" means the Federal Communications Commission.

[1] 47 U.S.C. § 201(b).

[2] 47 U.S.C. §§ 154(i), 154(j), 218 and 403.

(g) "Investigation" means the investigation commenced by the Bureau's Letter of Inquiry dated February 11, 2005.

(h) "Parties" means Madison River and the Bureau.

III. BACKGROUND

3. On February 11, 2005, the Bureau issued a Letter of Inquiry ("LOI") to Madison River, initiating an investigation. Specifically, the Bureau inquired about allegations that Madison River was blocking ports used for VoIP applications, thereby affecting customers' ability to use VoIP through one or more VoIP service providers.[3] Madison River submitted its initial response to the LOI on February 18, 2005, and supplemented that response on February 22, 2005.[4]

IV. AGREEMENT

4. To avoid the expenditure of additional resources that would be required to further litigate the issues raised in the Investigation, and in consideration for the termination of the Investigation in accordance with the terms of this Consent Decree, Madison River agrees to make a voluntary payment to the United States Treasury, without further protest or recourse to a trial *de novo,* in the amount of fifteen thousand dollars ($15,000.00) within ten (10) business days after the Effective Date of the Adopting Order. The payment may be made by check or similar instrument, payable to the order of the Federal Communications Commission. The payment must include the Acct. No. and FRN No. referenced above. Payment by check or money order must be mailed to Forfeiture Collection Section, Finance Branch, Federal Communications Commission, P.O. Box 73482, Chicago, IL, 60673-7482. Payment by overnight mail must be sent to Bank One/LB 73482, 525 West Monroe, 8th Floor Mailroom, Chicago, IL 60661. Payment by wire transfer must be made to ABA Number 071000013, receiving bank Bank One, and account number 1165259.

5. In order to resolve and terminate the Investigation, the Bureau requires, and Madison River agrees, that Madison River shall not block ports used for VoIP applications or otherwise prevent customers from using VoIP applications.

6. The Parties agree and acknowledge that this Consent Decree shall constitute a final settlement of the Investigation. In express reliance on the covenants and representations contained herein, and in order to avoid the potential expenditure of additional public resources, the Bureau agrees to terminate the Investigation. In consideration for the termination of this Investigation, Madison River agrees to the terms, conditions, and procedures contained herein.

7. The Bureau agrees that, in the absence of new evidence relating to incidents that were not the subject of the Investigation, the Bureau will not use the facts developed in the Investigation, or the existence of this Consent Decree, to institute, on its own motion, any new proceedings, formal or

[3] *See* Letter dated February 11, 2005 from Hillary S. DeNigro, Deputy Chief, Investigations and Hearings Division, Enforcement Bureau, FCC, to Steve Vanderwoude, Chairman & CEO, Madison River Communications, LLC, ("February 11 LOI").

[4] *See* Letter dated February 18, 2005 from Kenneth E. Hardman, Attorney for Madison River Telephone Company, LLC, et al., to Hillary S. DeNigro, Deputy Chief, Investigations and Hearings Division, Enforcement Bureau, FCC ("Madison River Response"); Letter dated February 22, 2005 from Kenneth E. Hardman, Attorney for Madison River Telephone Company, LLC, et al., to Hillary S. DeNigro, Deputy Chief, Investigations and Hearings Division, Enforcement Bureau, FCC ("Madison River Supplement").

informal, or to take any actions on its own motion against Madison River, including referral of this matter to any other government agency, concerning the matters that were the subject of the Investigation.

8. Madison River waives any objection to the authority of the Bureau to enter into and adopt this Consent Decree.

9. Madison River represents and warrants that it is the properly named party to this Consent Decree and is solvent and has sufficient funds available to meet fully all financial and other obligations set forth herein. Madison River further represents and warrants that it has caused this Consent Decree to be executed by its authorized representative, as a true act and deed, as of the date affixed next to said representative's signature. Said representative and Madison River respectively affirm and warrant that said representative is acting in his/her capacity and within his/her authority as a corporate officer of Madison River, and on behalf of Madison River and that by his/her signature said representative is binding Madison River to the terms and conditions of this Consent Decree.

10. The Parties agree that this Consent Decree does not constitute either an adjudication on the merits or a factual or legal finding regarding any compliance or noncompliance with the requirements of the Act and the Commission's orders and rules. The Parties agree that this Consent Decree is for settlement purposes only.

11. Nothing in this Consent Decree shall limit the Commission's authority to enforce this Consent Decree in accordance with its terms, nor shall anything in this Consent Decree limit the Commission's authority to consider and adjudicate any formal complaint that may be filed pursuant to section 208 of the Act, 47 U.S.C. § 208, and to take any action in response to such complaint.

12. Madison River waives any and all rights it may have to seek administrative or judicial reconsideration, review, appeal, or stay, or to otherwise challenge or contest the validity of this Consent Decree and the Order adopting this Consent Decree, provided the Order adopts the Consent Decree without change, addition, or modification.

13. Madison River's decision to enter into this Consent Decree is expressly contingent upon the Bureau's issuance of an Adopting Order.

14. In the event that this Consent Decree is rendered invalid by any court of competent jurisdiction, it shall become null and void and may not be used in any manner in any legal proceeding.

15. The Parties also agree that if any provision of this Consent Decree conflicts with any subsequent rule or order adopted by the Commission (except an order specifically intended to revise or otherwise modify the terms of this Consent Decree to which Madison River does not consent) that provision will be superseded by such Commission rule or order.

16. By this Consent Decree, Madison River does not waive or alter its right to assert and seek protection from disclosure of any privileged or otherwise confidential and protected documents and information, or to seek appropriate safeguards or confidentiality for any competitively sensitive or proprietary information. Nothing in this Consent Decree shall be deemed to prejudice Madison River's rights to seek exemption from disclosure pursuant to the Freedom of Information Act and the Commission's implementing regulations for documents provided by Madison River to the Commission, or for Madison River to contest any request for disclosure of agency records relating to the subject of this Consent Decree.

17. If either Party (or the United States on behalf of the Commission) brings a judicial action to enforce the terms of the Adopting Order, neither Madison River nor the Bureau shall contest the validity of the Consent Decree or the Adopting Order, and Madison River and the Bureau will waive any statutory

right to a trial *de novo* with respect to the issuance of the Adopting Order and shall consent to a judgment incorporating the terms of this Consent Decree.

18. Madison River agrees that any violation of the Consent Decree or the Adopting Order will constitute a separate violation of a Commission order, entitling the Commission, or its delegated authority, to exercise any rights or remedies attendant to the enforcement of a Commission order.

19. The Parties agree that the requirements of this Consent Decree shall expire on the earlier of thirty (30) months from the Effective Date, or the effective date of a federal statute or Commission rule or order declaring or clarifying that the conduct described in paragraph 5 above does or does not violate the Act or Commission rules.

20. This Consent Decree may be signed in counterparts.

NOTICE OF APPARENT LIABILITY FOR FORFEITURE

Adopted: August 12, 2005 **Released: August 12, 2005**

By the Commission:

I. INTRODUCTION

1. In this Notice of Apparent Liability for Forfeiture ("NAL"), we find that OCMC, Inc. ("OCMC"), a telecommunications carrier that has been operating and at least indirectly benefiting from federal programs supporting the telecommunications industry for years, apparently failed to meet its statutory and regulatory obligations related to the Universal Service Fund ("USF"). Specifically, we find that OCMC has apparently violated section 254(d) of the Communications Act of 1934, as amended (the "Act"),[1] and section 54.706(a) of the Federal Communications Commission's rules[2] by willfully and repeatedly failing to contribute fully and timely to the USF. Based on our review of the facts and circumstances of this case, and for the reasons discussed below, we find that OCMC is apparently liable for a total monetary forfeiture in the amount of $1,133,761.

II. BACKGROUND

2. The Telecommunications Act of 1996 codified Congress's historical commitment to promote universal service to ensure that consumers in all regions of the nation have access to affordable, quality telecommunications services.[3] In particular, section 254(d) of the Act requires, among other things, that "[e]very telecommunications carrier [providing] interstate telecommunications services . . . contribute, on an equitable and nondiscriminatory basis, to the specific, predictable, and sufficient mechanisms established by the Commission to preserve and advance universal service."[4] In implementing this Congressional mandate, the Commission directed all telecommunications carriers providing interstate telecommunications services and certain other providers of interstate telecommunications to contribute to the Universal Service Fund based upon their interstate and international end-user telecommunications revenues.[5] Failure by some providers to pay their share into

[1] 47 U.S.C. § 254.

[2] 47 C.F.R. § 54.706(a).

[3] The Telecommunications Act of 1996 amended the Communications Act of 1934. *See* Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56 (1996) ("1996 Act").

[4] 47 U.S.C. § 254(d).

the Fund skews the playing field by giving non-paying providers an economic advantage over their competitors, who must then shoulder more than their fair share of the costs of the Fund.

3. The Commission has established specific procedures to administer the universal service program. A carrier is required to file FCC Form 499-As, also known as the annual Telecommunications Reporting Worksheets ("Worksheets") for the purpose of determining its USF payments,[6] and, with certain exceptions, to file quarterly short-form Worksheets to determine monthly universal service contribution amounts. These periodic filings trigger a determination of liability, if any, and subsequent billing and collection, by the entities that administer the regulatory programs. For example, the Universal Service Administrative Company ("USAC"), the administrator of the USF, uses the revenue projections submitted on the quarterly filings to determine each carrier's universal service contribution amount.[7] Carriers are required to pay their monthly USF contribution by the date shown on their invoice.[8] The Commission's rules explicitly warn contributors that failure to file their forms or submit their payments potentially subjects them to enforcement action.[9] Further, under the Commission's "red light rule," action will be withheld on any application to the Commission or authorization made by any entity that has failed to pay when due its regulatory program payment, such as USF contributions, and if payment or payment arrangements are not made within 30 days from notice to the applicant, such applications or requests will be dismissed.[10]

4. OCMC is an operator service provider, interexchange carrier and toll reseller.[11] On September 16, 2004, USAC referred OCMC to the Enforcement Bureau ("Bureau") for investigation concerning OCMC's possible failure to fully and timely contribute to the USF. Thereafter, by letter dated September 28, 2004, the Bureau initiated an investigation into whether the company violated section 54.706 of the Commission's rules, which requires entities that provide interstate telecommunications to the public to contribute to USF.[12] The LOI directed OCMC to provide certain specified documents and

[3]47 C.F.R. § 54.706(b). Beginning April 1, 2003, carrier contributions were based on a carrier's projected, rather than historical, revenues. *Id.*

[6]Upon submission of a Form 499-A registration, the carrier is issued a filer identification number by USAC, which is then associated with further filings by the company and is used to track the carrier's contributions and invoices.

[7]Individual universal service contribution amounts that are based upon quarterly filings are subject to an annual true-up. *See Federal-State Joint Board on Universal Service, Petition for Reconsideration filed by AT&T*, Report and Order and Order on Reconsideration, 16 FCC Rcd 5748 (2001) ("*Quarterly Reporting Order*"); 47 C.F.R. § 54.709(a).

[8]*See Globcom, Inc.*, Notice of Apparent Liability for Forfeiture and Order, 18 FCC Rcd 19893, 19896 (2003) ("*Globcom*"); 47 C.F.R. § 54.711(a) ("The Commission shall announce by Public Notice published in the Federal Register and on its website the manner of payment and the dates by which payments must be made."). *See, e.g.*, "Proposed Third Quarter 2003 Contribution Factor," *Public Notice*, 18 FCC Rcd 11442 (Wir. Comp. Bur. 2003) ("Contribution payments are due on the date shown on the [USAC] invoice.") The Act and our rules, however, do not condition payment on receipt of an invoice or other notice from USAC. *See* 47 U.S.C. § 254(d); 47 C.F.R. § 54.706(b). A carrier that does not file may not receive an invoice from USAC, but is nonetheless required to contribute to the universal service fund, unless its revenues are considered *de minimus*. The instructions for the Telecommunications Reporting Worksheet include tables for carriers to determine their annual contributions.

[9] 47 C.F.R. § 54.713.

[10]47 C.F.R. § 1.1910. The rule went into effect on November 1, 2004. *See* "FCC Announces Brief Delay in Enforcement of Red Light Rule," *Public Notice*, 19 FCC Rcd 19452 (2004).

[11]OCMC's 2005 FCC Form 499-A Telecommunications Reporting Worksheet. *See also* Letter from Ann Bernard, OCMC, Inc., General Counsel, to Christopher Shields, Investigations and Hearings Division, Enforcement Bureau, FCC (October 18, 2004) ("LOI Response").

information. OCMC responded on October 18, 2004. A supplemental LOI was issued on December 16, 2004, and OCMC responded December 21, 2004.[13]

III. DISCUSSION

5. Under section 503(b)(1)(B) of the Act, any person who is determined by the Commission to have willfully or repeatedly failed to comply with any provision of the Act or any rule, regulation, or order issued by the Commission shall be liable to the United States for a forfeiture penalty.[14] To impose such a forfeiture penalty, the Commission must issue a notice of apparent liability, and the person against whom the notice has been issued must have an opportunity to show, in writing, why no such forfeiture penalty should be imposed.[15] The Commission will then issue a forfeiture if it finds by a preponderance of the evidence that the person has violated the Act or a Commission rule.[16] As set forth in greater detail below, we conclude under this standard that OCMC is apparently liable for forfeiture for its apparent willful and repeated violations of section 254(d) of the Act[17] and section 54.706(a) of the Commission's rules.[18]

6. The fundamental issue in this case is whether OCMC apparently violated the Act and the Commission's rules by willfully and repeatedly failing to timely pay in full the required universal service contributions. Based on a preponderance of the evidence, we conclude that OCMC is apparently liable for a forfeiture of $1,133,761 for apparently willfully and repeatedly violating section 254(d) of the Act and section 54.706(a) of the Commission's rules.[19]

7. Specifically, we propose base forfeitures of $20,000 for each of two apparent violations for non-payment of USF invoices, and $10,000 for each of seven apparent violations for submitting only a partial payment of USF invoices, within the last year. Additionally, consistent with past Commission precedent,[20] we propose an upward adjustment to this $110,000 base forfeiture of $1,023,761, which is one-half the outstanding balance owed on OCMC's USF account. Although we propose forfeitures only for apparent violations within the last year, we discuss below the history of OCMC's noncompliance in prior years to demonstrate the scope of OCMC's misconduct and to provide sufficient context for the misconduct that is within the statute of limitations period and thus covered by this NAL.

---

[13] Letter from Ann Bernard, OCMC, Inc., General Counsel, to Christopher Shields, Investigations and Hearings Division, Enforcement Bureau, FCC (December 20, 2004) ("Supplemental LOI Response").

[14] 47 U.S.C. § 503(b)(1)(B); 47 C.F.R. § 1.80(a)(1). Section 312(f)(1) of the Act defines willful as "the conscious and deliberate commission or omission of [any] act, irrespective of any intent to violate" the law. 47 U.S.C. § 312(f)(1). The legislative history to section 312(f)(1) of the Act clarifies that this definition of willful applies to both sections 312 and 503(b) of the Act, H.R. Rep. No. 97-765, 97th Cong. 2d Sess. 51 (1982), and the Commission has so interpreted the term in the section 503(b) context. *See, e.g., Application for Review of Southern California Broadcasting Co.*, Memorandum Opinion and Order, 6 FCC Rcd 4387, 4388 (1991) ("*Southern California Broadcasting Co.*"). The Commission may also assess a forfeiture for violations that are merely repeated, and not willful. *See, e.g., Callais Cablevision, Inc., Grand Isle, Louisiana*, Notice of Apparent Liability for Monetary Forfeiture, 16 FCC Rcd 1359 (2001) (issuing a Notice of Apparent Liability for, *inter alia*, a cable television operator's repeated signal leakage). "Repeated" means that the act was committed or omitted more than once, or lasts more than one day. *Callais Cablevision, Inc.*, 16 FCC Rcd at 1362, ¶ 9; *Southern California Broadcasting Co.*, 6 FCC Rcd at 4388, ¶ 5.

[15] 47 U.S.C. § 503(b); 47 C.F.R. § 1.80(f).

[16] *See, e.g., SBC Communications, Inc.*, Forfeiture Order, 17 FCC Rcd 7589, 7591, ¶ 4 (2002) (forfeiture paid).

[17] 47 U.S.C. § 254(d).

[18] 47 C.F.R. §§ 54.706(a).

[19] 47 U.S.C. § 254(d); 47 C.F.R. § 54.706(a).

A. Universal Service Contributions

8. We conclude that OCMC has apparently violated section 254(d) of the Act and section 54.706 of the Commission's rules by willfully or repeatedly failing to contribute fully and timely to universal service support mechanisms.[21] Section 54.706(c) unambiguously directs that "entities [providing] interstate telecommunications to the public . . . for a fee . . . contribute to the universal service support programs."[22] "Interstate telecommunications" include, among other things, "resale of interstate services" such as those provided by OCMC.[23]

9. Notwithstanding its contribution obligations, for years OCMC has made irregular and unsatisfactory payments to the USF. The record is clear that between September 2003 and the date of this NAL, OCMC failed to make any monthly payment whatsoever to USAC on eight occasions, and made contributions that were insufficient to satisfy the total amount of its outstanding USF balance on twelve occasions, including eight instances where its payments were not sufficient to cover even its current month's charges. Specifically, USAC's invoices show that OCMC failed to make any payment on invoices due October 15, November 14, and December 15, 2003; January 15, February 13, March 15 and June 15, 2004; and March 15 and June 15, 2005. The records demonstrate that OCMC made payments that were insufficient to satisfy the total amount of its outstanding balance on invoices due April 15, May 14, July 15, August 13, September 15, October 15, November 15, and December 15, 2004; and January, February 15, April 15, and May 13, 2005. Of these twelve partial payments, the record further demonstrates that OCMC made payments that were not sufficient to cover even its current month charges on invoices due May 14, August 13, September 15, October 15, and November 15, 2004, and February 15, April 15 and May 13, 2005. As a result of this misconduct, OCMC has consistently maintained large overdue balances with USAC, with the result that it now owes more than $2 million.

10. As we previously have stated,

> [c]arrier nonpayment of universal service contributions undermines the efficiency and effectiveness of the universal service support mechanisms. Moreover, delinquent carriers may obtain a competitive advantage over carriers complying with the Act and our rules. We consider universal service nonpayment to be a serious threat to a key goal of Congress and one of the Commission's primary responsibilities.[24]

Based on the preponderance of the evidence, we find that OCMC has apparently violated section 254(d) of the Act and section 54.706(a) of the Commission's rules by willfully and repeatedly failing to contribute fully and timely to the USF on multiple occasions between October 2003 and June 2005. Within the last twelve months specifically, which is the time period covered by this NAL, OCMC failed to remit any contribution toward its USF obligations for the payment due by March 15 and June 15, 2005, and contributed less than even the amount of its monthly obligation for the payments due by August 13, September 15, October 15, and November 15, 2004, and by February 15, April 15, and May 13, 2005.

11. In this NAL we have chosen to propose liability only for the months within the twelve-month limitations period[25] in which OCMC failed to pay at least the amount due for the current month by

[21] 47 U.S.C. § 254(d); 47 C.F.R. § 54.706(c).

[22] 47 C.F.R. § 54.706(c).

[23] *See* 47 C.F.R. § 54.706(a)(16).

[24] *Globcom, Inc.*, 18 FCC Rcd at 19903 ¶ 26.

[25] 47 U.S.C. § 503(b)(6).

the due date stated on the USAC invoice and not for months in which OCMC paid at least the current month's charges[26] because those months represent the most egregious examples of misconduct. Due to the accumulating record of contributors making only partial payments on USAC invoices, however, we may take a more expansive approach and include additional monthly violations in the future in appropriate circumstance.[27]

12. In responses to the Bureau's inquiries, OCMC provides information concerning a billing dispute with USAC as grounds for its contribution failures. OCMC implies that it withheld certain monthly contributions and submitted other insufficient monthly contributions because USAC's invoices did not reflect OCMC's view of the proper resolution of that dispute. In January 2004, OCMC disputed a USAC invoice, maintaining it was owed $310,703 in credits as a result of the true-up of its 2002 revenues.[28] OCMC, in subsequent correspondence to USAC in August 2004, admitted that the amount in dispute was, in fact, properly credited to OCMC's account in 2003.[29]

13. After reviewing all the facts and circumstances, we find that the existence of this billing dispute does not excuse OCMC's violations for several reasons. First, a carrier may not engage in self-help.[30] A carrier may not unilaterally decide to withhold universal service contributions pending the resolution of a billing dispute. Such a reading of Section 254 of the Act and our rules would encourage every contributor making USF payments to suspend such contributions by simply filing a dispute. Moreover, even if such self-help were permitted, OCMC suspended its contribution payments beginning in October 2003, but did not submit its billing dispute until February 2004. OCMC's delay undercuts its claim that its failures to contribute resulted from the dispute. In addition, the amount at issue in the dispute, $310,703, is far exceeded by the overdue balances incurred by OCMC during the period, which at times exceeded $1 million. Additionally, OCMC had no reasonable basis for disputing its invoices. The credits that OCMC alleged it was owed were clearly set forth in the USAC invoices for September – November 2003. Finally, OCMC conceded its position on the dispute as early as August 2004, yet continued to carry a massive outstanding balance and to make insufficient payment on its USAC invoices after that time. For all of these reasons, we reject OCMC's position that the existence of a billing dispute with USAC excuses its failures. Based on these facts, it appears that OCMC deliberately chose not to pay its USF contributions despite its clear obligations under our universal service rules, and despite numerous monthly invoices it received from USAC informing the carrier of its increasing debt.[31]

---

[26] Therefore, OCMC payments on invoices due April 15, July 15, August 13, and December 15, 2004 and January 2005 do not form the basis for liability in this NAL although those payments were insufficient to satisfy the total amount of its outstanding balance.

[27] The Commission's forfeiture authority might apply to additional months, because it is USAC's practice to apply partial payments to the oldest debt carried on USAC's books first, and not the current billed amount. *See North American Telephone Network, LLC*, Forfeiture Order, 16 FCC Rcd 4838, ¶ 8 & n. 12 (2001); *Intellicall Operator Services*, Forfeiture Order, 15 FCC Rcd 21,771, at 21,772, ¶ 6 and n.8 (2000).

[29] Supplemental LOI Response, Attachment dated Aug. 5, 2004 (reading, in part: "Thanks you for your reply. The amount, originally in dispute, has been satisfied. As per your mention of the credits").

[30] *See Application for Review of the Denial of Vista Communications, Inc.'s Request for Waiver of the Installment Payment Rules for the 218-219 MHz Service*, Memorandum Opinion and Order, 18 FCC Rcd 16,957 (2003) (Commission denied application for review that challenged decision that alleged confusion regarding the payment rules and payment schedule did not justify Interactive Voice and Data Service licensee's assumption that it could withhold payments).

[31] *See, e.g., Conquest Operator Services Corp.*, Forfeiture Order, 14 FCC Rcd 12,518, at 12,522, ¶ 9 (discussing the monthly USAC invoices and the "more than adequate notice of ConQuest's universal service obligation").

B. Proposed Forfeiture

14. Section 503(b)(1)(B) of the Act provides that any person that willfully or repeatedly fails to comply with any provision of the Act or any rule, regulation, or order issued by the Commission, shall be liable to the United States for a forfeiture penalty.[32]

15. For the apparent violations in this case, section 503(b)(2)(B) of the Act authorizes the Commission to assess a forfeiture of up to $120,000 for each violation or each day of a continuing violation, up to a statutory maximum of $1.2 million for a single act or failure to act for violations occurring before September 7, 2004, and up to $130,000 for each violation or each day of a continuing violation, up to a statutory maximum of $1.325 million for a single act or failure to act for violations occurring on or after September 7, 2004.[33] In determining the appropriate forfeiture amount, we consider the factors enumerated in section 503(b)(2)(D) of the Act, including "the nature, circumstances, extent and gravity of the violation, and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require."[34]

16. Under section 503(b)(6) of the Act, we may only propose forfeitures for apparent violations that accrued within one year of the date of this NAL.[35] Nevertheless, section 503(b) does not bar us from assessing whether OCMC's conduct prior to that time period apparently violated the Act or our rules in determining the appropriate forfeiture amount for those violations within the statute of limitations.[36] Therefore, although we find that OCMC apparently violated the Act and our rules on numerous occasions over the past several years, we propose forfeitures here only for violations that occurred within the last year.

17. Based on the facts above, it appears that OCMC has failed to make the requisite contributions into the USF on numerous occasions over the past several years. Nonpayment of universal service contributions is an egregious offense that bestows on delinquent carriers an unfair competitive advantage by shifting to compliant carriers the economic costs and burdens associated with universal service. A carrier's failure to make required universal service contributions hampers realization of Congress' policy objective in section 254(d) of the Act to ensure the equitable and non-discriminatory distribution of universal service costs among all telecommunications providers.[37] The Commission has established a base forfeiture amount of $20,000 for each month in which a carrier has failed to make required universal service contributions.[38] Consequently, we initially find that OCMC is apparently liable for a base forfeiture of $40,000 for its failures to make any universal service contributions with respect to the payments due by March 15 and June 15, 2005 on its USF account.

---

[37] *See* 47 U.S.C. § 254(d).

[38] *See Globcom, Inc.*, 18 FCC Rcd at 19903-19904, ¶¶ 25-27.

18. The Commission has not set a base forfeiture amount in a case in which a carrier repeatedly paid less than the current month's contribution amount by the due date stated on the USAC monthly invoice, resulting in an overdue balance on that carrier's account. As in the case of non-payment, such violations of our rules severely hamper realization of Congress's universal service goals as expressed in section 254 of the Act. We thus find that this violation is similar to, although less egregious than, a carrier's failure to make any universal service contributions in a specific month. Consequently, we find that OCMC is apparently liable for a forfeiture of $10,000 for each of the instances in which it failed to make a payment sufficient to satisfy the current charges on August 13, September 15, October 15, and November 15, 2004 and February 15, April 15 and May 13, 2005. Consequently, OCMC is apparently liable for a base forfeiture of $70,000 for these partial payments and a total base forfeiture of $110,000 after including the partial payment base forfeiture with the nonpayment base forfeiture. That base forfeiture amount is, however, subject to an upward adjustment.

19. In the past, we have calculated upward adjustments to forfeitures for failure to make USF payments based on one-half of the company's unpaid contributions.[39] When we began this investigation, OCMC owed approximately $1.7 million on its USF account. During the course of this investigation, however, OCMC's apparent continued violations of our rules caused its USF account debt to increase to $2,047,521. Therefore, taking into account all the factors enumerated in section 503(b)(2)(D) of the Act, we propose an upward adjustment of one-half of the company's unpaid contributions, $1,023,761 for OCMC's apparent nonpayment and partial payment violations. We thus find OCMC liable for a total proposed forfeiture of $1,133,761 for its apparent willful and repeated failure to make full and timely contributions into the USF.

IV. CONCLUSION

20. In light of the seriousness, duration and scope of the apparent violations, and to ensure that a company with substantial revenues such as OCMC does not consider the proposed forfeiture merely "an affordable cost of doing business,"[40] we find that a proposed forfeiture of $1,133,761 is warranted.

21. We caution that additional violations of the Act or the Commission's rules could subject OCMC to further enforcement action. Such action could take the form of higher monetary forfeitures and/or possible revocation of OCMC's operating authority, including disqualification of OCMC's principals from the provision of any interstate common carrier services without the prior consent of the Commission.[41] In addition, we note that, to the extent OCMC is found to be delinquent on any debt owed to the Commission (e.g., has failed to pay all of its USF contributions), the Commission will not act on, and may dismiss, any application or request for authorization filed by OCMC, in accordance with the agency's "red light" rules.[42]

V. ORDERING CLAUSES

22. ACCORDINGLY, IT IS ORDERED THAT, pursuant to section 503(b) of the Communications Act of 1934, as amended, 47 U.S.C. § 503(b), and section 1.80 of the Commission's rules, 47 C.F.R. § 1.80, that OCMC, Inc.is hereby NOTIFIED of its APPARENT LIABILITY FOR A

[39] *See, e.g., Globcom, Inc.*, 18 FCC Rcd at 19904.

[40] *Forfeiture Policy Statement*, 12 FCC Rcd at 17099; *see also* 47 C.F.R. § 1.80(b)(4).

[41] *See Business Options, Inc.*, Consent Decree, 19 FCC Rcd 2916 (2003); *NOS Communications, Inc., Affinity Network Incorporated and NOSVA Limited Partnership*, Consent Decree, 2003 WL 22439710 (2003).

[42] 47 C.F.R. § 1.1910.

FORFEITURE in the amount of $1,133,761 for willfully and repeatedly violating the Act and the Commission's rules.

23. IT IS FURTHER ORDERED THAT, pursuant to section 1.80 of the Commission's Rules,[43] within thirty days of the release date of this NOTICE OF APPARENT LIABILITY, OCMC, Inc. SHALL PAY the full amount of the proposed forfeiture or SHALL FILE a written statement seeking reduction or cancellation of the proposed forfeiture.

24. Payment of the forfeiture must be made by check or similar instrument, payable to the order of the Federal Communications Commission. The payment must include the NAL/Acct. No. and FRN No. referenced above. Payment by check or money order may be mailed to Forfeiture Collection Section, Finance Branch, Federal Communications Commission, P.O. Box 358340, Pittsburgh, PA 15251-8340. Payment by overnight mail may be sent to Mellon Bank /LB 358340, 500 Ross Street, Room 1540670, Pittsburgh, PA 15251. Payment by wire transfer may be made to ABA Number 043000261, receiving bank Mellon Bank, and account number 911-6106.

25. The response, if any, to this NOTICE OF APPARENT LIABILITY must be mailed to William Davenport, Chief, Investigations and Hearings Division, Enforcement Bureau, Federal Communications Commission, 445 12th Street, S.W., Washington, D.C. 20554 and must include the NAL/Acct. No. referenced above.

26. The Commission will not consider reducing or canceling a forfeiture in response to a claim of inability to pay unless the petitioner submits: (1) federal tax returns for the most recent three-year period; (2) financial statements prepared according to generally accepted accounting practices (GAAP); or (3) some other reliable and objective documentation that accurately reflects the petitioner's current financial status. Any claim of inability to pay must specifically identify the basis for the claim by reference to the financial documentation submitted.

27. Requests for payment of the full amount of this NAL under an installment plan should be sent to Chief, Credit and Management Center, 445 12th Street, S.W., Washington, D.C. 20554.[44]

28. IT IS FURTHER ORDERED that a copy of this NOTICE OF APPARENT LIABILITY AND ORDER shall be sent by certified mail, return receipt requested, to Ann Bernard, General Counsel for OCMC, Inc., 801 Congressional Boulevard, Carmel, Indiana, 46032.

ORDER ON REVIEW

Adopted: April 14, 2000 **Released:** April 20, 2000

By the Commission:

I. INTRODUCTION

1. In this Order, we deny Applications for Review of two orders issued by the Common Carrier Bureau (Bureau) granting formal complaints brought by several Bell Operating Companies asserting that Defendants failed to pay payphone compensation as required by the Commission's rules.

Upon review, we find that the Bureau properly addressed and correctly resolved each of the issues raised by petitioners.[1]

2. Complainants in this proceeding are Bell Operating Companies (BOCs)[2] that are also payphone service providers (PSPs). Petitioners Frontier Communications Services, et al. (Frontier) are providers of interstate and intrastate telephone toll service.[3]

3. In the *Payphone Orders*,[4] we adopted rules and policies governing the payphone industry to implement Section 276 of the Telecommunications Act of 1996 (1996 Act). Specifically, these orders set forth rules implementing the statutory mandate that PSPs be "fairly compensated for each and every" call from their payphones.[5] As part of that proceeding, we concluded that interexchange carriers (IXCs) receiving calls originating from payphones should compensate the PSP because the IXCs were the primary beneficiaries of such calls. We further concluded that local exchange carrier (LEC) PSPs would be eligible to receive compensation for completed calls originated from their payphones once the LEC "was able to certify" that it had complied with compensation eligibility prerequisites set forth in the *Order on Reconsideration*.[6] Specifically, we stated that:

> To receive compensation, a LEC must be able to certify the following: 1) it has an effective cost accounting manual ("CAM") filing; 2) it has an effective interstate CCL tariff reflecting a reduction for deregulated payphone costs and reflecting additional multiline subscriber line charges ("SLC") revenue; 3) it has effective interstate tariffs reflecting the removal of charges that recover the costs of payphones and any intrastate subsidies; 4) it has deregulated and reclassified or transferred the value of payphone customer premises equipment ("CPE") and related costs as required in the Report and Order; 5) it has in effect intrastate tariffs for basic payphone service (for "dumb" and "smart" payphones); and 6) it has in effect intrastate and interstate tariffs for

000608

unbundled functionalities associated with those lines.[7]

BOC payphone service providers were also required to "have approved [comparably efficient interconnection (CEI)] plans for basic payphone services and unbundled functionalities prior to receiving compensation."[8] The *Payphone Orders* did not, however, specify in any further detail the requirements of an adequate certification.[9]

4. The histories underlying these disputes are detailed in the Bureau Orders, which we incorporate herein by reference. It is undisputed that complainants submitted to Frontier letters, and in most cases additional documentation, "certifying" that they had satisfied the prerequisites set forth in the *Order on Reconsideration*.[10] Frontier refused to accept these as certification, arguing that the *Payphone Orders* obligated LECs to provide to the IXC payors evidence proving that they had complied with the Commission's payphone compensation prerequisites. As noted above, most of the complainants did provide additional documentation in an effort to demonstrate compliance with the Commission's rules and orders, and even made supplemental filings in an effort to satisfy Frontier.[11] Nonetheless, and notwithstanding the efforts of Commission staff to informally resolve these disputes,[12] Frontier continued to refuse complainants' demands for payment. Indeed, Frontier acknowledges that it has compensated only those LECs that followed the procedures Frontier itself established for proving compliance with the prerequisites.[13] Accordingly, these cases turn on the question of whether the Commission's requirement that a LEC "be able to certify" compliance entitled Frontier to refuse to compensate the LEC Defendants until each LEC proved to Frontier's own satisfaction that the underlying prerequisites had been met.

5. On September 24, 1999, the Common Carrier Bureau (Bureau) issued the *Bell Atlantic Order* resolving Bell Atlantic's complaints against Frontier. The Bureau held that Bell Atlantic's letters constituted an adequate certification and triggered Frontier's obligations to pay payphone

---

[7] *Order on Reconsideration* at para. 131.

[8] *Order on Reconsideration* at para. 132.

[9] *Bell Atlantic Order* at para. 6.

[10] *Bell Atlantic Order* at para. 8; *Ameritech Order* at paras. 19-24. For example, in addition to stating it had complied with each prerequisite, U S West's submission to Frontier provided a detailed status report on the removal of payphone subsidies. SBC provided specific information explaining how it had removed intrastate payphone subsidies. Bell Atlantic provided to Frontier several matrices listing how it had satisfied certain prerequisites, including detailed information on the applicable interstate and intrastate tariffs. *Id.*

[11] *Bell Atlantic Order* at paras. 9-10; *Ameritech Order* at paras. 19-24.

[12] As discussed in the Bureau Orders, and also below, Commission staff met with representatives of the parties in this case, along with representatives of several other IXCs that had also refused to pay compensation on similar grounds as those raised in this proceeding. During those meeting, the staff expressed the position that the Payphone Orders clearly mandated that IXC's must compensate a LEC payphone service provider upon reciept of the LEC's certification of elegibility without further inquiry or requirements. *See Bell Atlantic* Order at para. 10.

[13] *Ameritech Order* at para. 9 n. 24.

compensation.[14] More generally, the Bureau found no merit in Defendants' argument that the language in the *Payphone Orders* that LECs "be able to certify" compliance with the payphone compensation prerequisites gave each IXC the authority *to determine when* it became obligated to pay such compensation. The Bureau explained that the meaning of "certification" asserted by Defendants would place in the hands of the IXC payors the ability to determine when, or even if, it should become obligated to pay compensation mandated by the Act. The Bureau concluded that such an interpretation was not only inconsistent with the plain meaning of the Commission's orders, but would constitute an abdication of both the Commission's statutory obligation under section 276 of the Act and the authority specifically delegated to the Bureau to determine whether a LEC had complied with each compensation prerequisite.[15] On November 8, 1999, the Bureau issued the *Ameritech Order* resolving formal complaints filed by Ameritech Illinois (Ameritech), U S West Communications, Inc. (U S West), and Pacific Bell, et al. (SBC). In that Order, the Bureau found that these complaints raised the same issues addressed in the Bureau's *Bell Atlantic Order*, and specifically adopted that order's analysis and supporting rationale in rejecting the IXC's arguments.[16]

II. DISCUSSION

6. On October 25, 1999, Frontier filed its Application for Review of the *Bell Atlantic Order*. On December 8, 1999, Frontier filed an Application for Review of the *Ameritech Order*. In the interest of efficiency, we resolve both Applications for Review in this order. We agree with the Bureau that Frontier's arguments are without merit and specifically adopt herein the findings and conclusions in the Bureau Orders. Accordingly, we affirm the Bureau Orders.

A. The *Bell Atlantic Order*

7. In its Application for Review of the *Bell Atlantic Order*, Frontier first asserts that the Bureau's definition of what constitutes a "certification" is incorrect as a matter of law.[17] In support, Frontier argues that a LEC PSP may unfairly receive compensation from IXCs based on the inclusion of unlawful subsidies by merely signing a certification letter. In the *Bell Atlantic Order*, the Bureau explicitly considered and rejected Frontier's argument. First, the Bureau distinguished *certification* of compliance—which merely requires a LEC to attest that it has complied with each compensation eligibility requirement—from *proof* of compliance. The Bureau then found that, under prior Commission and Bureau orders addressing the same issue, LEC PSPs need only certify—and not

[14] *Bell Atlantic Order* at para. 29.

[15] *Id.* at paras. 20-22. *See Implementation of the Pay Telephone Reclassification and Compensation Provisions of the Telecommunications Act of 1996*, CC Docket No. 96-128, Order, 12 FCC Rcd. 20,997 (Com. Car. Bur. 1997)(*Bureau Order*). In the *Bureau Order*, the Common Carrier Bureau took various actions "on its own motion, pursuant to the authority delegated to it in the Order on Reconsideration to determine whether a LEC ha[d] met the requirements of the [Payphone Orders] prior to receiving compensation." *Id.* at para. 3.

[16] *Ameritech Order* at para. 3.

[17] Frontier Application for Review at 11.

prove—compliance to IXCs.[18] The Bureau emphasized that it is the Commission's role, and not that of the IXC, to determine if a LEC PSP has, in fact, removed intrastate subsidies from its rates.[19] The Bureau found that a letter could serve as a valid certification if it asserted that the LEC has complied with the compensation eligibility prerequisites, and that Bell Atlantic's letters clearly satisfied the Commission's certification requirements.[20] Upon review, we agree with the reasoning of the Bureau and hold that the Bureau correctly interpreted our decision and properly determined what constitutes certification. The argument put forth by Frontier would give the long-distance carrier the authority to create its own rules for determining when it became obligated to pay compensation as required by the Act and Commission rules. As the Bureau stated, if Frontier believed that a certifying BOC had not actually fulfilled its prerequisites for receiving payphone compensation, Frontier was entitled to bring that to the attention of the Commission through a formal complaint or other mechanism. It was not entitled, however, simply to refuse payment to the BOC at its own unilateral discretion.

8. Frontier next asserts that affirming the *Bell Atlantic Order* would constitute legal error and bad public policy.[21] To the contrary, as stated above, we find that *Frontier's* proffered argument would be bad public policy because it would give the long-distance company unilateral authority to evaluate the certifying BOC's compliance with Commission rules, and thereby determine when the long distance company became obligated to make payments pursuant to those rules. We see no public policy or legal basis for the Commission to delegate to the IXC payors sole authority to determine compliance with the Commission's rules. Rather, we find the Bureau correctly determined that certification of compliance to the IXC was consistent with the goals of section 276 of the Act, and with the Commission's implementing orders.[22] Accordingly, we affirm the Bureau's reasoning and conclusions.

9. Finally, Frontier asserts that the Bureau erred in refusing to consider Frontier's "affirmative defense" that "Bell Atlantic had not demonstrated that it qualified for payphone compensation and that Bell Atlantic, in fact, had not qualified for payphone compensation."[23] The Bureau rejected Frontier's argument that a "dispute" as to a carrier's eligibility to receive compensation negates the IXC's obligation to pay compensation in the first instance. The Bureau stated that an IXC disputing the veracity of a LEC's certification must do so by initiating a proceeding at the Commission, *e.g.*, through a Section 208 complaint against the LEC.[24] We agree with the Bureau that Frontier's so-called "affirmative defense" is irrelevant to evaluating Frontier's obligation to pay upon receiving certification from Bell Atlantic. The Bureau correctly concluded that Frontier's "affirmative defense" was not properly before the Bureau in the context of the LEC complaints. Rather, the proper way for an IXC to challenge a LEC's failure to remove unlawful subsidies is to initiate a Section 208 proceeding at

---

[19] *Id.* at para. 20.

[20] *Id.* at para. 24.

[21] Frontier Application for Review at 20.

[22] *Bell Atlantic Order* at paras. 19-25.

[23] Frontier Application for Review at 17.

[24] *Bell Atlantic Order* at paras. 26-28.

the Commission. Since Frontier failed to do so, in this instance we conclude that the Bureau properly rejected Frontier's argument.[25] We therefore affirm the Bureau's reasoning in this matter and deny Frontier's Application for Review of the *Bell Atlantic Order*.

B. The *Ameritech Order*

10. Frontier's Application for Review of the *Ameritech Order* is essentially a duplicate of its Application for Review of the *Bell Atlantic Order*. The Bureau held that the complaints underlying the *Ameritech Order* raised the same issues addressed in the *Bell Atlantic Order* and found that the defendants in the *Ameritech Order* proceeding had failed to raise any issues that had not been addressed in the *Bell Atlantic Order*. The *Ameritech Order* specifically incorporated the analysis and supporting rationale of the *Bell Atlantic Order* by reference.[26] Frontier has not challenged the Bureau's findings concerning the redundant nature of the complaints, defenses, and resolution of these two proceedings. As in its Application for Review of the *Bell Atlantic Order*, Frontier has raised no new issues in its Application for Review of the *Ameritech Order*. Accordingly, for the same reasons stated above in our affirmance of the Bureau's *Bell Atlantic Order*, we affirm the Bureau's reasoning in this matter and deny Frontier's Application for Review of the *Ameritech Order*.

III. CONCLUSION AND ORDERING CLAUSES

11. For the reasons stated above, we affirm the Bureau orders in all respects. Having reviewed the facts and history of these disputes reflected in the Bureau Orders, we are troubled by self-help actions taken by the Defendants in an apparent effort to delay payment of payphone compensation mandated by the Act and our rules. As detailed in the Bureau Orders, the parties met with Bureau staff in June of 1998 to discuss Defendant's obligations to pay payphone compensation, and specifically the issues raised in these complaints. During these meetings, the staff stated that the *Payphone Orders* clearly mandated that IXCs must compensate a LEC payphone service provider upon receipt of the LECs' certification of eligibility without further inquiry or requirements.[27] As discussed above, it was made clear at that time that if Frontier believed that a LEC had failed to satisfy its prerequisites to payphone compensation, the IXC was obligated to file a complaint with the Commission to that effect. Instead, Frontier continued to engage in self-help by simply refusing payment without bringing the matter to the Commission for resolution. As has been stated in other contexts, the Commission looks disfavorably on such self-help.[28] Accordingly, we direct the Commission's Enforcement Bureau to investigate whether further enforcement action is warranted against Defendants for apparent knowing or repeated violations of Commission rules in relation to the facts raised in these complaint proceedings.

12. Accordingly, IT IS ORDERED that pursuant to sections 1, 4(i), 4(j), 201(b), 203(c), and 208 of the Act, as amended, 47 U.S.C. §§ 151, 154(i), 154(j), 201(b), 203(c), 208, and sections 1.3 and

Defendant.	)	

MEMORANDUM OPINION AND ORDER

Adopted: July 16, 1999 Released: July 16, 1999

By the Deputy Chief, Common Carrier Bureau:

I. Introduction

1. In this proceeding, complainant MGC Communications, Inc., asserts that defendant AT&T Corp. has improperly refused to pay for originating exchange access service that AT&T ordered and accepted pursuant to MGC's validly filed tariff. AT&T contends that it terminated its relationship with MGC under which it had been receiving originating access service. Accordingly, AT&T argues, MGC's continued provision of access service constituted the conferral of an unwanted service for which AT&T is under no obligation to pay. For the reasons set out more fully below, we conclude that AT&T failed to take the appropriate steps unambiguously to terminate MGC's access service. We therefore grant MGC's complaint and find that AT&T is liable, according to the terms of MGC's access service tariff, for those access services that AT&T has accepted but for which it has not paid.

II. Facts and Procedural History

2. MGC is a facilities-based competitive local exchange carrier (LEC), which provides equal access for interexchange carriers' services, and local exchange and long

distance telecommunications services to its customers in five states.[1] AT&T operates as a non-dominant inter-exchange carrier (IXC) throughout the United States. Both AT&T and MGC are subject to the Commission's jurisdiction under Title II of the Communications Act of 1934, as amended (the Act).[2] During the time relevant to this dispute, MGC had on file with the Commission its Tariff FCC No. 1, under which it offered both originating and terminating access service.[3] Under its tariff, MGC's rate for access service was significantly higher than that charged by the incumbent LECs with which it competed in its various markets.[4]

3. In January 1998, AT&T began purchasing both originating and terminating local access service from MGC under the terms of MGC's Tariff FCC No. 1.[5] Between January and July 1998, AT&T accepted all traffic that MGC sent to its network, and it paid MGC at the tariffed rate. On July 21, 1998, an AT&T representative wrote to MGC for the claimed purpose of terminating AT&T's arrangement with MGC for originating access service. The parties' dispute in this case involves only originating access service, which permits MGC subscribers to place calls (either toll or toll-free) over AT&T's network. AT&T continues to purchase, under the terms of the tariff, MGC's terminating access service, which allows AT&T to complete calls to MGC's local service subscribers.

4. In relevant part, AT&T's July 21 letter stated:

> Recently, AT&T examined MGC Communication's switched access bill and concluded the rates being charged to AT&T are not competitive

---

[1] *See* MGC Communications Inc. Revised Proposed Findings of Fact and Conclusions of Law at 3, ¶ 3 (July 2, 1999) (MGC Proposed Findings).

[2] 47 U.S.C. § 101, *et seq.*; *see* AT&T Answer at 3, ¶ 6.

[3] *See* MGC Tariff FCC No. 1 (Complaint Exh. B); Joint Statement of Disputed and Undisputed Facts and Legal Issues at 1, ¶ 2 (June 7, 1999) (Joint Statement) (stipulating to accuracy of Complaint Exh. B).

[4] It appears that, under its tariff, MGC charges $0.008832 per minute for local transport service and $0.0785 per minute for local switching, *see* MGC Tariff FCC No. 1 §§ 6.8.3.B and 6.8.4.A, for a total per-minute access charge of approximately 8.73 cents. By contrast, in the Nevada market where MGC operates, Sprint Corp., the incumbent LEC, charged approximately 0.514 cents per minute for similar service. *See* Answer, Exh. 7; AT&T Revised Proposed Findings of Fact and Conclusions of Law at 4, ¶ 8 (July 2, 1999) (AT&T Proposed Findings).

[5] *See* Complaint at 5, ¶ 13. AT&T's answer does not address this allegation in MGC's complaint. Under our rules, allegations in a complaint that are not specifically denied are deemed to be admitted. 47 C.F.R. § 1.724(d). *See also* AT&T Proposed Findings at 19, ¶ 37 (conceding that AT&T initially ordered MGC's services). *Cf.* Phillip Miller Deposition at 25:18 - 26:10 (MGC Hearing Exhibit No. 26).

> with present market rates. AT&T has concluded that it cannot continue to purchase MGC Communication's service at these higher rates.
>
> We, therefore, give notice that, effective August 22, 1998, thirty days from the date of this letter, AT&T will not purchase switched access services under the terms and conditions of the MGC Communication tariff. At least for the present, AT&T will continue to complete calls to and from MGC Communication's local services customers, in order to avoid inconvenience to those customers.[6]

As of August 22, 1998, AT&T stopped paying for the originating access service that it received from MGC. On at least two subsequent occasions, AT&T reiterated its intention to continue completing calls to and from MGC's customers. At least through June 28, 1999, the date of the hearing in this matter, MGC continued to provide originating local access service to AT&T, and AT&T continued to accept, but not pay for, the service.

5. In December 1998, MGC contacted the Commission to initiate this complaint under the Accelerated Docket procedures of the Common Carrier Bureau.[7] The supervised settlement discussions, which form a prerequisite for the acceptance of any matter onto the Accelerated Docket, failed to resolve any portion of the parties' dispute. Accordingly, Commission staff notified MGC that its complaint, if filed, would be accepted onto the Docket. On May 18, 1999, MGC filed its section 208 complaint, which originally alleged, in three counts, that AT&T's continuing acceptance of originating access service and refusal to pay therefor violated sections 201(b), 202 and 203 of the Act.[8] Shortly after it filed its complaint, MGC moved to dismiss the counts alleging violation of sections 202 and 203.[9] After discovery, which included MGC's deposition of four AT&T witnesses, the parties participated in a minitrial, during which they examined two witnesses, presented oral argument and responded to questions from Commission staff. As contemplated by the rules

for the Accelerated Docket, we issue our order resolving this matter within sixty days of MGC's filing of its complaint.[10]

III. DISCUSSION

6. In this proceeding, MGC asserts that AT&T ordered, and continues to order -- either explicitly or constructively -- originating access service under MGC's tariff. MGC maintains that, having ordered the service, AT&T cannot decline to pay for it at the rate specified in MGC's validly filed tariff. Thus, MGC contends that, by accepting MGC's originating access service without paying for it, AT&T has improperly engaged in self help measures and has thereby violated section 201(b) of the Act, which prohibits any carrier "practice . . . that is unjust or unreasonable."[11] During the course of this proceeding, AT&T has repeatedly expressed its belief that MGC's access rates are unreasonably high[12]; however, in this action, it does not challenge the reasonableness of those rates. Rather, AT&T argues that, while it initially received, and was obligated to pay for, MGC's originating access service,[13] its July 21, 1998 letter complied with the termination provision of MGC's tariff and effectively ended AT&T's relationship with, and payment obligation to, MGC for originating access. Consequently, AT&T asserts, MGC's continued provision to AT&T of originating access, beyond August 22, 1998, amounts to the conferral of an unwanted benefit for which AT&T is not obligated to pay.[14]

7. MGC's tariff provides that access customers like AT&T may order access service either orally or in writing, including by the submission of an access service request.[15] The parties agree that the tariff permits cancellation of service, upon 30 days' notice either

orally or in writing.[16] AT&T concedes that, prior to its July 21 letter, it had ordered originating access service from MGC.[17] The question presented for our decision is whether AT&T took the appropriate steps effectively to terminate its arrangement with MGC for the acceptance of originating access traffic. This issue is entirely distinct from the question that AT&T has presented in a petition for rulemaking: whether an IXC may decline to purchase *terminating* access service.[18] In this decision, we express no opinion on that separate matter.

A. May an IXC Refuse a Competitive LEC's Access Service?

8. Preliminarily, we note that this proceeding implicates the question of whether, assuming that it does so effectively, an IXC may refuse to accept originating access traffic from a local exchange carrier. MGC appears to have conceded this point at the hearing in this case.[19] Furthermore, at no point in this proceeding has MGC contested the proposition that its tariff permits cancellation on 30 days' notice.[20] Having agreed that its tariff permits cancellation of access service, MGC can hardly contend that such cancellation is nevertheless somehow prohibited. Regardless of such a concession, however, MGC's papers in this proceeding fail to identify any impediment to an IXC declining to purchase a particular LEC's access service. MGC relies on equal access and dialing parity obligations and on the section of the Act relating to payphones as the bases for requiring AT&T to accept MGC's access traffic.[21] None of these will do the work that MGC demands of them.

9. Section 251(b)(3) of the Act imposes the obligation on all LECs to "provide dialing parity to competing providers of telephone exchange service and telephone toll

---

[16] *See* MGC Tariff FCC No. 1 §§ 5.5.1 and 5.6.1; Minitrial Transcript at 259:19 to 260:4. At no point in this proceeding has MGC contested the assertion that its tariff permits cancellation of service with 30 days' notice.

[17] *See supra* note 5.

[18] *See Interexchange Carrier Purchases of Switched Access Services Offered by Competitive Local Exchange Carriers*, Petition for Declaratory Ruling, CCB/CPD No. 98-43 (filed October 23, 1998).

[19] *See* Minitrial Transcript at 300:1-13 (MGC states that, prospectively, an IXC could simply refuse to accept a LEC's originating access traffic). *See also* MGC Proposed Findings at 35, ¶ 65 ("The law is noticeably silent with regard to carriers' ability to jointly agree not to complete certain types of traffic from one network to the other.").

[20] *See supra* note 16.

[21] *See* MGC Proposed Findings at 27, 41-45, ¶¶ 46-47, 75-83.

service."[22] We do not perceive in that obligation any restriction that would prevent an IXC from declining to be a "competing provider" by rejecting a LEC's access service. Indeed, in implementing the dialing parity provisions of the Act, the Commission expressly declined to require a competing provider to offer intraLATA toll service throughout an entire LATA.[23] Accordingly, we conclude that neither section 251(b)(3), nor the Commission's implementing rules would prevent an IXC from rejecting a competitive LEC's access service in some or all of its service area.

10. Along the same lines, the Commission's order implementing the equal access conversion process places certain obligations on a LEC once an IXC has "affirmatively notif[ied] the LEC of its intention to participate in the allocation process."[24] These are obligations on the LEC for the benefit of the IXC. We do not perceive in the equal access rules any restriction that would require AT&T to take (and pay for) MGC's access service, or, more generally, to provide its services to a particular group of customers.

11. Finally, neither the Act nor the Commission's rules or orders place any restrictions on an IXC's ability to block or refuse to carry payphone traffic. The Act prohibits a payphone service provider from restricting the IXCs that otherwise would be available to payphone users if they were calling from a non-public phone served by the same end office switch.[25] However, in the *Third Payphone Order*,[26] the Commission expressly encouraged IXCs to develop the capability to block traffic from certain payphones.

12. By holding that none of the obligations we discuss above prevents AT&T from declining MGC's originating access service, we do not imply that AT&T is entirely without constraint in determining where, how, or to whom it will provide its long distance services. Naturally, in providing those services, AT&T remains subject to a broad variety of statutory and regulatory constraints that are too numerous to list here, but which include, without limitation, sections 201, 202, 203 and 214 of the Act and section 63.71 of the Commission's

rules.[27] Additionally, AT&T's tariffs likely also place restrictions on the manner in which it offers its services to its customers. AT&T also may well be subject to other statutory or regulatory restrictions in its purchase of access services -- either originating or terminating -- but MGC has not raised them in this proceeding. Our analysis is restricted to the issues that MGC has presented. Consequently, we conclude only that none of the statutes, rules or orders governing equal access, dialing parity or payphone services imposes any obligation on AT&T that would prevent it, should it choose to do so, from rejecting MGC's originating access service.

B. Did AT&T Effectively Terminate MGC's Access Service?

13. The question remains whether AT&T took the steps necessary to terminate MGC's service. The parties appear to agree that the course of their discussions regarding AT&T's receipt of service is reflected in a series of written communications that passed between them in the summer and fall of 1998. Above, we quoted the relevant portion of AT&T's July 21, 1998 correspondence[28]; because they are relatively brief, we set out the remaining communications here.

14. The July 21 letter was followed by an August 14, 1998 letter from MGC, which stated that, given AT&T's continued willingness to accept traffic from MGC, the LEC was interested in further negotiations on the terms for originating access service.[29] AT&T, in turn, responded on August 26, 1998, stating that it had neither ordered, nor consented to receive, MGC's originating access service. Notwithstanding this assertion, the letter continued:

> [A]s noted in AT&T's letter of July 21, 1998, AT&T will continue, at least for the present, to complete calls to and from MGC's customers as

---

[27] 47 U.S.C. §§ 201, 202, 203, 214; 47 C.F.R. § 63.71 (establishing procedures for discontinuance or impairment of service by domestic, non-dominant carriers).

[28] *See supra* paragraph 4.

[29] In relevant part, MGC's letter stated:

> Based upon your assurance that for the present time, AT&T will continue to complete calls to and from MGC's local service customers, we agree at this time to engage in negotiations with AT&T for an agreement for switched services. However, it is my understanding that MGC is free to include, in its tariff, any such charges which are just and reasonable.

August 14, 1998 letter of Kent Heyman to Philip Miller (MGC Hearing Exh. No. 6).

> a convenience to those customers, and to ensure that their communications needs are not jeopardized because of MGC's failure to obtain AT&T's agreement to an access arrangement.[30]

The final piece of correspondence in the record is an e-mail message from an AT&T employee to MGC's general counsel. In it, AT&T's representative responds to MGC's request that AT&T confirm its final position on the issue of access service. In relevant part, the e-mail states:

> It was my understanding that MGC was willing to review, and was in the process of internally reviewing, pricing options for its switched access service. So, I didn't think we were at the point in our discussions for "final positions." AT&T continues to be open to negotiating a mutually acceptable purchase arrangement for switched access service at competitive prices, and hopes that MGC desires the same result. It would be helpful to us to understand the outcome of your internal review.
>
> I would also like to clarify a couple of issues you raised. AT&T will continue to complete calls to and from MGC local service customers, through ILEC tandems, so as to avoid any inconvenience to those customers. We also remain willing to direct trunk to MGC end offices under mutually agreed terms.[31]

15. We do not view this series of correspondence as unambiguously evincing an intention by AT&T to stop receiving MGC's originating access service as of August 22, 1998. Rather, the communications equivocate on whether AT&T wishes MGC to stop sending it access traffic. On the one hand, the July 21 letter states that AT&T "will not purchase switched access services under the terms and conditions" of MGC's tariff, while, on the other hand, it states that AT&T "will continue to complete calls to and from" MGC's customers. Each of the subsequent communications similarly indicates -- in virtually identical language -- the intention to continue completing calls to and from MGC customers (which is to say receiving MGC's access service) at the same time that they state AT&T's desire to terminate the parties' relationship. Additionally, the October 19, 1998 e-mail message quoted above explicitly states that AT&T's representative does not view the parties as having reached their "final positions." A party receiving this communication reasonably could interpret it as a statement that AT&T wished to continue negotiating over access rates and that it did not yet

[30] August 26, 1998 letter of Philip Miller to Kent Heyman (MGC Hearing Exh. No. 7).

[31] Oct 19, 1998 e-mail from Stephen Sisk to Kent Heyman (MGC Hearing Exh. No. 8).

intend to take the precipitate action of terminating the parties' relationship. This interpretation of the statement is only strengthened where, as here, it is immediately followed by the statement that AT&T will continue to avail itself of MGC's access service.

16. The conduct of the parties, particularly AT&T, during the relevant period further demonstrates the equivocal nature of AT&T's claimed termination of their relationship. For example, AT&T failed to take certain steps that would have been reasonable and necessary if it had wished to terminate its access service arrangement with MGC.[32] The originating access service relationship between AT&T and MGC gave rise to a class of end users who received their local service from MGC and who had chosen AT&T as their presubscribed interexchange carrier (PIC) so that they could place calls with AT&T on a 1+ basis. These end users were customers of, and had relationships with, *both* AT&T and MGC. Neither MGC nor AT&T was free simply to move these shared customers to another IXC -- or, for that matter, to another LEC -- so that AT&T and MGC could part ways. First, both the Act and our slamming rules prohibit either a LEC or an IXC from changing an end user's carrier without the customer's express authorization.[33] Second, we doubt that AT&T would agree simply to relinquish to another IXC all of the customers it currently shares with MGC. To the contrary, in terminating its relationship with MGC, AT&T likely would have a strong business incentive to participate in any process by which these shared customers are given a choice between staying with MGC and staying with AT&T. Indeed, we question whether AT&T might view it as a breach of a contract tariff (possibly entitling AT&T to liquidated damages) for certain of its customers to terminate their AT&T service in order to stay with MGC. Given these considerations, any effort by MGC unilaterally to migrate its customers to a different IXC not only would have raised confusion among the carriers' shared customers, but also would have placed MGC at significant legal risk.

17. The record indicates that AT&T was aware of the issues posed by the carriers' shared customers, but it chose not take what we view as reasonable measures to effectuate the termination because it did not wish to inconvenience *its own* customers. If AT&T truly had intended to terminate MGC's originating access service, it should have made reasonable efforts to begin the process of untangling the two carriers' dealings with their shared

---

[32] During the hearing in this case, AT&T introduced evidence tending to show that it would be unreasonably burdensome to require AT&T to develop a means of blocking MGC's traffic from coming onto AT&T's network. Minitrial Transcript at 51-85, 115-118. We credit that evidence. Our decision in this matter is in no way based on a finding that, to terminate MGC's service, AT&T was required to block MGC's traffic.

[33] *See* 47 U.S.C. § 258(a); *Implementation of the Subscriber Carrier Selection Changes Provisions of the Telecommunications Act of 1996; Policies and Rules Concerning Unauthorized Changes of Consumers Long Distance Carriers*, Second Report & Order and Further Notice of Proposed Rulemaking, 14 FCC Rcd. 1508, 1510 (1998); 47 C.F.R. § 64.1150.

customers. For example, AT&T might well have initiated talks with MGC on how the shared customers would be contacted and notified of the requirement that they switch either local or long distance providers. Indeed, William Taggart, AT&T's district manager for CLEC contract development and management, testified that he and other AT&T personnel discussed this precise issue.[34] However, it does not appear from the record that AT&T initiated any such conversations with MGC.[35]

18. The record demonstrates that this lack of action by AT&T was attributable to its desire to avoid service interruption or other inconvenience for its own customers. Thus, Mr. Taggart testified that the company "felt that any kind of . . . stopping of traffic flowing between the two companies would be very destructive between MGC's end user customers and [AT&T's] long distance customers."[36] Similarly, during his deposition, Philip Miller, the author of AT&T's July 21 letter, testified that AT&T did not consider blocking MGC's traffic because it was unwilling to risk losing existing business customers:

> [W]e determined first of all that it would be onerous on our part and two, that *more importantly, it would be onerous and inconvenient for our business customers* so as per my July letter to MGC, our decision on AT&T's part was not to block even though we had not ordered the service. *We did it on behalf of our business customers -- the convenience of our customers.*[37]

19. While AT&T claims it unambiguously indicated its desire to terminate the relationship with MGC, its own employees made affirmative decisions not to take reasonable steps to effectuate this goal because they did not wish to interrupt the service of, or otherwise inconvenience, AT&T's existing long distance customers. As indicated by Mr. Miller, this likely is why AT&T chose to include the same equivocal language about continuing to complete calls from MGC customers in each of its communications to MGC. Having chosen

---

[34] Mr. Taggart testified during deposition: "[T]o the extent that calls ended up being blocked by MGC, we felt that there was a need . . . to work with MGC to come up with some kind of communication to MGC local customers that were currently PIC'ed to AT&T and [give] them their options." William Taggart Deposition at 50:22 - 51:6 (MGC Hearing Exh. No. 25).

[35] *See, e.g., id.* at 51:7-21 (Taggart's testimony that, to his knowledge, no one from AT&T discussed with MGC the process of giving shared customers the option of choosing either a different IXC of a different LEC).

[36] *Id.* at 20:14-18. *See also id.* at 24:12-15 (AT&T's decision to continue accepting traffic motivated by concern about "reaction both from a customer standpoint, from an MGC standpoint and from an FCC standpoint").

[37] Philip Miller Deposition at 34:4-12 (MGC Hearing Exh. No. 26) (emphasis added).

to continue carrying traffic for the convenience of its customers (and presumably for the business advantage that it derived therefrom), AT&T cannot claim that it nevertheless intended to terminate its access service arrangement with MGC, and did so unambiguously.

20. The effect of AT&T's apparently calculated ambiguity was to place MGC in an intractable dilemma: it was forced to choose between sending traffic to AT&T, knowing it would not be paid, and blocking MGC subscribers' traffic from AT&T's network, thereby running the legal risks addressed above.[38] Under these circumstances, we conclude that AT&T was obligated to make its intent to terminate absolutely unambiguous. It failed to accomplish this.

21. With respect to categories of traffic other than 1+, it is also likely that AT&T would have undertaken at least some discussions with MGC if it had wished to terminate MGC's access service. For both toll-free (1-8YY) traffic and dial-around (10-10-XXX) traffic, AT&T likely would have wanted to participate in the composition of -- or at least know the content of -- any message that customers would receive from MGC indicating that AT&T would no longer accept these categories of traffic from MGC. In any event, we note that AT&T's communications did not distinguish between the various types of traffic so that MGC might treat these categories differently than 1+ traffic.

22. Similarly, AT&T's correspondence made no distinction between originating and terminating traffic. As noted above, the only service at issue in this proceeding is that for originating access. AT&T does not contend that it has terminated its agreement with MGC for terminating access service, nor does it contest its obligation to pay MGC for that service. However, none of AT&T's correspondence makes any distinction between the two types of access service. Rather, the July 21 letter states simply that "AT&T will not purchase switched access services under the terms and conditions of the MGC Communication tariff." It appears that, even in AT&T's contemplation, the record correspondence did not evince an intention to refuse terminating access service from MGC. Since the letters speak only in terms of "switched access service," it is unclear to us why, as AT&T argues, they necessarily reflect a different intent with respect to originating access service. More importantly, we see no reason that MGC would have discerned this distinction from AT&T's correspondence. This further supports our conclusion that both AT&T's communications and its conduct were equivocal.

23. Significantly, the record indicates that, even after the beginning of this proceeding, AT&T continued to permit MGC customers to choose AT&T as their presubscribed interexchange carrier, notwithstanding its claimed intention to reject MGC's access service after August 22, 1998. Thus, MGC submitted evidence showing that, between August 25, 1998 and May 24, 1999 (a week after MGC filed its complaint in this matter),

[38] *See supra* paragraph 16.

over 1,800 MGC end users selected AT&T as their PIC and were subscribed to that carrier's service.[39] Nothing in the record indicates that AT&T instructed MGC to stop permitting its customers to subscribe to AT&T or otherwise stated its intention not to receive the originating access service that certainly would accompany each new MGC customer who chose AT&T. To the contrary, Mr. Taggart testified that the company determined not to raise with MGC the issue of continuing PIC subscriptions after AT&T had purported to terminate service.[40]

24. Responding to this aspect of the record, AT&T argues that a customer's selection of AT&T as its PIC does not amount to an order by AT&T of MGC's access service.[41] This may be true, and we recognize that, under the Commission's rules, it typically is the LEC, not the IXC, that executes a customer's instructions to subscribe that customer to a particular long distance provider.[42] Nevertheless, it is hardly consistent with AT&T's claimed intention to stop receiving MGC's originating access service for the company to continue to accept new subscribers from MGC, without either protest or some statement that AT&T no longer wished to receive MGC's access service.

25. AT&T's actions after July 21 in no way clarify its equivocal correspondence that purported to terminate MGC's service. Indeed, we find that, in some ways, those actions perpetuated the ambiguities in the correspondence. We therefore conclude that AT&T did not unambiguously state its intention to terminate MGC's service. By this result, we do not intend to require some specific formula or boilerplate language for terminating tariffed service. We do require, however, that a party wishing to terminate service under a tariff explicitly and unequivocally state its intention and act in a manner consistent with that intention. We are confident that, when a carrier has genuinely decided to terminate service, it

---

[39] *See* MGC Hearing Exh. No. 1, "Presubscription Requests by MGC Customers Accepted by AT&T Following August 22, 1998."

[40] William Taggart testified as follows:

> Q: Was that ever discussed, the idea of coming to MGC directly and saying don't allow your customers to PIC AT&T anymore?
>
> A: When we told MGC that we did not want to purchase their service, we felt that it was their decision, whether they wanted to continue to PIC customers to AT&T.

Taggart Deposition at 50:9-15.

[41] *See* AT&T Proposed Findings at 28-29, ¶¶ 57-58.

[42] *See* 47 C.F.R. § 51.209(b); *Local Competition Second Report & Order*, 11 FCC Rcd. at 19419-20, ¶ 50.

will be able to express that decision in both words and actions that do not admit of the ambiguity that we find surrounded AT&T's actions here.

IV. CONCLUSION

26. For the reasons discussed above, we conclude that AT&T's July 21, 1998 letter and its later correspondence, especially when viewed against the background of AT&T's subsequent actions, failed to give MGC sufficiently unambiguous notice of AT&T's intent to terminate the arrangement under which MGC provided originating access service. Notwithstanding AT&T's purported termination of MGC's access service, AT&T's letters stated that it would continue to avail itself of that service for the indefinite future. Consistent with this statement, AT&T did, in fact, continue willingly accepting MGC's access service, as the record reflects, for the convenience of AT&T's customers, and, we conclude, for the business advantage that AT&T received therefrom. Furthermore, apart from the purported termination correspondence, AT&T failed to take certain steps that, we conclude, a carrier likely would take if it truly wished to terminate a LEC's originating access service. Chief among these steps is initiating the process of migrating AT&T's and MGC's shared customers to either a new LEC or a new IXC.

27. Having failed effectively to terminate its access relationship with MGC, we conclude that AT&T's refusal to pay for the originating access service that it has received since August 22, 1998, amounts to impermissible self-help and a violation of section 201(b) of the Act. We accordingly grant MGC's complaint in this matter and hold that AT&T is liable to MGC, at MGC's tariffed rate, for the originating access service that it received from August 22, 1998, through the date of this order. The parties have stipulated that, between August 22, 1998 and March 31, 1999, AT&T withheld payment for MGC's originating access service in the amount of $1,966,240.07.[43] We additionally conclude that AT&T is liable for interest on the stipulated amount at the rate published by the United States Internal Revenue Service for tax refunds.[44] We are confident that the parties similarly will be able to reach agreement on any unpaid balance that has accumulated since March.

V. ORDERING CLAUSES

28. Accordingly, IT IS ORDERED that, pursuant to sections 1, 4(i), 4(j), 201 and 208 of the Act, as amended, 47 U.S.C. § 151, 154(i), 154(j), 201, 208, and pursuant to the authority delegated to the Common Carrier Bureau in sections 0.91 and 0.291 of the Commission's rules, 47 C.F.R. § 0.91, 0.291, MGC's formal complaint filed in this proceeding IS GRANTED.

29. IT IS FURTHER ORDERED that AT&T is liable to MGC and SHALL PAY the stipulated amount of $1,966,240.07, plus interest at the rate published by the United States Internal Revenue Service, for originating access service that AT&T received from MGC between August 22, 1998 and March 31, 1999.

30. IT IS FURTHER ORDERED that the parties SHALL CONFER regarding the damages (including interest), accruing after March 31, 1999, for which AT&T is liable as a result of its actions in this matter. In the event that the parties are unable to reach agreement on this damages figure, MGC may file a further complaint in the appropriate forum.

31. It is FURTHER ORDERED that, consistent with MGC's unopposed motion, Counts II and III of the Complaint are hereby DISMISSED.

FEDERAL COMMUNICATIONS COMMISSION

Robert C. Atkinson
Deputy Chief, Common Carrier Bureau

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of

COMMUNIQUE TELECOMMUNICATIONS, INC. dba LOGICALL

Petition for Declaratory Ruling and Interim Relief Against the National Exchange Carrier Association's Unauthorized Interference with the Continued Provision of Authorized Resale Carrier Operations

National Exchange Carrier Association

Petition for Declaratory Ruling Regarding the Effectiveness of Tariff Rates and Regulations Governing Lifeline Assistance and Universal Service Fund Charges During the Period April 1 through July 31, 1989

DECLARATORY RULING AND ORDER

Adopted: May 23, 1995; Released: May 25, 1995

By the Chief, Common Carrier Bureau:

1. On April 21, 1993, Communique Telecommunications, Inc., dba LOGICALL (Communique), filed a petition for declaratory ruling and interim relief against the National Exchange Carrier Association (NECA)[1] and the local exchange carriers (LECs) providing interstate access services to Communique. Communique is a reseller of interstate telecommunications services. Communique seeks a declaratory ruling that NECA does not have statutory or other authority to bill and collect from Communique the Universal Service Fund (USF) and Lifeline Assistance (LA) charges contained in NECA's Tariff F.C.C. No. 5.[2] Communique also asks the Commission to rule that NECA's member LECs may not disconnect or otherwise interfere with local access services being provided to Communique while the Commission determines the lawfulness of NECA's tariffing, billing and collecting of the USF and LA charges under Part 69 of the Commission's rules.

2. Communique's petition was placed on public notice on May 10, 1993. On June 21, 1993, comments were filed by NECA, the National Telephone Cooperative Association (NTCA), Southwestern Bell Telephone Company (Southwestern), the United Telephone Companies (United) and the United States Telephone Association (USTA). Replies were filed by NECA, the Organization for the Protection and Advancement of Small Telephone Companies (OPASTCO) and Communique on July 12, 1993.

3. Previously, on December 5, 1990, NECA had filed a petition for declaratory ruling that the Commission's rules and NECA Tariff F.C.C. No. 5 require Allnet Communications Service, Inc. (Allnet) to pay USF and LA charges for the period April 1 through July 31, 1989. NECA further sought a ruling that the "self-help" provisions in Section 2.1.8 (f) of its tariff and similar provisions found in access tariffs of LECs that are not members of the NECA pools, which permit LECs to refuse to provide additional service or to discontinue existing service for nonpayment of bills, may be used to force Allnet to pay the delinquent USF and LA payments.[3] These are the provisions that Communique asks not apply to it while its petition is pending before the Commission.

4. We deny Communique's petition and conclude that NECA has authority to bill and collect USF and LA charges on behalf of the LECs, and that the administration of the USF and LA programs through the access charge plan has been affirmed through judicial review.[4] We deny Communique's request for interim relief because we find that it has failed to make the requisite showing for such relief. With respect to NECA's petition, we conclude that if Allnet had the requisite number of presubscribed lines during the period in question, it is liable for the USF and LA charges billed by NECA for the period between April 1 and July 31, 1989. We reach no conclusion on the issue of the lawfulness of NECA's and other LECs' self-help provisions raised in both Communique's and NECA's petitions. Instead we find that the issue is properly addressed in the complaint process rather than through requests for declaratory ruling.

[1] NECA is an association of all local exchange carriers created by Section 61 Subpart G of the Commission's rules. 47 C.F.R. § 61.601 *et seq.* NECA prepares and files access charge tariffs on behalf of all telephone companies that do not file separate tariffs or concur in a joint access tariff of another telephone company for all access elements. NECA also administers the Universal Service Fund and Lifeline Assistance programs.

[2] As discussed below, the USF and LA charges are per-line charges assessed on all interexchange carriers that use local exchange switching facilities to provide interstate or foreign telecommunications services and that have at least .05 percent of the total subscriber lines presubscribed to interexchange carriers.

[3] On December 10, 1990, Allnet filed a motion to dismiss NECA's petition or, in the alternative, to stay the proceeding pending the resolution of its court case. NECA filed its opposition to Allnet's motion on December 20, 1990. On January 4, 1991, Allnet filed its reply to NECA's opposition. NECA's petition was not placed on public notice. Allnet's opposition and the responsive pleadings did not address the issues for which NECA seeks declaratory ruling. Allnet argued that the timing of NECA's petition was improper because the matter was already before the courts, *citing Allnet Communications Services, Inc. v. NECA*, 741 F. Supp. 983 (1990); 965 F.2d 1118 (D.C. Cir. 1992). Subsequently, the Court of Appeals upheld the lower court's dismissal of Allnet's complaint and held that the Commission has primary jurisdiction over the substantive issues raised. Because the court proceedings have concluded, we need not address Allnet's opposition.

[4] *See NARUC v. FCC*, 737 F.2d 1095 (D.C. Cir. 1994), *cert. denied*, 469 U.S. 1227 (1985) (stating "[w]e therefore affirm the FCC's orders in all major respects.").

I. BACKGROUND

5. The Commission regulates the rates local exchange carriers (LECs) charge to recover the costs associated with providing interstate telecommunications services. The states regulate LEC rates that recover costs associated with intrastate services (local service and intrastate long distance services). The cost of telephone facilities that can be used to provide both interstate and intrastate services are allocated between the two jurisdictions. These jointly used facilities include local "loops" -- a term used to describe the telephone wires, poles, and other facilities that directly link each telephone customer's premises to a telephone central office in the public switched telephone network and can be used for making and receiving intrastate and interstate telephone calls.

6. On a nationwide, average basis, telephone companies allocate approximately 27 percent of their loop costs to the interstate (federal) jurisdiction and 73 percent to the state jurisdiction.[5] Individual LECs' average cost per loop, however, varies significantly. The Commission's high cost assistance program, which is known as the Universal Service Fund (USF), permits LECs with costs per loop that are well above the nationwide average to allocate a higher percentage of those costs to the interstate jurisdiction and receive payments from the USF to recover those additional allocated costs from interstate revenues. In this manner, the high cost assistance program enables eligible LECs to maintain their local rates at reasonable levels and thereby furthers one of the more important goals of federal and state regulation -- the preservation of universal telephone service.

7. The Lifeline Assistance (LA) programs are designed to promote universal service by helping low income individuals afford telephone service. The LA programs reflect matching local rate reductions approved by state utility commissions, and may take the form of a reduction in monthly charges or a reduction in service connection and installation charges. These state reductions are matched by corresponding reductions in the federal subscriber line charges -- a fixed monthly amount charged to all subscribers that covers a portion of the loop costs assigned to the interstate jurisdiction. A third program, Link-Up America, allows low income households to connect to the telephone network.[6] Under these programs, beneficiaries must pass a "means" test, such as eligibility for food stamps or Medicaid, and each applicant's eligibility for benefits must be verified. The states submit their plans and proposed qualification standards to the Commission for certification.

8. The present USF and LA programs began on April 1, 1989, and are funded by charges assessed on qualifying interexchange carriers in proportion to their presubscribed lines for interstate service.[7] Specifically, interexchange carriers that use local exchange switching facilities to provide interstate or foreign telecommunications services are charged for USF and LA if they have .05 percent or more of the total nationwide subscriber lines[8] that are presubscribed to an interexchange carrier for "1+" service.[9] These USF and LA charges are monthly per-line charges, computed and assessed by NECA. The level of the per line charge depends upon data submitted by the LECs, in compliance with Sections 69.116 and 69.117 of the Commission's rules.[10] The USF and LA charges are specific rate elements in access charge tariffs. The access charge tariff prepared by NECA is used by LECs that participate in the NECA pools.[11] while LECs that do not participate in the NECA pools maintain their own tariffs. USF and LA assistance is available to all LECs.

9. The rules now in effect superseded rules adopted by the Commission on May 19, 1987 that provided that an interexchange carrier would have to contribute to the USF and LA if it had at least one percent of the total presubscribed lines in all study areas. Under the superseded rules an interexchange carrier with five percent of the presubscribed lines in any single study area and a minimum of 1,000 presubscribed lines in that study area, would also be charged for USF and LA assistance.[12] NECA reported that an analysis of presubscribed lines data indicated that under the one percent threshold some very small interexchange carriers would have to contribute to the USF and LA while some medium-sized carriers would not. This occurred because some very small interexchange carriers had a relatively large regional presence (greater than 5 percent of the presubscribed lines in a study area) while some medium size interexchange carriers (on a na-

[6] Under the Link-Up America plan, federal assistance pays one-half of the connection charges, up to a maximum of $30.00. If a LEC offers a deferred payment plan for service commencement charges and it does not assess the subscribers any interest charges, federal assistance will be available to that LEC to cover the interest on costs of up to $200.00.

[7] Concerning USF charges, *see* MTS and WATS Market Structure, 93 FCC 2d 241, 281-82 (1983), *recon.*, 97 FCC 2d 682, 689, *further recon.*, 97 FCC 2d 834 (1984), *aff'd in principal part and remanded in part, NARUC v. FCC*, 737 F.2d 1095 (D.C. Cir. 1984), *cert. denied*, 469 U.S. 1227 (1985); *see also, Rural Telephone Coalition v. FCC*, 838 F.2d 1307, 1313-15 (D.C. Cir. 1988). Concerning LA charges, *see* MTS and WATS Market Structure, Amendment of Part 67 of the Commission's Rules and Establishment of a Joint Board, CC Docket Nos. 78-72 and 80-286, *Order*, 2 FCC Rcd 2953 (1987), *aff'd on recon.*, 3 FCC Rcd 4543 (1988), *aff'd, Dist. of Columbia Publ. Serv. Comm'n v. FCC*, 897 F.2d 1168 (D.C. Cir. 1990); *see also* MTS and WATS Rate Structure, *Recommended Decision and Order*, 2 FCC Rcd 2324, 2332 (1987).

[8] A "subscriber line" or "common line" is the local loop or the facilities connecting the telephone company central office with the customer's premises.

[9] To be presubscribed to an interexchange carrier for 1+ service means that when a subscriber dials "1" as the first digit of an interLATA call, the call is automatically handed off to and carried to its destination by the interexchange carrier previously selected by that subscriber. The Modification of Final Judgment defines 1+ service as a service that "permits each subscriber automatically to route, without the use of access codes, all the subscriber's interexchange communications to the interexchange carrier of the customer's designation." Modification of Final Judgment, app. B ¶ A(2)(ii), 552 F. Supp. 225, 233.

[10] 47 C.F.R. §§ 69.116 and 69.117.

[11] LECs that charge rates in the tariffs prepared by NECA all charge the same rates, even though their costs to provide services vary from company to company. The revenues collected through the tariff rates are "pooled." Each company then receives an amount of the pooled revenues to cover its costs, plus its share of the return earned by the pool. This pooling process is administered by NECA.

[12] MTS and WATS Market Structure, Amendment of Part 67 of the Commission's Rules and Establishment of a Joint Board, 2 FCC Rcd 2953 (1987).

tionwide basis) did not. For this reason, in November 1988, the Commission proposed to change both the one-percent and five-percent qualification criteria to a .05 percent threshold only.[12] While the revisions were not adopted until July 21, 1989 (and became effective 30 days after their release),[14] NECA and the LECs participating in its tariff had previously sought and received a waiver of the original criteria to permit use of the proposed .05 percent criteria to determine USF and LA interexchange carrier liability.[15] This waiver also permitted them to use the revised criteria in the 1989 access tariff filing. Those tariffs became effective April 1, 1989, between four and five months prior to the Commission's adoption of the new rule.

10. Communique's petition states that in January of 1993, Communique received letters from NECA seeking to collect past due USF and LA charges in the amount of $265,030.76. According to Communique, NECA's letter of January 22, 1993 stated that under Section 8.1 of the NECA tariff, NECA may send written notification to companies that have not paid USF and LA charges and that the LECs may take action, including disconnection or refusal to provide new access services.[16] Communique states further that it informed NECA, by letter of February 25, 1993, that it was working to establish a payment program for the charges and that payment would be made under protest.[17] Subsequently, Communique filed its petition.

11. Allnet, which was not required to pay USF or LA charges initially because it did not meet the original presubscribed line thresholds, has refused to pay charges associated with the USF and LA programs for the period from April 1 to July 31, 1989, the period covered by the waiver described in the preceding paragraph. It has, however, paid those charges after that period. When NECA threatened to invoke its tariff provisions enabling members to discontinue service to carriers for nonpayment of charges, Allnet sought injunctive and declaratory relief from the United States District Court.[18] Allnet also sought a declaratory ruling that it owed no USF or LA amounts for the period from April 1 to July 31, 1989, and requested the court to enjoin NECA from exercising the tariff's self-help provision. On July 31, 1990, the court issued an order dismissing Allnet's petition, effectively denying its request for injunctive relief, on the grounds that NECA was not a common carrier and therefore not subject to the court's jurisdiction under Section 207 of the Communications Act.[19] On appeal of that district court opinion, the United States Court of Appeals for the District of Columbia rejected the District Court's reasoning but affirmed the dismissal of the case on the ground that the Commission had primary jurisdiction over the dispute.[20] After the District Court's decision, but before the Court of Appeals decision, NECA filed its petition for declaratory ruling with the Commission.

II. DISCUSSION

A. NECA's Authority to Bill and Collect USF and LA Charges

1. Positions of the Parties

12. Communique argues that NECA is not a common carrier under the Communications Act and, therefore, it does not have authority to file tariffs and bill and collect charges based on such tariffs under Title II of the Act. Communique asserts that until the Commission and the courts resolve the issue of NECA's authority under Title II, NECA should not be permitted to exercise prerogatives of a Title II carrier, including disconnecting service for nonpayment of bills.[21] Since NECA has no authority to tariff USF and LA charges, and since those charges are not tariffed elsewhere (*i.e.*, by the LECs themselves), Communique maintains, Sections 203[22] and 217[23] of the Communications Act preclude NECA from billing and collecting such charges or effecting disconnection of Communique's access services for nonpayment.[24] Communique asserts that nothing in the express language of the Act authorizes a non-carrier to make tariff filings and that the Act does not expressly permit non-carriers to take the place of, or to substitute for, a carrier in discharging its common carrier duties and obligations under the Act.

---

[13] Amendment of Part 69 of the Commission's Rules Relating to the Assessment of Charges for the Universal Service Fund and Lifeline Assistance, *Notice of Proposed Rulemaking*, 4 FCC Rcd 2041 (1988). Under this threshold, only those interexchange carriers with .05 percent or more of the total presubscribed lines ("1+" access lines) allocated to interexchange carriers would be charged for USF and LA assistance.

Nov. 13, 1992).

[22] Section 203 of the Communications Act contains provisions concerning, *inter alia*, the filing of rates by common carriers. 47 U.S.C. § 203.

[23] Section 217 of the Communications Act addresses the liability of a carrier for the acts and omissions of agents. 47 U.S.C. § 217.

[24] Communique Petition at 7-8.

13. Communique also asserts that because Section 216 of the Act[23] expresses a Congressional intent that only receivers and trustees of carriers may stand in place of the actual carrier for purposes of the Act's application, an agent, such as NECA, may not. According to Communique, Section 217's provision of liability by a carrier for the acts or omissions of its agent does not entitle the agent to exercise the carrier's rights or obligations, including the obligation to file tariffs. Hence, Communique asserts that when Congress addressed the application of the Act to non-carriers, it did so specifically, and in a very limited way. These sections, Communique argues, preclude the FCC or a court from expanding the application of Title II to include NECA.[24] Communique also argues that the USF and LA charges constitute an unlawful tax in violation of Article I, Section 7 of the U.S. Constitution.[27]

14. Communique states that in *American Sharecom*,[28] the court concluded that NECA was not subject to liability under Sections 206 and 207[29] of the Act because these sections imposed liability only on common carriers for any act that violates the Act. Communique maintains that the court dismissed the claims against NECA in that case because it found no statutory basis to treat NECA as a common carrier even if it is an agent of LECs.[30]

15. Finally, Communique argues that the Court in *Rural Telephone Coalition v. FCC*, 838 F.2d 1307 (D.C. Cir. 1988),[31] "couched" its concerns about the inequities established by the USF program on the transitory nature of the USF plan and the Commission's need to establish an access charge plan at the time of divestiture.[32] Communique asserts that now, ten years later, this "transition" mechanism is still in place, but nothing has been done to address the inequities, which have only worsened. Communique does not describe these "inequities." Communique argues that the Commission has a duty to revisit its policies and to adapt them to new circumstances.[33]

16. USTA, NECA and Southwestern argue that the Commission's access charge rules require NECA to file tariffs on behalf of its member companies.[34] USTA argues that under Part 69 of the Commission's rules, interexchange carriers were required, effective April 1, 1989, to pay two new rate elements -- Lifeline Assistance and Universal Service Fund -- to help assure universal availability of telephone service funding programs established to reduce rates charged by high cost local exchange carriers.[35] NECA and USTA also assert that the rules require non-pooling LECs' tariffs to cross-reference NECA's USF and LA tariff provisions.[36] Southwestern and USTA further state that the Commission's rules give NECA authority to collect and distribute access charge revenues.[37] USTA argues that NECA's USF and LA charges have the same force and effect as a LEC's own access tariff charges and that the same authority to enforce collection applies.[38]

17. NECA argues that, contrary to Communique's claims, the court in *Rural Telephone Coalition v. FCC*, 838 F.2d 1307 (D.C. Cir. 1988), directly addressed and rejected the petitioners' claim that USF assessments constitute an unlawful "tax" in violation of Article I, Section 7 of the Constitution.[39]

18. NECA asserts that USF revenue requirements have grown pursuant to an eight-year "phase in" prescribed as part of the Commission's original USF plan, and currently are well within the amounts contemplated by the Commission when it established the plan.[40] NECA argues that the policies underlying the USF and LA programs are still valid and in the public interest.[41] But, even if it were true that the USF program requires further revisions, NECA continues, this would not absolve Communique of its obligation to pay the assessed USF and LA charges, which are calculated in accordance with current Commission rules, and which are set forth in NECA's filed and effective tariff. Similarly, according to NECA, the fact that the Commission has initiated an investigation of NECA's most recent USF filings, or the fact that it is examining NECA pooling safeguards in Docket 93-6, cannot possibly justify nonpayment of tariffed USF and LA charges.

19. Communique's position is that, because NECA is not a common carrier, NECA cannot file tariffs pursuant to Section 203 of the Act, and thus cannot collect charges for USF and LA from Communique. We disagree. The Commission in creating NECA implicitly recognized that NECA would act as a tariff filing agent for its member common carriers. The Commission found that, given the structure of the industry at the time of the enactment of

---

[23] Section 216 of the Communications Act states that the provisions of the Act "apply to all receivers and operating trustees of carriers subject to [the] Act to the same extent that it applies to carriers." 47 U.S.C. § 216.

[29] Sections 206 and 207 of the Communications Act address the liability of carriers for damages and the recovery of damages, respectively. 47 U.S.C. §§ 206, 207.

[30] Communique Petition at 9.

[31] In *Rural Telephone Coalition* the court affirmed the Commission's allocation of local exchange costs between interstate and intrastate jurisdictions. The court held that: (1) allocation of 25 percent of non-traffic sensitive costs to the interstate jurisdiction did not constitute confiscation of an interexchange carrier's property; (2) the 25 percent allocation was not a tax; (3) the 25 percent allocation was a reasonable and carefully considered element of transition toward a national telephone rate structure based primarily on access charges; (4) the USF proposal was within the Commission's statutory authority; (5) the Commission's proposed creation of the fund was neither arbitrary nor capricious; and (6) the Commission's amendment to the separations manual was a substantive change mandating seven-day traffic studies.

[40] *Id.* at 13. *See* National Exchange Carrier Association, Inc., Tariff F.C.C. No. 5, Transmittal No. 518, *Reply (errata* filed December 15, 1992); *see also* National Exchange Carrier Association, Inc. Tariff F.C.C. No. 5, Transmittal No. 475, *Reply*, (filed December 12, 1991).

[41] NECA Comments at 13-14, citing Communique at 23, *citing Bechtel v. FCC*, 957 F.2d 873, 881 (D.C. Cir. 1992).

the Communications Act of 1934, Congress effectively made American Telephone and Telegraph (AT&T) the tariff filing agent for the industry.[42] *Thus, AT&T's tariff filing* agent role was codified in Section 203(a).[43] The Commission, in its creation of NECA, required NECA to "compute the charges and prepare and justify the tariffs on behalf of all the participating carriers."[44] Thus, the Commission essentially replaced AT&T with NECA in this tariff filing agent role.[45]

20. Moreover, in *Allnet Communications*, the Court of Appeals for the District of Columbia Circuit concluded that "the Commission appears to have assumed that NECA was subject to its tariff regulations. Unless that view violated the clear intent of Congress or was otherwise an unreasonable construction of Section 203, we would defer to it."[46] As explained above, we believe that Section 203 contemplated the use of a tariff filing agent. That the agent itself is not a carrier, we do not believe is a fatal flaw. As the Court recently stated, "[t]he *tariff filing* requirement . . . was Congress' chosen means of preventing unreasonableness and discrimination charges."[47] Because the rates charged by NECA members, which are common carriers, are publicly available and thus subject to review for reasonableness and discrimination, the intent of Section 203 is not frustrated. Indeed, NECA's tariffs fulfill the same role as a tariff filed by the common carrier, therefore furthering the purposes of Section 203. Moreover, we note that the Interstate Commerce Commission's tariff filing rules explicitly permit a carrier's agent to file tariffs for the carrier in the agent's name.[48] The Communications Act of 1934, including Section 203, was largely derived from the Interstate Commerce Act. Therefore, we reject Communique's argument that NECA is precluded from filing tariffs.

21. Moreover, the Commission is authorized by Section 4(i) to "perform any and all acts, make such rules and regulations, and issue such orders, not inconsistent with this Act, as may be necessary in the execution of its functions."[49] An important function of the Commission is ensuring universal service. The establishment and empowerment of NECA is critical to ensuring this goal. NECA oversees the USF, LA and Link-Up America programs, all of which are designed to promote and preserve universal telephone service. The Commission's rules appropriately require NECA to administer, compute, bill and collect charges for those programs.[50]

22. The Court of Appeals has previously recognized the Commission's authority under Section 4(i) to direct a party to file a tariff, even if Section 203 is inapplicable.[51] In *Lincoln Telephone*, for example, the court affirmed a Commission order requiring Lincoln Telephone and Telegraph Co. to offer local interconnections on a tariffed basis to an interexchange carrier. Lincoln asserted that the Commission could not require Lincoln to offer local interconnections on a tariffed basis to MCI because Lincoln, as a connecting carrier, was not subject to the requirements of Section 203. In rejecting Lincoln's argument, the court declared that Section 203(a)'s terms "do not. . . . in any way" provide the exclusive authority under which the Commission can require a tariff to be filed." According to the court, while Section 203(a) did not grant the Commission the requisite authority for its action, the Commission properly exercised its authority under Section 4(i) to require Lincoln to file an interstate tariff.[52]

23. We also believe that NECA's ability to file tariffs on the behalf of its member LECs is not precluded by Section 217 of the Act. Communique argues that NECA does not have authority to tariff USF and LA charges and that Sections 203 and 217 preclude NECA from billing charges not tariffed elsewhere or from effecting disconnection of service to Communique.[53] As discussed above, we conclude that Sections 203 and 4(i) authorize Commission rules directing NECA to tariff USF and LA charges. Section 217 merely states that carriers are responsible for the acts, omissions, or failures of its agents, officers and employees. We find no basis for Communique's assertion that Section 217 reflects a congressional intent to restrict the activities of carriers' agents and that Section 203 and Section 217 preclude NECA from acting as agent for its member companies by developing tariffs and billing and collecting funds pursuant to those tariffs. We also find that Communique's argument based on Section 216, which addresses the application of the Act to receivers and trustees, is irrelevant to the issue before us. We therefore conclude that NECA is authorized under the Commission's rules to file tariffs, and to bill and collect the USF and LA charges, as agent for its member local exchange carriers and that the Commission rules empowering NECA to take these actions are a valid exercise of the Commission's statutory authority.

24. We also disagree with Communique that the USF charges are an unconstitutional tax. In *Rural Telephone Coalition*, the court explained that a regulation is a tax only when its primary purpose is raising federal revenue.[54] As we stated in paragraph 6, *infra*, the primary purpose of the USF is to further the goal of preserving universal telephone service, not to raise federal revenue. Moreover, the USF and LA programs are components of a system designed to recover non-traffic sensitive costs of the telephone network. As the court in *Rural Telephone Coalition* explained, there is "no reasonable way to construe the [non-

traffic sensitive] cost allocation as having the primary purpose of raising federal revenue."[55] The court found the Commission's non-traffic sensitive cost recovery system to be a reasonable method of regulation. Under the reasoning of the court in *Rural Telephone Coalition*, neither the USF nor the LA program can be construed as an unconstitutional tax, as Communique argues.

25. Communique neither states how the USF fund is inequitable nor seeks any specific relief for the alleged inequity other than Commission review. The court found the fund to be "lawful, supported by substantial evidence . . . and rationally connected to the facts."[56] *Rural Telephone Coalition* contains no finding that any imperfections of the fund require any further Commission action. We therefore find Communique's criticism of "inequities" in the USF should have no bearing on the outcome of this proceeding."[57]

B. NECA's Self-Help Tariff Provisions

26. We next turn to the "self-help" provisions of NECA's tariff that are at issue in both the Communique and NECA petitions. Communique asks that we issue a declaratory ruling finding these provisions to be unlawful. Section 2.1.8 of *NECA's Tariff F.C.C. No. 5* states:

> If the National Exchange Carrier Association, Inc. notifies the Telephone Company that the Customer has failed to comply with Section 8 of the National Exchange Carriers Association, Inc., Tariff F.C.C. No. 4 (Lifeline Assistance and Universal Service Fund charges) including any Customer's failure to make payments on the date and times specified therein, the Telephone Company, may, on thirty days' written notice to the Customer by Certified U.S. Mail, take any of the following actions: (1) refuse additional applications for service and/or (2) refuse to complete any pending orders for service, (3) discontinue the provision of service to the Customer. In the case of discontinuance, all applicable charges including termination charges shall become due.

As discussed above, NECA files tariffs on behalf of its member LECs. This self-help provision has been in the NECA tariff and the tariffs of all concurring LECs since 1989.[58] These tariffs have been reviewed by the Commission and allowed to become effective pursuant to the Commission's rules and the Communications Act.

1. **Positions of the Parties**

27. Communique argues that, because NECA has not sought disconnection of Allnet's access services despite its refusal to pay the USF and LA charges, the principles of equitable estoppel prevent NECA from now taking such action against Communique. In addition, Communique asserts, each NECA member serving Communique would also be subject to the doctrine of equitable estoppel because discontinuance would constitute a violation of Sections 201-203 of the Act.[59] Moreover, Communique contends that disconnection for non-payment of charges whose reasonableness has been challenged is forbidden by *Reiter v. Cooper* and that it has the right to litigate the reasonableness of those rates prior to making payment.[60]

28. USTA claims that *Reiter*, resolving only the narrow procedural question of whether a court must delay judgment until the regulatory agency having primary jurisdiction over the subject matter has an opportunity to rule on the matter, holds that courts cannot decide claims before a party exhausts its administrative remedies.[61]

29. Communique asserts that if "NECA were allowed to invoke Title II to secure rights for its members, while those against which it uses those rights are denied the protection" of Sections 206-209 of the Communications Act because NECA, as a non-common carrier, is not subject to liability under Sections 206-209, then "those against which NECA acted would be denied equal protection of the law."[62]

2. **Discussion**

30. First we address Communique's assertion that the doctrine of equitable estoppel prevents NECA and its member LECs from using the self-help provision. With respect to NECA, Communique argues that estoppel applies because NECA has not sought disconnection of Allnet's access services and because that discontinuance by NECA's member LECs would violate Sections 201-203 of the Act. We reject these arguments. NECA cannot be estopped from discontinuing service to Communique because NECA does not provide service. Only the member LECs can take action pursuant to the self-help provisions. With respect to the member LECs, even if Communique were correct that discontinuing access services to it would violate Sections 201-203 of the Act, the doctrine of equitable estoppel would not apply. Equitable estoppel precludes a party from asserting a right he otherwise would possess but that he forfeits because of his conduct. The aggrieved party must have justifiably relied upon such conduct and changed his position so that he will suffer injury if the other is allowed to repudiate his conduct. For the doctrine of equitable estoppel to apply to the instant circumstances, the LECs must have a right to disconnect Communique for failure to pay. Communique must show that it has relied upon the LEC's failure to disconnect, and Communique must show that it has been harmed by its reliance. However, Communique has neither taken action that can be construed as a change of position, nor can it demonstrate

[62] Communique Petition at 9.

harm from reliance on the LEC's failure to disconnect. Therefore, the doctrine of equitable estoppel does not apply.

31. We also do not believe that Communique is denied equal protection of the law if it is barred from filing a complaint against NECA under Title II.[63] It is not clear, however, that Communique would be barred from filing a Section 208 complaint against NECA. While the Commission has not ruled definitively on the issue, *dictum* suggests that access customers may file complaints against NECA.[64] Moreover, regardless of whether a complaint would lie against NECA, there is no question that Communique can pursue Section 208 complaints directly against all LECs that elect to discontinue service to Communique. If carriers employ the self-help provisions of NECA's *tariff*, Communique would have direct recourse against these carriers through the complaint process. No provision of the Act or of Commission rules limits Communique's procedural rights to raise grievances or seek reparations against such carriers. Thus, Communique's equal protection claim remains unsubstantiated. We therefore deny CTI's request for declaratory ruling and do not rule on the lawfulness of NECA's self-help provisions in this order.

32. Regarding Communique's request for a declaratory ruling, we note that the Bureau's initial review of tariffs and our orders denying petitions against the filings are interlocutory rulings and do not constitute a final determination of the lawfulness of the tariffs. The orders terminating such review simply assert that the contested portion of the tariff is not so patently unlawful that the tariff should be rejected and that no substantial issue has been raised that would require investigation of the tariff. Absent an investigation, the review of proposed tariffs is a limited review. More thorough adjudications occur in response to fact-specific complaints. The resolution of any application of self-help provisions at issue in this proceeding would depend on the facts of the specific case.

33. The determination of whether to issue a declaratory ruling under 47 C.F.R. § 1.2 in a particular proceeding is a matter within the Commission's discretion.[65] Issues that are heavily dependent on factual situations are not appropriately addressed through a declaratory ruling. For example, in *Competitive Telecommunications Association*,[66] the Common Carrier Bureau denied petitioner's request for declaratory ruling that "blocking" the use of competitive 800 access services[67] for the completion of interexchange telephone calls is an unlawful practice. In support of its decision to grant no declaratory ruling, the Bureau explained that the petitioner provided no "specific evidence" of blocking or violation of any provision of the Communications Act, Commission rules or orders. Accordingly, the Bureau stated that issuance of a declaratory ruling or a cease and desist order would be inappropriate. The Bureau concluded that, to the extent a carrier blocks calls, a complaint could be filed against that carrier under Section 208 of the Act.[68]

34. In this case, Communique offers no specific evidence that any carrier discontinued service because Communique had not paid USF and LA charges. Moreover, we do not find that on their face the NECA tariff provisions allowing for self-help violate any provision of the Communications Act, Commission rules or orders. The appropriate forum for resolving Communique's assertions challenging NECA and LEC self-help provisions is either a tariff investigation under Section 204 or 205 or the complaint process. As discussed above, no tariff investigation has been initiated; and to our knowledge, no carrier has attempted to enforce these self-help provisions. If a carrier elects to enforce the NECA tariff's self-help provisions, Communique may file a complaint under Section 208 and present the arguments it has made here, within the context of actual application of NECA's tariff by a participating carrier.

C. Interim Relief

35. We next turn to Communique's request for interim relief pending resolution of its petition to prevent NECA and its member companies from enforcing the self-help provisions against Communique for its failure to pay the USF and LA charges. Communique asserts that *Reiter*[69] requires that its challenge to the lawfulness of NECA's rates must be decided before it has to pay the USF and LA charges.

36. We agree with USTA and others that Communique has incorrectly interpreted the *Reiter* case. We find that *Reiter* did not hold that traditional self-help remedies for non-payment of disputed charges become unavailable to carriers whenever a customer asserts that the charges are unreasonable under the Communications Act. In fact, as NECA asserts,[70] the Court expressly affirmed the traditional rule that "tariff rates not disapproved by the [regulatory agency] are legal rates, binding on both the customer and the carrier."[71] Furthermore, the Commission has recognized that "the law is clear on the right of a carrier to collect its tariffed charges, even when those charges may be in dispute between the parties. . . ."[72] Customers who claim that tariff rates are unreasonable may file complaints with the Commission under Section 208 of the Communications Act, but may not automatically withhold payments of legally tariffed charges merely by asserting that the rates are unreasonable.[73]

[73] *See also* Business WATS, Inc. v. AT&T, 7 FCC Rcd 7942

37. The standards for granting a stay are well established. If Communique wishes a stay of enforcement of NECA's tariff while its disputes are being resolved, it must make the factual showing set forth in *Virginia Jobbers:* "(1) whether the petition is likely to prevail on the merits of his appeal; (2) whether, without a stay, the petitioner will be irreparably injured; (3) whether issuance of a stay will substantially harm other parties interested in the proceeding; and (4) wherein lies the public interest."[74]

38. We agree with NECA that Communique's request for injunctive relief must be denied. Not only has Communique failed to show any likelihood of success on the merits, but it has failed to address any of the remaining parts of the four-pronged test.

D. Allnet's Liability for USF and LA Payments

39. On December 2, 1988, the Chief, Common Carrier Bureau issued an order waiving Section 69.5 of the Commission's rules to permit NECA to file tariff revisions that imposed USF and LA obligations only on those interexchange carriers having .05 percent or more of the total number of access lines nationwide presubscribed to it.[75] In the order allowing NECA's rate filing to become effective, the Bureau extended the waiver of Section 69.5 pending adoption of a report and order in the Commission's proceeding proposing to amend Section 69.5 to impose USF and LA charges on interexchange carriers meeting the .05 percent criterion.[76] No party objected to the Bureau's grant of the waiver or to NECA's use of the .05 percent criterion in these tariff filings at the time they became effective.

40. We therefore conclude that, because a proper grant of the waiver permitted NECA to use the .05 percent criterion, that provision was effective in NECA's tariff during the April 1, 1989 through July 31, 1989 time frame. If Allnet met that criterion during the three-month time period, then it is liable for USF and LA charges assessed for the period between April 1 and July 31, 1989.

III. CONCLUSION

41. We therefore conclude that NECA is authorized under the Commission's rules to file tariffs, and bill and collect the USF and LA charges, as agent for its member local exchange carriers. NECA's USF and LA tariff, which include terms and conditions governing discontinuance of service for non-payment, are currently effective. Under Sections 203 and 4(i) of the Communications Act, Part 69 of the Commission's rules, and NECA's currently-effective tariff, Communique is properly subject to the USF and LA charges appearing in NECA's tariff.

42. We decline to determine the lawfulness of NECA's self-help provisions in the context of this order responding to petitions for declaratory ruling. We find that, pursuant to Commission rules and procedures, NECA's self-help provisions are effective tariff provisions. The lawfulness of legally effective tariff provisions, when applied in specific instances, may be challenged by the filing of a Section 208 complaint. We conclude that Communique has failed to make an adequate showing to justify the interim relief it requests.

43. We also find that NECA's tariff provisions, including the .05 percent criterion, were effective during the period from April 1, 1989 through July 31, 1989 and that if the USF and LA charges to Allnet are correct, then it is liable for those charges covering that period of time.

IV. ORDERING CLAUSES

44. Accordingly, IT IS ORDERED, pursuant to Section 5(d) of the Administrative Procedures Act, 5 U.S.C. § 554, and Section 1.2 of the Commission's Rules, 47 C.F.R. § 1.4, that the petition for declaratory ruling filed by the National Exchange Carrier Association IS GRANTED to the extent discussed herein.

45. IT IS FURTHER ORDERED, pursuant to Section 5(d) of the Administrative Procedures Act, 5 U.S.C. § 554, and Section 1.2 of the Commission's Rules, 47 C.F.R. § 1.4, that the petition for declaratory ruling and interim relief filed by Communique Telecommunications, Inc. IS DENIED.

FEDERAL COMMUNICATIONS COMMISSION

Florida Tariff No. 1
Original Sheet 14

SECTION 3 - DESCRIPTION OF SERVICE continued

3.4 Service Offerings

3.4.1 Bogus Long Distance Service

Bogus Long Distance Service is offered to residential and business customers. The service permits direct dialed outbound calling at a single per minute rate. Service is provided from presubscribed, dedicated or shared use access lines. Calls are billed in one minute increments. No monthly recurring charges or minimum monthly billing requirements apply.

3.4.2 Bogus 800/888 (Inbound) Long Distance Service

Bogus 800/888 (Inbound) Long Distance Service is offered to residential and business customers. The service permits inbound 800/888 calling at a single per minute rate. Service is provided from presubscribed, dedicated or shared use access lines. Calls are billed in six second increments, with a six second minimum call duration. A $10.00 minimum monthly billing requirement applies. Customers whose monthly usage is less than the minimum will be billed the minimum amount.

3.4.3 Bogus Calling Card Service

Bogus Calling Card Service is a calling card service offered to residential and business customers who subscribe to the Bogus Long Distance Service calling plan. Customers using the Carrier's calling card service access the service by dialing a 1-800 number followed by an account identification number and the number being called. This service permits subscribers utilizing the Carrier's calling card to make calls at a single per minute rate. Calls are billed in one (1) minute increments after the initial minimum period of one (1) minute. There are no nonrecurring or monthly recurring charges.

Tallahassee, FL 32301

14. SPRINT REAL SOLUTIONS VPN[SM] SERVICES (Continued)

3. Usage Charges

The following interstate per minute rates are billed in 6-second increments with a per call minimum of 18 seconds.

1. Interstate Dial-1 and Toll Free Services

The following usage rates apply to interstate Dial-1 and toll free services. Dial-1 interstate service is available to customers in the U.S. Mainland, Hawaii, Puerto Rico and the U.S. Virgin Islands. Dial-1 interstate calls may terminate to a state, U.S. possession or territory that is different from the originating location. Dial-1 terminating locations include the U.S. Mainland, Alaska, American Samoa, CNMI, Guam, Hawaii, Puerto Rico, and the U.S. Virgin Islands unless otherwise specified in Schedule No. 11. Interstate toll free calls may originate in the U.S. Mainland, Alaska, American Samoa, CNMI, Hawaii, Puerto Rico, and the U.S. Virgin Islands, unless otherwise specified in Schedule No. 11. Interstate toll free calls may terminate to the U.S. Mainland, Hawaii, Puerto Rico, and the U.S. Virgin Islands.

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 **Direct Dial Service,** ***cont'd*** .(M)

Direct Dial Service is offered to business and residential customers for both inbound and outbound, intraLATA and interLATA, calling over standard switched lines. Calls are billed in six (6) second increments after an initial minimum call duration of six (6) seconds. The applicable rates are not time of day sensitive and apply 24 hours per day, 7 days a week.

Volume and term discounts are offered and rates vary based on whether the Customer is served by on-net or off-net facilities. (M)

3.6.1 **HomeSaver(M)(N)**

HomeSaver is a two-way switched access service offered only in conjunction with interstate HomeSaver service. HomeSaver provides customers with both inbound (800) and outbound (1+) service. HomeSaver customers may be billed directly or via their credit card for intrastate and interstate calls that terminate to the customer's HomeSaver station, and are billed to the called party rather than the call originators. HomeSaver customers may originate outbound intrastate calls by dialing 1 plus an area code and the desired telephone number, or by dialing 101XXXX and then the area code and the desired telephone number. Inbound calls are originated to the HomeSaver customer's designated location by users dialing 1 plus the HomeSaver customer's 800 telephone number .(M)(N)

Material previously on this page has been moved to page 61.

Material on this page was previously on page 30.

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 Direct Dial Service, *cont'd* .(M)(N)

3.6.1 HomeSaver, *cont'd.*

A. Rate Structure

HomeSaver calls are based on length of call and time of day.

B. Usage Charges

The customer's total monthly use of HomeSaver is charged at the applicable service hours and rates per minute set forth in Section 4. HomeSaver outbound calls are billed in six (6) second increments, with a thirty (30) second minimum per call. HomeSaver inbound calls are billed in six (6) second increments with a one minute minimum per call. Any fraction of an increment is rounded up to the next whole increment.

HomeSaver subscribers who place Access (Travel) calls are billed in one minute increments with a one minute minimum per call, according to HomeSaver service hours. The rates applicable to HomeSaver Access (Travel) calls are set forth in Section 4 of the tariff. (M)(N)

3.6.11 Frontier Voice Virtual Private Network

Frontier Voice Virtual Private Network ("VPN") provides the Customer the functionality and capabilities of a private network through the use of shared and/or dedicated transmission facilities, which permits the Customer to establish a communications path between two Customer locations by using a Customer-defined Private Numbering Plan ("PNP"). The following call types are available to Frontier Voice VPN Customers:

1) Dedicated to Dedicated: provides PNP type calls between locations linked by dedicated access. All calls are billed in six second increments with a six second minimum for each call. Any fraction of an increment will round up to the next whole increment.

2) Dedicated to Switched: calls originating from a VPN Customer's dedicated location and terminate on switched facilities either within or outside the Customer's PNP. All calls are billed in six second increments with a six second minimum for each call. Any fraction of an increment will round up to the next whole increment.

3) Switched to Dedicated: calls originating from a switched location within a Customer's PNP and terminate on a dedicated location within the PNP. All calls are billed in six second increments with a six second minimum for each call. Any fraction of an increment will round up to the next whole increment (N)

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 **Direct Dial Service,** *cont'd* .(N)

3.6.11 Frontier Voice Virtual Private Network, *cont'd.*

4) Switched to Switched: calls originate from a switched location within the Customer's PNP and terminate on a switched location either within or outside the PNP. All calls are billed in six second increments with an eighteen second minimum for each call. Any fraction of an increment will round up to the next whole increment.

5) 8XX Remote access to Switched/Dedicated: calls originate from a switched location via a VPN 8XX remote access number and terminate to a switched/dedicated location within the Customer's PNP. A VPN personal code is used to verify that the caller is authorized to make VPN calls. The PNP code must be a uniform length not to exceed 10 digits. All 8XX remote access calls are billed in six second increments with a thirty second minimum for each call. Any fraction of an increment will round up to the next whole increment.

Frontier Voice VPN service charges consist of both recurring and non-recurring charges. Recurring charges consist of flat monthly charges and usage-based charges. Flat monthly charges apply whether or not the service is used. Usage charges apply to all completed calls. The usage charges apply to all call types, 24 hours a day 7 days a week. All recurring, non-recurring, volume and term discounts applicable to Frontier Voice VPN service are set forth in Section 4 following. (N)

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 **Direct Dial Service,** *cont'd.* (N)

3.6.11 **Frontier Voice Virtual Private Network,** *cont'd.*

The Frontier Voice VPN Customer must have T-1 access from at least one of their locations into one of the Company's switches equipped to provide VPN service. Additional connections to the VPN network can be either via dedicated, switched or remote access.

The Customer can originate calls via dedicated access and switched access. With switched access, Customer originated calls are connected to the Company network via a dial access basis. Switched access calls include those originating from the Customer's VPN lines pre-subscribed to the Company and using 1+ or 1+700 dialing plans.

For a one time setup charge a Switched Overflow option is available to the Frontier Voice VPN Customer. Switched Overflow will route any call placed from any PNP location terminating to a dedicated PNP location, to a switched plain old telephone service (POTS) number at the dedicated terminating location if the dedicated facility is busy or the network is at capacity. The setup charge applicable to this option is set forth in Section 4 following.

Customers may subscribe to Frontier Voice VPN on a one, two or three year term plan and may select from 5 monthly minimum usage levels (MMUL). Beginning with the Customers' fourth invoice, and for the remaining months of any term plan commitment, the Customer will be charged the difference between the gross account usage and the MMUL if the gross account usage is less than the MMUL. Term Plan Customers are eligible to receive tariffed volume discounts set forth in Section 4, each month based on its VPN MMUL commitment. (N)

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 **Direct Dial Service,** *cont'd* .(N)

3.6.11 **Frontier Voice Virtual Private Network,** *cont'd.*

Voice VPN Term Plan Customers whose monthly gross account usage exceeds the next higher MMUL above the level to which the subscriber has committed will receive the discount applicable to the next higher MMUL. Discounts on all monthly gross account usage will be capped at the discount level applicable to the next higher MMUL. Volume discounts are calculated off the Frontier Voice VPN Month-to-Month rates in effect when calls are made. The discounts apply to VPN usage (outbound and remote access) only and do not apply to non-recurring or monthly recurring charges nor to any associated calling card, operator/directory assistance and value added service usage. Volume discounts are not available to Customers subscribing to Frontier Voice VPN Month-to-Month service. In addition, Frontier Voice VPN customers who commit to a service term may receive additional discount credits as set forth in Section 4 following. Term plan options will automatically renew for successive periods of one year unless the Customer notifies the Company in writing before the end of their current term that the Customer intends to terminate the agreement at the completion of the term. The Company will notify the term plan customer at least 60 days prior to the end of the current term that the end of their current term is approaching. Customers choosing not to renew their term plan option will be assessed the Frontier Voice VPN Month-to-Month tariff rate currently in effect. A termination fee, equal to the MMUL of the term plan that the Frontier Voice VPN customer is subscribing, times the number of months remaining in the current term will be assessed to customers terminating service prior to the completion of their current term of service.

The Customer is responsible for any Company and local service provider monthly recurring charges for dedicated circuits/loops necessary for the service, and costs incurred by the Company, including installation and local service provider contract termination charges, if such circuits/loops are canceled prior to activation of service, or the completion of the term commitment made by the Customer .(N)

3.6.12 Frontier Simple 7

Frontier Simple 7 (FS7) is a two-way, non-distance sensitive, flat rated long distance product designed for business customers.

A. Rate Structure

FS7 provides a single rate for outbound (1+) calls and a single rate for inbound (8xx) calls regardless of time of day. There is a monthly minimum usage guarantee on this product.

B. Usage Charges

FS7 calls are billed in six second increments with a minimum billing increment of thirty seconds. Any fraction of an increment is rounded up to the net whole increment. (C)

C. Ancillary Charges

Calls made to directory assistance are charged on a per call basis.

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 **Direct Dial Service,** *cont'd.*

3.6.13 InterState 4.9

InterState 4.9 is a non-distance sensitive flat-rated, outbound service. The per minute usage charges as specified below apply to all intrastate calls which originate and terminate in the state of Florida.

This plan is available to customers of local exchange companies with whom the carrier has a billing and collections contract. Customer must subscribe to this product on the main billing number on the account. Customer must choose the InterState 4.9 product both for interLATA and intraLATA purposes for those lines which they choose to presubscribe to this product.

Calling card calls will appear as "TravelConnect" on the invoice. (N)

A. Per Minute Usage Charges

All inbound/outbound calls are subject to a minimum billing of thirty seconds with an additional billing increment of six seconds. All Calling Card calls are subject to a minimum billing of one minute with an additional billing increment of one minute. Charges will be rounded to the nearest cent on a per call basis.

B. Monthly Recurring Charges

The monthly recurring charge is applied at the account level when the monthly account usage charges are less than $30.00.*

* Intrastate, interstate and international usage excluding taxes and surcharges apply towards $30.00 minimum usage.

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6.14 Frontier VIP

Frontier VIP Standard and VIP Plus are long distance services that provide Customers with single per minute rates for both their inbound (8XX) and outbound (1+) switched and dedicated usage. VIP Standard and VIP Plus are offered dependant upon the availability of Carrier capability.

A. Rate Structure

Frontier VIP switched calls are non-distance sensitive, flat-rated, twenty-four (24) hours a day, seven days a week.

B. Usage Charges

Customers may subscribe to Frontier VIP Standard and VIP Plus switched and dedicated service on either a Month-to-Month, one, two or three year Term Plan. The Customer's total monthly usage of Frontier VIP is charged at the applicable per minute rates set forth in this tariff. Frontier VIP switched inbound (8XX) and outbound service is billed in six-second increments, with an eighteen-second minimum for each call. Any fraction of an increment is rounded up to the next whole increment. To calculate rounding, the raw usage charge for the call is calculated as the call duration (minimum plus fractional duration) multiplied by the 4-digit ($0.XXXX) rate value. That amount is then rounded up or down to the nearest whole cent. (N)

SECTION 3 - DESCRIPTION OF SERVICE, *cont'd.*

3.6 Direct Dial Service, *cont'd.* (N)

3.6.14 Frontier VIP, *cont'd.*

B. Usage Charges, *cont'd.*

Subscribers to VIP Standard and VIP Plus term plan service will be eligible to receive discounts on domestic 1+ and domestic Toll-Free calls. Applicable discounts are based on total monthly (domestic) usage for the respective service. VIP Standard total usage does not include the local services of affiliated ILECs with a billing and collection agreement with the Carrier, while VIP Plus total usage does include these local services. All discount credits will be applied against the customer's interstate usage. Applicable discounts are set forth in this tariff. Subscribers to Frontier VIP Term Plan services will receive a percent discount off the switched or dedicated Term Plan base rate, based on the Term Plan selected. The Volume Discount Levels and applicable discounts are specified in this tariff.

Applicable discounts are set forth in this tariff. Subscribers to a VIP Term Plan services will receive a percent discount off the Term Plan base rate, based on the Term Plan and Volume Discount Levels. The Volume Discounts Levels and applicable percent discounts are specified in this tariff.

Frontier VIP Standard Term Plans will automatically renew for successive twelve (12) month periods unless the Customer notifies the Carrier in writing before the end of their current term of their intention to terminate the agreement at the completion of the term. Frontier VIP Plus Term Plans will default to VIP Standard month-to-month plans if not renewed. Customers electing to continue receiving service without renewing their current term commitment will automatically revert to the respective switched current effective base rate. (N)
