# DIRECT TESTIMONY

OF

# SUSAN CHAMBERS

on behalf of

Aqua Utilities Florida, Inc.

COM APA ÉCR GCL 2 RAD \_\_\_ SSC ADM \_\_\_\_ OPC CLK ()

DOCUMENT NUMBER-DATE 05650 AUG 10 = FPSC-COMMISSION CLERK

| 1  |             | <b>BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION</b>                               |
|----|-------------|-----------------------------------------------------------------------------------|
| 2  |             | AQUA UTILITIES FLORIDA, INC.                                                      |
| 3  |             | <b>TESTIMONY OF SUSAN CHAMBERS</b>                                                |
| 4  |             | DOCKET NO. 100330-WS                                                              |
| 5  | I. <u>I</u> | ntroduction.                                                                      |
| 6  | Q.          | Please state your name, position, and business address.                           |
| 7  | А.          | My name is Susan Chambers. I am the National Customer Service Manager for         |
| 8  |             | Aqua America ("Aqua"). My business address is 762 W. Lancaster Avenue, Bryn       |
| 9  |             | Mawr, Pennsylvania 19010.                                                         |
| 10 |             |                                                                                   |
| 11 | Q.          | What are your duties and responsibilities as the National Customer Service        |
| 12 |             | Manager?                                                                          |
| 13 | A.          | I am responsible for serving the customers of Aqua Utilities Florida, Inc. ("AUF" |
| 14 |             | or the "Company") in the areas of customer service and Call Center operations,    |
| 15 |             | including quality control.                                                        |
| 16 |             |                                                                                   |
| 17 | Q.          | Please describe your educational background and work expertise.                   |
| 18 | A.          | I have worked for Aqua for 24 years. I have recently been appointed to the        |
| 19 |             | position of National Customer Service Manager. Prior to this appointment, I was   |
| 20 |             | the National Customer Billing Manager and took on that role in 2005. Prior to     |
| 21 |             | that, I have held several positions in Aqua's billing and accounting departments  |
| 22 |             | and became Aqua's billing manager in 2001. I have a B.S. degree in Accounting     |
| 23 |             | from Cabrini College in Radnor, Pennsylvania.                                     |
| 24 |             |                                                                                   |
| 25 |             | DOCUMENT NUMBER-DATE                                                              |
|    |             | 05650 AUG IO =                                                                    |

FPSC-COMMISSION CLERK

# 1 II. Purpose and Summary of Testimony.

| 2  | Q. | What is the purpose of your testimony?                                       |  |  |  |  |  |  |
|----|----|------------------------------------------------------------------------------|--|--|--|--|--|--|
| 3  | A. | I appear on behalf of AUF to discuss the Company's good customer service and |  |  |  |  |  |  |
| 4  |    | its strategy for continuing to enhance customer service. I also discuss the  |  |  |  |  |  |  |
| 5  |    | Company's continuing commitment to address customer satisfaction.            |  |  |  |  |  |  |
| 6  |    |                                                                              |  |  |  |  |  |  |
| 7  | Q. | Are you sponsoring any exhibits to your direct testimony?                    |  |  |  |  |  |  |
| 8  | A. | Yes. I am sponsoring the following exhibits:                                 |  |  |  |  |  |  |
| 9  |    | Exhibit SC-1 - is a compilation of AUF's actions taken in response to        |  |  |  |  |  |  |
| 10 |    | customer comments made during prior hearings in this                         |  |  |  |  |  |  |
| 11 |    | proceeding.                                                                  |  |  |  |  |  |  |
| 12 |    | Exhibit SC-2 - is AUF's detailed response to issues raised by a customer     |  |  |  |  |  |  |
| 13 |    | receiving service from AUF's Arredondo Farms system.                         |  |  |  |  |  |  |
| 14 |    | Exhibit SC-3 - is AUF's Final Phase II Quality of Service Monitoring Report. |  |  |  |  |  |  |
| 15 |    | <b>Exhibit SC-4</b> - is AUF's Report on Commission Complaints - 2011.       |  |  |  |  |  |  |
| 16 |    | Exhibit SC-5 - is AUF's Report on Commission Complaints - 2009-2010.         |  |  |  |  |  |  |
| 17 |    |                                                                              |  |  |  |  |  |  |
| 18 | Q. | Please summarize your testimony.                                             |  |  |  |  |  |  |

AUF has a strong commitment to customer service. The Company is dedicated to 19 A. anticipating and meeting the needs of its customers by effectively utilizing 20 customer service representatives ("CSRs"), field technicians, and technology to 21 enhance the quality of the service that AUF provides to its customers. 22 AUF continues to listen attentively to the concerns of its customers and has 23 implemented a number of significant proactive measures to address customer 24 satisfaction. 25

Since AUF's last rate case in Docket No. 080121-WS, AUF's customer service has been the focus of a rigorous and unprecedented monitoring review by the Commission, its Staff and the Office of Public Counsel ("OPC"). The results of that monitoring clearly show that AUF has good customer service and is committed to improving that service. No further action by the Commission is needed to ensure quality of service.

8

1

# 9 III. <u>AUF's Commitment to Customer Service.</u>

# 10 Q. Please describe AUF's commitment to customer service.

AUF's mission is built around a strong commitment to customer service. We have a Customer Field Services Manager in Florida who manages all customer service functions between the Call Center, Billing and Customer Service. This includes service orders, billing issues, water quality issues, meter reading and customer interface. We have a Call Center dedicated to AUF-related calls, and we are committed to making sure that our CSRs are well trained to respond to customers in an effective, prompt and courteous manner.

18

# 19 Q. Has AUF taken steps since its last rate case to enhance the services it 20 provides to customers?

- A. Yes. Since the last rate case, AUF has implemented a number of proactive
   measures to improve its customer service. For example:
- To identify trends or potential problem areas, and to appropriately resolve customer concerns, AUF has formed a "Complaint Analysis and Remediation Team" ("CART"), which consists of all Call Center

supervisors and their managers, as well as the Supervisor of Compliance.
The team meets on a monthly basis to address all escalated calls and to
identify areas where further coaching and training are needed. When I use
the terms "escalated calls" I refer to calls and communications received
from customers requesting further review by either a supervisor or
manager.

- AUF has refined the tracking of customer on-site meter and bench test
  procedures to make those tests more timely and efficient.
- To enhance customer responsiveness and efficiency, AUF has
  standardized its processes for its field technicians to improve the
  interactions between the field technicians and the Call Center.
- AUF prepared and provided an informational brochure to remind
   customers about contacting the Call Center when they leave or return to
   their Florida home. This proactive measure is helpful because many of
   AUF's customers use their Florida home as a second residence in the
   winter. The brochure was designed to encourage customers to contact the
   Call Center when they leave for the summer so that their account is
   properly noted as "seasonal."
- AUF developed a water conservation and leak detection informational
   section on the website. This can be found at
- 21 http://watersmart.aquaamerica.com.

These are just some of the measures AUF has taken since the last rate case to improve its customer service. AUF is constantly looking for ways to enhance customer satisfaction.

25

1

2

# Q. Has AUF attempted to address proactively customer concerns raised at the customer meetings that previously took place in this proceeding?

Yes. Between October 14, 2010, and November 18, 2010, AUF attended and 3 A. 4 participated in 9 customer meetings, at which time the customers were allowed to 5 ask questions and provide input regarding AUF's quality of service. AUF listened attentively to all of those customer comments. AUF customer 6 7 representatives reviewed every single issue raised during the public input 8 hearings. Depending on the nature of the issue, AUF followed up with meetings, 9 phone calls, meter tests, field visits and follow-up letters. In addition, AUF filed 10 with the Commission a formal response to the customer comments from each of 11 the meetings and from the May 24, 2011 Agenda Conference. Attached to my testimony as Exhibit SC-1 is a compilation of all of AUF's responses to the 12 customer comments, which AUF has previously filed with the Commission. 13

14

# Q. Has AUF attempted to proactively address customer concerns raised in other forums?

A. Yes. AUF filed a detailed response to concerns raised by a customer receiving
service from AUF's Arrendondo Farms system, which is attached to my
testimony as Exhibit SC-2. In addition, AUF has contacted this customer and will
be meeting with the customer in the near future to discuss specific issues which
the customer has raised.

22

# 23 Q. What other steps has AUF taken to address customer concerns?

A. Customer input is extremely important to AUF and the Company continues to take steps to address issues raised by customers at customer meetings. For example:

1

- AUF has taken significant steps to address customer concerns with respect
  to the aesthetic quality of water. This is explained in detail in Mr.
  Luitweiler's direct testimony,
- Furthermore, in order to address customer requests for online payment
   options, AUF has developed a new program Aqua Online that allows
   utility customers to view and pay bills online. This new program is
   currently available to AUF's customers.
- AUF listened attentively to those customers who expressed concerns that
  their water service had been "shut off" for nonpayment. AUF is sensitive
  to these concerns and has a termination of service policy that is more
  consumer friendly than the service termination regulations set forth in
  Commission Rule 25-30.320(2), F.A.C.
- 14
- 15
- 16
- 17 Q. Please compare AUF's service termination policies with those set forth in the
  18 Commission's Rules.

A. Under the Commission's Rules, a customer has 21 days to make a payment before
being considered delinquent. Once an account becomes delinquent, those rules
authorize the utility to terminate service for nonpayment for <u>any</u> amount past due,
provided that the utility supplies the customer with at least 5 working days written
notice in advance of termination. Under AUF's policy, the customer is provided
at least 10 days advance written notice indicating that service will be discontinued
if payment is not received. In addition to providing more advanced written

1 shutoff notice, AUF also attempts to call the customer prior to discontinuing service, which is not required by the Commission's Rules. Furthermore, unlike 2 the Commission's Rules which allow for service to be terminated for failure to 3 pay any amount of an outstanding bill, AUF's policy is to proceed with service 4 termination only in those instances where the outstanding amount owed exceeds 5 \$100. Furthermore, although not required by Commission Rules, AUF routinely 6 offers a payment plan for outstanding bills for qualified customers. Qualified 7 8 customers are customers who have not broken previous payment agreements more than twice. Finally, where service is terminated for failure to pay, AUF's policy 9 is to reinstate service within the next business day following the date of payment 10 confirmation. 11

12

# Q. Other than customer service meetings, are there other means by which the Company measures and monitors the quality of its customer service?

A. Yes, AUF closely monitors the types of calls coming into its Call Center as well
 as the complaints filed at the Commission. AUF also utilizes its own quality of
 service metrics which are part of its robust quality assurance program.

18

# 19 Q. Please provide examples of changes that were implemented as a result of the 20 Company monitoring calls coming into its Call Center.

A. Certainly. Since the last rate case, AUF has implemented a process where an alert
message is placed on a customer bill if a customer has a high bill or the bill covers
a period longer than 35 days. The high bill alert prompts the customer to
investigate for potential leaks and visit Aqua's website for more detailed

information. The long period bill alert advises the customer that they can request a payment arrangement upon contacting the Call Center.

3

1

2

In addition, in order to improve the CSR responsiveness and make sure that
escalated calls coming into the Call Center are responded to in a timely fashion,
AUF has developed an electronic work queue ("EWQ") that is used to monitor
and track supervisor customer call backs. The EWQ is audited by the Quality
Assurance Team, which is compromised of Senior CSRs.

9

# Q. Please explain how AUF monitors the complaints filed with the Commission in order to ensure quality of service.

A. AUF closely monitors the complaints coming into the Commission and categorizes the complaints in order to track and respond to root cause trends. For the first seven months of 2011 AUF averaged 10 complaints per month. By comparison, the average number of complaints filed regarding AUF in 2009 and 2010 were 18 per month and 13 per month, respectively. This is shown in my Exhibit SC-5. As shown in my Exhibit SC-4, 56 out of 71 (79%) complaints in 2011 were related to a high bill or billing dispute.

19

AUF has acted promptly and properly to resolve the complaints filed at the Commission's Call Center. Indeed, all of the complaints filed during the Phase II monitoring period have now been closed.

23

1

2

Q.

# Have you identified any trends in the volume of complaints that have been filed regarding AUF since 2007?

3 Α. Yes. In 2007 AUF averaged receiving 20 Commission complaints per month. In 2011, that average has dropped to 10 complaints per month, which equates to a 4 50% reduction in complaint volume. This decrease in complaints during this 5 6 period is significant, particularly when one considers that over the same time frame AUF had initiated two rate cases, and customer complaints and inquiries 7 typically increase around the time of a rate case. Although AUF is proud that the 8 number of complaints has decreased over the last 4 years, AUF recognizes the 9 10 importance of tracking formal complaints and will work hard to see the number of 11 complaints continue to decrease even further.

12

# Q. You mentioned that AUF measures and monitors its service quality using its own metrics. Why doesn't AUF use the Commission's metrics?

- A. The Commission has not adopted its own standards to monitor or measure a water
  or wastewater utility's quality of service.
- 17
- 18

Q. How does AUF employ its metrics to monitor and measure quality of service?
A. AUF has been proactive in establishing its own quality of service metrics as part
of a robust quality assurance program. A detailed discussion of those quality of
service metrics and how AUF utilizes those metrics to improve service and
address customer satisfaction is set forth in my Exhibit SC-3.

24

1 It is important to note that AUF did not establish these self-imposed metrics at easily attained levels so that it could simply justify the status-quo. Instead, AUF 2 designed its metrics to challenge employees to stretch their customer service 3 performance toward excellence. AUF's operations are guided by challenging 4 5 targets which take into account that, while 100 percent perfection is not always achievable or cost effective, AUF's customers expect 100 percent reliability. 6 AUF strives to provide 100 percent reliable customer service in all service 7 8 categories. However, as with any water, gas, electric or telecommunications 9 utility, 100 percent perfection is not always attainable. The fact that AUF has been proactive in adopting its own quality of service metrics, illustrates AUF's 10 commitment to quality of service. Moreover, as shown in Exhibit SC-3, the 11 results of those quality of service metrics demonstrate that AUF's service quality 12 has steadily improved since its last rate case. 13

14

# Q. You state that the quality of AUF's customer service has been the subject of rigorous monitoring by the Commission and others since the last rate case. Can you elaborate on that monitoring process?

Yes. AUF last sought rate relief from the Commission in 2008. After conducting Α. 18 a formal hearing, the Commission determined that AUF's quality of service was 19 marginal for all systems except the Chuluota System, which was found to be 20 unsatisfactory. The Commission thereafter granted AUF rate relief for all of its 21 22 systems, except for the Chuluota water and wastewater systems. In addition to granting rate relief, the Commission established a monitoring plan ("Initial 23 Monitoring Plan") to enable it to monitor AUF's customer service in three areas: 24 the general handling of customer complaints, the specific handling of complaints 25

at AUF's Call Center, and the accuracy of AUF's metering readings and resulting bills.

2

1

3

# Initial Monitoring Phase

The Commission's Initial Monitoring Plan required AUF to file monthly reports 5 6 on customer complaints, Call Center sound recordings, and meter reading logs and route schedules for the six-month period from May 2009 through October 7 2009. Every call from an AUF customer that came into the Call Center during 8 this time period was recorded and provided to the Commission Staff for review. 9 10 AUF complied with the Commission's Initial Monitoring Plan in all respects. 11 AUF timely submitted extensive complaint logs and Call Center sound recordings 12 for each month, which allowed Commission Staff to objectively review first-hand all customer calls to determine the quality of service provided by AUF's CSRs. 13 14 AUF also provided Commission Staff with all of its meter reading route schedules for the entire six month monitoring period along with the actual meter reading 15 logs for all of those systems. This allowed Commission Staff to personally visit 16 AUF systems soon after AUF's meter readers had completed their reads and 17 18 documented the usage on the meter. Commission Staff compared its volumetric reads to the AUF meter reading log to independently test for meter and billing 19 accuracy. 20

21

At the end of that intensive independent review process, Commission Staff filed a detailed report and recommendation on March 4, 2010, which concluded that AUF's handling of customer complaints, meter reading, customer billing and environmental compliance was adequate.

On March 16, 2010, the Commission considered Staff's recommendation and 2 observed that its Staff had spent an extraordinary amount of time objectively 3 reviewing the quality of AUF's customer service and further found that Staff's 4 review of the actual CSR sound recordings was the most reasonable means to 5 6 determine if AUF is performing adequately. The Commission went on to affirm that of the 738 total sound recordings reviewed, its Staff had independently 7 determined that "the majority were handled in a courteous and professional 8 manner and the representatives were taking the appropriate action to resolve all 9 10 issues in the call." Order No. PSC-10-0218-PAA WS (April 6, 2010) at p. 6. The 11 Commission also acknowledged that AUF had implemented a number of other measures to improve its customer service with respect to its Call Center, its field 12 technicians and its customer outreach. 13 14 The Commission ultimately concluded that the results of the Initial Monitoring 15 Plan showed "substantial improvement in AUF's customer service, [but that] 16 additional monitoring was required to ultimately render a determination as to the 17 adequacy of AUF's quality of service." Id. at 12 (emphasis added). 18 19 **Phase II of Monitoring** 20 Recognizing that its Initial Monitoring Plan had imposed substantial cost and time 21 requirements on utility Staff and Commission Staff, the Commission directed its 22 Staff to continue to monitor AUF's customer service through the end of 2010 on a 23 more limited basis. The Commission also ordered AUF to collaborate with the 24

1

25

14

OPC and other parties to "develop a cost-effective, efficient, and meaningful

monitoring plan, and to bring the supplemental monitoring plan to us within 45 1 days." Id. at 13. Thereafter, AUF, OPC and the parties ultimately agreed to a 2 proposed Phase II Monitoring Plan which eliminated the requirements that AUF 3 produce sound recordings, meter reading information, and complaint logs, but 4 5 continued a more limited monitoring of customer service and certain aesthetic water quality issues. To ensure that this Phase II Monitoring Plan was cost-6 effective and efficient, the reporting requirements specifically agreed upon by 7 OPC and AUF were structured around (i) non-proprietary reports that AUF was 8 9 already using internally to monitor and ensure quality of service (with the exception of one report that was created specifically for the Phase II Monitoring 10 Plan), and (ii) an aesthetic water quality improvement program that AUF already 11 had underway. 12 13 The Phase II Monitoring Plan required AUF to provide on a monthly basis the 14 following customer service-related reports: 15 A Management Quality Performance ("MQP") Report, which tracks on a 16 monthly basis the reasons for customer calls. This report is used by AUF 17

19 trends.

18

• A Florida Complaint Support Information Report, which provides nonproprietary information for each of the complaint-related calls that underlies the MQP Report for each month.

management to understand recent performance and identify any adverse

A Florida Scorecard, which includes quality of service metrics for each
 month and is used by management to incentivize its employees to provide
 excellent quality of service to customers.

| 1  |    | • A Call Center Monitoring Statistics Report, which tracks the key                |
|----|----|-----------------------------------------------------------------------------------|
| 2  |    | performance indicators of AUF's Call Center on a monthly basis, and is            |
| 3  |    | used by AUF management to ascertain whether it is meeting its targeted            |
| 4  |    | service performance levels.                                                       |
| 5  |    | • A Call Quality Report for AUF's Call Center, formatted such that monthly        |
| 6  |    | data can be tracked for each of the individual call center separately.            |
| 7  |    | • A Service Order Status Report, which tracks AUF's service order log and         |
| 8  |    | the timeliness of closing service order requests.                                 |
| 9  |    | • An Estimated Read Report, which allows for the tracking of the number of        |
| 10 |    | estimated reads and the investigating any adverse trends.                         |
| 11 |    |                                                                                   |
| 12 |    | By Order No. PSC-10-0297-PAA-WS, dated May 10, 2010 ("Phase II Monitoring         |
| 13 |    | Order"), the Commission approved the Phase II Monitoring Plan agreed to by the    |
| 14 |    | OPC and AUF. In so ruling, the Commission acknowledged that many of its           |
| 15 |    | customer service concerns regarding meter reading, meter accuracy and billing     |
| 16 |    | that led to the Initial Monitoring Plan had been addressed. Pursuant to the Com-  |
| 17 |    | mission's directives, AUF filed a final report on February 28, 2011, summarizing  |
| 18 |    | the results of AUF's Phase II reporting requirements. See Exhibit SC-3.           |
| 19 |    |                                                                                   |
| 20 | Q. | What did the results of Phase II Monitoring Reports show?                         |
| 21 | A. | The detailed results of the Phase II Monitoring Reports are set forth in AUF's    |
| 22 |    | Final Phase II Quality of Service Monitoring Report, which is attached as Exhibit |
| 23 |    | SC-3 to my testimony. The results of that report show that AUF has been           |
| 24 |    | proactive in adopting aggressive quality control methods and has done an          |

25 excellent job in meeting those service quality goals. The results of the Phase II

.

Monitoring Report also show that AUF has made steady improvement in the 1 quality of customer service since the last rate case. For example, the CSR Call 2 3 Ouality scores improved dramatically when compared to 2008. See Exhibit E to Exhibit SC-3. Also, the Estimated Read Report shows that the estimation rate for 4 Florida has been consistently below the target goal of 1 percent. See Exhibit G to 5 Exhibit SC-3. This steady improvement is also reflected in the downward trend in 6 complaints filed with the Commission that I previously discussed. 7

#### Since the last rate case, have the Commission and its Staff made any findings Q. with respect to the quality of AUF's customer service? 10

Yes. As I mentioned above, the Commission and its Staff have closely monitored 11 Α. the quality of AUF's customer service for over a period of almost two years, and 12 not once has the Commission or its Staff found that the quality of AUF's 13 customer service was unsatisfactory. In fact, as far back as March 4, 2010, 14 Commission Staff found: 15

Based on staff's review of AUF's processes for handling 16 customer complaints, meter reading, and customer billing, 17 as well as its environmental compliance, staff recommends 18 that AUF's performance as specified in the Monitoring 19 Plan detailed in the Final Order is adequate. 20

Staff Recommendation, dated March 4, 2010, in Docket No. 080121-WS, at 21 13. (emphasis added). Furthermore, when the Commission decided to 22 continue to monitor AUF's quality of service through the end of 2010, it 23 expressly found that "preliminary results show substantial improvement in 24 AUF's customer service." Order No. PSC-10-0218-PAA-WS (April 6, 25

| 1                                            |    | 2010) (emphasis added). More recently, after reviewing AUF's Final Phase                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |  |  |  |

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000001 of 000051

# Aqua Utilities Florida, Inc. Sunny Hills Customer Meeting Response

Overview: The Sunny Hills customer meeting was held on October 14, 2010, in Sunny Hills, Florida. Approximately 7 customers provided comments to the Commission staff during the meeting.

The majority of the customers gave input regarding the level of the rates and bills.

Two customers provided input concerning the secondary water quality, which pertained to cloudy water. One customer indicated that the cloudy water occurred three years ago. The other indicated it occurred approximately six months ago, but had cleared up.

One customer provided input on service related issues pertaining to a service line break.

One customer inquired as to his high consumption of water.

Two customers provided input on the consumption blocks and inquired as to why customers had to pay more for increased water use.

# Ms. Vitale; 1681 Ross Ct

At the meeting, Ms. Vitale raised an issue about a service line break which occurred between the utility's meter and her residence.

Upon researching Ms. Vitale's concern, AUF found that Ms. Vitale first called on January 11, 2010 stating she had a leak. An emergency work order was issued. Ms. Vitale called back requesting to know where her shut off valve was located on her side of the meter. The CSR advised that the location of the shut off valve was unique to each home and such information was not readily available to the CSR. Thereafter, Ms. Vitale ended the call abruptly.

Ms. Vitale again called back to inform the CSR that the fire department had come by and shut her water off. Ms. Vitale requested an adjustment. At this time the CSR cancelled the service order, thus the technician did not receive the work order. The customer was advised that CSR would contact the Florida operations division to research her line break. Again Ms. Vitale hung up on the CSR.

In February 2010, Ms. Vitale called inquiring as to a leak adjustment. She was informed that she needed to fax in the necessary receipts from her plumber showing the repairs had been made. On February 24<sup>th</sup>, Ms. Vitale called again and was inquiring where her adjustment was. She stated she was never told to provide information and once again,

hung up on the CSR. The CSR notes on the customer's account state that she was advised to provide the documentation of the repair.

Ms. Vitale called back March 11, 2010 to inquire as to her leak adjustment. She was notified that she had received an adjustment of \$15.61, which was based on the usage portion of the bill for the month in question \$35.80. This was compared to the average usage bill she has received in the past which was \$4.58. The difference between the incident and her normal usage was \$31.22. AUF's policy is to provide a 50% adjustment which in this case is \$15.61 – which she received.

# Linda Rollins; 3979 Ambassador:

Mr. Rollins raised an issue concerning high bills and that he cannot understand how he could be using the amount of water billed. AUF representatives visited Mr. Rollins' home after the meeting and explained how to read the meter and also found no leaks. Mr. Rollins was informed that a meter test would be scheduled on the meter to ensure the meter was accurately recording water usage. AUF made several calls to Mr. Rollins with no answer and no return phone calls. Nonetheless, AUF's Area Coordinator conducted an onsite meter test during the week of November 8, 2010.

The meter test was performed. The results were:

| Flow rate       | his meter | our meter | %       |
|-----------------|-----------|-----------|---------|
| 0.50 gpm        | 10.00     | 9.95      | 100.50% |

The AUF technician tagged the customer's door with these results and indicated that the meter passed. Further attempts will be made to contact Mr. Rollins and inform him of the test results.

Attached is the requested billing information. You will note, the customer has only been in this home since May of 2010.

# Ms. Luzia Mikutis: 1768 Quintara Ct.;

Ms. Mikutis was concerned about the rates and bills. After review of her account, there appears to be no excessive usage. The usage patterns show some "ups and downs" but this would relate to irrigation usage.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000003 of 000051

| Avrge/day:   | 10     | 25     | 35     | 31     | 147    | 93     | 26     | 20     | 63     | 25     | 27     | 34     | 45            |

In 2009, she had an issue that was due to frozen water lines.

She wanted to know if our rates were going up due to a new possible development (Spring Ridge) not going forward. As with all regulated utilities, Aqua has not made any investments related to this speculative development.

### Gary Hartman; 2150 Sunny Hills Blvd;

Mr. Hartman expressed concern that the rates are currently too high, which in turn could slow future growth.

### Katrina Randolph; 1717 Hemlock Circle;

After the conclusion of the meeting, Ms. Randolph indicated to the Commission staff that she had experienced an outage due to a lightning strike and it took four days to restore service.

After researching Ms. Randolph's concerns, AUF concluded that there had been no lightening strike outages in July 2009 as stated. However, this past summer, AUF conducted work at well #4 that may have resulted in discolored water. Well # 4 was taken out of service for repair and Well #1 maintained pressure throughout the event. AUF technicians worked round the clock to insure adequate pressure was maintained throughout the distribution system. AUF did receive several calls concerning discolored water during the work process: Directional flushing was performed to remedy this. Well #4 was brought back on line after repairs were completed.

#### Ms. Marcyan; 4050 Linwood Dr.;

After the conclusion of the meeting, Ms Marcyan expressed concerns to staff about a secondary water quality incident involving discolored water.

The Sunny Hills system is in compliance with all state and federal standards of the Department of Environmental Protection and Environmental Protection Agency.

Upon review of this account, it was discovered that in December 2007 there was a call from this residence concerning discolored water. The AUF technician conducted a site visit and flushed the water line by her house, which we believe remedied the issue.

Our records indicate that, in June 2010 there was another call concerning discolored water. Again, the technician flushed the water line by her house and again the discolored water cleared. The June 2010 situation was due to a line break stirring sediments up in the line. Discolored water complaints typically arise following either line breaks or flushing events.

This was not related to the work on Well #4, since this occurred in July 2009.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000005 of 000051

# Aqua Utilities Florida, Inc.

# Docket No. 100330-WS

#### Eustis Customer Meeting Response

<u>Overview:</u> The Eustis customer meeting was held on October 29, 2010. Approximately 25 customers provided comments to the Commission staff during the meeting.

The majority of the customers gave input regarding the level of the rates and bills.

Comments were also made concerning the payment of the base facility charge and the inclining block rate structure approved in the last rate case.

# **Representative Allen Hayes**

Representative Allen Hayes represents Scottish Highlands and cited economic hardships in the area. He also questioned how these systems could be allowed to be run down prior to the acquisition by Aqua.

# Cynthia Irwin - 36765 Shadow Hill Drive

Ms. Irwin discussed odor issues with the water system. She indicated that she had contacted Aqua and had someone come out and test the water outside her residence.

<u>Response:</u> In August 2010 AUF visited this site and determined that there was a slight increase in chlorine level. AUF technician thoroughly flushed the main for an extended time and took another test. The test results showed that everything was ok. This customer is located toward the end of a line.

#### Bob Gruno - 34834 Haines Creek Road

Mr. Gruno discussed that he has received a bill of \$200 a couple of years ago and questions the RF meters. In addition he discussed a hole in the rear of his home that is a hazard.

<u>Response:</u> In review of Mr. Gruno's account, there was no period since October 2006 where his monthly bill was greater than \$85.00. There seems to be consistent consumption on this account. Several attempts have been made to contact Mr. Gruno by telephone. AUF's technician has inspected the system and residence and has not located any "holes." A door tag has been left to have the customer contact AUF to determine the location of Mr. Gruno's concern.

Mr. Harold Robinson – 1205 Loch Rannoch

Mr. Robinson mentioned that his May bill was for 8,700 gallons. The customer stated he moved in June 2010; however, his move in was May 20, 2010.

<u>Response:</u> In review of his account his consumption was in fact 8,700 gallons. He called Aqua, but wanted to discuss the location of his meter. Mr. Robinson wanted a Utility Tech to visit his property and show him the location of his meter pit so in the event of a leak he had the ability to shut off water to his house. Our Utility Technician did visit the site and showed Mr. Robinson where his meter was located. He did ask about the rates and was informed of the new rate structure and how it impacts his usage given there are step rates now versus in the past.

# Mr. Tony Vanderberg - 7072 Earlwood Ave.

Mr. Vanderberg raised concerns with his water which occurred in 2007. Mr. Vanderberg is a customer in the Tangerine water system. In addition he had issue with Aqua inadvertently cutting off the water to the church. Aqua had cut off the wrong line. In addition he has an issue with Aqua's maintaining its water plant, which sits adjacent to the church. He states that Aqua continually drives across the church property.

<u>Response</u>: Aqua previously provided Mr. Vanderberg with instructions to forward information to Aqua to process his claim on his water softener. There are no records that Mr. Vanderberg sent in the required information as requested. Aqua has visited Mr. Vanderberg several times to discuss his water softener concerns. The customer's water softener system is over 15 years old and he was told it needs replacing due to softener pellets which have worn through the filter due to age.

AUF did inadvertently turn off the irrigation water to the church. In July 2009, AUF inadvertently shut down a valve to repair a water line that went through the park. At the time, AUF was unaware that this line also supplied water to the church's irrigation system. AUF reimbursed the church for damages to the landscape.

AUF is installing water main throughout Tangerine eliminating dead ends and undersized water main. Because this being a residential system, the contractor did not have anywhere to store the pipe so it was stored at the water plant. The Contractor did drive across the Church property and at our June meeting with the customers at Tangerine, Mr. Vanderberg mentioned the damage to the grass and he was assured when the construction was completed our Contractor would restore the property.

Tangerine is one of the systems involved in the secondary water project. A sequestering system has been installed and is operational. This system binds the naturally occurring calcium, iron and manganese in the water, which reduces the residue customers might see on dishes and fixtures.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000007 of 000051

In addition, AUF has recently completed replacement of old water mains and a looping project to address the secondary water concerns. AUF and OPC have met with the customers of Tangerine twice during the secondary water project.

# Greg Andes – 25101 Chip Shot Drive Sorrento FL

Mr. Andes raised issues with his water quality. He lives at the last house on a dead end street.

In addition he is requesting "internet payment service".

<u>Response</u>: Mr. Andes lives at the end of a cul-de-sac. Since moving to his residence, AUF has been to Mr. Andes home twice. The first time was July 2009 to address Mr. Andes' concern on fluoride, which Aqua does not add to the water. The second time was August 2009 to address his odor concerns.

This part of the Fairways system has been placed on a Flushing Program that is implemented quarterly. Since the last visit in August 2009, this customer has not called to report any additional odor issues. There appears to be no further issues with this customer or others in the system.

As with regard to internet payment, Aqua is working on providing this service to customers in the future.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000008 of 000051

# Aqua Utilities Florida, Inc.

#### Docket No. 100330-WS

#### Ft. Myers Customer Meeting Response

<u>Overview:</u> The Ft. Myers customer meeting was held on November 18, 2010. Three customers provided comments to the Commission staff during the meeting.

#### Steve Brunner - P.O. Box 100, Sanibel

#### Staff Specific Request:

Mr. Brunner manages eight condo associations. The Commission has been aware for some time of his potable water irrigation and sewer billing concerns. Apparently billing problems still exist concerning "deduct meter." Please give an update of the billing status situations for the associations Mr. Brunner represents.

#### Response:

Mr. Brunner's concerns are primarily due to the fact there is no "deduct meter" provision in AUF's tariffs. This is a wastewater only system and the water meters are owned by the water provider. If a deduct meter exists at the property, these deduct meters were installed and are owned by the respective associations. AUF does not own any water meters in its South Seas wastewater system.

Mr. Brunner is a new property manager who recently took over for Mr. Randy Didier, the previous manager. AUF has met with Mr. Didier numerous times over the past year, beginning in March 2010 and continuing through June 2010.

AUF has also met with members of some of these associations in South Seas. Field visits were made to these locations, and as agreed upon by the previous property manager and associations, AUF conducted a thorough analysis of each location. During the field visits with the previous property manager and with the associations, it was discovered that some of the associations did not even have a deduct meter.

The majority of the properties represented by the management company were resolved as a result of the numerous meetings held. One exception was the Beach Villas III. Originally, in June 2010, the representative of the BV III, proposed a resolution and agreed to the proposed settlement of this account by AUF. However, before this issue was resolved, Mr. Didier left the management company.

Subsequent to the customer meeting on November 18, 2010, AUF held several discussions with Mr. Brunner concerning the past actions which had taken place and the Company believes a resolution has been reached.

Please see the following summaries of each association in question:

The Associations were sent letters in July and August of 2010 outlining each question and considerations originally raised to the PSC by the customer letters. As indicated above, AUF has had discussions as recent as 12/15/10 with the current Island Management representative Steve Brunner.

#### Bayside Condominium Association

The deduct meter had not reinstated upon initial request. However, it has since been reinstated and this account is being re-billed with any associated deduction credits.

#### Beach Cottages Condominium Association

This condo association never had a deduct meter installed. It was explained to Mr. Lloyd that AUF was prohibited to offer any "subjective" monthly credits to the account, since the Company is required, by Florida Statute, to bill customers according to its approved tariff. AUF offered to sell the association a water meter, at its cost for subsequent installation. Mr. Lloyd accepted this offer and Beach Cottages installed the deduct meter on August 5, 2010. There were initial billing issues with this deduct meter. However, this has been corrected.

#### <u>SSP Beach Home Condominium Association 1 - 13</u>

This account has continuously been on an active deduct meter.

#### SSP Beach Home Condominium Association 14 – 26

This account has continuously been on an active deduct meter.

# SSP Beach Home Condominium Association 27 - 33

This account has continuously been on an active deduct meter.

#### Beach Villas III Condominium Association

The appropriate deduct meter was reinstated and re-billed reflecting the agreed upon credits. These credits were a result of the continued efforts of AUF, the previous property manager, and the condo association through the complaint resolution. During the process of the complaint resolution the bills were being held by AUF pending the outcome of the process. Since a resolution has been obtained by all parties, the bills will no longer be held. As indicated above, the Condo Owners Association has agreed with the credits offered by AUF, based on the in depth analysis of the past water consumption on the installed deduct meters as of December 15, 2010. Currently, this account is billing correctly and will continue to be monitored by the AUF office in conjunction with Island Management.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000010 of 000051

### Gulf Beach Villas

The deduct meter is in the system. However, this deduct meter is currently estimating, due in part to the fact that this meter being constantly under water and difficult to read. It was determined that a leak is occurring and Island Management was notified on December 14, 2010. The estimated bills will be corrected once an actual read is able to be obtained to reflect actual deductions.

#### Marina Villas

Marina Villas never had a deduct Meter. However, the water meter was incorrectly sized in the billing system as a 5/8 meter, and should be billed as a 2 inch meter. This has been corrected.

#### Sunset Beach Villas

The Deduct Meter is in place and on the account. The deduct meter was previously estimating and has been corrected.

#### Tennis Villas

The deduct meter was reinstated and is billing correctly as of December 2010. This account was credited back to last year for amount recorded on the deduct meter. This account is now up to date and is being billed correctly.

#### Additional PSC Staff Request:

Provide information concerning multiple sewage spills related to liftstation malfunctions that occurred in September of 2009.

#### Response:

September 2009: There were five abnormal events that took place involving the South Seas system: three at Lift Station #4; and, two at Lift Station #2. All events were reported to the FDEP and cleanup activities occurred promptly.

The events involving Lift Station # 4 were due to both pumps tripping the heater overload switches and one of the pumps ultimately failed. Both pumps have been replaced by AUF.

The events involving Lift Station # 2 were due to a breaker tripping on both occasions. AUF technician checked the panel and breakers for loose connections. This lift station has not had any further issues to date.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000011 of 000051

During this past year there has been over \$46,000 in capital investments in the South Seas lift stations to replace pumps and control cabinets, upgrade the power supply and repair a part of the collection line.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000012 of 000051

#### Aqua Utilities Florida, Inc.

# Docket No. 100330-WS

#### Gainesville Customer Meeting Response

<u>Overview:</u> The Alachua customer meeting was held on October 21, 2010, *in Gainesville*, Florida. Approximately 8 customers provided comments to the Commission staff during the meeting.

The majority of the customers' comments related to the rate increase and level of bills.

One customer indicated that she believed the customer service representatives were rude. When asked by the PSC staff attorney when this occurred, the customer indicated it was over 1 ½ years ago.

#### Vernon Berger – 7117 SW Archer, Gainesville

Mr. Berger provided comments concerning a bill which contained backbilling charges for wastewater service.

<u>Response:</u> Mr. Berger's high bill concern was due to being back billed for sewer charges. This customer was back billed for wastewater services for a period of 300 days. This was a result of the customer only being set up for water service in the billing system at the time Mr. Berger moved into his residence and not having wastewater service established.

The amount of the back bill was in compliance with Rule 25-30.35 Florida Administrative Code.

However, after the meeting, AUF discussed this situation with Mr. Berger. Subsequently, the customer was called and apologized to for the error of not properly applying sewer charges to his account at the time he activated his service with AUF. As a result, the customer was given an abatement on his account in the amount of \$616.27.

#### Lola Ferguson – 7117 SW Archer, Gainesville

Ms. Ferguson provided comments concerning a water heater and interior plumbing damage due to what she believed was sand in water. She stated that a damage claim was pending.

<u>Response:</u> Ms. Ferguson's claim was denied due to the deposits not being "sand" but actually calcium deposits that had built up in her water

heater over a period of time.

# Shirley Crosby – 7117 SW Archer, Gainesville

Ms. Crosby provided comments concerning water running down street during January & February of 2010.

<u>Response</u>: A leaking valve was brought to the attention of the AUF Field Supervisor in late February 2010. The late notice of this leak was due to a change in personnel for that service area. Due to the Non Severity of the leak, a schedule to replace the valve was prepared so proper notification could be provided to the customers and regulatory agencies. The valve was replaced on March 2, 2010.

# Pat Compton – Arrendondo Estates

Ms. Compton raised an issue regarding "soap suds in the water and it's not drinkable". In review of the records, there was no information found with regards to Ms. Compton reporting this type of issue. In review and in discussions with AUF field staff, there is no reason as to why there would be soap suds in the water or any condition that would result in this type of situation.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000014 of 000051

# Aqua Utilities Florida, Inc.

# Docket No. 100330-WS

#### Green Acres Customer Meeting Response

<u>Overview:</u> The Lake Osborne customer meeting was held on November 4, 2010, in Green Acres, Florida. Approximately 10 customers provided comments to the Commission staff during the meeting.

The majority of the customers' comments related to the rate increase and level of bills.

#### Justin Thompson – 5386 Lake Osborne Blvd.

Mr. Thompson indicated that when he called the CSR, he was placed on hold for 20 min. He also indicated that he had received bill 2 days before the due date and keeps getting late fees.

<u>Response:</u> Mr. Thompson moved in on September 2009. Since that date, he has had 2 late fees charged to his account, both in 2010. As of November 23, 2010, there has been a Shut Off for Non Payment issued for this address. Mr. Thompson has not paid his last bill in the amount of \$131.01. On 11/22/2010 he called to inform us he is moving out.

Below is a table indicating the mail date and the due date for Mr. Thompson.

| lustin Thompson              |        |
|------------------------------|--------|
| Justin Thompson<br>Bill Date | Due    |
|                              |        |
| (Mailed)                     | Date   |
| 8-Nov                        | 30-Nov |
| 8-Oct                        | 1-Nov  |
| 9-Sep                        | 1-Oct  |
| 9-Aug                        | 31-Aug |
| 9-Jul                        | 2-Aug  |
| 8-Jun                        | 30-Jun |
| 10-May                       | 1-Jun  |
| 8-Apr                        | 30-Apr |
| 8-Mar                        | 30-Mar |
| 8-Feb                        | 2-Mar  |
| 11-Jan                       | 2-Feb  |

Once a customer receives a bill, they have 21 days to make payment before being considered delinquent. Once the account is in arrears for a

period of time, a customer will receive a shut off notice advising that the service will be turned off in 10 days. The PSC rules on shut off notices require a 5 work day notice; however AUF's policy is to allow additional time. Further, customers are called before any action is taken to let them know that their service may be turned off.

# Linda Berg - 1515 Shirley Court:

Ms. Berg indicated that her bills did not make sense and stated that in 2006, she was billed for 17,000 gallons of usage.

<u>Response:</u> A review of Ms. Berg's account shows that in June 2006, she was billed on an estimated consumption of 8,000 gallons. In the subsequent month, July 2006, Ms. Berg was billed based on an actual read for a consumption amount of 17,000 gallons. This was the only time Ms. Berg received an estimated bill.

A further review of Ms. Berg's account shows that prior to the implementation of the increased rates, this customer historically experienced several months each year with high consumption. A further review of the usage on this account over a 2 year period (December 2008 – November 2010), shows there have been 3 times (August, September, and December 2009) when usage has gone up from the monthly average of 8,292 gallons. These usage "spikes" were for 14,400, 10,600, and 11,500 gallons respectively.

Also in August 2009 she had a leak and used 14,400 gallons.

Attached please see the consumption history from 2006 – 2010 for Ms. Berg.

AUF tested the water meter and accuracy was confirmed. The test results were previously provided to Staff at the PSC regarding the meter test conducted in September 2007.

A review of Ms. Berg's account shows that there have been 3 service orders since 2007. The first was in May 2007 to review the meter and it was found to be in good operating order. On June 4, 2007 the address was visited again and an on-site test was performed; high flow; 100.77%, med flow; 101.51%, low flow; 97.99 % with an average of 100.9% thus passing the accuracy test guidelines established by the FPSC. The last visit was in August 28, 2009 to address a low pressure issue. It was found that the customer had a leak in the home.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000016 of 000051

#### Alfred Binner – 1507 Crest Circle:

Mr. Binner stated concerns about bill estimates.

Response: Review of this account shows that Mr. Binner did have an issue with estimates on two occasions in 2008. AUF went out and replaced the meter in 2008 and since that time, Mr. Binner has had no estimated bills.

# Ray Thomsen- 5438 Lake Osborne Dr., Lk Worth

PSC Specific Request: Need explanation of procedure used for cutoffs due to non payments. Mr. Thomsen indicated that a cut off occurred in the evening. What time did his cut off actually occur?

<u>Response:</u> Mr. Thomsen is no longer a customer of AUF, and continues to have a balance on his inactive account. A new customer moved into this residence in March 2010, and the account is currently up to date.

Review of Mr. Thomsen's account shows that the customer had two Shut Off for Non-Payments (SNOP) in 2009, one in November 2009 and the other in December 2009. In January 2010, this account was Turned Off and Blocked (TOBK) due to the fact that there had been water usage on the account after it had been shut off. AUF addressed this situation in January 2010 with the TOBK.

Notably service was shut off in both instances on a weekday. Upon review, the time of the shut off was not documented, just the day the termination occurred.

It should be noted that Rule 25-30.320(6), Florida Administrative Code only addresses termination of service on weekends and public holidays.

#### Ray Thomsen- 5438 Lake Osborne Dr., Lk Worth

Additional PSC Specific Request: Mr. Thomsen noted that the Utility's water lines are in the back of his property. In general, how does the Utility gain access to non-roadside lines in order to maintain them? Are there "right of way" privileges? Are there any existing problems in any of the Utility's systems related to this matter. Please explain.

<u>Response</u>: As is the case in many of the systems that AUF acquired, the original owner installed lines in the rear of homes to take advantage of reducing the amount of main-footage that is required. This is the case with this system. Though not the preferred methodology of installation, AUF has not relocated these lines due to significant relocation cost, which would be borne by the ratepayers.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000017 of 000051

In 2007 and 2008, AUF conducted the meter replacement project in all of its Florida water systems, thus reducing the amount ingress and egress from properties. Prior to this meter replacement project, AUF had considerable challenges in several systems due to fencing, guard dogs, and customers who would not allow access in order to get appropriate meter reads. Since the meter project, the amount of inconvenience on the customer and AUF has been reduced considerably.

AUF also has "blanket easements" within all applicable systems allowing access to perform necessary repair and maintenance services. AUF staff members contact customers via telephone and/or a personal visit when it concerns an immediate repair. The majority of customers understand that AUF has to maintain its lines and from time to time might have to conduct a repair. AUF personnel work with customers if the situation is not an emergency. In exercising its rights under the blanket easements, AUF's policy is to minimize disruption and reduce any and all property damage to the surrounding area.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000018 of 000051

# Aqua Utilities Florida, Inc. Docket No. 100330-WS Lakeland Customer Meeting Response

<u>Overview:</u> The Lakeland customer meeting was held on October 28, 2010. Approximately 36 customers provided comments to the Commission staff during the meeting.

The majority of the customers gave input regarding the level of the rates and bills. Ten customers provided input concerning the secondary water quality in Zephyr Shores. Zephyr Shores is a community of about 500 customers and is one of the systems in the secondary water project. AUF installed a "sequestration" treatment system in March 2010. This system binds the naturally occurring calcium, iron and manganese in the water, which reduces the residue customers might see on dishes and fixtures.

#### David Busey

Mr. Busey raised concerns about customer service, rate structure and the level of rates. He also advocated for FGUA to take over the system. Mr. Busey spoke previously about these same issues at the customer meeting in New Port Richey.

# Frank Reams

Mr. Reams is not a customer of AUF. However, he raised concerns about customer service, rate structure and the level of rates. He also mentioned three customer billing issues but did not specify the time period or names of these customers. He further advocated for FGUA to take over the system. Mr. Reams spoke previously about these same issues at the customer meeting in New Port Richey.

#### Charles Bleam, 5502 Wyndermere:

Mr. Bleam indicated he had been a resident of Lake Gibson since 1960. He indicated that the water is good and the wells are good. He has no complaints with the water. However, he requested the Commission revisit the rate structure imposed in 2008, because he asserted it punishes large families. He expressed a desire for the county to take over the system.

#### Phyllis Johnson, 5918 Doe Circle W., Lake Gibson:

Ms. Johnson indicated that she has no complaints with the water and that the service is good. This customer questioned the level of rates and rate increase.
### Commission Staff Requests:

Please provide billing information which includes consumption and the dollar amount billed (water and or wastewater) for the following customers for the year 2009 to present:

# Michael Griffin - 2005 Christy, Lakeland

<u>Staff Request</u>: Questions consumption. Has requested meter change out. Provide detail.

<u>Response:</u> A meter test was completed on November 19, 2010 with a meter certified testing unit. The water meter test average was 98.7% which passed test.

Below are the results of the water meter test performed on November 19, 2010:

Low: 98% Med: 98% High: 100% Average of 98.7%

In reviewing Mr. Griffin's account, there are no abnormalities in his consumption. The consumption goes up and tapers down and then back up again. The water meter was installed in 2008 and the test on the customer's meter was accurate.

See the attached billing history requested.

John Round – 390 Windermere Dr., Lakeland

<u>Staff Request</u>: Suspects meter is reading wrong. Please perform field accuracy check.

<u>Response:</u> This customer's water meter was tested on 10/29/2010 and had an average accuracy test of 98.7%.

Erica White - 5560 Daughtey Down Loop, Lakeland

Ms. White provided comments concerning past bills.

Staff Request: Put on payment plan for high bill. Please explain.

<u>Response</u>: Customer was billed for zero consumption for five (5) months. Once the situation was rectified by replacing ERT unit, AUF billed for the five (5) months based on an actual read. This situation resulted in the customer being put on a payment arrangement plan due to the period of time the bill was for.

# Lew Carriere - 1026 Wildwood Ave., Lakeland

Staff Request: Explain way fire hydrants are being removed from service area.

<u>Response:</u> AUF has not removed any fire hydrants in Lake Gibson. We have currently listed 20 Fire Hydrants in the Lake Gibson service territory. Aqua has replaced 3 existing fire hydrants over the past year due to operational issues. They are located near 490 Platt St., 420 Byrd St., and 5810 N. Daughtery.

# Bradley Fox - 5712 Lake Breeze Ave., Lakeland

<u>Staff Request:</u> Water tank left uninstalled on private property (Byrd St. and Plant St.) for four years. Please explain.

<u>Response</u>: The tank in question was located on AUF's property for three (3) years. Aqua had determined that installing a small tank would improve system operations and water quality. The tank was purchased and prior to installation, the engineer determined the existing concrete pad and cradles were not sufficient to support the new tank. In order to construct the new pad an engineer was required to evaluate the existing pad, conduct a structural analysis, and submit the plans for permitting. Once all permits were in issued, the tank was installed. To date this tank is performing up to standards.

## Bryan Rule - 5880 Jacolanda Ave, Lakeland

<u>Staff Request:</u> Provide reason why water service was out at the Lake Gibson system for an extended period of time in July or August of 2010, and why boil water notices were not issued to the customer.

<u>Response:</u> There was not an extended water outage. There was an outage on July 20, 2010 due to a leaking valve. A boil water notice was issued on the same day, and was subsequently lifted on July 22, 2010.

There was another water outage which occurred on September 7, 2010 due to a contractor damaging AUF's water pipe. The repair occurred on September 9, 2010. All customers were issued a Boil Notice Water on September 7, 2010. The Boil Water Notice was lifted on September 10, 2010.

# Wayne Miles - 6301 Doe Circle E., Lakeland

<u>Staff Request:</u> Please explain why insurance claim was denied by the Utility for property damage due to a sewer backup.

<u>Response</u>: This incident occurred on August 30, 2009. The customer submitted the final supporting data on September 21, 2009. Customer signed the release on October 1, 2009, and the claim was submitted for Payment on October 5, 2009.

Check Number 310933, dated October 15, 2009 was issued to the customer and it has been cashed.

The Original Claim was denied due to inadequate information to substantiate the amount of the claim. As evidence by the timeline above, all information and matters were handled in less than 35 days from time of notice.

#### Joya Teter, 3865 Daughtery Downs

Ms. Teter indicated that she has a family of 5 people. Her bills usually run at \$200/ month. She received a bill last November 2009 for \$400. She indicated that she called CSR for 2 days. She stated that there was no way usage could double in one month.

<u>Response:</u> Ms. Teter did have one month where her usage spiked to 19,000 gallons, up from her average of around 6,500 gallons. After this month and up until now she has gone back to a normal usage. The AUF technician was dispatched to review the meter and to discuss with her this usage. However, no abnormalities were found wrong at this address. There were no leaks detected by the technician.

#### Judy Dent – 5800 Jacaranda Ave, Lake Gibson

Ms. Dent indicated that in March 1989, received a \$130 bill and that she called the company to see if she had a leak. Ms. Dent indicated that she was told had to pay the bill.

<u>Response:</u> AUF has reviewed Ms. Dent's account. She and/or her husband have called a total of 4 times since 2007. Two of these calls were to discuss when the bill was due and the amount. In May 2009, her husband called to ask about the bill and if the amount was due to rate increase (with step rates being introduced). One other call in 2008 was inquiring as to why there was no water. There was a main break which occurred during this incident. The customer's usage has remained constant over the last two years except for one month and then the usage went back down.

#### Kim Parizo – 6317 Doe Cir. East, Lake Gibson

Ms. Parizo indicated that there is no way she uses 4,000 – 5,000 a month. She indicated that she fills her pool and that water doesn't go to wastewater. In June, Ms. Parizo indicated that she was billed for 14,000 gallons and she wasn't there for several days. She believes that the meter reading must be wrong. She commented that she called CSR and was told "can't help you" and "you must pay the bill". She stated that she never got a bill that high since.

<u>Response:</u> AUF reviewed Ms. Parizo's bills since 2006. The customer has always maintained at least this usage that she states. Ms. Parizo used this amount of water/sewer before the new meters were installed and since. She has spikes both pre and post the new meter installation which indicates random usage for pool and or irrigation. She had several months prior to the new meter being installed where she used approximately 14,000 gallons. In all instances, she has spikes at least once or twice a year and then goes back to normal usage.

#### Addition Requests from the PSC staff:

Explain why customers with both residential and irrigation meters receive two different bills; and whether a single combined bill could be sent to those customers, if not, why not.

How many customers with residential and irrigation meters receive two different bills per billing period?

<u>Response:</u> Currently, AUF has 241 customers who have this situation. They reside in the Fairways system. AUF is currently experiencing a migration of these customers from two meter to one meter. The customers in Fairways have two separate water services, one for potable and one for irrigation service. The customers currently receive a separate bill for the irrigation service.

The current billing system does not have the capability of providing two water accounts on one bill. If a customer does receive multiple bills they can include both bill stubs in one envelope with one check for both accounts.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000023 of 000051

# Aqua Utilities Florida, Inc.

# Docket No. 100330-WS

# New Port Richey Customer Meeting Response

<u>Overview:</u> The New Port Richey customer meeting was held on October 20, 2010, in New Port Richey, Florida. Approximately 33 customers provided comments to the Commission staff during the meeting.

The majority of the customers gave input regarding the level of the rates and bills. Ten customers provided input concerning the secondary water quality in Zephyr Shores. Zephyr Shores is a community of about 500 customers and is one of the systems in the secondary water project. AUF installed a "sequestration" treatment system in March 2010. This system binds the naturally occurring calcium, iron and manganese in the water, which reduces the residue customers might see on dishes and fixtures.

Two customers provided input on service related issues pertaining to a service line break. One customer provided comments on a main break caused by Verizon. Several customers provided comments as to the payment of the base facility charges while not in residence.

Five customers provided comments on a stormwater retention pond. In review of this situation, there is a retention pond located between AUF's effluent retention ponds and spray field. This stormwater retention pond is owned by Pasco County and therefore, it is the responsibility of the County to maintain this stormwater retention pond. The County has been notified of this situation

#### Senator Fasano

Senator Fasano discussed economic hardship and advocated for FGUA to takeover the systems in this county.

#### Representative Legg

Representative Legg indicated that he represents Jasmine Lakes and cited economic hardships in the area.

#### Representative Weatherford

Representative Weatherford represents Zyphyr Shores and expressed his opposition to the inclining rate block structure approved by the PSC in the last AUF rate case.

#### County Commissioner Cox

Pasco County Commissioner Cox presented a letter in opposition to the rate increase and cited economic hardship for Jasmine Lakes. He referred to the replacement of old water meters with new RF meters and indicated this would provide more accurate billing to the customers.

# County Commissioner Mariano

Pasco County Commissioner Mariano expressed a variety of concerns and advocated for FGUA to takeover the systems in this county. He further advocated that the PSC maintain the current rates.

# David Busey

Mr. Busey raised concerns about customer service, rate structure and the level of rates. He also advocated for FGUA to take over the system.

# Frank Reams

Mr. Reams is not a customer of AUF. However, he raised concerns about customer service, rate structure and the level of rates. He also mentioned three customer billing issues but did not specify the time period or names of these customers. He further advocated for FGUA to take over the system.

# Robert Provost - 7704 Hawthorne Dr., - Palm Terrace

At the meeting Mr. Provost raised a question about his past bills. Specifically, Mr. Provost provided input concerning estimated bills he had received. In review of his account history, it was discovered that this customer had called in July 2007 indicating he had received estimated bills. Mr. Provost had indicated in 2007 that he was a seasonal customer and should not receive any billing for usage. A service order was issued to obtain an actual meter reading on August 1, 2007. The customer called again in August 27, 2007 for a bill explanation. In October 2007, Mr. Provost called to dispute his bill.

In further review of this customer's billing history from January 2009 through November 2010, there were separate two time periods where Mr. Provost had zero consumption: once from August 2009 – October 2009 and then again July 2010 – September 2010. With respect to the 2010 period, Mr. Provost contacted AUF in 2010 and stated that he had been away from his property and had turned off his water.

With respect to the 2009 period, Mr. Provost received a bill in November 2009 based on 14,600 gallons. It appears that during this period of time in 2009 the water remained on at the residence, which is different than the time period in 2010 when he called and said he had turned off his water. There is no further explanation in the customer notes as to

the amount of 14,600 in November 2009. However, in May 2009, Mr. Provost did contact Agua indicating there was water bubbling up in his back yard.

When reviewing the customer's consumption during the remaining months in 2009 and 2010, the customer's usage amounts were consistent. As requested by PSC staff, attached is the billing history for Mr. Provost from 2009 through present.

Mr. Provost also mentioned that the ponds have an odor coming from them. In review of this situation, there is a retention pond located between Aqua's ponds and spray field. This pond is owned by Pasco county and therefore the responsibility of the County to maintain this stormwater retention pond. The County has been notified of this situation

# Celeste Snyder (Jasmine Lakes)

Ms. Snyder provided comments on odor at the wastewater treatment treatment plant and 18 wheelers that use the road for sludge removal. She also complained about a boil water notice that occurred.

Please see AUF's response to the PSC staff's question on boil water notices at the conclusion of this response.

### Brian Diaz – Jasmine Lakes

Mr. Diaz provided comments concerning a water line break which occurred "before his house" and it took 4 days to fix. There are no notes on this customer's account concerning a main break. However, there is a note concerning his neighbor breaking his water meter with his truck, as well as a request to temporarily turning his service off so he could repair a leak.

He also stated he got 4 bills and they all had 4 different prices. AUF believes this was primarily due to changes in rates for interim and final rate increases from the last rate case, as well as the index and pass through which occurred in October 2009.

# Diane Manzo – 7932 Lotus Dr., Port Richey - Jasmine Lakes

Ms. Manzo discussed her usage variations. In review of her usage from January 2009 to November 2010 (attached), Ms. Manzo's usage has remained relatively constant with a few months where usage went up. Please see attached spreadsheet reflecting Ms. Manzo's billing history for the past twelve months.

In one of the months with increased consumption, November of 2009, she had a leak on her side of the meter which resulted in the highest usage for a one month period 10,500 gallons. In 2010, her usage went up in June and July. We have received no customer calls from Ms. Manzo concerning consumption since the leak in November of 2009.

# Richard Jenning – Jasmine Lakes

Mr. Jenning provided comments concerning the fluctuation in water usage and the increase in rates. He further provided comments concerning a ball value in his yard with a crooked value stem.

# Marla McDonnell (Lisa Barbas is customer) – 7811 Arbordale Dr., Port Richey – Palm Terrace

Ms. McDonnell raised the issue of property damage (driveway pavers) that she believes is the Utility's responsible. She also provided comments that the wastewater treatment plant emits odor and the retention pond overflows during raining periods. In talking to AUF field staff who were working in this system at the time, there is no recollection of any situations with regards to a customer driveway or yard regarding pavers. The water and wastewater lines for these customers are in the rear of the homes and AUF has no pipes that would affect the driveways in this system.

Ms. McDonnell also made reference to wastewater odor or pond overflowing issues. AUF notes that there is a spray field irrigation system across from her home that could account for a sulfur like odor.

Again, the retention pond that Ms. McDonnell referred to is owned by Pasco County and the responsibility of maintenance rests with the County. The County has been informed of the pond's condition.

#### Laurie Jenss - 7400 Rhinebeck Dr., Port Richey-Palm Terrace

Ms. Jenss wanted to know about shut off notices and late/credit card fees. AUF does not charge a credit card fee. However, if used by the customers, there is a charge for Western Union services. AUF has no fees on their bills that have not been approved by the FPSC. The option of utilizing Western Union is offered as a further convenience to customers, but is not required to be used. There are various options offered to customers for payment of bills.

In review of Ms. Jenss's account, she was questioning the activation fee, or Turn On Fee. This is a fee that has been approved by the FPSC and the charge was \$22.00 as provided in AUF's tariff. In addition, Ms. Jenss was properly charged a late fee in November 2010.

### Peggy Magruder - 11231 Yew Tree Ave., Port Richey

Ms. Magruder claimed that she was cut off and it took 2 days to restore service. In review or this account, AUF has no record of a shut off for non-payment occurring at this residence, however, there have been a significant amount of late fee charges.

# Michael Rock - 7430 Rhinebeck Dr., Port-Palm Terrace

Mr. Rock was inquiring as to damage caused due to flooding. On September 13, 2010, Pasco County struck and broke one of AUF's 2" line at this address. The County notified Aqua and our technician was dispatched. The County fixed the leak and made restoration based on this leak in all areas that were appropriate.

Additionally, the County started work prior to Aqua providing locates to this project as outlined in the locate request. Please see the attached Sunshine State One Call document concerning this line break received on September 15, 2010. The County commenced the storm water pipe replacement on September 13, 2010, which was two days before AUF received the request for line locate. As the AUF service technician arrived to locate and mark the water lines, Pasco County was already in the process of digging the ground for the storm pipe replacement.

# Sadie Dye – 1814 Stanford Dr., Port Richey

Ms. Dye's concern was that the lift station across from her was unprotected and there were inoperative valves plus the meters are covered with grass. AUF notes that the lift station is protected and there are locks on the electrical panel, as well as the on the grates to prevent unauthorized access. The bypass valve is operational and as of November 16, 2010, the meter box has been replaced.

Meter boxes are located on customer property. Aqua has replaced all aging water meters with new RF meters throughout the state. It is not necessary to have access to meters and/or meter boxes in order to read these RF meters.

# Mike Paone - 11235 - Palm Terrace

Mr. Paone provided comments indicating the water was "awful" and that he had put in a water softener. Mr. Paone also indicated that the water system was "old" and the water pipes had been placed into service in the 1970's. He also indicated that he believed that kids in the area were causing damage to the utility's facilities throughout the subdivision.

It should be noted that in the Palm Terrace system, AUF purchases its water from Pasco County. The water quality provided is therefore maintained by the county. Mr. Paone also commented on boil water notices. Please see explanation on the boil water notices at the end of AUF's response.

John Manzione - 7604 Hawthorne Dr. Port Richey - Palm Terrace

Mr. Manzione stated he did not get a pool credit on his sewer bill back in 2008. At that time (2008), AUF did not provide such credits given there is a cap on sewer charges. However, beginning in May 2009, AUF developed and implemented a pool credit policy.

# FPSC Staff Specific Requests:

1. Explain the processes as to how and why boil water notices are issued. Please provide a list of all boil water notices issued by the Utility, the water systems that were affected, the reason why they were issued, and the length of time before they were rescinded, during 2009 to the present.

<u>Response:</u> When a water system experiences a drop in water pressure below 20 PSI due to a break or some other event, a Boil Water Notice will be issued. All Boil Water Notices are delivered and hung on the customer's door via door tag notice. In addition, the field technician assigned to the system in which the notice will be issued is responsible for contacting the state customer service personnel (CSR) and operations management alerting them of the outage or pressure problem that requires a Boil Water Notice to be issued. The state customer service personnel will then post all relevant information including the cause of the Boil Water Notice to Aqua's internal intranet site. This site is used by customer representatives to relay important information to customers who call in.

All Boil Water Notices will remain in effect until a sample is taking and tested by an independent lab and found to be safe and satisfactory. Once the results are received and reviewed, AUF field staff will hand delivery a rescind notice to all effected customers. The rescind notice will be hung on the customers door.

In addition, Aqua has begun using a telephonic relay system called SwiftReach to contact affected customers.

Attached is the listing of boil water notices requested by staff.

<u>Additional Information Concerning Aqua's billing procedures:</u> Once a customer receives a bill, they have 21 days to make payment before being considered delinquent. Once the account is in arrears for a period of time, they receive a shut off notice of 10 days. The PSC rules on shut off notices require a 5 work day notice; however AUF we gives additional time. Further, customers are called before any action is taken to let them know that their service may be turned off. We do offer payment plans to our customers. The company's policy is to offer two payment plans per account.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000029 of 000051

# Aqua Utilities Florida, Inc.

# Docket No. 100330-WS

#### Palatka Customer Meeting Response

<u>Overview:</u> The Palatka customer meeting was held on October 22, 2010. Approximately 11 customers provided comments to the Commission staff during the meeting.

The majority of the customers provided comments related to the rates and rate increase.

#### Roy Ooten - 230 N. Hwy 17, Palatka

Mr. Ooten questioned his billed consumption. He stated that he has parked his vehicle over the water meter for 3 months and no one came out to examine it.

<u>Response:</u> This customer claims that AUF could not read his meter in 2008 but continuously charged at least 3,100 gallons per month. After further reviewing this customer's readings and consumption, it was determined that the consumption amounts were correct and consistent with the exception of one estimated read in October 2009.

The customer's notes on his account indicate there have been two calls concerning high usage. The first occurred in December 2006 and the other in October 2009. AUF reviewed and found no issues at this property. Aqua contacted the customer and attempted to explain the bill; however, the customer was not interested in any explanation.

As previously stated, AUF replaced all its old water meters with new RF water meters. With these replacements, it is no longer necessary to have access to the customers' individual meters and/or boxes to read the meters.

As requested by PSC staff, attached is the account history for Mr. Ooten from 2009 through present.

# Larry Mathews - 124 Palm Trail, East Palatka

Mr. Mathews provided comments concerning how the new meters are read and the boil water notice which occurred. He indicated that no door hangers were provided. Mr. Mathews also commented that he was "thrilled" that AUF had installed new water meters.

<u>Response:</u> In review of Mr. Mathews' account and any and all service orders for Mr. Mathews, AUF found no issues with his meter or with his billing. In addition

AUF reviewed the account for any information regarding his claim of nonissuance of boil water notices. The AUF technicians were also questioned as to the practice. It was determined that in this system we provide notice to the affected customers via door hangers.

### Mr. William Jordan - 104 Orange Dr.

Mr. Jordan provided comments concerning erosion issues into the canal originating on the utility's property.

Response: Subsequent to the customer meeting, Jack Lihvarcik and Harry Householder met with the original complainant, Bill Jordan on November 12, 2010. Inspecting the property, AUF has an inlet which drains into the canal and in areas along the path of the pipe to the canal are depressions. This could be a result of the pipe rotting and soil washing into the pipe. AUF plans on video inspecting the pipe to determine if dirt is washing into the pipe. Based on the findings we will determine if the pipe will need to be replaced or repaired. Once the pipe is determined to be working properly, the depressions will be filled and sod installed to eliminate erosion. The top of the property will need to be restored back to original design, recreating a swale so water will drain properly to the inlet, as concrete pad placed around the inlet so water will naturally run into the basin. The bulkhead will need to be raised to complement Mr. Jordon's existing bulkhead elevations and a concrete cap poured on top of the bulkhead. To eliminate a wash into the canal during peak rainstorms a small retaining wall needs to be constructed at the same location as Mr. Jordon's wall and connect into the neighbors wood retaining wall such as not to damage or cause any erosion during rain storms.

The Majority of the problem is due to the natural flow of water and sediment down the canal.

# Mr. Charles Davis - 102 Orange Dr.

Mr. Davis also brought up concerns on the sea wall. Further, Mr. Davis expressed concerns on the level of his bills.

Response: See response above concerning the seawall.

### Patricia Davis – 102 Orange Drive

Ms. Davis provided comments that Aqua has not been maintaining our facility for over 10 years. She stated that in the past a customer mowed this property in exchange for being able to park his boat on Aqua property.

<u>Response:</u> In the past 10 years AUF has utilized a contract service provider and has maintained the property in question. There is no nor have there been any

arrangements under AUF's ownership allowing anyone to park their personal property at its locations.

In response to a PSC staff question at the meeting regarding when Ms. Davis contacted AUF concerning the mowing of the grass, the customer responded that it was in 2007. She indicated that the property is now being maintained.

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000032 of 000051

# Aqua Utilities Florida, Inc.

# Docket No. 100330-WS

#### Sebring Customer Meeting Response

<u>Overview:</u> The Sebring customer meeting was held on October 27, 2010, in Sebring, Florida. This meeting primarily covered both the Highlands and Hardee County systems.

Approximately 21 customers provided comments to the Commission staff during the meeting.

The majority of the customers provided comments on the level of rates.

The Highlands county systems, Lake Josephine, Sebring Lakes, and Leisure Lakes systems are part of AUF's secondary aesthetics water project. AUF and OPC have met with the customers of these systems to discuss the efforts being made to address the aesthetic water concerns. AUF has explained that these issues revolve around the level of sulfur in the water supply. AUF has proposed and is actively pursuing the installation of an AdEdge filtering system to remove the sulfer content. These treatment systems are included in the rate case as pro forma plant additions.

# Jonathan Patton - 122 Leona Dr., Sebring

Mr. Patton provided comments concerning consumption fluctuations. The customer believed that the customer service was unhelpful. PSC staff has requested that AUF provide records of customer contact.

#### Response:

Mr. Patton's usage was high during the months of:

- July 2009 10,200 gallons
- August 2009 15,300 gallons
- September 2009 10,900 gallons

However, his usage went back down in the months of:

- October 2009 5,700 gallons
- November 2009 5,400 gallons

The customer's wife, Nancy, called in August 2009 in regards to high bill and was advised to check the property for leaks.

The wife, Nancy, called back on October 14, 2009 in regards to her past due balance and to see if AUF had received payment in the amount of \$100. She was advised that payment had not been recieved. She was also advised that a payment of \$100 was not sufficient to stop the shut off, since the past due balance was \$220.76 at that time.

Mr. Patton called on October 15, 2009 and asked if AUF had received the payment for \$100. He was advised that the payment had not been received, and again that \$100 was not enough to stop the shut off. He was further advised that he was not eligible for any further monthly payment arrangements. Aqua did offer to place a courtesy hold on the account to allow a couple more days for his payment to be received and for him to pay the difference. Mr. Patton then requested to speak to a supervisor, and in turn the call was transferred to the senior representative.

The senior representative spoke to Mr. Patton, who for the first time mentioned that he was not receiving his bills. He was then advised that AUF had no records showing that the bills had been returned back to the company. The senior representative advised him that \$220.76 needed to be paid by October 19th in order to guarantee service. Again he was informed that he was not eligible for any further arrangements because he had been offered two previous payment plans in July 2009 and September 2009 and had defaulted on both.

Mr. Patton called on again on October 18, 2009 and made a payment in the amount of \$120.76. In addition, his mailed payment of \$100, which was subsequently posted on October 20, 2009, thus satisfying the shut off amount. Mr. Patton stated he will continue to make payments on the account.

Concerning the late payment charges, in reviewing the timing of Mr. Patton's payment history, this customer is late on payments each month. This account has not been at a zero balance since the account was opened back in March 2009, which has resulted in late fees. Further, Shut Off for Non-Payment (SNOP) notices have been sent 6 out of the 20 months that Aqua has provided service to the customer.

# Cefie Metayer - 802 Sally Place, Wauchula

Ms. Metayer provided comments concerning high water consumption and questioned her meter accuracy.

#### Response:

#### Summary of customer account - Cefie Metayer

Ms. Matayer apparently owns two houses in the Peace River system. Prior to Ms. Metayer moving into and receiving service at 802 Sally Place, this customer occupied and received service at 833 Chamberlain on the same system. Below is a summary of Ms. Metayer's account while a customer at 833 Chamberlain Drive:

Customer took financial responsibility of the property at 833 Chamberlain on March 15, 2007. The first bill was estimated, and each bill thereafter was based on actual consumption.

Customer did not make first payment until November 29, 2007.

- Termination notices were sent on:
- 08/27/2007
- 10/13/2007
- 09/20/2008
- 10/17/2008
- 11/17/2008
- Customer's account was moved out for non payment on December 10, 2008.
- Turn off and block was issued on January 21, 2009 for this customer and water turned off
- Turn off and block was issued on March 20, 2009 for this customer and water turned off

Customer's account was turned on and moved back into service on July 7, 2009

- Meter was exchanged in December 2008
- Customer received bill in July 2009 for the seven month period (December through June) due to the move out for non payment noted above and for the services used by customer without consent.
- Apparently, during the period that the water service was turned off by AUF, the customer had been turning back on her service without utility permission or knowledge.
- Further Call reviews:
  - a. 07/06/09
    - i. Customer claims to have never received bill.
    - ii. Discussed balance and history with customer
    - Explained the seven month period of her account being inactive due to being turned off with consumption being used. Also explained that the past due amount was being pursued by Collections agency
  - b. <u>07/24/09</u>
    - i. Discussed account balance with customer including the seven months of services used by customer without authorization or contract

- ii. Explained that \$450 was due on the account and needed to be paid immediately
- c. <u>07/21/09</u>
  - i. Customer wanted to know if bill was mailed out Aqua confirmed it was
- d. <u>8/12/09</u>
  - i. Customer claims to not be receiving bills, but customer appears to have the bill in front of them during the call
  - ii. Customer does not understand why the \$1,000+ balance on the bill is so high. Sent \$400 payment, confirmed by representative
  - iii. CSR confirmed the address and the post office box is correct. Customer then claimed she had only received one bill in the last vear
- > Customer was moved out for non payment.
- Additional notes
  - a. Florida Division contact:
    - i. Customer claims a "major leak on customer side". Called left messages several times for customer. Customer never returned calls.

Ms. Metayer, through a family member, was discussing her large bill. The bill was apparently due to a large leak on the customer side. AUF assisted the customer in locating the leak with the customer and offered an adjustment if she got it repaired and could provide documentation.

This customer subsequently moved to another location (802 Sally Place) and the balance she owed on her account was applied to the new account at her new location. This occurred in January 2010 and she was advised of this balance transfer. Over \$5,000 was transferred from her previous account to the customer's new address, also on Sally Place. The customer has since paid her bill in full and is current on her account.

PSC staff has inquired whether a field accuracy check had been performed on this customer's meter? In so what were the results? If not please do so.

<u>Response:</u> As requested by the PSC staff, a water meter test was conducted on November 19, 2010.

Below are the results of the water meter test:

Low Flow: 98% Med Flow: 98% High Flow: 100% Average: 98.7%

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000036 of 000051

The test kit used for the meter test was a Sensus Unit.

#### Marilia Cimeus – 752 Chamberlain Blvd., Wauchula

Ms. Cimeus provided comments on past bills and a shut off notice.

<u>PSC Staff Request</u>: Provide possible disconnect activity for non payment information.

<u>Response:</u> Ms. Cimeus had 2 shut off notices for non-payment in 2009 (January and November). In 2010, she has had 4 notices (January, March, May, and August 2010 - Attached).

Over the course of these noticies, Ms. Cimeus' service was turned off once. In more than one case, Ms. Cimeus had sent her payments to various other addresses, other than the one that accompanies Aqua's bills. She has sent bills to Leesburg and Winter Haven. According to the notes, Aqua's CSRs have repeatedly provided the correct address over the phone to both Ms. Cimeus and her designated family member.

# Peter Maceri -- 2304 Oak Beach Blvd, Sebring

Mr. Maceri provided comments concerning billing adjustments. Mr. Maceri also commented that since the meter was read during a leak incident, AUF should have notified him that he had an ongoing leak.

<u>PSC Staff Request</u>: Explain the Utility's procedure of notifying customers of problems on their side of the meter.

<u>Response:</u> On December 7, 2009, Mr. Maceri called and advised that when he returned home from vacation, he detected a leak on his side of the meter. Mr. Maceri was informed of AUF's leak adjustment policy, which is 50% of the bill for that event, provided that data is submitted showing the leak was repaired. (Examples of such documentation include a plumber's bill or an invoice showing that the customer bought parts to repair the leak.)

Mr. Maceri disputed AUF's leak adjustment policy and wanted a further adjustment.

On December 16, 2009, AUF visited the property to gather a meter read based on Mr. Maceri disputing the consumption. The customer told the AUF technician he had a leak; however, at this time there was no leak visible. Mr. Maceri continued to object the way AUF calculates leak adjustments. Mr. Maceri's account was revisited in billing and with local senior management and Mr. Maceri received additional adjustments on his account for this leak, bringing the total of <u>adjustments</u> to \$2,158.21.

# Bernestine McLeod -- P.O Box 174, Wauchula

Ms. McLeod provided comments concerning improper service cut off in early 2010, due to non-payment.

<u>Response:</u> Ms. McLeod was disconnected on January 5, 2010. AUF provided a letter notice that was mailed December 18, 2009 with a follow up phone call on December 28, 2009. Customer called January 5, 2010, made a payment, and was reconnected on the same day - January 5, 2010.

# Tamra Mathy – 1934 Canary Way, Sebring

Ms. Mathey lives near the water plant and provided comments concerning chlorine levels in the water, possible sewer, and road damage due to construction traffic at the water treatment plant near to her residence.

<u>Response:</u> On several times, the technician has discussed the chlorine levels with the customer regarding and has tested the chlorine levels several times. Each time, the chlorine levels were within limits established by DEP. The customer stated that she had called the EPA and they came out.

This system has high sulfur content which requires both the use of chlorine and continued flushing to maintain the water quality and keep the sulfur bacteria in check. In the meantime, as part of AUF's secondary aesthetic water quality project, AUF has proposed pro-forma plant to install an AdEdge filtering system that will remove the sulfur. AUF is currently working on getting this filtering system designed and installed. This system should be operational in the first quarter of 2010, and will reduce the necessity to use elevated levels of chlorine and limit the amount of flushing.

#### Daryle Cook; 690 Chamberlain Blvd;

Mr. Cook discussed that AUF might have charged a connection fee in mistake.

<u>Response:</u> In review of the notes and the history of the account, there are no fees associated with connection since she has been with AUF.

#### Ms. Susan Yates: 722 Chamberlain Blvd

Ms. Yates provided comments concerning the level of rates and quality of water. She indicated that she had discussions with Ms. Laura King at the PSC concerning payment plans and turning water service off. Ms. Yates indicated that AUF does not bill on a 30 day billing cycle, but bills on a 45 day billing cycle.

<u>Response:</u> In review of Ms. Yates' account, AUF notes that since February 2008, the customer's billing dates have ranged between 28 and 33 days. AUF's bill cycle goal/parameters are 26 – 35 days. Review of this customer's account shows that there have been many issues with payments, backed up sewer lines on the customer's side of the connection, and other billing payment issues. Further, during the PSC monitoring in 2009, AUF provided updates and responses to Ms. King in reference to specific issues on billing and consumption.

# Adeline Hudson, 1204 David Ct; Peace River

Ms. Hudson provided comments concerning bills she had previously received from AUF. She disagreed with the rate increase and indicated that her water service was turned off.

<u>Response:</u> After review of Ms. Hudson's account, it was discovered that her account is turned off and "inactive" in the system. Ms. Hudson has been sent to collections for an outstanding sum of \$980. She has called in periodically to determine her balance and has been offered payment arrangements in the past.

On October 28, 2009, this customer called and stated that there was a leak in her home. She told the CSR that she tried to turn the water off herself, but the valve was broken. AUF had a contractor fix the broken valve on October 30, 2009.

The customer called Aqua on March 31, 2009 to see if payment arrangements could be made, the customer was advised that the account could not be placed on hold until the next day. On May 21, 2009, the customer called to see if the Shut Off for Non-Payment (SONP) could be extended. The customer was told she would need to pay \$63.91; however the customer never sent payment. The customer called again on November 6, 2009 to receive a payment arrangement. She was told that she would need to pay \$93.91, but never did. The customer was shut off in December 2009.

As indicated in the SONP history below, the customer repeatedly provided the service technician an excuse and was not shut off until the last time in December 2009.

- > 1/09 3 Day notice left
- > 2/09 Door tag left, per tech customer states she mailed in payment.
- 3/09 Per tech the customer states she made payment arrangement, door tag left. This was not an accurate statement and the customer was not on any payment arrangements.
- 5/09 Per tech the customer stated she paid bill, left door tag.
- > 6/09- Per tech the customer stated she paid bill per money order, left door tag.

> 7/09 – SONP canceled due to a High Consumption complaint.

> 12/09 – Customer's account shut off for non payment.

Several attempts have been made to contact the customer by telephone with no success. In a further attempt to contact the customer, on November 29, 2010, a letter was sent to Ms. Hudson concerning her account. Aqua has indicated that in an effort to get her service restored, the utility would be willing to place the customer on a payment plant. This is conditioned on the customer receiving financial assistance from a community organization in making a payment on your behalf.

Further, concerning the leak at her residence, Aqua advised the customer to contact an outside plumber to repair. Upon providing documentation of any repairs, the customer may then be eligible for a leak adjustment to the account.

# Commission Staff Requests:

 Multiple customers from the Peace River system complained about a boil water notice which appears to be ongoing. Is there an ongoing boil water situation? Please explain the situation.

#### Response:

From January 2009 to November 15, 2010, there were a total of five (5) boil water notice events in the Peace River system:

August 2009: 1 day in duration due to a broken pipe at the plant being repaired

March 2010: 1 day in duration due to flushing being conducted

April 2010: 1 day in duration due to detection of Coliform Bacteria in the water exceeding FDEP standards. Retesting of the water took place and showed to be in compliance

May 2010: 1 day in duration due to water main line being repaired

August 2010: 1 day in duration due to well pump failure

2: Explain the processes as to how and why boil water notices are issued. Please provide a list of all boil water notices issued by the Utility, the water systems that were affected, the reason why they were issued, and the length of time before they were rescinded, during 2009 to the present. <u>Response:</u> When a system experiences a drop in water pressure below 20 PSI due to a break or some other event, a Boil Water Notice will be issued. All Boil Water Notices are delivered and hung on the customer's door via door tag notice. The field Technician assigned to the system in which the notice will be issued is responsible for contacting the State customer service personnel and operations management and alerting them of the Outage or problem that requires a Boil Water Notice to be issued. The State customer service personnel will then post all relevant information including the cause of the Boil Water Notice to Aqua's internal intranet site. This site is used by customer representatives to relay important information to customers who call in.

All Boil Water Notices will remain in effect until a sample is taking and tested by an independent lab and found to be safe and satisfactory. Once the results are received and reviewed, field staff will hand deliver a rescind notice to all affected customers. The rescind notice will be hung on the customers door. In addition, Aqua has begun using a telephonic relay system called SwiftReach to contact affected customers in a more expeditious manner when boil water advisories are necessary.

See listing of Boil Water Notices provided in response to the New Port Richey customer meeting dated November 23, 2010.

<u>Additional Information Concerning Aqua's billing procedures:</u> Once a customer receives a bill, they have 21 days to make payment before being considered delinquent. Once the account is in arrears for a period of time, a customer will receive a shut off notice advising that the service will be turned off in 10 days. The PSC rules on shut off notices require a 5 work day notice; however AUF's policy is to allow additional time. Further, customers are called before any action is taken to let them know that their service may be turned off. We do offer payment plans to our customers. The company policy is to offer two payment plans per account.

# Supplemental Green Acres Customer Meeting Response

# Steve Brunner – P.O. Box 100, Sanibel

## Staff Specific Request:

Provide information concerning multiple sewage spills related to liftstation malfunctions that occurred in September of 2009.

#### Response:

September 2009: There were five abnormal events that took place involving the South Seas system: three at Lift Station #4; and, two at Lift Station #2. All events were reported to the FDEP and cleanup activities occurred promptly.

The events involving Lift Station # 4 were due to both pumps tripping the heater overload switches and one of the pumps ultimately failed. Both pumps have been replaced by AUF.

The events involving Lift Station # 2 were due to a breaker tripping on both occasions. AUF technician checked the panel and breakers for loose connections. This lift station has not had any further issues to date.

During this past year there has been over \$46,000 in capital investments in the South Seas lift stations to replace pumps and control cabinets, upgrade the power supply and repair a part of the collection line.

## Supplemental Eustis Customer Meeting Response

### Bob Gruno - 34834 Haines Creek Road

Mr. Gruno asserted that there was a hole in the rear of his home that is a hazard.

<u>Response:</u> On December 1, 2010, the AUF technician was able to contact Mr. Gruno regarding his concern about the hole. This "hole" was actually located on his sister's premises at 11747 Hickory Lane, and not Mr. Gruno's residence.

Mr. Gruno's sister is not in residence at this time and appears to be a seasonal customer.

In respect to this issue, it appears that someone had removed the meter box from the unit and placed it in the bushes. This had created a slight indent where the box was previously located. The AUF technician addressed Mr. Guno's concern by cleaning out the area and resetting the meter box. Further the area was filed and smoothed out.

In doing so, the AUF technician observed that there were cables that were ran next to the meter, just outside or around where the box was previously located. It appears that the cable company may have removed the meter box and failed to put it back to its original state.

In review of this account, Mr. Gruno has not called since July 2009 and that was concerning billing information.

Re: Docket No. PSC-100330-WS

Dear Ms. Cole:

On behalf of our client, Aqua Utilities Florida, Inc. ("AUF"), attached are AUF's responses to customers who attended the Agenda Conference on May 24, 2011, and spoke on billing and water quality issues.

Please acknowledge receipt of this filing by stamping the extra copy of this letter "filed" and returning the copy to me. Thank you for your consideration and assistance.

Sincerely,

HOLLAND & KNIGHT LLP

#### Aqua Utilities Florida, Inc.

#### Docket No. 100330-WS

#### PSC Agenda Conference – May 24, 2011

<u>Overview:</u> The PSC Agenda Conference was held on May 24, 2011 and approximately 37 customers provided comments prior to the PSC's consideration of AUF's PAA rate request. AUF's responses to those customers who spoke regarding billing and water quality issues at the Agenda Conference are set forth below.<sup>1</sup>

Benjamin Anderson – 7117 SW Archer Road, Lot 2629, Gainesville, FL – Arredondo Farms

Mr. Anderson raised questions concerning the hardness of the water and his belief that there is calcium in the water. Review of his account shows that Mr. Anderson contacted AUF twice -- on March 28, 2011, and again on April 21, 2011. Mr. Anderson stated that there were deposits in the water and the water was murky.

Mr. Anderson was informed that indigenous constituents in the ground water cause hard water, and that hard water does not pose health issues. Since AUF acquired the Arredondo Farms Water System in 2003, the system has provided water meeting all primary and secondary federal and state drinking water standards. Nonetheless, AUF is evaluating system-level alternatives to address the hardness issue at Arredondo Farms and these alternatives will be presented as soon as the first phase projects of AUF's Aesthetic Water Quality Project have been completed. Some of the options being evaluated at this time include adding a sequestering agent similar to that recently added to the Tangerine and Zephyr Shores water systems. AUF's ultimate goal is to find a balanced solution that will maximize benefits to customers and minimize upward pressure on rates.

Gerald Novak - 4912 Bobby Avenue, Zephyrhills, FL -

Mr. Novak asserted that rates impact property values. A review of AUF records indicates that Mr. Novak is no longer an AUF customer at this address. The account at this address is an inactive account that was turned off in October 2008 when it was discovered water was being used at the property but there was no customer of record.

<sup>&</sup>lt;sup>1</sup> AUF has not provided responses to those customers who limited their remarks to the amount of the proposed rate increase.

#### Julie Knox - 35303 Condo Boulevard, Zephyrhills, FL -

Ms. Knox raised a question about two bills that were both due in May, 2011. Ms. Knox receives bills for water and sewer on a monthly basis. Ms. Knox's meter is read at the beginning of each month and payment is due twenty-one days after the bill is issued. Review of Ms. Knox's account shows that her bill was issued on April 7, 2011 for 27 days of service, which bill was due on May 2, 2011. Her next bill was issued on May 5, 2011 for 29 days of service and was due on May 30, 2011. Although Ms. Knox received two bills with due dates in May, she was not double billed for service.

At the hearing Ms. Knox also mentioned an issue with damaged clothing. An AUF representative spoke with Ms. Knox and explained that she could contact the Company to submit a claim for any damaged items.

Please note that Ms. Knox recently filed a complaint with the PSC about her concerns with the water quality. An AUF representative spoke with Ms. Knox on June 15, 2011 to discuss her concerns. She stated that AUF had not yet installed an auto flusher that had been previously discussed. However, it was explained to her that the flusher was still scheduled to be installed and that the installation would be completed on June 21, 2011. Prior to the installation of the auto flusher, AUF was scheduled to flush the line in her area on June 16, 2011. An AUF area coordinator met again with Ms. Knox on June 17, 2011, and the auto flusher has now been installed.

At the meeting on June 15, 2011, Ms. Knox was also informed that AUF would be performing directional flushing for the entire system on July 7, 2011. The homeowner association has requested that the AUF representative attend its next meeting on July 7, 2011, which coincides with the date of the directional flushing to explain the event to the residents. Pursuant to that request, an AUF representative will attend the meeting and will fully explain the flushing program which has been implemented in the Zephyr Shores system.

#### Janice Ellis – 4600 Clarice Avenue, Zephyrhills, FL

Ms. Ellis discussed an issue that she previously had with AUF in 2009 regarding her claim that water had stained her clothing. After receiving the claim in 2009, AUF provided the customer with Iron Out for the clothing. The customer later advised that the Iron Out did not resolve the issue and AUF paid Ms. Ellis' claim to her for the damaged clothing. The customer has not called AUF since 2009.

Lou Vellei – 7741 Graybirch Terrace, Port Richey, FL

Mr. Vellei asserted that AUF has had 10 rate increases since 2004 and 5 since 2008. Although there have been increases for indexes and pass throughs, AUF has not had 10 rate increases since 2004. AUF's last full rate case in Docket No. 080121-WS was the

2

first full base rate increase granted by the PSC since 1996. Mr. Vellei mentioned a broken sewer pipe but a review of his account does not indicate any service orders for a broken pipe.

### Linda Gadd - 6110 Doe Circle East, Lakeland, FL

Ms. Gadd raised an issue regarding her monthly consumption. She stated that she read her meter on April 29<sup>th</sup> and again on May 23<sup>rd</sup> and calculated that she used 495 gallons. Subsequently, AUF has informed Ms. Gadd that she actually uses 5,000 gallons.

A review of Ms. Gadd's account confirms that her monthly usage fluctuates between 4,500 and 6,000 gallons each month. In reading her meter, Ms. Gadd did not account for fact that there is a 0 on the meter dial. Therefore, her usage between April 29<sup>th</sup> and May 23<sup>rd</sup> would be 4,950 which is in line with her average monthly consumption.

Ms. Gadd also raised an issue relating to service termination at her property on two occasions and claims that she was not given notice prior to the termination and that AUF took four days to restore her service. A review of Ms. Gadd's account indicates that she was placed into collections for past due balances on two occasions -- once in May 2010 and again in October 2010.

Her service was terminated on May 24, 2010 after she was given written notice on May 7, 2010 that her account was past due. On May 26, 2010, she contacted AUF for the restoration requirements. She was given the restoration requirement of \$197.25 and provided locations at which payments could be made. She stated she would call with the confirmation number once it was paid. On May 27, 2010 she called and said she would make a payment at a payment location. She called later the same day and said that she mailed the payment and would call the next day to see if the payment posted. On May 28, 2010 she called to see if the payment she mailed posted to the account. The payment was posted on the account on May 28, 2010 and service was restored that day.

It should be noted that Ms. Gadd filed a complaint with the FPSC concerning the October, 2010 service termination. AUF provided the following information to the PSC on Ms. Gadd's complaint. On October 8, 2010, Ms. Gadd was given a 10 day written notice of termination service for the balance due on her account of \$121.60. Subsequently, on October 15, 2010, Ms. Gadd received a call reminding her of her that she needed to make the payment or service would be turned off. On October 22, 2010, the customer's service was terminated for nonpayment. On October 27, 2010, Ms. Gadd telephoned the business office stating her service was terminated. The AUF representative attempted to share steps to have service restored; however, Ms. Gadd was noticeably upset and disconnected the call by hanging up.

On November 3, 2010 Ms. Gadd contacted AUF for the restoration requirements. On November 4, 2010 she called to state that she had paid her past due bill at a payment location and provided the appropriate confirmation information. Her service was restored on November 5, 2010, within 24 hours of notifying AUF of the payment. AUF notes that

3

there is no requirement in the current PSC rules relating to the timing of restoration of service after a disconnect for nonpayment.

AUF attempted to contact Ms. Gadd via telephone on November 23<sup>rd</sup> and November 29<sup>th</sup> to discuss her complaint with the PSC. However, both times voice messages were left. Therefore, a letter was mailed. The PSC closed the complaint on December 10, 2010.

# Phyllis Johnson - 5918 Doe Circle West, Lakeland, FL

Ms. Johnson stated that high water bills caused her to stop watering her lawn and that she requested a separate meter for irrigation. However, a review of her account does not show any contact with AUF regarding a high bill or any inquiry regarding an irrigation meter. On June 15, 2011, an AUF representative spoke with Ms. Johnson and discussed the option of an irrigation meter. The customer declined the option of installing an irrigation meter due to the cost.

# Gus Alexakos - 4625 Windy Lane, Zephyrhills, FL

On June 14, 2011, an AUF representative spoke with Mr. Alexakos concerning water quality issues and explained that AUF would like to assist with the water issues in his area. AUF notes that it has spoken to Mr. Alexakos numerous times over the past years and has worked closely with him to address any issue he has previously raised. Mr. Alexakos was informed that AUF would be performing directional flushing on July 7, 2011. The AUF representative scheduled a meeting for June 17, 2011 to further discuss Ms. Alexakos concerns.

On June 17, 2011, an AUF area coordinator met with Mr. Alexakos and gave Mr. Alexakos sample water testing bottles in case he experienced discolored water in the future so that AUF could test the samples. In addition, Mr. Alexakos and the AUF representative arranged for AUF to meet with the homeowner's association to discuss the flushing schedule for the upcoming year and any other customer concerns.

The association has requested that the AUF representative attend its next meeting on July 7, 2011, which coincides with the date of the directional flushing to explain the event to their residents. As stated above, an AUF representative will attend that meeting and will explain the flushing program which has been implemented in the Zephyr Shores system.

At the May 24<sup>th</sup> hearing, Mr. Alexakos mentioned an issue with his neighbor's meter which he said was locked but still registering usage. AUF has investigated the issue and determined that one of AUF's valves was broken at the neighbor's property causing water usage to register. AUF has repaired the valve and subsequently spoke to the neighbor to ensure that the account is credited appropriately.

#### Deborah DiBona - 10331 Willow Drive, Port Richey, FL

Ms. DiBona stated that she has a pool and raised an issue regarding sewer rates. Ms. DiBona is a water and sewer customer. It should be noted that while residential wastewater bills are based on water usage, there is a 6,000-gallon cap on the amount of water used to calculate the wastewater bills for all rate bands. For customers whose typical monthly water usage is below the cap, their water usage sometimes exceeds the cap in those months when their pools are filled, but those customers are not charged for more than the capped amount.

#### Nancy Jane Kraft - 7905 Mimosa Drive, Port Richey, FL

Ms. Kraft stated that she paid \$1,039 for water in 2009. Throughout 2010 her annual bills totaled \$1,077 and she has paid \$342 so far in 2011. It should be noted these costs are for both water and sewer service, not just water.

Christopher Ruiz - 11124 Tamarix Avenue, Port Richey, FL

Mr. Ruiz raised an issue regarding AUF's boil water notices. A review of his account shows that calls were made to AUF in November 2010 and on May 19, 2011. In November 2010, boil water notices issued to customers and a Swift Reach phone campaign was also initiated for a planned outage for valve replacements. On May 19, 2011, boil water notices were distributed to all customers and rescinded on May 21, 2011.

#### Lynda Wittkopp – 10531 Azalea Drive, Port Richey, FL

Ms. Wittkopp commented on the water rates and that she uses bottled water. A review of her account shows that her average bill is approximately \$56 per month and there have been no water quality or service calls since 2009.

Mike Rock – 7430 Rhineback Drive, Port Richey, FL

Mr. Rock attended the October 20, 2010 customer meeting that was held in New Port Richey. At that time, and again at the PSC Agenda Conference, Mr. Rock inquired as to damage caused due to flooding.

As reported to the PSC after the October customer meeting, on September 13, 2010, Pasco County Utilities hit and broke AUF's 2" line at this address. The County notified AUF and AUF's technician was dispatched. The County fixed the leak and made restoration based on this leak in all areas that were appropriate.

AUF received a Sunshine State One Call document concerning this line break on September 15, 2010. The County commenced the storm water pipe replacement on September 13, 2010, which was two days before AUF received the request for the line

5

locate. When the AUF service technician arrived to locate and mark the water lines, Pasco County was already in the process of digging the ground for the storm pipe replacement. Again, this was two days prior to AUF receiving the One Call request to locate the line.

#### Harold Todd - 7831 Judith Crescent, Port Richey, FL

Mr. Todd commented on an issue relating to his granddaughter's service. At the hearing, however, he did not mention the customer's name or address. On June 15, 2010, AUF contacted Mr. Todd's granddaughter and she did not have any current water quality concerns. AUF also asked the granddaughter about the incident referenced by Mr. Todd and the granddaughter did not have details and expressed no concern about past water quality problems.

#### Marie Skelton - 9438 US 19 #235, Port Richey, FL

Ms. Skelton raised an issue concerning a 2010 backbill as a result of zero usage on the account beginning in May 2009. There was a meter exchange in October 2009 and Ms. Skelton did receive a backbill. However, in accordance with Florida law, Ms. Skelton was not billed for more than 365 days of service. It should be noted that the balance on the account after the revised bill was \$200.05.

Ms. Skelton did write to AUF regarding complaints with her Zipcheck bill payments and AUF responded to Ms. Skelton's letter and resolved the issue. The account was abated \$3.20 for the Zipcheck fee. After the customer contacted AUF, AUF reviewed her bill and confirmed that Ms. Skelton was billed at the appropriate rates. AUF does not have a record of Ms. Skelton contacting the Company in 2009 about the meter readings.

#### Diane Manzo – 7932 Lotus Drive, Port Richey, FL

Ms. Manzo attended the October 20, 2010 customer meeting in New Port Richey. At that time, and again at the PSC Agenda Conference, Ms. Manzo discussed her usage variations. As reported to the PSC after the October customer meeting, a review of her usage from January 2009 through November 2010 confirms that her usage has remained relatively constant except for a few months when usage went up. Ms. Manzo asserted that AUF bills in 1,000 gallon increments and stated that she should not be charged for 2,000 gallons if she only uses 1,010 gallons. Ms. Manzo is incorrect. AUF bills in 100 (not 1,000) gallon increments.

6

Docket No. 100330-WS Compilation of AUF actions/customer comments Exhibit SC-1, Page 000051 of 000051

#### Lesley Marano - 7915 Foxbloom, Port Richey, FL

Ms. Marano raised a question regarding a collection issue and claimed that she was told that it would be okay to pay the balance on Friday but her service was terminated on Wednesday. She also discussed a broken pipe in the backyard that she asserts that it took four days to repair. Ms. Marano did not provide an address, but AUF believes that it has identified her account. On November 15, 2010 a notice was sent concerning a past due balance. The customer did call for payment requirements and did make a payment on Wednesday, November 17, 2010, and another payment on Friday, November 19, 2010. A review of the account, however, does not indicate that service was shut off for non-payment on Wednesday, November 17, 2010. Records do show that the customer called about no water on Wednesday, November 17, 2010. On November 17, 2010 there was an outage on the Palm Terrace system due to a broken valve. This was an emergency shut down and water was restored the same day. Although Ms. Marano was without service for a portion of the day on November 17, 2010, it was not due to termination for nonpayment; rather, it was due to an outage in the area at the time.

In May, 2010 there was a broken pipe at the address and a claim was paid to the customer for a broken water heater.

Dear Ms. Cole:

On behalf of Aqua Utilities Florida, Inc. ("AUF"), enclosed for filing are the original and seven (7) copies of AUF's Response to YES Companies, LLC d/b/a Arredondo Farms' Memorandum in Opposition to Rate Increase Application.

Please acknowledge receipt of this filing by stamping the extra copy of this letter "filed" and returning the copy to me. Thank you for your assistance.

Sincerely,

HOLLAND & KNIGHT LLP

# BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In Re: Application for increase in water and wastewater rates in Alachua, Brevard, DeSoto, Highlands, Lake, Lee, Marion, Orange, Palm Beach, Pasco, Polk, Putnam, Seminole, Sumter, Volusia, and Washington Counties by Aqua Utilities Florida, Inc.

DOCKET NO. 100330-WS

DATED: April 28, 2011

# AQUA UTILITIES FLORIDA, INC.'S RESPONSE TO YES COMPANIES, LLC D/B/A ARREDONDO FARMS' MEMORANDUM IN OPPOSITION TO RATE INCREASE APPLICATION

Aqua Utilities Florida, Inc. ("AUF"), by and through undersigned counsel, files its Response to the Memorandum In Opposition to AUF's Rate Increase Application filed by YES Companies, LLC D/B/A Arredondo Farms ("YES") on April 11, 2011. YES' memorandum is a compilation of sensationalized allegations that overlook the facts and the law and obscure the good quality of service at AUF's Arredondo Farms Water and Wastewater Systems ("Systems"). YES' arguments to deny or carve itself out of the rate case are without merit. To set the record straight, AUF states:

#### I. Overview of the Arredondo Farms Water and Wastewater Systems.

The Systems are located in Alachua County, Florida and currently serve approximately 343 water customers and 328 wastewater customers. Water is provided from two 6-inch wells that were drilled approximately 150 feet deep and have a casing length of 66 feet. Wastewater service is provided by a 60,000 gallon per day extended aeration wastewater treatment plant. All 343 water and 328 wastewater customers served by the Arredondo Farms water and wastewater systems reside in mobile homes located in the Arredondo Farms mobile home park owned by YES. YES acquired the mobile home park on or about January 18, 2008.
The Arredondo Farms water and wastewater systems were originally owned by Arredondo Utility Corporation ("AUC"). After the Commission gained jurisdiction over investor-owned water and wastewater systems in Alachua County in June of 1992, AUC was granted a grandfather certificate. *See* Order No. PSC-92-1454-FOF-WS (Dec. 15, 1992). AUC thereafter applied for and received a staff-assisted rate case wherein rates were set. *See* Order No. PSC-93-0509-FOF-WS (Apr. 5, 1993). In 1996, AUC applied for and received another staff-assisted rate case wherein new rates were set. *See* Order No. PSC-96-0728-FOF-WS (May 30, 1996).

In March of 1999, the Commission approved the transfer of majority organizational control of AUC to AquaSource Utility, Inc. Order No. PSC-01-0631-FOF-WU (Mar. 14, 2001). AUF's parent acquired the Arredondo Farms Systems in 2003 when it acquired the stock of AquaSource Utility, Inc.<sup>1</sup> In 2006, the Commission authorized AUC to operate under the fictitious name of Aqua Utilities Florida, Inc. In 2008, AUF applied for and received a water and wastewater rate increase from the Commission which included the Arredondo Farms Systems. *See* Order No. PSC-09-0385-FOF-WS (May 29, 2009).

#### II. The Legal Standard for Rate Increases.

YES' memorandum misrepresents the legal standard for rate increases by ignoring Florida's extensive jurisprudence on a public utility's entitlement "to an opportunity to earn a fair or reasonable rate of return on its invested capital." United Tel. Co. of Fla. v. Mann, 403 So. 2d 962, 966 (Fla. 1981) (citing Gulf Power Co. v. Bevis, 289 So. 2d 401 (Fla. 1974)). Indeed, "[t]he cases universally hold that utility rates, when adopted, must be adequate to produce a reasonable return on capital investment and to meet operating expenses." Village of Va. Gardens

<sup>&</sup>lt;sup>1</sup> The Commission's approval of the acquisition is addressed in Order No. PSC-03-0163-FOF-WS (Feb. 3, 2003).

v. Haven Water Co., 91 So. 2d, 181, 183 (Fla. 1956) (collecting cases). As further explained by

the Florida Supreme Court:

A fair rate of return is for the benefit of the utility's investors. Gulf Power Co. v. Bevis, 296 So.2d 482 (Fla.1974). This amount "should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain credit and to attract capital." Federal Power Commission v. Hope Natural Gas Co., 320 U.S. 591, 603, 64 S. Ct. 281, 288, 88 L.Ed. 333 (1944); see also Bluefield Waterworks & Improvement Co. v. Public Service Commission, 262 U.S. 679, 43 S. Ct. 675, 67 L.Ed. 1176 (1923). Therefore the purpose of establishing a fair or reasonable rate of return is to "fairly compensate investors for the risks they have assumed...." Permian Basin Area Rate Cases, 390 U.S. 747, 792, 88 S. Ct. 1344, 1373, 20 L.Ed.2d 312 (1968).

Mann, 403 So. 2d at 966. Therefore, refusal to grant a public utility a reasonable rate of return on its investment would be "confiscatory." Keystone Water Co., Inc. v. Bevis, 278 So. 2d 606, 609 (Fla. 1973); see also, N. Fla. Water Co. v. City of Marianna, 235 So. 2d 487 (Fla. 1970).

YES also fails to mention the due process protections that are afforded to a utility in a proceeding where compensatory rates are to be set. See City of Miami v. Fla. Pub. Serv. Comm'n, 226 So. 2d 217, 224 (Fla. 1969) (The determination of whether a public utility is receiving fair and reasonable returns "should be made in accordance with due process of law and in keeping with recognized rules of trial or administrative hearing procedure and practice. In such cases, neither the Commission nor the courts should countenance any harassment of the public utility or the making of it a 'whipping boy' for political or other extraneous purposes.").

As YES acknowledges, in fixing rates that are "just, reasonable, compensatory, and not unfairly discriminatory," the Commission is to consider among other things the "value and quality of the service and the cost of providing the service." § 367.081(2)(a)(1), Fla. Stat. However, YES attempts to heighten this standard by reference to unique utility cases involving

instances of criminal mismanagement or gross neglect which are not remotely at issue here.<sup>2</sup> YES suggests that because rates were reduced or not increased due to the extreme and inapposite facts in those unique cases, the Commission should exercise that same authority here. YES' logic is flawed. A review of the cases cited by YES demonstrates their inapplicability.

For instance, in *Gulf Power Company v. Wilson*, 597 So. 2d 270 (Fla. 1992), the Commission temporarily reduced an electric utility's return on equity ("ROE") after finding criminally corrupt practices and gross mismanagement which "reflect[ed] a disregard for the ratepayers and public service." *Id.* at 272 (quoting Commission's findings). These practices included "theft of company property, use of company employees on company time to perform services for management personnel, utility executives accepting appliances without payment, and political contributions made by third parties and charged back to" the utility. *Id.* Accordingly, the Commission penalized the utility by imposing a penalty of 50 basis points on its ROE "as a message to management" to stop its misconduct. *Id.* Notably, even under these extreme circumstances (which are certainly not present here), the Commission still approved a rate increase and only imposed the ROE penalty for a temporary two-year period.<sup>3</sup>

<sup>&</sup>lt;sup>2</sup> To be sure, "[i]f the commission finds that a utility has failed to provide its customers with water or wastewater service that meets the standards promulgated by the Department of Environmental Protection or the water management districts, the commission may reduce the utility's return on equity until the standards are met." § 367.111(2), Fla. Stat. But those are not the facts here.

<sup>&</sup>lt;sup>3</sup> In implementing its authority to reduce a utility's return on equity the Commission has been careful to limit such reductions to situations where the utility has flagrantly disregarded the Commission's rules and charged unauthorized rates, see Order No. PSC-03-0699-SU (June 9, 2003); ignored Staff's request for information, see id.; or repeatedly violated FDEP regulations, see Order No. PSC-98-0763-FOF-SU (June 3, 1998) (ROE reduced by 100 basis points for poor quality of service and mismanagement, where the utility had not had a single satisfactory field inspection by either FDEP or the Health Department, had received numerous warning letters, failed to perform timely after entering into consent agreements with FDEP, and incurred fines and possible penalties in excess of the value of the utilities planned). There is no evidence in this case, and indeed no claim, that AUF has flagrantly disregarded the Commission's rules, charged unauthorized rates, ignored staff's requests for information, or repeatedly violated FDEP requirements. Indeed, AUF has shown a commitment to taking actions beyond that required by law as described below.

Similarly, in North Florida Water Company v. Bevis, 302 So. 2d 129 (Fla. 1974), the Court affirmed the Commission's denial of a rate increase where the Commission had determined that (i) the utility's system was plagued by "insufficient past maintenance," (ii) the utility's system "leak[ed] like a sieve," and (iii) the utility's meter program was "virtually non-existen[t]." See Order No. 5853 (Sept. 14, 1973). In so ruling, the Court agreed that the public should not be compelled to pay increased rates due to egregious inefficiencies resulting from the utility's total neglect of the system. 302 So. 2d at 129-130. None of those extreme facts are present here.

Likewise, the administrative order in *Island Services Inc. v. Florida Public Service Commission*, DOAH Case No. 80-1176 (Aug. 6, 1980), involved other issues far beyond what is presented here. *See also*, Order No. 9773 (Jan. 29, 1981) (adopting administrative order). In *Island Services*, it was found that the system was not properly maintained, there were frequent periods of very low water pressure, customers were unable to contact the utility when outages occurred after business hours because no emergency phone number was provided, and that tests by the Department of Environmental Regulation demonstrated inadequate chlorine residuals which would require further monitoring. *Id.* at  $\P$  5. The request for the rate increase was further complicated by the fact that there was no basis on which to determine the utility's investment. *Id.* at  $\P$  6.

YES' citation to the Commission order in *In Re: Application of Palm Coast Utility Corporation*, Order No. 10463 (Dec. 18, 1981), is no more helpful. In that instance, the Commission granted a rate increase for all customers except for eight single-family residences and one duplex where, for those limited customers, water was found to have an "excessive chlorine taste, offensive odor, and high sodium content." *Id.* at 30. In so ruling, the Commission

found that it was "undisputed" that the quality of water provided to the eight single family residences and the duplex was "of a lesser quality than that received by the main body of customers . . . , especially when the factors of taste and odor are considered." *Id.* This notwithstanding, the Commission conditionally granted a rate increase to that small group of customers once their quality of water was elevated to the quality received by the utility's main body of customers. There is nothing here to suggest that AUF is failing to meet the minimal water quality standards which were not being met in that case. In fact, as is explained below, empirical water quality test results demonstrate that the quality of water supplied at the Arredondo Farms System is good. Moreover, the aesthetic quality of the water at Arredondo Farms actually exceeds the aesthetic standards of other systems that are included as part of the first phase of AUF's secondary/aesthetic water quality initiative.

For these reasons, and for all the reasons set forth below, the cases cited by YES are in no way comparable to the facts at issue here.

# III. The Value and Quality of AUF's Water Service are Good.

As prescribed by rule, when determining the quality of service provided by a utility, the Commission shall make this determination based on an evaluation of three separate components of water and wastewater utility operations:

- (i) Quality of the utility's product (water and wastewater);
- (ii) Operational condition of the utility's plant and facilities; and
- (iii) The utility's attempt to address customer satisfaction.

Rule 25-30.433(1), Fla. Admin. Code. As demonstrated below, the quality of AUF's water and wastewater product at the Arredondo Farms Systems is good, as is the operational condition of those Systems. Furthermore, AUF has made, and continues to make, concerted attempts to address customer satisfaction at the Arredondo Farms Systems.

Docket No. 100330-WS AUF responses/issues from AF System customers Exhibit SC-2, Page 000009 of 000027

# A. The Quality of Water Service is Good.

YES' memorandum is conspicuously silent as to the facts that the Arredondo Farms Water System is current in all of the required chemical analyses and that there are no outstanding enforcement issues. Indeed, YES' memorandum completely ignores empirical test results which demonstrate that the quality of water supplied at the Arredondo Farms system is good.

The U.S. Environmental Protection Agency (EPA) National Primary Drinking Water Regulations set enforceable Maximum Contaminant Levels ("MCLs") for drinking water to protect the public from contaminants that might present some risk to human health. An MCL is the maximum allowable amount of a contaminant in drinking water which is delivered to the consumer. EPA National Secondary Drinking Water Regulations set non-mandatory Secondary Maximum Contaminant Levels ("SMCLs") for 15 other contaminants based on aesthetic considerations such as taste, color and odor. EPA does not enforce these SMCLs. They are established as guidelines to assist public water suppliers in managing their drinking water systems. These contaminants are not considered to present a risk to human health at or below the SMCL. There is no SMCL for hardness. There is a SMCL for total dissolved solids (TDS) at 500 mg/L based largely on taste when the TDS is comprised mainly of salt (sodium and chloride).

AUF is required to regularly monitor for primary and secondary standards. Since AUF acquired the Arredondo Farms Water System in 2003, the System has provided water meeting <u>all</u> primary and secondary federal and state drinking water standards. *See, e.g.,* AUF's Responses to YES' First Request for Production of Documents Nos. 1, 2 and 8. The TDS of the water at Arredondo Farms is 306 mg/L, well below the SMCL. Neither sodium nor chloride are significant components of the TDS in the water at Arredondo Farms. The hardness of the water

in Arredondo Farms is around 320 mg/L as calcium carbonate. This is hard water, but not exceptionally hard for Florida. Contrary to the claims by YES, hard water does not contribute to corrosion and, in fact, protects against corrosion of household plumbing. For example, the most common indicator of corrosivity of water is the Langelier Index (or Saturation Index, SI). Water with a positive SI (like the water at the Arredondo Farms System) has a tendency to deposit a protective layer of calcium carbonate and other minerals that inhibit corrosion of metal pipe and plumbing fixtures. Water with a negative SI has a tendency to dissolve calcium carbonate and other metallic oxides and complexes that form on the metal surfaces, exposing the metal surface to corrosion.<sup>4</sup>

The Commission has consistently recognized that it is not unusual for Florida water utilities to experience water "hardness" issues, and the Commission has <u>not</u> taken punitive actions against utilities that do.<sup>5</sup> Indeed, in the 1996 rate case involving the Arredondo Farms Systems (which were then owned by AUC), the Commission expressly found that, while the water at the system was hard, it did <u>not</u> present a health hazard. *See* Order No. PSC-96-0728-FOF-WS at 2-3. The Commission went on to conclude that the "treated water provided by Arredondo meets or exceeds all requirements for safe drinking water" and that the utility had satisfactory water quality. *Id*. The Commission also warned that a system-level solution to the "hard" water issue at Arredondo would <u>not</u> be cost-effective or prudent:

> Those customers who attended the customer meeting were primarily concerned about mineral deposits on their kitchen and bath fixtures. This situation is generally treatable by lime softening. However, the cost to install lime softening equipment is from approximately \$80,000 to \$140,000 for each of the two water treatment plants. This cost would be passed on to the customers through their rates. We find that this solution would not be cost

<sup>&</sup>lt;sup>4</sup> Vernon Snoeyink & David Jenkins, Water Chemistry 289 (1980).

<sup>&</sup>lt;sup>5</sup> See, e.g., Order No. PSC-00-2054-PAA-WS (Oct. 27, 2000); Order No. PSC-96-0728-FOF-WS (May 30, 1996); Order No. PSC-93-0027-FOF-WS (Jan. 5, 1993).

effective or prudent for this customer base. We note that customers who find the scaling problem to be intolerable have other options. They could either have a local water softening company install a water softening unit at a variable price, or they could purchase a whole house filter system for less than \$50.00. Filter cartridges are replaced as necessary and can be purchased to screen for a variance of compounds, including excessive minerals. <u>All things considered, we find that the utility's quality of</u> service is satisfactory.

Id. at 3 (emphasis added).

Although the Commission has previously warned that a system-level solution to the "hard" water issue would not be cost-effective or prudent, the record should be made clear that that AUF continues to try to actively address its customers' concerns regarding hard water. AUF's service technicians are trained to routinely advise customers that the effects of hard water can be mitigated by a variety of household products or by homeowners softening their water. Furthermore, for customers who consider obtaining water softeners, AUF recommends softening only the hot water to maximize benefits and minimize the cost of softening. AUF also regularly includes written materials in customers' bills that explain how to mitigate the effects of hard water. As described below, AUF's efforts to address hard water concerns have not stopped there.

Hard water is an aesthetic water quality issue, and AUF is proud of its proactive programs in Florida to address aesthetic quality. As the Commission knows, in early 2009, AUF evaluated several of its water systems as candidates for investigation for improvements to address secondary (aesthetic) water quality parameters. The Arredondo Farms Water System was one of the systems considered based solely on the relative hardness of the water. There was no other primary or secondary water quality issue with the water at Arredondo Farms. AUF worked with the Commission and the Office of Public Counsel ("OPC") to determine which

systems would be targeted in the first phase of the secondary water quality projects and which would be targeted for subsequent phases. Ultimately, priority was given to systems with SMCL exceedances for taste and odor (due mainly to hydrogen sulfide), iron or manganese, especially where a system could have issues with primary drinking water standards. Because the Arredondo Farms Water System had no SMCL exceedances and no issues related to primary standards, it was placed in the next tier of systems to be addressed in the second phase of AUF's aesthetic water quality program.<sup>6</sup> System-level alternatives to address the hardness at Arredondo Farms are being evaluated and will be presented as soon as the first phase projects have been completed. Some of the options being internally evaluated at this time include adding a sequestering agent, similar to those recently added to the Tangerine and Zephyr Shores water systems during the first phase of the secondary water quality project. AUF's ultimate goal is to find a balanced solution that will maximize benefits to customers and minimize upward pressure on rates.

# B. The Quality of Wastewater Service is Good.

YES' memorandum completely ignores undisputed facts showing that AUF provides good quality of wastewater service at Arredondo Farms. First, YES completely ignores the fact that the Arredondo Farms Wastewater Treatment Facility ("WWTF") is currently operating in accordance with all applicable environmental standards, and there are no outstanding enforcement issues. Second, YES fails to mention that, subsequent to AUF's last rate case, AUF has made significant upgrades to the WWTF which were completed and placed into service in August 2010 at a cost of \$291,870.<sup>7</sup> (In addition, it should be noted that during the construction

<sup>&</sup>lt;sup>6</sup> In addition to the Arredondo Farms Water System, AUF has also preliminarily included Hermit's Cove, River Grove and Arredondo Estates in the second phase of its aesthetic water quality program.

<sup>&</sup>lt;sup>7</sup> The factual details and the costs associated with the WWTF upgrade are set forth in AUF's Sixth Supplemental Response to Staff's Second Data Request dated February 28, 2011.

of the WWTF upgrade, AUF's contractor advised the potential development of a sinkhole. AUF hired Devoe Engineering to perform a site assessment and the sinkhole was stabilized. However, another sinkhole developed, which AUF stabilized at a cost of \$47,137.) FDEP issued a clearance letter regarding this project on August 27, 2010. Third, YES ignores that AUF has completed a poind rehabilitation project at the Arredondo WWTF to improve percolation rates. This project was completed in November 2010 at a cost of \$127,765.

Finally, AUF continues to incur substantial operational costs at the Arredondo Wastewater System because of fats, oils, grease and other materials disposed of in the sewer system by customers who are tenants of YES. AUF has been working with YES to address some of these wastewater issues, and AUF appreciates YES' cooperation in taking these steps to mitigate the wastewater rate increase.

Clearly, AUF's actions demonstrate that it offers good quality wastewater service at Arredondo Farms and is committed to maintaining that good quality of service going forward.

#### C. The Quality of AUF's Billing Services is Good.

YES claims that AUF has poor billing practices, which YES blames on AUF's water meters. See YES' memorandum at 13. AUF strongly disagrees with YES' claims about billing errors. There simply is no evidence to suggest that AUF's meters are causing billing errors. Such claims ring particularly hollow when one reflects on the fact that the Commission recently affirmed the accuracy of AUF's meters based on an independent meter audit conducted by staff, which audit included random sampling of meters at Arredondo Farms. The Commission expressly found that:

> Our staff has randomly sampled 358 meter readings taken by AUF and compared those readings to a corresponding set of meter readings taken by Commission staff. Of these 358 meter readings taken by AUF, none were found to be significantly different from

the meter readings taken by our staff. Therefore, we find that no further testing of AUF's meter reading accuracy is necessary.

## Order No. PSC-10-0297-PAA-WS (May 10, 2010).

Furthermore, YES' unfounded claims of metering deficiencies ignore AUF's proactive efforts to address the metering issues in the Arredondo Farms area that existed prior to AUF acquiring the Systems. For example, in the 1996 rate case involving the Arredondo Farms Systems, customers had expressed concern that the prior owner - AUC - had an inconsistent policy of meter reading. At that time, AUC explained that when meters were not read it was "because those meters are within fenced yards where the gate is locked, or the yards contained unrestrained dogs, or there is too much debris covering the meter." Order No. PSC-96-0728-FOF-WS at 4. AUF has proactively addressed this issue by installing radio frequency ("RF") meters as a consistent, cost-effective, and accurate means to measure and bill for water service.

On page 14 of its memorandum, YES makes reference to seven customers who have received backbills, and erroneously claims that those isolated instances reflect systemic billing problems. That simply is not true. As will be explained in detail below, YES overlooks the fact that AUF's backbilling practices comport with the Commission's rules and its Commission-approved Tariff. Furthermore, the customer scenarios which YES cites are not indicative of chronic billing problems, but rather reflect routine billing challenges that can arise where there is damage to metering equipment, repeated "move-ins/move-outs" and customer billing address changes. Each of the seven customer scenarios referenced in YES' memorandum is addressed and explained in Exhibit "A".

# 1. AUF's Policy for Billing for Past Usage Complies with Commission Rules.

The Commission's rules expressly authorize AUF to backbill customers:

A utility may not backbill customers for any period greater than 12 months for any undercharge in billing which is the result of the utility's mistake. The utility shall allow the customer to pay for the unbilled service over the same time period as the time period during which the underbilling occurred or some other mutually agreeable time period. The utility shall not recover in a ratemaking proceeding, any lost revenues which inure to the utility's detriment on account of this provision.

Rule 25-30.350, Fla. Admin. Code. Rule 25-30.350 is virtually identical to the Commission's rules that authorize backbilling by electric utilities - Rule 25-6.106, Florida Administrative Code,<sup>8</sup> and by natural gas utilities - Rule 25-7.0851, Florida Administrative Code. AUF's backbilling practices also comply with Rule 25-30.350 and with Sections 23, 24 and 30 of its Commission-approved Tariff.

Both Rule 25-30.350 and AUF's approved Tariff allow AUF to backbill for up to 365 days. Thus, when AUF revises a bill to send to a customer to account for services used but not previously billed, the bill will be calculated based on the total amount of usage measured through the meter for the total time that service was received. If this time frame is longer than 365 days, AUF's policy is to include an adjustment on the bill that will credit the customer for usage beyond the 365 day look-back period. AUF's practice is designed to ensure that the backbilled period does not exceed 12 months. Furthermore, AUF's policy is to allow the customer to pay the backbill over the same time period in which the underbilling occurred or some other mutually agreeable time.

While AUF strives for perfection in its billing processes, it would be disingenuous to suggest that mechanical and human errors do not occur. The Commission has recognized this potential for billing mistakes as so have the courts. As set forth above, the Commission's rules

<sup>&</sup>lt;sup>8</sup> The Commission's rules concerning backbilling by electric utilities also authorize a utility to backbill for "up to four (4) years if the backbilling is necessary due to errors of an electrical contractor." See, R. 25-6.103(7), Fla. Admin. Code.

clearly recognize that, from time to time, billing mistakes will be made which will require the utility to backbill customers for service that was provided and used but was not captured in the normal monthly bill. The rationale for backbilling was clearly set forth in *Corporation de Gestion Ste-Foy, Inc. v. Fla. Power & Light,* 385 So. 2d 124 (Fla. 3<sup>rd</sup> DCA 1980). There the court found that a public utility "is not only permitted but is required to collect undercharges from established rates, whether they result from its own negligence, or even from a specific contractual undertaking to charge a lower amount." *Id.* at 126. The court explained that it would be improper for a utility to give preferential treatment or to charge one customer less than another customer for the same service. *Id.* The Florida Supreme Court later endorsed this principle when it expressly upheld the right of a water utility to backbill for water undercharges. *Jacksonville Elec. Auth. v. Draper's Egg & Poultry Co.*, 557 So. 2d 1357 (Fla. 1990).

In similar fashion, the Commission has expressly recognized the right of a water and wastewater utility to backbill customers pursuant to Rule 25-30.350. *See, e.g.*, Order No. PSC-94-0210-FOF-WS (Feb. 24, 1994); Order No. PSC-94-0501-FOF-WU (Apr. 27, 1994). Furthermore, the Commission has clearly explained the reason why a utility is entitled to backbill as follows: "regardless of whether the utility was aware of the connection or not, the customer has received service for which it has not paid." Order No. PSC-94-0210-FOF-WS:

In the water and wastewater industry the need to backbill is not uncommon and can happen for a variety of reasons. Some examples of these circumstances are as follows:

#### The Damaged ERT

Where the electronic radio transmitter ("ERT") component of an RF meter is damaged (e.g., by weather event or vandalism) the meter reads will be captured but not transmitted, and thus the customer will be billed only for the relevant base facility charge. When this "no

consumption" issue<sup>9</sup> is detected and the ERT is repaired, AUF's billing system will retrieve the actual read for the consumption and will backbill the customer for the full services provided over the period that the customer was undercharged but not longer than 365 days. This is in strict accordance with the Commission's backbilling rule - Rule 25-30.350. Under AUF's policy, the new bill should spread the total usage over the period of months that the customer was undercharged based on the appropriate rate tier. Furthermore, AUF's policy is to allow the customer to pay the backbill over the same time period in which the underbilling occurred or over some other mutually agreeable time.

#### Repetitive Billing Address Changes and Move-Ins/Move-Outs

A customer's repetitive changes in his or her billing address can also result in the customer "missing" bills which, in turn, requires the utility to backbill for services rendered but not paid for by the customer. In addition, the potential for billing issues may increase where a customer repeatedly moves in and out of AUF's billing system which causes constant changes in the customer account database. If an underbilling is detected in these scenarios, AUF's policy is to backbill the customer for the services provided over the period that the customer was undercharged but not longer than 365 days. Under AUF's policy the new bill should spread the total usage over the period of months that the customer was undercharged based on the appropriate rate tier. Furthermore, AUF's policy is to allow the customer to pay the backbill over the same time period in which the underbilling occurred or over some other mutually agreeable time.

<sup>&</sup>lt;sup>9</sup> YES insinuates that AUF should automatically treat a bill with "no consumption" as problem needing immediate attention. That simply is not the case. YES fails to understand that, due to the seasonal nature of many of Florida's residents, it is not unusual during many months of the year for a bill to have only a base facility charge, and no usage charges (i.e., "no consumption").

Docket No. 100330-WS AUF responses/issues from AF System customers Exhibit SC-2, Page 000018 of 000027

# 2. YES' Cherry Picking Argument Should be Rejected.

Since AUF's last rate case in Docket No. 080121-WS, AUF has issued over 12,300 bills to customers in Arredondo Farms. YES lists 7 of those customer bills and attempts to argue that those bills show systemic billing problems. YES' argument is classic "cherry picking" and reflects the fallacy of incomplete evidence. As the Commission and the Courts have recognized. billing mistakes will occur in the ordinary course of a utility's business, and those mistakes may require the utility to backbill customers for service that was provided and used but was not captured in the normal monthly bill. As discussed above, such billing mistakes sometimes occur where there is damage to an ERT or a meter, where customers repeatedly move in and out of the billing system, and where the customer repeatedly changes his or her billing address. Of those 7 customer bills listed by YES: 4 involved backbills because of a damaged ERT or a replaced meter; 2 involved backbills because of move-ins/move-outs; and 1 involved a backbill because of repeated changes in the customer's billing address. Simply put, the 7 customer scenarios listed in YES' memorandum all involved isolated billing mistakes that, despite AUF's best practices, occur in the ordinary course of a utility's business. None reflect chronic or systemic billing problems. Each of the 7 customer billing scenarios listed by YES are addressed and explained in Exhibit "B".<sup>10</sup> Furthermore, as shown in Exhibit "A", AUF has made a concerted effort to address each of these customer's concerns.

#### D. AUF Has Designed Rates Specifically to Address Affordability.

YES claims that AUF's proposed rates are unjust, unreasonable and unaffordable. Those claims are without merit. As explained above, AUF is entitled to rates that allow it the

<sup>&</sup>lt;sup>10</sup> The exhibits to YES' memorandum make passing reference to five (5) other customers who have expressed concerns with respect to the level of bills that did not relate to backbilling. Each of those customer scenarios are addressed and explained in Exhibit "B". Furthermore, as shown in Exhibit "B", AUF has made a concerted effort to address each of these customer's concerns.

opportunity to earn a reasonable return on its prudent capital investment and to recover its reasonable operating expenses. To ensure that its rates are affordable, AUF has requested that the Commission approve a statewide uniform rate structure which, if approved, would actually decrease water rates for customers in Arredondo Farms. While those customers would see a modest increase in wastewater rates, that increase is directly attributable to the substantial investments made by AUF to upgrade the Arredondo Farms WWTF. See Section III.C. above. The Commission has already allowed electric and natural gas utilities to implement uniform rates to address affordability concerns. Moreover, the Florida First District Court of Appeal ("1<sup>st</sup> DCA") has made it clear that there are no legal impediments to the Commission adopting a similar uniform rate structure for multi-system water and wastewater utilities like AUF. See S States Utils. v. Fla. Pub. Serv. Comm'n., 714 So. 2d 1046 (Fla. 1<sup>st</sup> DCA 1998). In fact, the court recognized that uniform rates for water and wastewater utilities can enhance affordability for all customers by providing bona fide cost savings "due to a reduction in accounting, data processing and administrative expenses." *Id.* at 1052 (quoting Order No. PSC-93-1480-FOF-WS (Oct. 11, 1993)).<sup>11</sup>

Finally, YES' attempt to compare AUF's proposed rates to rates of Gainesville Regional Utilities is baseless and contrary to Commission precedent. The Commission has expressly rejected a similar attempt by OPC to compare an investor-owned water utility's rates to rates of a municipally-owned utility:

> A valid comparison would take into account all differences and similarities of the utilities whose rates were being compared. One example of a major consideration is the type of ownership. The rates of a municipally-owned utility may vary greatly from those of

<sup>&</sup>lt;sup>11</sup> The 1<sup>n</sup> DCA also recognized that the Commission has set uniform rates in several other cases involving multiple water and wastewater systems. 714 So. 2d at 1052 (citing Order No. PSC-93-1092-FOF-WU (July 27, 1993); Order No. 23592 (Oct. 9, 1990); Order No. 14506 (June 26, 1985); Order No. 11507 (Jan. 13, 1983)).

an investor-owned utility. For instance, municipally-owned utilities generally have lower costs of debt and often subsidize their water and sewer systems through taxation. On the other hand, investorowned utilities are required to pay property and income taxes. These utilities usually have a much higher cost of debt because they do not have the same access to federal and state funds as do municipalities. Other components that may impact on the cost and pricing of water and sewer service include the number of customers served and the age of the plant.

The Commission has previously addressed this issue. For example, by Order No. 4137, the Commission found that rate comparisons are without value as a measure of reasonableness in fixing telephone rates within a specific area and for a particular utility. The Commission observed in that case that if such comparisons were a valid test of reasonableness, there would be only one rate for a given service throughout the jurisdiction, regardless of the utility involved or the operating conditions encountered. We therefore find that, based on the record, the rate comparison proposed by Public Counsel is irrelevant to our disposition of this rate case.

Order No. 20066 (Sept. 26, 1988).

#### IV. Conclusion.

The Commission should not be misled by YES' sensationalized allegations, which overlook key facts and legal precedent. The Commission has previously found the quality of service at the Arredondo Farms Water and Wastewater Systems to be satisfactory. Order No. PSC-96-0728-FOF-WS, *supra*. Since that time, the facts show that the service quality has improved. With respect to Arredondo Farms Water System, the undisputed facts show that since AUF acquired the system in 2003, the water has met <u>all</u> primary and secondary federal and state drinking water standards, and there are no outstanding environmental enforcement issues. Similarly, AUF has made substantial improvements to the Arredondo Farms Wastewater System, which is currently operating in accordance with all applicable environmental standards and there are no outstanding enforcement issues. Furthermore, there is nothing wrong with the quality of AUF's billing services. The Commission has recently affirmed the accuracy of AUF's meters

based upon an independent meter audit conducted by staff. Moreover, AUF's backbilling practices are entirely consistent with its approved Tariff, the Commission's rules, and the backbilling policies previously upheld by the Courts and the Commission. Finally, AUF has made and continues to make concerted efforts to address customer satisfaction. Although the Commission has previously determined that water hardness at Arredondo Farms is an aesthetic issue and not a health compliance issue, and has warned that system-level improvements to address hard water would not be cost-effective or prudent, AUF has not ignored the issue. AUF continues to try to actively address its customers' concerns by including written materials in customers' bills and by training its service technicians to routinely advise customers on how to mitigate the effects of hard water. In addition, AUF has proactively included the Arredondo Farms Water System in the next phase of its aesthetic water quality program and continues to evaluate cost-effective solutions to address hard water.

In summary, the overall quality of service provided by AUF at the Arredondo Farms Systems is good. YES' arguments to deny or carve itself out of the rate case are without merit.

Respectfully submitted this 28<sup>th</sup> day of April, 2011.

#### Docket No. 100330-WS AUF responses/issues from AF System customers Exhibit SC-2, Page 000023 of 000027

#### EXHIBIT A

#### Monica Thomas

Ms. Thomas' scenario involved a backbill due to a move-in issue. The customer contacted AUF on March, 18, 2008 to have service put in her name. At the time of this move-in notification, the property was not identified as a wastewater account in AUF's billing system. Consequently the customer began receiving water and wastewater service in March of 2008, but was billed only for water service. Upon learning of the undercharge in October 2010, AUF backbilled the customer for wastewater service back to September 2009, consistent with Rule 25-30.350. Although Ms. Thomas had received wastewater service since March 2008, AUF did not charge her for such service she received for the period March 2008 to September 2009.

Ms. Thomas' bill for the prior wastewater service specifically notified her that the bill was for a long period and that payment arrangements could be made on the account. AUF's policy is to encourage and allow payment plans, and Ms. Thomas was notified that a payment plan was available to her.

# Eugene Davis

Mr. Davis' scenario involved a backbill due to a move-in issue. The customer contacted AUF on August 28, 2007 to activate service. At the time of move-in notification, the property was not identified as a wastewater account in AUF's billing system. Consequently Mr. Davis began receiving water and wastewater service in late August 2007, but was billed only for water service. Upon learning of the undercharge in September 2010, AUF backbilled the customer for wastewater service back to September 2009, consistent with Rule 25-30.350. Although Mr. Davis received wastewater service since late August 2007, AUF did not charge him for such service he received for the period August 2007 through September 2009. Mr. Davis' bill for the prior wastewater service notified him that the bill was for a long period and that payment arrangements could be made on the account. This customer continues to make payments on his prior usage pursuant to a payment arrangement plan.

#### Katherine Smith

Ms. Smith's scenario involved a backbill due to a damaged ERT issue. As explained in Section III of the Response, where the ERT component of an RF meter is damaged (e.g., by weather event or vandalism) meter reads will be captured but not transmitted, and thus the customer will be billed only for the relevant base facility charge. When this issue is detected and the ERT is repaired, AUF will retrieve the actual read for the consumption and will backbill the customer for the full services provided over the period that the customer was undercharged but not longer than 365 days. This is in strict accordance with the Commission's backbilling rules. Furthermore, the bill should show the recalculated usage by month based on the appropriate tiered block rate structure. In Ms. Smith's case, when AUF detected that the ERT had been damaged and the customer had not been billed for usage for 361 days, it attempted to manually address the billing issue. As a result of human error, the manual override caused the customers' usage over the 361 day period (33,800 gallons) to be billed in a 28 day period. The customer's

Docket No. 100330-WS AUF responses/issues from AF System customers Exhibit SC-2, Page 000024 of 000027

revised bill, which was issued February 2011, thus reflected usage at the highest tier rate. Upon learning of this mistake, a corrected bill has been issued for the unbilled gallonage which has been spread over the 361 day period with the appropriate rate tier applied. AUF has also notified the customer that a payment plan is available to her.

#### Justin Houlker

Mr. Houlker's scenario involved a backbill due to a damaged ERT issue. Because of a damaged ERT, Mr. Houlker was not billed for water and wastewater services used from November 2009 to November 2010. A service technician discovered that the ERT was damaged and promptly repaired the ERT on November 24, 2010. In December 2010, the customer was backbilled for the unbilled service in accordance with the Commission's rules. The bill reflected usage calculations for the total time period that service was received but not billed (378 days). However, because the Commission's rule limits the backbill period to not more than 365 days, AUF's bill reflected a credit which credited Mr. Houlker's bill for usage beyond the 365 day period. AUF has notified the customer that a payment plan is available to him.

#### William Wright

Mr. Wright's scenario involved a backbill which was due to a damaged ERT issue. Mr. Wright has been a customer since 2001. In 2009, he began receiving a bill which contained only water and sewer base facility charges (with no usage charges) due to a damaged ERT.

The account was corrected and the customer was billed for 99,300 gallons of usage for 567 days of service. Because Florida's regulations state that Aqua can only back bill for 365 days of service, a credit was posted to the customer's account for the usage over 365 days. AUF has also notified the customer that a payment plan is available to him.

#### Joyce Helm

Ms. Helm's scenario involved a backbill due to repeated billing address changes requested by the customer. Records indicated that Ms. Helm called AUF on February 2, 2010 to activate her account, stating that she moved into the property on January 28, 2010. Between March 2, 2010 and April 22, 2010, the customer contacted AUF and stated that she had not received her bills. AUF sent the customer duplicates of the prior bills. Thereafter, at the customer's request, AUF changed the customer's billing address. On May 18, 2010 Ms. Helm called AUF and claimed that she was not a customer (Note that AUF's records show the Company received 2 credit card payments both in April 2010 showing Joyce Helm as the customer of record). Ms. Helm said that she did not live in Gainesville, that she lived in Titusville, Florida and that service should be taken out of her name. Pursuant to Ms. Helm's request, AUF took the service out of Ms. Helm's name at this property.

On June 28, 2010, after AUF's records indicated that there was consumption at the property but no customer of record, a service order was created to turn off and block service to this property. Ms. Helm then called in August 2010, asserting that she was not receiving bills for the 7171 Southwest Archer Road, Gainesville, Florida property.

Docket No. 100330-WS AUF responses/issues from AF System customers Exhibit SC-2, Page 000025 of 000027

The AUF representative advised Ms. Helms that she had previously stated that she did not live at the property and AUF's records indicated that there was no active customer at the property at that time. After speaking with Ms. Helm, the customer service representative put the service back into Ms. Helm's name. Because records indicated that she or someone authorized by her was using water and wastewater services at the property since she initially called and stated she had moved into the property, she was billed for the service used at this address as of January 28, 2010. Specifically, Ms. Helm was billed for 196 days of service. Ms. Helm raised this billing concern at the customer meeting in Gainesville on October 21, 2010 and spoke to a local AUF representative. As a one-time courtesy, a credit of \$318.56 was issued on the customer's account on October 22, 2010.

#### MaryAnn Walker

MaryAnn Walker's scenario involved a backbill due to a damaged meter issue. A brief history of Ms. Walker's account is as follows: Ms. Walker became an AUF customer at this address in March 2008. While she was a customer, this customer had numerous collection and payment issues which led to her service being discontinued in April 2009 for non-payment. In May 2009 AUF noticed that there was consumption but no customer of record at this property. On September 4, 2009, service was put back into Ms. Walker's name and a backbill was issued back to April 8, 2009 for services used but not paid for by the customer. Thereafter, Ms. Walker agreed to a payment plan to pay for the services she used but did not pay for.

On October 22, 2010, AUF determined that the meter at Ms. Walker's property was damaged, and thereafter the Company took prompt steps to exchange the meter. It was further determined that Ms. Walker had not been billed for usage from October 2009 through October 2010. The meter exchange was completed on October 22, 2010. As a one time courtesy, Ms. Walker was not billed for water and wastewater consumption from October 2009 to October 2010.

However, during the meter exchange on October 22, 2010, the service technician did not synchronize the new meter with the existing ERT. The technician's failure to synchronize the new meter with the ERT, which was contrary to AUF's training protocol, resulted in meter reading errors which were reflected in Ms. Walker's November and December bills. On January 5, 2011, an AUF field technician spoke with Ms. Walker, who inquired about her bill. AUF immediately reviewed the bill and issued a new bill on January 6, 2010 correcting the mistake. AUF also offered Ms. Walker a payment arrangement which was never accepted. Ms. Walker is no longer an active customer.

#### Docket No. 100330-WS AUF responses/issues from AF System customers Exhibit SC-2, Page 000026 of 000027

# EXHIBIT B

#### Beverly Jane Turner

Ms. Turner asserts that she current pays \$118 - \$128 per month. She states that several months ago, she had an unexplained charge on her bill. Upon a review of her bills, she has recently been charged a late payment fee and a deposit and reconnection fee in February 2011 due to a shut off for non payment in January. The current balance is \$104.07. Her typical monthly bill, without late fees, averages less than a \$100 for both water and wastewater service.

## Lola Ferguson

Ms. Ferguson incorrectly asserts that AUF improperly shut off her water. The facts of this account are as follows: The customer had a history of delinquent payments. A shut off notice was sent to the customer on February 11, 2010, requiring payment of \$416. When the customer failed to make the required payment in full, the service was discontinued and the account was closed on March 4, 2010. In April 2010, AUF's records showed consumption at the property, which indicated that someone had broken the lock and turned the water back on. In April of 2010, the customer made partial payments but did not make payments sufficient to reinstate service. Ultimately, the customer paid the required charges and service was reinitiated on May 3, 2010. Over the past 2 years, there have been approximately 25 service orders generated to this account, virtually all involving collections issues, move-in/move-out activities, and indications of consumption when the property was supposed to be "inactive."

It should be noted, that when the customer states she called in April 2010 regarding sand in her line, it was during the time period when she was "inactive with consumption" and receiving service but was not an active customer.

#### Teresa Jarvis

Ms. Jarvis' bills for monthly water and wastewater service average approximately \$90 per month. Review of her bill history shows that her payments tend to run a month behind, resulting in late charges and past due amounts which are reflected on the bill in accordance with AUF's Commission-approved Tariff.

#### Michelle Einmo

This billing issue arose in 2007 and has already been addressed in AUF's last rate case in Docket No. 080121-WS. Since that time, the customer's bills are correct. Recent collections notices and calls are not at all connected to the 2007 issue, but instead relate to her current balance which has been past due.

Docket No. 100330-WS AUF responses/issues from AF System customers Exhibit SC-2, Page 000027 of 000027

# Virginia Witt

Ms. Witt is complaining about her June 2010 bill with 4,600 gallons of usage. Review of Ms. Witt's billing history shows that Ms. Witt's usage fluctuates. For example, in June of 2008 she used 7100 gallons. On August 17, 2010 an AUF service technician went to the property and verified the meter information and confirmed that there were no leaks. Ms. Kurz's assertion that she checked Ms. Witt's meter and "it was not moving" is to be expected where there are no leaks at the property.

## Kathleen Delano

Ms. Delano initiated service in July 2010. Her average consumption is 5,600 gallons per month and her monthly bills average approximately \$150 per month. Her last bill was for \$136.17, though she is carrying a prior balance which makes her total bill \$231.45. Her average bill without any prior balance or late fees is <u>not</u> \$180-200 per month.

\_\_\_\_ \_\_..........

# I. <u>Background</u>

# A. The Prior Rate Case

Aqua Utilities Florida, Inc. ("AUF") is a wholly-owned subsidiary of Aqua America, Inc., one of the largest publicly traded water and wastewater utilities in the United States with operations in 13 states. AUF began doing business in Florida in 2003 and, since that time, has acquired a number of water and wastewater utilities throughout the state. AUF currently operates 109 water and wastewater utility systems in Florida, 101 of which are under the jurisdiction of the Florida Public Service Commission ("FPSC" or "Commission"). Currently, AUF has FPSC jurisdictional systems in the following Florida counties: Alachua, Brevard, Desoto, Highlands, Lake, Lee, Marion, Orange, Palm Beach, Pasco, Polk, Putnam, Seminole, Sumter, Volusia, and Washington. At the time AUF acquired these systems, the vast majority had not had a rate case or undergone system improvements for many years. Therefore, in order to continue to make needed system improvements and to maintain its financial integrity, AUF sought rate relief from the Commission in 2008. See FPSC Docket No. 080121-WS.

After conducting a formal hearing, the Commission ultimately granted rate relief for all of AUF's systems, except for the Chuluota water and wastewater systems. Order No. PSC-09-0385-FOF-WS issued May 29, 2009 ("Final Order").

# B. Initial Monitoring Plan (May 2009 through October 2009)

In addition to granting rate relief, the Final Order established a monitoring plan ("Initial Monitoring Plan") to enable the Commission to monitor AUF's customer service in three areas: the general handling of customer complaints, the specific handling of complaints at AUF's call centers, and the accuracy of AUF's metering readings and resulting bills. The Commission's Initial Monitoring Plan required AUF to file the following information for the six-month period from May 2009 through October 2009:

1. AUF shall submit a monthly report to this Commission for the first six months after this order is issued. The report will list all customer complaints for each system for the month. The report shall include the customer name, address, phone number, account number, a description of the complaint, and how the complaint was resolved. We will audit a sample (sample will be chosen to determine with a 90 percent confidence level and a maximum error rate of 5 percent) of the reported customer complaints to determine whether the complaints were resolved appropriately ("appropriately" will be defined as any errors made by AUF are corrected and all issues in the complaint are addressed).

2. AUF shall submit to this Commission on a monthly basis all sound recordings of customer complaints from customers to this Commission for the first six months after this order is issued. Our staff will listen to a sample of these to determine if the customer complaints are handled in a professional and courteous manner.

3. AUF will provide our staff with route schedules that identify the day that meters will be read for AUF's regulated systems for the six months after this order is issued. The route schedules will be due to our staff by May 1, 2009. AUF shall also provide staff with the meter reading logs for the same six-month period. Based on the meter reading schedule, our staff will manually read a sample of AUF's meters on the same day that the Utility is scheduled to read them to verify the accuracy of the meter readings and resulting customer bills.

Upon the completion of these reporting requirements, our staff will present their conclusions regarding AUF's performance to us. If AUF is not performing adequately, we may initiate show cause proceedings, or take such other action as we may deem appropriate.

Final Order at p. 22.

AUF complied with the Commission's Initial Monitoring Plan in all respects. During that six month monitoring period, AUF timely submitted extensive complaint logs for each month. The logs listed all customer complaints for each system for the month and, in accordance with the Commission's directives, set forth (i) the customer name, address, phone number, account number;<sup>1</sup> (ii) described the nature of the complaint; and (iii) reported on how the complaint was resolved. In addition, AUF recorded each and every customer call it received at its call centers from Florida customers and provided those sound recordings to Commission staff on a monthly basis during the entire monitoring period. In this way, the Commission staff was able to objectively review first-hand all customer calls to determine the quality of service provided by AUF's customer service representatives ("CSFs"). AUF also provided Commission staff with all of its meter reading route schedules for the entire six month monitoring period along with the actual meter reading logs for all of those systems for each month during the monitoring period. Commission staff, in turn, personally visited AUF systems soon after AUF's meter readers had completed their reads and documented the usage on the meter. Commission staff compared its volumetric reads to the AUF meter reading log to independently test for meter accuracy. Commission staff further audited AUF customer bills with the meter reading information to test for billing accuracy.

<sup>&</sup>lt;sup>i</sup>Because the Commission directed AUF to provide proprietary customer specific information, AUF was required to request confidential classification of that information to prevent identity theft and other harm to the customer.

Although the above reporting requirements were extensive and required many hours of the utility's time, not once did AUF miss a reporting deadline or request that any reporting deadline be extended.

During the course of Initial Monitoring Plan, Commission staff thoroughly evaluated all of the monthly reports and data provided by AUF, and conducted its own independent analysis of AUF's quality of service. At the end of that intensive independent review process, Commission staff filed a nineteen page recommendation on March 4, 2010, which concluded:

Based on staff's review of AUF's processes for handling customer complaints, meter reading, and customer billing, as well as its environmental compliance, staff recommends that AUF's performance as specified in the Monitoring Plan detailed in the Final Order is <u>adequate</u>.

Staff Recommendation at p. 13 (emphasis added).

On March 16, 2010, the Commission considered staff's recommendation at its regularly-scheduled Agenda Conference, and heard from staff, the parties and several customers. The Commission observed that its staff had spent an extraordinary amount of time objectively reviewing the quality of AUF's customer service and had independently evaluated of sound recordings for "635 randomly selected customer calls" to AUF's call centers, as well as 103 specific recordings, for a total of 738 recordings. Order No. PSC-10-0218-PAA-WS at p. 4. The Commission further found that:

the most reasonable means at our disposal for determining if AUF is performing adequately are the actual sound recordings of interactions between consumer and AUF's CSR. Unlike the logs, which captured only complaints and certain inquiries, the sound recordings captured all Florida calls made to AUF call centers. By having all types of Florida calls available for review, our staff evaluated not only customers calling with a

complaint, but also customers that were calling for more routine issues, such as making a payment by telephone.

*Id.* at p. 5. The Commission went on to affirm that, "[o]ut of the 738 total sound recordings reviewed, our staff thought that the majority were handled in a courteous and professional manner and the representatives were taking the appropriate action to resolve all issues in the call." *Id.* at p. 6.

The Commission also acknowledged that AUF had implemented measures to improve

its customer service including:

- Forming a "Complaint Analysis and Remediation Team" (CART). The CART consists of all call center supervisors and their managers, as well as the Supervisor of Compliance. This team addresses all executive escalations and meets biweekly to review all accounts where further coaching and training issues are identified for follow-up.
- Implementing a Call Escalation Process. The process was developed in April 2009 and was reviewed with all supervisors and the Compliance Team. This escalation process was then communicated to all CSRs in each of AUF's three call centers.
- Developing a detailed Supervisor Audit. This involves the Training Team pulling all supervisor callbacks from the three call centers. These are placed in a folder on AUF's internal network and are reviewed by all management in the call centers. The data is used for coaching and feedback to the CSRs to reduce the number of customer call backs.
- Auditing all its replaced meters in Florida. AUF found that there were some transitional issues that occurred with this change and has audited nearly every meter replaced to ensure that the meter is coded properly to its billing system.
- Standardizing its service order processing system for its field technicians. This change was implemented to improve the communication between the field technicians and the call centers.

- Refining the tracking of customer on-site meter and bench test procedures, since this is a common request.
- Providing an informational brochure to remind customers about contacting the call center when they leave or return to their Florida home. Many of AUF's customers use their Florida home as second residence, and the mailer was designed to encourage customers to contact the call center when they leave for the summer so that their account is properly noted.

Id. at pp. 6-7.

The Commission ultimately concluded that "while preliminary results show substantial improvement in AUF's customer service, additional monitoring was required to ultimately render a determination as to the adequacy of AUF's quality of service". *Id.* at p. 12 (emphasis added). In so ruling, the Commission recognized that its Initial Monitoring Plan had imposed substantial cost on AUF and required many hours of both utility staff and Commission staff time. Thus, the Commission directed staff to continue to monitor AUF's customer service through the end of 2010 on a more limited basis and ordered AUF to collaborate with the OPC and other parties to "develop a costeffective, efficient, and meaningful monitoring plan, and to bring the supplemental monitoring plan to us within 45 days." *Id.* at p. 13.

# C. Phase II Monitoring (May 2010 through December 2010)

Pursuant to the directives of the Commission, AUF, OPC and the parties ultimately agreed to a proposed Phase II Monitoring Plan which eliminated the requirements that AUF produce sound recordings, meter reading information, and complaint logs, but continued more limited monitoring of customer service and certain aesthetic water quality issues. To ensure that this Phase II Monitoring Plan was costeffective and efficient, the reporting requirements agreed upon by OPC and AUF were structured around (i) non-proprietary reports that AUF was already using internally to monitor and ensure quality of service, and (ii) an aesthetic water quality improvement program that AUF already had underway.

Specifically, the Phase II Monitoring Plan required AUF to provide on a monthly basis the following customer service-related reports:

- A Management Quality Performance ("MQP") Report which tracks on a monthly basis the reasons for customer calls. This report is used by AUF management to understand recent performance and identify any adverse trends.
- A Florida Complaint Support Information Report which provides nonproprietary information for each of the complaint-related calls that underlies the MQP Report for each month.
- A Florida Scorecard which includes quality of service metrics for each month.
- A Call Center Monitoring Statistics Report which tracks the key performance indicators of AUF's call centers on a monthly basis, and is used by AUF to ascertain whether it is meeting its targeted service performance levels.
- A Call Quality Report for all call centers formatted such that monthly data can be tracked for each of the call centers separately.

- A Service Order Status Report which tracks AUF's service order log and the timeliness of closing service order requests.
- An Estimated Read Report which allows staff and the parties to track the number of estimated reads and investigate any adverse trends.

With respect to aesthetic water quality, the Phase II Monitoring Plan agreed upon by OPC and AUF required that AUF to monitor the aesthetic (secondary) drinking water constituents for seven of its water systems: Lake Josephine, Leisure Lakes, Sebring Lakes, Rosalie Oaks, Tangerine, Tomoka View, and Zephyr Shores. OPC and AUF also agreed that AUF would conduct a series of meetings with customer representatives from the seven systems to provide updates on the monitoring, discuss aesthetic water quality concerns, and identify possible solutions and associated costs.

By Order No. PSC-10-0297-PAA-WS dated May 10, 2010 ("Phase II Monitoring Order"), the Commission approved the Phase II Monitoring Plan agreed to by the OPC and AUF. In so ruling, the Commission acknowledged that many of its concerns that led to the Initial Monitoring Plan had been addressed. For example, the Commission noted that during the Initial Monitoring Plan, its staff had

> ... randomly sampled 358 meter readings taken by AUF and compared those readings to a corresponding set of meter readings taken by Commission staff. Of these 358 meter readings taken by AUF, none were found to be significantly different from the meter readings taken by our staff. Therefore, we find that no further testing of AUF's meter reading accuracy is necessary.

Phase II Monitoring Order at p. 6. The Phase II Monitoring Order also recognized that staff had randomly sampled 50 customer bills which showed that all of those bills were
appropriately based upon the usage indicated by the meter readings taken by AUF. *Id.* However, at the March 16 Agenda Conference, a former Commissioner insisted that the sample size of 50 may not be sufficient to provide adequate assurance that all customer bills are appropriately based on actual meter readings. The Commission therefore instructed staff to expand this sample to the same sample size of 358 used to determine the accuracy of AUF's meter reading. *Id.* at p. 7.

In addition to the monitoring requirements agreed upon by OPC and AUF, the Commission required AUF to provide quarterly reports on environmental compliance and directed staff to review enforcement actions taken by the FDEP, the County Health Departments, and the Water Management Districts ("WMDs") through the end of 2010 for each of AUF's jurisdictional water and wastewater systems. The Commission also directed AUF to report on capital projects designed to improve the water quality at the Chuluota system. Finally, the Phase II Monitoring Order instructed AUF to file a final report by the end of February, 2011, summarizing the results of AUF's Phase II reporting requirements. AUF is filing this final report pursuant to the Commission's instruction.

#### II. Summary of Phase II Monitoring Reports

#### A. Management Quality Performance Report

The Management Quality Performance Report is a high level report used by AUF to track the reasons for customer calls to the call centers. AUF management relies on the information contained in this report to identify customer service trends from month to month and prepare responsive actions where needed. A sample report is provided in **Exhibit "A"**. Data derived from Management Quality Performance Reports shows that the vast majority of the calls received by AUF's CSRs during the Phase II monitoring period involved routine day-to-day issues such as move in/move out requests, payment questions, requests to pay over the phone, and requests to verify account balances.

The data gathered in these reports during the Phase II monitoring period was consistent with AUF's expectations and there does not appear to be abnormal variances or trends for Florida calls. Of course, any call related to a water quality complaint, a boil water notice or an emergency repair is immediately addressed by a customer service technician through the issuance of a service order.

#### **B.** Florida Complaint Support Information Report

The Florida Complaint Support Information Report consists of more granular nonproprietary information for each of the complaint-related calls identified in the Management Quality Performance Report. This report provides AUF management with additional call information by system and thus enhances AUF's ability to identify customer service trends and to more effectively tailor responsive actions where needed.

The report also enables AUF management to investigate unexplained increases in call volume. For example, these reports reveal that call volumes increased:

 from the Jasmine Lakes system in August 2010 when one of AUF's water mains was damaged by Verizon and a boil water notice was sent out to customers.

10

- from the Jasmine Lakes system in September 2010 when Pasco County damaged one of AUF's water mains and a boil water notice was sent out to customers.
- from the Lake Gibson Estates system in September 2010 when the system was shut down during a tank replacement project.
- from the Lake Gibson Estates system In November 2010 when a well went off line and a boil water notice was issued.
- from the Lake Osborne Estates system in November when there was an unexpected main break.
- from the Palm Terrace system in November 2010 when a broken valve caused system outages.

Unlike the Initial Monitoring Plan, the Phase II Monitoring Order did not require AUF to file extensive complaint logs with the Commission. Instead, the Commission staff was directed to produce monthly reports that track complaints filed at the Commission Call Center. AUF has closely reviewed the complaint reports filed by Commission staff in this docket. On average, approximately thirteen complaints were registered with the Commission Call Center each month during the Phase II monitoring period. Based on AUF's analysis, it appears that the overwhelming majority of complaints listed in the staff reports relate directly to customer concerns about the utility's approved rates and bills.<sup>2</sup>

<sup>&</sup>lt;sup>2</sup> It is also noteworthy that a group advocating government takeover of private water utilities like AUF has aggressively encouraged AUF customers to file complaints and write letters to the Commission and other public officials. See Exhibit "B".

complaints filed at the Commission's Call Center. Indeed, AUF has a Customer Field Service Manager dedicated to investigating and responding to all Florida customer complaints in accordance with Commission regulations.

#### C. Florida Score Card

The Florida Score Card is a performance-based report structured around AUF's own quality of service metrics. Management meets with AUF employees on a weekly basis to review this data. This report applies to all jurisdictional and non-jurisdictional systems in Florida. Notably, while the Commission has not adopted customer service metrics for water and wastewater utilities, AUF has been proactive in this area and has adopted its own aggressive service quality metrics. See Exhibit "C".

AUF's customer service metrics address service-related issues including: meter read rates; percentage of meter reading cycles completed by a scheduled date; overall estimation rates; accounts estimated for over 90 days; and percentage of active accounts not billed. The Florida Score Card reports filed during the Phase II monitoring period show that AUF is committed to good customer service and has done an excellent job in meeting its service quality goals with some limited and expected exceptions.

AUF met its targeted goals in all but the following instances over the eight month Phase II monitoring period. In June 2010, AUF was slightly below its targeted meter read rate due to a downloading glitch which required AUF to "re-read" 115 meters. This "re-read" of the 115 meters also caused AUF to be slightly below its targeted goal for Percentage of Cycles Completed in June. In July, AUF was slightly over its target of .15% for Accounts Estimated > 90 days. The achieved metric was slightly higher in July (.16%) because of a meter change out in AUF's Sarasota County system which resulted in customers receiving estimated bills. AUF's Sarasota County system is not regulated by the Commission.

AUF was slightly outside of its target goal for Percentage of Active Accounts Not Billed target in July, September, October, and November. This is an expected result for these months when there are higher volumes of "move ins" by seasonal customers. For example, when a seasonal customer moves back in, the report will reflect that the last time the account was billed was when the customer moved out several months prior. The extended period of time between bills is to be expected under this scenario.

In summary, the Florida Scorecard Reports show that AUF has been proactive in adopting aggressive quality control metrics, and has done an excellent job in meeting those service quality goals.

#### **D.** Call Center Monitoring Statistics Report

The Call Center Monitoring Statistics Report was provided to Commission staff and the OPC on a monthly basis during the Phase II monitoring period. Please see **Exhibit "D"**. This report is based on Call Center performance indicators which provide AUF management with insights into:

- proper staffing of the call center;
- how quickly customers are connecting to a CSR ("calls answered in < 90 seconds");</li>

- how many calls are coming into the call centers each day ("average calls/day"); and,
- the time a customer waits on the phone before speaking with a CSR ("average speed to answer").

AUF has established aggressive performance goals for its call centers. With respect to answer time, AUF's goal is to have 80% of all calls answered in less than 90 seconds, AUF has consistently met this goal with the minor exceptions in June (74%), July (73%) and October (79%) when there was an unexpected increase in the number of calls into the call center. AUF also has a goal to achieve an average answer time of 60 seconds. AUF met this goal every month with the exception of July where the average answer time was 61 seconds.

Another of AUF's goals is to limit the number of abandoned calls to 5%. AUF met this goal every month during the Phase II monitoring period with minor exceptions in June (5.4%) and July (5.6%).

#### E. Customer Service Representative ("CSR") Call Quality Scores Report

AUF provided its CSR Call Quality Reports on a historical basis (2007 through 2010), as well as on a monthly basis throughout the monitoring period. See Exhibit "E". This report is utilized by AUF management to evaluate performance of CSRs in answering customer calls at the call centers. AUF call center managers randomly sample CSR calls and evaluate them on a monthly basis. The evaluation addresses the CSR's

soft skills such as tone and demeanor and focuses on whether the CSR has fully satisfied the customer's inquiry.

The reports supplied for the months of May through December 2010 shows that the call center performance has improved dramatically when compared to the period January 2008 through November 2008. The reports also demonstrate that from December 2008 through December 2010, the Call Centers have consistently exceeded AUF's targeted service performance goals.

#### F. Service Order Report

The Service Order Reports are designed and used by AUF management to track pending service order requests and to ensure that those requests are properly addressed as soon as practicable. The service order reports were provided to Commission staff, OPC and the parties on a monthly basis throughout the Phase II monitoring period. In reviewing these reports it is important to understand that service orders are created by CSRs for a myriad of different reasons, including but not limited to: requests for bench tests to evaluate meter accuracy; requests to repair a broken meter, and requests to investigate a water main break. These service orders may involve issues that can be resolved in one visit or may require several visits to achieve final resolution. For purposes of the tracking reports, a service order is not closed until there is complete and final resolution. AUF strives to address customer concerns within 14 days of the service order, with 7 days being the goal. The service order reports show that the overwhelming majority of service order requests are addressed within these timelines. However, despite AUF's best efforts, there are anomalies and some customer issues are not completely resolved within 14 days.

During the Phase II monitoring period, AUF processed 510 service orders, 460 of which were closed within 14 days. There were no service orders open over 14 days in May or August. Only three service orders were open over 14 days in June, one over 14 days in July, one over 14 days in September, and two over 14 days in October. In November, there was an anomalous incident which resulted in an abnormally high number of open service orders. This was due to a computer interface malfunction which temporarily interrupted the transmission of CSR generated service orders to field service representatives. The delay resulting from this computer interface interruption caused service orders to remain open beyond AUF's timeline targets. This incident was an anomaly and accounted for almost all of the November service orders that were closed beyond the 14 day goal. When AUF discovered the issue, AUF moved promptly to rectify the problem. Indeed, reports show that in December there was only 1 service order open over 14 days.

In summary, the Service Order Reports show that AUF vigilantly tracks, and consistently follows through on, service order requests.

#### G. Estimated Read Report

Unlike the Florida Score Card (which is Florida specific), this report provides the estimated read rates for all states where Aqua America subsidiaries operate. The Estimated Read Reports show that the estimation rate for Florida has been consistently

below the target goal of 1% for some time now. During the Phase II Monitoring Period, the Florida estimation rate has improved even more. In fact, the estimated reads have been consistently at or below 0.5%, with the past 6 months being between 0.1% to 0.3%.

The results of this report confirm the benefits of the new radio frequency meters which have now been installed at all of AUF's systems in Florida.

#### **III. AUF'S Secondary Water Quality Project**

#### A. Background

Aesthetic water quality involves non-health related characteristics of water such as taste, color, odor, hardness and turbidity. The United States Environmental Protection Agency ("EPA") has developed secondary drinking water standards that pertain to aesthetic water quality, which standards have been adopted by the FDEP. Unlike primary drinking water standards, typically secondary standards are not enforced by EPA and FDEP, but simply function as guidelines.

The Phase II Monitoring Plan approved by the Commission includes an aesthetic water quality component, which was based on a aesthetic water quality improvement program that AUF already initiated ("Original Aesthetic Program"). AUF initiated its Original Aesthetic Program in 2008 to address customer comments related to aesthetic water quality made during the last rate case. While aesthetic water quality standards are not typically enforced by environmental agencies, AUF proactively developed its Original Aesthetic Program as a plan to effectively address its customers' aesthetic water quality concerns. As part of its Original Aesthetic Program, AUF reviewed: comments

from customers at the public hearings; complaints dealing with aesthetic water quality issues; aesthetic water quality sampling data; and, feedback from area coordinators. AUF also surveyed customers on aesthetic water quality. As a result of this process, AUF identified seven (7) water systems where customers had expressed the most concern regarding aesthetic water quality issues: Lake Josephine, Leisure Lakes, Sebring Lakes, Rosalie Oaks, Tangerine, Tomoka View, and Zephyr Shores. OPC and AUF agreed that these same seven (7) systems would be the focus of the Phase II Monitoring Plan's aesthetic water quality component.

#### **B.** Aesthetic Monitoring

Pursuant to the Phase II Monitoring Plan, AUF monitored the secondary (aesthetic) drinking water constituents for the seven water systems listed above. The results of that monitoring are appended as **Exhibit "F"**.

#### C. Joint Secondary Water Quality Task Force Meetings

During the summer of 2010, in accordance with the Joint Monitoring Plan, AUF met twice at each of the seven system locations with OPC and designated customer representatives to discuss aesthetic concerns, possible solutions to those concerns, and associated costs. AUF also participated in a mid-point meeting on January 20, 2011 with Commission staff, the OPC, and other interested persons to discuss the status of the customer meetings on aesthetic issues. Handouts distributed at the customer meeting are attached as Composite **Exhibit "G"**. The results of those meetings are summarized below.

Docket No. 100330-WS Final Phase II QSM Report Exhibit SC-3, Page 000023 of 000183

#### Lake Josephine / Sebring Lakes

Through its Original Aesthetic Program, AUF had identified the Lake Josephine and Sebring Lakes systems as having experienced aesthetic water issues concerning taste and odor which stem from naturally occurring hydrogen sulfide in the water.

Because these two systems are interconnected, the customer meetings for Lake Josephine and Sebring Lakes were combined and took place on July 7, 2010 and again on September 21, 2010. Representatives from Lake Josephine were invited but did not attend.

At the meeting on July 7, 2010, AUF representatives and Sebring customer representatives discussed the water having a sulfur taste and odor. The Sebring representatives expressed the desire to address the aesthetic water quality issues. AUF shared its water quality test results and discussed treatment options for these facilities. AUF then explained its experience with the AdEdge treatment system and the positive impacts it had on sulfur issues in AUF's other pilot programs. AUF informed the customers that an RFP/RFQ was being prepared to design and permit the AdEdge treatment system, and explained that this bid process allowed for bidding firms to recommend alternative treatment for these facilities.

At this meeting, Sebring customer representatives suggested that would it be a better alternative to loop the distribution lines within the system to help address the water quality issues rather than installing treatment at what may be a higher cost. The customers asked AUF to consider this alternative. AUF representatives stated that they would do so and report back at the follow-up meeting.

19

At the follow-up meeting on September 21, 2010, AUF representatives presented a cost/benefit analysis regarding the customers' looping suggestion. This analysis showed that the cost of looping was considerably more expensive that the AdEdge alternative and that "looping" would not effectively address the sulfur issue. At this meeting, the customer representatives appeared to be satisfied with the improvements AUF was making in the system. Currently, AdEdge is constructing the filters for the treatment system, and AUF and its engineers have had a pre-submittal meeting with FDEP to inform the agency that a permit filing is forthcoming.

#### Leisure Lakes

Through its Original Aesthetic Program, AUF had identified the Leisure Lakes system as experiencing aesthetic water issues concerning odor and taste which stem from naturally occurring hydrogen sulfide, calcium, and sediment in the water. AUF and OPC representatives met with Leisure Lakes representatives on July 7, 2010 and again on September 21, 2010.<sup>3</sup>

At the first meeting on July 7, 2010, AUF representatives and customers discussed that, despite the flushing plan implemented in 2009, customers were still experiencing odor issues related to sulfur in the water. After sharing the water quality testing results with the Leisure Lake representatives, AUF discussed treatment options needed to address the sulfur related odor issues. Specifically, AUF representatives discussed the AdEdge treatment system with the customer representatives, who expressed a particular

<sup>&</sup>lt;sup>3</sup>AUF representatives had previously met with the homeowner's association (HOA) in April 2009 to discuss aesthetic water quality issues. At that time, AUF developed a flushing plan that continues to this day.

interest in the design and inquired if any buildings needed to be constructed. The customer representatives indicated that they would like to review the design and wanted information about the colors of the storage tank and building. The customer representatives shared that they wanted AUF to address the odor issues. Furthermore, the customer representatives advised AUF that the HOA board had conducted its own independent survey of the residents concerning the water quality, and the results of that survey indicate that residents want AUF to resolve the sulfur issue.

At the follow-up meeting on September 21, 2010, AUF representatives provided an update on the status, design and permitting of the AdEdge system. AUF also provided an overview of the additional capital costs related to the project. The customers generally seemed satisfied with this plan. Currently, AdEdge is constructing the filters and AUF and its engineers have had a pre-submittal meeting with FDEP to inform the agency of the forthcoming permit filing.

#### **Rosalie Oaks**

Through its Original Aesthetic Program, AUF had identified the Rosalie Oaks system as experiencing aesthetic water issues concerning taste, odor and clarity which stem from sporadic flows and naturally occurring sediment in the water. AUF and OPC representatives met with Rosalie representatives on July 8, 2010 and again on September 22, 2010.

The Rosalie Oaks system is a weekend and holiday get-away for the residents; thus, system usage is intermittent and sporadic. This intermittent and sporadic usage pattern presents challenges for AUF to maintain aesthetic water quality for the system. Therefore, as part of its Original Aesthetic Program, AUF had evaluated the water quality, the distribution system and frequency in which the system was flushed.

Prior to being included in Original Aesthetic Program, the Rosalie Oaks system lacked critical valves and flushing hydrants. Thus, AUF devised a directional flushing program for Rosalie Oaks by installing a short water main extension and flushing hydrant to flush the system properly. A flushing protocol was developed to address the weekend and holiday customers' usage patterns. The protocol calls for the operator to flush the water mains before a weekend or holiday to assure that customers have quality water.

At the first meeting on July 8, 2010, AUF representatives shared the water quality test results and discussed water quality in the system. Two customers represented the system. One was satisfied with the water quality and stated she never had issues with the water quality. The other expressed issues with the water quality and was unaware of the flushing program that AUF had already put in place. Based on the feedback, AUF representatives stated they would continue address aesthetic water quality by flushing prior to weekends and holidays.

At the follow up meeting on September 22, 2010, the customer representative present was unaware when flushing occurred. AUF representatives agreed to keep this customer apprised when flushing occurred. AUF has since followed up with this customer who has indicated that personal notification is no longer needed when flushing activities occur. Currently, AUF has continued with its systematic flushing plan. Based on the customer base and intermittent use of this system, AUF determined that systematic flushing was the most appropriate and cost effective solution to address the aesthetic water quality issues.

#### Tangerine

Through its Original Aesthetic Program, AUF had identified the Tangerine system as experiencing aesthetic water issues concerning color, odor, and turbidity, which stem from naturally occurring iron, hydrogen sulfide, calcium and sediment in the water. AUF and OPC representatives met with customers of this system on July 9, 2010 and again on September 23, 2010.

At the July 9, 2010 meeting, AUF representatives and Tangerine customer representatives discussed discolored water concerns. The customers generally expressed their desire for the Company to address the aesthetic water quality issues. AUF discussed the sequestering process and the looping initiative in the system, which it had previously designed, permitted and installed to address the iron and hardness issue in the water. The sequestering system was operational in the summer of 2010.

At the follow up meeting on September 23, 2010, the Company reviewed the costs of the sequestration and looping projects with the customers who seemed satisfied with the course of action AUF was taking to address the aesthetic water quality concerns.

In addition, a customer raised the issue concerning a fire she previously had at her home. She stated that there was not a fire hydrant in the vicinity. After the meeting, AUF representatives met with the customer to determine where she lived in relationship to the nearest fire hydrant. As a result of this meeting, AUF had a contractor install the fire hydrant in the customer's vicinity.

Currently, a sequestering treatment system is in place and operating in Tangerine. Furthermore, AUF has installed various water main extensions in order to connect dead ends. These initiatives have improved pressure problems, given the water a "softer" taste, removed sediment from the system.

#### Tomoka View

Through its Original Aesthetic Program, AUF had identified the Tomoka View system as experiencing aesthetic water issues concerning taste and odor, which stem from naturally occurring hydrogen sulfide, calcium and sediment in the water. The system also experienced a primary water quality issue involving Trihalomethanes ("TTHMs").<sup>4</sup> AUF signed a consent order on December 18, 2009, which was discussed in AUF's last rate case. In accordance with that consent order, AUF completed construction of the chloramination system, which was placed in service in December 2009. The results from the quarterly samples taken from December 2009 to June 2010 and the rolling annual average ("RAA") for the second quarter of 2010 were all well below the TTHM standards. AUF has received notification from the Volusia County Health Department that the system has been put on reduced monitoring for TTHMs. The consent order is now closed.

<sup>&</sup>lt;sup>4</sup> Trihalomethanes are disinfection by-products ('DBPs") created when water containing even trace amounts of natural organic carbon is disinfected with chlorine. Water sources with relatively higher levels of total organic carbon or high chlorine demand can generate elevated levels of TTHMs when disinfected with chlorine.

The first meeting with Tomoka View took place on July 9, 2010 with a follow up meeting on September 23, 2010. At the July 9<sup>th</sup> meeting, AUF representatives discussed the chloramination system. Tomoka View representatives were very satisfied that the TTHM issue was resolved and the water quality had improved since additional treatment and flushing programs were initiated. The customers were also informed of the storage tank project to install a new liner preventing leakage through the deteriorating concrete block walls of a storage tank. AUF representatives explained that the project has been delayed due to Volusia County requiring engineering documents detailing the installation of the temporary hydropneumatic tank the contactor will be installing. The current estimated date of completion is March 30, 2011.

Customer representatives also discussed the issue of dark rings in the toilet bowl and pink film in shower stalls or bath tubs. AUF representatives provided the customers with information on these issues and made customers aware that the cause was related to airborne bacteria. The customers had previously attributed this occurrence to poor water quality.

At the follow-up meeting on September 23, 2010, AUF representatives primarily discussed a temporary nitrification issue that had arisen in July of 2010. (The American Water Works Association estimates that nitrification occurs to some degree in two-thirds of the public drinking water systems that use chloramines as a means of disinfection.) AUF explained that it has a vigorous nitrification surveillance protocol and when nitrification was detected, it moved promptly to remedy the situation. After public notice was issued, the system was converted to free chlorine for disinfection and directionally

25

flushed. The system remained on free chlorine for approximately 30 days. After public notice, the disinfection process was converted back to chloramines. The distribution system has not had any nitrification issues since then, and AUF is planning to convert to free chlorine again in June 2011 for 30 days as a preventative measure.

#### **Zephyr Shores**

Through its Original Aesthetic Program, AUF had identified the Zephyr Shores system as experiencing aesthetic water issues concerning color, hardness and turbidity, which stem from naturally occurring manganese, calcium, iron and sediment in the water. AUF designed, permitted and installed a sequestering agent to address these aesthetic issue and that sequestering system was operational in March of 2010.

AUF representatives and the OPC met with Zephyr Shores representatives on July 9, 2010 and again on September 22, 2010. Both meetings were attended by many customers who expressed concern about rates and the desire for AUF to be taken over by either the FGUA or Pasco County.

At the July 9 meeting, AUF representatives discussed the status of utilizing a sequestering agent to address the aesthetic water quality issues, and further reported that to properly flush this system, critical valves needed to be installed and additional flushing hydrants were needed. AUF explained that a contractor was hired and the valves and flushing hydrants had been installed. Furthermore, a written flushing plan was developed to instruct the operator how to flush the system.

During the meeting some customers raised concerns about low water pressure in a specific area of the development. AUF committed to analyze the system and present solutions for the next meeting.

At the follow-up meeting on September 22, 2010, AUF's engineer presented two solutions to the pressure issue. The first involved installing a water main through an easement between 2 properties. This option was objected to by a customer that owned the intervening property impacted by the easement. The second option involved installing the water main alongside the roadway. This option would involve a longer route than the first option but would accomplish the same results. Currently, the main is being designed along the roadway and AUF is preparing to meet with the HOA board to discuss the location and obtain any necessary utility easements.

#### IV. Quarterly Environmental Compliance Reports

#### A. Background

The Phase II Monitoring Order required AUF to file quarterly "environmental compliance" updates describing the status of outstanding warning letters, consent orders and notices of violation. See Phase II Monitoring Order at p. 6. The updates were to include information concerning enforcement actions identified in the Final Order, additional warning letters, consent orders, and notices of violation issued during the period, and AUF's plan to resolve each alleged violation. In accordance with those requirements, AUF filed quarterly updates with the Commission on July 10, 2010 and

again on October 11, 2010.<sup>5</sup> AUF's final quarterly update for the fourth quarter of 2010 is attached as **Exhibit "H"**. Before addressing the quarterly compliance updates that AUF provided, it is important to understand the terminology used by the Commission with respect to environmental compliance. As the Commission explained in this docket:

DEP conducts periodic inspections of all water and wastewater facilities and, if environmental compliance violations are found, a "noncompliance letter" is sent describing the violation. The utility is given time to respond and correct the violation. If the utility fails to respond or if the response is insufficient, the utility is sent a "warning letter" which describes the outstanding violation and DEP's recourse if the violation is not resolved. If the utility and DEP agree on a resolution, a "consent order" is issued describing the resolution. If an agreement is not reached, DEP issues a "notice of violation" which may result in a hearing.

Order No. PSC-10-0281-PAA-WS at 10.

It is also important to note that, when the Commission instructed OPC and AUF to

agree upon a Phase II Monitoring Plan, the Commission and its staff had thoroughly

evaluated AUF's environmental compliance up to that point. The Commission expressly

found that:

It appears that AUF has been responsive to DEP and the County Health Departments in attempting to resolve compliance issues. In some cases, compliance involves complicated and difficult issues which can take significant time to resolve. To date, five of the nine outstanding consent orders and warning letters referred to in the Final Order have been resolved. No notices of violation have been issued. Although two new consent orders and three warning letters have been issued, we note that AUF is responsible for more than 80 water and wastewater systems regulated by us.

Id. at p. 12.

<sup>&</sup>lt;sup>3</sup> In its quarterly update filed on October 11, 2010. AUF explained that because the previous quarterly update was filed on July 10, 2010, the next quarterly update would have to have been due in October not September as indicated in the Phase II Monitoring Order.

Docket No. 100330-WS Final Phase II QSM Report Exhibit SC-3, Page 000033 of 000183

#### **B.** Overview of Quarterly Environmental Compliance Updates

The quarterly environmental compliance updates which AUF has submitted show that AUF continues to be extremely responsive to FDEP and County Health Departments concerning environmental compliance. Indeed, the information and activities described in those reports confirm that AUF's top priority is to ensure that all of AUF's systems comply with applicable water and wastewater standards and regulations. Furthermore, as of the date of this report, AUF has no notices of violation from FDEP or the Department of Health. Moreover, as shown in the attached **Exhibit "I"**, AUF has taken aggressive steps to resolve all of the environmental compliance issues which had been identified in the Final Order during the last rate case.

While AUF is proud of its environmental compliance for all of its systems, it is particularly pleased to report that it has made significant improvements to the Chuluota water system. The Commission removed the Chuluota water and wastewater system from the last rate case primarily because it found that the quality of service for that particular system was unsatisfactory. That finding with respect to AUF's Chuluota system was based primarily on water quality issues involving disinfection byproducts (TTHMs), which were the subject of an open consent order with the FDEP at the time of the last rate case.

Since the last rate case, AUF has made significant improvements to the Chuluota system and has invested over \$2.3 million dollars in a state-of-the-art ion exchange system to address the TTHM issue. As a result of those improvements, the Chuluota

29

system has been in compliance with TTHM standards for all of 2010, and FDEP has closed out the consent order.

#### V. Conclusion

For almost two years now, AUF's customer service has been the focus of a rigorous and unprecedented review by the Commission, its staff, the OPC, and other parties. AUF has timely complied in all respects with the monitoring and reporting requirements imposed by the Commission and, in so doing, has incurred significant costs. During the course of this intensive monitoring, AUF has supplied the Commission, the OPC and the parties with thousands of pages of data, documents, audio tapes, and reports. That information clearly shows that AUF has good customer service and consistently complies with environmental requirements. The information in this report further shows that AUF has been proactive in establishing quality of service performance goals to ensure that its good customer service will be maintained into the future.

## Agenda Conference May 24 Tallahassee

No commentsEventsFebruary 22nd, 2011FReams

We are planning to repeat our Bus trip to Tallahassee and to attend and hopefully speak at this hearing which will be held on Aqua's latest request for an increase in rates and Single Tariff Pricing. Also, discussed will be Aqua's level of customer service based on the order issued at the last Agenda conference March 16, 2010 at that conference the commission ordered Aqua to continue submitting monthly reports on Customer Contacts as well as delays in service requests by system and percent of customers billed in the normal cycles.

If you would like to attend this upcoming meeting in Tallahassee please submit your requests via the website, we will be emailing updated information to all who are signed up for our Newsletter sent each week. As we receive requests we will be determining boarding locations for the busses.

## **Charolette Observer Aqua NC rate case**

No commentsUncategorizedFebruary 16th, 2011FReams

Aqua North Carolina, the state's largest private water utility, is asking state regulators for a hefty rate increase for the second time in three years.

The move has riled homeowners who already pay Aqua about \$100 for typical monthly usage, twice as much as residents of Raleigh, Charlotte and other municipal utility departments. Aqua is asking for 20.4 percent more for water service and 16.4 percent more for sewer service, which would add \$13 to monthly bills. In 2009 those fees went up 12.5 percent and 29.7 percent.

This time, homeowners are organizing and plan to stage a rally outside the N.C. Utilities Commission office in Raleigh the day of the public hearing on the rates. The hearing date has not yet been set but could draw protesters from much of the state.

## Complain! Complain! Complain!

No commentsUncategorizedFebruary 15th, 2011Dbussey

Our voices are getting stronger..... keep filing complaints with the PSC...... write your senator and representative..... don't forget to let our new governor know about our problems with Aqua Utilities Florida...... let the Secretary of State know about it, too.

Let everyone know how upset you are with the PSC and AUF.

Are your rates too high? Tell them!

Should AUF be allowed to acquire more utilities? Tell them!

Is your Customer Service lousy? Tell them!

Do you want AUF kicked out of Florida? Tell them!

Do you want the PSC to do what's right, instead of "business as usual"? Tell them! And keep on telling them until they do something about it!!!!!
