CERTIFICATE OF REPORTER 1734

P R O C E E D I N G S

(The transcript follows in sequence from Volume 12.)

THE COURT: All right, Staff.

MS. BROWN: Good afternoon, Ms. Slattery. I'm Martha Carter Brown. We spoke earlier this month at your deposition. I have handed out four documents, that include a transcript of your deposition, which has been marked for identification in the exhibit list as Number 111. I'd like to ask if any parties have any objection to that deposition at this time, specific objections.

CHAIRMAN BRISE: Okay. Are there any objections to the deposition?

MS. CLARK: Are you doing the errata sheet separately?

MS. BROWN: I'm sorry, the errata sheet is included with the deposition.

MS. CLARK: Okay.

MR. REHWINKEL: Mr. Chairman, I generally don't have an objection to the -- I was assuming that the exhibit would be kind of a composite of the depo, the errata, and then the three late filed deposition exhibits.

MS. BROWN: That's perfectly fine if everyone is amenable to that.

MR. REHWINKEL: Well, the one thing I -- and

1 Mr. Young indicated that I generally don't have an
2 objection to this. I would just ask, if we could be
3 given some leeway. This deposition was taken August
4 10th, I believe, and I'm actually not quite sure exactly
5 when the late filed were filed. I haven't had an
6 opportunity to look at them.

7 I'm not disputing them, but if it would be
8 appropriate to have very limited opportunity on the
9 rebuttal phase to inquire about the late filed, or
10 information on the late filed, would that be a problem?

11 MS. CLARK: Mr. Chairman, I would suggest we wait
12 and have it identified and moved into the record during
13 the rebuttal testimony.

14 CHAIRMAN BRISE: Okay.

15 MS. CLARK: If that's acceptable.

16 MS. BROWN: Do you want to include the deposition,
17 as well, later? I have some questions to ask about one
18 of these late fileds, but we could identify them and
19 then move them in at rebuttal. Do you want to include
20 the deposition, as well?

21 MS. CLARK: Maybe I'm confused. The deposition?

22 MS. BROWN: The way I've set this up is the
23 deposition exhibit includes the errata sheet, but I have
24 separate exhibits for each of the late filed exhibits.

25 MS. CLARK: I don't think we have any objection to

1 handling it that way. I would like to point out that --
2 I want to inquire whether or not you have the updated
3 errata sheet. We filed one last night.

4 MS. BROWN: I don't think so.

5 MS. CLARK: Okay.

6 MS. BROWN: If you can provide it to us, we can
7 amend the exhibit, the deposition exhibit, to include
8 that. If I may have -- why don't we just mark these
9 late filed exhibits for the record and then we can
10 determine when we want to move them in and that would
11 give Mr. Rehwinkel time to look at them.

12 CHAIRMAN BRISE: You want to mark them
13 individually?

14 MS. BROWN: Yes, I do.

15 CHAIRMAN BRISE: Okay. So we're at 540.

16 MR. LITCHFIELD: Is that the depo transcript?

17 CHAIRMAN BRISE: No, we're dealing with the late
18 filed.

19 MS. BROWN: The deposition transcript is Exhibit
20 111. That would be FPL's Late Filed Exhibit 1
21 for Kathleen Slattery.

22 CHAIRMAN BRISE: Yes, that would be 540.

23 MS. BROWN: Late filed Exhibit 2 for Kathleen
24 Slattery.

25 CHAIRMAN BRISE: 541.

1 MS. BROWN: And Late Filed Exhibit 3 for Kathleen
2 Slattery.

3 CHAIRMAN BRISE: Okay, 543.

4 MR. SAPORITO: Mr. Chairman, the errata sheet, does
5 that follow as 111, also?

6 MS. BROWN: Yes, we'll amend Exhibit 111 to include
7 the updated errata sheet.

8 CHAIRMAN BRISE: Okay, so I misspoke. So it's 540,
9 and that's the Late Filed Number 1. 541 is the Late
10 Filed Number 2, and 542 is the Late Filed Number 3.

11 MS. CLARK: No objection, Mr. Chairman.
12 (Exhibits 540, 541 and 542 marked for identification.)

13 CROSS EXAMINATION

14 BY MS. BROWN:

15 Q Now, Ms. Slattery, I have a series of documents I
16 want to pass around and pass out to you for your convenience.
17 They are already in the record, either to be admitted at the
18 end of your testimony, or they are already in as discovery
19 exhibits, but I have some questions I want to ask you about.

20 You already have a copy of OPC's Second Set of
21 Interrogatories, number 37, FPL's response. It has been
22 marked for identification as Exhibit 531. Then also in the
23 little packet I handed out to you there is the document FPL's
24 Response to Staff's Fifteenth Set of Interrogatories, number
25 438. That's been entered into the record as Exhibit 52. And

1 finally, Staff's Ninth Set of Interrogatories, number 314,
2 has been entered into the record as Exhibit 46.

3 And I think you also have Schedule C-2 from your
4 MFRs that have been entered into the record and Schedule C-35
5 that other parties asked you questions about earlier. Do you
6 have all that?

7 A Yes, I do.

8 Q Okay. Well, if you'd refer to Exhibit 531, the
9 table included there shows wage rate increases for
10 non-bargaining and bargaining employees for 2009 through
11 2012, correct?

12 A Yes.

13 Q There are wage rate increases built into the
14 projected 2013 test year for executive, non-executive,
15 non-bargaining and bargaining employees, correct?

16 A That's correct.

17 Q What are those wage rate increases included in the
18 2013 test year for each of those categories, executive,
19 non-executive, non-bargaining and bargaining employees?

20 A For non-bargaining employees, it's 3 percent. And
21 I don't recall the bargaining unit wage rate increase under
22 the collective bargaining agreement for 2013.

23 Q Well, would it be okay if I asked you that same
24 question on your rebuttal testimony and you could get the
25 answer for me then?

1 A Yes, thank you.

2 Q Okay. And what about executive -- so the 3
3 percent is for executive and non-executive non-bargaining?

4 A Yes, that's correct.

5 Q And the wage rate increases included in the 2013
6 test year for each of those executive categories, can you
7 tell me what those are?

8 MS. CLARK: Would you tell us where you are?

9 BY MS. BROWN:

10 Q I'm going to withdraw that question. It's really
11 repetitive of the one I just asked. Sorry. All right,
12 referring to Staff's Fifteenth Set of Interrogatories, that
13 was Exhibit 52. It's number 438, your response.

14 Your response states that the base salary for
15 non-executive non-bargaining employees net of allocations to
16 affiliates will be decreasing 7,545,000 and change, or 1.4
17 percent from 2012 to 2013. Is that correct?

18 A That's correct.

19 Q The amount described is decreasing, even though
20 there is a wage rate increase included in the 2013 test year,
21 correct?

22 A That's correct. And that's related to the
23 forecasted decrease in total head count as shown on MFR C-35,
24 including decreases in the bargaining unit head count.

25 Q Okay. Now referring to Staff's Ninth Set of

1 Interrogatories, number 314, which is Exhibit 46, the table
2 included shows an increase in executive base salary on a
3 jurisdictional basis of \$578,140. Has this amount been
4 excluded as part of the adjustment included on MFR C-2,
5 column seven?

6 A No, it has not been excluded.

7 Q Why not?

8 A Because the adjustment on that MFR is related to
9 executive incentive compensation and a portion of stock-based
10 non-executive compensation, and this dollar amount is in
11 regards to base salary and our FPL officers -- FPL portions
12 of base salaries are included in the O&M request.

13 Q Now, on to MFR C-35. The average number of
14 employees is projected to decline from 10,312 in year 2012 to
15 10,147 in year 2013, correct?

16 A Yes.

17 Q If you would refer to your Late Filed Exhibit
18 Number 1, and tell me why the average enrolled head counts
19 are the same for 2012 projected and 2013 projected for
20 medical, dental, and defined contribution, and show increases
21 for short-term disability and life insurance if average
22 employees are projected to decline based on C-35.

23 A Okay. Well, for medical and dental, the enrolled
24 head count includes not only active employees but also those
25 on long-term disability and COBRA continuance. And because

1 we have planned some reductions in force for our meter
2 readers in 2012 and 2013 related to the AMI project, we are
3 presuming that there will be an increase in the number of
4 COBRA continuance. And that explains the assumption of kind
5 of a flat enrolled head count year over year.

6 With regard to the 401(k), this is a little bit
7 more difficult to predict, because as you can see, the
8 participation is less than the total active employee
9 population, and it's an individual employee election that
10 occurs pay period by pay period.

11 But FPL has an active communication campaign in
12 2012, including scheduled monthly communications to
13 employees, to encourage participation and increase
14 participation. So we are assuming that we will have flat
15 participation year over year because we're hoping to actually
16 encourage employees to give a little more from their base
17 salaries to fund their retirement.

18 And with regards to short-term disability and life
19 insurance, again, those are different reasons. Life
20 insurance also includes long-term disability continuance.
21 And the short-term disability number is just slightly less
22 than the forecasted total number of employees in 2013,
23 because as a general rule most employees, active employees,
24 are eligible for short-term disability.

25 MS. BROWN: All right, thank you. That's all we

1 have.

2 CHAIRMAN BRISE: All right, Commissioners?

3 Commissioner Brown.

4 COMMISSIONER BROWN: Thank you. And thank you,
5 Ms. Slattery, for your testimony today. I just have a
6 few questions. I've kind of narrowed them down
7 throughout the various cross examination.

8 So, first, how much does the total compensation
9 cost, excluding the executive compensation, represent
10 from a percentage standpoint of the total O&M costs for
11 the test year? I was trying to find it, and I couldn't
12 find it anywhere.

13 THE WITNESS: I have the net O&M payroll in the
14 filing. What I don't have with me is the total O&M
15 request. So I know that the net O&M payroll and filing
16 after all of the adjustments is 740,842,000, but I don't
17 have the MFRs with me to give you the total O&M request.

18 MS. CLARK: Mr. Chairman, Ms. Slattery is coming
19 back on rebuttal, and we'd be happy to provide that at
20 that time.

21 COMMISSIONER BROWN: That would be great. Thank
22 you. Your KS-2 exhibit --

23 THE WITNESS: Yes.

24 COMMISSIONER BROWN: -- on your direct, it says --
25 and I know FIPUG touched on this a little bit. But it

1 says the average base salary organization-wide is
2 78,000. Of the total employees -- and I don't know if
3 you have this categorized somewhere, but do you know how
4 many are skilled workers versus professional versus
5 administrative?

6 THE WITNESS: I don't have the employee population
7 broken down quite that way. I know that we do try to
8 keep track of degrees. Of our salaried employees, 33
9 percent have an engineering degree, 83 percent have an
10 engineering or professional degree, and 24 percent have
11 an advanced degree. And those are statistics we keep on
12 our roughly 4,400 salaried employees. I don't have
13 comparable statistics for the hourly employees.

14 COMMISSIONER BROWN: No, that's good. I appreciate
15 that, though. Of the -- how many former employees
16 currently receive that post-employment medical and life
17 benefits?

18 THE WITNESS: I do not know the number of retired
19 employees who are currently receiving that.

20 COMMISSIONER BROWN: Do you have the amount?

21 THE WITNESS: It's in the test year. It's on C-35.
22 Let me get that amount for you. I don't have a number
23 of people on it, I just have a dollar figure for
24 post-employment.

25 COMMISSIONER BROWN: That's okay, just the dollar.

1 THE WITNESS: So the gross amount for
2 post-retirement benefits, as shown on C-35 in the test
3 year, is 16,200,000.

4 COMMISSIONER BROWN: Do they -- do those
5 post-employment benefits, do they ever -- is there an
6 age when they stop?

7 THE WITNESS: No. However, it is somewhat a scaled
8 expense in that our retirees under the age of 65 who are
9 eligible for post-retirement medical insurance are FPL
10 primaries, we would say. And when they become Medicare
11 entitled, we require them to become Medicare primary, so
12 the expense is different and the actuarial expense is
13 calculated separately for the two groups.

14 But they are eligible to remain on it for, you
15 know, the rest of their life, but they receive only the
16 difference between what FPL benefits would provide and
17 Medicare.

18 COMMISSIONER BROWN: Okay. And again, I know this
19 is probably an exhibit somewhere, and I was trying to
20 find it and I couldn't get my hands on it. How much
21 does the portion of non-executive incentive compensation
22 that is being excluded, what is the total amount for
23 this test year, 2013? I think it was on Exhibit 533.

24 THE WITNESS: Yes, I do have a figure for that.
25 So for the non-executive stock-based incentive

1 compensation, the adjustment for that is 1,044,900. And
2 that is FPL per book O&M remaining after the -- oh, I'm
3 sorry, that's what remains after the adjustment. I
4 apologize, Commissioner. The adjustment portion is
5 actually higher than that. It's 1,361,000. So more of
6 it is excluded than is included.

7 COMMISSIONER BROWN: Okay. Thank you. Of the
8 total compensation FPL is requesting for the test year,
9 what is the rate impact on a typical customer's bill at
10 1,000 kilowatts an hour?

11 THE WITNESS: I do not know, Commissioner. As I
12 said before, I know that the total compensation expense
13 included in the O&M is 740 million, but I don't -- I
14 haven't calculated the impact on customers. I can do
15 that before I come back for rebuttal.

16 COMMISSIONER BROWN: That would be great. Thank
17 you. And that's all.

18 CHAIRMAN BRISE: Commissioner Balbis.

19 COMMISSIONER BALBIS: Thank you, Mr. Chairman.
20 I have a few questions to follow up on Commissioner
21 Brown's questions. How many total budgeted positions
22 does FPL have for 2013?

23 THE WITNESS: For 2013 it is 10,147, as shown on
24 MFR C-35.

25 COMMISSIONER BALBIS: Okay. And how many are

1 budgeted for the current year?

2 THE WITNESS: 10,312.

3 COMMISSIONER BALBIS: How many of those are vacant
4 currently?

5 THE WITNESS: Vacant? There was a late filed
6 exhibit which shows our current head count. So
7 currently, as of July 31st, the total number of FPL
8 employees is 10,230, and that includes temporaries, as
9 all of these figures do. And by temporary, I don't mean
10 contractors, Commissioners, I mean people on FPL payroll
11 who are working on a time-bound or project-bound basis,
12 generally related to nuclear extended power upgrade
13 outages.

14 COMMISSIONER BALBIS: Okay. And does that ratio --
15 does that number of vacancies, as far as a percentage,
16 is that typical year to year? Well, let me ask you
17 this. What is your typical vacancy rate year to year,
18 from a percentage standpoint?

19 THE WITNESS: That's a question that is of some
20 debate among the Intervenors and myself, actually.
21 Although FPL will always have some vacant positions as
22 a result of normal, healthy turnover -- which, for
23 example, last year turnover was seven percent for the
24 year -- we're constantly incurring the payroll expense
25 related to getting the job done.

1 So we budgeted optimal staffing levels. We will
2 have healthy turnover. Sometimes we have hiring lags
3 that make it a long, complicated process to fill certain
4 positions where we need skilled labor, but we still have
5 to get the work done, so we use our existing employees
6 on an overtime basis, which is why for every historical
7 year, on another exhibit that I have, it shows that
8 we've been slightly over budget in payroll from the
9 overtime perspective. Not total payroll, but overtime.

10 So we're always going to have some vacancies and
11 it's going to vary from month-to-month, year-to-year,
12 but we're still incurring the payroll expense in the
13 form of overtime and temporary labor to get the work
14 done.

15 COMMISSIONER BALBIS: Okay. Don't you budget --
16 isn't there a budget line item for overtime and a budget
17 line item for temporary labor?

18 THE WITNESS: Yes, there is.

19 COMMISSIONER BALBIS: Okay. Let me change gears a
20 little bit. You mention on page eight of your testimony
21 the aging workforce as your justification for FPL's
22 compensation package, is that correct?

23 THE WITNESS: Well, the aging workforce is not a
24 justification for the compensation package, rather the
25 fact that we have a philosophy of providing market

1 competitive total compensation and benefits is the
2 basis for the fact that we say we have a reasonable,
3 appropriate, and necessary level of comp and benefits.
4 We make sure that we benchmark that in a robust annual
5 benchmarking process to validate that we're at or below
6 median of the market.

7 The aging workforce is a variable that impacts
8 our -- the necessity of us providing the market
9 competitive total compensation and benefits package,
10 because we are competing for resources in a marketplace
11 where, in many jobs, the demand exceeds the supply. And
12 so we cannot afford to pay less than market or we will
13 lose our employees that we have and we won't be able to
14 attract new ones.

15 COMMISSIONER BALBIS: Okay. And then just below
16 that you cite an organization, the Center for Energy
17 Workforce Development. And they state a percentage of
18 skilled technicians and power engineers will need to be
19 replaced. What percentage of the 10,000 employees are
20 skilled technicians or power engineers?

21 THE WITNESS: Well, as I was telling Commissioner
22 Brown earlier, I don't have those statistics for the
23 hourly employees, but 83 percent of our salaried
24 employees have engineering or professional degrees.

25 COMMISSIONER BALBIS: Right, but they -- okay,

1 I understand. I'm not sure if I ask you -- are the
2 engineers -- are they all nuclear engineers or are they
3 considered power engineers, or do you have a variety of
4 different engineering fields you employ?

5 THE WITNESS: Right, we have a variety of
6 engineering degrees in there.

7 COMMISSIONER BALBIS: Okay. But the salary
8 increases that you're proposing are for all the
9 employees, correct?

10 THE WITNESS: It's a salary increase budget that
11 would not be applied as an across-the-board cost of
12 living increase to non-bargaining employees. Rather the
13 awards are provided based on performance against stated
14 objectives for the prior year and our need to remain,
15 you know, market competitive with our salaries. So
16 there's variability among the distribution of awards
17 but it is a budget that applies to all levels of the
18 non-bargaining organization.

19 COMMISSIONER BALBIS: Okay, because some employee
20 positions would be easier to fill than others, such as
21 administrative staff would probably be easier to fill
22 versus a nuclear engineer position, correct?

23 THE WITNESS: I do agree with you that it is easier
24 to fill those positions, and that's why we benchmark
25 them based on regional administrative positions rather

1 than national utility industry jobs. And Exhibit KS-3
2 separates out, you know, the hourly workers from the
3 salaried to show that we make sure that we're paying
4 appropriately, based on the market, for each job,
5 including the fact that it is easier to fill an
6 administrative position than a nuclear engineer.

7 COMMISSIONER BALBIS: Right. Okay. Well, then,
8 let's focus on the collective bargaining employees.
9 What percentage or what roundabout number of the 10,000
10 employees are covered under a collective bargaining
11 agreement?

12 THE WITNESS: The most current figure I have for
13 bargaining is that we have 3,087 bargaining unit
14 employees as of July 31st.

15 COMMISSIONER BALBIS: Okay, because I think that's
16 important, because on page five of your testimony you
17 indicate that the total rewards package -- and I think
18 I'm quoting -- but emphasizing pay for performance has
19 served the company and customer well.

20 But then in this FIPUG exhibit -- I think it's
21 534 -- interrogatory number eight, at the bottom, you
22 note that please also note that the bargaining unit
23 employee base increases are contractual and are not
24 performance based.

25 THE WITNESS: That's correct.

1 COMMISSIONER BALBIS: So how -- what benefit is the
2 customer getting for a pay increase that is not based on
3 performance?

4 THE WITNESS: Well, you know, for this reason we
5 would always prefer to be able to deal directly with our
6 employees rather than go through a third party such as a
7 labor union, because we do feel that a pay for
8 performance philosophy drives performance for the
9 benefit of the customer and it is best for customers.

10 But we do need our -- you know, our line workers,
11 they do a fantastic job for our customers and we have to
12 deal with the labor union that represents them, and we
13 negotiate hard. So we do the best we can to control
14 costs.

15 And then, of course, it is the non-bargaining unit
16 employees that set the strategic direction for the
17 company, set the performance goals, and essentially set
18 out the priorities for the bargaining unit, and, you
19 know, supervise that work in such a way that we are able
20 to deliver industry leading performance to our
21 customers.

22 COMMISSIONER BALBIS: Okay, I'm glad you explained
23 that, because I'm just trying to put my arms around -- I
24 think you indicated a 14.65 percent total increase over
25 a period of time for collective bargaining employees, so

1 I appreciate you explaining that.

2 Has FPL entered into collective bargaining
3 agreements that included increases -- we'll just call
4 them increases -- since the last rate case?

5 THE WITNESS: Yes.

6 COMMISSIONER BALBIS: Okay. And was there ever any
7 discussion during the negotiation process -- well, let
8 me back up. Were you part of the negotiation process?

9 THE WITNESS: No, I was not.

10 COMMISSIONER BALBIS: Okay. So I'm not sure if you
11 can answer this or not. But my question is, was there
12 ever a discussion, before, during or after the
13 negotiation process, as to whether or not this
14 Commission would approve the revenue requirements
15 associated with these increases?

16 THE WITNESS: No, I'm not aware of those -- that
17 being part of the discussions, no. One thing I would
18 like to add, though, Commissioner, is that part of these
19 negotiations over the past four years have included some
20 very tough negotiations around benefits, which are not
21 shown on this schedule of wage rate increases.

22 Our bargaining unit employees have higher medical
23 costs on a per employee basis than non-bargaining unit
24 employees. And a lot of the cost containment efforts we
25 were able to implement for non-bargaining employees

1 through plan design changes and better health incentives
2 we were limited from implementing for the bargaining
3 unit employees.

4 So the thing that's not shown here is the benefit
5 side of the equation and how hard our labor relations
6 staff worked to convince the union to allow some change
7 in that regard in a way that will provide cost
8 containment for our customers on a go-forward basis.

9 COMMISSIONER BALBIS: So the benefits portion of
10 the compensation part of the collective bargaining
11 agreement went down? I mean, those were decreases?

12 THE WITNESS: We were able to implement some of the
13 same plans that we had for non-bargaining employees,
14 which will lower costs over time.

15 COMMISSIONER BALBIS: Okay. And then I have one
16 more question. It's concerning pensions, because I want
17 to make sure I understand the pension plan that you have
18 because in one of the exhibits you indicated
19 participation in a 401(k) type program. And I assume
20 that is a defined contribution plan versus a defined
21 benefit plan.

22 THE WITNESS: Yes, it is.

23 COMMISSIONER BALBIS: So can you explain the
24 pension program? Is it a defined contribution plan like
25 other private companies do and local governments are

1 going toward now, or is it a defined benefit plan like
2 one of the older pension type plans?

3 THE WITNESS: Well, the pension plan that we have
4 is technically a defined benefit plan under accounting
5 rules. But when I describe to you how it works, it
6 looks a lot like a defined contribution plan in that the
7 benefits accrue for an employee based on a percent of
8 annual salary.

9 So for a non-bargaining employee, for the first
10 five years of employment, it's four-and-a-half percent
11 of salary that accrues in a cash balance style account.
12 And after five years of employment it's six years -- six
13 percent, rather, of base salary.

14 And each year that account also accrues interest at
15 a rate of about four percent on the balance of the
16 account. So that would kind of look and feel to an
17 employee more like a defined contribution plan, but
18 under accounting rules it is a defined benefit plan.

19 Our 401(k) is, you know, a plan that if the
20 employee defers a portion of base salary through an
21 elective, an election, then the company will match up to
22 4.75 percent.

23 When we benchmark our defined benefit and defined
24 contribution plans, we make sure to do it as a combined
25 total retirement savings value, because it would not be

1 appropriate to just benchmark them separately. So when
2 we benchmark against other utilities as --

3 COMMISSIONER BALBIS: Well, I'm not -- I understand
4 your benchmarking process and I think you do a very good
5 job of benchmarking, so I'm very comfortable with your
6 benchmarking. I just want to make sure I understand the
7 pension plan.

8 So you said for the employee it seems more like
9 a 401(k) plan. So the company matches a certain
10 percentage based on the tenure of the employee and then
11 those dollars get invested, I assume, into some program.

12 Is the company at risk if the performance of those
13 investments falters, or is the employee at risk? Who
14 takes on that risk? Because then, in my mind, that
15 would shift more from more of a defined benefits plan
16 than a defined contribution plan.

17 THE WITNESS: You've really hit the nail right on
18 the head, Commissioner Balbis, because that is the
19 difference between the defined benefit and the defined
20 contribution plan. In the defined contribution plan,
21 the 401(k), the employee bears the risk of investment.
22 They select their investments with the exception of
23 certain limitations on moving out of the employee stock
24 fund for the company match.

25 But in the defined benefit pension plan, there is

1 no investment by the employee in any kind of group of
2 funds, it's simply you're going to get interest credit
3 at the end of the year on your account, and the employer
4 is investing the pension fund asset, and that expense is
5 recognized in our budget. So that's a significant
6 difference between the two.

7 COMMISSIONER BALBIS: Okay, thank you. That's all
8 I have.

9 CHAIRMAN BRISE: Commissioner Graham.

10 COMMISSIONER GRAHAM: Thank you, Mr. Chair.
11 Welcome, Ms. Slattery. One of the benefits of being
12 last is most of my questions get asked before it comes
13 to me. I have about two left, though.

14 Are you aware that this Commission, for about the
15 last two years, hasn't given any salary increases for
16 your non-bargaining employees or executives short of --
17 short of settlements or stipulations?

18 THE WITNESS: No, I was not aware of that.

19 COMMISSIONER GRAHAM: Okay. I'm looking at the
20 Exhibit 531. I think it's OPC's Second Set of
21 Interrogatories, number 37.

22 THE WITNESS: Yes.

23 COMMISSIONER GRAHAM: And somebody added these up
24 earlier where the non-bargaining was 10 percent since
25 first quarter '09 and bargaining was 14.65; do you

1 recall that?

2 THE WITNESS: That's correct.

3 COMMISSIONER GRAHAM: I guess the question I have,
4 this Commission, my understanding from talking to Staff,
5 for at least the last 25 years, has always given the
6 companies anything that was negotiated on the bargaining
7 table. Those salary increases, for lack of a better
8 word, were just passed through.

9 My question is, what motivates Florida Power &
10 Light to get to the bargaining table and fight hard to
11 make sure that those numbers are down and just basically
12 not give away the farm?

13 THE WITNESS: Well, we're highly motivated to
14 ensure that although we're fair to the bargaining unit,
15 we would not want to essentially provide motivation for
16 additional unionization of the work force. We feel it's
17 best to deal directly with our employees. We think that
18 that's always the best way. And that, furthermore, our
19 ability to provide variable performance-based
20 compensation to our non-bargaining employees directly
21 benefits our customers.

22 So we do not want to incent additional portions
23 of our workforce to unionize, so we would never be
24 incented to give a better deal to the bargaining unit
25 than we do to the non-bargaining unit. And the

1 percentages reflected for '09 are a factor of the length
2 of time that the bargaining unit went without an
3 increase during a period of extended negotiations with
4 the company in '08 and 09. I hope that gives you some
5 comfort around our motivation to work hard to ensure we
6 don't give more than we have to.

7 COMMISSIONER GRAHAM: To follow up on that
8 question, what's happened since first quarter '09 to the
9 end of this chart?

10 THE WITNESS: This reflects negotiations with the
11 bargaining unit that we feel are appropriate based on
12 information we receive, particularly through surveys
13 such as Ed Powell, which provides a lot of information
14 about the hourly workforce that we have and what the
15 market value of their jobs are.

16 Additionally, with this chart, Commissioner, I want
17 to assure you that we have provided, through the
18 discovery process, evidence that we are in receipt of a
19 number of market surveys from very well-respected
20 third-party survey companies which aggregate data from
21 around the United States, such as WorldatWork, which
22 every year surveys more than 4,300 employers.

23 And it shows that for WorldatWork, Mercer, Hewitt,
24 M-sight (phonetic) and other sources, that 3 percent
25 salary increases are market median for the utility

1 industry and general industry for 2013, 2012 and 2011.
2 That 2.7 percent was the market median for 2010, and 2.5
3 percent was the market median for 2009.

4 COMMISSIONER GRAHAM: Okay, that's all I have.

5 CHAIRMAN BRISE: Commissioner Balbis.

6 COMMISSIONER BALBIS: Thank you. I just wanted to
7 follow up on Commissioner Graham's questioning. That
8 brought something up that I did not ask. And I think I
9 have the same concerns, at least it sounds like, of
10 Commissioner Graham, that the time frame on that chart
11 just happens to coincide when this state and the country
12 has been going through a severe recession. So that's
13 why I'm glad you were able to explain some of the
14 situation associated with 14.65 percent pay raises over
15 that period and 10 percent for the other employees.

16 But my question is about the merit adjustments in
17 this FIPUG's First Set of Interrogatories. I think it's
18 535, the exhibit, but I might have missed one or two
19 numbers.

20 Your answer to the question where the paragraph is
21 indented, is that from -- are those guidelines, are
22 those the only published guidelines associated with the
23 merit adjustments?

24 THE WITNESS: I apologize, Commissioner Balbis,
25 I want to make sure I have the right exhibit. Can you

1 please tell me which interrogatory response this is?

2 COMMISSIONER BALBIS: It's FIPUG's First Set of
3 Interrogatories, interrogatory number 9, page one of
4 two.

5 THE WITNESS: I have it. Regarding --

6 MS. CLARK: Is there an exhibit number so I --

7 COMMISSIONER BALBIS: I thought it was 535, but
8 maybe --

9 CHAIRMAN BRISE: It is 535.

10 MS. CLARK: Got it. Thank you.

11 COMMISSIONER BALBIS: My question, again, the merit
12 adjustment that's listed, is that the only published
13 document or guidelines for managers to use in assigning
14 the merit -- any merit pay?

15 THE WITNESS: No, every year in advance of merit we
16 have leadership training for merit that's applicable to
17 that year, and we hand out guidelines which include
18 suggested base salary merit increase percentages for
19 each category of employee performance, whether they
20 outperform their goals -- we have a one through five
21 scale for employees.

22 So we suggest stratifying the awards based on the
23 performance rating, but we also recognize that the
24 supervisor needs to take into consideration that
25 employee's position to market, based on their market

1 reference point. So we want to make sure that we are
2 providing market competitive salaries; we don't want to
3 be too high, we don't want to be too low. We have to
4 take into account internal equity, as well.

5 COMMISSIONER BALBIS: Okay. The reason why I'm
6 asking is I just want to ask you, how does this
7 Commission know that the performance goals that are
8 associated with this merit program benefit the
9 customers?

10 THE WITNESS: Well, we've provided through
11 discovery a description of our corporate goals on an
12 annual basis, which include customer satisfaction,
13 survey ratings, generation availability, service
14 reliability, safety, environmental compliance, hitting
15 our O&M budget targets and capital budget targets, and
16 these are all very customer-focused operating metrics.

17 We've also provided through discovery a description
18 of how we -- how our business units align; there are
19 business unit goals each year to those corporate goals.
20 And then supervisors are responsible for ensuring that
21 each individual employee aligns to their business unit
22 goals. So in this way we have line of sight to these
23 customer-focused metrics.

24 And it may also give you some comfort to know that
25 my staff and I perform a thorough audit of all of the

1 merit awards that are entered into the system prior to
2 running them through payroll. So we want to make sure
3 that we have an appropriate distribution of awards by a
4 performance rating of employee before we actually let it
5 flow through payroll. And we go looking for
6 explanations of outliers.

7 COMMISSIONER BALBIS: Okay, I think that answers my
8 question. I guess my last follow-up question to that,
9 are any of the company's goals that provide that line of
10 sight, as you said, have anything to do with the
11 financial performance of the company or NextEra?

12 THE WITNESS: No, they do not.

13 COMMISSIONER BALBIS: Okay. Thank you, that's all
14 I have.

15 CHAIRMAN BRISE: Okay. Any further questions,
16 Commissioners? Seeing none, redirect?

17 MS. CLARK: I have a few.

18 REDIRECT EXAMINATION

19 BY MS. CLARK:

20 Q I think I want to touch first on a question that
21 you got from Commissioner Brown regarding post-retirement
22 medical benefits. Has there been a change in that? In other
23 words, are current employees eligible for that?

24 A No, no employee hired since April 1st, 1997 has
25 been eligible for post-retirement medical coverage.

1 Q And Commissioner Balbis asked you some questions
2 regarding temporary labor, I think, and you also talked about
3 temporary employees. Could you make -- distinguish between
4 the two?

5 A Temporary labor and temporary employees, as I've
6 used that term today, is an FPL employee on FPL payroll who
7 has been hired on a project-bound or time-bound basis for a
8 duration of six months or less.

9 It's primarily used for our nuclear business unit,
10 so they can have a scaleable workforce for outages. So it's
11 been heavily utilized for the last several years for the
12 extended power uprates project and will be through 2013, as
13 well. I did not mean to use the term in reference to
14 contract labor or folks that come in through third-party
15 vendors and are not on FPL payroll.

16 Q You were asked some questions by Mr. Saporito that
17 had reference to unemployment statistics. Do you remember
18 that?

19 A Yes, I do.

20 Q Do you have some information about the level of
21 employment in the utility industry?

22 A I do not have any specific data, but unemployment
23 in the utility industry is less than Florida average or
24 national average. It is an industry where there is a
25 documented shortage of skilled replacement workers for our

1 aging workforce, and so for the majority of our positions we
2 are competing in the market for skills that are in short
3 supply. And frequently these skills are not transferable
4 from other industries where unemployment is higher.

5 Q Early on I think you were asked a question about
6 the goal setting process. Could you explain how that goal
7 setting is done and how those goals are communicated to the
8 employees?

9 A Yes. The corporate goals for the organization are
10 determined in the fall of each year in advance of the coming
11 year so that there's time to communicate them across the
12 organization. They are determined by senior leadership and
13 are set based on industry benchmarks.

14 We want our goals to be challenging yet achievable
15 because we don't want to make them too easy but yet we don't
16 want to demotivate the workforce, either. So our industry
17 benchmarks, we generally look for top quartile or top decile
18 performance as our goal. And then, after we've set those
19 goals and senior leadership has approved them, they're
20 communicated to the business units, who in turn set business
21 unit goals which are to align to them.

22 And then, in turn, in January of each year every
23 supervisor in the company must sit down with each
24 non-bargaining employee and set individual goals which align
25 to the business unit goals, which, again, in turn, align to

1 the corporate goals.

2 Q Could you give us an example of the goals? In
3 other words, are there goals that are tied to availability of
4 units, reliability standards?

5 A Yes, the corporate goals for Florida Power & Light
6 Company generally include operations and maintenance costs
7 and capital costs. In other words, hitting budget targets,
8 which is, you know, something that throughout our culture is
9 emphasized as important; fossil generation availability;
10 nuclear industry composite rating -- usually we use the invo
11 (phonetic) index -- service reliability in minutes, and also
12 average frequency of customer interruptions and average
13 number of momentary interruptions per customer.

14 We always have an employee safety goal, which we
15 usually use OSHA recordables per 200,000 hours worked. And
16 customer satisfaction survey scores for residential and
17 business customers, as well as compliance with environmental
18 FERC and NERC requirements.

19 Q You were also asked a question -- and this is with
20 regard to Exhibit 536 -- and this is titled incentive
21 compensation. You were asked a question about the last
22 paragraph of that answer. Are you there?

23 A Yes.

24 Q It is -- I'm sorry -- it's OPC's Second,
25 interrogatory 40.

1 A Yes, I have that.

2 Q Could you give us some idea of the magnitude of
3 the limited participation project specific incentive program?

4 MR. REHWINKEL: Mr. Chairman, before we continue
5 with this, I kind of want to interpose an objection. It
6 seems to me the purpose of redirect is to kind of give
7 the witness an opportunity to address a point that was
8 made in cross examination in an adversarial sense. And
9 I'm just not sure what the question was that is being
10 redirected, specifically, and whether this is soliciting
11 just supplemental direct testimony. And I'm just kind
12 of struggling with what the redirect is at this point.

13 MS. CLARK: Mr. Chairman, she was asked a direct
14 question about this paragraph regarding this incentive
15 program. I'm just asking her to explain the magnitude
16 of the dollars in it.

17 CHAIRMAN BRISE: Okay, I'll allow it.

18 THE WITNESS: The dollars are very small because we
19 don't use limited participation project specific
20 incentive programs very often. We may have one or two
21 going at any -- in any year, with less than \$500,000 in
22 them.

23 BY MS. CLARK:

24 Q You were asked a number of questions about the
25 determination of market comparable pay, and I think you were

1 directed to page 12 and 13 of your testimony, the bottom of
2 page 12 and top of 13. And you mentioned the fact that you
3 use third-party compensation surveys both with regard to
4 national surveys and regional surveys.

5 Are these the type of surveys professionals in
6 your position rely on to determine market --

7 MR. URBAN: Mr. Chair, I'm going to have to object.
8 It's leading the witness.

9 MS. CLARK: I think I can do that on redirect.
10 Well, fine, I'll rephrase it.

11 BY MS. CLARK:

12 Q Could you describe these salary surveys that you
13 use in determining market-based pay?

14 MR. REHWINKEL: Mr. Chairman, I want to renew my
15 objection. I asked the question about this, and I
16 basically just asked her if that was her testimony.
17 There's no issue that needs to be redirected. I think
18 it is, again, soliciting supplemental direct testimony.

19 MS. CLARK: May I respond, Mr. Chairman?

20 CHAIRMAN BRISE: Sure, you may respond.

21 MS. CLARK: My inquiry along these lines is with
22 respect to the questions by the attorney for FEA, and
23 the suggestion that the people who prepared those
24 surveys are not here or that in the last case we had a
25 person here to testify as to the reasonableness of that

1 salary.

2 Ms. Slattery has been presented as an expert in
3 compensation. And as an expert she is entitled to rely
4 on market data, surveys, or information that individuals
5 in her profession routinely rely on. And for that
6 reason I am cross examining -- I am redirecting her to
7 ask her whether or not these are the type of information
8 that professionals in her position rely on.

9 In other words, Mr. Chairman, FEA has made a
10 suggestion that by not producing those people who may
11 have compiled the surveys, that Ms. Slattery cannot rely
12 on them in terms of determining market position. The
13 evidence code allows professionals in her position to
14 rely on such surveys, and I'm just establishing that
15 point.

16 CHAIRMAN BRISE: Okay.

17 MR. URBAN: If that was their position, then they
18 should have put that in their direct testimony,
19 Mr. Chairman.

20 MS. CLARK: Well --

21 CHAIRMAN BRISE: I'm going to go ahead and rule.
22 You have one question on this, right?

23 MS. CLARK: I would just ask her with regard to the
24 third-party compensation survey sources, are they the
25 sources people in her profession rely on in determining

1 market salaries.

2 CHAIRMAN BRISE: Okay. I think that's a fair
3 question.

4 THE WITNESS: Yes, they are. We must rely on
5 salary surveys that provide aggregated data compiled by
6 well-respected national survey companies because we
7 cannot, under antitrust law, benchmark directly with one
8 another in our industry, so this is the way that we
9 benchmark it. All professionals in compensation do it
10 this way.

11 BY MS. CLARK:

12 Q And you resorted to those same surveys in
13 determining the percentages of merit pay increases, is that
14 right?

15 MR. LaVIA: Leading, Your Honor.

16 CHAIRMAN BRISE: Ms. Clark, I provided you some
17 latitude.

18 BY MS. CLARK:

19 Q Ms. Slattery, would you describe the process that
20 you went through in determining appropriate salary increases
21 for FPL employees?

22 A Yes, we purchased the market surveys --

23 MR. MOYLE: I'm going to object to that. I mean,
24 that's a direct question that should have been in the
25 direct testimony, and here it is, you know, tell us

1 about the process you went through to determine the
2 salaries. I mean, you know, that's wide open, you know,
3 soliciting live direct testimony. I mean, that's
4 improper.

5 MS. CLARK: Mr. Chairman, I'm just reinforcing what
6 is in the direct testimony based on what was asked in
7 cross. And I believe if you look at page 12 and 13 you
8 will find a reference to that process of determining
9 market-based pay. He asked questions about it on cross.
10 I'm simply asking her to explain again the process.

11 CHAIRMAN BRISE: Mary Anne?

12 MS. HELTON: Mr. Chairman, if we're explaining
13 again, Chapter 120 says that irrelevant, immaterial or
14 unduly repetitious evidence shall be excluded. So it
15 seems to me that we are getting into the repetition
16 arena.

17 CHAIRMAN BRISE: Okay. Okay. So we will -- if you
18 can deal with questions that need specific clarification
19 from questions that were posed during cross examination.

20 MS. CLARK: Yes, Mr. Chairman.

21 CHAIRMAN BRISE: Thank you.

22 BY MS. CLARK:

23 Q You had some questions from Mr. Moyle regarding
24 employee salaries. Do you recall that?

25 A Yes, I do.

1 Q And are you aware that Mr. Moyle represents some
2 of the large industrial customers in Florida?

3 A Yes.

4 Q And would they employ a number of professionals
5 such as the engineers and accountants?

6 MR. MOYLE: I'm going to -- objection, relevancy,
7 beyond the scope of the -- of the cross.

8 MS. CLARK: I'll ask -- I'll rephrase the question.

9 CHAIRMAN BRISE: Please do.

10 BY MS. CLARK:

11 Q Given the customers that Mr. Moyle represents,
12 would you expect the average compensation for those employees
13 to be below the Florida per capita income?

14 MR. MOYLE: Same objection.

15 MR. LaVIA: Leading.

16 MR. MOYLE: Relevancy, leading, and, you know, my
17 clients and their salaries are not at issue in this
18 case.

19 CHAIRMAN BRISE: Yeah, I think I agree with that.

20 MS. CLARK: I'll move on.

21 BY MS. CLARK:

22 Q Ms. Slattery, I want to refer you to questions you
23 had about FP&L's total compensation. And I want to be clear
24 that FPL's total compensation, including incentive
25 compensation, is included in O&M expenses, is that correct?

1 A Could you please rephrase that?

2 Q Yes. Can you tell me what of FPL's compensation
3 is included in O&M expenses?

4 A So the net O&M payroll amount in the filing?

5 Q I just want to establish that that is included in
6 O&M expenses, is that correct?

7 A Yes, it is.

8 Q With regard -- if you know -- do you recall that
9 Mr. Reed did some O&M benchmarking and in that do you know if
10 FPL, in benchmarking relative to its peers, did -- was there
11 an amount included for compensation, if you know?

12 A I do recall from --

13 MR. URBAN: I'm going to have to object,
14 Mr. Chairman. This is another leading question. She's
15 continuing to ask leading questions here on redirect and
16 this is a real abuse of the process. Furthermore, it's
17 outside the scope of the testimony.

18 CHAIRMAN BRISE: Ms. Clark, if you could restate
19 the question, please?

20 BY MS. CLARK:

21 Q I will. Thank you. Ms. Slattery, you are
22 familiar, are you not, with the benchmarking that Mr. Reed
23 did and provided in this proceeding?

24 A Yes, I am.

25 Q And in that he -- are you aware that -- let me ask

1 that --

2 MR. URBAN: I'm going to have to object,
3 Mr. Chairman. Once again, this is beyond the scope of
4 her testimony. She's asking leading question after
5 leading question. This -- this -- this needs to stop.

6 MS. CLARK: I apologize, Mr. Chairman. I was just
7 trying to hurry this up a little bit.

8 BY MS. CLARK:

9 Q With regard to Mr. Reed, again -- and I'll be
10 quick about this. With regard to peer groups, was there --
11 can you tell us what he did in comparison with total
12 compensation? Was there a comparison there?

13 MR. URBAN: Mr. Chairman, I don't -- I have no idea
14 what this is tied to, which cross examine question she's
15 actually redirecting on.

16 MS. CLARK: I think I've gotten the answer to my
17 question, and my question was, does she know if
18 incentive comp is included in total comp and is that
19 included in O&M.

20 CHAIRMAN BRISE: Okay. So that was an actual
21 question, right?

22 MS. CLARK: Let me ask it again, Mr. Chairman.
23 I apologize.

24 BY MS. CLARK:

25 Q Does FPL's total compensation include incentive

1 compensation in the amount that is included in O&M?

2 MR. URBAN: Objection, leading.

3 BY MS. CLARK:

4 Q Let me ask, what does total compensation consist
5 of?

6 A The total compensation expense included in the
7 O&M request does include 100 percent of non-executive
8 performance-based variable compensation. It excludes 100
9 percent of executive incentive compensation and a portion of
10 non-executive stock-based compensation.

11 MS. CLARK: Thank you, Mr. Chairman.

12 CHAIRMAN BRISE: Thank you. Exhibits.

13 MS. BROWN: Mr. Chairman, if I might pass out what
14 FP&L has told me is the most current errata sheet to
15 Ms. Slattery's deposition. And then I think we'll be
16 copasetic on the deposition.

17 CHAIRMAN BRISE: Sure. That would go with 111?

18 MS. BROWN: Yes.

19 CHAIRMAN BRISE: Okay. Yes, Mr. Moyle?

20 MR. MOYLE: So I'm just not particularly clear
21 where we are right now, process and procedure-wise, with
22 respect to this witness and the exhibits. Mr. Rehwinkel
23 raised a concern about some of the late filed exhibits
24 and that he had just seen them and he wants some
25 latitude to ask questions on them. We're getting

1 another exhibit handed out now.

2 And I -- in the discussion that was had with this
3 witness, she was asked some questions and provided
4 testimony on information that was not, I do not believe,
5 in her direct testimony. And so she's provided
6 additional information that -- we can handle it on
7 rebuttal if there's latitude given to do so.

8 But some of the -- you know, the exhibits and the
9 testimony that she provided in response to questions
10 from the bench has prompted some further questions on
11 behalf of FIPUG. We're happy to hold them, but I don't
12 want to be, you know, confronted with objections to that
13 if we're going to hold them for rebuttal. So I was
14 really just kind of seeking clarification on that point.

15 CHAIRMAN BRISE: All right. Well, the document
16 that is being offered right now was one that we
17 discussed at the beginning of this witness coming up
18 when Staff offered their deposition. And there was a
19 question about an errata sheet, and this is the errata
20 sheet that is following Exhibit 111. So that's what
21 this is.

22 MR. MOYLE: Okay.

23 CHAIRMAN BRISE: We had some discussion about some
24 late filed documents -- late filed exhibits, and there
25 was the request for latitude with respect to those

1 exhibits -- I mean, those exhibits under rebuttal to
2 deal with some of the issues that were brought up within
3 those exhibits. So we recognize that, and we'll
4 probably allow some latitude with respect to that.

5 With respect to the redirect, I think there was one
6 question that it took -- I don't know -- maybe five or
7 six times to get to the right posture to actually ask
8 the question so that it could be answered. And there
9 was a lot of objections without an actual answer being
10 offered to the question. So if latitude needs to be
11 provided, it will be provided on rebuttal so that issues
12 can be dealt with there.

13 MR. MOYLE: Okay, thank you, I appreciate that.
14 Just so we're clear, some of what I intend to ask was
15 raised in response to questions from Commissioner
16 Balbis. So as long as I have the latitude to -- she
17 talked about a pension --

18 CHAIRMAN BRISE: No, let's be clear. The only
19 latitude that will be provided is latitude based upon if
20 you felt that some of the questions that were posed
21 during redirect led to new issues. Questions raised
22 from the bench are questions raised from the bench, and
23 that's that. So you wouldn't have an opportunity after
24 that to pose those questions. So that's the only
25 latitude that would be provided in rebuttal.

1 MR. MOYLE: Okay. So I guess -- I mean, just the
2 question -- just so the record is clear, the questions I
3 was going to ask relate to her testimony with respect to
4 the pension and how it's calculated and the details of
5 that. I didn't find that in her direct testimony. I
6 was going to do some follow-up, given the questions from
7 the bench. You've overruled that, so we'll move on.

8 MR. LITCHFIELD: Mr. Chairman, I thought that, yes,
9 that we had identified three late fileds and there was
10 an initial objection -- or not necessarily an objection,
11 but a qualification request for clarification from OPC
12 that they would be entitled to review those and then
13 take up any questions on those three late fileds on
14 rebuttal.

15 CHAIRMAN BRISE: On rebuttal.

16 MR. LITCHFIELD: And that's acceptable to us, and
17 we're indifferent as to whether those are marked and --
18 or, excuse me, they've been marked -- moved now or
19 later. We are really indifferent on that point.

20 MS. BROWN: We can move them in later. We do want
21 to move in the deposition and the errata sheet today.

22 MR. REHWINKEL: Mr. Chairman, with the
23 clarification and the latitude that you've recognized, I
24 have no problem with all four -- five documents going in
25 as one package, because they do all relate to the same

1 deposition. So I'm comfortable with that as long as I
2 have some limited opportunity on rebuttal, if need be.

3 MS. BROWN: Well, then, at the appropriate time
4 we'll move all those documents.

5 CHAIRMAN BRISE: All right. Thank you. Back to
6 exhibits. FPL, what do we have for Ms. Slattery?

7 MS. CLARK: Thank you, Mr. Chairman. FPL would
8 move Exhibits 185 to 192.

9 CHAIRMAN BRISE: Okay, 185 through 192. Any
10 objections? Okay, seeing none, we'll move 185 through
11 192 into the record.

12 (Exhibits 185, 186, 187, 188, 189, 190, 191 and 192
13 admitted in evidence.)

14 MR. MOYLE: FIPUG would offer 531 and 532.

15 CHAIRMAN BRISE: Okay, 531 and 532 by FIPUG. Any
16 objections? Okay, seeing none, we'll move 531 and 532
17 into the record.

18 (Exhibits 531 and 532 admitted in evidence.)

19 CHAIRMAN BRISE: South Florida Hospital
20 Association?

21 MR. URBAN: Yes, we would like to move exhibits
22 marked 533 to 537 into the record.

23 CHAIRMAN BRISE: Okay, we will move 533 through 537
24 into the record. Are there any objections?

25 MS. CLARK: No objections.

1 CHAIRMAN BRISE: Okay, seeing none. Mr. Saporito?
2 (Exhibits 533, 534, 535, 536 and 537 admitted in
3 evidence.)

4 MR. SAPORITO: Yes, Mr. Chairman, I would like to
5 move 538 and 539 into the record.

6 MS. CLARK: No objection.

7 CHAIRMAN BRISE: Okay. Any objection? Seeing
8 none, we'll move 538 and 539 into the record.
9 (Exhibits 538 and 539 admitted in evidence.)

10 CHAIRMAN BRISE: Staff?

11 MS. BROWN: Yes, Mr. Chairman, Staff would move
12 Exhibit 111, as amended with the errata sheet, and
13 Exhibits 540, 541 and 542 as the late filed exhibits to
14 the deposition.

15 CHAIRMAN BRISE: Okay. So we will move into the
16 record Exhibit 111, with the latest errata sheet, 541,
17 and 542. Any objections?

18 MS. BROWN: And 540.

19 CHAIRMAN BRISE: And 540. Thank you.

20 MS. CLARK: No objection.

21 CHAIRMAN BRISE: Okay, seeing no objections, 111,
22 540, 541 and 542 will be moved into the record.

23 (Exhibits 111, 540, 541 and 542 admitted in evidence.)

24 MS. CLARK: Ms. Slattery will come back on
25 rebuttal, Mr. Chairman.

1 CHAIRMAN BRISE: Rebuttal? So do we need to excuse
2 her from direct?

3 MS. CLARK: If that's the current process, yes,
4 could you please excuse her from direct.

5 CHAIRMAN BRISE: All right, you may be excused from
6 direct. Thank you.

7 MR. YOUNG: Mr. Chairman?

8 CHAIRMAN BRISE: Yes, sir.

9 MR. YOUNG: If I can beg the Court's indulgence to
10 take a five-minute break to set up the Avera -- Staff's
11 questions on Avera and everything else, to talk to the
12 parties.

13 CHAIRMAN BRISE: Okay.

14 MR. YOUNG: Maybe four.

15 CHAIRMAN BRISE: Okay. All right. It is 4:25, so
16 we'll -- 5:30 -- I mean, 4:30, we'll got to 4:30.

17 (Brief recess)

18 CHAIRMAN BRISE: We're going to go ahead and
19 reconvene at this time. Mr. Young?

20 MR. YOUNG: Yes, sir. It is my understanding that
21 FEA has a possible request. I think all the parties
22 have agreed to possibly stipulating their witness,
23 Stephens.

24 CAPT. MILLER: That's correct.

25 CHAIRMAN BRISE: Okay. Is that everybody's desire

1 to stipulate witness Stephens? I need to hear
2 affirmative.

3 MR. MOYLE: No objection from FIPUG.

4 CHAIRMAN BRISE: Okay.

5 MR. LITCHFIELD: No objection.

6 MR. SUNDBACK: No objection from the hospitals,
7 Mr. Chairman.

8 CHAIRMAN BRISE: Okay.

9 MR. HENDRICKS: No objection.

10 MR. SAPORITO: I will stipulate to whatever OPC
11 stipulates to.

12 MR. LaVIA: No objection.

13 MR. McGLOTHLIN: We do not object to stipulating
14 that witness.

15 CHAIRMAN BRISE: Okay, thank you. Mr. Young,
16 anything else that we need to take care of?

17 MR. YOUNG: No, sir, not at this time.

18 MR. LITCHFIELD: FPL calls Dr. Avera to the stand.
19 I don't believe he's previously been sworn.

20 Thereupon,

21 WILLIAM E. AVERA
22 was called as a witness on behalf of Florida Power & Light
23 Company, and having been first duly sworn, testified as
24 follows:

25 DIRECT EXAMINATION

1 BY MR. GUYTON:

2 Q Please state your name and business address.

3 A William E. Avera, 3907 Red River, Austin, Texas,
4 78751.

5 Q And by whom are you employed and in what capacity?

6 A I'm the President of FINCAP, Incorporated.

7 Q And have you prepared and caused to be filed 90
8 pages of direct testimony in this proceeding?

9 A Yes, sir.

10 Q Do you have any changes or corrections to your
11 prefiled direct testimony?

12 A No, sir.

13 Q If I were to ask you the same questions today as
14 are contained in your prefiled direct testimony, would your
15 answers be the same?

16 A They would.

17 MR. LITCHFIELD: Mr. Chairman, we ask that
18 Dr. Avera's direct testimony be inserted into the record
19 as though read.

20 CHAIRMAN BRISE: Okay, we will insert Dr. Avera's
21 testimony into the record as those read.

22

23

24

25

1 **Q. Please state your name and business address.**

2 A. William E. Avera, 3907 Red River, Austin, Texas, 78751.

3 **Q. By whom are you employed and in what capacity?**

4 A. I am a principal in Financial Concepts and Applications, Inc. ("FINCAP"), a firm
5 engaged in financial, economic, and policy consulting to business and
6 government.

7

8

I. OVERVIEW

9

10 **Q. What is the purpose of your testimony?**

11 A. The purpose of my testimony is to present to the Florida Public Service
12 Commission ("FPSC" or the "Commission") my assessment of the fair rate of
13 return on common equity ("ROE") for the jurisdictional electric utility operations
14 of Florida Power & Light Company ("FPL" or the "Company"). In addition, I
15 examine the reasonableness of FPL's capital structure.

16 **Q. Are you sponsoring any exhibits in this case?**

17 A. Yes. I am sponsoring Exhibits WEA-1 through WEA-18, which are attached to
18 my direct testimony.

- 19
- WEA-1, Qualifications of William E. Avera
 - 20 • WEA-2, Interest Rate Trends
 - 21 • WEA-3, Comparison of Proxy Group Risk Indicators
 - 22 • WEA-4, DCF Model – Utility Proxy Group
 - 23 • WEA-5, Sustainable Growth Rate – Utility Proxy Group

- 1 • WEA-6, Implied Utility Bond Yields
 - 2 • WEA-7, DCF Model – Non-Utility Proxy Group
 - 3 • WEA-8, Sustainable Growth Rate – Non-Utility Proxy Group
 - 4 • WEA-9, CAPM – Utility Proxy Group
 - 5 • WEA-10, Yield spreads
 - 6 • WEA-11, Electric Utility Risk Premium
 - 7 • WEA-12, Expected Earnings Approach
 - 8 • WEA-13, Summary of Cost of Equity Estimates
 - 9 • WEA-14, FPL Adjusted Capital Structure
 - 10 • WEA-15, Capital Structure – Electric Utility Operating Cos.
 - 11 • WEA-16, Capital Structure – Utility Proxy Group
 - 12 • WEA-17, Market Value Capital Structure – Utility Proxy Group
 - 13 • WEA-18, Endnotes to Direct Testimony of William E. Avera
- 14 **Q. Are you sponsoring or co-sponsoring any Minimum Filing Requirements**
15 **(“MFRs”)?**
- 16 A. No.
- 17 **Q. Please describe your educational background and professional experience.**
- 18 A. A description of my background and qualifications, including a resume containing
19 the details of my experience, is attached as Exhibit WEA-1.
- 20 **Q. Please summarize the information and materials you relied on to support the**
21 **opinions and conclusions contained in your testimony.**
- 22 A. I am familiar with the organization, finances, and operations of FPL from my
23 participation in prior proceedings before the FPSC. In connection with the

1 present filing, I considered and relied upon corporate disclosures, publicly
2 available financial reports and filings, and other published information relating to
3 FPL, including bond rating agency reports, financial filings, and prior regulatory
4 proceedings and orders. I also reviewed information relating generally to current
5 capital market conditions and specifically to current investor perceptions,
6 requirements, and expectations for FPL. These sources, coupled with my
7 experience in the fields of finance and utility regulation, have given me a working
8 knowledge of the issues relevant to investors' required return for FPL, and they
9 form the basis of my analyses and conclusions.

10 **Q. Please summarize your findings regarding a fair ROE for FPL.**

11 A. I determined that 11.25% represents a fair ROE for FPL, which falls at the middle
12 of my recommended range of 10.25% to 12.25%. This conclusion is based on
13 several factors. I applied four accepted methods of estimating ROE to a proxy
14 group of fourteen other utilities with comparable investment risks. Consistent
15 with the fact that utilities must compete for capital with firms outside their own
16 industry, I also referenced a proxy group of companies selected from the least
17 risky, most stable and mature participants in the non-utility sectors of the
18 economy. In addition, my testimony examines the unique financial challenges
19 facing FPL that must be considered in evaluating a fair ROE range from within
20 the proxy group results, and in order to recognize FPL's requirements for
21 financial strength and benefit customers.

1 I also present the regulatory precedent supporting the 25 basis point adder to
2 recognize FPL's excellence in management, superior service, and its achievement
3 of low rates for its customers. Other FPL witnesses document FPL's
4 accomplishments, while my testimony demonstrates how the proposed adder is
5 consistent with FPSC regulatory policy and objectives. Finally, my testimony
6 demonstrates that FPL's capital structure is consistent with my fair ROE range
7 and necessary to meet the financial challenges facing FPL.

8 **Q. Is the requested ROE a reasonable cost for FPL's customers to pay?**

9 A. Yes. Investors have many options vying for their money. They make investment
10 capital available to FPL only if the expected returns justify the risk. Customers
11 will enjoy reliable and efficient electric service so long as investors are willing to
12 make the huge capital investments necessary to maintain and improve FPL's
13 electric system. Providing an adequate return to investors is a necessary cost to
14 ensure that capital is available to FPL now and in the future. If regulatory
15 decisions increase risk or limit returns to levels that are insufficient to justify the
16 risk, investors will look elsewhere to invest capital. The availability of capital is
17 particularly important to FPL's customers because of the need for financial
18 strength inherent in FPL's location and characteristics.

19 **Q. Have customers benefited from FPL's past financial strength?**

20 A. Yes. The shocks that have roiled the capital markets in recent years have made
21 investors wary of putting their money into anything other than the safest
22 investments. During the credit crisis, for example, utilities were forced to draw
23 on short-term credit lines to meet debt retirement obligations because of

1 uncertainties regarding the availability of long-term capital,¹ while others were
2 effectively shut out of the commercial paper market altogether.

3

4 In contrast to the experience of many other utilities, FPL has been able to raise
5 funds on reasonable terms, even in times of financial turmoil. The FPSC Staff in
6 its December 23, 2009 Memorandum for Docket Nos. 080677-EI and 09130-EI
7 (“Staff Memorandum”) observed:

8 FPL’s position of financial strength has served it and its customers
9 by holding down the Company’s cost of capital. During the recent
10 volatility in the capital markets, many companies experienced
11 sharp spikes in their cost to borrow. In some instances, companies
12 had to accept rates as high as 10% to issue bonds. In the case of
13 FPL, however, due to its strong financial position it was able to sell
14 30-year bonds at rates under 6% during 2008 and 2009 despite
15 significant disruption in the credit markets.²

16

17 Unfortunately, the market uncertainties that began in 2008 have lingered as
18 domestic political shocks and foreign financial difficulties have continued to
19 buffet investors. Yet FPL must continue to make significant new capital
20 investments to keep its system efficient and reliable for the customers it serves. If
21 FPL can raise private capital for these vital infrastructure investments, both its
22 customers and the economy of Florida will benefit. In the past, FPL’s financial
23 strength, fostered by the support of this Commission, has served customers well

1 as the Company has been able to raise capital on a reasonable and timely basis to
2 meet past challenges such as devastating storms. To maintain its position of
3 strength and navigate through the current financial shoals, FPL needs the FPSC's
4 support. FPL must be in a position of financial strength to attract private capital
5 on reasonable terms from investors whose first instinct is to rush to the safety of
6 U.S. Treasury securities.

7 **Q. Has the FPSC Staff recognized that customers save money in the long-run if**
8 **they are served by a financially strong utility?**

9 A. Yes. The Staff Memorandum in FPL's 2009 rate case cited evidence to
10 demonstrate that FPL customers would pay a lower capital cost in their rates than
11 the Commission had ordered for Tampa Electric Company ("TECO") *even if the*
12 *Commission had approved FPL's requested ROE and capital structure:*

13 The goal of an appropriate equity ratio and capital structure is to
14 minimize the overall weighted average cost of capital and to
15 maintain consistent access to capital on reasonable terms. This is
16 an important consideration in that it's the overall cost of capital
17 that is used to determine revenue requirements and ultimately
18 customer rates. The overall cost of capital of 8.29 percent
19 approved in the TECO rate case was based on an ROE of 11.25
20 percent and an equity ratio of 54.0 percent as a percentage of
21 investor capital. Due to its ability to raise capital from a position
22 of financial strength, even at the proposed ROE of 12.5 percent

1 and an equity ratio 59.1 percent, FPL's requested overall cost of
2 capital is 7.85 percent.³

3

4 The FPSC Staff was observing the fundamental truth that it is FPL's customers
5 that ultimately benefit when the utility providing service has a strong credit rating,
6 supportive regulation, and excellent management.

7 **Q. What role does FPSC regulation play in saving FPL's customers money**
8 **through supporting investor confidence and rewarding superior**
9 **performance?**

10 **A. Regulatory signals are a major driver of investors' risk assessment for utilities.**
11 Security analysts study commission orders and regulatory policy statements to
12 advise investors where to put their money. If FPSC actions instill confidence that
13 the regulatory environment is supportive, investors make capital available to
14 Florida's utilities on more reasonable terms. As FPL's past experience indicates,
15 when investors are confident that a utility has supportive regulation, they will
16 make funds available even in times of turmoil in the financial markets. Moreover,
17 suppliers of fuel, replacement power, equipment, and the other goods and services
18 necessary to keep the lights on in Florida will offer more favorable terms to a
19 financially strong utility operating under constructive regulation than to a utility
20 whose financial wherewithal is suspect. Since the FPSC is FPL's primary utility
21 regulator, investors and suppliers look to the FPSC to assess regulatory support
22 behind FPL's financial and contractual obligations. When FPL can negotiate
23 from a position of financial strength it will get a better deal for its customers.

1 **Q. What is the danger to FPL's customers when investors and suppliers doubt**
2 **the FPSC's regulatory support of the Company?**

3 A. FPL's customers become exposed to less reliable and more expensive electric
4 service. Consider the effect of the FPSC's 2010 rate order in Docket Nos.
5 080677-EI and 09130-EI. The 10% ROE was unsettling to investors because it
6 was such a low ROE for an electric utility in Florida and the decision was viewed
7 as a departure from the FPSC's tradition of supportive regulation protected from
8 political influence. As described in FPL witness Dewhurst's testimony, the bond
9 rating agencies responded with negative assessments, including downgrades of
10 FPL's bond rating by Moody's Investors Service ("Moody's") and Standard &
11 Poor's Corporation ("S&P"). When the parties reached a settlement that allowed
12 FPL to earn an ROE of 11%, investors reacted with relief that the previous
13 decision may have been a temporary deviation from FPSC tradition of regulatory
14 support.

15 **Q. Do customers benefit when investors have confidence that the regulatory**
16 **environment is constructive?**

17 A. Yes. The challenging capital market environment highlights the benefits of the
18 ability in attracting the capital needed to secure reliable service at a lower cost for
19 customers. Changing course from the path of financial strength would be
20 extremely short-sighted. Customers and the economy of Florida have benefited
21 from FPL's financial flexibility and ability to raise capital on reasonable terms. If
22 investors perceived that the Commission was withdrawing its support for FPL's
23 financial strength at this crucial juncture, then it would likely take a long time to

1 re-establish the well-deserved reputation that this Commission had earned among
2 investors. By helping sustain FPL's financial strength, the FPSC will facilitate
3 the flow of capital on reasonable terms that is required for the Company to
4 maintain and improve the electric infrastructure so vital to Florida's economic
5 recovery and future growth.

6 **Q. Is the ROE in this case an important signal to investors?**

7 A. Yes. In setting the ROE in this case, the FPSC has an opportunity to show that it
8 recognizes the importance of financial strength and it will reward superior
9 performance by a utility. A constructive outcome will confirm that the FPSC has
10 returned to the regulatory policy of supportive regulation and that the investors
11 should not expect that the 10% ROE in the last case signals a change in the
12 regulatory climate in Florida. By allowing an ROE in this case that reflects
13 capital market realities and FPL's unique financial challenges while providing
14 justified ROE adder for superior performance, the FPSC will reassure investors of
15 the regulation in Florida has returned to its tradition of fairness and innovation.

16 **Q. Does FPL have any unique characteristics that make it more important to
17 maintain financial strength and regulatory support?**

18 A. Indeed it does. FPL's location and fuel mix give its customers a larger stake in
19 the Company's financial strength and regulatory support compared to other
20 electric utilities in Florida and the rest of the nation. FPL's exposure to
21 devastating storms requires that FPL mount huge recovery efforts that require
22 ready availability of money and credit. FPL's nuclear generation, while saving
23 customers significant energy costs, can necessitate huge unexpected expenditures.

1 FPL's dependence on natural gas, while having economic, environmental, and
2 operational advantages benefiting customers, has volatile prices and exposure to
3 transportation disruptions. FPL's unique location at the end of the Florida
4 Peninsula increases the challenges of accessing the nation's energy infrastructure.
5 In addition, FPL's service area is exposed to economic fluctuations and requires
6 large capital investments to support customer growth. FPL must be prepared to
7 meet these challenges even when confronting capital market conditions that might
8 restrict access for utilities with weaker financial profiles or lacking effective
9 regulatory support.

10 **Q. Can the FPSC be confident that allowing an ROE in the 10.25% to 12.25%**
11 **range represents a reasonable cost for FPL's customers?**

12 A. Yes. The ROE compensates common equity investors for the use of their capital
13 to finance the plant and equipment necessary to provide utility service. Investors
14 commit capital only if they expect to earn a return on their investment
15 commensurate with returns available from alternative investments with
16 comparable risks. To be consistent with sound regulatory economics and the
17 standards set forth by the Supreme Court in the *Bluefield*⁴ and *Hope*⁵ cases, a
18 utility's allowed ROE should be sufficient to: (1) fairly compensate investors for
19 capital invested in the utility, (2) enable the utility to offer a return adequate to
20 attract new capital on reasonable terms, and (3) maintain the utility's financial
21 integrity.

1 I have developed the range by first estimating investors' required return for a
2 proxy group of comparable risk utilities and a low-risk group of non-utility
3 enterprises using four accepted methods: the discounted cash flow ("DCF")
4 model, Capital Asset Pricing Model ("CAPM"), risk premium method, and the
5 expected earnings approach. In evaluating a reasonable ROE for FPL from within
6 the range of these results, I considered the impact of flotation costs and the
7 imperative of recognizing the unique risk exposures and financial challenges
8 faced by FPL. An ROE in the 10.25% to 12.25% range represents a reasonable
9 and necessary cost to attract investors' funds and to maintain FPL's financial
10 strength.

11 **Q. Is it appropriate to consider customers' stake in FPL's financial strength and**
12 **encourage effective management and low rates when setting a fair ROE?**

13 A. Yes. The purpose of regulation is to achieve the best possible long-term outcome
14 for customers in terms of economical rates and reliable service. Florida has led
15 the way in innovative and effective regulation. During the early days of the
16 Public Utility Commission of Texas ("PUCT"), I traveled with the chair of that
17 commission to Florida to interview the FPSC commissioners and senior staff
18 about the forward-looking actions of this commission, particularly its use of
19 incentives in regulation. Since that time regulatory agencies around the nation
20 have followed with measures to encourage and support utilities in building
21 financial strength and encouraging effective management.

1 The Federal Energy Regulatory Commission (“FERC”), over the last decade has
2 effectively supported utilities in attracting capital and encouraging the
3 improvement of the open access transmission grid by allowing ROE’s from the
4 upper end of the reasonable range. For example, FERC has allowed an increment
5 of 50 basis points above the base ROE level for membership in a regional
6 transmission organization. Utilities can qualify for additional ROE adders if they
7 demonstrate that they need a higher ROE to attract sufficient capital or they are
8 bringing other benefits to their customers.

9
10 A law passed several years ago in Virginia established a new regulatory
11 framework that allows utilities to request an ROE adder of 50 basis points over
12 and above the cost of equity found by the Virginia State Corporation Commission
13 as an incentive for the utility to meet renewable energy goals. In its recent case,
14 Appalachian Power Company was granted the 50 basis point ROE adder in
15 recognition of its achievements.

16
17 Similarly, the Florida Legislature has provided the FPSC with the statutory
18 authority to make adjustments to the ROE to recognize a utility’s relative
19 performance. Consistent with this statutory guidance, the FPSC has used the
20 ROE as a lever to recognize a utility’s effective management, and on occasion
21 signal dissatisfaction with utility behavior. If the FPSC finds that consumers in
22 FPL's service area have benefited from efficient and cost-effective operations,
23 excellent customer service, and relatively low rates, considering the Company’s

1 exemplary performance through a higher ROE is entirely consistent with sound
2 regulatory policy. FPL's customers will clearly benefit in the long run if the ROE
3 in this case reflects the cost of attracting investors' funds and sends a clear signal
4 that the FPSC understands the importance of supporting investors' confidence and
5 encouraging efficient management and low rates. Given FPL's unique
6 characteristics and recent investor concerns about the FPSC's regulatory support,
7 FPL's customers have a stake in a constructive outcome in this case. Just as
8 customers in the free enterprise system win because companies that provide the
9 best value also have the opportunity to earn higher returns, so also do utility
10 customers benefit when regulators allow utilities that provide superior value the
11 opportunity to earn an increment of return.

12 **Q. What is your conclusion as to the reasonableness of FPL's recommended**
13 **capital structure for regulatory purposes?**

14 A. Based on my evaluation, I concluded that FPL's projected equity ratio of 59.6%
15 based on investor sources described in the testimony of FPL witness Dewhurst
16 represents a reasonable mix of capital sources from which to calculate FPL's
17 overall rate of return. My analyses demonstrate that while FPL's adjusted
18 common equity ratio falls somewhat above the average maintained by the electric
19 utilities in the proxy group, it is well within the range of individual results for
20 these firms and in-line with the lower leverage expected for the industry going
21 forward. In addition, FPL's regulatory capital structure contains less equity than
22 the market value capital structures relevant to investors for the electric utilities in
23 the proxy group used to estimate the cost of equity.

1 Absent its relatively conservative capital structure, FPL's financial strength would
2 suffer and its debt rating would undoubtedly be lower than present levels. The
3 resulting greater investment risk would imply an increase in investors' required
4 rate of return for FPL's securities and ultimately higher costs for FPL's customers.
5 Given FPL's need for financial strength due to its exposure to devastating storms,
6 nuclear generation, reliance on natural gas, location at the end of the Florida
7 Peninsula, and economic vulnerability and growth of its service area, FPL
8 customers benefit from a more secure capital structure.

9
10 Sensitivity to financial market and regulatory uncertainties has increased
11 dramatically and investors recognize that constructive regulation is a key
12 ingredient in supporting utility credit standing and financial integrity. For a utility
13 with an obligation to provide reliable service, investors' increased reticence to
14 supply additional capital during times of financial turmoil highlights the necessity
15 of preserving the flexibility necessary to overcome periods of adverse capital
16 market conditions.

17 18 **II. RISKS AND FINANCIAL REQUIREMENTS OF FPL**

19
20 **Q. What is the purpose of this section of your testimony?**

21 **A.** As a predicate to my capital market analyses, this section briefly reviews FPL's
22 operations and finances. In addition, it examines the risks that investors take into
23 account in evaluating their required rate of return for FPL, the unique financial

1 requirements that should be considered in establishing a fair ROE for FPL, and
2 conditions in the capital markets and the general economy.

3
4 **A. Operations and Finances**

5
6 **Q. Please briefly describe FPL and its parent, NextEra Energy, Inc.**

7 A. Headquartered in Juno Beach, Florida, FPL is engaged in the generation,
8 transmission, and distribution of electric power throughout 35 counties located
9 principally along the east and lower west coasts of Florida. FPL is one of the
10 largest rate-regulated utilities in the U.S., and its service territory includes a
11 population of nearly 8.9 million, with service being provided to approximately 4.6
12 million customers. FPL is a wholly owned subsidiary of NextEra Energy, Inc.
13 (“NextEra”).

14
15 NextEra Energy is a leading energy company with over 41,000 megawatts
16 (“MW”) of generating capacity, and approximately 14,800 employees in 24 states
17 and Canada. NextEra Energy’s principal subsidiaries are FPL and NextEra
18 Energy Resources, LLC, which together with its affiliated entities is the largest
19 generator in North America of renewable energy from the wind and the sun.
20 Through its subsidiaries, NextEra Energy collectively operates the third largest
21 U.S. nuclear power generation fleet.

1 **Q. Please describe FPL's electric utility operations.**

2 A. During 2011, approximately 51% of electric sales were attributable to residential
3 customers, with 42% from commercial and 7% from industrial and other users.

4 With a combined capacity of approximately 24,460 MW, FPL's generating
5 facilities include four nuclear units at the St. Lucie and Turkey Point generating
6 stations, with a total capacity of 2,970 MW. In 2011, nuclear generation
7 accounted for 20% of the electric energy provided by FPL, with natural gas at
8 65%, oil at 1%, and coal at 5%.

9
10 The remaining 9% of FPL's 2011 energy requirements were obtained through
11 purchased power contracts. Take-or-pay purchased power contracts with the
12 Jacksonville Electric Authority and with subsidiaries of The Southern Company
13 provide approximately 1,330 MW of power through 2015 and 375 MW thereafter
14 through 2021. FPL also has various firm contracts to purchase approximately 705
15 MW of capacity and energy from certain cogenerators and qualifying facilities.
16 FPL estimates that capacity and minimum payments under these agreements will
17 exceed approximately \$400 million annually through 2015.

18
19 FPL's transmission and distribution facilities consist of over 580 substations and
20 include over 48,000 miles of overhead lines and approximately 25,000 miles of
21 underground and submarine cables. As of December 31, 2011, FPL's investment
22 in utility assets was approximately \$31.8 billion. FPL's retail electric operations
23 are subject to the jurisdiction of the FPSC, with the interstate jurisdiction

1 regulated by FERC. Additionally, FPL's nuclear facilities are subject to licensing
2 and oversight by the Nuclear Regulatory Commission. FPL's latest
3 decommissioning studies indicate that FPL's portion of the cost of
4 decommissioning its four nuclear units, including costs associated with spent fuel
5 storage, to be \$6.2 billion. As of December 31, 2011, the accumulated provision
6 for nuclear decommissioning totaled approximately \$2.8 billion.

7 **Q. What credit ratings have been assigned to FPL?**

8 A. FPL has been assigned a corporate credit rating of "A-" by S&P and an issuer
9 rating of "A2" by Moody's. Fitch Ratings Ltd. ("Fitch") has assigned an issuer
10 default rating of "A" to FPL.

11
12 **B. Risks and Financial Requirements**

13
14 **Q. How have investors' risk perceptions for the utility industry evolved?**

15 A. Implementation of structural change and related events caused investors to rethink
16 their assessment of the relative risks associated with the utility industry. There
17 has been steady erosion in credit quality throughout the utility industry for more
18 than a decade, both as a result of revised perceptions of the risks in the industry
19 and the weakened finances of the utilities themselves. In December 2009, S&P
20 observed with respect to the industry's future that:

21 Looming costs associated with environmental compliance, slack
22 demand caused by economic weakness, the potential for permanent
23 demand destruction caused by changes in consumer behavior and

1 closing of manufacturing facilities, and numerous regulatory
2 filings seeking recovery of costs are some of the significant
3 challenges the industry has to deal with.⁶

4 Similarly, Moody's noted:

5 [A] sustained period of sluggish economic growth, characterized
6 by high unemployment, could stress the sector's recovery
7 prospects, financial performance, and credit ratings. The quality of
8 the sector's cash flows are already showing signs of decline, partly
9 because of higher operating costs and investments.⁷

10

11 More recently, Moody's concluded, "we also see the sector's overall business and
12 operating risks increasing."⁸

13 **Q. Does FPL anticipate the need to access the capital markets going forward?**

14 **A.** Yes. FPL will require capital investment to meet customer growth, provide for
15 necessary maintenance and replacements, and fund new investment in the
16 facilities needed to generate, transmit and distribute electricity. As discussed in
17 greater detail by FPL witness Dewhurst, over the 2011-2013 period alone, FPL
18 plans to invest approximately \$9 billion to strengthen and improve Florida's
19 electric generation and delivery system.

20

21 Continued support for FPL's financial integrity and flexibility will be
22 instrumental in attracting the long-term capital necessary to fund these projects in
23 an effective manner. In addition, FPL must meet short-term liquidity needs

1 arising from seasonal cash flows and ongoing construction programs. FPL's
2 exposure to storm restoration activities and the substantial liquidity requirements
3 necessary to support its fuel hedging program magnify the importance of
4 maintaining financial flexibility, which is essential to guarantee access to the cash
5 resources and interim financing required to cover operating cash flows and fund
6 required investments in the utility system.

7 **Q. Is the potential for energy market volatility an ongoing concern for investors**
8 **and does it affect FPL's financial requirements?**

9 A. Yes on both counts. In recent years utilities and their customers have had to
10 contend with dramatic fluctuations in fuel costs due to ongoing price volatility in
11 the spot markets, and investors recognize the potential for further turmoil in
12 energy markets. In times of extreme volatility, utilities can quickly find
13 themselves in a significant under-recovery position with respect to power costs,
14 which can severely stress liquidity. The power industry and its customers have
15 had to contend with dramatic fluctuations in gas costs due to ongoing price
16 volatility in the spot markets. Similarly, the Energy Information Administration
17 ("EIA"), which is a statistical agency of the U.S. Department of Energy ("DOE"),
18 reported that the weighted-average price paid for uranium oxide equivalent in
19 2008 was \$45.88 per pound, representing an increase of 40% compared to 2007
20 price levels and coming on the heels of a 76% price increase during the previous
21 year.⁹

1 While current expectations for significantly lower power prices reflect weaker
2 fundamentals affecting current load and fuel prices, investors recognize the
3 potential that such trends could quickly reverse. For example, recurring political
4 crises in the Middle East have led to sharp increases in petroleum prices.
5 Moody's concluded that utilities remain exposed to fluctuations in energy prices,
6 observing, "This view, that commodity prices remain low, could easily be proved
7 incorrect, due to the evidence of historical volatility."¹⁰ Fitch recently observed
8 that market conditions will likely result in higher natural gas prices, and noted the
9 utility industry's potential exposure to future price shocks.¹¹

10 **Q. Are volatile natural gas prices relevant to FPL's financial requirements?**

11 A. Yes. In order to meet rising demand for electricity across its service territory, FPL
12 has sought to acquire additional power resources to ensure its ability to maintain
13 adequate reserve margins and provide reliable service. The expansion of gas-fired
14 generation has resulted in this fuel representing over 60% of FPL's fuel mix.
15 Exposure to fluctuations in natural gas prices or supply interruption is a
16 significant concern, with S&P noting that, "a large and growing reliance on
17 natural gas to fuel utility generation could over time turn from an advantage
18 (because of its environmental status) to a weakness if gas prices continue to
19 fluctuate and trend up."¹² FPL's significant exposure to natural gas detracts from
20 the Company's credit quality and should be considered in evaluating a fair ROE.
21 While FPL has stated that it continues to explore alternative fuel sources and
22 technologies, the potential for a continuation of the extreme price volatility
23 experienced in the market for natural gas means that FPL must be able to fund

1 fuel under-recoveries and have the financial strength to effectively hedge price
2 risks.

3 **Q. Do the Commission's adjustment mechanisms protect FPL from exposure to**
4 **fluctuations in power supply costs?**

5 A. To a limited extent, yes. The investment community views FPL's ability to
6 periodically adjust retail rates to accommodate fluctuations in fuel and purchased
7 power as an important source of support for FPL's financial integrity.
8 Nevertheless, they also recognize that there can be a lag between the time FPL
9 actually incurs the expenditure and when it is recovered from ratepayers. As a
10 result, FPL is not insulated from the need to finance deferred power production
11 and supply costs and support the substantial liquidity requirements related to its
12 fuel hedging program. Indeed, despite the significant investment of resources to
13 manage fuel procurement, investors are aware that the best FPL can do is to
14 recover its actual costs. In other words, FPL earns no return on fuel costs and is
15 exposed to substantial short-term financing responsibilities, regulatory lag, and
16 the potential for disallowances for imprudence in its fuel procurement.

17 **Q. What other financial pressures impact investors' risk assessment of FPL and**
18 **its financial requirements?**

19 A. Investors are aware of the financial and regulatory pressures faced by utilities
20 associated with rising costs and the need to undertake significant capital
21 investments. S&P noted that cost increases and capital projects, along with
22 uncertain load growth, were a significant challenge to the utility industry.¹³ As
23 Moody's observed:

1 [W]e also see the sector's overall business risk and operating risks
2 increasing, owing primarily to rising costs associated with
3 upgrading and expanding the nation's trillion dollar electric
4 infrastructure.¹⁴

5
6 As noted earlier, investors anticipate that FPL will undertake significant electric
7 utility capital expenditures. While providing the infrastructure necessary to meet
8 the electricity needs of customers is certainly desirable, it imposes additional
9 financial responsibilities on the Company.

10 **Q. Are environmental considerations also affecting investors' evaluation of**
11 **electric utilities, including FPL?**

12 A. Yes. Although FPL's exposure is moderated through the Company's reliance on
13 natural gas and nuclear generation, and the environmental compliance cost
14 recovery clause established by the FPSC, utilities are confronting increased
15 environmental pressures that impose significant uncertainties and costs. Moody's
16 noted that, "the prospect for new environmental emission legislation – particularly
17 concerning carbon dioxide – represents the biggest emerging issue for electric
18 utilities."¹⁵ While the momentum for carbon emissions legislation has slowed,
19 expectations for eventual regulations continue to pose uncertainty.

20 **Q. Please discuss the impact that FPL's nuclear operations have on its financial**
21 **requirements?**

22 A. Approximately 20% of FPL's total energy requirements are provided by its four
23 nuclear units located at the St. Lucie and Turkey Point generating stations.

1 Moreover, in light of political opposition to the construction of new coal-fired
2 generation in Florida, expanding FPL's nuclear generating capacity will likely be
3 required in order to diversify fuel mix while meeting customer load.

4
5 As discussed in the testimony of FPL's witnesses, consumers have realized
6 considerable savings in energy costs as a result of FPL's effective management of
7 its nuclear generating facilities. While customers benefit from the advantages of
8 fuel cost savings and diversity that nuclear power confers, investors also associate
9 nuclear facilities with risks that are not encountered with other sources of
10 generation. S&P has long recognized the additional risks posed by nuclear
11 facilities, as reflected in a 1994 article:

12 Operating and maintaining [nuclear plants] is more complex
13 compared with fossil plants because of safety considerations and
14 the additional safety equipment and operational controls required.¹⁶

15
16 More recently, Moody's confirmed that "ownership of nuclear generating
17 facilities brings a higher level of complexity associated with operating and
18 maintaining the units."¹⁷

19
20 These concerns have been exacerbated by the events at the Fukushima Daiichi
21 nuclear complex in Japan, as S&P recently noted:

22 Standard & Poor's Ratings Service believes that the failure of the
23 back-up safety systems will heighten scrutiny of the systematic

1 risks for U.S. nuclear power generators. We aren't taking any
2 rating actions at this time. Still, the failures and their
3 consequences raise the likelihood of greater costs and enhanced
4 regulatory oversight for existing U.S. facilities. A renewed public
5 focus on the inherent risks of nuclear power will demand as much.
6 This could result in delays in license-extension approvals and
7 deteriorating economics for new plant construction. At the same
8 time, closure of nuclear power plants, either due to increased costs
9 or regulatory action, might significantly affect U.S. electricity
10 supply and have substantial capital spending implications for
11 utilities.¹⁸

12
13 As Moody's noted, "[O]ne of the biggest risks associated with nuclear generation
14 is an unanticipated extended outage," concluding that "an extended outage can
15 significantly stress an owner's liquidity and over-all financial profile."¹⁹ In
16 addition, longer-term uncertainties regarding the disposal of spent fuel and the
17 ultimate costs of decommissioning continue to accompany any investment in
18 nuclear generating facilities. In order to mitigate these potential exposures,
19 Moody's cited the importance of a constructive regulatory relationship and "a
20 need to establish financial policies over the near-term aimed at producing very
21 strong financial credit ratios in order to maintain a given rating."²⁰

1 **Q. What other operational factors increase FPL's need for financial strength?**

2 A. Because of the geographical location of FPL's service territory, the potential
3 exposures associated with a prolonged outage at key generating facilities or
4 disruptions in fuel supply are heightened. As Fitch noted:

5 Given the location of the company's service territory at the
6 extreme southern end of the Florida peninsula, there are limits on
7 the ability to import power.²¹

8 Apart from its relative isolation, FPL's service territory has extreme exposure to
9 the catastrophic damage of tropical storms. While the investment community
10 recognizes that the FPSC has been generally supportive in permitting recovery of
11 the costs of storm damage, FPL nonetheless must maintain the financial strength
12 and liquidity necessary to effect a rapid and far-reaching response in the likely
13 event of a future hurricane strike.

14 **Q. How does the nature of the economy in FPL's service territory impact its
15 relative risks and financial requirements?**

16 A. Past experience indicates that the economy in FPL's service territory can be
17 highly vulnerable, especially to conditions that cause a decline in tourism. And
18 while the Florida economy has achieved a degree of diversification that was not
19 present during the tourism-led slump of the 1970s, Floridians are aware that the
20 combined effect of a general business slowdown and a plunge in tourism can
21 result in a particularly severe economic double-whammy, which heightens the
22 risks that an economic downturn poses for FPL's investors and customers. More
23 recently, the economy of FPL's service territory has been the epicenter for the

1 monumental collapse in real estate values that precipitated a global financial
2 crisis. As Fitch recently noted, “FPL’s south Florida service territory still has
3 above average unemployment and a weak housing market,”²² S&P recently
4 recognized, “Maintaining financial strength despite regulatory setbacks and a
5 moribund economy has been challenging.”²³ While the long-term outlook for
6 Florida’s economy may remain positive, investors nonetheless recognize the
7 exposure introduced by current uncertainties.

8 9 **C. Impact of Capital Market Conditions**

10 11 **Q. What are the implications of recent capital market conditions?**

12 A. As The Value Line Investment Survey (“Value Line”) recently recognized, “It has
13 been a turbulent year for the financial markets, to say the least.”²⁴ Investors have
14 faced a myriad of challenges and uncertainties, including the threat of a U.S.
15 government default, political brinkmanship over raising the federal debt ceiling,
16 and S&P’s subsequent downgrade of its U.S. sovereign debt rating. The
17 sovereign debt crisis in Europe has also dealt a harsh blow to investor confidence,
18 and concerns over potential exposure to a Euro-zone default has again
19 undermined confidence in the financial and banking sector. Meanwhile,
20 speculation that the economy remains exposed to a potential “double-dip”
21 recession persists, with unemployment remaining stubbornly high, rising
22 petroleum prices, lackluster consumer confidence, and continued weakness
23 plaguing the real estate sector.

1 Investors have had to confront ongoing fluctuations in share prices and stress in
2 the credit markets.²⁵ In response, investors have repeatedly fled to the safety of
3 U.S. Treasury bonds, and stock prices have experienced renewed volatility. As
4 the *Wall Street Journal* noted in August 2011:

5 Stocks spiraled downward Thursday as investors buckled under the
6 strain of the global economic slowdown and the failure of policy
7 makers to stabilize financial markets.... The nervousness among
8 investors is being reflected in an extraordinary rally in U.S.
9 Treasury bonds, regarded as a safe haven for investors in time of
10 turmoil.... The Dow's decline was its biggest point drop since the
11 market was plunging amid a crisis of confidence in banks in late
12 2008. On Thursday, the focus shifted to world governments,
13 which are laboring under mountains of debt and have diminished
14 ability to prop up the financial system.²⁶

15
16 The dramatic rise in the price of gold and other commodities also attests to
17 investors' heightened concerns over prospective challenges and risks, including
18 the overhanging threat of inflation, a double-dip recession, and renewed economic
19 turmoil. With respect to utilities, Moody's noted the dangers to credit availability
20 associated with exposure to European banks,²⁷ and concluded:

21 Over the past few months, we have been reminded that global
22 financial markets, which are still receiving extraordinary
23 intervention benefits by sovereign governments, are exposed to

1 turmoil. Access to the capital markets could therefore become
2 intermittent, even for safer, more defensive sectors like the power
3 industry.²⁸

4

5 Uncertainties surrounding economic and capital market conditions heighten the
6 risks faced by utilities, which, as described earlier, face a variety of operating and
7 financial challenges.

8 **Q. How do interest rates on long-term bonds compare with those projected for**
9 **the next few years?**

10 A. Exhibit WEA-2 compares current interest rates on 30-year Treasury bonds, triple-
11 A rated corporate bonds, and double-A rated utility bonds with near-term
12 projections from Value Line, IHS Global Insight, Blue Chip Financial Forecasts
13 (“Blue Chip”), S&P, and the EIA.

14 As shown on Exhibit WEA-2, there is a clear consensus that the cost of
15 permanent capital will be higher in the 2012-2016 timeframe than it is currently.
16 As a result, current cost of capital estimates are conservative, because they are
17 likely to understate investors’ requirements at the time the rates set in this
18 proceeding become effective.

19 **Q. What do these events imply with respect to the ROE for FPL?**

20 A. No one knows the future of our complex global economy. We know that the
21 financial crisis had been building for a long time, and few predicted that the
22 economy would fall as rapidly as it did, or that corporate bond yields would

1 fluctuate as dramatically as they have. While conditions in the economy and
2 capital markets appear to have stabilized significantly since 2009, investors
3 continue to react swiftly and negatively to any signs of future trouble in the
4 financial system or economy. Given the importance of reliable utility service, it
5 would be unwise to ignore investors' increased sensitivity to risk and future
6 capital market trends in evaluating a fair ROE in this case.

7 **Q Does the prospect for continued turmoil in capital markets also influence the**
8 **appropriate capital structure for FPL?**

9 A Yes. Financial flexibility plays a crucial role in ensuring the wherewithal to meet
10 funding needs, and utilities with higher financial leverage may be foreclosed from
11 additional borrowing, especially during times of stress. Fitch recently highlighted
12 this exposure:

13 **Capital Markets Freeze:** Significant tightening or loss of capital
14 markets and bank access would have a deleterious affect on sector
15 creditworthiness in the face of high capex budgets.²⁹

16
17 As a result, the Company's capital structure must maintain an equity "cushion"
18 that preserves the flexibility necessary to maintain continuous access to capital
19 even during times of unfavorable market conditions.

III. CAPITAL MARKET ESTIMATES

1

2

3 **Q. What is the purpose of this section?**

4 A. In this section, I develop capital market estimates of the cost of equity. First, I
5 address the concept of the cost of equity, along with the risk-return tradeoff
6 principle fundamental to capital markets. Next, I describe DCF, CAPM, and risk
7 premium analyses conducted to estimate the cost of equity for benchmark groups
8 of comparable risk firms and evaluate expected earned rates of return for utilities.
9 Finally, I examine the issue of flotation costs, which are properly considered in
10 evaluating a fair ROE.

11

A. Economic Standards

12

13

14 **Q. What role does the return on common equity play in a utility's rates?**

15 A. The return on common equity is the cost of inducing and retaining investment in
16 the utility's physical plant and assets. This investment is necessary to finance the
17 asset base needed to provide utility service. Competition for investor funds is
18 intense and investors are free to invest their funds wherever they choose.
19 Investors will commit money to a particular investment only if they expect it to
20 produce a return commensurate with those from other investments with
21 comparable risks.

1 **Q. What fundamental economic principle underlies the cost of equity concept?**

2 A. The fundamental economic principle underlying the cost of equity concept is the
3 notion that investors are risk averse. In capital markets where relatively risk-free
4 assets are available (e.g., U.S. Treasury securities), investors can be induced to
5 hold riskier assets only if they are offered a premium, or additional return, above
6 the rate of return on a risk-free asset. Because all assets compete with each other
7 for investor funds, riskier assets must yield a higher expected rate of return than
8 safer assets to induce investors to invest and hold them.

9

10 Given this risk-return tradeoff, the required rate of return (k) from an asset (i) can
11 generally be expressed as:

$$12 \quad k_i = R_f + RP_i$$

13 where: R_f = Risk-free rate of return, and

14 RP_i = Risk premium required to hold riskier asset i .

15 Thus, the required rate of return for a particular asset at any time is a function of:
16 (1) the yield on risk-free assets, and (2) the asset's relative risk, with investors
17 demanding correspondingly larger risk premiums for bearing greater risk.

18 **Q. Is the cost of equity observable in the capital markets?**

19 A. No. Unlike debt capital, there is no contractually guaranteed return on common
20 equity capital since shareholders are the residual owners of the utility. Because it
21 is not readily observable, the cost of equity for a particular utility must be
22 estimated by analyzing information about capital market conditions generally,
23 assessing the relative risks of the company specifically, and employing various
24 quantitative methods that focus on investors' required rates of return. These

1 various quantitative methods typically attempt to infer investors' required rates of
2 return from stock prices, interest rates, or other capital market data.

3
4 **B. Comparable Risk Proxy Groups**

5
6 **Q. How did you implement these quantitative methods to estimate the cost of
7 common equity for FPL?**

8 A. Application of the DCF model and other quantitative methods to estimate the cost
9 of equity requires observable capital market data, such as stock prices. However,
10 even for a firm with publicly traded stock, the cost of equity can only be
11 estimated. As a result, applying quantitative models using observable market data
12 only produces an estimate that inherently includes some degree of observation
13 error. Thus, the accepted approach to increase confidence in the results is to apply
14 the DCF model and other quantitative methods to a proxy group of publicly
15 traded companies that investors regard as risk-comparable.

16 **Q. What specific proxy group of utilities did you rely on for your analysis?**

17 A. In order to reflect the risks and prospects associated with FPL's jurisdictional
18 utility operations, my DCF analyses focused on a reference group of other utilities
19 composed of those companies classified by Value Line as electric utilities with:
20 (1) an S&P corporate credit rating of "BBB+" to "A", (2) a Value Line Safety
21 Rank of "1" or "2", (3) a Value Line Financial Strength Rating of "B++" or better,
22 and (4) a market capitalization of approximately \$1.8 billion or greater. In
23 addition, I eliminated two utilities that otherwise would have been in the proxy

1 group, but are not appropriate for inclusion because they are currently involved in
2 a major merger or acquisition. These criteria resulted in a proxy group composed
3 of fourteen companies, which I will refer to as the "Utility Proxy Group."

4 **Q. What other proxy group did you consider in evaluating a fair ROE for FPL?**

5 A. Under the regulatory standards established by *Hope* and *Bluefield*, the salient
6 criterion in establishing a meaningful benchmark to evaluate a fair ROE is relative
7 risk, not the particular business activity or degree of regulation. With regulation
8 taking the place of competitive market forces, required returns for utilities should
9 be in line with those of non-utility firms of comparable risk operating under the
10 constraints of free competition. Consistent with this accepted regulatory standard,
11 I also applied the DCF model to a reference group of low-risk companies in the
12 non-utility sectors of the economy. I refer to this group as the "Non-Utility Proxy
13 Group."

14 **Q. Do utilities have to compete with non-regulated firms for capital?**

15 A. Yes. The cost of capital is an opportunity cost based on the returns that investors
16 could realize by putting their money in other alternatives. Clearly, the total
17 capital invested in utility stocks is only the tip of the iceberg of total common
18 stock investment, and there are a plethora of other enterprises available to
19 investors beyond those in the utility industry. Utilities must compete for capital,
20 not just against firms in their own industry, but with other investment
21 opportunities of comparable risk. Indeed, modern portfolio theory is built on the
22 assumption that rational investors will hold a diverse portfolio of stocks, not just
23 companies in a single industry.

1 Q. Is it consistent with the *Bluefield* and *Hope* cases to consider required returns
2 for non-utility companies?

3 A. Yes. Returns in the competitive sector of the economy form the very
4 underpinning for utility ROEs because regulation purports to serve as a substitute
5 for the actions of competitive markets. The Supreme Court has recognized that it
6 is the degree of risk, not the nature of the business, which is relevant in evaluating
7 an allowed ROE for a utility. The *Bluefield* case refers to, “business undertakings
8 attended with comparable risks and uncertainties.”³⁰ It does not restrict
9 consideration to other utilities. Similarly, the *Hope* case states:

10 By that standard the return to the equity owner should be
11 commensurate with returns on investments in other enterprises
12 having corresponding risks.³¹

13
14 As in the *Bluefield* decision, there is nothing to restrict “other enterprises” solely
15 to the utility industry.

16
17 Indeed, in teaching regulatory policy I usually observe that in the early
18 applications of the comparable earnings approach, utilities were explicitly
19 eliminated due to a concern about circularity. In other words, soon after the *Hope*
20 decision, regulatory commissions did not want to get involved in circular logic by
21 looking to the returns of utilities that were established by the same or similar
22 regulatory commissions in the same geographic region. To avoid circularity,
23 regulators looked only to the returns of non-utility companies.

1 **Q. Does consideration of the results for the Non-Utility Proxy Group make the**
2 **estimation of the cost of equity using the DCF model more reliable?**

3 A. Yes. The estimates of growth from the DCF model depend on analysts' forecasts.
4 It is possible for utility growth rates to be distorted by short-term trends in the
5 industry or the industry being in temporary favor or disfavor by analysts. The
6 result of such distortions would be to bias the DCF estimates for electric utilities.

7

8 Because the Non-Utility Proxy Group includes low risk companies from many
9 industries, it diversifies away any distortion that may be caused by the ebb and
10 flow of enthusiasm for a particular sector.

11 **Q. What criteria did you apply to develop the Non-Utility Proxy Group?**

12 A. My comparable risk proxy group of non-utility firms was composed of those U.S.
13 companies followed by Value Line that: (1) pay common dividends, (2) have a
14 Safety Rank of "1", (3) have a Financial Strength Rating of "B++" or greater; (4)
15 have a beta of 0.60 or less, and, (5) have investment grade credit ratings from
16 S&P.

17 **Q. Do these criteria provide objective evidence to evaluate investors' risk**
18 **perceptions?**

19 A. Yes. Credit ratings are assigned by independent rating agencies for the purpose of
20 providing investors with a broad assessment of the creditworthiness of a firm.
21 Ratings generally extend from triple-A (the highest) to D (in default). Other
22 symbols (e.g., "A+") are used to show relative standing within a category.
23 Because the rating agencies' evaluation includes virtually all of the factors

1 normally considered important in assessing a firm's relative credit standing,
2 corporate credit ratings provide a broad, objective measure of overall investment
3 risk that is readily available to investors. Although the credit rating agencies are
4 not immune to criticism, their rankings and analyses are widely cited in the
5 investment community and referenced by investors. Investment restrictions tied
6 to credit ratings continue to influence capital flows, and credit ratings are also
7 frequently used as a primary risk indicator in establishing proxy groups to
8 estimate the cost of common equity.

9
10 While credit ratings provide the most widely referenced benchmark for
11 investment risks, other quality rankings published by investment advisory services
12 also provide relative assessments of risks that are considered by investors in
13 forming their expectations for common stocks. Value Line's primary risk
14 indicator is its Safety Rank, which ranges from "1" (Safest) to "5" (Riskiest).
15 This overall risk measure is intended to capture the total risk of a stock, and
16 incorporates elements of stock price stability and financial strength. Given that
17 Value Line is perhaps the most widely available source of investment advisory
18 information, its Safety Rank provides useful guidance regarding the risk
19 perceptions of investors.

20
21 The Financial Strength Rating is designed as a guide to overall financial strength
22 and creditworthiness, with the key inputs including financial leverage, business
23 volatility measures, and company size. Value Line's Financial Strength Ratings

1 range from “A++” (strongest) down to “C” (weakest) in nine steps. Finally, Value
2 Line’s beta measures the volatility of a security's price relative to the market as a
3 whole. A stock that tends to respond less to market movements has a beta less
4 than 1.00, while stocks that tend to move more than the market have betas greater
5 than 1.00.

6 **Q. How do the overall risks of your proxy groups compare with FPL?**

7 A. Exhibit WEA-3 compares the Non-Utility Proxy Group with the Utility Proxy
8 Group and FPL across four key indicators of investment risk. Because FPL has
9 no publicly traded common stock, the Value Line risk measures shown reflect
10 those published for its parent, NextEra Energy.

11 **Q. Does this comparison indicate that investors would view the firms in your
12 proxy groups as risk-comparable to FPL?**

13 A. Yes. As shown in Exhibit WEA-3, the average corporate credit rating for the
14 Utility Proxy Group is “BBB+”, with ratings for the individual firms ranging from
15 “BBB+” to “A”, while the Non-Utility Proxy Group’s average credit rating is
16 slightly higher at “A”. These average ratings for the Utility and Non-Utility
17 Proxy Groups bracket FPL’s “A-” corporate credit rating.

18
19 Meanwhile, the average Value Line Safety Rank and Financial Strength Rating
20 for the Utility Proxy Group are identical to the values corresponding to FPL,
21 while the average beta value of 0.70 indicates less risk than for FPL. With respect
22 to the Non-Utility Proxy Group, its average Safety Rank, Financial Strength
23 Rating and beta all indicate less risk than the values corresponding to FPL.

1 Considered together, a comparison of these objective measures, which consider of
2 a broad spectrum of risks, including financial and business position, relative size,
3 and exposure to company specific factors, indicates that investors would likely
4 conclude that the overall investment risks for FPL are comparable to those of the
5 firms in the Utility and Non-Utility Proxy Groups.

6
7 While the impact of differences in regulation is reflected in objective risk
8 measures, my analyses conservatively focus on a lower-risk group of non-utility
9 firms. The 13 companies that make up the Non-Utility Proxy Group are
10 representative of the pinnacle of corporate America. These firms, which include
11 household names such as Coca-Cola, Colgate-Palmolive, Proctor & Gamble, and
12 Wal-Mart, have long corporate histories, well-established track records, and
13 exceedingly conservative risk profiles. The companies in my Non-Utility Proxy
14 Group have a stable track record of dividend payments, with the average dividend
15 yield for the group approaching 3%. Moreover, because of their significance and
16 name recognition, these companies receive intense scrutiny by the investment
17 community, which increases confidence that published growth estimates are
18 representative of the consensus expectations reflected in common stock prices.

C. Discounted Cash Flow Analyses

1

2

3 **Q. How is the DCF model used to estimate the cost of equity?**

4 A. DCF models attempt to replicate the market valuation process that sets the price
5 investors are willing to pay for a share of a company's stock. The model rests on
6 the assumption that investors evaluate the risks and expected rates of return from
7 all securities in the capital markets. Given these expectations, the price of each
8 stock is adjusted by the market until investors are adequately compensated for the
9 risks they bear. Therefore, we can look to the market to determine what investors
10 believe a share of common stock is worth. By estimating the cash flows investors
11 expect to receive from the stock in the way of future dividends and capital gains,
12 we can calculate their required rate of return. In other words, the cash flows that
13 investors expect from a stock are estimated, and given its current market price, we
14 can "back-into" the discount rate, or cost of equity, that investors implicitly used
15 in bidding the stock to that price.

16 **Q. What form of the DCF model is customarily used to estimate the cost of
17 equity in rate cases?**

18 A. Rather than developing annual estimates of cash flows into perpetuity, the DCF
19 model can be simplified to a "constant growth" form.³²

1
$$P_0 = \frac{D_1}{k_e - g}$$

2 where: P_0 = Current price per share;

3 D_1 = Expected dividend per share in the coming year;

4 k_e = Cost of equity; and

5 g = Investors' long-term growth expectations.

6 The cost of equity (k_e) can be isolated by rearranging terms within the equation:

7
$$k_e = \frac{D_1}{P_0} + g$$

8 This constant growth form of the DCF model recognizes that the rate of return to
9 stockholders consists of two parts: 1) dividend yield (D_1/P_0), and 2) growth (g).

10 In other words, investors expect to receive a portion of their total return in the
11 form of current dividends and the remainder through price appreciation.

12 **Q. How is the constant growth form of the DCF model typically used to estimate
13 the cost of equity?**

14 A. The first step in implementing the constant growth DCF model is to determine the
15 expected dividend yield (D_1/P_0) for the firm in question. This is usually
16 calculated based on an estimate of dividends to be paid in the coming year divided
17 by the current price of the stock. The second, and more controversial step, is to
18 estimate investors' long-term growth expectations (g) for the firm. The final step
19 is to sum the firm's dividend yield and estimated growth rate to arrive at an
20 estimate of its cost of equity.

21 **Q. How was the dividend yield for the Utility Proxy Group determined?**

22 A. Estimates of dividends to be paid by each of these utilities over the next 12

1 months, obtained from Value Line, served as D_1 . This annual dividend was then
2 divided by the average stock price for the 30 days ended November 28, 2011 to
3 arrive at the expected dividend yield for each utility. The stock prices, expected
4 dividends, and resulting dividend yields for the firms in the Utility Proxy Group
5 are presented on page 1 of Exhibit WEA-4. As shown there, dividend yields for
6 the firms in the Utility Proxy Group ranged from 2.0% to 5.3%, and averaged
7 4.1%.

8 **Q. Do the dividend yields incorporated in your DCF analyses reflect the**
9 **quarterly timing of dividend payments?**

10 A. No. The traditional annual form of the constant growth DCF model applied in my
11 testimony is based on the assumption that dividends are received as a lump sum
12 payment at the end of the year, when in fact most utilities pay dividends on a
13 quarterly basis. Because of the time value of money, a stock that pays quarterly
14 dividends will command a higher price than a stock that pays the same amount as
15 a lump sum at year-end. As a result, the annual model that is most frequently
16 relied on in regulatory proceedings understates investors' required rate of return
17 because it ignores the quarterly timing of dividend cash flows.

18 **Q. What is the next step in applying the constant growth DCF model?**

19 A. The next step is to evaluate long-term growth expectations, or "g", for the firm in
20 question. In constant growth DCF theory, earnings, dividends, book value, and
21 market price are all assumed to grow in lockstep, and the growth horizon of the
22 DCF model is infinite. But implementation of the DCF model is more than just a
23 theoretical exercise; it is an attempt to replicate the mechanism investors used to

1 arrive at observable stock prices. A wide variety of techniques can be used to
2 derive growth rates, but the only “g” that matters in applying the DCF model is
3 the value that investors expect.

4 **Q. Are historical growth rates likely to be representative of investors’**
5 **expectations for utilities?**

6 A. No. If past trends in earnings, dividends, and book value are to be representative
7 of investors’ expectations for the future, then the historical conditions giving rise
8 to these growth rates should be expected to continue. That is clearly not the case
9 for utilities, where structural and industry changes have led to declining growth in
10 dividends, earnings pressure, and, in many cases, significant write-offs. While
11 these conditions serve to distort historical growth measures, they are not
12 representative of long-term expectations for the utility industry or the forward-
13 looking expectations that investors have incorporated into current market prices.
14 As a result, historical growth measures for utilities do not currently meet the
15 requirements of the DCF model.

16 **Q. Do the growth rate projections of security analysts nonetheless consider**
17 **historical trends?**

18 A. Yes. Professional security analysts study historical trends extensively in
19 developing their projections of future earnings. Hence, to the extent there is any
20 useful information in historical patterns, that information is incorporated into
21 analysts’ growth forecasts.

1 Q. What are investors most likely to consider in developing their long-term
2 growth expectations?

3 A. While the DCF model is technically concerned with growth in dividend cash
4 flows, implementation of this DCF model is solely concerned with replicating the
5 forward-looking evaluation of real-world investors. In the case of utilities,
6 dividend growth rates are not likely to provide a meaningful guide to investors'
7 current growth expectations. This is because utilities have significantly altered
8 their dividend policies in response to more accentuated business risks in the
9 industry.³³ As a result of this trend towards a more conservative payout ratio,
10 dividend growth in the utility industry has remained largely stagnant as utilities
11 conserve financial resources to provide a hedge against heightened uncertainties.

12
13 As payout ratios for firms in the utility industry trended downward, investors'
14 focus has increasingly shifted from dividends to earnings as a measure of long-
15 term growth. Future trends in earnings per share ("EPS"), which provide the
16 source for future dividends and ultimately support share prices, play a pivotal role
17 in determining investors' long-term growth expectations. The importance of
18 earnings in evaluating investors' expectations and requirements is well accepted
19 in the investment community, and surveys of analytical techniques relied on by
20 professional analysts indicate that growth in earnings is far more influential than
21 trends in dividends per share ("DPS"). Apart from Value Line, investment
22 advisory services do not generally publish comprehensive DPS growth
23 projections, and this scarcity of dividend growth rates relative to the abundance of

1 earnings forecasts attests to their relative influence. The fact that securities
2 analysts focus on EPS growth, and that dividend growth rates are not routinely
3 published, indicates that projected EPS growth rates are likely to provide a
4 superior indicator of the future long-term growth expected by investors.

5 **Q. What are security analysts currently projecting in the way of growth for the**
6 **firms in the utility proxy group?**

7 A. The projected EPS growth rates for each of the firms in the Utility Proxy Group
8 reported by Value Line, Thomson Reuters ("IBES"), and Zacks Investment
9 Research ("Zacks") are displayed on page 2 of Exhibit WEA-4.³⁴

10 **Q. Some argue that analysts' growth rates are biased. Do you believe these**
11 **projections are inappropriate for estimating investors' required return using**
12 **the DCF model?**

13 A. No. In applying the DCF model to estimate the cost of common equity, the only
14 relevant growth rate is the forward-looking expectations of investors that are
15 captured in current stock prices. Investors, just like securities analysts and others
16 in the investment community, do not know how the future will actually turn out.
17 They can only make investment decisions based on their best estimate of what the
18 future holds in the way of long-term growth for a particular stock, and securities
19 prices are constantly adjusting to reflect their assessment of available information.

20

21 Any claims that analysts' estimates are not relied upon by investors are unfounded
22 given the reality of a competitive market for investment advice. The market for
23 investment advice is intensely competitive, and securities analysts are personally

1 and professionally motivated to provide the most accurate assessment possible of
2 future growth trends. If financial analysts' forecasts do not add value to investors'
3 decision making, then it is irrational for investors to pay for these estimates.
4 Those financial analysts who fail to provide reliable forecasts will lose out in
5 competitive markets relative to those analysts whose forecasts investors find more
6 credible. The reality that analyst estimates are routinely referenced in the
7 financial media and in investment advisory publications (*e.g.*, Value Line)
8 strongly suggests that investors use them as a basis for their expectations.

9
10 The continued success of investment services such as Thomson Reuters and Value
11 Line, and the fact that projected growth rates from such sources are widely
12 referenced, provides strong evidence that investors give considerable weight to
13 analysts' earnings projections in forming their expectations for future growth.
14 While the projections of securities analysts may be proven optimistic or
15 pessimistic in hindsight, this is irrelevant in assessing the expected growth that
16 investors have incorporated into current stock prices, and any bias in analysts'
17 forecasts – whether pessimistic or optimistic – is similarly irrelevant if investors
18 share the analysts' views. Earnings growth projections of security analysts
19 provide the most frequently referenced guide to investors' views and are widely
20 accepted in applying the DCF model. As explained in *New Regulatory Finance*:

21 Because of the dominance of institutional investors and their
22 influence on individual investors, analysts' forecasts of long-run
23 growth rates provide a sound basis for estimating required returns.

1 Financial analysts exert a strong influence on the expectations of
2 many investors who do not possess the resources to make their
3 own forecasts, that is, they are a cause of g [growth]. The accuracy
4 of these forecasts in the sense of whether they turn out to be
5 correct is not an issue here, as long as they reflect widely held
6 expectations.³⁵

7 **Q. How else are investors' expectations of future long-term growth prospects**
8 **often estimated when applying the constant growth DCF model?**

9 A. In constant growth theory, growth in book equity will be equal to the product of
10 the earnings retention ratio (one minus the dividend payout ratio) and the earned
11 rate of return on book equity. Furthermore, if the earned rate of return and the
12 payout ratio are constant over time, growth in earnings and dividends will be
13 equal to growth in book value. Despite the fact that these conditions are seldom,
14 if ever, met in practice, this "sustainable growth" approach may provide a rough
15 guide for evaluating a firm's growth prospects and is frequently proposed in
16 regulatory proceedings.

17

18 Accordingly, while I believe that analysts' EPS growth forecasts provide a
19 superior and more direct guide to investors' expectations, I have included the
20 "sustainable growth" approach for completeness. The sustainable growth rate is
21 calculated by the formula, $g = br + sv$, where "b" is the expected retention ratio, "r"
22 is the expected earned return on equity, "s" is the percent of common equity
23 expected to be issued annually as new common stock, and "v" is the equity

1 accretion rate.

2 **Q. What is the purpose of the “sv” term?**

3 A. Under DCF theory, the “sv” factor is a component of the growth rate designed to
4 capture the impact of issuing new common stock at a price above, or below, book
5 value. When a company’s stock price is greater than its book value per share, the
6 per-share contribution in excess of book value associated with new stock issues
7 will accrue to the current shareholders. This increase to the book value of existing
8 shareholders leads to higher expected earnings and dividends, with the “sv” factor
9 incorporating this additional growth component.

10 **Q. What growth rate does the earnings retention method suggest for the Utility
11 Proxy Group?**

12 A. The sustainable, “br+sv” growth rates for each firm in the Utility Proxy Group are
13 summarized on page 2 of Exhibit WEA-4, with the underlying details being
14 presented on Exhibit WEA-5. For each firm, the expected retention ratio (b) was
15 calculated based on Value Line’s projected dividends and earnings per share.
16 Likewise, each firm’s expected earned rate of return (r) was computed by dividing
17 projected earnings per share by projected net book value. Because Value Line
18 reports end-of-year book values, an adjustment was incorporated to compute an
19 average rate of return over the year, consistent with the theory underlying this
20 approach to estimating investors’ growth expectations. Meanwhile, the percent of
21 common equity expected to be issued annually as new common stock (s) was
22 equal to the product of the projected market-to-book ratio and growth in common

1 shares outstanding, while the equity accretion rate (v) was computed as 1 minus
2 the inverse of the projected market-to-book ratio.

3 **Q. What cost of equity estimates were implied for the Utility Proxy Group using**
4 **the DCF model?**

5 A. After combining the dividend yields and respective growth projections for each
6 utility, the resulting cost of equity estimates are shown on page 3 of Exhibit
7 WEA-4.

8 **Q. In evaluating the results of the constant growth DCF model, is it appropriate**
9 **to eliminate estimates that are extreme low or high outliers?**

10 A. Yes. In applying quantitative methods to estimate the cost of equity, it is essential
11 that the resulting values pass fundamental tests of reasonableness and economic
12 logic. Accordingly, DCF estimates that are implausibly low or high should be
13 eliminated when evaluating the results of this method.

14 **Q. How did you evaluate DCF estimates at the low end of the range?**

15 A. It is a basic economic principle that investors can be induced to hold more risky
16 assets only if they expect to earn a return to compensate them for their risk
17 bearing. As a result, the rate of return that investors require from a utility's
18 common stock, the most junior and riskiest of its securities, must be considerably
19 higher than the yield offered by senior, long-term debt. Consistent with this
20 principle, the DCF results must be adjusted to eliminate estimates that are
21 determined to be extreme low outliers when compared against the yields available
22 to investors from less risky utility bonds.

1 **Q. What does this test of logic imply with respect to the DCF results for the**
2 **Utility Proxy Group?**

3 A. As noted earlier, S&P corporate credit ratings for the firms in the Utility Proxy
4 Group ranged from “BBB+” to “A”, with Moody’s monthly yields on triple-B and
5 single-A bonds averaging approximately 5.1% and 4.3%, respectively, in
6 December 2011.³⁶ It is inconceivable that investors are not requiring a
7 substantially higher rate of return for holding common stock. Consistent with this
8 principle, the DCF results for the Utility Proxy Group must be adjusted to
9 eliminate estimates that are determined to be extreme low outliers when compared
10 against the yields available to investors from less risky utility bonds.

11 **Q. Have similar tests been applied by regulators?**

12 A. Yes. FERC has noted that adjustments are justified where applications of the
13 DCF approach produce illogical results. FERC evaluates DCF results against
14 observable yields on long-term public utility debt and has recognized that it is
15 appropriate to eliminate estimates that do not sufficiently exceed this threshold.
16 In a 2002 opinion establishing its current precedent for determining ROEs for
17 electric utilities, for example, FERC noted:

18 An adjustment to this data is appropriate in the case of PG&E’s
19 low-end return of 8.42 percent, which is comparable to the average
20 Moody’s “A” grade public utility bond yield of 8.06 percent, for
21 October 1999. Because investors cannot be expected to purchase
22 stock if debt, which has less risk than stock, yields essentially the

1 same return, this low-end return cannot be considered reliable in
2 this case.³⁷

3

4 Similarly, in its August 2006 decision in *Kern River Gas Transmission Company*,
5 FERC noted that:

6 [T]he 7.31 and 7.32 percent costs of equity for El Paso and
7 Williams found by the ALJ are only 110 and 122 basis points
8 above that average yield for public utility debt.³⁸

9

10 The Commission upheld the opinion of Staff and the Administrative Law Judge
11 that cost of equity estimates for these two proxy group companies “were too low
12 to be credible.”³⁹

13

14 The practice of eliminating low-end outliers has been affirmed in numerous
15 FERC proceedings,⁴⁰ and in its April 15, 2010 decision in *SoCal Edison*, FERC
16 affirmed that, “it is reasonable to exclude any company whose low-end ROE fails
17 to exceed the average bond yield by about 100 basis points or more.”⁴¹

18 **Q. What else should be considered in evaluating DCF estimates at the low end of**
19 **the range?**

20 A. As indicated earlier, while corporate bond yields have declined substantially as
21 the worst of the financial crisis has abated, it is generally expected that long-term
22 interest rates will rise as the recession ends and the economy returns to a more
23 normal pattern of growth. As shown in Exhibit WEA-6, forecasts of IHS Global

1 Insight and the EIA imply average triple-B and single-A bond yields of
2 approximately 6.6% and 6.0%, respectively, over the period 2012-2016.

3

4 The increase in debt yields anticipated by IHS Global Insight and EIA is also
5 supported by the widely-referenced Blue Chip Financial Forecasts, which projects
6 that yields on corporate bonds will climb more than 100 basis points through the
7 period 2013-2017.⁴²

8 **Q. What does this test of logic imply with respect to the DCF estimates for the**
9 **Utility Proxy Group?**

10 A. As highlighted on page 3 of Exhibit WEA-3, the low end of the range of results
11 was set by a 5.9% cost of equity estimate for Pacific Gas and Electric Company
12 (“PG&E”) Corporation. In light of the risk-return tradeoff principle and the test
13 applied in *SoCal Edison*, it is inconceivable that investors are not requiring a
14 substantially higher rate of return for holding common stock, which is the riskiest
15 of a utility’s securities. As a result, consistent with the test of economic logic
16 applied by FERC and the upward trend expected for utility bond yields, this value
17 provides little guidance as to the returns investors require from utility common
18 stocks and should be excluded.

19 **Q. Do you also recommend excluding estimates at the high end of the range of**
20 **DCF results?**

21 A. Yes. The upper end of the cost of common equity range was set by cost of equity
22 estimates of 20.7% and 18.5%. When compared with the balance of the
23 remaining estimates, these values are clearly implausible and should be excluded

1 in evaluating the results of the DCF model for the Utility Proxy Group. This is
2 also consistent with the precedent adopted by FERC, which has established that
3 estimates found to be “extreme outliers” should be disregarded in interpreting the
4 results of the DCF model.⁴³

5 **Q. What cost of common equity estimates are implied by your DCF results for**
6 **the Utility Proxy Group?**

7 A. As shown on page 3 of Exhibit WEA-4, after eliminating illogical low-end values,
8 application of the constant growth DCF model resulted in an average cost of
9 common equity estimates ranging from 9.6% to 10.3%.

10 **Q. What were the results of your DCF analysis for the Non-Utility Proxy**
11 **Group?**

12 A. I applied the DCF model to the Non-Utility Proxy Group in exactly the same
13 manner described earlier for the Utility Proxy Group. The results of my DCF
14 analysis for the Non-Utility Proxy Group are presented in Exhibit WEA-7, with
15 the sustainable, “br+sv” growth rates being developed on Exhibit WEA-8. As
16 shown on Exhibit WEA-7, after eliminating illogical low- and high-end values,
17 application of the constant growth DCF model resulted in cost of common equity
18 estimates ranging from 11.5% to 12.3%.

19 **Q. How can these DCF results for the Non-Utility Proxy Group be reconciled**
20 **against the significantly lower estimates produced for your comparable-risk**
21 **group of utilities?**

22 A. First, it is important to be clear that the higher DCF results for the Non-Utility
23 Proxy Group cannot be attributed to risk differences. As I documented earlier, the

1 risks that investors associate with the group of non-utility firms - as measured by
2 S&P's credit ratings and Value Line's Safety Rank, Financial Strength, and Beta -
3 are lower than the risks investors associate with the Utility Proxy Group and FPL.
4 The objective evidence provided by these observable risk measures rules out a
5 conclusion that the higher non-utility DCF estimates are associated with higher
6 investment risk.

7
8 Rather, the divergence between the DCF results for these two groups of utility and
9 non-utility firms can be attributed to the fact that DCF estimates invariably depart
10 from the returns that investors actually require because their expectations may not
11 be captured by the inputs to the model, particularly the assumed growth rate.
12 Because the actual cost of equity is unobservable, and DCF results inherently
13 incorporate a degree of error, the cost of equity estimates for the Non-Utility
14 Proxy Group provide an important benchmark in evaluating a fair ROE for FPL.
15 There is no basis to conclude that DCF results for a group of utilities would be
16 inherently more reliable than those for firms in the competitive sector, and the
17 divergence between the DCF estimates for the Utility and Non-Utility Proxy
18 Groups suggests that both should be considered to ensure a balanced end-result.

D. Capital Asset Pricing Model

1

2

3 **Q. Please describe the CAPM.**

4 A. The CAPM is a theory of market equilibrium that measures risk using the beta
5 coefficient. Because investors are assumed to be fully diversified, the relevant
6 risk of an individual asset (*e.g.*, common stock) is its volatility relative to the
7 market as a whole, with beta reflecting the tendency of a stock's price to follow
8 changes in the market. The CAPM is mathematically expressed as:

$$9 \quad R_j = R_f + \beta_j(R_m - R_f)$$

10 where: R_j = required rate of return for stock j ;

11 R_f = risk-free rate;

12 R_m = expected return on the market portfolio; and

13 β_j = beta, or systematic risk, for stock j .

14 **Q. How did you apply the CAPM to estimate the cost of equity?**

15 A. Application of the CAPM to the Utility Proxy Group based on a forward-looking
16 estimate for investors' required rate of return from common stocks is presented on
17 Exhibit WEA-9. In order to capture the expectations of today's investors in
18 current capital markets, the expected market rate of return was estimated by
19 conducting a DCF analysis on the dividend paying firms in the S&P 500. This is
20 directly analogous to the CAPM approach previously utilized by the FPSC Staff.⁴⁴

21

22 The dividend yield for each firm was obtained from Value Line, and the growth
23 rate was equal to the consensus earnings growth projections for each firm

1 published by IBES, with each firm's dividend yield and growth rate being
2 weighted by its proportionate share of total market value. Based on the weighted
3 average of the projections for the 373 individual firms, current estimates imply an
4 average growth rate over the next five years of 10.9%. Combining this average
5 growth rate with a year-ahead dividend yield of 2.6% results in a current cost of
6 common equity estimate for the market as a whole (R_m) of approximately 13.5%.
7 Subtracting a 3.0% risk-free rate based on the average yield on 30-year Treasury
8 bonds produced a market equity risk premium of 10.5%.

9 **Q. What was the source of the beta values you used to apply the CAPM?**

10 A. I relied on the beta values reported by Value Line, which in my experience is the
11 most widely referenced source for beta in regulatory proceedings. As noted in
12 *New Regulatory Finance*:

13 Value Line is the largest and most widely circulated independent
14 investment advisory service, and influences the expectations of a
15 large number of institutional and individual investors.... Value
16 Line betas are computed on a theoretically sound basis using a
17 broadly based market index, and they are adjusted for the
18 regression tendency of betas to converge to 1.00.⁴⁵

19 **Q What else should be considered in applying the CAPM?**

20 A. As explained by *Morningstar*:

21 One of the most remarkable discoveries of modern finance is that
22 of a relationship between firm size and return. The relationship
23 cuts across the entire size spectrum but is most evident among

1 smaller companies, which have higher returns on average than
2 larger ones.⁴⁶

3

4 Because empirical research indicates that the CAPM does not fully account for
5 observed differences in rates of return attributable to firm size, a modification is
6 required to account for this size effect.

7

8 According to the CAPM, the expected return on a security should consist of the
9 riskless rate, plus a premium to compensate for the systematic risk of the
10 particular security. The degree of systematic risk is represented by the beta
11 coefficient. The need for the size adjustment arises because differences in
12 investors' required rates of return that are related to firm size are not fully
13 captured by beta. To account for this, Morningstar has developed size premiums
14 that need to be added to the theoretical CAPM cost of equity estimates to account
15 for the level of a firm's market capitalization in determining the CAPM cost of
16 equity.⁴⁷ Accordingly, my CAPM analyses incorporated an adjustment to
17 recognize the impact of size distinctions, as measured by market capitalization.

18 **Q. What cost of equity is indicated based on this forward-looking application of**
19 **the CAPM?**

20 A. The average market capitalization of the Utility Proxy Group is \$12.9 billion.
21 Based on data from *Morningstar*, this means that the theoretical CAPM cost of
22 equity estimate must be increased by 81 basis points to account for the industry
23 group's relative size. As shown on page 1 of Exhibit WEA-9, adjusting the 10.4%

1 theoretical CAPM result to incorporate this size adjustment results in an indicated
2 cost of common equity of 11.2%.

3 **Q. Is it appropriate to consider anticipated capital market changes in applying**
4 **the CAPM?**

5 A. Yes. As discussed earlier, there is widespread consensus that interest rates will
6 increase materially as the economy continues to strengthen. As a result, current
7 bond yields are likely to understate capital market requirements at the time the
8 outcome of this proceeding becomes effective. Accordingly, in addition to the use
9 of current bond yields, I also applied the CAPM based on the forecasted long-
10 term Treasury bond yields developed based on projections published by Value
11 Line, IHS Global Insight, and Blue Chip. Incorporating projected bond yields in
12 applying the CAPM is analogous to the approach that has been adopted by the
13 FPSC staff in prior proceedings.⁴⁸

14 **Q. What cost of equity was produced by the CAPM after incorporating**
15 **forecasted bond yields?**

16 A. As shown on page 2 of Exhibit WEA-9, incorporating a forecasted Treasury bond
17 yield for 2012-2016 implied a cost of equity of approximately 10.8% for the
18 Utility Proxy Group, or 11.6% after adjusting for the impact of relative size.

19 **Q. Should the CAPM approach be applied using historical rates of return?**

20 A. No. Like the DCF model, the CAPM is an *ex-ante*, or forward-looking model
21 based on expectations of the future. As a result, in order to produce a meaningful
22 estimate of investors' required rate of return, the CAPM must be applied using
23 data that reflects the expectations of actual investors in the market. Applications

1 of the CAPM method that are based on historical data – such as realized rates of
2 return or expected returns estimated in the past – ignore the returns that investors
3 are currently requiring in the capital markets. As a result, they violate a
4 fundamental requirement of the CAPM approach.

5 **Q. Is there good reason to entirely disregard the results of historical CAPM**
6 **analyses?**

7 A. Yes. The CAPM cost of common equity estimate is calibrated from investors'
8 required risk premium between Treasury bonds and common stocks. In response
9 to heightened uncertainties, investors have repeatedly sought a safe haven in U.S.
10 government bonds and this “flight to safety” has pushed Treasury yields
11 significantly lower while yield spreads for corporate debt have widened. This
12 distortion not only impacts the absolute level of the CAPM cost of equity
13 estimate, but it affects estimated risk premiums. Economic logic would suggest
14 that investors’ required risk premium for common stocks over Treasury bonds has
15 also increased.

16
17 Meanwhile, backward-looking approaches incorrectly assume that investors’
18 assessment of the required risk premium between Treasury bonds and common
19 stocks is constant, and equal to some historical average. At no time in recent
20 history has the fallacy of this assumption been demonstrated more concretely than
21 it is today. This incongruity between investors’ current expectations and historical
22 risk premiums is particularly relevant during periods of heightened uncertainty

1 and rapidly changing capital market conditions, such as those experienced
2 recently.⁴⁹ As the FPSC Staff concluded:

3 [R]ecognizing the impact the Federal Government's unprecedented
4 intervention in the capital markets has had on the yields on long-
5 term Treasury bonds, staff believes models that relate the investor-
6 required return on equity to the yield on government securities,
7 such as the CAPM approach, produce less reliable estimates of the
8 ROE at this time.⁵⁰

9 **Q. Has the Federal Reserve continued to pursue a policy of actively managing**
10 **long-term government bond yields?**

11 A. Yes. In September 2011, the Federal Reserve announced "Operation Twist,"
12 involving the exchange of short-term Treasury instruments for longer-term
13 government bonds, in an effort to put downward pressure on long-term interest
14 rates. The ongoing potential for renewed turmoil in the capital markets has
15 certainly come to a head in recent months, with common stock prices exhibiting
16 the dramatic volatility that is indicative of heightened sensitivity to risk.

17
18 Nowhere has this been more evident than in the market for Treasury bonds, with
19 yields being pushed significantly lower due to a global "flight to safety" in the
20 face of rising political, economic, and capital market risks. In turn, this has led to
21 a dramatic increase in risk premiums, as illustrated by the spreads between triple-
22 B utility bond yields and 30-year Treasuries shown in Exhibit WEA-10. This

1 increase in the yield spread indicates that the additional compensation investors
2 demand to take on higher risks has increased. As S&P observed:

3 Standard & Poor's U.S. speculative-grade composite spread, which
4 measures the extra yield above U.S. Treasury bonds that investors
5 demand to hold the bonds of riskier companies, widened by 63% to
6 781 basis points (bps) from April 18, 2011, to Sept. 30, 2011. This
7 sharp expansion reflected the bond market's increasing aversion to
8 credit risk in an uncertain and riskier environment.... During
9 periods of stress, correlations frequently increase among risky
10 asset classes such as the relationship between the return on
11 speculative-grade bonds and the return from equities.⁵¹

12
13 Equity risk premiums cannot be observed directly, but because common stock
14 investors are the last in line with respect to their claim on a utility's cash flows,
15 higher yield spreads imply an even steeper increase in the additional return
16 required from an investment in common equity. In short, heightened capital
17 market and economic uncertainties, and the increase in risk premiums demanded
18 by investors, further undermine any reliance on historical studies to apply the
19 CAPM.

20 **Q. Did your CAPM analysis rely on geometric or arithmetic means in arriving**
21 **at an equity risk premium?**

22 A. No. Reference to arithmetic or geometric mean risk premiums is associated with
23 applications of the CAPM that depend on historical data. In order to derive an

1 estimate of the market equity risk premium under this approach, historical average
2 returns on Treasury bonds are typically subtracted from those for common stocks.
3 These average rates of return based on backward-looking data for historical time
4 periods can be derived using both arithmetic and geometric means.

5

6 As discussed above, however, my application of the CAPM was a purely forward-
7 looking approach, which is consistent with the underlying assumptions of this
8 method and the standards underlying a determination of a fair rate of return.
9 Because I looked directly at investors' current expectations in the capital markets
10 – and not at historical rates of return – my CAPM analysis did not need to
11 reference either the arithmetic or geometric mean of historical rates of return.⁵²

12 **Q. Are there selected academic studies or other sources that might measure an**
13 **equity risk premium that is less than what is indicated based on investors'**
14 **current expectations for the stocks in the S&P 500?**

15 A. There are numerous studies that examine what investors have actually realized in
16 terms of equity returns versus stocks. Similarly, there are articles suggesting what
17 investors should expect based on “building blocks” or other techniques. Further,
18 there are surveys of corporate executives and others about what they expect the
19 return differential to be over various horizons. Finally, there are projections that
20 the managers of utility pensions funds use for actuarial purposes.

21

22 None of these values are comparable to the risk premium, as I have applied it in
23 my forward-looking CAPM analyses, which is based not on some generic notion

1 of the equity risk premium but is derived from contemporaneous projections for
2 individual stocks in the S&P 500. Average realized risk premiums computed over
3 some selected time period may be an accurate representation of what was actually
4 earned in the past, but they don't answer the question as to what risk premium
5 investors were actually expecting to earn on a forward-looking basis during these
6 same time periods. Similarly, calculations of the equity risk premium developed
7 at a point in history – whether based on actual returns in prior periods or
8 contemporaneous projections – are not the same as the forward-looking
9 expectations of today's investors, which are premised on an entirely different set
10 of capital market and economic expectations.

11
12 The purpose of my analysis was to determine an allowed return that would meet
13 the regulatory requirement of allowing FPL to attract capital and maintain its
14 financial integrity. The most appropriate benchmark for a meaningful forward-
15 looking estimate of the return investors require from FPL is what investors are
16 currently requiring for other investments with which FPL must compete for
17 capital. The risk premium used in my CAPM is derived from current market data
18 and is forward-looking in the sense of using the projected earnings estimates used
19 by investors. It does not depend on analysis of past historical data on risk
20 premiums nor does it purport to identify what investors will actually realize in the
21 future, or what they should reasonably expect over the long-term. Rather it is an
22 estimate of what investors currently require when they allocate their capital to
23 competing investments. These current forward-looking required returns are the

1 touchstone of whether an authorized ROE can meet the FPSC's standard of capital
2 attraction and maintaining financial integrity.

3
4 **E. Risk Premium Approach**

5
6 **Q. Briefly describe the risk premium method.**

7 A. The risk premium method of estimating investors' required rate of return extends
8 to common stocks the risk-return tradeoff observed with bonds. The cost of
9 equity is estimated by first determining the additional return investors require to
10 forgo the relative safety of bonds and to bear the greater risks associated with
11 common stock, and by then adding this equity risk premium to the current yield
12 on bonds. Like the DCF model, the risk premium method is capital market
13 oriented. However, unlike DCF models, which indirectly impute the cost of
14 equity, risk premium methods directly estimate investors' required rate of return
15 by adding an equity risk premium to observable bond yields.

16 **Q. How did you implement the risk premium method?**

17 A. I based my estimates of equity risk premiums for electric utilities on surveys of
18 previously authorized rates of return on common equity. Authorized returns
19 presumably reflect regulatory commissions' best estimates of the cost of equity,
20 however determined, at the time they issued their final order. Such returns should
21 represent a balanced and impartial outcome that considers the need to maintain a
22 utility's financial integrity and ability to attract capital. Moreover, allowed returns
23 are an important consideration for investors and have the potential to influence

1 other observable investment parameters, including credit ratings and borrowing
2 costs. Thus, this data provides a logical and frequently referenced basis for
3 estimating equity risk premiums for regulated utilities. Using the survey approach
4 avoids the assumption that the average realized returns for stocks and bonds over
5 some historical period represent what investors expected.

6 **Q. How did you implement the risk premium approach using surveys of allowed**
7 **rates of return?**

8 A. Surveys of previously authorized rates of return on common equity are frequently
9 referenced as the basis for estimating equity risk premiums. The rates of return on
10 common equity authorized utilities by regulatory commissions across the U.S. are
11 compiled by Regulatory Research Associates and published in its *Regulatory*
12 *Focus* report. In Exhibit WEA-11, the average yield on public utility bonds is
13 subtracted from the average allowed rate of return on common equity for electric
14 utilities to calculate equity risk premiums for each year between 1974 and 2011.
15 Over this 38-year period, these equity risk premiums for electric utilities averaged
16 3.41%, and the yield on public utility bonds averaged 8.91%.

17 **Q. Is there any capital market relationship that must be considered when**
18 **implementing the risk premium method?**

19 A. Yes. There is considerable evidence that the magnitude of equity risk premiums is
20 not constant and that equity risk premiums tend to move inversely with interest
21 rates. In other words, when interest rate levels are relatively high, equity risk
22 premiums narrow, and when interest rates are relatively low, equity risk premiums
23 widen. The implication of this inverse relationship is that the cost of equity does

1 not move as much as, or in lockstep with, interest rates. Accordingly, for a 1%
2 increase or decrease in interest rates, the cost of equity may only rise or fall, say,
3 50 basis points. Therefore, when implementing the risk premium method,
4 adjustments may be required to incorporate this inverse relationship if current
5 interest rate levels have changed since the equity risk premiums were estimated.

6
7 Finally, it is important to recognize that the historical focus of the risk premium
8 studies almost certainly ensures that they fail to fully capture the significantly
9 greater risks that investors now associate with providing electric utility service.
10 As a result, they are likely to understate the cost of equity for a firm operating in
11 today's electric power industry.

12 **Q. What cost of equity is implied by surveys of allowed rates of return on**
13 **equity?**

14 **A.** Based on the regression output between the interest rates and equity risk
15 premiums displayed on page 4 of Exhibit WEA-11, the equity risk premium for
16 electric utilities increased approximately 41 basis points for each percentage point
17 drop in the yield on average public utility bonds. As illustrated on page 1 of
18 Exhibit WEA-11, with the yield on average public utility bonds in December 2011
19 being 4.47%, this implied a current equity risk premium of 5.24% for electric
20 utilities. Adding this equity risk premium to the yield on single-A utility bonds of
21 4.33% produces a current cost of equity of approximately 9.6%.

1 **Q. What cost of equity was produced by the risk premium approach after**
 2 **incorporating forecasted bond yields?**

3 A. As shown on page 2 of Exhibit WEA-11, incorporating a forecasted yield for
 4 2012-2016 and adjusting for changes in interest rates since the study period
 5 implied an equity risk premium of 4.56% for electric utilities.⁵³ Adding this
 6 equity risk premium to the average implied yield on single-A public utility bonds
 7 for 2012-2016 of 6.00% resulted in an implied cost of equity of approximately
 8 10.6%.

9

10 **F. Expected Earnings Approach**

11

12 **Q. What other benchmarks did you develop to evaluate the ROE for FPL?**

13 A. As I noted earlier, I also evaluated the ROE by reference to expected rates of
 14 return for electric utilities. Reference to rates of return available from alternative
 15 investments of comparable risk can provide an important benchmark in assessing
 16 the return necessary to assure confidence in the financial integrity of a firm and its
 17 ability to attract capital. This approach is consistent with the economic
 18 underpinnings for a fair rate of return, as reflected in the comparable earnings test
 19 established by the Supreme Court in *Hope* and *Bluefield*. Moreover, it avoids the
 20 complexities and limitations of capital market methods and instead focuses on the
 21 returns earned on book equity, which are readily available to investors.

1 **Q. What economic premise underlies the expected earnings approach?**

2 A. The simple, but powerful concept underlying the expected earnings approach is
3 that investors compare each investment alternative with the next best opportunity.
4 If the utility is unable to offer a return similar to that available from other
5 opportunities of comparable risk, investors will become unwilling to supply the
6 capital on reasonable terms. For existing investors, denying the utility an
7 opportunity to earn what is available from other similar risk alternatives prevents
8 them from earning their opportunity cost of capital. In this situation the
9 government is effectively taking the value of investors' capital without adequate
10 compensation.

11 **Q. How is the comparison of opportunity costs typically implemented?**

12 A. The traditional comparable earnings test identifies a group of companies that are
13 believed to be comparable in risk to the utility. The actual earnings of those
14 companies on the book value of their investment are then compared to the
15 allowed return of the utility. While the traditional comparable earnings test is
16 implemented using historical data taken from the accounting records, it is also
17 common to use projections of returns on book investment, such as those published
18 by recognized investment advisory publications (*e.g.*, Value Line). Because these
19 expected returns on book value equity are analogous to the allowed return on a
20 utility's rate base, this measure of opportunity costs results in a direct, "apples to
21 apples" comparison. My application of the expected earnings approach was
22 focused exclusively on forward-looking projections, not historical data.

1 Moreover, regulators do not set the returns that investors earn in the capital
2 markets – they can only establish the allowed return on the value of a utility’s
3 investment, as reflected on its accounting records. As a result, the expected
4 earnings approach provides a direct guide to ensure that the allowed ROE is
5 similar to what other utilities of comparable risk will earn on invested capital.
6 This opportunity cost test does not require theoretical models to indirectly infer
7 investors’ perceptions from stock prices or other market data. As long as the
8 proxy companies are similar in risk, their expected earned returns on invested
9 capital provide a direct benchmark for investors’ opportunity costs that is
10 independent of fluctuating stock prices, market-to-book ratios, debates over DCF
11 growth rates, or the limitations inherent in any theoretical model of investor
12 behavior.

13 **Q. What rates of return on equity are indicated for electric utilities based on the**
14 **expected earnings approach?**

15 A. Value Line reports that its analysts anticipate an average rate of return on common
16 equity for the electric utility industry as a whole of 10.5% over its forecast
17 horizon.⁵⁴ While this provides a rough guide to investors’ expectations, the
18 returns on common equity projected by Value Line over its forecast horizon for
19 the comparable-risk group of utilities are shown on Exhibit WEA-12. Consistent
20 with the rationale underlying the development of the br+sv growth rates, these
21 year-end values were converted to average returns using the same adjustment
22 factor discussed earlier and developed on Exhibit WEA-5. As shown on Exhibit

1 WEA-12, Value Line's projections for the Utility Proxy Group suggest an average
2 ROE of 12.0%.

3

4

G. Flotation Costs

5

6 **Q. What other considerations are relevant in setting the return on equity for**
7 **FPL?**

8 A. The common equity used to finance the investment in utility assets is provided
9 from either the sale of stock in the capital markets or from retained earnings not
10 paid out as dividends. When equity is raised through the sale of common stock,
11 there are costs associated with "floating" the new equity securities. These
12 flotation costs include services such as legal, accounting, and printing, as well as
13 the fees and discounts paid to compensate brokers for selling the stock to the
14 public. Also, some argue that the "market pressure" from the additional supply of
15 common stock and other market factors may further reduce the amount of funds a
16 utility nets when it issues common equity.

17 **Q. Is there an established mechanism for a utility to recognize equity issuance**
18 **costs?**

19 A. No. While debt flotation costs are recorded on the books of the utility, amortized
20 over the life of the issue, and thus increase the effective cost of debt capital, there
21 is no similar accounting treatment to ensure that equity flotation costs are
22 recorded and ultimately recognized. Alternatively, no rate of return is authorized
23 on flotation costs necessarily incurred to obtain a portion of the equity capital used

1 to finance plant. In other words, equity flotation costs are not included in a utility's
2 rate base because neither that portion of the gross proceeds from the sale of
3 common stock used to pay flotation costs is available to invest in plant and
4 equipment, nor are flotation costs capitalized as an intangible asset. Unless some
5 provision is made to recognize these issuance costs, a utility's revenue requirements
6 will not fully reflect all of the costs incurred for the use of investors' funds.
7 Because there is no accounting convention to accumulate the flotation costs
8 associated with equity issues, they must be accounted for indirectly, with an
9 upward adjustment to the cost of equity being the most logical mechanism.

10 **Q. What is the magnitude of the adjustment to the "bare bones" cost of equity to**
11 **account for issuance costs?**

12 A. While there are a number of ways in which a flotation cost adjustment can be
13 calculated, one of the most common methods used to account for flotation costs in
14 regulatory proceedings is to apply an average flotation-cost percentage to a
15 utility's dividend yield. Based on a review of the finance literature, *New*
16 *Regulatory Finance* concluded:

17 The flotation cost allowance requires an estimated adjustment to
18 the return on equity of approximately 5% to 10%, depending on
19 the size and risk of the issue.⁵⁵

20
21 Alternatively, a study of data from Morgan Stanley regarding issuance costs
22 associated with utility common stock issuances suggests an average flotation cost
23 percentage of 3.6%.⁵⁶

1 Applying these expense percentages to a representative dividend yield for a utility
2 of 4.0% implies a flotation cost adjustment on the order of 14 to 40 basis points.
3 Issuance costs are a legitimate consideration in setting the return on equity for a
4 utility, and I recommend incorporating a minimal, 15 basis-point adjustment in
5 determining a reasonable ROE range for FPL.⁵⁷

7 IV. RETURN ON EQUITY RANGE FOR FPL

8
9 **Q. What is the purpose of this section?**

10 **A.** This section addresses the economic requirements for FPL's rate of return on
11 equity. It discusses the regulatory policy reasons for avoiding a return on equity
12 that is not sufficient to maintain FPL's financial integrity and ability to attract
13 capital. This section also demonstrates the benefits to FPL's customers of an ROE
14 that reflects FPL's need for financial strength and recognizes FPL's low rates and
15 excellent service through management effectiveness. The 11.5% recommended
16 ROE remains well below the 12.25% upper end of my range, and is a reasonable
17 cost for FPL's customers to pay so investors will provide their money to FPL on
18 reasonable terms. Ensuring FPL's financial flexibility and access to capital
19 ultimately results in low cost and reliable service to customers in the long-run,
20 while assuring that Florida has private capital to develop and maintain the vital
21 electric infrastructure.

1 **A. Implications for Financial Integrity**

2

3 **Q. Why is it important to allow FPL an adequate return on equity?**

4 A. Given the importance of the utility industry to the economy and society, it is
5 essential to maintain reliable and economical service to all consumers. While
6 FPL remains committed to provide reliable electric service, a utility's ability to
7 fulfill its mandate can be compromised if it is allowed a return too low to attract
8 investors' money.

9

10 As documented earlier, the major rating agencies have warned of FPL's exposure
11 to uncertainties associated with ongoing capital expenditure requirements,
12 uncertain economic and financial market conditions, uncertain environmental
13 compliance costs, and the potential for continued energy price volatility.
14 Investors understand just how swiftly unforeseen circumstances can lead to
15 deterioration in a utility's financial condition.

16

17 While maintaining and improving the electric infrastructure for customers is
18 certainly desirable, it imposes additional financial responsibilities on FPL.
19 Coupled with FPL's inherent characteristics that require financial strength,
20 investors' fear during times of crisis requires that FPL have the flexibility
21 necessary to overcome periods of adverse capital market conditions. Without an
22 adequate ROE FPL will not be able to compete for investors' money at the very
23 time it is needed most to protect customers.

1 **Q. What role does regulation play in ensuring that FPL has access to capital**
2 **under reasonable terms and on a sustainable basis?**

3 A. Supportive regulation plays a central role in maintaining FPL's access to capital
4 on reasonable terms. Investors recognize that regulation has its own risks, and
5 that constructive regulation is a key ingredient in supporting utility credit ratings
6 and financial integrity, particularly during times of adverse conditions. Fitch
7 concluded, "[G]iven the lingering rate of unemployment and voter concerns about
8 the economy, there could well be pockets of adverse rate decisions, and those
9 companies with little financial cushion could suffer adverse effects."⁵⁸ Moody's
10 has also emphasized the need for regulatory support, concluding:

11 For the longer term, however, we are becoming increasingly
12 concerned about possible changes to our fundamental assumptions
13 about regulatory risk, particularly the prospect of a more
14 adversarial political (and therefore regulatory) environment. A
15 prolonged recessionary climate with high unemployment, or an
16 intense period of inflation, could make cost recovery more
17 uncertain.⁵⁹

18

19 S&P noted, "the quality of regulation is at the forefront of our analysis of utility
20 creditworthiness."⁶⁰

21

22 With respect to Florida specifically, the investment community expressed
23 significant concerns over the highly politicized atmosphere surrounding FPL's last

1 base rate proceedings. S&P acknowledged that FPL's credit fundamentals have
2 been aided by constructive regulation and a sound service area economy, but
3 noted:

4 Both of those pillars have been shaken in recent years as Florida,
5 and FP&L's service territory in particular, suffered during the
6 recession, and regulators have responded in ways that reflect
7 greater political influence over regulatory decisions.⁶¹

8
9 More recently, however, the rating agencies have expressed optimism that this
10 period of regulatory and political strife has been replaced by a return to a more
11 orderly and constructive climate. For example, the investment community noted
12 the regulatory clarity provided by the FPSC's approval in December 2010 of the
13 settlement agreement governing FPL's base rates. Although cautioning that
14 deterioration in the regulatory outlook could prompt a downgrade, Moody's noted
15 that FPL's current ratings, "reflect the stabilization of the political and regulatory
16 environment for investor owned utilities in Florida."⁶²

17 **Q. Does the fact that FPL operates under various cost adjustment mechanisms**
18 **warrant any adjustment in your evaluation of a fair ROE?**

19 A. No. Investors recognize that FPL is exposed to significant risks associated with
20 energy price volatility and rising costs and concerns over these risks have become
21 increasingly pronounced in the industry. The FPSC's cost adjustment
22 mechanisms are a valuable means of mitigating those risks, but they do not
23 eliminate them. Of particular concern to investors is the impact of regulatory lag

1 and cost-recovery on the utility's ability to earn its authorized return. The
2 adjustment mechanisms approved for FPL only serve to preserve FPL's
3 opportunity to earn its authorized return, as required by established regulatory
4 standards.

5
6 Moreover, adjustment mechanisms and contractual arrangements that enable
7 utilities to implement rate changes to pass-through fluctuations in fuel costs have
8 been widely prevalent in the industry and utilities increasingly benefit from a
9 wide variety of mechanisms designed to mitigate against the risks associated with
10 fluctuations in costs and regulatory lag. While not always directly analogous to
11 the specific mechanisms in effect for FPL, the objective is similar; namely, to
12 allow the utility an opportunity to earn a fair rate of return and partially attenuate
13 exposure to attrition in an era of rising costs. Reflective of this industry trend, the
14 companies in the Utility Proxy Group operate under a variety of cost adjustment
15 mechanisms, which range from riders to recover bad debt expense and post-
16 retirement employee benefit costs to adjustment clauses designed to address the
17 rising costs of environmental compliance measures.

18
19 For example, PG&E also operates under numerous balancing account
20 mechanisms that cover a significant portion of its revenue requirements and
21 effectively dampen the impact of fluctuations in electric sales and expenses on its
22 ability to recover the costs of providing service. Similarly, SCANA
23 Corporation's electric and gas utilities operate under weather normalization and

1 revenue decoupling mechanisms, as well as the ability to implement periodic rate
2 adjustments to reflect new nuclear construction costs. Moreover, in response to
3 the heightened risk associated with utilities' exposure to substantial costs for
4 environmental remediation, adjustment mechanisms designed to allow for
5 recovery of these costs outside a general rate case have become increasingly
6 prevalent. As a result, the mitigation in risks associated with utilities' ability to
7 attenuate the impact of fluctuations in costs is already reflected in the cost of
8 equity estimates developed earlier. Similarly, the firms in the Non-Utility Proxy
9 Group also have the ability to alter prices in response to rising production costs,
10 with the added flexibility to withdraw from the market altogether.

11 **Q. Do the exposures inherent to FPL highlight the need for ongoing support of**
12 **the company's financial strength and ability to attract capital on reasonable**
13 **terms?**

14 **A.** Most definitely. As discussed earlier, FPL faces a number of challenges that
15 require the relatively swift commitment of capital in order to maintain reliable
16 service and preserve low rates. For example, if federal agencies ordered FPL to
17 shutdown one or more generating units (possibly in response to security threats or
18 events far from Florida) this would impose significant reliance on wholesale
19 power markets to meet energy shortfalls. In light of its relative geographic
20 isolation on the Florida Peninsula, contracting for the resources necessary to keep
21 the lights on in the FPL service area would require strong credit and ready access
22 to cash. Similarly, weather emergencies that can devastate parts of Florida have
23 required FPL to fund enormous recovery efforts to protect the health and safety of

1 its customers and restore utility service. These massive undertakings require FPL
2 to mobilize money and credit on a scale beyond the experience of utilities
3 elsewhere in America. In addition, it is crucial that FPL maintain its ability to
4 meet the significant liquidity requirements necessary for its fuel hedging program.

5
6 Apart from this exposure to the vagaries of capital and energy market conditions,
7 FPL must simultaneously meet the long-term energy needs of its service area. To
8 continue to meet these challenges successfully and economically, it is crucial that
9 FPL receive adequate support for its credit standing. While providing an ROE
10 that is sufficient to maintain FPL's ability to attract capital, even under duress, is
11 consistent with the economic requirements embodied in the Supreme Court's
12 *Hope* and *Bluefield* decisions, it is also in customers' best interests. Ultimately, it
13 is customers and the service area economy that enjoy the benefits that come from
14 ensuring that the utility has the financial wherewithal to invest in infrastructure
15 and take whatever actions are required to ensure a reliable energy supply. By the
16 same token, customers and the service area economy suffer when the utility is
17 unable to attract necessary capital.

18 **Q. What evidence illustrates the benefits of maintaining FPL's ability to attract**
19 **capital?**

20 **A.** FPL's ability to keep pace with the growing needs of its customers demonstrates
21 the advantage that accrues to all stakeholders when the utility is able to maintain a
22 strong financial position. In recent years, FPL has spent billions of dollars to add
23 the new generation and transmission capacity dictated by the demands of a vibrant

1 service area and repair the devastation wrought by tropical storms. At the same
2 time, FPL was increasing efficiency and lowering emissions from its generating
3 facilities. Despite the associated complexities, including volatile conditions in
4 energy and capital markets, FPL has responded to these challenges while charging
5 relatively low rates to its customers.

6
7 As discussed in the testimony of FPL's witnesses, FPL has done an outstanding
8 job of meeting customers' power requirements reliably, efficiently, and at rates
9 that compare favorably with other utilities in Florida. While FPL's financial
10 strength has benefited customers and provided a strong platform for continued
11 success, regulatory actions that undermine financial strength or impair financial
12 flexibility could have swift and damaging consequences. The cost of providing
13 FPL an adequate return is small relative to the benefits of strong utility in
14 providing reliable service and fostering economic growth. And as FPL's history
15 demonstrates, financial strength leads to relatively low rates over the long run.

16
17 **B. Return on Equity Recommendation**

18
19 **Q. Please summarize the results of your analyses.**

20 **A.** The cost of equity estimates produced by the analyses described in my testimony
21 are summarized in Exhibit WEA-13. As shown there, the "bare bones" cost of
22 equity estimates (*i.e.*, excluding flotation costs) produced by the alternative
23 approaches explained in my testimony ranged from 9.6% to 12.3%. In evaluating

1 a fair ROE range for FPL from within these results, I considered the relative
 2 strengths and weaknesses inherent in each method, and the implications of
 3 quarterly dividend payments and flotation costs. In addition, my assessment also
 4 reflects the specific risks and exposures faced by FPL, and the need to consider
 5 the importance of maintaining FPL's financial flexibility. Based on my evaluation
 6 of these considerations, I concluded that my analyses indicate a fair ROE for FPL
 7 in the 10.25% to 12.25% range.

8 **Q. What then is your conclusion as to a fair ROE for FPL applicable to the 2013**
 9 **Test Year?**

10 A. After considering the potential exposures faced by FPL and the economic
 11 requirements necessary to maintain access to capital even under adverse
 12 circumstances, it is my opinion that the Commission should allow an ROE at the
 13 midpoint of my recommended range, or 11.25%, before any adder for low rates
 14 and excellent management. Apart from the results of these quantitative methods,
 15 it is crucial to recognize the importance of maintaining a strong financial position
 16 so that FPL remains prepared to respond to unforeseen events that may
 17 materialize in the future. While this imperative is reinforced by current capital
 18 market conditions, it extends well beyond the financial markets and includes the
 19 Company's ability to absorb potential shocks associated with devastating
 20 hurricanes, volatile fuel pricing, and disruptions in energy supply.

21
 22 Recent challenges in the capital markets and regulatory environments, and
 23 ongoing economic uncertainties, highlight the benefits of FPL's strong credit

1 rating in attracting the capital needed to secure reliable service at a lower cost for
2 customers. Changing course from the path of financial strength would be
3 extremely short-sighted, especially considering that a combination of events could
4 adversely impact FPL's ability to serve customers if its current financial strength
5 were not maintained.

6 **Q. In evaluating the fair ROE for FPL, is it also appropriate to recognize that**
7 **customers have benefited from FPL's low rates?**

8 A. Yes. As discussed in the testimony of FPL witness Dewhurst and other FPL
9 witnesses, the Company has distinguished itself in numerous measures of
10 operating efficiency and effectiveness while maintaining relatively low electric
11 rates compared to other Florida utilities. As a result, consumers and the service
12 area economy have benefited from FPL's efficient and cost-effective operations,
13 excellent customer service, improved reliability, and prices that have declined in
14 real terms. As S&P noted, "costs and rates are low, and reliability and customer
15 satisfaction is high."⁶³ I therefore support FPL's request that the Commission
16 approve a 25 basis point adder, or an ROE totaling 11.50%. An ROE of 11.50%
17 remains well below the 12.25% top end of my reasonable range.

18 **Q. Is an adjustment to recognize FPL's relative performance consistent with**
19 **sound regulatory policy?**

20 A. Yes. Considering exemplary performance when establishing a fair ROE from
21 within my recommended range is entirely consistent with regulatory economics
22 and past incentive mechanisms approved by the FPSC. While traditional cost of
23 service regulation has provided a foundation for the development of an efficient

1 and reliable utility system, it is not without drawbacks. One of these is a lack of
2 incentive to achieve increased efficiencies and innovate. Regulation presumably
3 serves as a substitute for the outcome of a competitive market, but unlike firms
4 operating under free competition, which can reap the benefits of efficiency and
5 innovation through higher returns, the ROE for a regulated utility is generally set
6 based on cost of equity estimates for a risk-comparable proxy group. As a result,
7 the traditional cost of service model provides little incentive to encourage and
8 support increased efficiencies. Frequently, the results of the regulatory process
9 are asymmetric, with cost savings associated with innovations and exemplary
10 management being passed on to customers, while less successful endeavors are
11 disallowed, penalized, and absorbed by investors.

12
13 This potential inequity was specifically addressed by the Florida Legislature,
14 which granted the FPSC the statutory authority to explicitly consider relative
15 performance when setting rates for utility service.⁶⁴ Similarly, the Florida
16 Supreme Court has recognized that adjustments to the ROE represent “the only
17 incentive available” to reward efficiency or punish mismanagement.⁶⁵ Thus,
18 including an award for exemplary management above the minimum fair ROE
19 required by investors is entirely consistent with the current regulatory regime in
20 Florida.

1 Similarly, it is also consistent with past actions of the FPSC. For example, the
2 Commission has formerly approved agreements providing for earnings sharing
3 between FPL's customers and shareholders, and has adjusted allowed ROEs –
4 both upward and downward – to recognize relative performance.⁶⁶ Considering
5 FPL's relative performance in establishing the ROE in this case would further
6 confirm the FPSC's commitment to foster an environment in which customers are
7 assured reliable service at reasonable rates, while stockholders are fairly treated.

8 9 V. CAPITAL STRUCTURE

10
11 **Q. Is an evaluation of the capital structure maintained by a utility relevant in
12 assessing its return on equity?**

13 **A.** Yes. Other things equal, a higher debt ratio, or lower common equity ratio,
14 translates into increased financial risk for all investors. A greater amount of debt
15 means more investors have a senior claim on available cash flow, thereby
16 reducing the certainty that each will receive his contractual payments. This
17 increases the risks to which lenders are exposed, and they require correspondingly
18 higher rates of interest. From common shareholders' standpoint, a higher debt
19 ratio means that there are proportionately more investors ahead of them, thereby
20 increasing the uncertainty as to the amount of cash flow, if any, that will remain.

1 **Q. What equity ratio is implied by FPL's requested capital structure for the**
2 **2013 Test Year?**

3 A. As discussed in the testimony of FPL witness Dewhurst, FPL's capital structure
4 based on investor sources results in an equity ratio of 59.6%.

5 **Q. Does this provide a representative basis on which to evaluate FPL's capital**
6 **structure?**

7 A. No. Depending on their specific attributes, contractual agreements that obligate
8 the utility to make specified payments may be treated as debt in evaluating a
9 utility's financial risk. Because power purchase agreements typically obligate the
10 utility to make specified minimum contractual payments akin to those associated
11 with traditional debt financing, investors consider a portion of these commitments
12 as debt in evaluating total financial risks. The implications of purchased power
13 commitments and other off-balance-sheet obligations have been repeatedly cited
14 by major bond rating agencies in connection with assessments of utility financial
15 risks. Because bond ratings agencies and investors consider the debt impact of
16 such fixed obligations in assessing a utility's financial position, they imply greater
17 risk and reduced financial flexibility.

18

19 As discussed earlier, a significant portion of FPL's power requirements are
20 currently obtained through purchased power contracts. These contractual
21 payment obligations are fixed commitments with debt-like characteristics and are
22 properly considered when evaluating the financial risks implied by FPL's capital
23 structure. S&P reported that it adjusts FPL's current capitalization to include

1 approximately \$949 million in imputed debt from off-balance sheet obligations.⁶⁷
2 Unless the Company takes action to offset this additional financial risk by
3 maintaining a higher equity ratio, the resulting leverage will weaken FPL's
4 creditworthiness, implying a higher required rate of return to compensate
5 investors for the greater risks.⁶⁸

6 **Q. What capital structure is implied for FPL's 2013 Test Year once the off-**
7 **balance sheet obligations associated with purchased power contracts are**
8 **incorporated?**

9 A. Based on S&P's quantification, an upward adjustment to long-term debt of \$949
10 million was incorporated for 2013 to account for the debt equivalent attributed to
11 FPL's off-balance sheet obligations. As shown in Exhibit WEA-14, this results in
12 an adjusted common equity ratio of 56.3%.

13
14 This adjustment not only reflect the investment community's evaluation of FPL's
15 financial risks, it is also consistent with past decisions of the FPSC, which have
16 acknowledged that an adjustment is appropriate to address the capital structure
17 impact associated with purchased power.

18 **Q. How can FPL's requested capital structure be evaluated?**

19 A. It is generally accepted that the norms established by comparable firms provide
20 one valid benchmark against which to evaluate the reasonableness of a utility's
21 capital structure. The capital structure maintained by other electric utilities should
22 reflect their collective efforts to finance themselves so as to minimize capital costs
23 while preserving their financial integrity and ability to attract capital. Moreover,

1 these industry capital structures should also incorporate the requirements of
2 investors (both debt and equity), as well as the influence of regulators.

3 **Q. What capitalization ratios are maintained by other electric utility operating**
4 **companies?**

5 A. Exhibit WEA-15 displays capital structure data at year-end 2010 for the group of
6 electric utility operating companies owned by the firms in the Utility Proxy Group
7 used to estimate the cost of equity. As shown there, common equity ratios for
8 these electric utilities ranged from 44.0% to 62.9% and averaged 53.8%.
9 Incorporating the same short-term debt ratio reflected in FPL's 2013 capitalization
10 of approximately 2.2% results in an average common equity ratio for this group of
11 other utilities of 52.6%.

12 **Q. What was the average capitalization maintained by the Utility Proxy Group?**

13 A. As shown on Exhibit WEA-16, for the nineteen firms in the Utility Proxy Group,
14 common equity ratios at December 31, 2010 ranged between 30.9% and 52.4%
15 and averaged 45.9%. Adjusting the average capitalization to include short-term
16 debt in the same proportion as FPL would result in an adjusted equity ratio of
17 44.9%.

18 **Q. What capitalization is representative for the Utility Proxy Group going**
19 **forward?**

20 A. As shown on Exhibit WEA-16, Value Line expects an average common equity
21 ratio for the Utility Proxy Group of 48.1% for its three-to-five year forecast
22 horizon, with the individual common equity ratios ranging from 35.0% to 54.5%.

1 Adjusting the average capitalization to include short-term debt in the same
2 proportion as FPL would result in an adjusted equity ratio of 47.1%.

3 **Q. What other benchmarks are relevant in assessing FPL's capital structure?**

4 A. From an investor's perspective, the relevant capital structure is based on the
5 market values of securities because investors can only buy and sell securities at
6 market value. To be able to raise capital, companies must pay returns that are
7 competitive at the current market prices of their securities, not the embedded book
8 value of the mix of stocks and bonds. As a result, the market value capitalization
9 for the firms in the Utility Proxy Group also serves as a benchmark in evaluating
10 FPL's capital structure.

11

12 As shown on Exhibit WEA-17, at year-end 2010, the market value capitalization
13 for the firms in the Utility Proxy Group implied an average common equity ratio
14 of 59.7%, or 58.9% based on Value Line's projections for its 2014-16 forecast
15 horizon. Adjusting these ratios to consider FPL's short-term debt balances would
16 result in adjusted equity ratios of 58.4% and 57.6%, respectively.

17 **Q. What implication does the increasing risk of the utility industry have for the
18 capital structures maintained by utilities?**

19 A. As discussed earlier, utilities are facing rising cost structures, significant capital
20 investment plans, energy market volatility, uncertainties over accommodating
21 future environmental mandates, and ongoing regulatory risks. Coupled with the
22 potential for turmoil in capital markets, these considerations warrant a stronger
23 balance sheet to deal with an increasingly uncertain environment. A more

1 conservative financial profile, in the form of a higher common equity ratio, is
2 consistent with increasing uncertainties and the need to maintain the continuous
3 access to capital that is required to fund operations and necessary system
4 investment, even during times of adverse capital market conditions.

5
6 Moody's has repeatedly warned investors of the risks associated with debt
7 leverage and fixed obligations and advised utilities not to squander the
8 opportunity to strengthen the balance sheet as a buffer against future
9 uncertainties.⁶⁹ As Moody's concluded:

10 From a credit perspective, we believe a strong balance sheet
11 coupled with abundant sources of liquidity represents one of the
12 best defenses against business and operating risk and potential
13 negative ratings actions.⁷⁰

14
15 Similarly, S&P noted that, "we generally consider a debt to capital level of 50% or
16 greater to be aggressive or highly leveraged for utilities."⁷¹ Fitch affirmed that it
17 expects regulated utilities to employ "a judicious mix of debt and equity to
18 finance high levels of planned investments."⁷² More recently, Moody's affirmed
19 that it expects regulated utilities to strengthen their balance sheets in order "to
20 prepare for more challenging business conditions."⁷³ This is especially the case
21 for FPL, which faces the prospect of financing significant capital expansion plans
22 in a turbulent market while at the same time maintaining its ability to respond to
23 other significant challenges.

1 Q. What did you conclude regarding the reasonableness of FPL's requested
2 capital structure?

3 A. Based on my evaluation, I concluded that the 59.6% common equity ratio
4 requested by FPL represents a reasonable mix of capital sources from which to
5 calculate FPL's overall rate of return. Although this adjusted common equity ratio
6 is higher than the average book value equity ratio currently maintained by the
7 group of electric utility operating companies, it is well within the range of
8 individual results for this reference group, below the average market value equity
9 capitalization, and consistent with the trend towards lower financial leverage
10 expected for the industry. As discussed earlier, it is also consistent with the
11 relatively greater financial strength required to counterbalance the various
12 exposures faced by FPL.

13

14 While industry averages provide one benchmark for comparison, each firm must
15 select its capitalization based on the risks and prospects it faces, as well as its
16 specific needs to access the capital markets. A public utility with an obligation to
17 serve must maintain ready access to capital under reasonable terms so that it can
18 meet the service requirements of its customers. The need for access becomes
19 even more important when the company has capital requirements over a period of
20 years, and financing must be continuously available, even during unfavorable
21 capital market conditions.

1 Financial flexibility plays a crucial role in ensuring the wherewithal to meet the
2 needs of customers, and utilities with higher leverage may be foreclosed from
3 additional borrowing, especially during times of stress. FPL's capital structure
4 reflects the Company's ongoing efforts to maintain its credit standing and support
5 access to capital on reasonable terms. The reasonableness of FPL's capital
6 structure is reinforced by the ongoing uncertainties associated with the electric
7 power industry, the need to accommodate the specific exposures faced by FPL,
8 and the importance of supporting continued system investment, even during times
9 of adverse industry or market conditions.

10 **Q. Does this conclude your direct testimony?**

11 **A. Yes.**

1 BY MR. GUYTON:

2 Q Are you sponsoring Exhibits WEA-1 through 18,
3 which have been identified as Exhibits 193 through 210?

4 A Yes, sir.

5 Q And is the information contained in those exhibits
6 true and correct to the best of your knowledge and belief?

7 A Yes.

8 Q Please summarize your testimony for the
9 Commission.

10 A Good afternoon, Commissioners. I'm Bill Avera.
11 I pronounce my name Avera, even though it's an Hispanic name
12 because my family didn't survive the name leaving Florida and
13 going to Georgia. So I hope -- there is some confusion.

14 My testimony deals with return on equity, ROE, and
15 capital structure. I present in my testimony analyses to
16 support a reasonable range for a fair ROE of FPL from 10.25
17 to 12.25. And I find and give evidence to support that the
18 midpoint of 11.25 is a reasonable and fair return for FPL.

19 Now, to get to that conclusion, I considered a
20 number of factors. First, I did four standard accepted
21 analyses on a group of comparable utilities. I chose 14
22 comparable utilities where the information was available and
23 ran those analyses.

24 Also, recognizing that investors have choices, and
25 they not only invest in utilities, but they invest in other

1 companies and hold diversified portfolios, I selected a group
2 of 13 extremely low risk, mature, recognized blue-chip
3 companies and conducted a DCF analysis on those companies.

4 Having conducted these analyses, I then looked to
5 where we should position FPL in the reasonable range, and I
6 considered the inherent risk that FPL faces and its
7 challenges because of its unique characteristics. And then
8 I also considered flotation costs and the quarterly payment
9 of dividends to come up with my reasonable range.

10 My testimony also deals with the ROE adder. Now,
11 my role is to give the regulatory philosophy behind the
12 adder, how it is sound regulation, how it's consistent with
13 what this Commission has done in other cases and how it
14 models the way free enterprise markets work.

15 Others present the facts and figures to support
16 that FPL has a record of superior customer service, low
17 rates, efficiency and reliability, and excellence in
18 management that support the adder.

19 And finally, my testimony deals with the issue
20 of capital structure. I show that the capital structure
21 presented by Mr. Dewhurst is the actual capital structure of
22 the company and is an appropriate capital structure. It is
23 reasonable and it's in the customer's interest that that
24 capital structure be used.

25 Now, my suggested 11.5 ROE and the actual capital

1 structure is reasonable and is a good deal for customers
2 because investors have choices. They have many places vying
3 for their money and they will not make money available to FPL
4 unless its return is commensurate with its risk.

5 We have seen that this company has been challenged
6 by the actions of the market when in 2010 the order was
7 disappointing and shocking. And then we saw later in 2010,
8 when the settlement gave the company an opportunity to earn a
9 reasonable return, the financial position stabilized. This
10 is important to customers.

11 A financially strong company can get a better deal
12 for customers. It pays less for debt, it is in a better
13 position to negotiate with vendors, it is in a better
14 position to get fuel, it's in a better position to hedge its
15 fuel.

16 FPL is exposed to storms, it has nuclear power, it
17 has natural gas, it's located at the end of a peninsula, and
18 it has an economically vulnerable service area. Now, some
19 utilities have these characteristics but FPL is unique in the
20 interaction of these characteristics. And that's why it's so
21 important for FPL to maintain strength.

22 What we saw when the market was disappointed by
23 the Commission's actions, bond ratings went down and
24 ultimately the customers would have suffered. Fortunately,
25 there was an agreement which allowed the company to earn 11

1 percent -- actually earn 11 percent -- and that worked to the
2 benefit of the customers. Thank you.

3 CHAIRMAN BRISE: Thank you, Dr. Avera.

4 MR. GUYTON: We tender Dr. Avera for cross.

5 MR. YOUNG: Mr. Chairman, the parties have
6 graciously agreed that I can go first. And with that,
7 Staff -- in lieu of Staff's cross, Staff is going to
8 request that what is identified as hearing Exhibit 112
9 on the comprehensive exhibit list be marked and moved
10 into the record. This will be amended to include the
11 late filed deposition exhibits that the parties have
12 received. And I think we are trying to locate
13 Dr. Avera's errata sheet, which was sent out this
14 morning or late yesterday.

15 CHAIRMAN BRISE: Okay, are there any objections?

16 MR. GUYTON: FPL has no objections. That's all
17 part of 112?

18 MR. YOUNG: Yes.

19 MR. MOYLE: FIPUG has no objections but is unclear
20 with respect to the deposition is 112 and then there's
21 another exhibit. Is that part of 112 or 113, or --

22 MR. YOUNG: That's part of 112.

23 MR. MOYLE: Okay, so two 112s. Got it.

24 CHAIRMAN BRISE: Any further objections or
25 questions on this exhibit? All right, seeing none,

1 thank you very much. So now we'll deal with the moving
2 in a little bit later.

3 (Exhibit 112 marked for identification.)

4 CHAIRMAN BRISE: Mr. Young, is that it?

5 MR. YOUNG: I'm done.

6 CHAIRMAN BRISE: Okay. I wasn't sure with the
7 errata if you had found it or not.

8 MR. GUYTON: It's in the process of being copied,
9 Mr. Chairman.

10 CHAIRMAN BRISE: Okay. All right, FIPUG? Just so
11 that you know, we'll be taking our afternoon sort of
12 dinner break at 5:00, so manage yourself accordingly.
13 You know, you can come back and continue your questions
14 post that time --

15 MR. MOYLE: Okay.

16 CHAIRMAN BRISE: -- if necessary.

17 MR. MOYLE: Thank you. And maybe just right before
18 the break also we can deal with the errata. FIPUG has
19 no objection to any of the exhibits and any of that.

20 CROSS EXAMINATION

21 BY MR. MOYLE:

22 Q Good afternoon --

23 A Good afternoon, Mr. Moyle. Good to see you.

24 Q -- Mr. Avera. Thank you for the help on the
25 pronunciation. I've heard it a couple of ways and I'm sure

1 you've heard it a lot more often a couple of ways than I
2 have.

3 A Yes, sir.

4 Q You have not been here throughout much of this
5 hearing, correct?

6 A Well, I've watched a good deal of it since Tuesday
7 afternoon on the television.

8 Q Okay. There's a provision in the order that the
9 Chairman has entered and he has repeatedly directed
10 witnesses, if a question is phrased or posed to solicit a yes
11 or no answer, that the witness answer the question yes or no.
12 Can you comply with that order?

13 A Yes.

14 Q I was hoping that would be your answer, and thank
15 you. I have some introductory questions. In your opening
16 you talked about investors having choices and capital seeking
17 places where it can earn the best return for the lowest risk.
18 And you also have DCF models and a lot of ways to calculate
19 an ROE.

20 And with respect to your testimony about what
21 investors will or will not do, I am not sure whether that is
22 testimony based on facts or theory. And if you could -- if
23 you could -- is it based on theory?

24 A Yes, along with factual inputs and necessary
25 professional judgments.

1 Q Okay. So when we talk about investors, then I'm
2 correct in assuming largely that's theoretical, correct?

3 A No. Investors exist, they have money, and if they
4 don't make the money available to FPL, the lights will go
5 out.

6 Q On a couple of -- let me direct you to page 27,
7 line 15. You have two places in your testimony. One you
8 talk about -- well, let me just take them one at a time: 27,
9 15.

10 A Yes, sir.

11 Q You use the phrase political brinkmanship over
12 raising the Federal debt ceiling. What are you referring to
13 there?

14 A I'm referring to that period of time when Congress
15 could not reach a conclusion to extend the debt limit, and
16 had they not been successful, the United States of America
17 would have defaulted on its obligations.

18 Q But Congress was successful, correct?

19 A Yes, sir, they were. Thank you, Congress.

20 Q And I guess successful may be with a small "S" in
21 that in a lot of respects they've made some budgets decisions
22 but have put a trigger in place that said they need to make
23 further budget decisions or else certain cuts will befall the
24 military and domestic programs; is that a fair
25 characterization?

1 A Yes, it's sometimes called the fiscal cliff. And
2 also there was a down-rating of the credit rating of the
3 country. It's a sovereign debt in part because of that
4 episode.

5 Q Okay. And I have an exhibit that I'd like to have
6 handed out, if I could.

7 CHAIRMAN BRISE: This will be marked as 543. Any
8 objections?

9 (Exhibit 543 marked for identification.)

10 MR. GUYTON: I'm a little bit hard-pressed to raise
11 an objection until I hear the questions. This looks to
12 be hearsay on the part of the witness, and I don't know
13 how the exhibit is to be used, Mr. Chair.

14 MR. MOYLE: Sounds like he needs me to pose my
15 question first.

16 CHAIRMAN BRISE: That's what it sounds like to me,
17 too.

18 BY MR. MOYLE:

19 Q Mr. Avera, take a minute if you would and maybe
20 just review the first few paragraphs of the exhibit. It's
21 entitled Florida -- I'm sorry -- Federal Budget, quote,
22 unquote, Sequestration Threatens Florida Military Bases.

23 A Yes, sir.

24 Q And the questions that I just asked you with
25 respect to your reference to the political brinkmanship and

1 your relating of the actions of Congress, is it your
2 understanding that this 1.2 billion -- I'm sorry, 1.2
3 trillion trigger is set to take place in January, as
4 reflected in the second paragraph of this article?

5 A Yes, sir.

6 Q And do you have any understanding with respect to
7 the impacts that this sequestration may have on the defense
8 industry in the state of Florida?

9 A Yes, sir. I'm a retired military -- retired Naval
10 officer, and I spent many happy years sailing ships out of
11 Mayport. So I know that the military is important to this
12 state.

13 Q And I guess the other point is are you aware that
14 Florida is working hard to -- as it says in the article -- to
15 make the state one of the nation's most military friendly?

16 A Yes, sir.

17 Q That's all I have. Page six, line 18 -- I'm
18 sorry, I got that wrong. Let me refer you to page 11, line
19 10. You were asked the question can the Florida Public
20 Service Commission be confident that allowing an ROE in the
21 range of 10.25 percent to 12.25 percent range represents a
22 reasonable cost for FPL's customers. And you say yes,
23 correct?

24 A Yes.

25 Q Am I correct in understanding your testimony,

1 then, that your recommendation with respect to 11.25 is not
2 the only number that in your judgment would be reasonable,
3 correct?

4 A That is correct. It is the midpoint of a range
5 from 10.25 to 12.25, and in my judgment that represents a
6 reasonable range for this Commission to consider the return
7 on equity for FPL in this case.

8 Q Okay. And you would likewise agree that given
9 your testimony, all your testimony here speaks to a number
10 that includes 10.25, correct? Yes?

11 A That is correct, plus if the Commission agrees
12 with the equity adder there would be another 25 basis points.

13 Q All right. You -- page nine, line three, you made
14 some comments in your opening about the last rate case. I
15 think you said it was disappointing and shocking in your
16 opening, correct?

17 A Yes, sir.

18 Q And I assume that that is your opinion that you're
19 expressing, correct?

20 A No, sir.

21 Q So you don't have an opinion with respect to the
22 rate case order?

23 A Well, I have an opinion but my opinion doesn't
24 matter. What matters is how investors reacted. And those
25 words -- disappointing, shocked -- were in Value Line. There

1 have been similar descriptions by S&P and Moody's when they
2 downgraded FPL's ratings.

3 So Bill Avera's ideas are important to me and my
4 family, but this Commission needs to be concerned about the
5 investment community, because they're the ones that make
6 capital available and decide if FPL can get capital in good
7 times and bad. When the storms come, when the financial
8 turmoil comes, it can get capital to save the customers money
9 in the long run.

10 Q But you would agree, would you not, that this
11 Commission also needs to be keenly concerned about the
12 interest of Floridians who receive power from Florida Power &
13 Light, correct?

14 A Absolutely. As I mention in my testimony, this
15 Commission is the agent for the company.

16 MR. MOYLE: Mr. Chair, I'm only interested in the
17 yes. I don't need the additional.

18 BY MR. MOYLE:

19 Q You state, on line three, that FPL's customers
20 become exposed to less reliable and more expensive electric
21 service, correct?

22 A Yes.

23 Q And you stand by that comment?

24 A Yes, sir. Yes, sir. In the long run, it will be
25 more expensive if the strength goes down.

1 Q Okay. But with respect to -- your next sentence
2 talks about the 2010 rate order. Am I correct in assuming
3 that you were commenting on the 2010 decision in this answer
4 to this question?

5 A Yes, sir.

6 Q Okay. So you say that the customers have been
7 exposed to less reliable service. Have you read Mr. Reed's
8 testimony? Do you know Mr. Reed?

9 A Yes, sir.

10 Q And have you read his testimony?

11 A Parts of it, yes, sir.

12 Q Are you aware that Mr. Reed provided testimony
13 that FP&L ranks high in reliability even after the rate case?

14 A Yes, sir.

15 Q Okay. And with respect to more expensive electric
16 service, you don't have any evidence that you can point to
17 that FPL's ratepayers -- you use the word customers -- but
18 that they have incurred additional cost with respect to the
19 price -- the price of electricity following the order in the
20 2010 rate case, am I correct?

21 A Yes, sir. As we discussed in my deposition, it's
22 the long run effect that's important. If you turn to page
23 six of my testimony, the Staff, in their report, gave
24 examples of customers paying more.

25 Q I appreciate that. And you agreed in the

1 deposition and you agree with me today that with respect to
2 your statement about the customers becoming exposed to less
3 reliable and more expensive electricity that there's no
4 evidence, there's no facts supporting that, and that your
5 view on that is looking down the road as to what may happen,
6 correct?

7 A No, sir.

8 MR. GUYTON: I object. He's characterizing --
9 mischaracterizing testimony taken out of a deposition.
10 We have the witness here. He can ask the witness the
11 question that he wants to ask him rather than
12 recharacterizing what Dr. Avera supposedly said in
13 deposition.

14 MR. MOYLE: I thought he was getting to that point
15 in his live testimony. I mean, I can clarify it, but --

16 CHAIRMAN BRISE: If you can clarify the question.
17 Make it direct.

18 BY MR. MOYLE:

19 Q Mr. -- Mr. Avera -- Avera, I'm sorry -- there's no
20 evidence, looking factually, and looking in a retrospective
21 vantage point, that FPL's customers have had to experience
22 less reliable electrical service following the last rate
23 case, correct?

24 A No, there is no evidence. But had it extended and
25 the settlement not been reached, then the bond ratings that

1 occurred, D ratings, would have likely cumulated and
2 ultimately customers would be exposed, as I say in the
3 testimony, to less reliable and more expensive energy.

4 Q And we're going to talk about what would have
5 happened, but I just am trying to get you to agree that
6 factually, from a retrospective basis, there's no evidence to
7 support either customers being exposed to less reliable
8 energy or more expensive electric service; we can agree with
9 that, correct?

10 A No, we can't.

11 MR. GUYTON: Objection, asked and answered.

12 BY MR. MOYLE:

13 Q Well, I asked it with respect to less reliable and
14 I thought I got an answer. I'll ask it with respect to more
15 expensive, if we need to do it that way.

16 From a retrospective analysis, following the last
17 rate case with FP&L, you have no evidence with respect to
18 customers -- customers incurring any monetary loss in having
19 to pay more for electric service, correct?

20 A Correct, for that period. But they were exposed
21 to a scenario where reliability and cost could have
22 deteriorated.

23 Q But you would agree with me that from a
24 ratepayer's perspective -- you talk a lot about from an
25 investor's perspective -- from a ratepayer's perspective,

1 being exposed to something where it doesn't take any money
2 out of your pocket as compared to having something that takes
3 money out of your pocket, that there's a pretty big
4 difference between those two, correct?

5 A No, you and I have insurance because we're exposed
6 to fires and traffic accidents and we want our family
7 protected if something happens to us. So that's the reason
8 we have insurance, to protect us from those risks.

9 Q All right. And just one final point on this line,
10 and maybe we'll take a break. But with respect to the answer
11 of the question I asked you, I thought I heard you say that
12 your concern was -- you used the word could, and, you know,
13 prospective -- your concerns are more prospective as compared
14 to looking at a retroactive factual analysis, is that right?

15 A Yes, but it is factual. It is a fact, and I
16 present the facts.

17 MR. MOYLE: Okay. Okay, that may be --

18 CHAIRMAN BRISE: This is a good time to break. It
19 is 5:02 so we'll return at about 6:00.

CERTIFICATE OF REPORTER

STATE OF FLORIDA)
COUNTY OF LEON)

I, LAURA MOUNTAIN, Court Reporter, do hereby
certify that I was authorized to and did
stenographically report the foregoing proceedings;
and that the transcript is a true record of the
aforesaid proceedings.

I FURTHER CERTIFY that I am not a relative,
employee, attorney or counsel of any of the parties,
nor am I a relative or employee of any of the parties'
attorney or counsel connected with the action, nor am
I financially interested in the action.

Dated this 28th day of August, 2012.

LAURA MOUNTAIN, RPR
Post Office Box 13461
Tallahassee, Florida 32317
