COMMISSION  
CLERK

November 24, 2014

Chairman Art Graham  
Florida Public Service Commission  
2540 Shumard Oak Blvd.  
Tallahassee, FL 32399-0850

RE: Docket #s 130199-EI, 130200-EI, 130201-EI, 130202-EI, 130203-EI, 130204 EI, and  
130205-EI

Dear Chairman Graham:

Attached, please find copies of a petition signed by more than 1000 Floridians who support the Florida NAACP's intervention into the Florida Demand Side Management docket. After learning about the issue, several family members, friends and I decided to gather signatures from across the state to demonstrate support for their efforts.

We are very thankful that our voices were represented on this very important issue and because of the FL NAACP, we actually had a seat at the table.

We hope the Florida Public Service Commission will consider the FL NAACP's concerns regarding the negative impact of renewable energy policies on our communities as you move forward because they SPEAK FOR US---low and fixed income consumers.

I can be reached at the number provided below if you have any questions.

Sincerely,

Claudia Campbell  
Jacksonville, Florida  
904-708-4776

Cc: Commissioner Lisa Polak Edgar  
Commissioner Eduardo E. Balbis  
Commissioner Ronald Brise  
Commissioner Julie Brown

**PETITION**  
**Urging Support of Fair, Affordable, and**  
**Equitable Renewable Energy Policies for ALL Floridians**

The Florida State Conference of the NAACP supports clean energy and all of the benefits it promises, especially to low-income, working class and minority communities. We encourage the development of more clean energy programs and initiatives in which ALL communities can participate.

Currently, the Florida Public Service Commission (FPSC) is considering rules that would increase energy efficiency in the state and increase the development of renewable energy sources such as solar, as required by the Florida Energy Efficiency and Conservation Act (FEECA). On **Tuesday, November 25**, the Commission is expected to vote on whether to continue, revise or eliminate many of these energy efficiency programs.

This year, the NAACP Florida State Conference intervened and filed a brief at the FPSC urging that the companies' existing Solar Pilot Programs, which subsidize wealthy homeowners' rooftop solar installations, not be extended because of the Pilot Programs' negative impact on low-income, working class and minority communities. By discontinuing the Pilot Programs unless their regressive impact is corrected, the Commission can ensure that renewable energy programs are not being subsidized on the backs of non-affluent, financially struggling, non-participating ratepayers.

The undersigned encourage the Commission to design renewable energy efficiency programs, including solar, in which everyone can benefit. The undersigned further request that the Florida Public Service Commission, the Office of Public Counsel, and the regulated companies develop more energy assistance programs like the federally funded Low Income Home Energy Assistance Program (LIHEAP) and Florida's Emergency Home Energy Assistance for the Elderly Program.

**We ask that from this point forward, the Florida Public Service Commission adopt renewable energy policies that make participation in energy efficiency programs affordable for ALL Floridians.**

**PETITION**  
**Urging Support of Fair, Affordable, and**  
**Equitable Renewable Energy Policies for ALL Floridians**

The Florida State Conference of the NAACP supports clean energy and all of the benefits it promises, especially to low-income, working class and minority communities. We encourage the development of more clean energy programs and initiatives in which ALL communities can participate.

Currently, the Florida Public Service Commission (FPSC) is considering rules that would increase energy efficiency in the state and increase the development of renewable energy sources such as solar, as required by the Florida Energy Efficiency and Conservation Act (FEECA). On **Tuesday, November 25**, the Commission is expected to vote on whether to continue, revise or eliminate many of these energy efficiency programs.

This year, the NAACP Florida State Conference intervened and filed a brief at the FPSC urging that the companies' existing Solar Pilot Programs, which subsidize wealthy homeowners' rooftop solar installations, not be extended because of the Pilot Programs' negative impact on low-income, working class and minority communities. By discontinuing the Pilot Programs unless their regressive impact is corrected, the Commission can ensure that renewable energy programs are not being subsidized on the backs of non-affluent, financially struggling, non-participating ratepayers.

The undersigned encourage the Commission to design renewable energy efficiency programs, including solar, in which everyone can benefit. The undersigned further request that the Florida Public Service Commission, the Office of Public Counsel, and the regulated companies develop more energy assistance programs like the federally funded Low Income Home Energy Assistance Program (LIHEAP) and Florida's Emergency Home Energy Assistance for the Elderly Program.

**We ask that from this point forward, the Florida Public Service Commission adopt renewable energy policies that make participation in energy efficiency programs affordable for ALL Floridians.**

**PETITION**  
**Urging Support of Fair, Affordable, and**  
**Equitable Renewable Energy Policies for ALL Floridians**

The Florida State Conference of the NAACP supports clean energy and all of the benefits it promises, especially to low-income, working class and minority communities. We encourage the development of more clean energy programs and initiatives in which ALL communities can participate.

Currently, the Florida Public Service Commission (FPSC) is considering rules that would increase energy efficiency in the state and increase the development of renewable energy sources such as solar, as required by the Florida Energy Efficiency and Conservation Act (FEECA). On **Tuesday, November 25**, the Commission is expected to vote on whether to continue, revise or eliminate many of these energy efficiency programs.

This year, the NAACP Florida State Conference intervened and filed a brief at the FPSC urging that the companies' existing Solar Pilot Programs, which subsidize wealthy homeowners' rooftop solar installations, not be extended because of the Pilot Programs' negative impact on low-income, working class and minority communities. By discontinuing the Pilot Programs unless their regressive impact is corrected, the Commission can ensure that renewable energy programs are not being subsidized on the backs of non-affluent, financially struggling, non-participating ratepayers.

The undersigned encourage the Commission to design renewable energy efficiency programs, including solar, in which everyone can benefit. The undersigned further request that the Florida Public Service Commission, the Office of Public Counsel, and the regulated companies develop more energy assistance programs like the federally funded Low Income Home Energy Assistance Program (LIHEAP) and Florida's Emergency Home Energy Assistance for the Elderly Program.

*We ask that from this point forward, the Florida Public Service Commission adopt renewable energy policies that make participation in energy efficiency programs affordable for ALL Floridians.*

Chairman Graham and Commissioners of the Florida Public Service Commission,

**I work at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.**

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

**This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.**

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

**To:** Office Of Commissioner Graham  
**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**Subject:** Solar rebates

Sir:  
In my opinion, you are doing consumers a great disservice eliminating solar rebates. It is actually embarrassing when I tell people about the lack of support for solar energy in the "Sunshine State. Northern states are beyond us.

You need to say NO to the big utilities who are lobbying in their interests and not ours.

Sincerely,

**From:** Roger Messenger <messenge@fau.edu>  
**Sent:** Sunday, November 23, 2014 10:23 AM  
**To:** Office Of Commissioner Graham  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Roger Messenger

**Sent:** Saturday, November 22, 2014 10:35 PM  
**To:** Office Of Commissioner Graham  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

I understand that on November 25th you will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts.

This is to ask ask that you set conservation goals that increase efficiency opportunities, rather than dramatically decreasing the scope of what are already extremely modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those with lower incomes who lack the resources to reduce their energy use and save money on their bills.

Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's Pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida. PLEASE DO THE RIGHT THING FOR THE PEOPLE, NOT THE POWER COMPANIES!

**Attachments:** FARE letter to the PSC Nov 20 2014 (7).docx

November 22, 2014

Re: Docket 130199, 130200, 130201, 130202, 130203, 310204 and 130205  
Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar and renewable energy industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you **not** to terminate the solar pilot program and consider the following request:

- Reduce the incentive for January 2015 for Residential Solar PV to \$0.40
- Apply a similar reduction to the commercial solar PV program
- Require a MW goal
- Require a predictable declining incentive structure
- Maintain the current funding cap

Sighting the most recent Staff recommendations the installed solar photovoltaic prices have dropped in Florida to \$4.13/watt for the average residential solar system and lower for commercial. As compared to slightly over \$8.00/watt in 2009 .

In 2009 the Florida Solar Coalition, an intervener in Docket 080407 suggested the following:

FSC (Florida Solar Coalition) suggests that annual support should continue for five years, and decrease every year to account for market development and reductions in technology costs.

At that time 25% of the installed cost per watt was subsidized by this program. This coming January if left unchanged the incentive will have actually increased to approximately 50% of the installed cost. Everything in the middle was purposefully over subsidized in order to promote the Utility argument toward the termination of this program - all at the expense of the ratepayers who provide them their guaranteed profits. The utilities could have avoided this by following the Florida Solar Coalitions recommendations in 2009 and followed a simple market price decline and the residential solar rebate would be approximately \$1.00/watt.

The Utilities have blatantly avoided a simple way of increasing the programs participation rates and it is time to require the utilities to lower the incentive amount for the 2015 program launch to \$0.50 cents per watt. This would positively impact promoting solar energy in Florida all while maintaining the funding cap established in order PSC-09-0855-FOF-EG. Though this appears to be a dramatic step downward in incentive, it signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It

also supports staffs favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and reasonable use of funds it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Regarding the future of the Solar Pilot Programs, we believe that they should have been designed to have a MW goal accompanied with a smooth transition to an incentive less market. We urge the Commission, rather than terminate the Solar Pilot Programs, extend them for 1 more year following the 2015 launch with a MW Goal combined with declining incentives as we approach zero incentives and the programs end.

Though it is not part of the mandate of the commission to consider these statistics we feel that it is important to note that the solar industry employs nearly 150,000 Americans and is growing every day. Every 3 and half minutes a new solar energy system is installed in the United States. These are well paying construction jobs that cannot be outsourced overseas. The sun provides Florida with stable energy that does not come from across our border. It is energy that is generated here in Florida using our most popular resource.

The Florida industry is not asking for overly rich subsidies to promote solar, but simply for a clear and stable business environment in which to operate. One that sends the appropriate signals to ratepayers - incentives that decrease over time, not increase. The utilities have ignored this request on all accounts which is why the staff was easily able to come to the conclusions to terminate the programs. We are now relying on you the Commissioners to heed our requests and enforce make sense policy for the ratepayers of Florida.

Professionally Yours,

Scott McIntyre  
President  
Florida Alliance for Renewable Energy

Re: Docket 130199, 130200, 130201, 130202, 130203, 310204 and 130205

Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar and renewable energy industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you not to terminate the solar pilot program and consider the following request:

- Reduce the incentive for January 2015 for Residential Solar PV to \$0.40
- Apply a similar reduction to the commercial solar PV program
- Require a MW goal
- Require a predictable declining incentive structure
- Maintain the current funding cap

Sighting the most recent Staff recommendations the installed solar photovoltaic prices have dropped in Florida to \$4.13/watt for the average residential solar system and lower for commercial. As compared to slightly over \$8.00/watt in 2009<sup>1</sup>.

In 2009 the Florida Solar Coalition, an intervener in [Docket 080407](#) suggested the following:

*FSC (Florida Solar Coalition) suggests that annual support should continue for five years, and decrease every year to account for market development and reductions in technology costs.*

At that time 25% of the installed cost per watt was subsidized by this program. This coming January if left unchanged the incentive will have actually increased to approximately 50% of the installed cost. Everything in the middle was purposefully over subsidized in order to promote the Utility argument toward the termination of this program - all at the expense of the ratepayers who provide them their guaranteed profits. The utilities could have avoided this by following the Florida Solar Coalitions recommendations in 2009 and followed a simple market price decline and the residential solar rebate would be approximately \$1.00/watt.

The Utilities have blatantly avoided a simple way of increasing the programs participation rates and it is time to require the utilities to lower the incentive amount for the 2015 program launch to \$0.50 cents per watt. This would positively impact promoting solar energy in Florida all while maintaining the funding cap established in order PSC-09-0855-FOF-EG.

Though this appears to be a dramatic step downward in incentive, it signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staffs favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**From:** Beverly Jones <Beverlyr.Jones@comcast.net>  
**Sent:** Saturday, November 22, 2014 5:51 PM  
**To:** Office Of Commissioner Graham  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Beverly Jones

**Sent:** Saturday, November 22, 2014 5:28 PM  
**To:** Office Of Commissioner Graham  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**From:** John Alger <j.alger@aetsolar.com>  
**Sent:** Friday, November 21, 2014 10:16 AM  
**To:** Office of Commissioner Balbis  
**Subject:** State Rebate Program for Solar  
**Attachments:** National Grid projects a 37 percent increase for winter electricity rates - Business - The Boston Globe.pdf

Dean Commissioner Balbis,

There has been a lot of back and forth with regards to solar pilot programs that have expired. It seems that TECO, Duke and FPL all feel that energy efficiency costs per kWh saved are greater than what they can generate and sell a new kWh now. Let me state that most of the discussions center around Solar PV or the electric panels while you hear little if any on solar water heating systems.

It could be argued as it is, by the utility companies, that they are in fact, in business to generate electricity and make a return for their share holders. Unlike most companies, their rate of return or profit is limited to around 12 or 13% or as dictated by the PUC. So, on the one hand, you have to ask yourself, why does it make sense to ask utility companies to pay for programs that actually reduce their profit? In a real sense, it is like asking General Motors to pay for me to install energy efficiency improvements on my Chevy Truck to improve its fuel economy rating so I don't need to buy a new vehicle. The concept is ridiculous.

On the other hand, by virtue of being a monopoly and the unique guidelines that govern their operations, utility companies can actually be allowed to charge existing rate payers for the cost of building new power plants and generating capacity long before that new production is realized. This makes the case for looking at other strategies that have a lower impact on rates, the environment, and jobs creation. Of course, most people have no idea that some of their bill is covering these expenses so it is rarely questioned.

In my case, my company makes solar water heating equipment. This is a proven technology that offers significant benefits to the utility companies:

1. Storage. Unlike PV, Solar water heating has built in energy storage.
2. Not connected to the grid. This whole argument about the wealthy owners of solar systems being paid for on the backs of poor rate payers, simply does not apply to solar thermal since solar thermal water heating does not use the Utility power lines, transformers or switch gear.
3. Backup element can be radio controlled. Due to the combination of storage and an electric backup element, utilities can remote control the backup element to turn it off when they experience periods of peak demand like on cold mornings in the winter. Solar thermal water heating can actually help the utility more effectively load level their output by allowing the backup elements to come on at say 4:00AM but cut them off at the peak times of around 5:30 to 6:00AM so that they do not have to run expensive peaking units. PV does not offer this benefit since it has no built in storage.
4. The cost per watt offset is greater than with a PV system. A 4x10 solar water heating panel, the most common size installed in Florida, has an approximate equivalent output of about 2100 watts. Most modern PV modules are in the 230 watt range.

Maybe a better strategy for Florida, would be to do what Hawaii has done and just require a solar water heating system on all new homes. This helps to kick the volume higher, lowers cost due to economies of scale, puts the cost of the system into the 30 year mortgage and since Florida does most residential water heating with electricity, will have a huge impact for the utility companies to mitigate new plant construction. This can be done without a utility rebate program. In addition, it has been estimated that 80% or more of Floridians, feel that the state needs to do more with Solar but feel it is too costly and no one wants to pay more on their utility bill to subsidize it.

Just so you know, while Florida lags behind California, New Jersey and now possibly New York in Solar PV, it ranks in the top 3 for solar water heating and has since the late 70's.

Finally, make no mistake, natural gas prices are not going to remain at the historically low figures that they are now forever and Florida is especially vulnerable to spikes and shortages. Look at the attached Boston Globe article that predicts electric rates will rise 37% this year for the North east. This is because the main gas line is not large enough to provide the volume of gas during peak demand events. Florida could have the same problem. Not long ago, FPL used to generate 50% of it's electricity from coal. Now, 70% from Natural gas. Duke just closed down the Crystal River Nuclear Station and will replace it with a gas unit. Consider that this gas comes from a hurricane prone area; the gulf coast. The issue of cost per kWh may be a secondary issue to being able to get power at all if we are hit with the storms we had back in 2003. Use of a technology like solar water heating that can actually store energy, can pull demand off the grid and allow more electricity to be used for more productive activities like running refrigerators for food and meds and oxygen machines for seniors.

Ask yourself, how will you respond in the town hall meetings when the utilities need to raise rates because gas went up and what did you do to mitigate that?

**Subject:** FEECA

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Best regards,

Bill Gallagher

**Bill Gallagher**  
President/CEO, Solar-Fit

**From:** Carlos Boueres <Cboueres@msn.com>  
**Sent:** Saturday, November 22, 2014 4:50 PM  
**To:** Office Of Commissioner Graham  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Carlos Boueres

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies - and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Kathryn Walters

**Subject:** Florida Solar Energy Debacle

Chairman Graham -

Those of us who have lived all or most our lives in Florida, as have I, realize the "Sunshine State" is largely a Chamber of Commerce notion when one finds that Florida is in the second quartile of annual insolation of the 50 states.

Nevertheless, being in the second quartile is significant, worthy of the State being much more creative and supportive of distributed solar electric generation, as is occurring in several states (e. g., New Jersey and Minnesota) of less solar resource than Florida.

Net metering has been characterized as the solar elite being subsidized by the non-solar masses. A few months ago economists with the Minnesota equivalent of the PSC debunked this subsidy perception, when all true values and all true costs of solar versus conventional generation are considered.

I look forward to the PSC adding renewed emphasis to the "Public" and the "Service" components of its name in

regard to the big picture of electric power production and usage in Florida.

Respectfully,

**To:** Office Of Commissioner Graham  
**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

Solar is the future and Florida is incredibly well positioned to lead. We should take advantage of this incredible resource. FP&L is a super company. I think they do an outstanding job. I am constantly amazed at the low power bill and infrastructure hardening since Hurricane Wilma. The stability of the electric flow could possibly be better. STILL, the future is SOLAR. Let's lead the way to high quality jobs and low cost energy.

I am Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. **Sent:** Friday, November 21, 2014 8:06 PM  
**To:** Office Of Commissioner Graham  
**Subject:** FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a year-round Florida resident, and I strongly support the development and use of solar energy systems in our state.

There is a growing demand for clean energy, and it would be ludicrous for The Sunshine State to fail to exploit this natural and available energy source. A solar rebate program is vital to the growth of the solar industry, which can provide new, badly needed jobs and spur investments in Florida. Solar energy growth would decrease the use of fossil fuels, resulting in a cleaner environment and thereby support the tourist industry. It would also reduce the impetus for fracking, an environmental disaster that is now threatening Florida and would result in heavy demands on already stressed water supplies, contamination of the aquifer and air and health problems. On a larger scale, decreased fossil fuel use will affect climate change and its impacts, impacts to which Florida will be especially susceptible.

Consumers deserve to have energy options, including localized solar power. It is vital that the Solar Pilot Program not only continue but be expanded if Florida is not to fall behind in developing cleaner energy. I urge you to support consumers and Florida's future in the face of strong opposition from utility companies and to continue and strengthen Florida's Solar Pilot Program.

Thank you for the opportunity to comment.

Dear Chairman Art Graham,

Please preserve and improve our Solar Pilot Program so that Florida customers like me can continue to invest in and benefit from local solar power.

We need affordable solar power to help build a stronger Florida, preserve our resources, and improve the odds of beating the bad consequences of climate change. The solar rebate program will help our local solar industry grow. We should definitely invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you very much for your attention.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

I installed solar electricity and hot water panels on my former home back in 2005. At that time it was quite expensive, but worth it in cutting down on my use of coal or gas generated electricity. I wondered why the "sunshine state " did not do more to facilitate the use of solar energy. Please don't go backwards on the effort to bring solar energy usage to out state. Go forward to make solar more available, less expensive, and the norm in Florida.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar reb ate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

As a former Floridian I wondered why there was so little solar energy in the sunshine state I have just begun adding solar to my roof here in Ohio.

Why not preserve and improve your Solar Pilot Program so that customers can continue to invest in and benefit from local solar power?

Unfortunately my Governor Kasich put a freeze on renewable standards, threatening jobs (while pushing the dubious JobsOhio) and a fossil-free future. But we carry on despite his blindness to progress.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**Subject:** We \*must\* preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state.

You must do everything you can to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida.

A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently.

You can ensure that industry and customers alike feel confident in investing in the growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**Sent:** Friday, November 21, 2014 4:06 PM  
**To:** Office Of Commissioner Graham  
**Subject:** Support and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a longtime Florida resident, homeowner, voter and ratepayer. I fully support solar energy in our state. I just do not understand why we, The Sunshine State, have been so far behind in supporting the widespread use of solar power throughout the State. It is just unbelievable to me that we have not embraced this clean, renewable, inexpensive energy source. I've written to Governors and legislators about this for as long as I can remember. Yet, nothing has been done. The big electric utilities and other special interests continue to kill any meaningful actions that should be taken so preserve their own profits.

I now urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power. We should have solar panels on every roof in the state. Now.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**Subject:** Solar Pilot Program Helps Minorities

Dear Chairman Graham and Commissioners of the Florida Public Service Commission,

As a City of Tampa certified Minority Business Enterprise and Service Disabled Veteran Owned Small Business – Florida Licensed Solar Contractor, I cannot stress sufficiently how integral the Solar Pilot Program (SPP) was in getting my business out of the “starting block” and how important it is to providing opportunities to those who cannot afford the upfront cost of installing solar on their home.

Tampa Energy Solutions began installing solar panels in 2012 shortly after my retirement from the military. My first customers were Solar Pilot Program recipients. Two these customers (SPP recipients) are your average hard working single women located in the heart of Tampa’s blue collar district. They would not have solar on their roof today without this important program and remain grateful for the opportunity to receive the support provided by this critical program. Contrary to what has been described in other publications, these individuals are NOT well paid doctors, lawyers or big business owners. Their homes are modest two bedroom places.

Overall, we have been fortunate to support solar installations on 6 customers in the past two years that received support from this critical program. The Solar Pilot Program is for many the only way for those in this economic category to obtain solar on their home. The majority of my mainstream customers that purchase solar without the rebate are more affluent and possess the financial means to afford systems at today’s cost.

For the reasons stated above, I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By simply reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Steve Rutherford  
President

**Sent:** Friday, November 21, 2014 11:16 AM  
**To:** Office of Commissioner Balbis  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maria Fernandez

**Sent:** Friday, November 21, 2014 10:16 AM  
**To:** Office of Commissioner Balbis  
**Subject:** State Rebate Program for Solar  
**Attachments:** National Grid projects a 37 percent increase for winter electricity rates - Business - The Boston Globe.pdf

Dean Commissioner Balbis,

There has been a lot of back and forth with regards to solar pilot programs that have expired. It seems that TECO, Duke and FPL all feel that energy efficiency costs per kWh saved are greater than what they can generate and sell a new kWh now. Let me state that most of the discussions center around Solar PV or the electric panels while you hear little if any on solar water heating systems.

It could be argued as it is, by the utility companies, that they are in fact, in business to generate electricity and make a return for their share holders. Unlike most companies, their rate of return or profit is limited to around 12 or 13% or as dictated by the PUC. So, on the one hand, you have to ask yourself, why does it make sense to ask utility companies to pay for programs that actually reduce their profit? In a real sense, it is like asking General Motors to pay for me to install energy efficiency improvements on my Chevy Truck to improve its fuel economy rating so I don't need to buy a new vehicle. The concept is ridiculous.

On the other hand, by virtue of being a monopoly and the unique guidelines that govern their operations, utility companies can actually be allowed to charge existing rate payers for the cost of building new power plants and generating capacity long before that new production is realized. This makes the case for looking at other strategies that have a lower impact on rates, the environment, and jobs creation. Of course, most people have no idea that some of their bill is covering these expenses so it is rarely questioned.

In my case, my company makes solar water heating equipment. This is a proven technology that offers significant benefits to the utility companies:

1. Storage. Unlike PV, Solar water heating has built in energy storage.
2. Not connected to the grid. This whole argument about the wealthy owners of solar systems being paid for on the backs of poor rate payers, simply does not apply to solar thermal since solar thermal water heating does not use the Utility power lines, transformers or switch gear.
3. Backup element can be radio controlled. Due to the combination of storage and an electric backup element, utilities can remote control the backup element to turn it off when they experience periods of peak demand like on cold mornings in the winter. Solar thermal water heating can actually help the utility more effectively load level their output by allowing the backup elements to come on at say 4:00AM but cut them off at the peak times of around 5:30 to 6:00AM so that they do not have to run expensive peaking units. PV does not offer this benefit since it has no built in storage.
4. The cost per watt offset is greater than with a PV system. A 4x10 solar water heating panel, the most common size installed in Florida, has an approximate equivalent output of about 2100 watts. Most modern PV modules are in the 230 watt range.

Maybe a better strategy for Florida, would be to do what Hawaii has done and just require a solar water heating system on all new homes. This helps to kick the volume higher, lowers cost due to economies of scale, puts the cost of the system into the 30 year mortgage and since Florida does most residential water heating with electricity, will have a huge impact for the utility companies to mitigate new plant construction. This can be done without a utility rebate program. In addition, it has been estimated that 80% or more of Floridians, feel that the state needs to do more with Solar but feel it is too costly and no one wants to pay more on their utility bill to subsidize it.

Just so you know, while Florida lags behind California, New Jersey and now possibly New York in Solar PV, it ranks in the top 3 for solar water heating and has since the late 70's.

Finally, make no mistake, natural gas prices are not going to remain at the historically low figures that they are now forever and Florida is especially vulnerable to spikes and shortages. Look at the attached Boston Globe article that predicts electric rates will rise 37% this year for the North east. This is because the main gas line is not large enough to provide the volume of gas during peak demand events. Florida could have the same problem. Not long ago, FPL used to generate 50% of it's electricity from coal. Now, 70% from Natural gas. Duke just closed down the Crystal River Nuclear Station and will replace it with a gas unit. Consider that this gas comes from a hurricane prone area; the gulf coast. The issue of cost per kWh may be a secondary issue to being able to get power at all if we are hit with the storms we had back in 2003. Use of a technology like solar water heating that can actually store energy, can pull demand off the grid and allow more electricity to be used for more productive activities like running refrigerators for food and meds and oxygen machines for seniors.

Ask yourself, how will you respond in the town hall meetings when the utilities need to raise rates because gas went up and what did you do to mitigate that?

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

It is a bit of an embarrassment to me and should be to you as well, that even a state like New Jersey with no where near as much sunshine as Florida is more supportive of distributed solar energy for homes and businesses. Florida is the Sunshine State and we should be doing more in Florida as well as the entire US to take advantage of solar energy.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. **To:** Office Of Commissioner Graham  
**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I strongly support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**To:** Office Of Commissioner Graham  
**Subject:** Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy as a protection against climate change, a completely viable alternative energy source and one which also protects the environment. Of course, then, I support any effort to promote solar energy development and distribution in the Sunshine State.

I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. The goal is not to create an unfair advantage for solar but to allow this completely clean energy to compete and develop. A smart solar rebate program should predictably decrease over time, and during its existence will help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

I have already installed a solar generation system in my house and am reaping the benefits daily. This was an economic and environmental decision that has huge ramifications for our children and future generations.

Our system paid for itself in the first two years of operation and now it continues to generate electricity, saving me well over \$200 per month. This is a no-brainer decision for anyone, especially residents of the Sunshine state.

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

**Sent:** Friday, November 21, 2014 12:17 PM  
**To:** Office Of Commissioner Graham  
**Subject:** Florida solar is a sleeping giant

Dear Chairman Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Sincerely,

Bob Everhard

**Subject:** Energy Efficiency and Solar programs for ratepayers

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer and business owner, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

**Sent:** Friday, November 21, 2014 11:16 AM  
**To:** Office Of Commissioner Graham  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maria Fernandez

**Subject:** Solar Pilot Program  
**Attachments:** FlaSEIA letter to the PSC Nov 21, 2014.docx

November 20, 2014

Re: Solar Pilot Program

Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you not to terminate the Solar Pilot Program and consider the following request:

Reduce the incentive for January 2015 for Residential Solar PV to \$0.40 per watt and engage in an open dialogue with the solar industry for a redesign of the 2016 program and beyond.

We believe that the current Solar Pilot Program does more harm than good to a developing sustainable solar market. But instead of “throwing the baby out with the bath water” with your upcoming FEECA ruling, we urge you to take the next year and work to meet consumer demand for solar power and promote energy diversity in Florida

Citing the most recent Staff recommendations, the installed solar photovoltaic prices have dropped 28% between 2011 and 2013 and according to a study by GTM research the average national price has fallen by 41% since 2010 to an average of \$3.92 per watt for an average residential solar system and even lower for commercial. As early as 2011 FlaSEIA sent letters to the PSC asking for the rate to be reduced. The program is vastly oversubscribed and the rebate funds are exhausted in a matter of seconds. By reducing the rate from \$2.00 a watt to \$0.40 there could 5 times the amount of solar installed and 5 times as many solar consumers investing their private capital in to our energy production mix.

There are also several other simple fixes to enhance this program and ensure better value for ratepayers while meeting consumer demand for solar power. We are optimistic to have a dialogue with the commission about fixes for the 2016 program such as including a MW goal, a predictable declining incentive structure, and exempting the first 1000 KWH of ratepayer consumption from paying in.

Reducing the rebate amount from \$2.00 to \$0.40 signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staff's favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and a reasonable use of funds, it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Our request is simple: Vote to extend the Solar Pilot Program in 2016, reduce the rate from \$2.00 to \$0.40 in 2015, and work with the solar industry to redesign the program in a way that will promote renewable energy and solar in Florida while delivering maximum value to ratepayers and meeting consumer demand.

Respectfully yours,

Reed Wilson

Re: Solar Pilot Program

Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you not to terminate the Solar Pilot Program and consider the following request:

Reduce the incentive for January 2015 for Residential Solar PV to \$0.40 per watt and engage in an open dialogue with the solar industry for a redesign of the 2016 program and beyond.

We believe that the current Solar Pilot Program does more harm than good to a developing sustainable solar market. But instead of “throwing the baby out with the bath water” with your upcoming FEECA ruling, we urge you to take the next year and work to meet consumer demand for solar power and promote energy diversity in Florida

Citing the most recent Staff recommendations, the installed solar photovoltaic prices have dropped 28% between 2011 and 2013 and according to a study by GTM research the average national price has fallen by 41% since 2010 to an average of \$3.92 per watt for an average residential solar system and even lower for commercial. As early as 2011 FlaSEIA sent letters to the PSC asking for the rate to be reduced. The program is vastly oversubscribed and the rebate funds are exhausted in a matter of seconds. By reducing the rate from \$2.00 a watt to \$0.40 there could 5 times the amount of solar installed and 5 times as many solar consumers investing their private capital in to our energy production mix.

There are also several other simple fixes to enhance this program and ensure better value for ratepayers while meeting consumer demand for solar power. We are optimistic to have a dialogue with the commission about fixes for the 2016 program such as including a MW goal, a predictable declining incentive structure, and exempting the first 1000 KWH of ratepayer consumption from paying in.

Reducing the rebate amount from \$2.00 to \$0.40 signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staff's favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and a reasonable use of funds, it would require the utilities to make the

adjustment to the program prior to the January launch as part of the order on November 25th.

Our request is simple: Vote to extend the Solar Pilot Program in 2016, reduce the rate from \$2.00 to \$0.40 in 2015, and work with the solar industry to redesign the program in a way that will promote renewable energy and solar in Florida while delivering maximum value to ratepayers and meeting consumer demand.

**Subject:** Please preserve and improve the FEECA Solar Pilot Program

Dear Commissioner Brown,

Dear Commissioners,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power while delivering strong ratepayer value. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention,

Sincerely,

Justin Hoysradt

**Subject:** Florida solar is a sleeping giant

Dear Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Sincerely,

Bob Everhard

**To:** Office of Commissioner Brown  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maria Fernandez

**Subject:** expired solar pilot programs.

Dean Commissioner Brown,

There has been a lot of back and forth with regards to solar pilot programs that have expired. It seems that TECO, Duke and FPL all feel that energy efficiency costs per kWh saved are greater than what they can generate and sell a new kWh now. Let me state that most of the discussions center around Solar PV or the electric panels while you hear little if any on solar water heating systems.

It could be argued as it is, by the utility companies, that they are in fact, in business to generate electricity and make a return for their share holders. Unlike most companies, their rate of return or profit is limited to around 12 or 13% or as dictated by the PUC. So, on the one hand, you have to ask yourself, why does it make sense to ask utility companies to pay for programs that actually reduce their profit? In a real sense, it is like asking General Motors to pay for me to install energy efficiency improvements on my Chevy Truck to improve its fuel economy rating so I don't need to buy a new vehicle. The concept is ridiculous.

On the other hand, by virtue of being a monopoly and the unique guidelines that govern their operations, utility companies can actually be allowed to charge existing rate payers for the cost of building new power plants and generating capacity long before that new production is realized. This makes the case for looking at other strategies that have a lower impact on rates, the environment, and jobs creation. Of course, most people have no idea that some of their bill is covering these expenses so it is rarely questioned.

In my case, my company makes solar water heating equipment. This is a proven technology that offers significant benefits to the utility companies:

1. Storage. Unlike PV, Solar water heating has built in energy storage.
2. Not connected to the grid. This whole argument about the wealthy owners of solar systems being paid for on the backs of poor rate payers, simply does not apply to solar thermal since solar thermal water heating does not use the Utility power lines, transformers or switch gear.
3. Backup element can be radio controlled. Due to the combination of storage and an electric backup element, utilities can remote control the backup element to turn it off when they experience periods of peak demand like on cold mornings in the winter. Solar thermal water heating can actually help the utility more effectively load level their output by allowing the backup elements to come on at say 4:00AM but cut them off at the peak times of around 5:30 to 6:00AM so that they do not have to run expensive peaking units. PV does not offer this benefit since it has no built in storage.
4. The cost per watt offset is greater than with a PV system. A 4x10 solar water heating panel, the most common size installed in Florida, has an approximate equivalent output of about 2100 watts. Most modern PV modules are in the 230 watt range.

Maybe a better strategy for Florida, would be to do what Hawaii has done and just require a solar water heating system on all new homes. This helps to kick the volume higher, lowers cost due to economies of scale, puts the cost of the system into the 30 year mortgage and since Florida does most residential water heating with electricity, will have a huge impact for the utility companies to mitigate new plant construction. This can be done without a utility rebate program. In addition, it has been estimated that 80% or more of Floridians, feel that the state needs to do more with Solar but feel it is too costly and no one wants to pay more on their utility bill to subsidize it.

Just so you know, while Florida lags behind California, New Jersey and now possibly New York in Solar PV, it ranks in the top 3 for solar water heating and has since the late 70's.

Finally, make no mistake, natural gas prices are not going to remain at the historically low figures that they are now forever and Florida is especially vulnerable to spikes and shortages. Look at the attached Boston Globe article that predicts electric rates will rise 37% this year for the North east. This is because the main gas line is not large enough to provide the volume of gas during peak demand events. Florida could have the same problem. Not long ago, FPL used to generate 50% of it's electricity from coal. Now, 70% from Natural gas. Duke just closed down the Crystal River Nuclear Station and will replace it with a gas unit. Consider that this gas comes from a hurricane prone area; the gulf coast. The issue of cost per kWh may be a secondary issue to being able to get power at all if we are hit with the storms we had back in 2003. Use of a technology like solar water heating that can actually store energy, can pull demand off the grid and allow more electricity to be used for more productive activities like running refrigerators for food and meds and oxygen machines for seniors.

Ask yourself, how will you respond in the town hall meetings when the utilities need to raise rates because gas went up and what did you do to mitigate tha

**Attachments:** FlaSEIA letter to the PSC Nov 21, 2014.docx

November 20, 2014

Re: Solar Pilot Program

Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you not to terminate the Solar Pilot Program and consider the following request:

Reduce the incentive for January 2015 for Residential Solar PV to \$0.40 per watt and engage in an open dialogue with the solar industry for a redesign of the 2016 program and beyond.

We believe that the current Solar Pilot Program does more harm than good to a developing sustainable solar market. But instead of “throwing the baby out with the bath water” with your upcoming FEECA ruling, we urge you to take the next year and work to meet consumer demand for solar power and promote energy diversity in Florida

Citing the most recent Staff recommendations, the installed solar photovoltaic prices have dropped 28% between 2011 and 2013 and according to a study by GTM research the average national price has fallen by 41% since 2010 to an average of \$3.92 per watt for an average residential solar system and even lower for commercial. As early as 2011 FlaSEIA sent letters to the PSC asking for the rate to be reduced. The program is vastly oversubscribed and the rebate funds are exhausted in a matter of seconds. By reducing the rate from \$2.00 a watt to \$0.40 there could 5 times the amount of solar installed and 5 times as many solar consumers investing their private capital in to our energy production mix.

There are also several other simple fixes to enhance this program and ensure better value for ratepayers while meeting consumer demand for solar power. We are optimistic to have a dialogue with the commission about fixes for the 2016 program such as including a MW goal, a predictable declining incentive structure, and exempting the first 1000 KWH of ratepayer consumption from paying in.

Reducing the rebate amount from \$2.00 to \$0.40 signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staff's favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and a reasonable use of funds, it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Our request is simple: Vote to extend the Solar Pilot Program in 2016, reduce the rate from \$2.00 to \$0.40 in 2015, and work with the solar industry to redesign the program in a way that will promote renewable energy and solar in Florida while delivering maximum value to ratepayers and meeting consumer demand.

**Subject:** Solar Programs for Florida

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

G. Eric Dirschka

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies - and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

JP Roberts

**Subject:** SUPPORT SOLAR ENERGY

Chairman Graham and Commissioners of the Florida Public Service Commission,

**I work at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.**

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

**This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.**

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

# Opinion

## ANOTHER VIEWPOINT

### *We lag behind nation in efficiency, renewables*

BY CHRISTOPHER VON ZWEHL

von Zwehl

In response to the Aug. 17 story, "Florida among the states with tons of sun but rules that prevent using it" by Evan Halper:

Florida is one of only a dozen states that does not have a renewable energy

standards portfolio, either mandatory or voluntary. The purpose of these standards are stated as, "Policies designed to increase generation of electricity from renewable resources."

Contrary to what the Public Service Commission is proposing, energy efficiency and renewable energy mandates must be part of the energy mix to sustain Florida's future and our state must establish a renewable energy standards portfolio. For Floridians this would mean putting cleaner skies ahead of the state's 15 coal-fired power plants. Two possible scenarios can play out. One, the re-

placement power will only come from natural gas as FP&L proposes. Or two, Florida will join the 21 century and incentivize the state utilities to mix it up with renewables and greater energy efficiency standards.

The second scenario provides a more stable and secure future for all Floridians and our economy. Renewable energy credit structures could be set in place to have an effective market system that government (state and federal), utilities and consumers participate in to reduce our reliance on carbon-intensive power while increasing the grids resiliency to spikes, outages and the like.

"The Perfect Climate" For Business is the official slogan for Enterprise Florida, the state's office of economic development. Their website quotes "Floridians understand the undeniable link between sustainability and the economy, and are building a robust clean tech industry." **Cleaning the air means thousands of new jobs and billions of dollars invested in replacing those outdated coal plants.** The right way to accomplish this goal is with a mix

of clean power options.

Hundreds of clean-tech energy suppliers and manufacturers, subcontractors and alike could provide alternative wind, sun, algae, bio-fuels and fuel-cell derived power along with micro-grids that would flourish in Florida but only with economic incentives from Tallahassee.

The questions Floridians need to ask themselves are:

With all of these facts, why is the state proposing to do away with energy efficiency mandates? Will our representatives miss this opportune moment in truly making Florida a cleaner, brighter state to live, work and play?

We all need to take positive action and let our elected representatives know a clean energy future for our state needs to be a priority.

*Christopher von Zwehl is the vice president of Business Development for E-Renewables, one of the nation's leading business development, financing and consulting companies in the clean energy sector.*

# New EPA rules should keep the Sunshine State sunny

BY CHRISTOPHER VON ZWEHL

Von Zwehl

The new EPA rules outlined in the Clean Power Plan are the right direction for Florida, and will improve the state's energy efficiency, environment and overall economy.

Our state's dominate base-load electric power source, coal, dates back to the 1800's and is causing rising sea levels and the erosion of our beautiful beaches.

As we continue to face this debate between the renewable and conventional energy, big oil focuses on shale gas, which has ignited a tipping point in energy. This tipping point is the phase out of black carbon (coal) power to lower carbon emission sources to meet new EPA clean-air guidelines.

What does this mean for the Sunshine State? We have the most to gain by effectively meeting these standards. A new clean energy mandate out of Tallahassee now, while our beaches are still around, will become a strong economic driver and set Florida up as an example to be followed by other coastal states in the South.

The good news for big energy players here, Duke, NextEra/FPL, Tecu, JEA, FMPA and others, is they can play the central role in helping Florida come in to the 21st century clean-power equation. In renewable energy and energy efficiency projects, we have worked on across America, a mix of players successfully partnered together. Some of which are and were the biggest carbon emitters in the U.S., and by putting aside politics, we made a big difference in achieving reductions in the use of coal and oil.

We are also home to the world's largest clean energy technology and equipment providers, Seiman's AG, who provides thousands of Floridians and Americans clean-energy jobs out of Orlando.

To be successful, our next governor must lead the charge to invest \$100 million a year (about one-tenth of 1% of the state budget). Leveraged by industry and minimally offset by consumers, we can and will lower our carbon emissions and advance renewable energy in Florida. This investment in our future will prove to be a strong equation for success in protecting

low-lying areas. The legislation will also add high-paying jobs and economic activity that are exportable.

The absence of real action now and measurable legislation by our lawmakers could be disastrous for our future. Current projections of rising sea levels call for billions of dollars of Florida taxpayer funded expenditures to protect critical infrastructure and our water supply. We will also see billions in ratable taxes on waterfront properties disappear along with double-digit insurance premium increases. We can't afford the luxury of finger pointing and debating anymore. Florida is soon to be the third biggest state in the nation and the 16th biggest economy in the world with a GDP approaching \$1 trillion. We can and need to make a difference today. There is no time to waste.

Some ideas on how to make that happen include an increased focus on solar energy. Solar is poised to be a leader to a brighter, cleaner energy economy here in Florida. We are light years behind other states in this area. We need no less than 1,000 megawatts (1 gigawatt) a year of new, cleaner power (including natural gas cycled turbine power) installed for the next 15 years to meet federal guidelines. We also need stronger conservation mandates to meet our growing energy needs and protect our way of life.

Critics will argue the balance of cost versus benefits. Well, the benefits for Florida are unmistakable. While the risk for the Sunshine State would be irreversible; beaches gone, tourists gone, drinkable water gone and more. Cheap, dirty coal power is forever a thing of the past in the U.S., and so are its detractors.

Who would have thought big oil would be the tipping point to have built the bridge to a brighter, cleaner energy future for the United States' power hungry economy? Let's lead the way to a more economically rich future in Florida while protecting our way of life with clean energy legislation to support the execution of the new EPA guidelines.

*Christopher von Zwehl is vice president of business development & operations for E-Renewables, one of the nation's leading business development, financing and consulting companies in the clean energy sector. He lives in Fort Lauderdale and can be reached at 954 895-3524 or at [www.e-renewables.com](http://www.e-renewables.com).*

**To:** Office Of Commissioner Graham; Office of Commissioner Balbis; Office Of Commissioner Edgar; Office of Commissioner Brisé; Office of Commissioner Brown  
**Subject:** Sunshine to Power the Sunshine State

All,

I've had a solar system since 2008. It's serviced me and my immediate neighbors very well. They use my excess production during peak hours of the day (via a shared transformer). I am not a drain on the utility as they try to claim. I do, of course, buy power at night when demand for it is lower. This makes me a Florida ratepayer as well as supporter of solar energy in our state.

I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me continue to have the opportunity to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Respectfully,

Vicki Eckels

**Subject:** I am a Florida ratepayer, and I support solar energy in our state

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

**To:** Office of Commissioner Balbis  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

JP Roberts  
2223 Parker Place Ct

**To:** Office of Commissioner Balbis  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Sincerely,

Bill Gallagher

**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**To:** Office of Commissioner Balbis  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Tanya Tweeton

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Fred Rilling  
135 Inlets Blvd

**To:** Office of Commissioner Balbis  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

It is no longer possible to pretend that renewable energy is not viable. The technology exists right now to produce a major portion of our electricity from renewables. I know people in Utah that have generated near 40% of their annual electricity with solar panels. This is in a place where it snows and the panels are covered. Solar panels on my house would save me at least 40% on my electricity bill.

A distributed energy grid that maximizes rooftop solar is the future for Florida. The benefits of renewable energy for consumers and society as a whole are clear. The coming change in energy generation can be likened in scale to the change our society accommodated in the transition from horse-drawn carriages to automobiles. It will be a fundamental change that improves our lives.

Setting high standards for energy efficiency will help consumers, get us a more resilient energy grid, and improve our environment and our economy.

If you do not enact meaningful energy efficient goals, it will be obvious you are working to support the power companies ever-increasing profits to the detriment of consumers.

The people you represent want new, clean sources of energy, not from fossil fuels.

I hope you keep that in mind on November 25th.

Sincerely,

Kathy Freeman

**To:** Office of Commissioner Balbis  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**To:** Office of Commissioner Brown  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Andy Wing

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies - and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Todd & Carolyn Stevens

**To:** Office of Commissioner Brown  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Maggie Davidson  
750 Pine Drive, Apt 11  
Pompano Beach, FL 33060

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies - and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

William Claiborn

**Sent:** Tuesday, November 18, 2014 10:10 AM  
**To:** Office of Commissioner Brown  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

It is no longer possible to pretend that renewable energy is not viable. The technology exists right now to produce a major portion of our electricity from renewables. I know people in Utah that have generated near 40% of their annual electricity with solar panels. This is in a place where it snows and the panels are covered. Solar panels on my house would save me at least 40% on my electricity bill.

A distributed energy grid that maximizes rooftop solar is the future for Florida. The benefits of renewable energy for consumers and society as a whole are clear. The coming change in energy generation can be likened in scale to the change our society accommodated in the transition from horse-drawn carriages to automobiles. It will be a fundamental change that improves our lives.

Setting high standards for energy efficiency will help consumers, get us a more resilient energy grid, and improve our environment and our economy.

If you do not enact meaningful energy efficient goals, it will be obvious you are working to support the power companies ever-increasing profits to the detriment of consumers.

The people you represent want new, clean sources of energy, not from fossil fuels.

I hope you keep that in mind on November 25th.

Sincerely,

Kathy Freeman

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Galen Treuer

**To:** Office Of Commissioner Graham  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

It is no longer possible to pretend that renewable energy is not viable. The technology exists right now to produce a major portion of our electricity from renewables. I know people in Utah that have generated near 40% of their annual electricity with solar panels. This is in a place where it snows and the panels are covered. Solar panels on my house would save me at least 40% on my electricity bill.

A distributed energy grid that maximizes rooftop solar is the future for Florida. The benefits of renewable energy for consumers and society as a whole are clear. The coming change in energy generation can be likened in scale to the change our society accommodated in the transition from horse-drawn carriages to automobiles. It will be a fundamental change that improves our lives.

Setting high standards for energy efficiency will help consumers, get us a more resilient energy grid, and improve our environment and our economy.

If you do not enact meaningful energy efficient goals, it will be obvious you are working to support the power companies ever-increasing profits to the detriment of consumers.

The people you represent want new, clean sources of energy, not from fossil fuels.

I hope you keep that in mind on November 25th.

Sincerely,

Kathy Freeman

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. **To:** Office of Commissioner Brown  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

John Debus

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies - and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

abby Fuller

**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. **To:** Office of Commissioner Balbis  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Bonnie Mc Cune

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

abby Fuller

**To:** Office of Commissioner Balbis  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Bill Stokes

**To:** Office of Commissioner Balbis  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Tonya Andreacchio

**To:** Office of Commissioner Brisé  
**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

winnie Foster

**To:** Office of Commissioner Brisé  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

John Dervin

**To:** Office of Commissioner Brisé  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Babilis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**Sent:** Monday, November 17, 2014 2:51 PM  
**To:** Office of Commissioner Brisé  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

JUAN ZURITA  
4382 NW 113 PL  
Doral, FL 33178

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Tonya Andreacchio

**Sent:** Tuesday, November 18, 2014 7:12 AM  
**To:** Office Of Commissioner Graham  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Babilis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. ### Looking deeper into Germany's power market transition, seeking clues for US

November 18, 2014, San Francisco—Are renewables sinking or boosting Germany? This, the subject of a curtain-opening panel, "Germany's Transition to Renewables," at NARUC's annual meeting Sunday led to a surprising consensus: In spite of mistakes that were made and high electricity rates, the German people overwhelmingly support getting off nuclear and fossil-fueled power and committing heavily to renewables. That steady commitment, based on a long-term view of the future, has allowed the government to continue and refine the program.

[Read more](#)

### Ambiguities could muddy the waters of EPA's existing, new power plant rules

Attendees at the annual meeting of the National Association of Regulatory Utility Commissioners on Sunday heard from two legal experts discuss ambiguities between section 111 (b) of the Clean Air Act, covering new power plants, and 111 (d) of the Act addressed to existing plants. They were among many complications that could fuel litigation over rules the

Environmental Protection Agency will promulgate to enforce both provisions. Roger Martella of the Sidley Austin firm, a former EPA general counsel, said it was unclear what the timing might be for adopting the two rules, but that June 2015 was a firm deadline for the 111 (d) rule. Litigation is likely to swiftly follow adoption, he said. Martella opined that EPA's strongest argument is the very purpose of the rule—climate change—which has been given deference by federal appeals courts. Appellants' strongest line of attack, he said, might be that third parties could be held liable for the actions of others, as could happen here, with both utilities and states under the gun. Rishi Garg, general counsel for the National Regulatory Research Institute, addressed interactions between section 111 (d) and the Federal Power Act and focused on a lack of clarity on what is a new and what is an existing source.

## Nevada Power to regulators: Reconsider decision to axe \$438M solar plant

Nevada Power has petitioned the Nevada Public Utilities Commission to reconsider its decision to reject construction of a 200-MW solar project on the Moapa River Paiute Indian Reservation as part of the utility's plan to retire its coal-fired electricity generation within the next five years. The commission voted 2-1 on Oct. 27 to reject the \$438 million solar facility on the basis it was not needed and too costly. Approving the Moapa project would provide value to customers through incremental fuel diversity, generate construction jobs, and yield a net positive impact on Nevada's economy," the petition says. The commission's action, says the utility, a unit of Berkshire Hathaway Energy's NV Energy, "increases Nevada Power's dependence on natural gas, a resource that does not exist in this state in any significant quantity, and increases the price exposure of Nevada Power's customers to fluctuation in the natural gas markets." Sen. Harry Reid called the vote a setback for all Nevadans, according to the *Las Vegas Review Journal*.

## What price tag nuclear decommissioning?

While capital and replacement costs of nuclear generating plants are a huge deterrent to their future development, the end-of-life costs associated with these plants is equally daunting, maintains the *EnergyDigital* website. In the US, 200 nuclear reactors are due to be shut down by 2040 at an estimated \$100 billion in decommissioning costs. Now the International Energy

Agency is warning governments that there are "considerable uncertainties" about these costs, citing governments' limited experience in the matter. Only ten plants have been decommissioned in the last 40 years. The most recent estimate in the US comes from the San Onofre Nuclear Power Plant. According to the Nuclear Regulatory Commission, the process could take around 20 years and cost \$4.4 billion, or about \$2.1 million/MW installed, the most ever for such a decommissioning. Adding to the debit side of the ledger, a major cost not considered part of decommissioning proper is the cost of storing nuclear waste produced by the plant. As of right now, there are no commercial facilities to do so. The cost of dry cask storage for the spent fuel onsite and security that might be required adds only question marks to the burden.

## Foundation blasts Ivanpah solar plant's request for a grant to pay off its loan

Having earlier received a \$1.6 billion construction loan from U.S. taxpayers, the libertarian think tank Reason Foundation says the wealthy investors of a concentrating solar thermal power plant in California's Mojave Desert now want a \$539 million federal grant to pay off their federal loan. Terming the request an unwarranted bailout, Reason Foundation VP of Research Julian Morris called the plan "rather obscene." The Ivanpah solar electric generating plant is owned by Google and diversified energy giant NRG, which are on the hook for paying off the loan. But if approved by the US Treasury, the two companies would use taxpayer funds to pay off the borrowed 30 percent of the plant's cost. Taxpayers would receive none of the millions in revenues the plant will generate over the next 30 years, said the foundation. Ivanpah has produced only one-quarter of the power it was expected to during the first eight months of 2014.

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

**To:** Office Of Commissioner Graham  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Babilis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Babilis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Bill Stokes

**Subject:** Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

**To:** Office Of Commissioner Graham  
**Subject:** Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

9 conservationist John Muir in 1892 is the nation's  
10 largest grass roots environmental organization in  
11 the country with 2.3 million sponsors and members.

12 Our Florida state headquarters is located right  
13 here in St. Petersburg on Central Avenue in a  
14 net zero energy building. It is covered by solar  
15 panels that generate more electricity than the  
16 Sierra Club and the other tenants in the building  
17 use. We feed solar power back to Duke Energy.

18 The Sunshine State Clean Energy Coalition is an  
19 alliance of environmental, health, business and  
20 other groups which care about Florida's energy  
21 future. Our goal is to move far and away from dirty  
22 fuels like coal and towards clean energy. We do  
23 this by helping communities advocate for the  
24 retirement of old and outdated coal plants and  
25 replacing them with clean energy solutions, like

♀

3

1 solar, geothermal and energy efficiency.

2 Simply put, the brightest future for the  
3 Sunshine State is to invest in job creating and  
4 money saving clean energy solutions. Across the

5 country electric utility companies are investing in  
6 efficiency. I knew I skipped a page here. Okay.  
7 All right. So why did we ask you to be here tonight  
8 for a hearing on a hot July evening at the beginning  
9 of the hurricane season, just two days before a  
10 national holiday, what is so urgent; why did we drag  
11 you here tonight? It is because we have a once in a  
12 decade opportunity to save consumers and businesses  
13 billions of dollars on our power bills, and at the  
14 same time steer the State of Florida towards a  
15 healthier clean energy future.

16 Energy efficiency is the cheapest, fastest and  
17 safest way and meet Florida's electricity needs.  
18 The cost of coal, gas and nuclear power is going up  
19 while the price of solar power and efficiency  
20 programs keep going down.

21 Duke Energy, Tampa Electric Company and  
22 Florida Power & Light can give consumers a break by  
23 investing in energy efficiency, which saves  
24 consumers money and protects our health. Energy  
25 efficiency programs lowers customer's monthly bills,

♀

4

1 saving consumer's money and supporting Florida's  
2 economy.

3 Now, does that sound worthwhile to you?

4 (Audience answers yes)

5 MR. JACKALON: Okay. Well, there is more.

6 This year the Florida Public Service Commission will  
7 set new standards for energy efficiency for the next

8 ten years under the Florida Energy Efficiency and  
9 Conservation Act. This process presents an  
10 immensely important opportunity for us all. Energy  
11 efficiency is the cheapest, fastest and most  
12 reliable energy source. If Florida's utilities  
13 include Duke, TECO, FP&L are required to achieve  
14 higher energy efficiency goals, their customers,  
15 that is all of us, will see lower bills, job growth  
16 and the environmental benefits of an energy  
17 efficient economy. Now, across the country utility  
18 companies are investing in efficiency to cut monthly  
19 energy bills, and they are doing more on solar and  
20 wind, but Florida lags way behind most of the  
21 country, as you will learn tonight.

22 Florida electric utilities have now submitted  
23 their request to the Public Service Commission, and  
24 it is bad news. Their proposed energy saving goals  
25 are unprecedented lows. They want to eliminate

♀

5

1 solar pilot projects. This means we will have  
2 higher energy bills for rate payers and pollution  
3 from new unnecessary power plants. The Public  
4 Service Commission needs to hear from us. We asked  
5 for a public hearing. We asked them to come here to  
6 Pinellas County or somewhere else in Florida and  
7 hold a public hearing. They said no. They're  
8 isolated in Tallahassee, comfortable to be there.  
9 They said no. Here is a direct quote from the chair  
10 of the Public Service Commission, quote, given the

11 technical nature of this goal-setting procedure and  
12 non-legislative directs you to take public  
13 testimony, I do not find it necessary to hold a  
14 public hearing. Persons without the resources to  
15 intervene may file written comments in the docket.

16 We are here tonight at the citizens hearing to  
17 make sure that all of our voices are heard. There  
18 is a court reporter present who will be recording  
19 our comments. We will have some experts testify and  
20 then hear from the public so that all of you can let  
21 the Commission know that you want energy savings to  
22 protect our health and lower our bills. This is  
23 your hearing, and we encourage you to provide your  
24 comments tonight.

25 Now, I would like to introduce three of

♀

6

1 Florida's top advocates and organizers who are with  
2 us; first is Julia Hathaway. Julia, raise your  
3 hand.

4 (Audience applauds)

5 MR. JACKALON: Julia is the Sierra Club's  
6 representative who served as the first organizer for  
7 the Sunshine State Clean Energy Coalition and helped  
8 to coordinate tonight's event. The other  
9 coordinator of the hearing tonight is Sierra Club  
10 conservation organizer Britton Cleveland. Britton,  
11 are you there?

12 (Audience applauds)

13 MR. JACKALON: And finally, I would like to

14 turn the microphone over to the third person,  
15 Tim Heberlein, the political director of the Florida  
16 Consumer Action Network, one of the co-founders of  
17 the Sunshine State Clean Energy Coalition. I am  
18 happy to announce that Tim will join the Sierra Club  
19 staff full-time next week.

20 (Audience applauds)

21 MR. JACKALON: Tim will serve as our MC for the  
22 rest of the program tonight. Tim, take it away.

23 MR. HEBERLEIN: Thank you very much. Again,  
24 welcome. Thank you. That is very loud. My name is  
25 Tim Heberlein, I'm the political director of the

♀

7

1 Florida Consumer Action Network, and I will be your  
2 MC for tonight. Just before we get started, I'll  
3 want to lay out some ground rules. We will have  
4 some expert testimony as Frank mentioned, as well as  
5 receive public comments. Please when you are making  
6 your statements, please direct them at the PSC, or  
7 to the commission, if you were, because we will be  
8 submitting these to the official record on the 21st  
9 in Tallahassee when the PSC has their hearing there.

10 As Frank mentioned, why are we here, the  
11 Sunshine State Clean Energy Coalition believes that  
12 your voices need to be heard. So thank you very  
13 much for coming. The PSC didn't think this was  
14 necessary, but by your presence here, obviously they  
15 were wrong. This is an important issue and I'm so  
16 glad to be part of the team. Again, your comments

17 are being recorded, so please direct them -- when  
18 you approach the microphone, please state your name  
19 and your address and make your comment.

20 So first I have some notes here. Well, first I  
21 want to recognize some of the elected officials in  
22 the room and thank you very much for being advocates  
23 for the coalition as well as Clean Energy Solutions  
24 here in Florida. First is Representative Dwight  
25 Dudley.

♀

8

1 (Audience applauds)

2 MR. HEBERLEIN: St. Pete council member Dardin  
3 Rice.

4 (Audience applauds)

5 MR. HEBERLEIN: And Pinellas County  
6 Commissioner Ken Welch. Thank you.

7 (Audience applauds)

8 MR. HEBERLEIN: Seminole council member Patty  
9 Plantamura.

10 (Audience applauds)

11 MR. HEBERLEIN: City of Gulf Port council  
12 member Yolonda Roman.

13 (Audience applauds)

14 MR. HEBERLEIN: Gulf Point council member  
15 Michael Fridovich.

16 (Audience applauds)

17 MR. HEBERLEIN: And Safety Harbor member  
18 Andrew Zodrow.

19 (Audience applauds)

20 MR. HEBERLEIN: Ms. Martin, representative for  
21 the Sierra Club, go ahead.

22 MS. MARTIN: Good evening, folks. We are  
23 moving into the public testimony portion of the  
24 evening, so I'm going to kick us off. My name is  
25 Kelly Martin, and I'm the senior campaign

♀

9

1 representative with the Sierra Club, Beyond Coal  
2 Campaign. I'm here tonight to ask the Public  
3 Services Commission to set much, much higher energy  
4 savings goals than the ones that the big power  
5 companies have proposed, because saving energy  
6 through efficiency is the cheapest, fastest and  
7 safest way to meet Florida's electricity needs.  
8 There is a huge opportunity here in Florida to save  
9 more energy and more money starting right now in  
10 2014. Simple things, simple programs can go a  
11 really long way, compact florescent light bulbs,  
12 modern appliances that use less electricity, energy  
13 audits and good insulation so that air conditioning  
14 cools the inside of our homes and not the outside,  
15 and through setting strong goals, the Commission  
16 should hold the big power companies accountable for  
17 helping all customers install these efficiency  
18 measures and gain the benefits of lower power bills  
19 and the benefits of energy efficiency investments  
20 going far beyond low power bills. They help create  
21 local jobs.

22 If the big utilities in Florida were to match

23 the industry standard for investments in energy  
24 efficiency that one percent of the previous years  
25 retail sales that most -- a lot of states, more than

♀

10

1 half the states nationwide are hitting, we would  
2 create here in Florida 900 jobs in the first year  
3 alone, and consumers would save \$10 million on their  
4 electric bills over the life of these energy  
5 efficiency programs. But instead, Florida's power  
6 companies have proposed dramatic, unprecedented  
7 reductions from the modest annual energy savings  
8 that they currently achieve. That is a giant step  
9 backwards, and it means higher power bills, economic  
10 stagnation and dirty air. What is proposed by the  
11 power companies are unwise because they fail to look  
12 ahead and to acknowledge that saving energy can help  
13 save avoid expensive new power plants and expensive  
14 pollution controls for the old plants.

15 So just recently, as you heard, the U.S.  
16 Environmental Protection Agency has announced  
17 historic carbon pollution standards, and they will  
18 require that we reduce our emissions in every state,  
19 and part of that includes a one-and-a-half percent  
20 annual energy savings, energy efficiency savings  
21 related -- which is relative to sales by 2020 and in  
22 every state including Florida, and the utilities --  
23 the utilities' goals that they propose right now in  
24 this energy savings proceeding, also known as PIKA,  
25 are nowhere near the standard, and so that means

♀

11

1 that they are failing to capture the savings for  
2 peoples' bills, and they are also -- how on earth --  
3 how on earth is Florida going to meet the carbon  
4 pollution standard if they are not maximizing  
5 investments in energy efficiency. That is the  
6 cheapest, that's the fastest and that is the safest  
7 way to reduce our emissions.

8       So let's be clear, Florida ranks 27th in the  
9 country on energy efficiency. North Carolina,  
10 South Carolina, Ohio, all the other states where  
11 Duke Energy operates, are all achieving much, much  
12 higher energy savings every year. Even Arkansas is  
13 achieving much higher energy savings every year, and  
14 here is one reason why, so when the utilities  
15 propose the goals they look at what is cost  
16 effective, which makes sense, but what happens is  
17 they're using a really flawed analysis to look at  
18 cost effectiveness. Nearly every state in the  
19 country has rejected the analysis that Florida  
20 companies are using. It is called the rate impact  
21 measure test and the two-year payback provision, and  
22 what these are is they are very limiting. They are  
23 really narrow ways to look at whether a particular  
24 energy efficiency measure is in the consumer's  
25 interest, and as a result, the companies, Florida

♀

12

1 companies are missing out on most of the great  
2 energy efficiency programs that are working all over  
3 the country to reduce bills, reduce pollution and  
4 protect our interest.

5 All right. So I'm going to try out an analogy  
6 here and I think it is kind of like this to describe  
7 this cost effectiveness, so-called cost  
8 effectiveness test. So pretend for a minute that  
9 you are at a breakfast buffet, and you want to have  
10 a big fruit salad for breakfast, right? You want it  
11 to be full of delicious fruits that are chockful of  
12 vitamins and minerals and nutrients are good for  
13 your health, right? And then you go up to the  
14 buffet, and it has got this weird section where only  
15 the blueberries are available, and all the other  
16 fruits are like behind a glass cage that you can't  
17 get to, and then somewhere along the way you learn  
18 that maybe a pork company backs the restaurant, and  
19 you start to think that might be weird, and then you  
20 see that your only option for this big, healthy  
21 fruit salad that you want is these expensive  
22 blueberries; the watermelon, the oranges, the  
23 peaches, raspberries, grapefruits, they are all off  
24 limits, right? So what was going to be your big,  
25 healthy fruit salad is limited to the boring, narrow

1 option of blueberries that are more expensive than  
2 the other fruits, and then slowly bacon starts to  
3 look pretty good and the waffles look pretty good,

4 and your pathetic blueberries aren't even looking  
5 very appetizing or cheap anymore, so why even  
6 bother.

7       So this little silly rule about what kind of  
8 fruit you can have means that you have ended up with  
9 a meal that has no vitamins, no minerals, little  
10 nutrition and leaves all these delicious and lovely  
11 options left on the table, and that is how this  
12 screen works for the utilities what they are looking  
13 at. It is an arbitrary rule. The limits the  
14 options that allows us to make the best choices for  
15 energy efficiency. The leaves awesome energy  
16 efficiency and ion solar programs on the table that  
17 consumers in Florida can't take advantage of, and it  
18 makes the options much like the bacon and waffles.  
19 It makes the options to build new expensive,  
20 polluting power plants much more palatable. They,  
21 all of the sudden, look like better options than  
22 energy efficiency, and it skewes with the results  
23 for options that pays more money for the  
24 shareholders and less options available that save  
25 money for consumers and protect our health. So I

♀

14

1 ask the Public Service Commission to please leave  
2 behind this flawed test that the utilities use and  
3 allow customers better choices for energy savings  
4 like is happening all over the country.

5       I will close with this, so I'm a mom, probably  
6 like many of you in the room, and I like to make

7 sure my kids eat healthy fruits and vegetables such  
8 as you could tell in my analogy, but I have three  
9 small children, and I worry about their future, and  
10 what their future looks like, really quite literally  
11 keeps me up at night. We're already feeling the  
12 impact of climate disruption from super storms and  
13 severe temperatures to droughts out west and eroding  
14 beaches. Climate change is on our doorstep, and  
15 power plants are the largest source of carbon  
16 pollution of causing climate changes.

17 This Commission right now this summer has an  
18 opportunity to set easy high goals for the utilities  
19 for energy savings. It is the cheapest way, the  
20 easiest way to reduce our reliance on dangerous and  
21 polluting fossil fuels, to reduce our carbon  
22 emissions, to mitigate the worst impact of climate  
23 change, because our window to act on climate is  
24 closing. We are the last generation of people that  
25 can act. By the time that my three children are

♀

15

1 grown up and are my age, our window to act on  
2 climate will have closed.

3 So I ask the Commission to please hear our call  
4 for more energy savings and set these high goal for  
5 energy efficiency that are on par with nationwide  
6 standards, to expand these narrow tests that  
7 utilities use to calculate what programs are cost  
8 effective and to protect and expand the solar pilot  
9 programs, and by doing so, the Commission will help

10 protect clean air and clean water and create jobs in  
11 the clean energy economy, saving millions of dollars  
12 for our consumers. So thank you very much for that  
13 opportunity to testify.

14 MR. HEBERLEIN: Thank you very much, Kelly.

15 I'm glad you are staying and we are going to  
16 the timely comment portion of tonight's meeting.

17 REVEREND BELL: Good evening, everyone. I'm  
18 Reverend Andy Bell. I'm a licensed psychotherapist  
19 here in St. Petersburg, and I come here tonight as a  
20 representative of Sunshine State Interfaith Power &  
21 Light. We have been told that these issues are far  
22 too complex for us mere public folks to understand.  
23 There are certain things I understand that I want to  
24 try to address them very quickly tonight. I  
25 understand that our governor may say he doesn't get

♀

16

1 it. I understand that he is being told it is too  
2 complex even for him to understand, but what I do  
3 understand is this, I am one of those many, many  
4 people in the state who suffers with asthma. I am  
5 thrilled that my asthma doctor is here this evening  
6 and is much more educated on these issues, and I  
7 know that she is going to be an advocate, as well.

8 I understand it when energy is produced, we  
9 need energy, we do, but when it is produced in a way  
10 that causes toxins to flow into the atmosphere it  
11 causes our children to be sick. It causes our  
12 elderly to be sick. I also understand that the

13 solar panels that are on my house work well. I  
 14 understand that at my home we haven't paid a power  
 15 bill to Duke or Province in over two years. I get  
 16 that. I also understand solar works. I understand  
 17 energy efficiency works. I understand energy  
 18 efficiency is the least expensive option for some  
 19 people.

20 I want to sum up by telling you about Martha.  
 21 Martha is a woman who has come to Lakewood United  
 22 Methodist Church, who comes in and she asks for  
 23 assistance with power bills, two months worth of  
 24 power bills that total over \$650. Martha is a  
 25 single grandmother raising two children with no

♀

17

1 possible way to ever pay those bills. She lives in  
 2 a sieve, living in her home -- she is actually a  
 3 homeowner. Her home was built in the 1950s, typical  
 4 block style. She tries to air condition it. It is  
 5 like trying to air condition a sieve, and I  
 6 understand also that with a few hundred dollars  
 7 worth of energy efficiency programs savings would go  
 8 a long way in probably cutting that bill at least in  
 9 half, along with some good energy conservation  
 10 education. Martha is one of many.

11 In closing, now Martha is one of many. Every  
 12 church, every synagogue, every mosque, every house  
 13 of faith, every social welfare organization in  
 14 Florida is deluged with people just like Martha,  
 15 every year. We need to call on the Public Service

16 Commission to actually step up to help our brothers  
17 and sisters who can have affordable air conditioning  
18 in their home, who can have affordable power, and we  
19 need the public service commission to satisfy our  
20 request to stand up to help them. We have to do  
21 this. Thank you.

22 (Applause)

23 MR. HEBERLEIN: Thank you very much.

24 MS. HAYES: Hello. My name is Maria Hayes. I  
25 live in St. Petersburg, Florida. I'm here to speak

♀

18

1 to the PSC. I may not be a financial analyst, but  
2 what I do understand is that under the state law the  
3 PSC must ensure our electric rates are as low as  
4 possible, and currently we are ranked ninth in the  
5 country, but that is slowly changing due to  
6 increasing temperatures here in Florida. I remember  
7 last year, last summer, and I am not one to get  
8 overheated, I actually like it to be 75 degrees and  
9 seem comfortable. I actually feel cold in my home.  
10 I have the thermostat set around 78 to 80. I like  
11 to keep it that way because it is energy efficient,  
12 but this year I have noticed, because of the  
13 increasing heat and because of global warming, my AC  
14 is constantly running. I am a single mother of two  
15 children on a single income. I don't receive any  
16 help. So for me, utility bills matter to me, just  
17 like I pay my rent, just like I pay my car  
18 insurance. Utility bills are slowly raising, and

19 that means less money for investing in my children,  
20 less money for them to go to after-school programs,  
21 less money for -- you know, clothing, decide whether  
22 to pay the bills or to, you know, opt out of paying  
23 medical costs and things like that. So that is a  
24 huge concern for me.

25 The other thing is that fossil fuels and

♀

19

1 nuclear power is expensive and harmful to the  
2 environment, while solar power is inexpensive, and  
3 we have an abundance here in Florida. We are the  
4 Sunshine State, and I, like the other gentleman that  
5 spoke, I suffer from chronic allergies and  
6 respiratory issues, and so does my eldest daughter,  
7 and this last spring we had a ridiculously high  
8 pollen count. It made me so sick I couldn't  
9 function, even to the point where I broke out into  
10 hives for several days. I couldn't get rid of them.  
11 This affects us. It affects us financially. It  
12 affects our health. So in conclusion, we need  
13 financial, efficient renewal goals here in the State  
14 of Florida, and Floridians just can't afford this  
15 anymore, and it is just not sustainable. Thank you.

16 (Applause)

17 MR. HEBERLEIN: Thank you.

18 SPEAKER: Good evening, everyone. My name is  
19 Neo Constintino. I'm with a small public interest  
20 think tank called Camelot Florida. Our mission goal  
21 is Florida first and quality of life and sustainable

22 living, and we had put together a program twelve  
 23 years ago at the University of South Florida clean  
 24 energy where we saved -- put saved the Frenchen  
 25 Trail Bridge and then we put panels on the bridge.

♀

20

1 well, that didn't work for a lot of reasons, but  
 2 history repeats itself. So we are back again. The  
 3 bridge is there, but we're smarter this time because  
 4 we want to put solar panels not only on the Frenchen  
 5 Trail Bridge, not only on the two other bridges on  
 6 the Gandy but all the bridges in Florida, all the  
 7 bridges in Tampa Bay. So words are good. It is  
 8 called talk the talk, and it is a wonderful talk to  
 9 talk tonight, but if you really want to do  
 10 something, an actionable item, something that gets  
 11 done and we're working together to get it done, look  
 12 at the Fourth of July as independence from these  
 13 four power companies. It is a new way of looking at  
 14 the Fourth of July. We are independent of these  
 15 people. We take control, and we can indeed put  
 16 solar panels on these eight bridges we have. We  
 17 could be solar and that could work, but we all have  
 18 to pull together to make it work, and we are asking  
 19 for your help tonight to make it work.

20 we can generate upwards of 100 megawatts of  
 21 solar panels, or we call it megasolarwatts instead  
 22 of megawatts, explain how it was generated. The  
 23 other thing on our production of energy, you can all  
 24 buy solar panels and join the coal op and then we

25 would install your panels on bridges. There is a

♀

21

1 lot to it. We have a website. Thank you very much,  
2 and thank you, all of you for being here.

3 (Applause)

4 SPEAKER: Hey, everybody. My name is Mike  
5 Antheil. I'm the executive director of a group  
6 called the Florida Alliance for Renewable Energy.  
7 I'll be real quick. We just want to hopefully  
8 convey this message to the Public Service  
9 Commission. That message is simply that the eyes of  
10 the state are on this process, the eyes of the state  
11 are on the Public Service Commission and the folks  
12 that are up there making decisions on our behalf. I  
13 have traveled all around, probably to every city in  
14 this state with Susan and some others working  
15 renewable energy. We are a trade association. We  
16 essentially represent the solar businesses,  
17 renewable energy businesses in the state. I can  
18 tell you just like the people that are in this room  
19 tonight there are pockets all across the state of  
20 people that are very serious about taking control  
21 and taking renewable energy a little more serious  
22 than some of our decision-makers are. Right now we  
23 can tell you firsthand there is this drumbeat.  
24 There is this slow and steady drumbeat, and every  
25 time another nuclear power plant gets commissioned,

♀

1 the drumbeats a little louder. Every time a million  
2 dollars flows into the coffers of whoever is  
3 campaigning so on and so forth for the utilities,  
4 the drumbeats a little louder. Every time the  
5 public is denied input in a process where all times  
6 the public should have input in that process, the  
7 drumbeats a little louder, and I can tell you  
8 without question that if the Public Service  
9 Commission doesn't take their obligation to the  
10 public serious, that the citizens and the public and  
11 residents in the State of Florida are going to take  
12 it upon themselves to take control and make change.

13 Thank you very much. I just want to say to  
14 everybody that is here awesome conversation, love  
15 the blueberry analysis, for this many elected  
16 official representatives, all the commissioners  
17 here, seriously fantastic and great  
18 job, Sunshine State Energy Coalition. Thank you.

19 (Applause)

20 MR. HEBERLEIN: Thank you.

21 SPEAKER: My name is Jim Shirff. I live at  
22 8705 Cove Court in Tampa, yes, the other side of the  
23 Bay. Thank you very much to the commissioners for  
24 allowing me to speak. First, I would like to solve  
25 Ms. Ross' question about why it is so hard to do

1 solar energy in Florida, and the best statement is

2 someone who once said it is really difficult to get  
3 somebody to understand something when its salary  
4 depends on their understanding. I would like --  
5 (Applause) the floor of my condominium is nine feet  
6 above sea level. How many people in this room have  
7 a floor level within the first, say, 20 feet above  
8 sea level? Just for the record, I would like to say  
9 that over half the hands of the people in this room  
10 indicate they live at or near sea level, and all it  
11 is going to take is one storm surge to wipe us out.  
12 This state, Florida, is right at the edge of  
13 survivability and any more global warming is going  
14 to put you literally underwater. We have to do  
15 everything we can to make this work, to make energy  
16 conservation and renewable energy sources work.  
17 Basically, we have got to get away from fossil  
18 fuels and we have got to get away now. I would like  
19 to ask everybody in this room to commit to go to  
20 Tallahassee, whether it is on a bus or with private  
21 transportation -- if the busses overflow, I will  
22 take four people in my Prius. Thank you very much,  
23 and I look forward to seeing you in Tally.  
24 (Applause)  
25 MR. HEBERLEIN: Thank you.

♀

24

1 SPEAKER: My name is Gerald Gowen, G-e-r-a-l-d  
2 G-o-w-e-n. Janet and I live at 104 Clippers Way in  
3 Tarpon Springs. We have lived there for 20 years.  
4 We are no longer Hoosiers. We are Floridians. Our

5 burial sites are in this county. I'm going to say  
6 that lightly. Let's get serious for a moment.  
7 There are 20 solar panels currently sitting on a  
8 wastewater plant in Tarpon Springs as a \$50,000  
9 pilot project that is one year old. It is working.  
10 If you are accepting any kind of exhibits tonight,  
11 here is Exhibit No. 1 about that project. There is  
12 example after example after example appearing in the  
13 news to tell us that solar saves money. Scientists  
14 recently told us in May of this year that Tampa Bay  
15 is in the cross-hairs of climate change and  
16 Senator Nelson called a conference in April of this  
17 year because of flooding in Miami Beach streets, the  
18 beach erosion and the saltwater contamination, you  
19 may not know too much about that, are occurring now.  
20 Pinellas County is ready to move on solar and  
21 other alternative sources. I won't pretend to speak  
22 for that because Commissioner Welsh is here, but he  
23 knows about a year ago I wrote him and challenged  
24 the county as well as the school system to do  
25 everything they could to put everything possible on

♀

25

1 alternative energy sources for this county. He  
2 wrote back. With your permission, I will read this  
3 sentence.

4 COMMISSIONER: I don't remember it, so go  
5 ahead.

6 SPEAKER: Thank you for your letter, Gerald.  
7 The Commission is moving forward with the RFP and

8 pace implementation. We are looking forward to  
 9 moving this initiative forward in collaboration with  
 10 other citizens and multiple powers. Ken Welsh.  
 11 (Applause) there is a solar field at the entrance of  
 12 the Florida Gulf Coast University that is producing  
 13 18 to 20 percent of the university's electrical  
 14 needs. It is headed by Dr. Joseph Simmons, and he  
 15 was brought here from Arizona specifically to head  
 16 the research program there. I have been in contact  
 17 with him. This is not entirely a political issue.  
 18 This is a moral issue. It is a survival issue. It  
 19 isn't an issue about what I give to my children, my  
 20 grandchildren, and as of four weeks ago my great  
 21 grandchildren. Don't let me have to say I am sorry  
 22 your mother and I left you this mess.

23 (Applause)

24 SPEAKER: My name is (inaudable) Salona. I  
 25 came from Orlando because this is important, and I'm

♀

26

1 glad to see you guys here. I'm glad to see so many  
 2 familiar faces. I want to say a few things for the  
 3 record. When I heard this was going to the Public  
 4 Service Commission, they need to think about this  
 5 very seriously. Let's start first with these talks  
 6 about sea level rise. I've done some calculations,  
 7 and the bottom line to me is that whether it is 2060  
 8 or 2100, the thing is that most of these processes  
 9 physically impact energy, and you have to put -- you  
 10 know that I've been using other people's data, but

11 basically it is an exponential catastrophe, because  
12 you don't see anything really happening until the  
13 last ten years. So this is something to be taken  
14 very seriously, especially with the calculations I  
15 read, that NASA has started, in October, to fly over  
16 Greenland to get better data. So we really need to  
17 get on the ball on that, really right now.

18 So in terms of solar, first of all, so I don't  
19 get any booing, I did supper insulate my house a  
20 couple years ago. I have to go fast now. 1.73 was  
21 quoted for a solar system here in the area, Tampa  
22 Bay area, okay. Use that number and nuclear can't  
23 even touch solar. On top of that, nuclear gets  
24 40 years. You do 40 years on solar, and you get  
25 less than a two cent a kilowatt hour. Even gas

♀

27

1 beats that. So basically another thing that the  
2 Public Services Commission needs to understand very  
3 carefully is transit costs. When I start getting  
4 people off the grid and then the utility goes to the  
5 Public Service Commission for more money because  
6 they have less customers, you have big problems.  
7 That is the thing that the Public Service Commission  
8 needs to consider very seriously.

9 Thank you.

10 (Applause)

11 SPEAKER: Hi, everybody. My name is Greg  
12 Wilson. I'm the president of windjammer Energy.  
13 When I was designing my patent for a new type of

14 wind energy, our governor, Rick Scott, went to see  
15 the Coke brothers, and he came back and did away  
16 with all the federal grant money that was in the  
17 state hands, and so I have been trying to come up  
18 with funding for the last three years to get my  
19 invention going. It is pretty simple. The sails in  
20 the center move and it pulls a rope. It is just  
21 like pulling on a lawn mower. All the high-speed  
22 equipment is down in the middle of the base unit,  
23 and so it is safe for wildlife and people and birds  
24 and all that, winter Bines kill big birds and lots  
25 of birds and they don't pay for themselves in

♀

28

1 Florida. That is why I came up with this new kind  
2 of invention, to have Florida Power & Light and Duke  
3 think they are going to build more nuclear power  
4 plants they are crazy. I even called the Nuclear  
5 Regulatory Commission in Orlando and said it was  
6 insane to build a new nuclear power plant. There is  
7 no safe way to store the spent fuel for eternity,  
8 which is basically what it comes down to. So I'm  
9 going to be a thorn in the side of Florida Power &  
10 Light just like I did for Duke, and I stopped their  
11 program at Duke, and I'm going to stop this one at  
12 Florida Power & Light. We are going to get away  
13 from coal and oil and natural gas, and we are going  
14 to go with renewable because that is the future. We  
15 are not going to sit and wait for them to decide for  
16 us.

140702pu - vol\_ I

17           when everybody is laying on their deathbed  
18 including the people that own these companies, and  
19 they look outside their window and they see the sky  
20 is black at the rivers are poison and all the  
21 animals are dead and the fish are long gone, what  
22 are they going to do, they are going to look around  
23 and see their family there, their children and their  
24 spouses and their grandkids, what are they going to  
25 tell do, tell them to eat money, that doesn't work.

♀

29

1 So anybody that needs to know any information, I'm  
2 on Facebook, windjammerenergy.com. I mean, yeah, I  
3 got that too, but I have a group and like a page on  
4 Facebook.

5           SPEAKER: I'm Ken Conklin, 435 62nd Avenue  
6 South. We the CEOs of the corporations of the  
7 United States in order to form a more profitable  
8 business established the statutory law, ensure stock  
9 tranquility, promote the general profits over the  
10 environmental welfare and secure the blessing of  
11 lobbyists to ensure our prosperity. Is this the  
12 preamble of our Constitution?

13           (Audience answers no)

14           SPEAKER: It starts out with the "We the  
15 People," and it contains promote the general  
16 welfare. Each and every appointed and elected  
17 official takes an oath to uphold the Constitution of  
18 the United States. Now, I'm not here to talk to you  
19 about the Constitution. On December 20, 2010, I was

140702pu - vol\_ I  
20 diagnosed with severe asthma. I live 75 percent of  
21 my life in my bedroom. It is environmentally  
22 sealed, HEPA filters, humidifiers and its own air  
23 conditioning system. I'm self-employed. I also  
24 work in my bedroom. Being self-employed, I don't  
25 get sick days. I don't get vacation. So when I

♀

30

1 don't feel good, I have to get up and work. I would  
2 like you to close your eyes and imagine this. In  
3 the middle of the night as you are sleeping you  
4 shoot up from the bed desperately gasping for air.  
5 while gasping, you frantically struggle to find your  
6 rescue inhaler on the nightstand. By the time you  
7 find it, you are in a full panic, unable to breathe.  
8 Even though you have your rescue inhaler, you cannot  
9 take a deep breath to get the medicine in your  
10 lungs. Your panic worsens, your spouse is trying to  
11 help, but again, your airways are clogged. You  
12 can't calm down enough to take a deep breath. You  
13 hope that you are able to calm down enough to take a  
14 deep breath before your fingers turn blue and you  
15 have to have to have the paramedics come. This is  
16 what us asthmatics live with.

17 (Applause)

18 SPEAKER: Greetings. I'm Nancy Ogden,  
19 190 18th Avenue North, St. Petersburg, and thank you  
20 for the great presentations this evening. We are  
21 happy not to have snow in Florida, but it is  
22 critical to our state, our real estate to preserve

23 the snow in the mountains in the north and in the  
24 poles, because Florida was underwater at one time,  
25 and think of everything we have burned produces CO2.

♀

31

1 Think of CO2 as a blanket. The more we produce it,  
2 the thicker it gets, the warmer the earth is going  
3 to get. And Florida is heading for that underwater  
4 state. I have been documenting the disappearance of  
5 palm trees at the park as sea level rises and comes  
6 around the base of the tree. It is happening. The  
7 older docks are underwater at high tide. So let's  
8 -- we have to do something about CO2. We have to  
9 get the snow back in the mountains and save our  
10 country, our world. Thank you.

11 (Applause)

12 SPEAKER: Hi. My name is Patricia Holmes. I  
13 live at 6357 2nd Avenue North, St. Pete. I decided  
14 to speak tonight because I have been a tree hugger  
15 for most of my life, but I know that I live under an  
16 oak tree for shade that somebody else planted, and  
17 whenever we talk about trying to save the future,  
18 everybody goes, well, that is going to be in 2100.  
19 I'm not going to be alive. Well, that means you are  
20 not planting oak trees for somebody else to enjoy  
21 the shade. You are not planting for the future of  
22 our children, of our grandchildren, of our great  
23 grandchildren. I'm a third generation Floridian,  
24 and my son is a fourth generation Floridian. I'm  
25 hoping for a fifth. Another thing I would say, I'm

♀

32

1 very glad about the EPA now putting a limit on  
2 carbon. The unfortunate thing is they have no  
3 powers to fine or penalize somebody for not doing  
4 it. The other thing I would say is that here in the  
5 United States we call it an ocean surge. In Japan  
6 it is called a Tsunami. If you remember what they  
7 went through and that atomic or nuclear power is  
8 still polluting the ocean, it is still -- the people  
9 cannot return to their homes. They can go in there  
10 45 minutes every month. They are still looking for  
11 bodies of their children, of their parents, of their  
12 wife. We don't want this here. This is a beautiful  
13 state, and it is up to us to make everyone work to  
14 save it. Thank you.

15 (Applause)

16 SPEAKER: Good evening. My name is Bruce  
17 Taylor. I reside at 131 35th Avenue Northeast in  
18 St. Petersburg, and I have been born and raised in  
19 Pinellas County, and I want to start by saying, as I  
20 don't disagree with hardly anything that has been  
21 said here tonight, but I do want to add a different  
22 twist. It is my understanding the immediate  
23 question before the commission is whether or not to  
24 relax the energy efficiency standards to a  
25 considerable extent, and I want to say I have a

♀

33

1 great deal of confidence in corporate America,  
2 particularly in the power companies. They can meet  
3 the old standards with the finances and the  
4 resources at their disposal and the pool of talents  
5 that they have, they can meet the old standards.  
6 Sometimes they need an incentive to meet those, and  
7 that is why we have laws that require them to meet  
8 certain efficiency standards, and therefore, I'm  
9 going to ask you to not take those incentives away  
10 because they can meet those standards if they try,  
11 and I want you to keep the old standards in place.  
12 Thank you.

13 (Applause)

14 SPEAKER: Hello. My name is  
15 Stephanie Striklin. I am a resident of Tallahassee,  
16 but I'm down here in St. Pete because I'm an intern.  
17 I just wanted to say that this April I worked with  
18 (Inaudible) Clear Energy & Southern Energy Network  
19 on the solar rally in Tallahassee, Florida. You may  
20 have heard of it. And across the state there were  
21 eight or nine of us organizing at universities. I  
22 was organizing at Florida State, and many people  
23 were organizing at FIU and different other colleges,  
24 and people of our generation want this. Our  
25 generation is the solar generation. We are the

1 people moving to make this happen, and we meet with  
2 thousands of people that would love this to happen,  
3 all in our age group and everyone -- many people

4 showed up and voted for clean energy in our ballots,  
5 and I just wanted to say that it is something that  
6 is so important, and I want to have a great future  
7 for my family, and I want to help make my family  
8 better. My parents both suffer from very severe  
9 asthma. My boyfriend had an asthma attack and had  
10 to go to a hospital four days ago, and just quickly  
11 there is something you may not know about  
12 Tallahassee, Tallahassee does not actually produce  
13 any of its own power. It doesn't have any power  
14 plants, and it does not have any admissible trash  
15 dumps, which means that people up there are not  
16 responsible for what they put out, and that is  
17 something we have to do. We have to make them  
18 responsible for their own pollution up there,  
19 because they can't pollute our water and our lives  
20 just because they can't see it. Thank you.

21 (Applause)

22 MR. HEBERLEIN: Thank you.

23 SPEAKER: Hi. I want to thank everybody that  
24 put this on tonight. I'm Linda Varonich,  
25 V-a-r-o-n-i-c-h. I live at 1728 Lori Lane in Belair,

1 Florida. I'm a Michagander, grew up next to Fisher  
2 Body. I used to know when they were going to paint  
3 because you could smell it in the air, and asthmatic  
4 too. I blame Fisher Body there is nothing there  
5 anymore to blame. It has already been decimated.  
6 Fast forward to when I was a public health

7     sanitarian in Michigan and I had the occasion to  
 8     meet the general who responded to the Chernobyl  
 9     incident. He was one of the last surviving people,  
 10    in like 1985. I'm sorry. Because all the first  
 11    responders were dead that responded to the Chernobyl  
 12    incident. Do we want that in Florida? I don't  
 13    think so. Get rid of that 22 million stupid watt  
 14    nuclear idea, Governor, and all the other stuff that  
 15    goes with it. (Applause) and there is an easy one  
 16    for the Public Services Commission who seem to be  
 17    very into baby steps. I was in Albuquerque last  
 18    week and had the occasion to go to a park and view a  
 19    movie called (inaudible) Ocean, and in response to  
 20    the carbon comments that are made, it is not  
 21    entertaining even though Sigourney Weaver narrates  
 22    it. It is about how shells cannot form in the  
 23    arctic for the fact that the ocean temperature is  
 24    rising, acid changes in our oceans are killing all  
 25    the marine animals to the tune of one out of four

♀

36

1     that rely on coral reefs to sustain, you know, and  
 2     bigger fish eat the little fish, and as the other  
 3     gentleman said too, you can look out the window and  
 4     just sit on your piles of money. I don't think so.

5           (Applause)

6           SPEAKER: Hello. My name is Dave Kovar,  
 7     K-o-v-a-r. I live in Safety Harbor at 305 Los Posis  
 8     Drive. I appreciate this great event and giving us  
 9     an opportunity. I'm with the Tampa Bay Clean Air

10 Coalition, a member of the Sunshine State  
 11 Commission. I made this speech at dozens of events.  
 12 It applies to solar just like it does to transits  
 13 just like it does to healthcare, and that is -- I'm  
 14 tired of the way that Americans measure costs.  
 15 There is a story where the person with the  
 16 blueberries. Bear with me, when someone clear cuts  
 17 a mountain for its coal, that makes money for the  
 18 gross domestic product. If they turn around and  
 19 send those workers into dark pits and they work all  
 20 day and they don't come out for air, that adds money  
 21 to the GDP. When they burn the dirty coal, that  
 22 adds money to the GDP. Here is my favorite one. If  
 23 everybody within a hundred miles gets cancer, that  
 24 adds money to the GDP because we can hire more  
 25 people in the hospitals, more pills from the

♀

37

1 pharmacy and of course more grave diggers and sell  
 2 more graves in the cemetery. Those are our job  
 3 creators.  
 4 We hear again and again that solar doesn't pay,  
 5 that Germany has to subsidize solar work and that --  
 6 but that these other states have set -- we know that  
 7 Germany subsidizes it and that other states have  
 8 reached these savings goals that the profit makers  
 9 dispute. We hear that coal is cheap, that fracking  
 10 gas is cheap, that nuclear is cheap, but somehow  
 11 solar power is expensive and that is because of the  
 12 way costs are measured. People don't put a cost on

13 cancer. People don't put a cost on pollution.  
14 People don't put a cost on the quality of life, and  
15 I frankly am sick and tired of it, whether we are  
16 talking about transit, whether we are talking about  
17 Medicare, whatever, the value of drilling in public  
18 parks, national parks or Alaska, it is all the same.  
19 We are not measuring costs the correct way. Thank  
20 you very much.

21 (Applause)

22 SPEAKER: Good evening. I am Kathy Harrelson.  
23 I'm a Florida organizer for Gulf Coast Networks, and  
24 we are also members of the coalition. Thanks to  
25 everyone for doing everything you did tonight to

♀

38

1 make this happen. I do this for my grandson, and I  
2 brought -- you can't see it. It is small, but I  
3 brought a picture of him tonight. He is ten years  
4 old. He is the only one within our family with  
5 asthma, the only one born and raised here in the  
6 Tampa Bay area. So it is not genetic. This is  
7 causative, but one of the things I want to talk  
8 about that hasn't -- you may not realize this, the  
9 Public Service Commission, by not pushing renewable  
10 energy standards, by not pushing energy efficiency  
11 creates a trumped-up need, quote, unquote, need for  
12 new energy plants in this state. It is a  
13 manufactured number, and what the result of it --  
14 you might not realize that even now Florida Power &  
15 Light and a company called Spectra Energy is pushing

16 to build a 300 mile natural gas pipeline called  
17 single trail through our springs and rivers to the  
18 green swamps going to Orlando going to the other  
19 coasts. why, because we have a need which they have  
20 created for us. That is why you need to push for  
21 energy efficiency standards. The one percent should  
22 be happening now and should be happening every year.  
23 That's the direction we need to go to create jobs,  
24 to make this state a liveable place and to save our  
25 water. Thank you very much.

♀

39

1 (Applause)

2 SPEAKER: Good evening. My name is Rose Marie  
3 Grougo. I'm a resident of Brookshaw, Florida in  
4 Hernando County. I have come here to St. Pete today  
5 so that my words can be heard by the Public Service  
6 Commission, who doesn't feel that the public has any  
7 right to make a comment. I think that the Public  
8 Service Commission should remember that its name is  
9 Public Service Commission and that their job is to  
10 serve the public and not their own pockets and the  
11 greed of the giant power companies in our state. I  
12 would expect them to pay close attention to the new  
13 EPA standards and to push and push very hard for  
14 your utility companies in Florida to get in line and  
15 also serve their customers. Thank you.

16 (Applause)

17 SPEAKER: My name is Greg Decosmo, I live at  
18 1951 Bayou Grand in St. Pete. For those of you who

19 are local, you know that the ever water rising,  
 20 we're the first to know. We live on the water, but  
 21 when the water rises, we have water front and back.  
 22 So I have experienced that, and I'm glad to see  
 23 St. Petersburg's commissions here and Pinellas  
 24 County because we are on the front line of climate  
 25 change. We are first to be affected, and I think

♀

40

1 that we should go to the front of the line as far as  
 2 protesting what is happening in the Public Service  
 3 Commission. I'm really glad to see they are taking  
 4 the buses to Tallahassee. I'm planning on being on  
 5 one of those buses. The other thing I want to say  
 6 is sometimes public -- sometimes their job is to not  
 7 hear because they are being paid to not hear or not  
 8 pay attention. I'm a big proponent of grabbing  
 9 people's attention with non-violent,  
 10 non-confrontational and protest, and I just had an  
 11 idea. I don't know how sound or safe it is, or if  
 12 you, the more sane and experienced persons in the  
 13 room, but I would think that if on July 19th, the  
 14 Saturday before everyone -- at 4:00 in the afternoon  
 15 turned off their air conditions, turned off their  
 16 lights, if they want to save energy we'll show them  
 17 how. Of course, there are safety concerns as far  
 18 as, you know, power outages, but I think it is  
 19 something that we could do, and if we get that  
 20 Pinellas or St. Petersburg, I think that might get  
 21 some attention. Thank you.

22 (Applause)

23 MR. HEBERLEIN: A few more comments for time  
24 sake.

25 SPEAKER: Hi. I'm Julie Kessel, the president

♀  
†

41

1 of the League of Women Voters of the St. Pete area,  
2 and I'm speaking on behalf of (inaudible). Our  
3 location is in downtown St. Petersburg at 233 3rd  
4 Street North. Come visit us. I'm also a resident  
5 of St. Petersburg. The League of Women Voters of  
6 Florida and the local St. Pete area supports state  
7 legislation for energy conservation and greater use  
8 of renewable resources, such as solar energy. The  
9 League encourages the efficient use of energy in  
10 public and private sectors, new construction and how  
11 commit state funds to achieve those goals. This  
12 position is rooted in intense study and are resulted  
13 commitment to conservation of our natural resources  
14 and the environment, our support for sustainable  
15 economy and the promotion of effective solutions and  
16 transportation, including mass transportation. We  
17 have got the following specific concerns. One, we  
18 already have legislation in place in Florida to  
19 improve energy efficiency but limited enforcement.  
20 we have technologies that are home grown, available  
21 and the intelligent resources here to make renewable  
22 but outsource those resources, we have left or  
23 residents with limited affordable energy options,  
24 our commitment to renewable energy has actually gone

25 down in the last five years rather than up. Our

♀

42

1 power companies continue to endure substantial  
2 further reduction and reversal of renewable energy  
3 standards. Public Service Commission does not make  
4 public comment easily accessible to its residents,  
5 making the process not transparent. We are not  
6 training the next generation of skilled workers in  
7 this area and putting people to work in a clearly  
8 robust economy sector. The impact of these things  
9 are failures to invest in renewable energy resources  
10 is disingenuous. It doesn't represent the interests  
11 of its resident, it doesn't support the development  
12 of a sustainable economy, it doesn't trust the  
13 citizens to make effective, affordable choices for  
14 their family and compromises our collective physical  
15 health.

16 we respectfully request the following, public  
17 hearings, PSC hold public hearings, make the process  
18 more transparent, increase civic engagement in this  
19 decision, meet standards that are here in place,  
20 meet standards signed most recently by the EPA and  
21 address climate changes in mindful ways, use  
22 resources we already have in Florida, encourage  
23 private and public sector investment, put people to  
24 work, expand the solar pilot programs and  
25 incentivize residents and businesses to move to

♀

1 renewable resources for energy in the homes and  
2 places of work. Thank you.

3 (Applause)

4 MR. HEBERLEIN: Thank you.

5 SPEAKER: Yes, Patricia Plantamura. I'm a city  
6 council member in Seminole, Florida, and I took some  
7 random notes so bear with me here. I want to say  
8 first that Florida is a peninsula, and Pinellas  
9 County is a peninsula on a peninsula. Should we not  
10 be speaking up tonight? In fact, if we are not  
11 speaking up tonight, it is like sitting on a branch  
12 in a tree with a saw and sawing the branch that you  
13 are sitting on slowly -- well, this is going to  
14 accelerate and the consequences are come a lot more  
15 quickly if we proceed in the manner that we are  
16 doing. About six months ago I spent three weeks in  
17 Germany, and the people there, it was an urban  
18 fellowship. They sent me back with a German energy  
19 plan through 2050, and the bottom line, one of the  
20 principles is the energy side itself, the goal of  
21 making the most energy events and environmentally  
22 sounds economics on the world while maintaining  
23 competitive energy prices and a high level of  
24 prosperity, and I have to emphasize that because I  
25 think it is really something that does not occur to

1 people a lot, is that to be environmentally

2 responsible, does not mean that it is excluding you  
3 from being economically prosperous. These are not  
4 mutually exclusive ideas, and when we get that,  
5 (applause) we will move forward, and we want both.  
6 Let me just tell you a couple of the German plans,  
7 things they have, they have goals like primary  
8 energy demands will be progressively reduced by 80  
9 percent by 2050. By 2050 every building in Germany  
10 will be climate neutral. They are not only taking  
11 out some of their nuclear plants, but they're  
12 accelerating taking them up because they see the  
13 writing on the wall.

14 Let's stop chopping the branch we are sitting  
15 on, okay.

16 MR. HEBERLEIN: We have the place until 9:00,  
17 which it is around that time. I don't want to  
18 surprise anybody. The PSC is very good at doing  
19 that. We actually want to take your public comments  
20 on the comment cards. We want you to fill those out  
21 if you are unable to make a comment at the  
22 microphone or interest in writing it down. We want  
23 to hear your comments that way. We can go ahead and  
24 finish up the line here, and I'm going to introduce  
25 afterwards our organizer. We'll go ahead and finish

♀

45

1 up the rest of the comments, and just to let  
2 everybody know, where -- please fill out the comment  
3 cards if you didn't get a chance to speak.

4 SPEAKER: Good afternoon. My name is winnie

5 Foster, and I live at 311 57th Avenue South. I am a  
6 grass roots organizer at the Sojourner Truth Center,  
7 and in studying sojourner truth throughout live, we  
8 know how important it is to speak truth to power and  
9 so we are speaking our truth tonight to the Public  
10 Service Commission and sending many heart felt  
11 messages and facts to them. I'm also -- our  
12 organization is also a member of the Sunshine State  
13 Clean Energy Coalition, and we appreciate this  
14 community building work that is going on around  
15 this. I'm a great grandmother, and I am very  
16 concerned about global warming and what is this  
17 going to mean to future generations but also to our  
18 lives right now, and if the global warming is like a  
19 heavy blanket coming down on top of us, and some of  
20 the reasons for that are directly traceable to the  
21 work of the Public Service Commission and the  
22 permission that they give to utilities to use the  
23 fuels that they are using. Let me give you some  
24 statistics. The amount of CO2 that is in our  
25 atmosphere comes from -- 44 percent of it is from

♀

46

1 the use of coal. Utilities are using coal, burning  
2 coal, and we know about the asthma, and 36 percent  
3 of the CO2 is from burning of fossil fuels. We say  
4 to the Public Service Commission, keep the dinosaurs  
5 in the ground. 20 percent comes from natural gas,  
6 and we know the other complications of getting  
7 natural gas and polluting widely everywhere that it

8 goes. So I think we all need to do our civic duty,  
9 and that's the thing that I hear all the time, and  
10 I'm going to stop.

11 (Applause)

12 MR. HEBERLEIN: Thank you very much.

13 SPEAKER: Good evening. (Inaudible) I live at  
14 2519 (inaudible) in St. Petersburg. I understand  
15 that Germany is the first solar produce -- solar  
16 energy producer in the world. We are the Sunshine  
17 State. I am wondering where does the cloud cover  
18 that prevents efficiency of solar energy in Florida  
19 come from? I will let you speculate. Thank you.

20 (Applause)

21 MR. HEBERLEIN: Thank you very much.

22 SPEAKER: My name is Chuck (inaudible). I'm a  
23 citizen of St. Petersburg, Pinellas County, Florida,  
24 United States and the world. I take my citizenship  
25 and my responsibility as a citizen pretty seriously,

♀

47

1 not just some response to my community and the  
2 future. I ask that the Public Service Commission  
3 consider their responsibility not just for  
4 themselves but also to this community and the  
5 future. I ask that they do what they can to serve  
6 the public that they should be serving, that they  
7 diminish the perception of corruption. It doesn't  
8 take a rocket scientist to look and see money flying  
9 into Tallahassee from power companies and then see  
10 policy made by the Public Service Commission that

11 benefits power companies. Even if there isn't a  
 12 direct quid pro quo, there is a perception of  
 13 corruption that erodes our confidence as citizens in  
 14 our elected and non-elected leaders to do their job.  
 15 I ask that they do what they can to make the  
 16 standards for energy efficiency much more re bus  
 17 than what they are doing, and absent that, they will  
 18 present participate state that perception of  
 19 corruption, and it is our job to organize and to  
 20 shame them, every one of them for sacrificing our  
 21 future.

22 (Applause)

23 SPEAKER: My name is (inaudible) I'm the host  
 24 and executive producer of Spectrum 360 on 10 Talk  
 25 Radio Network. (Inaudible) that 20 percent of the

♀

48

1 electricity in the United States is wasted. What is  
 2 the percentage of energy in the United States that  
 3 is generated by nuclear power, 20 percent. We can  
 4 eliminate nuclear power with energy efficiency and  
 5 increasing renewables. We need to commit to a  
 6 (inaudible) products, renewable energy and energy  
 7 security programs in this country. Now, we can't  
 8 let people who are (inaudible) abject stupidity stop  
 9 us from saving our civilization. Thank you.

10 (Applause)

11 MR. HEBERLEIN: That would conclude the public  
 12 comment portion of it. We do have elected officials  
 13 here, and they have a chance to speak, and I wanted

14 to see if you have any comments or reactions from  
15 the public comments that were made. If anybody  
16 would like to say a few things, keep it to a  
17 minimum.

18 Commissioner?

19 COMMISSIONER: Good evening. Thank you all for  
20 coming and staying tonight. This kind of reminds me  
21 of some commissions where you just kind of wonder  
22 where the logic and common sense is. My colleagues  
23 of Seminole council said we are a peninsula. If  
24 anybody ought to be concerned about climate changes it  
25 is Pinellas County. We are the Sunshine State. If

♀

49

1 anybody should be doing more with solar power and  
2 renewables, it is the State of Florida. This is  
3 just common sense, and I told Julia that I wanted to  
4 get the facts, and I think I got a lot of facts here  
5 tonight. I do want to tell you county commission  
6 last year made sea level rise and climate change one  
7 of our strategic priorities, and I want to take this  
8 back to the county commissioners. I want to take  
9 this information back to how we can join this  
10 effort. So thank you all for being here.

11 (Applause)

12 COUNCIL WOMAN PLANTAMURA: Yeah, I wanted to  
13 make one more point. When I was talking candidly  
14 for the three weeks I was in Germany with people  
15 there, people are very careful about what they tell  
16 Americans, and I asked in discussions, please be

17 frank with me about what you think America is doing  
18 in its energy policy, and people did not want to  
19 talk, and finally one group of people said to me,  
20 they said, you know, your country has such great  
21 people with great ideas, how come you don't use your  
22 own ideas in your own country they asked me. So I  
23 mean, we're not asking for anything really weird.  
24 Let's use these great American ideas for making a  
25 better American future. Thank you.

♀

50

1 (Applause)

2 MR. HEBERLEIN: Thank you very much. That  
3 concludes our public portion of the event tonight.  
4 I actually want to thank you, Michelle for being a  
5 great court reporter.

6 (Applause)

7 (Proceedings concluded at 9:12 p.m.)

CERTIFICATE OF REPORTER

STATE OF FLORIDA

COUNTY OF HILLSBOROUGH

I, Michelle L. Deliman, do hereby certify that  
I was authorized to and did report in Stenotypy and  
electronically the foregoing proceedings and evidence in  
the captioned case and that the foregoing pages  
constitute a true and correct transcription of my  
recordings thereof.

IN WITNESS WHEREOF, I have hereunto affixed my  
hand this 16th day of July, 2014, Hillsborough County,  
Florida.

PUBLIC STATEMENTS  
ON ELECTRIC UTILITY CONSERVATION GOALS

---

DATE: Monday, July 21st, 2014

TIME: Commenced at 1:00 p.m.  
Concluded at 3:50 p.m.

LOCATION: Public Service Commission  
4075 Esplanade Way  
Tallahassee, Florida

\* \* \*

PREMIER REPORTING  
TALLAHASSEE, FLORIDA  
(850) 894-0828

## 1 PUBLIC STATEMENTS

2 MR. MESSINA: My name is Charles Messina,  
3 M-e-s-s-i-n-a. For the intent of full disclosure,  
4 I am a candidate for Florida State House  
5 District 76 as a Democrat for Representative  
6 Rodrigues.

7 I am here today to let the Public Service  
8 Commission know that they are not acting as a good  
9 steward for the people that they represent here in  
10 Florida. They are neglecting the idea of creating  
11 a renewable portfolio standard, which there are  
12 only three states that don't have one, and Florida  
13 is one of them.

14 And we should be looking at clean renewal  
15 sources of energy here in the state of Florida.  
16 It would be an economic benefit to the people of  
17 the state of Florida because every year Florida  
18 consumes or purchases \$9 billion in fuel used to  
19 generate electric power for the state. If we  
20 invest in solar power, we would not have to spend  
21 that much money. There would be a huge savings  
22 for the consumers in the state.

23 And if we were to invest in solar power in  
24 the state of Florida, which we do in certain ways,  
25 in other ways we don't, the Public Service

1 Commission says that if you generate solar power  
2 -- or if you generate power, that you need to be  
3 regulated as a power generator.

4 There are companies that will come to our  
5 state, to our homes, and install solar panels and  
6 connect to the grid on a lease to purchase  
7 agreement, and the Public Service Commission  
8 refused to let that happen. Consequently, the  
9 only ones that can get solar panels or solar  
10 panels in their home are the affluent and  
11 well-heeled.

12 There was 119,000 solar jobs in the United  
13 States in 2013, and the state of Florida only  
14 participated to the tune of 2,500 solar jobs for a  
15 state with a population of 19 million. By the  
16 year 2030, there would be 220,000 more new solar  
17 jobs created, and I fear that the people of  
18 Florida will not be participating in these new  
19 good paying jobs.

20 The Public Service Commission needs to get  
21 out of the way of solar power and clean renewables  
22 and promote them instead of hindering them. I  
23 would recommend that the Public Service Commission  
24 approve the Babcock Ranch exemption -- exception,  
25 I'm sorry -- request, because this is a project in

1 the state of Florida that has -- it's an excellent  
2 experiment for the development of solar energy in  
3 Florida. It would have no costs to the taxpayers  
4 and it would have no costs to the ratepayers.

5 I'm not saying this because, you know, I'm in  
6 favor of Babcock Ranch or development, I'm just  
7 saying that there are entities, Babcock Ranch  
8 being one of them, that would like to have their  
9 own solar power generation facility. I know that  
10 Cape Coral is looking into the idea of taking over  
11 the business of distribution of power in their  
12 area because companies like LCEC are just middling  
13 the deal, they don't create the energy, they just  
14 maintain the infrastructure. And, quite frankly,  
15 there's plenty of talented people around that  
16 could do that.

17 One other fact I would like the Public  
18 Service Commission to be aware of is solar is  
19 economical, it is feasible, it's getting less and  
20 less costly every day. And if you had a  
21 single-level home, a single-family home with a  
22 single level in the state of Florida with rooftop  
23 solar panels, that home would create enough  
24 electric power to sustain it for two years.

25 The Public Service Commission, in my humble

1 opinion, needs to get out of the way of clean  
2 renewable energy development in the state. And  
3 they don't have to -- how should I say this -- the  
4 power companies themselves can participate. They  
5 don't have to fade away into nothingness. They  
6 could be maintaining the infrastructure. They  
7 could be participating in the system and allowing  
8 and being involved in clean renewables. They  
9 don't have to look at it as losing turf.

10 This is my humble opinion. I thank you for  
11 letting me make my remarks. And I hope the  
12 Commission takes this serious, that the public is  
13 demanding to be able to save money in these trying  
14 economic times when the taxes are being raised.  
15 They want to try and save money, they want to put  
16 solar panels on their homes, and they are  
17 prevented from doing so. Thank you for your time.

18 THE COURT REPORTER: I think they want you to  
19 say where you're from.

20 MR. MESSINA: I live on Pine Island. My name  
21 is Charles Messina, I live on Pine Island, St.  
22 James City, Florida.

23 MR. KRUMREICH: My name is Tom Krumreich  
24 K-r-u-m-r-e-i-c-h, Tampa, Florida.

25 Well, I'm here representing the people of the

1 state of Florida. "We the People" are the iconic  
2 first three words in our country's Declaration of  
3 Independence from the tyranny of the British  
4 empire. Those words set the tone for the spirit  
5 of our political culture, which we still need to  
6 cultivate and vigilantly defend today.

7 We the People, not We the Government, not We  
8 the Corporations, but We the People, the public,  
9 the average Joe and Jane whose opinions are  
10 supposed to guide us in the formation of our  
11 public policy as decided by entities like the  
12 Florida Public Service Commission.

13 So why are we excluded from making a  
14 contribution in the form of testimony before the  
15 very group making decisions which have a potential  
16 to have dramatic effects on the quality of our  
17 lives? On behalf of the people of the state of  
18 Florida, I beseech the Public Service Commission  
19 to do the right thing and increase, not lower, the  
20 efficiency standards for generating electricity in  
21 our state and invite us to engage with them in a  
22 dialogue to decide on the necessary steps towards  
23 creating a more economically and environmentally  
24 sustainable future for our state.

25 MS. STRICKLAND: My name is Stephanie

1 Strickland, S-t-r-i-c-k-l-a-n-d. I am a resident  
2 of Leon County.

3 Every day I work with youth in the St. Pete  
4 area and in the Tallahassee area and all over the  
5 state, and we all have one goal, to make this  
6 world cleaner, to have more clean energy. Of all  
7 the things that we're concerned about, the primary  
8 goals we focus on are health for all of our  
9 citizens, national security and a clean  
10 environment we can call home.

11 We all know that using less oil or any form  
12 of fossil fuel would be good for us as a society  
13 because it would let us release ourselves from  
14 foreign powers that we have unstable relationships  
15 with, such as Russia. We would be more secure as  
16 a nation if we felt that we didn't have to go to  
17 wars to protect our oil security.

18 I helped organize the solar rally in  
19 Tallahassee with Southern Energy Network and  
20 Southern Alliance for Clean Energy on April 10th  
21 in Tallahassee, and hundreds of youth from all  
22 over the state came out to say that they care  
23 about solar energy. We are the solar generation.  
24 We care about these issues. It is of the utmost  
25 importance to us that we make something that we

1 can be proud of.

2 MR. WILSON: My name is Greg Wilson, and I  
3 live in Dunedin, Florida.

4 I would like to talk about the future of  
5 having too much carbon in our atmosphere. We need  
6 to cut back on that, which is where energy  
7 efficiency comes in. I also have a new type of  
8 wind energy. And for them to make up rules that  
9 will stand for ten years, it will possibly block  
10 out new innovation for any kind of new type of  
11 electrical energy.

12 Global warming and climate change are a big  
13 issue for Florida because the climate scientists,  
14 some of them say that they may be off a little bit  
15 and sea level rise may happen faster than what  
16 it's predicted. Greenland glaciers are sliding  
17 off at a much faster rate than they were ever  
18 predicted. And the west side of Antarctica is  
19 starting to slide also, which includes thousands  
20 of years of icepack and glaciers.

21 So to encourage energy efficiency is very  
22 important due to the fact that Florida is very  
23 susceptible to sea level rise. And that will be  
24 very expensive if we have to start moving away  
25 from the coastlines. We will lose our barrier

1 islands. And there's really not a price tag that  
2 you can put on something like that.

3 So the power companies should help with  
4 energy efficiency, especially solar and any kind  
5 of new wind energy, which Florida does not have  
6 wind energy here. And my wind invention is the  
7 only one that will work here in Florida. It's  
8 safe for birds and wildlife and it works in very  
9 light wind conditions. I think that's it.

10 MS. FRAINETTI: Nancy Frainetti  
11 F-r-a-i-n-e-t-t-i. And I'm from St. Petersburg,  
12 Florida.

13 I'm a woman-owned electric solar boat  
14 manufacturer, and I believe that solar is key to  
15 our future. And the same with my electric boats,  
16 that they be able to not pollute the air and the  
17 water. And solar is an efficient and excellent  
18 way to power these boats. That's it.

19 MS. BRONSON: Christina Bronson, Lehigh  
20 Acres, Florida.

21 What I wanted to bring to attention is since  
22 I'm a native from Austria and my generation was  
23 doing what is going on right now here 40 years  
24 ago, about, and we are very successful, I wanted  
25 to bring your attention to the Wikipedia site

1           where they talk about renewable energy in Germany.  
2           And they already have the problem that there is an  
3           overflow of energy created by wind and solar, and  
4           that they have not enough facilities to detain  
5           it -- I don't know the right word -- to keep it.  
6           They don't know what to do with it. They send it  
7           to Czechoslovakia, to Yugoslavia and also to  
8           Austria, but the Austrians don't have the capacity  
9           to work the energy.

10                 So definitely in Germany by 2050, I was  
11           reading that they want to have 100 percent solar  
12           wind power. So there is good information out  
13           there. And look over the borders, it's already  
14           happening, it's already effective and successful.  
15           Thank you.

16                 MR. SILLMAN: David Sillman, S-i-l-l-m-a-n,  
17           from New Port Richey, Florida.

18                 And I want to put on my support for  
19           efficiency and solar standards. I know this  
20           question has been studied by other utilities, one  
21           in Austin, Texas in particular, that found clearly  
22           that efficiency is a far better investment than  
23           new power plants, as verified in one of the  
24           opening statements in the opening session. To  
25           protect for-profit utility monopolies does not

1           serve the public's interest. That is not what the  
2           Public Service Commission should be in the  
3           business of doing.

4           Solar and efficiency are proliferating around  
5           the country and around the world. Florida stands  
6           out for its status as a laggard in these areas.  
7           Fortune 500 companies are implementing solar  
8           efficiency at an ever increasing pace, not out of  
9           altruism but because these make business sense.

10          Solar projects that pay for themselves in  
11          five years or less and efficiency projects that do  
12          even better are solid business decisions. And to  
13          set an unfair bar of a two or three-year payback  
14          when clean energy that we desperately need is set  
15          to too rigid of a standard is not in the public  
16          interest and not a good policy. That's about it.

17          MS. ROSS: I'm Kim Ross, R-o-s-s, and I'm  
18          from Tallahassee, Florida.

19          The investor and the utilities are giving as  
20          small of an investment and energy efficiency and  
21          renewal energies as possible and they aren't  
22          taking into account the true needs of its  
23          ratepayers, especially poverty stricken  
24          ratepayers, as they go about making their  
25          recommended goals.

1           I run, as a contractor, a Demand-Side  
2           Management Program in Tallahassee, and I have run  
3           a low income weatherization program called  
4           Neighborhood Reach here in Tallahassee. And these  
5           programs are great examples of what investor-owned  
6           utilities ought to be doing and would save on a  
7           statewide basis a larger percentage of energy than  
8           any of the larger investor-owned utilities are  
9           recommending.

10           Energy efficiency and renewable energy both  
11           provide far more jobs than the conventional form  
12           of energy production, which also further boosts  
13           Florida's economy. So while we're listening to  
14           this show of Public Service Commission considering  
15           the testimony, it does not appear that Florida's  
16           citizens and ratepayers' true needs are taken into  
17           account.

18           The Public Service Commission should be  
19           accountable to the public and protective of the  
20           public good. The types of tests that they're  
21           talking about using for determining whether or not  
22           to allow any particular measure don't take into  
23           account the public good, specifically there are  
24           documents that define -- that specifically state  
25           they don't take into account the public good. The

1           Public Service Commission should have found a way  
2           to allow themselves to hear from the public rather  
3           than ignoring the public.

4           MS. EMMEL: My name is Linda Emmel,  
5           E-m-m-e-l, Plant City, Florida 33566. We have a  
6           solar energy panel, a solar panel at home, and I  
7           love it. It's cut our electric bill down quite a  
8           bit. It's for the water heater. And the power  
9           will go out for a week at a time with storms and  
10          whatever, but I always have hot water, that's why  
11          I love it.

12          It's jobs for people putting them up, solar  
13          energy, solar power, it's clean. I can't see why  
14          people don't go for it, why the Commissioners and  
15          stuff can't see it. It's the best thing, you  
16          know, we're missing out. Other states have it,  
17          they have the wind turbines. I believe there's a  
18          country, it's Scotland, it's either 90 or  
19          99 percent completely clean energy. It's all  
20          solar and wind turbines. So if the whole country  
21          can do it, why can't Florida, one state, do it?  
22          We have sun here almost every day of the year, it  
23          doesn't make any sense not to use it. It's  
24          healthier. It helps the environment. I guess  
25          that's about all I have to say.

1 MS. GARGEL: My name is Cheryl Curry Gargel,  
2 G-a-r-g-e-l, and I am from Gulfport, Florida. I'm  
3 also a realtor in the state of Florida holding an  
4 EcoBroker's Green Certification. I'm also a  
5 broker in Aspen, Colorado.

6 My concern as a citizen and as a professional  
7 realtor of 30 years is that one of the first  
8 questions I get when I interview clients to buy a  
9 home, after they have selected a home, I should  
10 say, is what does the electric run on the house.  
11 Today it seems as though even qualifying for a  
12 mortgage, we have to take in consideration the  
13 expenses that the client is incurring presently.  
14 And if that is not sufficient to pay for the new  
15 home and the ratio that is already set, then they  
16 will not qualify for what they are trying to buy.

17 And as the electric rates go up, if this  
18 policy is allowed to expire, which electric rates  
19 will go up, then it's going to impact our buying  
20 clients, home purchasing, which in turn will have  
21 an impact on the taxes in the state. So it's a  
22 great concern professionally and also as a citizen  
23 of the state of Florida. So I'm asking that the  
24 Public Service Commission keep the policy that is  
25 currently in place and work toward more efficiency

1 in our state. And that is my purpose being here  
2 today. Thank you.

3 MS. GRIFFITHS: Beverly, B-e-v-e-r-l-y,  
4 Griffiths, it's spelled G-r-i-f-f-i-t-h-s, like  
5 Sam, Tampa, Florida.

6 I would like to see the Public Service  
7 Commission consider keeping the percentage of  
8 renewables required by utilities the same or  
9 higher, not lower them. And I would like to see  
10 Florida move in the direction of increased solar  
11 and for the Legislature to create a renewable  
12 portfolio standard that would create incentive for  
13 businesses and residents to purchase solar.

14 I'm concerned that the utilities have too  
15 much control over the Public Service Commission's  
16 decision making and that they should be willing  
17 and more available for public comment and input.  
18 And the reason I want to see more clean renewable  
19 energy used in our state is to protect our air and  
20 water quality. And I'm very concerned about the  
21 rush to use more natural gas because I'm concerned  
22 about the environmental damage caused by fracking.

23 THE COURT REPORTER: Spell fracking.

24 MS. GRIFFITHS: Fracking is spelled  
25 f-r-a-c-k-i-n-g.

1 THE COURT REPORTER: Thank you.

2 MS. GRIFFITHS: So that's it.

3 MS. FORCAN: Jasmina, with an A at the end,  
4 Forcan, F-o-r-c-a-n, Clearwater, Florida.

5 I want to talk about efficiency and energy  
6 savings. I personally in my household, I waste  
7 almost nothing. I unplug everything. All of the  
8 appliances that are not being used at the moment I  
9 always unplug. And I believe that I do everything  
10 I can to reduce the energy use and therefore save  
11 the environment.

12 And my question is why Duke Energy doesn't  
13 help us in Florida. We are older people, you  
14 know, on fixed incomes, and I think we need more  
15 help with our energy costs than most of the other  
16 states. However, we are 27th on the Energy  
17 Efficiency Listing in the United States.

18 So I'm not sure why are they neglecting the  
19 state of Florida in helping like they help other  
20 states. They provide free of charge squirrely  
21 light bulbs and, you know, the window and door  
22 insulation and things. So that's my question to  
23 the Duke Energy.

24 And I think we should be going more to clean  
25 and renewable energy because it will keep our

1 environment in better condition, and also our  
2 health is important. When we use coal, it's not  
3 good.

4 And that's another cost to us, the users in  
5 Florida, we have higher medical bills because of  
6 the pollution. They used to have emission control  
7 in Florida, but they dismantled that process. So  
8 I think we really need to address why is Florida  
9 27th on the list in energy efficiency.

10 MS. DATZ: My name is Amy, A-m-y, my last  
11 name is Datz, D as in David, A as in apple, T as  
12 in Tom, Z as in zebra. I live in Tallahassee,  
13 Florida.

14 I am the Chair of the Democratic  
15 Environmental Caucus of Leon County and am on the  
16 State Board for the Democratic Environment Caucus.

17 I am here today because I am opposed to  
18 fracking, f-r-a-c-k-i-n-g, in Florida. I feel  
19 fracking will destroy Florida's environment.  
20 There are 18 permitted wells in Florida, each well  
21 can be fracked 18 times. Each fracking requires  
22 8 million gallons of water. If all wells are  
23 completely fracked, we would have generated  
24 2.6 gallons of highly explosive, highly toxic  
25 fracked water that will have to be stored for more

1           than 100 years and will never, ever be able to be  
2           clean water again.

3           We do not have enough water to support this  
4           industry. We do not have a viable aquifer that  
5           will allow fracking without damage to our drinking  
6           water, to our spring systems and to our natural  
7           wildlife lagoons and Everglades. We must stop  
8           fracking in Florida.

9           I would support subsidizing solar for any  
10          household that is under -- I should say within or  
11          under 400 percent of the federal poverty level.  
12          This will allow these poverty level citizens to be  
13          able to afford food and housing.

14          I think it is criminal that Duke Energy has  
15          charged their customers for a nuclear power plant  
16          they will never build and has refused to reimburse  
17          those costs to the public. They should be  
18          investigated and prosecuted for criminal theft to  
19          the public.

20          MR. MASCIA: My name is Nick Mascia,  
21          M-a-s-c-i-a, Sanford, Florida. I've been hearing  
22          comments concerning solar electric. They seem to  
23          conflict research done by other states,  
24          specifically the installation of solar energy on  
25          residential homes will actually save money for

1 utility companies as opposed to having costs  
2 passed on to those homeowners that don't have  
3 solar energy. I heard it quoted twice, once by a  
4 utility company passing the costs off onto other  
5 users. And I'm speaking of grid costs.

6 There is research done by the Public Utility  
7 Commission of Nevada that supports my statement as  
8 done by an outside research firm in San Francisco.  
9 I would be glad to supply this evidence.

10 Also missing from the use of solar energy on  
11 a home is the fact that one home with solar  
12 electric energy will negate the use of  
13 55,000 gallons of water that a power company would  
14 need to use to cool down liquid to provide  
15 electricity for that one home. Water conservation  
16 should be tied into energy conservation when  
17 considering the replacement of fossil fuel energy  
18 by utilities with solar energy.

19 I do not understand how the determination of  
20 ten years of energy use for 17 million, 18 million  
21 Florida residents can be determined by five  
22 individuals listening to five utility companies  
23 and not utilizing research resources to get  
24 information for both sides from a neutral  
25 provider.

1           There was a comment by the NAACP that  
2           impoverished -- poverty level families are  
3           penalized by increased costs of utility  
4           availability because of homes that can't afford  
5           solar energy do not contribute to the cost of the  
6           grid. Not true. By utilizing solar energy on a  
7           home, it reduces the cost for the utility  
8           companies to create power, they just don't pass  
9           the savings to those that don't have it. End of  
10          statement.

**To:** Records Clerk  
**Subject:** FPL customers' letter/petition about FPL's proposed energy efficiency rollbacks  
**Attachments:** FPL-Concerned-Customers-EE-Reductions-001.pdf

Dear Commission Clerk,

Please post the attached letter and petition signed by FPL customers concerned about the Company's proposed rollbacks in energy efficiency goals in Docket No. 130199.

Thank you on behalf of the undersigned FPL customers,

George Cavros

May 15, 2014

Florida Public Service Commission  
Commissioners Brise, Graham, Edgar, Bablis & Brown  
2540 Shumard Oak Blvd.  
Tallahassee, Florida 32399

Dear Florida Public Service Commissioners:

The smarter use of energy helps save customers money, creates jobs, and leaves a sustainable energy future for the next generation. The Commission plays a critical role in this regard by setting conservation goals, for some of the state's largest electric utilities. Energy efficiency is the lowest cost resource in meeting electricity demand, it is also the fastest and cleanest way to reduce harmful carbon pollution from the electricity sector.

Many residential utility customers do not have the information or the financial resources to implement energy efficiency measures. These measures help reduce energy use and help customers save money on their bills. These savings are realized not only by those who use the measures, but by all electricity customers because the use of efficiency defers the need to construct new, more costly power plants.

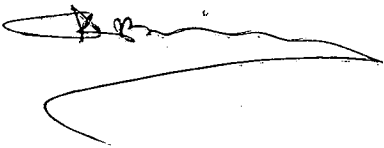

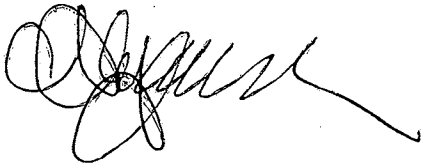

We understand that FPL has proposed significantly lowering its goals for utility-sponsored energy efficiency. We also understand that FPL shareholders earn a rate of return on its power plants, therefore, there is an incentive for it to reduce energy efficiency efforts that can defer the very assets up which its shareholders earn a rate of return.

The Public Service Commission is charged with balancing the interest of customers against that of the utility. FPL's significantly reduced proposed goals will hurt customers and should be rejected. Furthermore, higher goals should be set in order to capture all energy efficiency that cost less than building new power plants. Don't leave customer savings on the "table."

As FPL customers, we urge you to show courage and side with the customers' best interest in rejecting FPL's proposed energy efficiency goals. Moreover, goals should be set that make FPL a national leader in saved energy from energy efficiency programs.

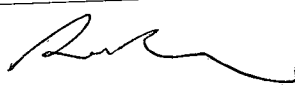

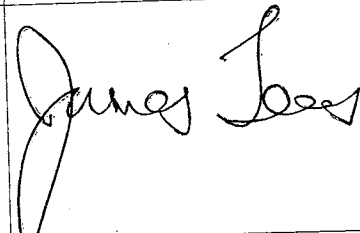

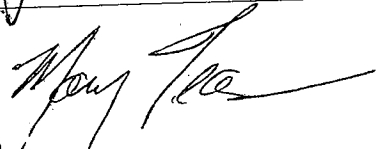

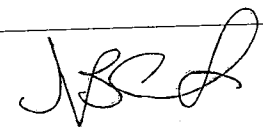

Sincerely,

  
Jonathan Allen

**Subject:** FPL New Solar Program

Dear PSC,

I am writing in response to the latest solar initiative that FPL has announced. This is a program similar to the previous FPL program in the 2000's known as the "Sunshine Energy Program" where customers (including my parents) were able to pay an additional voluntary amount each month in order to foster the development and installation of solar power generation. Later we were appalled to learn that most, if not all, of those voluntary contributions went to administrative and marketing purposes. A representative sample of the news media coverage of this can be found at <http://www.browardpalmbeach.com/2014-04-10/news/fpl-s-new-solar-energy-program-just-more-greenwashing/full/>

After our parents passed away, my sister and I inherited the house just in time to participate in the program whereby FPL gave a \$2 per watt rebate for solar installations on private homes up to a system size of 10kW. I installed a system of 6240W and have since added capacity bringing my system size to 7210W. This system generates an average of 850 kw/h per month of electricity and has so far avoided emissions of over 46000 pounds of CO2 since it was installed. I plan to further increase the size of the solar array by another 50% to facilitate the use of an electric car. Since installation of this solar array, the house has essentially been carbon neutral and since it is part of a 5 acre tree farm nursery with over 600 trees, the entire parcel is very much carbon negative.

It must be noted that all of this would not have been possible without the wisdom and forethought of **your office** in supporting this plan. Rumor has it that this plan and the size of the funding were directly proportional to the funds collected (but never spent) by FPL for the "Sunshine Energy Program."

FPL has also benefited from this sort of "distributed generation capacity" by the fact that the historic period of highest daily demand is also the time when solar installations such as those owned by myself are contributing the greatest amount of energy back into the grid helping to reduce peak load.

Sadly, I have read on FPL's webpage, that they are now "badmouthing" the previous solar rebate program (supported and/or directed by the FL PSC) as a waste of money from ratepayers. This is especially sad given the fact most of what FPL collected under the "Sunshine Energy Program" went to G&A and Marketing. FPL claims that the money spent under the recently completed rebate program was wasted and went to only 900 homeowners. I personally can refute this: even 3 years after I installed the system, where can anyone get a completely engineered and installed Photovoltaic system installed for \$2/Watt, which was what this system feeding into the grid "cost" FPL?

Given FP&Ls history of being a bit "creative" with their funding received under the "Sunshine Energy Program" and being "economical with the truth" in their comments on the Solar Rebate Program, I would urge that the FL PSC ***extremely*** closely monitor all aspects of their new 2015 solar program initiative to prevent another customer ripoff program where the vast majority of collected funding goes toward "administration."

I can be reached at [JimSIA@hawaii.rr.com](mailto:JimSIA@hawaii.rr.com) or 808-225-1448. The property address is 8359 SE Rivers Edge St, Jupiter, FL 33458.

I would be happy to show any PSC associate the system installed using the Solar Rebate program.

Thanks for your time,

Sincerely,

Jim Morris

Comments:

The energy companies need to keep their Energy Efficiency Standard HIGH! We don't need any more dirty Energy! Your shareholders make enough money and shouldn't make more on the backs of tax payers and the Environment.

Dear Julie Imanuel Brown,

I am writing because I am concerned about outside groups like the Southern Alliance for Clean Energy, which purport to be about what's best from Florida, but actually are funded by out-of-state interests. Florida has already imposed enough regulations on its energy sector. I can't afford to pay more to keep my home cool just to satisfy an interest group's agenda. Please oppose outside groups like SACE and do what is best for me -- help me keep my bills paid and my lights on. Thank you for your consideration.

Sincerely,  
robert james

Dear Julie Imanuel Brown,

I don't want out-of-state groups like the SACE, to dictate anything in my home state of Florida! They've got selfish reason for trying to become involved in this state. Keep them out. Florida already has too many regulations on our energy suppliers. Maybe you can but I can't afford to pay more to keep my home cool just to placate a kooky "green" group. Please oppose outside groups like SACE and do what is best for Floridians -- help us keep our bills paid and our lights on.

Very Sincerely,  
Yvonne Pribyl

**Subject:** I already pay enough in energy bills

Richard Russell  
285 Westhampton Drive  
Palm Coast, FL 32164

September 4, 2014

Dear Julie Imanuel Brown,

I am writing because I am concerned about outside groups like the Southern Alliance for Clean Energy, which purport to be about what's best from Florida, but actually are funded by out-of-state interests. Florida has already imposed enough regulations on its energy sector. I can't afford to pay more to keep my home cool just to satisfy an interest group's agenda. Please oppose outside groups like SACE and do what is best for me -- help me keep my bills paid and my lights on. Thank you for your consideration.

Sincerely,  
Richard Russell

**Subject:** I already pay enough in energy bills

Edith Smiley  
7754 County Road 139 B  
Glen Saint Mary, FL 32040

September 4, 2014

Dear Julie Imanuel Brown,

I am writing because I am concerned about outside groups like the Southern Alliance for Clean Energy, which purport to be about what's best from Florida, but actually are funded by out-of-state interests. Florida has already imposed enough regulations on its energy sector. I can't afford to pay more to keep my home cool just to satisfy an interest group's agenda. Please oppose outside groups like SACE and do what is best for me -- help me keep my bills paid and my lights on. Thank you for your consideration.

Sincerely,  
Edith Smiley

I am writing because I am concerned about outside groups like the Southern Alliance for Clean Energy, which purport to be about what's best from Florida, but actually are funded by out-of-state interests. Florida has already imposed enough regulations on its energy sector. I can't afford to pay more to keep my home cool just to satisfy an interest group's agenda. Please oppose outside groups like SACE and do what is best for me -- help me keep my bills paid and my lights on. Thank you for your consideration.

Sincerely,  
Mariann Clauss

Dear Julie Imanuel Brown,

I am writing because I am concerned about outside groups like the Southern Alliance for Clean Energy, which purport to be about what's best from Florida, but actually are funded by out-of-state interests. Florida has already imposed enough regulations on its energy sector. I can't afford to pay more to keep my home cool just to satisfy an interest group's agenda. Please oppose outside groups like SACE and do what is best for me -- help me keep my bills paid and my lights on. Thank you for your consideration.

Sincerely,  
Diane Kuhn

Dear Julie Imanuel Brown,

Look at Europe --countries in the EU went down the road being pushed by groups like the Southern Alliance for Clean Energy and are suffering for it. many, like Spain and even Germany, are coming back to their senses and going back to coal to regain what they've lost by the wasteful green energy fad.

Florida has already imposed enough counter-productive regulations on its energy sector esp. under Gov Crist. People at the lowest income levels suffer most but we all pay for the silly global warming morons' idea of saving the planet. Poor people with shackles of high energy costs get poorer to make some heirs and heiresses pleased with themselves for forcing their baseless green agenda..

Please oppose outside faddist/political groups like SACE and do what is best for Florida. -- help us continue to prosper in freedom by not being prohibited to use our God-given resources in a responsible manner. Thank you for doing the right thing.

Sincerely,  
George Blumel

**From:** Paul.Zimbardo@ubs.com on behalf of Julien.Dumoulin-Smith@ubs.com  
**Sent:** Friday, September 05, 2014 8:48 AM  
**Subject:** UBS: Set to Raise Expectations: NEE, D, DUK, ITC, WEC, DTE, NU  
**Attachments:** Julien Dumoulin-Smith.vcf; disclaim.txt

## US Electric Utilities & IPPs: Set to Raise Expectations

[Click here for the full report](#)

### Growth rates in focus, as company's poised to up expectations

The disparity between the 'Haves' and 'Have Notes' continues to widen, as company's like Dominion appear teed up to increase their structural growth expectations at their promised Investor Update with 4Q results in early February 2015; specifically, we see a ~7% rate potentially supported from its midstream business as well as eventual splits. Moreover, NEE could yet be poised to accelerate drop-downs to NEP, benefitting from new tax-equity structures which would enable new wind assets to be dropped down immediately upon completion, with tax investors enabling a steady stream of cash flows. Growth here could yet be revised to the ~mid-to-high teens from the current 12-15% articulated with its recent IPO, although this remains a moving target. We see a modest acceleration in the growth to achieve a 'best in class' trajectory as improving NEP's overall multiple – and enabling a slightly higher NPV of GP cash flows.

### Laying out investment thesis for 2H: remains oriented towards infrastructure

We include updates from a wide range of our coverage universe [D, DUK, DTE, NEE/NEP, ITC, NU], reiterating a common theme across the space: nearly all of our coverage appears geared to update their infrastructure spend in 2H14. Specifically, D, DTE, NEE, and now DUK will push forward to finalize recently announced pipelines, all with stated intentions of upsizing projects off their original volumes.

### Focusing on renewables, utility-scale solar remains the renewable growth lever

We flag SO, DUK, and NEE all continue to evaluate solar RFP opportunities across the Southeast, with developments likely in 2H14. We look towards GA Power to release the results of its own ~400 MW RFP in October, while NC could yet provide a source for ~300MW of incremental utility-scale build via RFP. We suspect DUK could yet own the vast majority of this build. Altogether, we emphasize the Southeast appears to have found a green tinge despite having limited formal renewable targets.

### Doubling down on our infrastructure thesis with latest updates

We see the latest Fall updates as generally supportive of our thesis, with renewable and midstream updates dominating presentation and meetings this past week; rather, we heard little else new in the sector aside for this thesis. We see D as firmly positioned as among the best names into 2H. We include SRE, NEE, ITC, and EIX to a certain extent within our 'Infrastructure' themed-orientation. Please see our latest note '[Articulating the Infrastructure Investment Thesis](#)' for more.

## NextEra Energy: A quieter 2H14 before '15 updates

### What's the right growth rate for NEP? We think an upward revision is likely

We believe management is increasingly biased to raise its structural growth up from its committed 12-15% at NextEra Partners (NEP), up to a range that represents its 'best in class' opportunity set. While management appears keen to keep an eye towards the longevity of its advantageous cost of capital and growth trajectory, it does appear poised to ratchet expectations modestly.

Stars should align on key issues for management to be able to provide a longer-term outlook on growth.

While unclear exactly what a 'best in class' (our words) growth rate would be, we estimate it is somewhere close to NYLD's disclosed 15-18% growth rate, with a biased towards the upper end. While management has complete latitude to engineer NEP drop-downs to its liking, the latest organic outlook for both renewables and midstream would suggest it is indeed possible to have such an acceleration (particularly amidst the meaningful backlog of potential drop downs).

## **Accelerating drops through 'structured' tax equity deals**

Among the most promising developments of late is NextEra's confidence in structuring novel tax equity deals on new wind projects, which would effectively enable for a constant distribution off the project entity through the life of a wind PPA, despite the upfront ten-year tax equity structures put in place on many new deals. Typically these tax equity structures effectively 'grab' all cash flows off new assets during the 10-year life of the Production Tax Credits (PTCs), leaving just the last ten-year period eligible to be dropped into the structure. NEE's proposed structure would allow for a relatively consistent 20-year payout from the structure, effectively allowing NEE to drop down even its newly developed assets into the YieldCo structure. We see the ability to accelerate the drop-down of newly constructed assets as enabling the depreciation benefits to deem cash flows as a 'return of capital'.

### *Structuring 'tranche'd' drop-drops the next evolution in YieldCo's?*

While not necessarily attributable to NextEra directly, we see the direction of the latest tax equity deal, and potential structuring of a 'note' to effectively pay out cash flows from its Point Beach nuclear unit as indicative of the trend in the YieldCo industry towards financially optimizing 'non-qualifying' assets into YieldCo eligible drops. Diversification across the sector will inevitably continue to push the conventional notion of what is an eligible drop down.

## **Carbon 111 (d): the biggest driver of long-term renewables growth**

We agree with management's view of long-term renewable growth as increasingly driven by carbon 111(d) mandates, with RPS standards likely 'cemented' by final rules. Moreover, many companies will opt to lean heavy on renewables in lieu of EPA's proposed 'building blocks' to achieve targeted reductions (such as excessive levels of coal to gas switching, etc.).

## **Longer-term guidance possible early next year**

We continue to see a revision to the 2016 EPS guidance as a visible positive; however, we now anticipate an update in early 2015 versus potentially as early as 4Q14. By early next year NextEra will have certainty on the (1) Florida gubernatorial election, (2) potential PTC extension (mgmt. believes still better than 50% chance of extension with other outstanding tax items), and (3) a Florida Public Service Commission decision on ratebasing of gas assets which could potentially be worth a few hundred million per year in spending.

## **Handling the regulatory relationship in Florida**

As we discussed in our note last week following the Democratic primary, a victory by Democrat Crist over incumbent Governor Scott (R) will be perceived negatively for NextEra's Florida Power & Light (FPL) and TECO's local utilities given previous interactions with the regulated entities. It does not appear to be a secret that the business community is more supportive of Scott but the potential impact of Crist winning is an unknown.

Utilities are likely hoping that Governor Scott's record on the economy wins out with voters...

Gubernatorial certainty will be key as we look beyond 2016 where management could revise its 5-7% EPS CAGR from 2012-2016 as we assume that FPL will file a rate case in 2016 (FPL remains in a rate stay out through 2016). NEE is currently weighing a decision on whether to file a rate case in late 2015/early 2016 for Jan 2017 implementation. In the event of a Crist win, the company may attempt to avoid a filing with cuts to both capital and operating spending in an effort to preserve ROEs (albeit at a slower investment and earnings growth rate) through the duration of his term.

...which will be key for NextEra's next rate case expected in 2016.

The company does not anticipate its next large generation need until the 2019/2020 timeframe so absent impacts from depreciation studies or utility scale solar, we would not expect significant rate inflation and pushback from regulators.

## **Risk around Florida PSC appointments declining**

With Commissioners Balbis' and Brown's terms expiring at the end of this year and the remaining three Commissioners having terms extending through 2016-2018, Governor Scott's nomination process is currently underway, with 16 candidates recently interviewed for the two opening spots.

Our impression is that none of the 16 candidates would be objectionable to the state's utilities. This is important in that should Crist win the election, he may reject Scott's final picks, but may only replace them with the other candidates already approved by the Florida Public Service Commission Nominating Council unless he receives legislative approval for a new nominating process – unlikely to be given by a still deeply Republican legislature that is largely antipathetic to Crist's recent "conversion" to the Democratic party in December 2012. In any event, we believe that a silver lining of a Crist administration could come in the form of a stronger emphasis on (ratebase-eligible) solar initiatives that have been sidelined on economic concerns by Scott. Exposed companies include TE, NEE, and DUK.

### **Signs of a nuclear renaissance?**

Southern Company spent much of their **recent 2Q14 earnings call** discussing the possibility of new nuclear build in the early 2020s and NextEra could be following suit if the latest EPA standards force the state to further reduce carbon emissions. NextEra is closely watching SCANA and Southern's progress on their respective projects and given the long lead-time ahead of nuclear development, we would not be surprised to hear management announce its intentions sooner rather than later with respect to its Turkey Point Units 6 & 7 (collectively 2.2GW). FP&L received approval from the Florida Siting Board in May 2014 for the two units and the 2009 application is still pending with the Nuclear Regulatory Commission (NRC). Late in August the NRC voted to end the moratorium on issuing new plant licenses and the Company is optimistic that it can receive its licenses in 2017.

Serious Southern nuclear discussions could be kicked off in the next few years as sixty year license expirations loom.

The broader question from Southern and NextEra's contemplation of new nuclear is to what extent the country intends to replace nuclear units that will see their sixty-year licenses expiring in the late 2020/early 2030s. For example, Turkey Point Units 3 & 4 came online in 1972 & 1973. We see this issue becoming an increasingly popular topic in the next few years as the subject gains greater clarity with regulated utilities especially in the context of the latest EPA standards. The discussion of further extensions to eighty-year licenses remains a topic for discussion although retrofits and upgrades would be needed.

### **Infrastructure remains a hot topic with more expected to come**

Following **Tuesday's announcement of the Mountain Valley Pipeline** (MVP) with majority owner/operator EQT Corp., we expect more updates following the binding open season which ends on September 29<sup>th</sup>. Management characterized the economics of the project as solid at 1.5bcf/day but it is optimistic that the project could reach 2bcf/day, thereby enjoying much better economics. More importantly we expect NextEra, Dominion, and other regional peers to increasingly become involved in midstream plays as they stray outside their traditional regulated utility footprints to capture growth. Despite having a minority stake in MVP, this could potentially be a \$1Bn spending opportunity for NextEra and Dominion/Duke's Atlantic Coast Pipeline announcement only reaffirms that fact.

NextEra wants to be integrally involved in the shifting Southern fuel mix and MVP is only the start of the pipeline buildout.

### **Other investment opportunities**

- **Transmission investments** are "inching forward" and we could see some regulatory decisions in the next approximate six months. By 2020 this could be a \$50-100Mn net income business (~\$35Mn UBSe), potentially worth an incremental ~\$1/sh in our valuation.
- **Utility scale solar** could be a big opportunity later in the decade and NextEra has accumulated ~800MW of eligible sites in Florida but management continues to have a less optimistic outlook for distribution generation (DG). On the 1Q14 call management stated that they do not see much of an opportunity with distributed solar.
- **Florida peaker** studies are still progressing and management continues to view this as more of a shift in capex rather than a risk of spending not materializing. While there is competition from other projects, we see the real question as whether the Florida PSC will accept the proposal under its Environmental Cost Recovery (ECR) Rider, rather than through a conventional rate case (as mentioned above, FP&L remains in a rate stay out through 2016).
- **Storage** is a small investment for NextEra today but the company comments that it could be "meaningful" by the end of the decade. Early indications appear to bias towards frequency regulation – and other short term solutions.

## **M&A: Unlikely for NextEra to pursue Oncor under auction**

While the prospects of acquiring Oncor appear "off the table right now" given the two-tier auction process, we would not rule NextEra out, despite their having withdrawn their bid. NextEra likes Texas and the fundamental Oncor business so it remains to be seen whether management returns to the table in the next ~month. Turning to what NextEra looks for in regulated M&A, one of the most important factors is a jurisdiction with supportive regulators, a characterization which management believes that Texas meets. While Florida's regulatory climate has been consistently rated in the top ten in recent years, NextEra says regulatory diversification would be a plus and while the regulatory environment must be favorable to consider an investment, the target jurisdiction does not necessarily have to be as high quality as Florida's.

**M&A is important for NEE but the company cautions that it will not pursue a deal unless its strict criterion are met.**

With respect to NextEra Energy Partners, the emphasis continues to be on drop-downs from NextEra Energy but the door remains open for M&A at the YieldCo. While management reiterated that it has no real interest in acquiring merchant power, the company did say it might be interested in contracted gas for NEP, akin to the strategy utilized by NRG Yield.

## **What kinds of options does the Mountain Valley pipe hold?**

We look for further data points this Fall around the success of its binding open season and expect further expansions in the upcoming months/years. Dominion's announcement of a \$500Mn, 1-1.5bcf/day Supply Header Project off of its Atlantic Coast Pipeline announced just a day earlier is an excellent example of incremental expansion opportunities from a base pipeline.

**NEE set to follow Dominion's lead.**

## **Don't look for much on the wind development side until PTC clarity**

We don't expect management, nor its counterparties, will sign much in the way of further wind deals ahead of pending clarity of a further Production Tax Credit (PTC) clarity in the lame duck session later this year. While investor expectations continue to call for a further 2-year extension (pushing the effective date for project in-service to qualify into 2016, and some into 2017). As a reminder, management has already 1.8GW of backlog, out of the 500MW – 1.5GW range previously articulated at its last Analyst Day.

## **More solar soon? Utility-scale opportunities still lurk**

Management appeared surprisingly confident in its outlook for up to ~400 MW of further utility-scale solar projects, with RFP developments likely to yield formal projects in 2H14. Not only could NEE be awarded some projects in the southeast, but could see further awards in California as well. While we expect the utility-scale market to continue to decelerate (amidst an increasingly competitive field of players), we suspect management will continue to de-emphasize opportunities in this segment.

**Bias remains for utility scale over distributed generation.**

*Still not stoked on merits of DG – outside of C&I*

Management maintained its more sober view on the value proposition of distributed generation amidst a clear preference for large-scale C&I. We flag a clear reticence persists across a variety of companies from entering too aggressively the residential DG market.

## **Dominion: Onwards and Upwards**

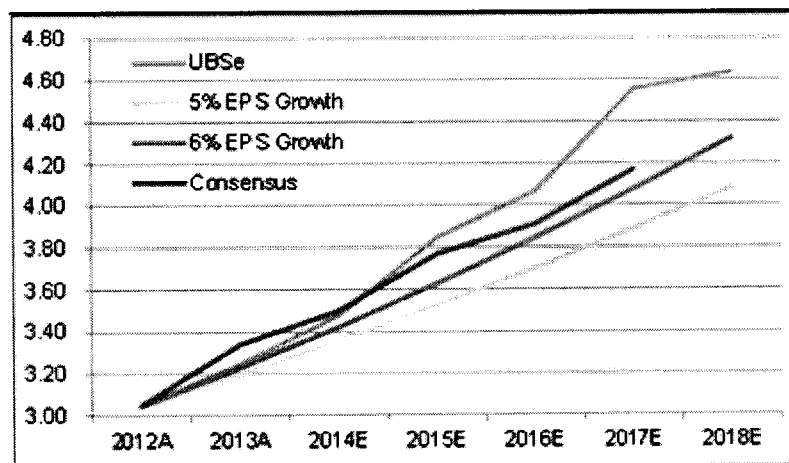

### **February Analyst Day will summarize all the growth**

With many balls 'still in the air', we look towards a February update with which management will summarize its long-term EPS and dividend outlook, among several other datapoints (likely pushing out this expectation through at least the 5-year 2019 view, consistent with that latest capex budget). Currently we estimate a ~6.6% 2014-2019 EPS CAGR and would anticipate an upward guidance revision to the 6-7% range versus 5-6%

currently. In summary, we reiterate our expectations for an EPS growth rate that could yet have an 8% estimate at the top end of the band when fully factoring the company's updates from Wednesday through the February Analyst day as well.

We expect Dominion to revise its long-term growth rate up to 6-7% at its Analyst Day in February.

### Capex updates: adding it all up yields a rosy outlook.

Dominion announced an incremental annual spend of \$0.8bn per year compared to their last plan (the new plan includes an additional forecast year 2019 but the incremental capex is also impacted by new projects that add to each year out to 2019). The table below shows the change between the old plan and the new. Importantly, this excludes new pending projects such as the Supply Header project, for which Dominion is likely to gain sufficient clarity later this year to move forward with development (~\$500 Mn spend). Moreover, upsizing of newly contemplated Atlantic pipeline is excluded.

### The Southeast Solution: The Atlantic coast pipeline and supply header

The first new project is a 45% stake in the \$4.5-5bn (ex-finance costs), 550+ mile long, 1.5bcf/d capacity Atlantic Coast pipeline. Dominion's 45% share in costs will be ratable. We believe the capacity has potential to increase (pipe is expandable to 2-2.5bcf/d) given our expectation for gas demand to ramp up further. The fact that the company has an open season lined in next few weeks even after 92% of capacity is already subscribed also signals possible expansion. FERC pre-filing is fall 2014, with a FERC application fall next year; once approved by FERC (~summer 2016), the pipeline should be operational by late 2018. The table below shows the ownership structure for the Atlantic Coast pipeline. Amongst the owners, Dominion is in charge of constructing, operating and managing the pipeline.

**Figure 3: Ownership of the Atlantic Coast Pipeline**

The Atlantic Coast Pipeline JV	
Dominion Resources	45%
Duke Energy	40%
Piedmont Natural Gas	10%
AGL Resources	5%

Source: Company sources

### **And how about a gathering network to go along with it?**

Secondly, Dominion announced a complementary 100% owned, ~\$500mn, 1.0-1.5 bcf/d “Supply Header” project which will be used to gather the gas, compress it, and bring it to the Atlantic Coast pipeline. An opens season for the header is planned for this fall. Capacity for the header is expandable to ~2.5bcf/d levels as well. The project will allow for more access to Marcellus and Utica gas supplies. Although we don’t see the pipeline itself as competition to NEE’s MVP pipe, we believe the header can be in direct competition. Company expects the header to be operational by late 2018, along the time the Atlantic Coast pipeline starts service. We flag this ~\$500 Mn project would similarly drive 'chunky' EPS growth in ~2019 (following a November 2018 in-service).

We think both these projects are well supported by increasing Marcellus and Utica gas supplies. Dominion noted Wood Mackenzies' increased 2025 forecast production from ~23 bcf/d (in their 2013 forecasts) to an expected ~30bcf/d (in their revised forecasts made in 2014). The pipeline should be able to serve the heating/industrial and also power generation demand (increasing, owing to coal shutdowns) arising in Virginia and parts of Carolina.

Regulator and policy support for such investments in the Southeast has also heightened after the Polar Vortex events in the last winter. For such projects, (with project financing at the JV level during construction) we would expect Dominion to earn returns in the mid-teens.

### **Solar generation and electric substation security**

Dominion also announced new solar utility scale development (selling to utilities under long term 15-20 year PPAs) which is beyond the 250MW planned earlier and above the \$500mn already spent on solar. Most of this will be in California and also Virginia (where they are installing ~2mn solar panels this year in old tobacco farms). The company has articulated a clear preference for solar over wind.

The company will spend slightly above \$550mn through the period to 2019 on physical security of their substations.

### **Upside to the Atlantic Connection pipeline too.**

Following disclosures earlier this week that Dominion and other parties had received ~90% of necessary volumetric commitments to move forward with their proposed Atlantic Connection pipeline, we believe there is likely upside to the contemplated 1.5 bcf/d project. In particular, we suspect the 42" inch pipeline project could yet have plants to be upsized to 2.0-2.5 bcf/d prior to its in-service in late 2018 as regional utilities continue to contemplate their gas needs . Moreover, we suspect some additional producer volumes could yet coalesce around the project – and its target markets of Eastern Virginia and Eastern North Carolina.

### **Could yet extend the Atlantic pipe too.**

We believe management could yet look to extend the pipeline down further from NC, into SC and even GA in future expansions to address continued coal-to-gas switching. We see this project as uniquely benefitting from the Carbon 111(d) regulations due to their disproportionate ask of Southeast coal-to-gas switching.

### **Update on long-term outlook would necessarily involve view on VEPCO**

We believe management may yet be looking to pro-actively address its VEPCO biennial review process again to minimize over-earnings risk. We suspect further legislation to further adjust the mechanism/process could minimize even the distant risk of an over-earnings risk in the ~2019 period. We suspect this will cement the company's comfort in raising growth projections through the period that includes this potential reset.

While VEPCO has earnings certainty for the investment horizon, it could look to cement even more.

## Valuation: Increasing Price Target \$2 to \$82

Our valuation is based on a 2015 utilities sum-of-the-parts analysis. The primary catalyst in the higher valuation is a ~0.5x improvement in the regulated peer multiple and a recovery of Mass Hub power prices.

## Duke Energy: Flurry of activity not yet over

### International strategic review – don't necessarily expect a sale

We increasingly emphasize Street expectations for a sale of the International business are likely misdirected, with a variety of other potentials clearly before management. We emphasize a direct sale of the business would appear dilutive given depressed regional multiples in the Americas (generally in the ~6x EBITDA range), and with management committed to making any transaction accretive, this would appear a tough hurdle to cross.

Strategic review = Sale?

Not a guarantee

*What's the purpose of the strategic review?*

The purpose appears first and foremost is to solve the segment's relatively flat EPS profile through the forecast period. We suspect management will not suffice with any outcome that does not deliver a corresponding 4-6% EPS trajectory from the business.

*Could a deal with AES Tiete work? We think there's good logic.*

Among these, we emphasize the opportunity to pursue a transformative merger of the international business appears the most interesting, with synergy opportunities from bringing the business to scale. In particular, we emphasize its regional peer, AES Tiete, could yet fit nicely as a recombining of the two asset bases (previously housed under the same parent company in a prior life). With total EPS of ~\$0.23 from the Brazilian segment in 2013, we see the opportunity to add ~\$0.03 from conservative synergy expectations, and most importantly enable Duke to monetize its position via a public equity listing (via a share-for-share transaction). We suspect even if AES Tiete is not the partner, Duke's bias remains to take shares with a regional partner in the Americas to gain the liquidity to gradually sell down the business.

Bringing the foreign assets back to their origin?

*Tax structuring remains the missing piece*

We also emphasize the key to any transaction would be resolving off-share tax considerations, enabling the company to repatriate the \$1.7Bn (at least over time). We suspect the structure of any sale could prove crucial to effecting the appropriate tax basis.

Exploring ways to bring back the trapped cash

*What's the timing? Still an update by year end.*

While we're not necessarily convinced a final deal will be announced by year end, we suspect management will delineate at least coalesce around a strategic path forward by year end.

**Getting utility-scale solar going: the next positive datapoint?**

We emphasize that utility-scale solar opportunities could involve material spending (like for NextEra discussed above) and Duke currently has a 300MW RFP in North Carolina and is able to invest in up to 150MW of projects by 2021.

**More wind in Texas too?**

Wednesday Duke also announced its plants to build and operate a 110MW wind farm in Texas at the Los Vientos wind farm. The new capacity will be sold under a 25-year PPA to Garland Power & Light and other local municipalities. Upon expected completion in 2H15, Duke will have 912MW of capacity at its Los Vientos I-V projects in Texas and over a 2.1GW wind portfolio.

## ITC Holdings: No news on structuring front

### Once again, all about REITs and ROEs

The conversation remains dominated once again by considerations that factor into whether ITC could (and would) convert to a REIT. We increased our probability of a REIT to 20% with our 2Q14 note following the comments, or lack thereof, on the most recent earnings call but management shed additional light onto the topic. The company emphasized that there are both positives and negatives with opting for a new corporate structure with the 75% asset test being towards the top of the list as it limits diversification opportunities. Two other areas of uncertainty that the company said they would have to gain comfort with include confidence on the continued health of the equity markets (given the need to continually issue equity to finance the REITs growth) and certainty surrounding tax reforms. With the latest rhetoric around potential tax reform due to tax inversion M&A this summer, management appeared more cautious in particular on this front. Wisconsin Energy specifically addressed a similar question about REITs/YieldCos on Wednesday but expressed skepticism when CEO Gale Klappa stated that the entities "may not create permanent shareholder value." Regardless, WEC management would likely not truly consider such a corporate structure change ahead of the closing of its pending Integrys Energy Group (TEG) acquisition which is still set to close in 2H15.

ITC still continually evaluating the potential of a REIT but do not want to sacrifice long-term flexibility for a short-term valuation uplift.

Having said this, we increasingly believe that the possibility exists for ITC to essentially form a REIT 'YieldCo' and spinoff assets into the new vehicle as they reach maturity. The benefit here is that the company would maintain its flexibility to pursue growth while also getting a higher valuation of the stable components of the business. Throwing cold water on the story in the short-term was the logical comment that it is unlikely to expect any radical changes before MISO ROE clarity. FERC could act on the MISO case as soon as this month and based on our recent mark-to-market, we see a ~100bp higher FERC 75th percentile at 11.56% based upon a 6.74-13.16% zone of reasonableness.

Could ITC form a true YieldCo where it spins-off existing, stable transmission assets while leaving the growth story intact?

We discuss Kansas Corporation Commission's Section 206 transmission formula rate complaint against Westar Energy below but we do not believe that that ITC Great Plains (Kansas and Oklahoma subsidiary) faces the same challenge as the background issues appear to be more Westar specific.

For further details of the FERC methodology and our mark-to-market, please refer to our note 'Breaking Down the New FERC ROE Methodology'; please ask us for a working Excel model version.

Figure 4: FERC ROE Analysis Summary

ROE Analysis Summary	Low	Midpoint	High	FERC 75th %	"True" 75th %
Zone of Reasonableness (Original)	7.03	9.39	11.74	10.57	9.77
Zone of Reasonableness (UB Se MTM)	6.74	9.95	13.16	11.56	9.48
Zone of Reasonableness (Adj. MTM)	6.74	9.24	11.75	10.49	9.48

Source: Company Filings, FactSet, Yahoo! Finance (I/B/E/S), UBS

### What about FERC 1000? Cuts both ways

Management continues to view competitive bidding as a positive catalyst that opens the door for the company to expand its footprint. ITC has specifically not looked to gain incumbent advantageous in its 'home territories' in order to preserve the playing field in new regions. While the company has shied away from California in the past, it actively is receiving requests 'all the time' from developers in the state who value ITC's independent nature and believe it gives them an advantage in competitive solicitations. In its 'Tier One' alone (SPP and MISO North & South) management sees \$9.5-11.0Bn of opportunities with MISO South being an area for opportunity as the company leverages the intel it gains from the attempted Entergy transaction.

Independent orientation appears to be yielding early benefits in California but only time will tell if that translates into opportunities versus incumbents.

## **Westar Energy: Challenging the system rather than the company**

### **Westar transmission ROE complaint unlikely to go very far, we think**

After reviewing the Kansas Corporation Commission's (KCC) Section 206 transmission formula rate complaint, we reiterate our Buy rating that is largely predicated on a robust long-term transmission investment growth rate. We are convinced that the KCC faces long odds of success in their attempt to convince FERC to adjust their methodology so soon after the resolution of the New England case in order to produce a base ROE radically lower than the 10.56% set for New England. Moreover, FERC specifically advised that evidence and analyses provided in other complaints be "guided" by the New England outcome. Comments are due on Sept 29th, after which an ALJ may be assigned during a possible settlement phase. We do not expect a conclusion until 2015 at least.

Recent challenge does not shake our confidence in the long-term transmission story.

While WR's current base ROE of 10.8% plus a 50 bps adder for SPP RTO is above FERC's 10.56% upper-half midpoint, it is still well within the 9.39%-11.74% zone of reasonableness and unlikely to be changed significantly, in our view. In contrast, the KCC cites 8.87% base plus 50 bps as more reasonable based on its adjusted calculations using the FERC two-step method. In our opinion, a reduction of 169 bps is unlikely to be considered consistent with FERC guidance. It is our impression that WR refused to file a Section 205 complaint (as requested informally by the KCC) in order to avoid opening the issue up to other parties. Furthermore, while a Section 205 filing need only show that proposed rates are just and reasonable, a Section 206 must also meet the higher burden of proof that existing rates are unjust and unreasonable as well.

Challenge could be an uphill battle for the KCC

We believe that the KCC request reflects the testing of FERC rates generally throughout the nation and is not necessarily a reflection of a serious deterioration of their regulatory relationship with WR. The utility's current Kansas jurisdiction authorized ROE is 10.4% and as noted in the complaint, WR and the KCC both agreed recently to voluntarily reduce the ROE component of its Generation Formula Rate from 10.8% to 10.2%. It is our understanding that the KCC staff is irritated with WR for refusing to negotiate on transmission ROEs after the voluntary reduction for generation. With trailing 12 month overall ROE at a healthy 9.8% (9.5% for Kansas jurisdictional assets), we still expect WR to file its next Kansas ratecase in March or April 2015 in order to place the remaining portion of LaCygne scrubbers into ratebase. While the settlement of equity forward sales (~3M shares in 2H14 and another 8.9M shares in mid-2015) will flow into the average shares outstanding through mid-2015, note that no further market sales of equity are required through this time. The dividend currently stands at the low-end of their payout target 60%-75% and will probably remain there through the next ratecase (in a test year now). The earliest a dividend step-up would probably occur is Feb 2016.

## **DTE: Nexus is On**

### **All systems are go with Nexus, and a bigger size**

Management characterized themselves as "very enthusiastic" about the project and increased the capacity on the pipeline to 1.5bcf/day from 1.0bcf/day and surpassed its 80% firm commitment criteria for the project. DTE also reiterated that they are "very, very optimistic" that the pipe will be completed in 2017. The project is now expected to meet the "majority" of the \$20Mn of 2018E operating earnings 'white space' for the gas segment. The key question now becomes whether DTE and Spectra Energy could increase their ownership levels from 33% currently contemplated in the guidance with Enbridge potentially left on the outside looking in.

Despite investor skepticism, Nexus finally looks fully locked-in.

## **Northeast Utilities**

### **NU's Connecticut ratecase settlement possible, but not this month**

To the extent that a settlement is possible, we don't expect to hear of anything in Northeast Utilities' CL&P ratecase this month, although we think that a settlement of the case is somewhat more likely this time around without the former Attorney General Richard Blumenthal to knock down any deal. With a draft decision due December 1, any possible settlement would probably come in the Oct/Nov timeframe, earliest. A final decision is due December 17. In early August, the CT Office of Consumer Counsel (OCC) filed testimony recommending a \$143M increase (vs \$232M ask) based on an 8.9% ROE. We consider the 8.9% to be the low-end of expectations for a final outcome later this year, with a bid/ask midpoint of 9.55% a reasonable expectation vs the currently authorized 9.4%. We expect a ~150 bps rise in earned ROE beginning December 1, 2014 and beyond as a result of finally being allowed to recover and earn a return on \$286M of net deferred storm expense and resiliency investment. The returns on storm cost and investment should boost earned ROE to the mid-9%, allowing CL&P to earn its allowed ROE for only the second time since 2004 (it also achieved this milestone in 2011). We further note that under the earnings sharing mechanism, shareholders retain 50% of all earnings above the authorized ROE and that state law allows the utility to over-earn by as much as 100 bps before a mandatory rate review.

November could be quiet in CT.

### **NESCOE process slowed down by failed legislation; RFP by December?**

The New England States Committee on Electricity (NESCOE) had been expected to provide a schedule for its RFP by September for the development of transmission and delivery of at least 1.2-3.5 GW of clean energy into New England. However, this is now highly likely to be postponed through Nov/Dec as a result of the failure of Massachusetts to pass a Clean Energy Bill on July 31. The Bill would have allowed the state to enter into long-term contracts for ~19 TWhs of hydroelectricity from Hydro Quebec, essentially providing backstop financing for new power lines intended to be developed under a NESCOE RFP. Similar clean power procurement legislation already exists in Connecticut. Press reports indicated that environmental group opposition to hydropower in favor of wind and solar were a key factor in the Bill's demise. With no chance of any similar legislation this year, NESCOE's plan to file for two new tariffs to fund both electric transmission and new gas pipelines into New England have stalled as the states reconsider how to proceed.

We think NESCOE may be a dead-end for now

Without more gas, we emphasize the need for new electric transmission is all the more dire

### **Kinder Morgan Energy Direct project facing some intense local opposition**

The proposed Tennessee Gas Pipeline Northeast Energy Direct (NED) Project into New England continues to be the subject of intense local opposition in some of the Massachusetts towns where engineering surveys are set to be conducted. The company plans to make preliminary FERC filings this month for the 0.8-2.2 bcf/d pipeline that would transport Marcellus gas from Wright, NY to Dracut Mass and be in service by winter of 2018. A FERC decision is expected in 2016.

Please see attachment for disclosures and disclaimers.

---

This report has been prepared by UBS Securities LLC. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES AT END OF NOTE.** UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

#### Statement of Risk

Risks for Utilities and Independent Power Producers (IPPs) primarily relate to volatile commodity prices for power, natural gas, and coal. Risks to IPPs also stem from load variability, and operational risk in running these facilities. Rising coal and, to a certain extent, uranium prices could pressure margins as the fuel hedges roll off Competitive Integrations. Further, IPPs face declining revenues as in the money power and gas hedges roll off. Other non-regulated risks include weather and for some, foreign currency risk, which again must be diligently accounted in the company's risk management operations. Major external factors, which affect our valuation, are environmental risks. Environmental capex could escalate if stricter emission standards are implemented. We believe a nuclear accident or a change in the Nuclear Regulatory Commission/Environment Protection Agency regulations could have a negative impact on our estimates. Risks for regulated utilities include the uncertainty around the composition of state regulatory Commissions, adverse regulatory changes, unfavorable weather conditions, variance from normal population growth, and changes in customer mix. Changes in macroeconomic factors will affect customer additions/subtractions and usage patterns.

#### Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction. It is published solely for information purposes; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. No representation or warranty, either express or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in this document ('the Information'), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party.

Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. Investments involve risks, and investors should exercise prudence and their own judgement in making their investment decisions. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors. Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

This document and the Information are produced by UBS as part of its research function and are provided to you solely for general background information. UBS has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. In no circumstances may this document or any of the Information be used for any of the following purposes:

- (i) valuation or accounting purposes;
- (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or
- (iii) to measure the performance of any financial instrument.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

Research will initiate, update and cease coverage solely at the discretion of UBS Investment Bank Research Management. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results. The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS Investment Bank as a whole, of which investment banking, sales and trading are a part.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

September 5, 2014

Dear Julie Imanuel Brown,

I am Debbi Schaefer and I'm writing because of my deep concern about outside groups like the Southern Alliance for Clean Energy, which purport to be about what's best for Florida, but actually are funded by out-of-state interests. Florida has already imposed enough regulations on its energy sector. I can't afford to pay more to keep my home cool just to satisfy an interest group's agenda. Please oppose outside groups like SACE and do what is best for me -- help me keep my bills paid and my lights on. Thank you for your consideration.

Sincerely,  
Debbi Schaefer

September 5, 2014

Dear Julie Imanuel Brown,

I am writing because I am concerned about outside groups like the Southern Alliance for Clean Energy, which purport to be about what's best from Florida, but actually are funded by out-of-state interests. Florida has already imposed enough regulations on its energy sector. I can't afford to pay more to keep my home cool just to satisfy an interest group's agenda. Please oppose outside groups like SACE and do what is best for me --PLEASE help me keep my bills paid and my lights on. Thank you for your consideration.

Sincerely,  
Bonni Fox

**To:** PSC Media  
**Subject:** FPL

I've written before regarding FPL/Duke Energy and their application for more nuclear plants. I found an article regarding the scale back/dropping incentives for solar energy which I have included below:

# Regulators asked to scale back energy goals

## Florida power providers say rebates expensive, benefit few.

*By Jim Turner The News Service of Florida*

TALLAHASSEE — Florida's biggest electric providers are asking state regulators this week to let them scale back energy-efficiency programs — such as rebates for installing solar panels and power-saving appliances — that they say have become expensive and benefit few customers.

But conservationists argue that dramatically reducing energy-efficiency programs will only result in higher monthly bills for customers as the utilities eventually will need to build more natural gas and nuclear power plants.

This week, Florida Power & Light, Duke Energy Florida, Tampa Electric Co., Gulf Power Co. and JEA in Jacksonville are presenting testimony to the Florida Public Service Commission that they should be allowed to roll back energy-efficiency goals, as demand for the conservation programs has declined.

"We think it's in the best interest of our 1.7 million customers to reduce that energy conservation goal and let us look at programs that could benefit the whole entire customer base," Duke spokesman Sterling Ivey said. "It could be a community solar offering versus a rebate to an individual to put a solar panel on a roof, perhaps we can build a community solar array that all our customers pay into it and all would benefit."

Rep. Dwight Dudley, D-St. Petersburg, said customers' electricity bills have dropped due to conservation efforts and "slashing" the energy-efficiency programs will simply allow the power companies to make more money.

"This is not in the interest of the public, this is not in the interest of the people," Dudley told the commission.

The hearing is expected to last three days. Two extra days have been set aside next week if the review runs long.

The commission isn't expected to make a ruling on any of the requests until late fall.

Before the hearing began Monday, Dudley joined about 100 conservationists, many up since 3 a.m. as they bused from the Tampa region, demanding the energy-efficiency programs be retained or expanded.

"The opportunity to take action on climate is right now," Kelly Martin, of the Sierra Club, said during a pre-hearing rally outside the Public Service Commission building. "Climate change is not some far off thing in the future. Severe weather, extreme weather is happening right now on our doorsteps."

Susan Glickman, Florida director for the Southern Alliance for Clean Energy Action Fund, said the proposal will "effectively eliminate energy efficiency programs in Florida" as FPL seeks to expand its nuclear plants in South Florida and Duke is planning a new natural-gas plant in Citrus County.

"The utilities feign that their concern is for poor people in our communities," Glickman said. "If the concern was for poor people, why don't they help them lower their bill by offering cost-effective energy efficiency?"

Utility officials say the economic advantage of conservation has waned as natural gas has grown in use. Also, government efficiency rules have resulted in more energy-efficient construction and in people using products such as lower emitting light bulbs.

Duke Energy now charges residential customers \$4.02 per 1,000 kilowatt-hours on monthly bills for environmental programs, including energy efficiency. FPL has a similar monthly charge of \$3.37 per 1,000 kilowatt-hours.

If the Public Service Commission approves FPL's full proposal, company spokeswoman Alys Daly estimated the savings on a typical bill would be about \$1 a month.

State Public Counsel J.R. Kelly, whose office represents consumers on utility issues, said some of the proposals are "extremely low" and expects the commission to find a middle ground in its decisions.

"We're very cognizant of the impact of rates on our constituents," said Kelly, whose office is taking a limited role in the hearings. "You have some of my clients who want all the conservation in the world and don't care what the rates are. I've got others, seniors, low income, that say, 'Look I just can't conserve any more, so don't make my rates go up.'"

Last year, Duke spent \$1.4 million for solar programs that were approved for about 150 of its 1.7 million customers.

In the past three years, FPL's solar installation program has been used by 916 of its 4.7 million customers at a cost of \$16.5 million.

Please consider these points of opposition and instead of promoting nuclear energy by approving the proposal, promote alternative energy by NOT approving the application. You could take the lead.

Sandra Safran  
Boynton Beach

Comments:

Public Service Commission:

You are nothing but a bunch of self serving, corrupt individuals. That do not have the public's or the companies that provide solar services to Floridians at heart. Your only concern is which utility you will work for after you leave the PSC.

Florida is a back water corrupt state that is standing in the way of real progress and opportunity that the Florida Solar companies provide. Tallahassee is sewer that needs to be cleaned up. From the Governors office, to the legislator's, to the PSC.

Comments:

I would like to register my dissatisfaction with recent action by the PSC. In July 2014 a meeting was held in Tallahassee with large power companies in which they expressed their desire for reductions in their clean energy programs. During this meeting, members of the tax-paying public were not allowed to speak. Well, here's my "written testimony," as requested by PSC Chairman Art Graham.

Please do not bow to the 'profits before all' power companies. Our Sunshine State should become the Solar State, and it will, eventually. But as long as no one can put a meter on the sun, the power companies will seek to delay real energy conservation.

Sincerely,  
Christine Hervig

RE: Docket 130199

Dear Commissioners Balbis, Edgar, Graham, Brisé, and Brown:

You have the authority and the responsibility to act on behalf of the best interests of all Florida's citizens and, as a 51-year resident of this state, I urge you to accept that mandate and reject the notion that our electric utility companies should not continue prudent implementation of new and innovative efficiency standards and methodology.

Current sources of our electric power must be mitigated by use of generating technologies that reduce carbon pollution as well as strategies to stimulate more efficient consumer consumption. It does not take additional scientific study to verify the certain disastrous impact of continuing pollution from power plants if the PSC retreats from its public mandate.

I fully understand "the technical nature" of your deliberations as well as the lack of specificity from our legislature that makes your job difficult. But, I also know members of the PSC do not exist in a vacuum. I have seen many changes in our state during my residency, and there has never been another time when your role as the PSC was more important.

There is more than ample and factual data easily available from the most credible sources to support a PSC decision to continue and accelerate the work with Florida's electric utilities to help insure a safer and more prosperous future.

Thank you for your consideration.

Sincerely,

Roger Crescentini Sr

Re: Docket 130199

Good Morning,

I am sure that you, as members of the Florida Public Service Commission, are very concerned about the power issues that we currently face in Florida. This letter is being written because it seems more and more evident that self interest and party politics and conventional short term thinking have now become the driving forces for making Florida's energy decisions.... Rather than science, research, and the best interests of the people of Florida.

Members of the Service Commission, please tell me why the four energy companies in Florida have spent some \$13 million on lobbyists... employing an average of one lobbyist for every 2 members of the Florida Legislature. Please, "just follow the money." It smells rather self-serving to me. This is money utility customers have paid for the basic needs of light and energy for our homes and it is being used to influence members of the Legislature in a regressive, self-serving direction. Even more, please tell me why these utilities have recently approached the Public Service Commission with the request to weaken their energy conservation programs, and discourage the use of alternative power such as wind and solar.

It is amazing that Thomas Edison, the inventor of the light bulb in 1903 said this, "We are like tenant farmers chopping down the fence around our house for fuel when we should be using Nature's inexhaustible sources of energy--sun, wind and tide. I'd put my money on the sun and solar energy. What a source of power! I hope we don't have to wait until oil and coal run out before we tackle that." And, I hope our power companies and the Public Service Commission will take heed of Edison's wisdom.

It is well proven that our continued use of fossil fuels will at some point in time will cease to be economically sustainable. What follows, I think is a possible answer. I am sure you remember the name E. F. Schumacher, economist and author of the book, *Small is*

*Beautiful: Economics as if People Mattered* (1973). Though the book is dated, the basic wisdom is undeniable and ageless. In fact the Schumacher Center for a new Economics in Great Barrington, Massachusetts continues to remind us that sustainability is a central economic concept that needs to direct so many decisions today.

If we study this economics of sustainability/permanence, it takes us profoundly in the opposite direction than our conventional thinking regarding the use of the limited fossil fuels. Agreed? Sustainability/Permanence should also force us to move in the direction of growing the decentralization of power production simply for the sake of safety being less vulnerable to unexpected malfunctions, regular shutdowns for servicing, terror and natural disasters. Likewise, the rule of sustainability/permanence forces us to think in terms of diversification in the production of various energies (wind, photovoltaic, methane from animal waste etc.).

Just 3 weeks ago I was in Rutland, Vermont and walked into a store called the Energy Innovation Center. It is sponsored by the largest of their power companies, Green Mountain Power. I was amazed at the positive and sustainable things the power companies are currently doing, to encourage decentralization and diversification of energy production. Along with encouraging photovoltaic and wind energy, they are even assisting dairy farmers to turn cow poop into methane power on the farm. The amazing thing is that the energy companies are open to this, and encouraging their customers to link into the power grid and become part of the system production! Needless to say, I was quite encouraged. Schumacher's call for sustainability/permanence is taking root and slowly will become the way of true progress in the world of energy production.

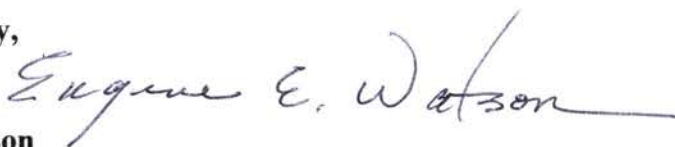

Of course, science and research will be so essential. I wonder how far that \$13 million for Lobbyists would have gone if used for research? For instance, today one of the strongest arguments against alternative energies is the lack of dependability. "There are just too many fluctuations in the wind and cloudy days will always prevent a steady energy production by the sun". Thanks to good science, and the kind of determined research of a modern Edison, there are valid technologies that respond to the negative liabilities of the alternative energies. For instance, Isentropic Power storage currently offers big promises for an economically sustainable and feasible storage system for leveling power production fluctuations. See <http://www.treehugger.com/clean-technology/breakthrough-grid-scale-renewable-energy-storage-battery-made-gravel.html>

So, Members of the Florida Public Service Commission, I'm trusting that you will put, at the top of your priorities, the energy needs of all Floridians. That means you must be wary and wise to the self-interests, party politics and conventional short term thinking that currently seems to be driving Florida's energy decisions.

I await your response.

Yours truly,

Gene Watson

Comments:

The Commissioners are to be congratulated for their tremendous service to the Utility companies, I hope you get invited to more of their festivities at our cost. Your bias on not permitting us to comment at a public hearing based on discussions on solar (I guess the DOT use of solar displays their ignorance-Have you "Quislings" no shame at all? What a bunch of scum bags you all are! sorry several deuchbags as well!

## Opinion – Florida, "The Perfect Climate" For Business

Assemblyman Joe Gibbons gets it. Now will the rest of the Florida Legislature and our next Governor sign on? Solar and other renewable energy sources MUST be part of the energy mix to sustain Florida's future. For Floridian's this would mean cleaner skies ahead as the state's 15 coal-fired power plants will need very costly upgrades or be replaced, the likely choice for our big utilities. But will the replacement power come from only natural gas fired plants built on top of the old coal sites or will Florida incentivize the state utilities to mix it up with renewables? "The Perfect Climate" For Business (the official slogan for Enterprise Florida, the state's office of economic development) truly epitomizes where we are headed as a state. Cleaning the air means thousands of new jobs and billions of dollars invested in replacing those outdated coal plants. Not only will Lake Mary based Mitsubishi-Hitachi Power Systems America need to double down on it already robust operations to replace these plants but so will Siemens USA in Orlando, GE in Pensacola and several dozen other clean-tech energy suppliers and hundreds of sub-contractors in building these new plants and in providing alternative wind, sun , algae, bio-fuels and fuel-cell derived power. It was a breath of fresh air to see Duke Energy already commit to retiring and replacing two older polluting plants with much cleaner, more efficient and reliable gas-cycled turbine power. It is also another way to also reduce our reliance on costly imported oil. The last missing link in this equation is a strong legislative mandate for the state to put its money where its mouth is. On the Florida Enterprise website it quotes "Floridians understand the undeniable link between sustainability and the economy, and are building a robust cleantech industry, with particular strength in energy, efficiency, and environmental technologies." Actions speak louder than words. With the Governorship up for a vote this November, who will provide a legislative platform that outlines the steps that will be taken in the next state budget cycle to put words to action? Florida is one of only a dozen states that does not have a renewable energy standards portfolio, either mandatory or voluntary. The purpose of these standards is in quote "Renewable portfolio standards (RPS), also referred to as renewable electricity standards (RES), are policies designed to increase generation of electricity from renewable resources. These policies require or encourage electricity producers within a given jurisdiction to supply a certain minimum share of their electricity from designated renewable resources. Generally, these resources include wind, solar, geothermal, biomass, and some types of hydroelectricity, but may include other resources such as landfill gas, municipal solid waste, and tidal energy." This, taken from the U.S. Energy Information Administration website outlines the REC's or renewable energy credit structures that could be set in place to have an effective market system that government (State and Federal), utilities and consumers participate to reduce our reliance on carbon-intensive power while increasing the grids resiliency to spikes, outages and the like. With the inevitable replacement of 15 aging coal-fired plants in Florida, and the investment of several billion dollars for such creating thousands of new jobs, Florida has "The Perfect Climate" for Business. Now our State and Federal representatives must support this remarkable clean energy renaissance with supportive legislation and funding. One state legislator, Joe Gibbons gets it. The question now is will his colleagues sign-on to this opportune moment in truly making Florida a cleaner, brighter state to live, work and play.

# New EPA rules should keep the Sunshine State sunny

BY CHRISTOPHER VON ZWEHL

Von Zwehl

The new EPA rules outlined in the Clean Power Plan are the right direction for Florida, and will improve the state's energy efficiency, environment and overall economy.

Our state's dominate base-load electric power source, coal, dates back to the 1800's and is causing rising sea levels and the erosion of our beautiful beaches.

As we continue to face this debate between the renewable and conventional energy, big oil focuses on shale gas, which has ignited a tipping point in energy. This tipping point is the phase out of black carbon (coal) power to lower carbon emission sources to meet new EPA clean-air guidelines.

What does this mean for the Sunshine State? We have the most to gain by effectively meeting these standards. A new clean energy mandate out of Tallahassee now, while our beaches are still around, will become a strong economic driver and set Florida up as an example to be followed by other coastal states in the South.

The good news for big energy players here, Duke, NextEra/FPL, Tecu, JEA, FMPA and others, is they can play the central role in helping Florida come in to the 21st century clean-power equation. In renewable energy and energy efficiency projects, we have worked on across America, a mix of players successfully partnered together. Some of which are and were the biggest carbon emitters in the U.S., and by putting aside politics, we made a big difference in achieving reductions in the use of coal and oil.

We are also home to the world's largest clean energy technology and equipment providers, Seiman's AG, who provides thousands of Floridians and Americans clean-energy jobs out of Orlando.

To be successful, our next governor must lead the charge to invest \$100 million a year (about one-tenth of 1% of the state budget). Leveraged by industry and minimally offset by consumers, we can and will lower our carbon emissions and advance renewable energy in Florida. This investment in our future will prove to be a strong equation for success in protecting

low-lying areas. The legislation will also add high-paying jobs and economic activity that are exportable.

The absence of real action now and measurable legislation by our lawmakers could be disastrous for our future. Current projections of rising sea levels call for billions of dollars of Florida taxpayer funded expenditures to protect critical infrastructure and our water supply. We will also see billions in ratable taxes on waterfront properties disappear along with double-digit insurance premium increases. We can't afford the luxury of finger pointing and debating anymore. Florida is soon to be the third biggest state in the nation and the 16th biggest economy in the world with a GDP approaching \$1 trillion. We can and need to make a difference today. There is no time to waste.

Some ideas on how to make that happen include an increased focus on solar energy. Solar is poised to be a leader to a brighter, cleaner energy economy here in Florida. We are light years behind other states in this area. We need no less than 1,000 megawatts (1 gigawatt) a year of new, cleaner power (including natural gas cycled turbine power) installed for the next 15 years to meet federal guidelines. We also need stronger conservation mandates to meet our growing energy needs and protect our way of life.

Critics will argue the balance of cost versus benefits. Well, the benefits for Florida are unmistakable. While the risk for the Sunshine State would be irreversible; beaches gone, tourists gone, drinkable water gone and more. Cheap, dirty coal power is forever a thing of the past in the U.S., and so are its detractors.

Who would have thought big oil would be the tipping point to have built the bridge to a brighter, cleaner energy future for the United States' power hungry economy? Let's lead the way to a more economically rich future in Florida while protecting our way of life with clean energy legislation to support the execution of the new EPA guidelines.

## At long last, equality comes to Florida

Fly that rainbow flag high, Florida, for equal rights is just around the corner.

Thursday's ruling by a judge in the Florida Keys overturns — in his jurisdiction of Monroe County — the state ban on gay marriage that voters added to the state constitution in 2008. While the ruling only covers Monroe, similar rulings are expected any day in Tallahassee and in a Miami-Dade case brought by six couples, including four from Broward County.

Since the U.S. Supreme Court threw out a key provision of the federal Defense of Marriage Act last year, courts across the country have been striking down statewide bans on same-sex marriage.

Florida Attorney General Pam Bondi quickly said her office would appeal Thursday's ruling, but her fight will be upstream against a tide of nationwide acceptance. Indeed, in Florida, polls show 67 percent of voters support legal recognition of same-sex couples.

Nineteen states and the District of Columbia now allow same-sex marriage. Just last week, a federal judge ruled Kentucky's same-sex marriage ban was unconstitutional.

It's just a matter of time until all of Florida is added to that group. And it's about time.

"This is a monumental step forward for Florida," said Nadine Smith, CEO of Equality Florida Institute.

"[Thursday's] historic ruling affirms what the majority of Florida residents already knew to be true: All couples and their families deserve to be treated equally by their government."

While a majority of Florida voters put the same-sex marriage ban into the state constitution, Circuit Judge Luis Garcia said in his ruling that "it is our country's proud history to protect the rights of the individual, the rights of the unpopular and the rights of the powerless, even at the cost of offending the majority."

Opponents will not let up. Attorney Mathew Staver, founder of the conservative Liberty Counsel, said if Bondi "does not want to present a vigorous defense, she owes it to the voters of Florida to step down and allow someone else to represent the interests of the state."

Actually, Bondi and Gov. Rick Scott would be better served to give up the fight, rather than continuing to waste time and taxpayer money in an embarrassing attempt to enshrine discrimination in Florida.

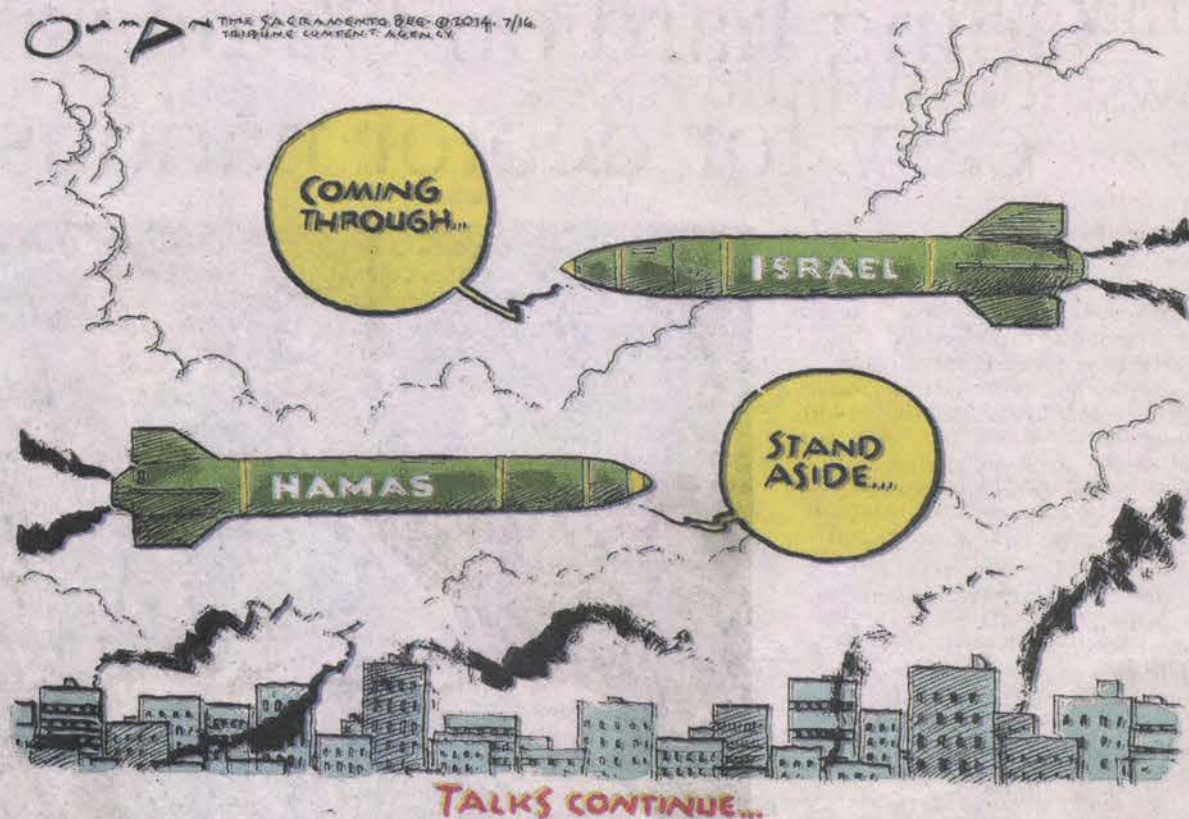

The time has come to allow same-sex couples the same legal and financial rights as heterosexual couples.

The time has come to allow them equal hospital visitation rights, instead of making them go through a bureaucratic and emotional nightmare.

The time has come for Scott, Bondi and others to realize that in the 21st century, bigotry and prejudice should not be given constitutional protection.

Same-sex couples who want to marry aren't infringing on anyone's rights. They don't pose a threat to traditional marriage or society. They merely want to enjoy the "pursuit of happiness" that our Founding Fathers guaranteed more than two centuries ago.

For the state to continue this fight is unseemly. It is time for full equality to take its deserved spot in Florida.

## Solar technology still needs subsidies

BY JOE GIBBONS

Gibbons

Sometimes good intentions can produce bad outcomes. A case in point is the framework by which we subsidize residential solar panels.

With the good intention of promoting more solar panels on consumer rooftops, Florida has created a system of subsidies that benefit solar panel owners, who are usually high-income homeowners, at the expense of working-class families and individuals on fixed incomes. This is a policy outcome which no one but those few who benefit would argue is in the best, long-term interests of our state.

Solar technology is expensive. To help offset costs, a wide array of generous state and federal subsidies were advanced to encourage more residential roof-top solar installations.

One such state subsidy is known as "net metering." With net metering, whether a homeowner buys or leases their rooftop solar system, utility companies are required to buy back the excess power they generate at full retail price.

While this full retail price credit brings substantial savings to solar homeowners, those bill reductions are financially supported by consumers without solar panels, including low income consumers, who end up with higher bills because they have to pay for the solar homeowners' share of the costs of the electric grid. And by the way, every solar homeowner continues to rely on the transmitting and distributing services provided by

the grid.

The vast majority of Floridians cannot afford to buy solar panels for their house, nor do they have the near-perfect credit needed to qualify for a solar lease. In California, a study by the Public Utility Commission found that the average income of households using solar is nearly twice that of homes without solar. Add to that the fact that low-income electricity consumers spend a disproportionately higher percentage of their income on household energy bills.

This policy has created a subsidy system that allows high-income rooftop solar users to enjoy all of the benefits of traditional generation of electricity, and the grid that distributes it, without helping to pay for maintaining the overall network.

Furthermore, people who rent a house or apartment are simply locked out of the subsidies even if they can afford it. Those who own a home in a densely shaded area or next to a large building are also out of luck.

We must remember that our electric grid is essential to all communities, and we can't leave those who can least afford it holding the bill.

Solar is hardly a bad thing. Floridians value clean technologies and are increasingly interested in reliable, energy-efficient, and affordable options. But our elected officials and regulators must acknowledge that there are simply more equitable ways to develop this technology.

For example, we could do a better job of incentivizing large industry-scale solar installations that give all consumers the opportunity to participate in the both the benefits and costs.

It's clear that Florida needs to rethink its unbalanced solar policies. All citizens and communities throughout the state deserve clean, affordable energy options.

Joe Gibbons represents District 100 in the Florida House of Representatives.

## Opinion

Going hard on China isn't  
easy for debtor nationsBy WILLIAM PESEK  
Bloomberg View

TOKYO — Julie Bishop, Australia's foreign minister, is beginning to understand what former Secretary of State Hillary Clinton meant in 2009 when she posed this question about China: "How do you deal toughly with your banker?"

Clinton was conferring with then-Australian Prime Minister Kevin Rudd about China's rapid rise and, according to cables released by WikiLeaks.org, the leverage Beijing's massive store of U.S. Treasuries (\$1.3 trillion at last count) gives it over Washington. Australia finds itself in a similar bind as its resource-based economy begins to look like a ward of China.

Not happy with this state of affairs, Bishop's boss, Prime Minister Tony Abbott, is grasping for a harder line on China and not doing it very well. Abbott used last week's visit to Australia by Japanese Prime Minister Shinzo Abe to preview his China policy. Abbott had previously declared Japan, China's sworn enemy, Australia's "best friend in Asia." Last week, though, he went off the diplomatic rails when he said, bizarrely, of the Japanese submariners who fired missiles at Sydney harbor during World War II: "We admired the skill and the sense of honor that they brought to their task."

Huh? Try telling that to the families of Australian and British prisoners during World War II, many of whom the Japanese tortured during the death marches of Sandakan and starved while working at gunpoint on the Burma railway. China's foreign ministry, which clearly hasn't forgotten the war, hit back arguing that "anyone with a conscience will disagree with the remarks made by the Australian leader."

Beijing mouthpiece, the Global Times, challenged Bishop's comments about a more assertive stance toward China, deriding her as a "complete fool" who was helping to turn Australia into an outpost of "rascals and outlaws" who don't understand Asian geopolitics.

What are we to make of all this? The obvious point is Clinton was right. Why would China fear a nation it could traumatize tomorrow by dumping its debt or shifting its iron ore, coal and copper orders elsewhere?

There are two cautionary messages embedded in this Beijing-Canberra imbroglio — one for Abbott, one for Abe.

For Abbott, the issue is how China is forcing democratic nations to choose between obedience to the Communist Party or eco-

LISA MAREE WILLIAMS/AFP-GETTY IMAGES

Australian Prime Minister Tony Abbott is struggling to strike a tough tone with China — his country's No. 1 trading partner. He recently said Japan is Australia's "best friend in Asia."

nomic pain. Britain is clearly going the former route as Prime Minister David Cameron turns his back on Hong Kong. Why is Cameron silent as China clamps down on civil liberties in a former British colony that the Communist Party promised Margaret Thatcher it would leave alone?

Among conservatives, Abbott and his chief diplomat Bishop may score points by pushing back against China. It may also be his way of reminding the United States it still has a friend Down Under. But Abbott's bromance with Abe comes as former Prime Minister Malcolm Fraser hawks a new book, "Dangerous Allies," critical of Canberra's closeness to Washington at the expense of China. Time will tell if Australia pays a price for cozying up to a nationalist like Abe who leads a waning economic power as China extends its reach around the globe. China, after all, is Australia's No. 1 trading partner and a rising military superpower. And, let's face it, the Communist Party really knows how to hold a grudge.

Abe, meanwhile, should consider how badly his foreign policies are traveling. Just this week, he complained that Chinese President Xi Jinping continues to rebuff requests for a summit meeting. How about looking in the mirror? His unapologetic visit last December to Tokyo's Yasukuni Shrine, where 14

Class-A war criminals are interred, enraged China and South Korea. So has Abe's silence as people in his political orbit deny that the Nanjing Massacre happened or that the Imperial Army rounded up women and forced them to work in brothels. More recently, Abe's move to "reinterpret" Japan pacifist constitution has shaken Asia's security status quo.

As the Sydney Morning Herald asked in a July 11 headline: "Are We Really Comfortable With Abe?" When other democratic leaders are getting flack for being your friend, it's time to assess how your domestic politics are undermining external relations. After all, a key pillar of Abenomics should be closer relations with Asia's biggest economies, not alienating them.

Australia may now have a similar problem on its hands as China stewes about Abbott's affection for Japan. As a sovereign nation, it's Australia's right to forge relationships as it sees fit. But as recent events attest, balancing China's economic might with its diplomatic idiosyncrasies is something few governments have achieved — including the one Clinton may run come 2016.

## THE STORY

Hollywood plans to spend \$1.5 million on a closed-circuit surveillance system that will help police fight crime in key hot spots before, during and after a crime takes place.

## THE QUESTION

What are your thoughts?

## YOUR COMMENTS

Surveillance needs to be constantly on the Hollywood Police Department. They are storytellers, bulls\*\*\* artist and abusers. The minute you go to that department for help or info, they will do whatever it takes to turn the tables and make you out to be a criminal.

Rob Vango

I'm glad to see the majority of the comments are from ones who have woken up to this Orwellian police state. Film the police. It is your right under the Supreme Court decision Gilk v Cuniffiee.

Dillon Fortunato

Maybe if the police would patrol instead of sitting in parking lots it might deter some crime.

Doreen Gadbois

How about making cops wear cameras.

Stephen Sarsfield

That's great for stopping crime but seems an awful lot like living in a "perfectly safe police state." Is this where we are now?

Jeffery Craig

Big brother is here. In the name of our safety, we give up much privacy

Michael Stein

Will they put the cameras in the police station and squad cars, since that's where most of the crimes are committed?

Jonathan Kraljic

All these cities crying broke, and now instead of real police work they are spending taxpayer money to spy on everyone.

Tom Lee Campbell

Interesting probably the worst PD in Broward County wants to use cameras to record crime when they are the ones committing it.

Frank Wannop

How about hiring cops. Crazy concept.

Debra Saracione-Wasserman

Make sure you put one on Coolidge St. and 20th Ave. Thanks in advance!

Danene Marie

Every time they spy on us

July 24, 2014

RE: Florida Energy Policy - Promote Energy Efficiency to Benefit Consumers

Dear Chairman Graham:

Thank you for the opportunity to share my concerns regarding the request by Florida investor-owned utilities that the Public Service Commission ("PSC") diminish the commitment to consumers under the state energy efficiency and conservation goals. Florida utilities are proposing to slash their annual energy savings goals from an already anemic 2,012 gigawatt hours (GWh) from 2009-2013 to 263 GWh for the period of 2015 through 2019. In fact, the largest electric utility in Florida, comprising nearly half the entire state's electricity sales, is proposing annual energy savings of 100 times less for 2015 than what it achieved in 2013. Drastically reducing energy savings will diminish the potential to decrease carbon pollution which is the main contributor to climate change and its devastating impacts. I urge you not to reduce Florida's very modest energy efficiency initiatives and instead side with Florida consumers and businesses and *increase* the state's commitment to cost-effective energy efficiency and demand-side renewable energy.

The timing of the PSC's action could not be worse. It is clear that Florida will have to make a major shift to reducing carbon pollution in the coming years. Energy efficiency will be one of the primary tools our state will need to meet carbon pollution reduction goals. If you reduce the state's modest energy efficiency initiatives, you are making the road ahead much more difficult and likely much more expensive for Floridians.

It costs less to save energy than to produce energy. Yet, under Florida's electric utility regulatory scheme, utilities have incentives to build large operating power plants and sell as

RECEIVED FPSC  
14 JUL 29 PM 12:15  
COMMISSION  
CLERK

much energy as possible. The business model is outdated and fails to meet the modern challenges of Florida's future and protect Florida consumers.

As a member of the U.S. House Energy and Commerce Committee, I have watched other states outperform Florida on energy efficiency and clean energy. Florida is far behind other states that have been innovative in helping consumers save money. When a consumer or business saves money on their electric bill, they have more resources to invest in other goods and services. Energy efficiency also boosts job creation in construction, weatherization, retrofits, manufacturing and installation of energy-efficiency equipment. According to the American Council for an Energy-Efficient Economy (ACEEE), a more aggressive commitment to energy efficiency would yield significant economic benefits. By 2050, ACEEE estimates that significant investments in energy efficiency at the state and federal level could benefit all parts of the economy including residential, commercial, industrial and transportation sectors. These efficiency investments would result in a net gain of almost 2 million jobs and save consumers an average of \$400 billion per year (about \$2,600 per household).

Just imagine what the ratepayers on the west coast of Florida could have done with the \$3 billion they spent on the broken Crystal River nuclear power plant or the jettisoned Levy County plant? They are on the hook for \$3 billion that did not produce a single kilowatt hour of energy. With \$3 billion we could have provided energy-efficient appliances, air-conditioning systems, weatherized homes, insulation, smart meters to many Floridians and businesses - and create thousands of jobs doing so.

I understand that the electric utilities argue that they are concerned about the costs of energy efficiency and clean energy. The greater financial concerns for Floridians are the huge costs of the changing climate such as dealing with extreme weather events, flood insurance, homeowners insurance, beach renourishment, and property taxes for local infrastructure repairs. Add in costly health impacts like asthma and the PSC and State simply cannot shirk its responsibility to the citizens of Florida.

In addition, a recent Standard & Poor's report highlighted the economic danger of not acting to reduce carbon pollution: "climate change is likely to be one of the global mega-trends impacting sovereign creditworthiness, in most cases negatively." Climate change will impact credit ratings in several ways. First, economic performance will be reduced as agricultural yields decrease because of "repeated and prolonged droughts, heat waves and wildfires, or floods" and health effects reduce worker productivity. The report states that "extreme weather events, especially floods, can be expected to increasingly take a toll on a country's infrastructure and thus productivity." Second, fiscal performance will decline as government budgets come under increased stress from climate-induced emergency support and infrastructure reconstruction costs.

According to S&P, “[n]ational budgets would invariably come under additional strains, potentially putting downward pressure on sovereign ratings and debts and deficits mount.”

In the face of these challenges, Florida must dramatically *improve* its commitment to energy efficiency and clean energy – not go backward. The PSC will harm Florida consumers and businesses if it keeps our state stuck in the last century. Plus, the state will find it impossible to meet its carbon pollution reduction goals unless it reworks its incentives for fossil fuel energy consumption and modernizes its energy policies now. Many other states have a much more robust commitment to conservation, efficiency, solar and other clean sources of energy. It is embarrassing that states like Georgia and New Jersey produce more solar energy than the Sunshine State.

For all of these reasons and with an eye to the future of our great state, I respectfully urge you to reject any weakening of Florida’s energy efficiency standards.

Sincerely,
