December 16, 2014

Dear Commissioner:

We have just moved to the State of Florida and now happily live in Tarpon Springs. Since moving here we have been impressed with the medical care, bike trails, parks, and urban forestry even libraries and public sport centers. Nice work.

But a recent report, rumor, data has surfaced which revealed Duke Power, who owes the public hundreds of millions for planned but not executed nuclear plants, and other sources; as reducing and curtailing integrated energy sources for the future. In fact, I see in your current report that there is currently "no solar" being used in the Florida even though there are 5-7 plants? For an area of the U.S which has 320 days of sunshine this fact is preposterous and unbelievable. It is a crime (literally) for energy producers and legislators like you to overlook a viable and economically friendly resource like solar power.

You also lack in your NON-integrated system "Wind Power", another basically reliable and cost efficient plentiful resource. If and when you travel to Europe like Copenhagen, Sweden, France, and Germany you will see many examples of solar and wind energy being utilized. So unless you are purposely trying to raise the Co2 levels with coal and gas fired energy plants; global warming which serious endangers any low-lying coastal area we can't understand non-integration of solar and wind. Or perhaps you are in cahoots with Duke Energy which like Houston Lighting and Power can be negative influencing beneficial planning and execution as well as other energy consortiums. Something is obviously amiss and this serves as a public accusation of a failure to honestly and beneficially represent the people of the State of Florida as you are sworn to do.

Therefore, when in Washington, Canada and Europe we will endeavor to spread the word to avoid Florida as a vacation or domestic local because of its' abusive environmental operations.

Regretfully,

Richard M. Edson

Want to help chairman Leon Jacobs get his facts right with regards to solar energy in Florida! We sorely need REFORM within Florida's PSC.

It's time to get elected officials in their that work for the ratepayers and not the monopoly electric utilities!

Subject: Florida's PSC needs serious REFORM

Hello PSC Commissioners and staff,

I am writing today to try to educate all of you especially Chairman Leon Jacobs. I am a rate payer of Duke Energy and have been a resident of our great state since 1983. My grandfather retired here in 1969 and I have been enjoying Florida most all my life.

I have attached one small bit of information from the Florida Solar Energy Center (FSEC) that shows how much sunshine the state of Florida receives relative to the rest of the country. You can see from these facts that Florida has the best solar resource east of the Mississippi River. I have been in the solar industry for over 30 years and still daily get the question posed to me: "why don't we have more solar here?" The only people that don't ask this question are monopoly electric utilities and the Florida PSC. Myself and thousands of others jokingly call the Florida PSC the 5th investor owned utility because the utilities and the IOU's have such a cozy relationship. Myself along with thousands of others are pressing hard to get your organization completely reformed.

When we see Chairman Jacobs state that our state slogan- THE SUNSHINE STATE is merely a license plate….. Myself and thousands of others get infuriated. We are pressing our elected officials for complete reform of the PSC. Education will prevail as well as freedom for Florida's citizens to produce their own power if wanted. Solar Energy on homes and businesses helps the electric grid and keeps rates lower for ALL ratepayers. What is the true value of solar energy that is generated and used on that same premise? Are the costs lowered if the IOU's don't have to generate, transmit, substation and distribute?

What a great study that would be… Many have been done and every one of them shows how costs are saved for ALL ratepayers. These studies are not viewed well by the IOU's but they should be. Isn't the cheapest KWH one that is not used?

We hope we can help with further education although that day probably won't come until the PSC is completely REFORMED.

Sincerely,

Wayne Wallace - President

FLORIDA SOLAR ENERGY CENTER®

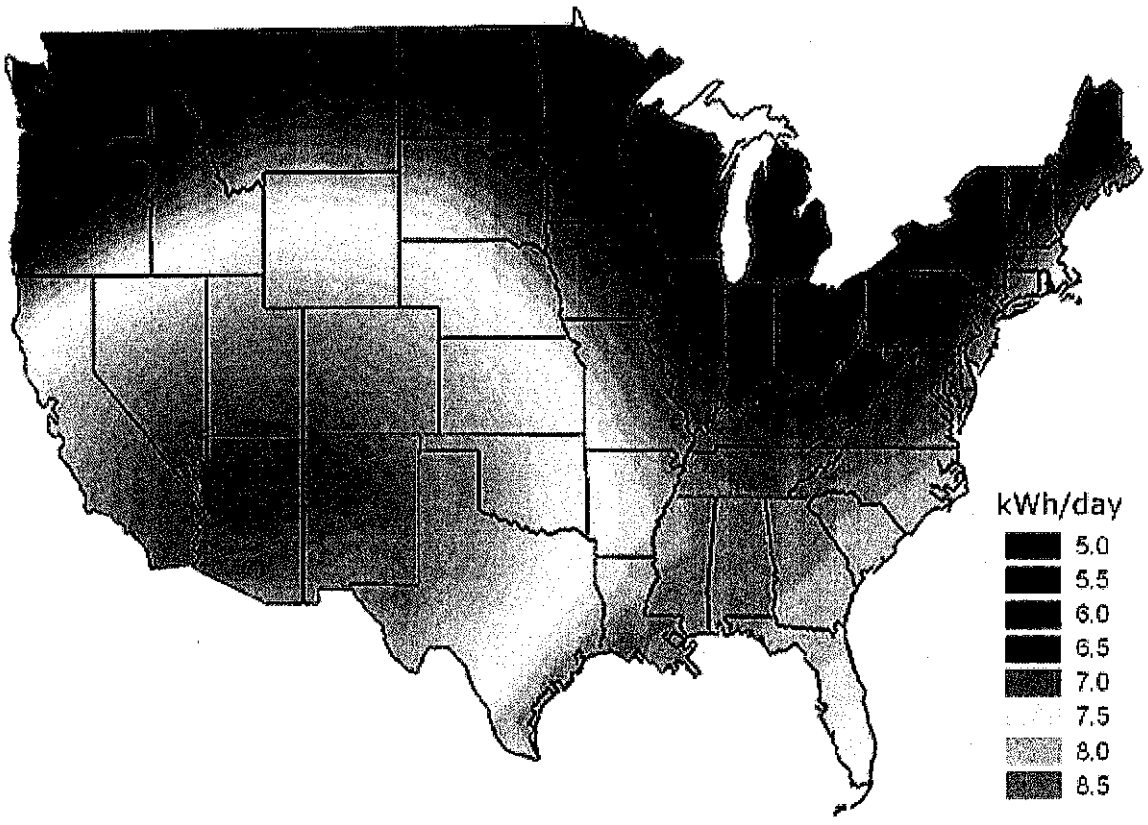

Creating Energy Independence

2007.03.26

Does the "Sunshine" State have a sufficient solar resource to support solar energy applications?

Every so often, we get a call or email asking about the use of solar energy in Florida and whether the state has too many cloudy days and hazy sky conditions to support solar energy applications. Many people say they have heard that solar energy applications only work well in the clear skies of the desert southwest and just won't be as effective in Florida's weather conditions.

While it is true that the desert southwest has the largest solar resource in the continental U.S., this does not mean that Florida has a poor resource. Consider the following map that compares the solar resource for 2-kilowatt photovoltaic residential applications across the entire U.S.:

This image comes from a study the Florida Solar Energy Center conducted on the performance of 2-kW photovoltaic (PV) systems installed on highly efficient homes across the country. The results capture all aspects of PV system performance, including the temperature effect on cell performance as well as the efficiency of the conversion from DC to AC power through the inverter. The map clearly shows that the desert southwest has the largest solar resource in the continental U.S., but Florida is not very far behind with 85% of the maximum PV resource of any location in the country (7.2 kWh/day out of a maximum of 8.5 kWh/day). Consumers should note that many parts of the country that have more state financial incentives have a much

poorer solar resource, making Florida a very cost-effective location for using solar energy. You can view the complete study at: www.fsec.ucf.edu/en/publications/html/FSEC-PF-380-04/.

There is Also Money Waiting for You in Florida!

There are also substantial federal income tax credits (30% of the cost of a solar hot water system) and State of Florida rebates ($500 for a system) for the installation of solar systems in Florida. In addition, one Florida utility, Progress Energy Florida (PEF), recently implemented a new program that offers additional utility incentives of $450 for the installation of solar water heating systems. These combine to offer a considerable buy-down for a solar water heating system.

If you are interested in photovoltaics, there is a federal income tax credit of up to $2,000 plus a State of Florida rebate of up to $20,000 for home applications and up to $100,000 for commercial applications.

Additional information on these solar energy tax credit, state rebate and utility incentive programs can be found by clicking on the following links:

- Federal tax credits: http://www.fsec.ucf.edu/en/media/enews/2005/2005-03_EPAct2005.htm
- State of Florida tax rebates: http://www.fsec.ucf.edu/en/media/enews/2006/2006-04-R1_Energy-act.htm
- Progress Energy incentives: http://www.progress-energy.com/custservice/flares/save/solarheater.asp

Florida citizens express their opinion on solar energy for Florida:

Subject: Recent PSC decisions

Mr. Graham, I am not happy with the PSC decision to reduce conservation programs and eliminate solar incentives...my God, what will it take for our State to be responsible and forward thinking? Your goals are sadly NOT in keeping with the quality of life that most Floridians want...your pandering to corporate interests is noticed, and not acceptable.

I know nothing about you personally, Mr. Graham, but you are probably not a young man because if you were, and if you gave a damn about the future of any children or grandchildren you might have, you would stop this ridiculous road you are going down.

Stand up and be someone that the citizens of this State can be proud of. To continue to depend on fossil fuels at the expense of our clean air and water is to cut your own throat, and ours. The quality of our lives depend on the decisions you make, Mr. Graham...

RE: PSC/Constituent Concerns

Chairman Graham;
I am disappointed, and in strong disagreement, with the recent ruling of the Florida Public Service Commission that will allow the state's investor owned utilities to reduce their energy conservation goals by 90% and to remove the modest solar energy incentives then in effect.
This now encourages more electric use so that the utilities have justification to build more fossil fuel generation plants. These plants will require rate increases to fund and further exacerbate pollution issues.
There is a significant environmental impact of using more fossil fuel produced electricity. These fuel sources increase greenhouse gases and other toxic by-products.
It would be better to invest in job creating clean energy technologies that will grow Florida's economy while saving customer's money.
In this day and age of climate change awareness, it seems very shortsighted & irresponsible to reduce conservation goals by 90% and eliminate solar energy incentives.
As a member of the rate-paying, tax-paying public that you serve, and based on the goals you have established for your commission, I am calling for you to retain both the modest solar energy incentives and the conservation goals that were in place on 11/1/14.
Thank you,

Dan McCormic

Subject: Please see here: Comment in regards to Florida Public Service Commission. THANK YOU.

Chairman Graham,

I cannot believe what has just happened.
I just found out recently how this appointed board, the Florida Public Service Commission, how they are now allowing for the state's investor owned utilities to REDUCE their energy conservation goals-- BY 90%!!
And -- to add INSULT to injury -- are now removing all the solar energy incentives.
-- Is this a joke?

We live in The SunShine State, for cryin' out loud.

I keep looking to Europe, for all their innovation and progress.
I have friends that live overseas -- they also question why the USA is not moving forward more with Solar.
And here we are, getting rid of incentives,and stifling progress and positive change?
This is very odd to me.

Again, we live in the Sunshine State.
I volunteer with Audubon. I used to be much more involved than I am right now.
That said-- I have a few friends, and they have friends of friends -- who donated hours and hours of their time, energy, blood, sweat and tears,
toward helping the animals, mostly birds, that were so horribly impacted by that HUGE BP spill in the Gulf.

Animals covered with oil. Oil in their eyes, mouths, and in their little, innocent bodies.

All suffering. They didn't deserve what happened to them.

Yes--it was an accident.

But it was a huge, and costly accident. Both costly monetarily, and also--in relation to the innocent lives impacted.
Have you seen the photos of the animals that suffered and died?
They are very graphic. I can only image what those innocent creatures of God went through.
All so we can have energy? There has gotta be a better way--there is.
Oil and fracking is not the future, I might add.

***Let's not forget the HUMANS LIVES lost during spills, and explosions with oil and non-clean energy solutions.

Know what a "solar spill" is called?
-- A nice day.

We need to push for cleaner energy solutions.

This will help us not just create better paying jobs, but also -- safer and cleaner jobs.

If Germany can do it--surely we in the USA are capable of such progress.
Let's set the stage to be a model for the world to want to follow.
A positive example to all.

I am begging you all --PLEASE help to retain both the solar energy incentives AND the conservation goals that were in place on 11/1/14.

Thank you for supporting progress and clean energy solutions,

Maria Bolton-Joubert

Importance: High

Chairman Graham,
I read with horror that you are actually considering gutting the energy conservation and solar initiatives in Florida. Please listen to citizens versus the energy companies who only have their profits in mind when advocating for no energy conservation measures.

Citizens want Florida to be the Solar resources capital of the world and are concerned about the current high pollution energy sources.

We need to move forward – NOT BACKWARDS. We need a brighter, positive future and the responsibility lies with you.

Please make a difference.

Chairman Graham,

I am in strong disagreement with the recent ruling of the Florida Public Service Commission that will allow the state's investor owned utilities to reduce their energy conservation goals by 90% and to remove the solar energy incentives.

I work on water issues and understand very well that Florida needs to conserve water. Conserving water requires conserving electricity. This ruling actually encourages more electric use, and the utilities will use this as a justification to build more fossil fuel generation plants. These plants will require rate increases to fund.

More importantly, there is a significant environmental impact of using more fossil fuel produced electricity. These fuel sources increase greenhouse gases and other toxic by-products.

Wouldn't it be better to invest in job creating clean energy technologies that will grow Florida's economy while saving customer's money?

In this day and age of climate change awareness, it seems very shortsighted & irresponsible to reduce conservation goals by 90% and eliminate solar energy incentives.

As a member of the public that you serve, and based on the goals you have established for your commission, I am calling for you to retain both the solar energy incentives and the conservation goals that were in place on 11/1/14.

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Dear Commissioner Imanuel Brown:

Dear Commissioner Brown,
I don't understand this logic. We live in one of the most suitable states for the usage of Solar energy in the United States. How can intelligent people with the opportunity to exploit this free energy source overlook it?

I have spent years overseas and I was amazed at the small Island of Cyprus, world leaders. Did you know that 100% of the houses in that country have solar hot water systems. Can you imagine how much money that saves the people? How much money it saves the country to not have to import oil to make that water hot.

I am a thirty five year resident of Florida with three children and four grandchildren. I speak to them often about the advantages of alternative sources of energy. I also tell them of the destruction to our environment and the limited source of oil and natural gas, which powers our electric infrastructure.

I purchased solar hot water system when President Reagan was in office in 1983. It was expensive back then but I realized I would recoup my expenses in less than five years. In those 31 years I have used the Florida sun to heat our water, less than 1% of the time I have had to depend on electricity to heat our water.

Can you invasion Florida as Cyprus with 50%-100% of the houses having solar hot water.

Please explain to me and the rest of the Florida residents & other sunny
state residents why this is not the MOST IMPORTANT ITEM ON YOUR AGENDA.
I would go total solar if the price was even near being affordable. I could buy two houses for what they want for solar electric system, even though the technology has improved thousand fold.

What and who is stopping us from slowly getting off the dependance of the Arab oil? Ourselves. We have the technology but we don't have the courage. We subsidized the Vietnamese when they flooded us after the war, we subsidize the railroad (needed I agree) we subsidize the farmers (also needed) we subsidize, just about everyone that asks. Is it big oil that keeps us from the most important subsidy of them all????

I am appalled that Florida, Arizona, New Mexico, California, Mississippi, Louisiana, North & South Carolina don't subsidize solar.

What a fantastic idea that Florida would be the leader and continue with this subsidy at all costs.

Would that not make you proud of your efforts to help America get off its dependance on Arab & imported oil? You would be looked at as a visionary, well ahead of your time. You have the power, don't let the rest of America down. This is the path the people want to take in the present and future. You are our PUBLIC SERVICE Commissioner. The public wants your help to allow incentives to those of us who want and realize solar is an important to our renewable future energy source.

With all due respect,
Captain Stephen Rhodes
U.S. Merchant Marine

Sincerely,

Stephen Rhodes

Subject: Question from a concerned citizen

Commissioners,

I recently read that the PSC recently voted to approve proposals to completely gut the state's energy efficiency goals and to end its solar rebate programs by the end of 2015. I know it was a 3-2 vote with Lisa Edgar and Julie Brown, who said that they would not agree with a plan that altered state energy policy so severely. My question is to the rest of the board members. What was your rationale in making this decision? Why would you slash the state's energy efficiency goals by over 90 percent and terminate solar rebate programs by the end of 2015? In my opinion, this board failed the citizens of this state by not working improve florida's commitment to clean alternative energy. The citizens of this state deserve a full explanation of this boards decision. I am personally committed to getting an explanation from this board and will continue until a full explanation is given to the people of this state.

Thank You,

Clint Christensen

Dear Mr. Lewis:

The Governor's office forwarded a copy of your email regarding Duke Energy Florida (DEF) to the Florida Public Service Commission (PSC). The PSC regulates investor-owned electric, and natural gas utilities throughout the state, and investor-owned water and wastewater utilities in those counties which have opted to transfer jurisdiction to the PSC. The PSC has authority in the telephone industry which is limited to the Lifeline Assistance Program, Florida Relay Service, and pay telephone service. We appreciate the opportunity to respond to you.

We will add your comment to the correspondence side of Docket Nos. 130200-EI regarding DEF's numeric conservation goals and 1400009-EI regarding DEF's nuclear cost recovery.

If you have any questions or concerns please call Ellen Plendl at 1-800-342-3552 or by fax at 1-800-511-0809.

Comments:
Dear PSC,
I cannot believe you would cut back on solar power in our state, the sunshine state. 'Florida's Public Service Commission voted last week to cut energy efficiency targets for power companies and to do away with a solar rebate program in the state, decisions that served to scale back the state's already paltry efforts in renewable energy.'
How dare you! As your name states PUBLIC is in your name. I do not agree with this decision. With all the sun in our state we should be expanding our use of Solar Power not decreasing it. Have you polled the public on this or just Gov. Rick Scott? I believe most citizens who aren't receiving money from the Utilities companies would agree we need to expand Solar power not decrease.
I abhor your decision and it just goes to people thinking Florida is a laughing stock of this country.
Sincerely,
Janel Miller

Subject: How DARE you gut efficiency and solar incentives!!

With your decision to end utility efficiency programs and solar subsidies you just STOPPED FL from participating in the energy $$ savings, incredible economic growth and job creation being experienced in states with pro-efficiency and solar policies. There is simply NO business case to be made for your decision, and to allow Duke to build new fossil fuel plants and eliminate assistance to rate payers (for efficiency) after they literally have been robbing us (ie. Crystal River) for years (and still are) is an insult and CRIME against the citizens you are supposed to be standing up for. Countless other states are heading in the opposite direction, guided by FACTS and economics.

You are blatantly corrupt and idiotic thieves & ideologues, in the pockets of this radical Republican party and their destructive & greedy corporate overlords. You all are unfit for the important jobs you hold. You have done GRAVE damage to the state, Country and a world coming to grips with the climate crisis. Go straight to hell … the sooner the better!

Phone Number: 727-595-8474

Message Body: I am very disappointed in the recent decision of the PSC to end renewable energy goals including solar rebates.

The claim by our major power companies that it is currently cheaper to produce energy than save it is ludicrous. Can we start thinking about tomorrow, the costs of climate change, and the future cost of oil and natural gas?

A little (OK, maybe a big) investment now will have a huge payout in the future.

After all, are we not to believe that saving and investing in balance with consumption, is a good thing?

From: Mike Matthews [mailto:mmathws@yahoo.com]
Sent: Monday, December 01, 2014 11:01 PM
To: Consumer Contact
Subject: Your Nov. 25 Ruling on Power Company Proposals

The following is directed to Chairman Graham and Commissioners Balbis and Brise:

I am not now nor have I ever been a political activist, and only on rare occasions have I been moved communicate with elected or appointed officials, however your vote of Nov. 25 to effectively eliminate all of Florida's energy-efficiency goals and provide Duke Energy and the other electric utility companies that operate in Florida an early Christmas present that must exceed their wildest dreams is so far beyond the realm of believability that I am compelled to write and express my disgust at your total failure to fulfill your obligations to the citizens of this state. Is there anything that the utility companies of this state could propose that you would NOT be in favor of? Florida already had one of the most power-company friendly energy policies in the country, and now this? You have just given the rest of the country yet another reason to mock us. It seems that forward thinking and common sense are concepts that are largely unknown to most of Tallahassee, especially appointed officials such as yourselves.
Your abdication of the responsibilities of your positions verges on, and in my mind meets and surpasses the definition of criminal. Is it possible that you are so ignorant and/or uneducated as to be totally oblivious to the need for alternative energy sources for our state, and the role that the public utilities should play in this effort? Or is it more likely that you are willing lackeys of the industry, jumping at their beck and call, determined to prop up their outdated business model and allow them to not only continue but expand their flagrant fleecing of consumers who are victims of the utility company monopoly in order to assure that you remain in their good graces, expecting them to provide future compensation in return for your favor now?
I struggle to find the appropriate term to define my feelings regarding this decision and my reinforced opinion of your arrogance and lack of integrity, thoughtfulness or ethics. “Corrupt” is a word that immediately sprints to mind, along with…
Disgusted? Appalled? Disbelieving? Saddened? Angered?
All of the above, and more. By moving to slash energy efficiency targets to the point of non-existence, eliminate rebates for the purchase and installation of solar-powered equipment and approve the building of additional power plants, to be financed in advance by the ratepayers of these companies with zero guarantee that we will ever see a return on our investment, you have displayed an arrogance in the face of common sense that staggers the imagination. (Does Levy County sound familiar? One point five BILLION dollars shelled out by consumers and NOTHING to show for it?!)
In earlier times I would be leading a charge to have your heads on a platter – it is unfortunate that in these times of special interest groups, lobbyists and the almighty dollar the majority of citizens feel powerless to make a difference. It seems that the best we can hope for is that you are eventually

replaced by someone more responsible, ethical, and/or less obligated to those who placed them in their position, and that in your future you hold a position from which you can do less damage.
My heartfelt thanks to Commissioners Edgar and Brown for taking the stand that you did in voting against this most outrageous legislation, upholding the responsibilities of your position, defending the rights of the consumers in this state and attempting to protect and preserve the once bountiful natural resources of our beautiful state.

Sincerely,
Mike Matthews
Pasco County, Florida

Florida already had one of the most power-company friendly energy policies in the country, and now this? You have just given the rest of the country yet another reason to mock us. It seems that forward thinking and common sense are concepts that are largely unknown to most of Tallahassee, especially appointed officials such as yourselves.
Your abdication of the responsibilities of your positions verges on, and in my mind meets and surpasses the definition of criminal. Is it possible that you are so ignorant and/or uneducated as to be totally oblivious to the need for alternative energy sources for our state, and the role that the

public utilities should play in this effort? Or is it more likely that you are willing lackeys of the industry, jumping at their beck and call, determined to prop up their outdated business model and allow them to not only continue but expand their flagrant fleecing of consumers who are victims of the utility company monopoly in order to assure that you remain in their good graces, expecting them to provide future compensation in return for your favor now?

I struggle to find the appropriate term to define my feelings regarding this decision and my reinforced opinion of your arrogance and lack of integrity, thoughtfulness or ethics. “Corrupt” is a word that immediately sprints to mind, along with… Disgusted? Appalled? Disbelieving? Saddened? Angered?

All of the above, and more. By moving to slash energy efficiency targets to the point of non-existence, eliminate rebates for the purchase and installation of solar-powered equipment and approve the building of additional power plants, to be financed in advance by the ratepayers of these companies with zero guarantee that we will ever see a return on our investment (Does Levy County sound familiar? One point five BILLION dollars shelled out by consumers and NOTHING to show for it!), you have displayed an arrogance in the face of common sense that staggers the imagination.

In earlier times I would be leading a charge to have your heads on a platter – it is unfortunate that in these times of special interest groups, lobbyists and the almighty dollar the majority of citizens feel powerless to make a difference. It seems that the best we can hope for is that you are eventually replaced by someone more responsible, ethical, and/or less obligated to those who placed them in their position, and that in your future you hold a position from which you can do less damage.

My heartfelt thanks to Commissioners Edgar and Brown for taking the stand that you did in voting against this most outrageous legislation, upholding the responsibilities of your position, defending the rights of the consumers in this state and attempting to protect and preserve the once bountiful natural resources of our beautiful state.

Dear Mr. Matthews:

This is in response to your E-mail to the Florida Public Service Commission regarding Duke Energy Florida (DEF).

We will add your comment to the correspondence side of Docket Nos. 130200-EI regarding DEF's numeric conservation goals .

If you have any questions or concerns please call Ellen Plendl at 1-800-342-3552 or by fax at 1-800-511-0809.

Sincerely,

Randy Roland

Subject: Reduction of solar tax credits

To my representatives on the Florida PSC,

Specifically, to the three Representatives who approved ending solar rebates…

I just learned of your decision to end solar power rebates and am appalled by the shortsightedness and lack of vision you display toward the economic future of Florida, Your decision smacks 'sunshine state' residents in the long term wallet and does nothing to address the need (or desire of forward thinking individuals) to develop solar resources over traditional greenhouse gas causing technologies. Your decision ignores the fast growing demographic of people who want to generate their own electricity and sell it back to utility companies, who then make a profit from the free power being generated for them. Giving utility companies this windfall helps them, but not the consumers of Florida. You are stifling solar power installation companies, innovation, and this decision will kill jobs in a high growth industry. Long term, this is a huge 'screw you' to the people of Florida and benefits a few utility shareholders at the expense of all the citizens of Florida.

Letter to the Florida Public Service Commission:

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Subject: Shame

Dear Commissioner Balbis;

I am writing you to express my disappointment in your decision to vote for the power utilities instead of protecting consumers. Your decision will certainly move the state of Florida in a backward direction instead of moving us forward. To be a leader means doing what's right, even though it may not be popular. I can only say that your decision hurt Floridians. Florida is the Sunshine State and should live up to its name by being a leader in Solar Energy.

Please re-evaluate your actions and find the right direction for our state by making decisions that are in the best interest of Florida and its citizens - not the utilities.

I know you can make a difference for all or us by doing what's right moving forward.

Sincerely,

Ken Gagliano

Subject: Congrats on your new job at Duke Energy

Eduardo,

It may be early, as there hasn't yet been an official announcement, but I wanted to be the first to congratulate you on your new job at Duke Energy. Given that your most recent decision goes against all common sense, and against the wishes of most (sane) Floridians, I can only assume an offer of a well-paid, yet cushy, position has been promised to you for your service to the company through your position at the PSC. Cash kickbacks are so gauche, and you seem a man of style and class, so I imagine those weren't necessary for your compliance .

Apologies, of course, if I've jumped to conclusions and you actually believe that the Sunshine State should burn more coal and risk nuclear disaster rather than encourage the growth of low-carbon solar power generation and energy conservation. If that is the case, then I've mistaken pure idiocy for corruption. My bad.

Regardless of the reasons behind your decision, please enjoy your future in a Florida guaranteed to be dirtier, warmer, and more expensive. Thanks to you.

Sincerely,
Domenick Yoney

Subject: Duke and Renewable Energy

Expires: Monday, May 25, 2015 12:00 AM

Dear Ms Brown,
Reading the Tampa Bay Times this morning, I am very grateful that you stood your ground against Duke and promoted the renewable energy. It is astonishing that Duke doesn't think for the future. Thank you very much.

We have 13.2 KW nominal solar capacity on our roof (55 panels) and we are almost completely independent. Our monthly power bill is $10.49 for 11 months (= the connection fee). In the month of January, Duke pays me a paltry $.04 per KW for the overage and since this is a "dark" month I do not produce sufficient reserve to get back to $10.49. Instead I am being charged $0.14 or $0.15 for power usage. The most honorable Duke could do is trade me KW for KW. But I could do this investment because of the tax credit and the $2.00 per KW subsidy from then Progress Energy.

I think furthermore that the time has come to stop the premium consumers have to pay for future investments that are never going to take place. Any reasonable company plans and pays for its own investments, but this being a public utility I understand they need help from time to time. But let the expenses be reimbursed as they occur, though there does not seem to be a need: Duke makes for plenty of happy shareholders.

Anyway, thank you again for your support and Happy Thanksgiving.

Best Regards,

Wim Dericks

Subject: Thank you...

Thank you for protecting us residents of the 'Mostly Shady' State of Florida from the dangerous alternatives to nuclear and fossil fuel power plants.

Your recent vote to end solar power rebates and significantly reduce energy efficiency goals will allow us to continue getting our energy fix from the unarguably safe nuclear fusion and million year old dinosaurs (or thousands of years if you believe the earth is only 6,000 years old) instead of the very dangerous and existential threat of the sun which causes sunburns, overdoses of Vitamin D, global warming, and risks to FPL's extremely profitable business model.

I am grateful on this thanksgiving weekend that the PSC has agreed with the lobbyists and large energy monopolies to give them everything they asked for in their sincere effort to protect us from the evils of renewable energy and conservation. I am also thankful that we are not moving in the direction of the lefty, hippie, liberal bastion of Georgia who now has almost 5 times more solar production than the great 'Not So Sunshiney' state of Florida.

In unity with your decision and the power companies, I will promptly turn on all my electrical appliances and crank the AC with the door open - because it is apparently in my best interest.

Regards,

Dave Doebler

Subject: Appalled and Outraged

Please explain to me how we can forgo our states need for alternative energy? Gutting that industry is ludicrous and I'm sure you're doing it without the majority of floridians knowing, but the few who do know are highly upset. We are the sunshine state, why not make it more meaningful by investing more into renewable energies like solar and wind?

Subject: your vote for solar

Hi Jullie, We reside in Safety Harbor, Fl. I want to thank you for standing up for those of us who believe in use of solar energy. The residents of our "Sunshine State" certainly deserve to make up our minds re: use of solar power. The PSC has not done a good job for us, other then you and Lisa Edgar, and the power companies have all of us in a bind to use their pro duct. Having said that, I am going to research use of solar for our home, even if it isn't cost efficient, and make a change. Having the tax credit through 2015 will help in my decision. You and Lisa, keep up the good work for us citizens and if either of you run for any public office in the future, you will have our support. Thank you for your service.

Respectfully, Gil Amspaugh

Subject: Letter to the Florida Public Service Commission:

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Liz Laquidara, PhD

Subject: Stop damaging solar industry to benefit Big Electric

Letter to the Florida Public Service Commission:

November 25, 2014, a month before Christmas

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power. I am a disabled Vietnam veteran and my wife is unable to work, and we are looking at a bleak fixed-income future, with a virtual guarantee that you will keep letting the power monopolies get away with the games they play with you to increase the rates we little ordinary people have to pay for the necessities of life, like electric power. I would love to be in a position to add solar power to my home, but without the leveling effects of the tiny supports that I might qualify for, I am roped to the insatiable greed of Duke and its lobby and clout. I see you have already let Duke mostly get away with abandoning its minimal obligation to set aside funds for green projects and conservation, and we silly little ratepayers know what the real reasons for that are.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program. If that is the most you are willing to do, when so much more is needed to fit Florida out to address the changes that are inevitable in the energy area if our nation and locale are going to survive and prosper. It is patently unfair and unwise to let the power monopolies continue to force coal and nuke and gas consumption on us, at high cost even not accounting for externalities.

If Germany, which gets less than half the solar radiation that Florida does, can be on the way to principal power from solar PV and other alternatives, when the US keeps fighting wars, at huge expense, to protect the carbon-burning interests, and when even right wingers and evangelical Christians with consciences and honesty are acknowledging that humans need to stop burning the planet, there is no reason, for God's sake, other than friendly complicity, to strangle conservation and conversion to renewables. Affordable, ever cheaper solar power is ready to help build a stronger, healthier, and more resilient Florida. It is time to stop incentivizing the people who selfishly and arrogantly control the energy markets behind a pretense of "free-market" fraud. Like the 'extended billing period" trick that Duke has just pulled, on me and others, and the huge amount of sheer profit that you have let them reap for breaking the Crystal River plant (they bought the liabilities, not just the profits and "good will") and for those nuke plants that will never be built.

Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market (after maybe giving the solar and wind and other sectors a little tiny bump that's a fraction of the benefits and subsidies and insurance breaks and other socialization-of-loss/privatization-of-profit schemes that power monopolies have taken and are still booking, over generations now, not to mention their virtual immunity to any pricing-in of the external costs they impose on the rest of us), and engage in a meaningful discussion with the

solar industry on how to provide a stable business environment during this period of rapid innovation and inevitable recasting in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. At the least..

Sincerely yours,

Jonathan T. McPhee

Why is it that FL Light & Power rates are so much better than those of Duke Energy? We own properties in Manattee and Pinellas Counties and it's amazing how much difference there is.

At one of my rental properties recently, my usage went up when there was no tenant in the property. When I called Duke, they indicated a new meter has been installed that was "much more efficient!" Is this their way of falsifying usage?

Also, please send me your justification for taking away tax credits for solar energy and moving away from energy conservation.

Thank you for protecting us residents of the 'Mostly Shady' State of Florida from the dangerous alternatives to nuclear and fossil fuel power plants.

Your recent vote to end solar power rebates and significantly reduce energy efficiency goals will allow us to continue getting our energy fix from the unarguably safe nuclear fusion and million year old dinosaurs (or thousands of years if you believe the earth is only 6,000 years old) instead of the very dangerous and existential threat of the sun which causes sunburns, overdoses of Vitamin D, global warming, and risks to FPL's extremely profitable business model.

I am grateful on this thanksgiving weekend that the PSC has agreed with the lobbyists and large energy monopolies to give them everything they asked for in their sincere effort to protect us from the evils of renewable energy and conservation. I am also thankful that we are not moving in the direction of the lefty, hippie, liberal bastion of Georgia who now has almost 5 times more solar production than the great 'Not So Sunshiney' state of Florida.

In unity with your decision and the power companies, I will promptly turn on all my electrical appliances and crank the AC with the door open - because it is apparently in my best interest.

Regards,

Dave Doebler

Subject: Appalled and Outraged

Please explain to me how we can forgo our states need for alternative energy? Gutting that industry is ludicrous and I'm sure you're doing it without the majority of floridians knowing, but the few who do know are highly upset. We are the sunshine state, why not make it more meaningful by investing more into renewable energies like solar and wind?

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Subject: Stop damaging solar industry to benefit Big Electric

Letter to the Florida Public Service Commission:

November 25, 2014, a month before Christmas

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power. I am a disabled Vietnam veteran and my wife is unable to work, and we are looking at a bleak fixed-income future, with a virtual guarantee that you will keep letting the power monopolies get away with the games they play with you to increase the rates we little ordinary people have to pay for the necessities of life, like electric power. I would love to be in a position to add solar power to my home, but without the leveling effects of the tiny supports that I might qualify for, I am roped to the insatiable greed of Duke and its lobby and clout. I see you have already let Duke mostly get away with abandoning its minimal obligation to set aside funds for green projects and conservation, and we silly little ratepayers know what the real reasons for that are.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program. If that is the most you are willing to do, when so much more is needed to fit Florida out to address the changes that are inevitable in the energy area if our nation and locale are going to survive and prosper. It is patently unfair and unwise to let the power monopolies continue to force coal and nuke and gas consumption on us, at high cost even not accounting for externalities.

If Germany, which gets less than half the solar radiation that Florida does, can be on the way to principal power from solar PV and other alternatives, when the US keeps fighting wars, at huge expense, to protect the carbon-burning interests, and when even right wingers and evangelical Christians with consciences and honesty are acknowledging that humans need to stop burning the planet, there is no reason, for God's sake, other than friendly complicity, to strangle conservation and conversion to renewables. Affordable, ever cheaper solar power is ready to help build a stronger, healthier, and more resilient Florida. It is time to stop incentivizing the people who selfishly and arrogantly control the energy markets behind a pretense of "free-market" fraud. Like the 'extended billing period" trick that Duke has just pulled, on me and others, and the huge amount of sheer profit that you have let them reap for breaking the Crystal River plant (they bought the liabilities, not just the profits and "good will") and for those nuke plants that will never be built.

Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market (after maybe giving the solar and wind and other sectors a little tiny bump that's a fraction of the benefits and subsidies and insurance breaks and other socialization-of-loss/privatization-of-profit schemes that power monopolies have taken and are still booking, over generations now, not to mention their virtual immunity to any pricing-in of the external costs they impose on the rest of us), and engage in a meaningful discussion with the

solar industry on how to provide a stable business environment during this period of rapid innovation and inevitable recasting in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. At the least..

Sincerely yours,

Jonathan T. McPhee

Subject: State Utility Energy Efficiency Goals

Based on the fact that new EPA rules state that Florida must reduce their carbon emissions by 38 % below 2005 levels by 2030, it makes absolutely no sense to gut the energy efficiency goals of our state utilities. Keep in mind that Miami is having serious flooding issues now and the problem gets worse every year. Tampa is not far behind.

Let's not wait until those cities and possibly others are under water before we take some serious action. It is critically important that the utility companies serving Florida do everything they can to protect our environment. Their adding new gas-fired electric generation plants is a VERY small step in the right direction. Conservation and higher energy efficiency standards will get us there much faster and much cheaper.

Do your job in protecting us and the future of Florida.

Subject: Energy Efficiency Standards

Dear PSC Members,

It is my understanding that you are poised to lower Florida's energy efficiency requirements and once again put the power companies ahead of the consumer.

In the future, your actions will not be judged by how much you supported power company investors, but whether you protected the people of Florida. And yes, that includes protecting us from the effects of climate change caused by our over-reliance on fossil fuels. Cost is not just measured in electric rates, but in the effects of pollution from coal and oil, the environmental effects of fracking and the disastrous effects on Florida's economy from oil spills in our once pristine waters.

Our home is powered in part by solar energy. Before we had solar installed we increased the energy efficiency of our home. Not everyone reads as much as we do, and they need education on how to make energy efficient improvements, as well as rebates to support these changes. This should still be required by the power companies. I resent that Duke Energy would rather spend my money on political candidates who support their fossil-fueled views, rather than on energy conservation programs proven to work. It is wrong and should not be allowed.

What we don't need is the PR whitewashing from your commission and the power companies that makes alternative energy and energy efficiency appear to be more expensive than building new power plants!! It's unbelievable that you are even a part of this. Please, open your minds to the future for the sake of our children and grandchildren. Do not let yourselves be bought and sold by the power companies and big oil and coal as Rick Scott has done. You are there to represent citizens, not investors.

Thank you.

Sincerely,
Joni Spencer

To: Consumer Contact
Subject: Renewable Portfolio Standard

Dear PSC leaders,

There is either a lack of renewable portfolio leadership on the part of the PSC, or you have a huge public relations problem.

Everything we read points to a lack of desire to move Florida forward in terms of renewable energy or a Renewable Portfolio Standard. What's your alternative?

We heard from a FL representative that he was shocked when he arrived in Tallahassee and learned the hard way that there were a lot of taboo subjects at the PSC because utility companies don't want the PSC to discuss them! The entire country heard about the Governor's propensity to replace commissioners that think the wrong way.

Meanwhile, Florida stands to suffer more than many states from climate change. Remember, we will suffer from the actual sea level rise, but we can also suffer from real estate investors and property insurers that decide that Florida is at risk and decide to invest elsewhere. So we should be leading the charge to pursue renewable energy standards. Even the Wall Street Journal and GOP operatives and think tanks now admit that human activity is causing problems. The WSJ even suggested that renewable energy can create jobs.

What we need is a plan to rewrite the rules between utilities and the public of Florida, for implementation over some set number of years. This should include clear renewable energy goals, which we could achieve with the utility companies or WITHOUT them.

Utilities will always pursue goals that conflict with the Florida public, and their increasing revenues will continue to make it impossible for elected officials to do their jobs with any level of integrity. Is there a timeline to break this cycle? Please realize that utility companies enjoy the same approval levels as tobacco companies; by siding with them, the PSC commissioners are tarred with the same brush.

Comments:
To my representatives on the Florida PSC,

Specifically, to the three Representatives who approved ending solar rebates…

I just learned of your decision to end solar power rebates and am appalled by the shortsightedness and lack of vision you display toward the economic future of Florida, Your decision smacks 'sunshine state' residents in the long term wallet and does nothing to address the need (or desire of forward thinking individuals) to develop solar resources over traditional greenhouse gas causing technologies. Your decision ignores the fast growing demographic of people who want to generate their own electricity and sell it back to utility companies, who then make a profit from the free power being generated for them. Giving utility companies this windfall helps them, but not the consumers of Florida. You are stifling solar power installation companies, innovation, and this

decision will kill jobs in a high growth industry. Long term, this is a huge 'screw you' to the people of Florida and benefits a few utility shareholders at the expense of all the citizens of Florida.

Disgusted in Ocala,
Dana Rasmussen

Subject: Support for the "Solar Pilot Program"

Chairman Graham and Commissioners of the Florida Public Service Commission,
I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Regards,

Alfonso Iglesias | Solar Energy Beneficiary

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Believe in the Solar Rebate Program

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer in Orlando, and I support solar energy in our state. I invested in our utilities future by participating in the past Solar Rebate program and had PV and hot water panel systems installed to not only lower my monthly grid usage, but utilize the green energy so abundant to us as Floridians; the sun. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program. Currently, there is a significant up-front cost to consumers and, without incentives, most are unwilling to take the risk which primarily benefits the utility companies. Solar rebate programs increase the reward for investing in our most abundant natural resource, lower utility company costs(fuel and distribution) and allow for community growth without the need for more power plants; which no one wants in their backyards. As a state, we need to promote solar programs to allow our existing power companies to serve future growth. The excess power my panels generate gets used by my neighbors which means the power distribution is more efficient since it does not need to travel through long power lines and transformers. During the peak of summer, solar panels generate more energy thereby reducing the power load created by our air conditioners.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector. Please be smart about our future and do everything possible to encourage all owners(business and home) to invest in solar and our future power needs.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. I'd be willing to discuss this issue further if you'd like more details about my experience with the past program, solar panel systems and why I chose to invest in our future.

Signed,

Chuck Hickey

Dear Chairman Graham and Commissioners Edgar, Brisé, Balbis, and Bowen:

Florida Refrigeration and Air Conditioning Contractors Association (Florida RACCA) is a statewide professional association representing approximately 325 contractor and associate members. On behalf of our members, we oppose the request of various utility companies and the PSC staff recommendations to eliminate rebates for air conditioning systems that are more energy efficient.

It is our position that rebates for air conditioning systems with greater efficiency meet the PSC rules requirement to be cost-effective by directly and proportionately (or greater) reducing the utility costs for the customer. We understand this reduces revenue for any utility company.

We disagree with the point made by utility companies and the PSC staff that improved building codes make rebates unnecessary as these improved codes apply only to new construction - which is only a fraction of the overall residential energy use. The existing building stock still constitutes the largest portion, for which energy efficiency is still very much needed. It is reasonable to estimate that it will take at least another ten years for Florida's residents and businesses to transition from existing inefficient air conditioning systems to new ones. Until then, it only makes sense to continue with this part of the rebate program.

In addition to simply improving energy efficiency for air conditioning systems, the rebate program also provides a very important impact for Florida in that it increases

permitted installations by licensed contractors because the rebate makes the perceived savings in hiring unlicensed contractors who will install substandard or illegal equipment without a permit much less attractive for the consumer.

Complete elimination of rebates benefits only the utility companies and hurts the consumer, the State of Florida, and businesses that participate in this worthwhile program. It hurts the consumer by virtually mandating higher utility expenditures by encouraging higher use of energy that results in what the utility companies really want – a reason to impose higher rates on consumers in order to build (or plan to build) additional power plants. It hurts the State of Florida by leaving it alone to try to meet upcoming federal goals while utility companies pull Florida in the wrong direction. It hurts participating businesses by requiring a sudden and costly shift in business structure to account for elimination of the rebates, which cost cannot be passed on to ratepayers as it can be by and for utility companies.

In the best interests of most involved, it would be prudent to modify, rather than eliminate, the rebates and to delay the deadline to end the program. We understand that falls short of what the utility companies want, but this should not be driven by what the utility companies want. This should be about what is best for the consumers and the State of Florida.

We respectfully request that the Public Service Commission deny complete elimination of the rebates in favor of a modification of the program to allow continued rebates for a minimum of ten years for air conditioning systems with greater efficiency.

Your favorable consideration in this matter is greatly appreciated. If you have any questions or would like additional information, please feel free to contact me.

Sincerely,

Cheryl Harris

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Chris Terrell

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Many other states have clearly proven the effectiveness of these programs. Given the rapid population growth in Florida and future demand, we need efficiency programs to meet that demand in a way that is cost effective and helps preserve the unique natural beauty that attracts so many people and businesses to Florida.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maura ODonnell

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

ENERGY GUARDIAN

King delivers blow to Senate Keystone passage

By Edward Felker

The outlook for passage of a bill to approve the Keystone XL oil sands pipeline from Canada dimmed in advance of a planned vote Tuesday, when a key undecided senator announced his opposition.

The decision to vote no on the bill by Sen. Angus King, an independent from Maine who caucuses with Democrats, left Sen. Mary Landrieu one vote short of the 60 she needs to pass her bill. She has the backing of all 45 Republicans and 13 other Democrats.

Landrieu, D-La., avoided comment when asked in the Capitol about King's decision.

Her top Democratic ally on the bill, Sen. Joe Manchin of West Virginia, acknowledged that they had run out of potential backers and had to hope that one senator would reverse course to vote for the $8 billion project.

"Maybe someone else will see it like I do and surprise us," Manchin told reporters.

King, who was previously leaning against the bill, said in a statement that while he

was "frustrated" by Obama administration delays in making a decision on the project, he was also opposed to Congress giving the green light to individual pipelines.

"Congress is not, nor should it be, in the business of legislating the approval or disapproval of a construction project," he said.

Sen. Harry Reid, D-Nev., the outgoing majority leader, told reporters that Landrieu brought up the vote in the Democrats' weekly closed-door luncheon on Tuesday. He declared himself uncertain about how the bill would fare and would not confirm that the bill would come up short.

"I don't expect it to fail -- I don't know what's going to happen," he told reporters in response to a question about whether the bill would be defeated.

Landrieu secured a vote on her bill last Tuesday in a bid to show her influence on Capitol Hill ahead of her Dec. 6 runoff election against Rep. Bill Cassidy, R-La.

Responding to questions about the impact of the vote on Landrieu's re-election prospects, Reid said only, "the race is not over in Louisiana. She has not given up and we have not given up."

The last publicly undeclared vote, Sen. Dick Durbin, D-Ill., Reid's top deputy, declined Tuesday to say definitively that he would oppose the bill.

But he told CNN on Sunday that he backs President Barack Obama's stance that Congress should not intervene in the ongoing State Department permit review.

The Keystone vote was capping a multi-hour debate on the Senate floor over the project, which would transport oil sands crude from Canada to Nebraska for shipment to refineries on the Texas Gulf Coast.

The debate was marked by partisan jabs and references to the race between Landrieu and Cassidy, who sponsored identical approval legislation that passed the House on Friday.

Under a deal between Landrieu and Republicans to bring the bill to a vote in the Senate, the final bill sent to Obama after Senate passage would be the House version, giving Cassidy a victory to tout in Louisiana.

Incoming majority leader Sen. Mitch McConnell, R-Ky., opened debate by referring to the bill as "Congressman Cassidy's Keystone bill," and said that if it fails on Tuesday, he will bring it back up when the GOP takes over the Senate in January.

Berkeley to vote on climate change labels at gas pumps

By The Associated Press

BERKELEY, Calif. (AP) — The San Francisco Bay Area city of Berkeley will decide whether to slap stickers on gas pumps warning that burning fuel contributes to global warming in a plan that's a first of its kind in the country.

The Berkeley City Council is expected to vote Tuesday night on whether to move forward with the proposal to put climate-change warning labels on gas pumps

citywide. San Francisco is drafting a similar ordinance that officials could vote on by next spring.

A spokeswoman for the Western States Petroleum Association, an oil-industry lobbying group, has said the labels reflect the state's and Berkeley's opinions and would force "unwanted speech in violation of the First Amendment."

The labels are part of a voter-approved city plan to reduce emissions by 33 percent between 2000 and 2020.

Heating costs heading up as cold grips nation

By Jonathan Fahey

NEW YORK (AP) — The cold is back, and with it, rising heating bills.

This winter was expected to bring much lower bills than last year because it wasn't supposed to be so darn cold. Homeowners could go a little easier on the thermostat, and less fuel use would offset rising prices for natural gas and electricity, which generates heat for 88 percent of U.S. households.

Then, descending from the Arctic, came a block of cold air nearly the size of the entire Lower 48. This month is now on track to be the coldest November since 1996.

"It came in hard and strong, pretty impressive stuff," says Matt Rogers, a meteorologist at the Commodity Weather Group, which forecasts weather and heating demand for energy companies. He notes that a cold November doesn't necessarily lead to a colder winter. But it depletes fuel supplies and pushes prices up.

And it just so happens most forecasters think January and February will also be colder than normal across most of the U.S.

Toxic plume spreading at defense plant in NY, tests show

By Frank Eltman

BETHPAGE, N.Y. (AP) — A decades-long toxic cleanup around the former aerospace plant that helped land a man on the moon is getting renewed scrutiny after groundwater tests showed a potential carcinogen spreading deeper and toward nearby Long Island communities.

Officials revealed this month that the 4.5 mile by 3.5 mile plume of underground contamination in Bethpage is moving deeper than ever. High concentrations of the industrial solvent trichloroethylene, or TCE, were found more than 60 stories below ground.

Readings show the plume is moving further south toward untainted public wells, officials said.

"Unless they figure a way to reach it, locate it and extract it, you're looking at a much longer range of a high contamination area that they will have to contend with," warned Sarah Meyland, associate professor of environmental technology at New York Institute of Technology.

The contamination is emanating from a 600-acre property that was once home to Grumman Aerospace Corp., the U.S. Navy and other associated defense industries. Grumman built an armada of aircraft used during the Cold War, as well as the lunar module that landed astronauts on the moon.

NTSB: Gov't aircraft regulations apply to drones

By Joan Lowy

WASHINGTON (AP) — The government has the power to hold drone operators accountable when they operate the remote-control aircraft recklessly, a federal safety board ruled Tuesday in a setback to small drone operators chafing under Federal Aviation Administration restrictions.

The National Transportation safety Board, which hears appeals of Federal Aviation Administration enforcement actions, ruled that small drones are a type of aircraft and fall under existing FAA rules.

The FAA had fined Raphael Pirker, an aerial photographer, $10,000 for operating his Ritewing Zephyr in a reckless manner on the University of Virginia campus in 2011. Pirker allegedly flew the drone, which weighed less than 5 pounds, at "extremely low" altitudes, including under a pedestrian bridge and directly at a person, causing the individual to duck out of the way. He had been hired to make photos and videos of the campus.

Pirker appealed the fine, saying his aircraft was effectively no different than a model aircraft and therefore not subject to regulations that apply to manned aircraft. An NTSB administrative law judge sided with him in March, saying the FAA hasn't issued any regulations specifically for drones and therefore can't determine their use.

The FAA appealed the decision to the four-member safety board, which said Tuesday that the definition of an aircraft is very broad.

NRC chair: Work needed to finish Fukushima changes

By Ray Henry

ATLANTA (AP) — The outgoing chair of the U.S. Nuclear Regulatory Commission said Tuesday the industry must finish making the safety changes required after a nuclear disaster in Japan, and it faces unresolved questions over how to store nuclear waste as existing plants close.

Allison Macfarlane became the agency's leader in July 2012 after the stormy tenure of former chair Gregory Jaczko, whose management style was described as bullying by fellow commissioners and staffers. A geologist, Macfarlane will start teaching Jan. 1 at George Washington University.

Macfarlane said the agency must follow through on changes required after the March 2011 crisis at the Fukushima Dai-ichi nuclear plant in Japan. Tsunami waves disabled the plant's electrical and cooling systems, causing a meltdown and explosions that flung debris and radiation into the environment.

"We as regulators need to do what we think is right," Macfarlane said in an interview during a nuclear industry conference in Atlanta. "And if we think something is required, and this is something we've learned as a result of the Fukushima accident, we need to tell the industry to do it."

Among the changes, the nuclear industry has set up centers in Memphis and Phoenix that can quickly send emergency gear to a stricken plant. Some plants will install vents meant to prevent explosions during extreme accidents. Regulators are reviewing updated earthquake and flooding hazard assessments for plants across the country.

Stevie Wonder headlining fundraiser for Landrieu

By The Associated Press

BATON ROUGE, La. (AP) — Stevie Wonder is lending a hand to endangered Democratic U.S. Sen. Mary Landrieu.

The legendary musician is performing at a $1,000-per-person fundraiser Dec. 1 in New Orleans to drum up campaign cash for the Big Easy Committee, a joint

committee that supports Landrieu and the Democratic State Central Committee of Louisiana.

The event is being advertised as an "Intimate Evening with Stevie Wonder." For $5,000, a couple also can attend a smaller "patron reception" with the musician.

Landrieu, who is seeking a fourth term, faces an uphill fight to re-election in the Dec. 6 runoff against Republican challenger U.S. Rep. Bill Cassidy.

The fundraiser with Wonder could give Landrieu's campaign a jolt of cash in the final days, as she struggles to combat attack ads from outside groups supporting Cassidy.

Google buys up Dutch wind energy for data center

By The Associated Press

AMSTERDAM (AP) — Google says it will buy the entire output of an 18-turbine, 62-megawatt Dutch wind energy project in the Netherlands to supply power to a major data center it is building.

Company officials said Tuesday that Google wants both price certainty and to ensure that the 600 million euro ($750 million) data center in Eemshaven, Netherlands — due to be completed in 2017 — will be supplied by renewable energy from the start.

The wind project is also still under construction at nearby Delfzijl, with turbines both onshore and off the coast in the North Sea.

Google did not disclose terms but said it has signed a 10-year contract. The U.S. internet giant has inked similar deals in Finland and Sweden in the past two years.

Shell Nigeria denies it lied to Dutch court

By Chika Oduah

LONDON (AP) — Shell Nigeria denies it lied to a Dutch court in The Hague about oil pollution in the Niger Delta.

The multinational company, half owned by Nigeria's government and with significant Dutch shareholding, says sabotage, not negligence, caused spills in 2004 along the Trans-Niger Pipeline that destroyed several hectares of mangrove forests and the livelihoods of residents of Goi village.

"We dismiss any suggestion that SPDC has knowingly continued to use a pipeline that is not safe to operate," a spokesperson for the Shell Petroleum Development Company of Nigeria Ltd told The Associated Press on Tuesday. Shell is preparing for the appeal hearing.

In a press statement released Monday, Friends of the Earth Netherlands alleged that

documents revealed this year in a British court show that Shell continued to pump oil through a corroded pipeline despite being warned in 2002 that it had exceeded its lifespan and needed to be replaced.

Brazil ex-billionaire on trial for insider trading

By Jenny Barchfield

RIO DE JANEIRO (AP) — Eike Batista, the flamboyant Brazilian tycoon once named No. 7 on Forbes' list of the world's richest people, went on trial Tuesday in an insider trading case that could make him the first person in the country to go to prison on such charges.

The 58-year-old former billionaire who once reveled in the limelight made a now-rare public appearance with his arrival Tuesday at a federal criminal court in Rio de Janeiro.

It's the latest chapter in a vertiginous fall that saw Batista's estimated $30 billion fortune evaporate over the past two years as his oil, mining, logistics and shipbuilding empire crumbled. Batista often used to say he hoped to dethrone Mexico's Carlos Slim to become the world's richest person, but now says he's $1 billion in debt.

Batista faces market manipulation charges in the sales of shares in two of his companies, including the OGX oil exploration and production unit that filed for bankruptcy protection last year. If convicted, Batista faces fines and up to 13 years in prison, but experts say he could get a lighter sentence as a first-time defendant.

To: Office of Commissioner Brisé
Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

ENERGY GUARDIAN

King to vote no on Keystone XL

By Edward Felker

Sen. Angus King, an Independent from Maine who caucuses with Democrats, announced that he will vote against the Keystone XL pipeline approval bill up for a vote in the Senate on Tuesday.

King had said Monday he was leaning against the bill, sponsored by Sen. Mary Landrieu, D-La. Without his support, the bill is likely to fall one vote short of the 60 needed to pass.

"Congress is not, nor should it be, in the business of legislating the approval or disapproval of a construction project," King said in a statement.

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Fred Rilling

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

It is no longer possible to pretend that renewable energy is not viable. The technology exists right now to produce a major portion of our electricity from renewables. I know people in Utah that have generated near 40% of their annual electricity with solar panels. This is in a place where it snows and the panels are covered. Solar panels on my house would save me at least 40% on my electricity bill.

A distributed energy grid that maximizes rooftop solar is the future for Florida. The benefits of renewable energy for consumers and society as a whole are clear. The coming change in energy generation can be likened in scale to the change our society accommodated in the transition from horse-drawn carriages to automobiles. It will be a fundamental change that improves our lives.

Setting high standards for energy efficiency will help consumers, get us a more resilient energy grid, and improve our environment and our economy.

If you do not enact meaningful energy efficient goals, it will be obvious you are working to support the power companies ever-increasing profits to the detriment of consumers.

The people you represent want new, clean sources of energy, not from fossil fuels.

I hope you keep that in mind on November 25th.

Sincerely,

Kathy Freeman

Subject: Florida solar is a sleeping giant

Dear Chairman Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maria Fernandez

Subject: solar rebates

Letter to the Florida Public Service Commission:

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,
Jeanne Galligan

Dean Commissioner Brise,

There has been a lot of back and forth with regards to solar pilot programs that have expired. It seems that TECO, Duke and FPL all feel that energy efficiency costs per kWh saved are greater than what they can generate and sell a new kWh now. Let me state that most of the discussions center around Solar PV or the electric panels while you hear little if any on solar water heating systems.

It could be argued as it is, by the utility companies, that they are in fact, in business to generate electricity and make a return for their share holders. Ulike most companies, their rate of return or profit is limited to around 12 or 13% or as dictated by the PUC. So, on the one hand, you have to ask yourself, why does it make sense to ask utility companies to pay for programs that actually reduce their profit? In a real sense, it is like asking General Motors to pay for me to install energy efficiency improvements on my Chevy Truck to improve its fuel economy rating so I don't need to buy a new vehicle. The concept is ridiculous.
On the other hand, by virtue of being a monopoly and the unique guidelines that govern their operations, utiltiy companies can actually be allowed to charge existing rate payers for the cost of building new power plants and generating capacity long before that new production is realized. This makes the case for looking at other strategies that have a lower impact on rates, the environment, and jobs creation. Of course, most people have no idea that some of their bill is covering these expenses so it is rarely questioned.

In my case, my company makes solar water heating equipment. This is a proven technology that offers significant benefits to the utility companies:

1. Storage. Unlike PV, Solar water heating has built in energy storage.
2. Not connected to the grid. This whole argument about the wealthy owners of solar systems being paid for on the backs of poor rate payers, simply does not apply to solar thermal since solar thermal water heating does not use the Utiltiy power lines, transformers or switch gear.
3. Back up element can be radio controlled. Due to the combination of storage and an electric back up element, utilities can remote control the backup element to turn it off when they experience periods of peak demand like on cold mornings in the winter. Solar thermal water heating can actually help the utility more effectively load level their output by allowing the backup elements to come on at say 4:00AM but cut them off at the peak times of around 5:30 to 6:00AM so that they do not have to run expensive peaking units. PV does not offer this benefit since it has no built in storage.
4. The cost per watt offset is greater than with a PV system. A 4x10 solar water heating panel, the most common size installed in Florida, has an approximate equivalent output of about 2100 watts. Most modern PV modules are in the 230 watt range.

Maybe a better strategy for Florida, would be to do what Hawaii has done and just require a solar water heating system on all new homes. This helps to kick the volume higher, lowers cost due to economies of scale, puts the cost of the system into the 30 year mortgage and since Florida does most residential water heating with electricity, will have a huge impact for the utility companies to mitigate new plant construction. This can be done without a utility rebate program. In addition, it has been estimated that 80% or more of Floridians, feel that the state needs to do more with Solar but feel it is too costly and no one wants to pay more on their utility bill to subsidize it.

Just so you know, while Florida lags behind California, New Jersey and now possibly New York in Solar PV, it ranks in the top 3 for solar water heating and has since the late 70's.

Finally, make no mistake, natural gas prices are not going to remain at the historically low figures that they are now forever and Florida is especially vulnerable to spikes and shortages. Look at the attached Boston Globe article that predicts electric rates will rise 37% this year for the North east. This is because the main gas line is not large enough to provide the volume of gas during peak demand events. Florida could have the same problem. Not long ago, FPL used to generate 50% of it's electricity from coal. Now, 70% from Natural gas. Duke just closed down the Crystal River Nuclear Station and will replace it with a gas unit. Consider that this gas comes from a hurricane prone area; the gulf coast. The issue of cost per kWh may be a secondary issue to being able to get power at all if we are hit with the storms we had back in 2003. Use of a technology like solar water heating that can actually store energy, can pull demand off the grid and allow more electricity to be used for more productive activities like running refrigerators for food and meds and oxygen machines for seniors.

Ask yourself, how will you respond in the town hall meetings when the utilities need to raise rates because gas went up and what did you do to mitigate tha

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

I understand that on November 25th you will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts.

This is to ask ask that you set conservation goals that increase efficiency opportunities, rather than dramatically decreasing the scope of what are already extremely modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those with lower incomes who lack the resources to reduce their energy use and save money on their bills.

Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's Pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida. PLEASE DO THE RIGHT THING FOR THE PEOPLE, NOT THE POWER COMPANIES!

Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Judy Munro

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Sir:
In my opinion, you are doing consumers a great disservice eliminating solar rebates. It is actually embarrassing when I tell people about the lack of support for solar energy in the "Sunshine State. Northern states are beyond us.

You need to say NO to the big utilities who are lobbying in their interests and not ours.

Sincerely,
Pat Ernst Dugan

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Kurt Johnsen

The incredibly expensive problems with the Crystal River power plant are the some of the best reasons why we need to diversify our energy supply with more solar. Please work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Angela Charles

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Energy efficiency is one of the few low cost options for dealing with global warming and climate change. It is critical that we reduce consumption now. Please act on behalf of the energy customers who are doing their part to reduce energy consumption. I am asking you to not approve the power companies' request to gut energy efficiency efforts.

Sincerely,

Paul Davis

By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

I was a recipient to this program and was able to install a 5kw system on my home. It has dramatically reduced my energy consumption which is critical in a state which such a low elevation, reduced greenhouse gases will only help us as climate changes and not for the betterment of Florida. I urge you to resist legislation put forth by ALEC in order to protect the corpatocracy.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Scott Bellefleur

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Rafiek Mohammed

Lauderhill, FL

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Linda Honey

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Andrew Smyth

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Michael Huss

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Carl Sorenson

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

William Merenda

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Franklin B Huff Sr

By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Adam Richardson

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Ronnie Bolling

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Lynne Jasinski

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

Laws need to be changed, as current legislation prevents home owners from taking advantage of solar power during an emergency, only grid tied inverters are allowed. This means that when the power goes out no solar power can be harvested. This is inconsistent legislation, since back up generators are allowed and solar is not. Solar inverters can be wired in a similar manner as a back up generator to prevent electrical feedback into the line protecting power company workers.

I believe that legislation preventing stand alone off grid and hybrid inverters is the largest reason solar system have not been invested in. This control of power exercised by Florida Power and Light through government legislation is unconstitutional and disastrous to our economy. This type of control has been exercised historically in oppressive regimes of the past. Let us learn from past history.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Energy efficiency is one of the few low cost options for dealing with global warming and climate change. It is critical that we reduce consumption now. Please act on behalf of the energy customers who are doing their part to reduce energy consumption. I am asking you to not approve the power companies' request to gut energy efficiency efforts.

Sincerely,

Paul Davis

Subject: Solar energy support needed

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida taxpayer as well as a ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can afford to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to help consumers like me to be able to afford personal solar power. It is up to you to engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for listening to my comments and for your service on this commission.

Signed,

Susan Kasica

Just when the evidence is piling up that solar energy is a positive plus to reduce carbon emissions and dependency on oil products alone, the State of Florida, its governor and legislators and the Public Service Commission want to undo the progress. Don't pull the rug out from under solar energy. It should be made available to any and all people who want it, and it should be installed on ALL GOVERNMENT BUILDINGS. Don't be dumbed-down by greedy oil barons. We need to leave our children, our grandchildren and their grandchildren a cleaner planet than our parents left us.

I was a recipient to this program and was able to install a 5kw system on my home. It has dramatically reduced my energy consumption which is critical in a state which such a low elevation, reduced greenhouse gases will only help us as climate changes and not for the betterment of Florida. I urge you to resist legislation put forth by ALEC in order to protect the corpratocracy.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.
We must become independent of fossil fuels for energy to slow climate change.Also having solar helps during power outages such as those experienced after 2004 hurricanes.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Florida Energy Efficiency and Conservation Act (FEECA).

Importance: High

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support and provide solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Signed,

Donald W. Leddin

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Energy efficiency is one of the few low cost options for dealing with global warming and climate change. It is critical that we reduce consumption now. Please act on behalf of the energy customers who are doing their part to reduce energy consumption. I am asking you to not approve the power companies' request to gut energy efficiency efforts.

Sincerely,

Paul Davis

Dear Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, a registered professional engineer in the solar energy industry, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Remember, Florida has the very prestigious Florida Solar Energy Center which is leading research and development efforts to bring the vision of Energy Independence to fruition. You must set an example for the rest of the nation. Let’s not make this political.

Please respond and let me know your thoughts.

Thank you.

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida taxpayer as well as a ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can afford to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to help consumers like me to be able to afford personal solar power. It is up to you to engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for listening to my comments and for your service on this commission.

Signed,

Susan Kasica

Chairman Graham and Members of the Commission,

Attached, please find an additional 125 letters from Florida ratepayers supporting the redesign and extension of the Solar Pilot Program.

A smart solar rebate program can deliver strong value to every ratepayer while meeting consumer demand for renewable energy and providing stability to a growing solar industry. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Richard Gilland

By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Mike Dove

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Jerry Tyner

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Bonnie Ferraro

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

William Denne

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Wendy Weiss

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Mark garcia

By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

William Mencarelli

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Ruth Lambert

Dear Chairman Graham:

I am a Florida ratepayer, and I strongly support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program .

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

Laws need to be changed, as current legislation prevents home owners from taking advantage of solar power during an emergency, only grid tied inverters are allowed. This means that when the power goes out no solar power can be harvested. This is inconsistent legislation, since back up generators are allowed and solar is not. Solar inverters can be wired in a similar manner as a back up generator to prevent electrical feedback into the line protecting power company workers.

I believe that legislation preventing stand alone off grid and hybrid inverters is the largest reason solar system have not been invested in. This control of power exercised by Florida Power and Light through government legislation is unconstitutional and disastrous to our economy. This type of control has been exercised historically in oppressive regimes of the past. Let us learn from past history.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. RE: Stand with Florida Families by Voting for Impactful Energy Efficiency Goals

Dear Chairman Graham:

I respectfully urge you to side with Florida consumers and keep Florida's energy efficiency goals intact. The Florida Public Service Commission (FPSC) is one of the most important regulatory bodies in the entire state, affecting the daily lives of 19.5 million people and ensuring quality and affordable electricity. On July 24, I wrote to you and your fellow commissioners regarding the benefits of energy conservation, energy efficiency and renewable energy. I thank you for making my letter a part of the record in the "numeric conservation goals" proceedings. However, upon learning that FPSC staff recommended certain utilities' proposal to eviscerate their currently weak energy conservation goals by 90 percent for the next 10 years, I felt I had to again urge you and the Commission to side with hardworking Florida families and vote for meaningful energy efficiency goals.

Florida needs to adopt the greatest possible energy conservation, energy efficiency and renewable energy goals. Doing so would unleash a wave of innovation, investment and jobs. In addition, it would set Florida on a path to meet the Environmental Protection Agency's proposed Clean Power Plan, which seeks to reduce carbon pollution from existing power plants. Carbon pollution not only causes climate change and its devastating impacts such as sea-level rise, but it causes health problems, as well.

Florida ranks 28th in the country in the American Council for Energy-Efficient Economy's (ACEEE) 2014 state scorecard. Even though Florida has the potential to be the 3rd leading solar power producer in the country, it ranks 18th. Adopting greater use of energy conservation and renewable energy helps consumers save money on their electric bill, which gives them more resources to invest in other goods and services and creates American jobs. Energy efficiency boosts job creation in construction, weatherization, retrofits, manufacturing and installation of energy-efficiency equipment. According to the ACEEE, a more aggressive commitment to energy efficiency would yield significant economic benefits. ACEEE estimates that by 2050, significant investments in energy efficiency at the state and federal level could

PRINTED ON RECYCLED PAPER

benefit all parts of the economy, including the residential, commercial, industrial and transportation sectors. These efficiency investments would result in a net gain of almost 2 million jobs and save consumers an average of $400 billion per year (or about $2,600 per household).

The PSC's and utilities' elimination of energy conservation goals is extremely shortsighted, especially because it increases our dependence on natural gas. Florida relies on natural gas for over 62 percent of electricity generation. The average Florida household spends $1,900 every year on electricity, 40 percent more than the U.S. average. As a peninsular state, Florida always faces the threat of hurricanes and natural disasters disrupting our natural gas delivery infrastructure. In this day and age of technological interdependence, we cannot afford to risk the loss of energy supplies as it leads to economic loss and could lead to the loss of life.

I urge you and your fellow commissioners to reject the utilities' request to eviscerate their already mild energy conservation standards by 90 percent. On November 25, you can help create jobs, reduce consumers' electricity bills, decrease pollution and diversify Florida's fuel mix by voting against the proposal. Instead, take a forward-looking step for Florida and examine an expansion of energy conservation to benefit consumers and the great state of Florida.

If you have any questions or comments, please do not hesitate to contact me or my Legislative Assistant, Javier Gamboa at (202) 225-3376.

Sincerely,

Kathy Castor

RE: Congratulation on Election to Lead NARUC

Dear Commissioner Edgar:

Congratulations on your election as President of the National Association of Regulatory Utility Commissioners (NARUC), the 126-year old national association representing regulators of critical utility services such as electricity, gas, water and telecommunications. As a longtime member and former Chairman of the Florida Public Service Commissioner and as former Deputy Secretary of the Florida Department of Environmental Protection, I know that you will provide thoughtful leadership on the very complex issues facing state utility commissions across the country.

As the primary voice of NARUC before Congress, I look forward to working with you to make our country's energy sources cleaner, safer, reliable and affordable. We can do this by encouraging greater use of energy conservation, energy efficiency and renewable energy. Adopting these types of measures helps consumers save money on their electric bill, which gives them more resources to invest in other goods and services and creates American jobs. Energy efficiency boosts job creation in construction, weatherization, retrofits, manufacturing and installation of energy-efficiency equipment. Like you, I have an opportunity to compare state energy policies. Florida is lagging when it should be a leader. You have the ability and influence to begin to examine Florida's business model that is so out of date with the challenges of the modern era.

According to the American Council for an Energy-Efficient Economy (ACEEE), a more aggressive commitment to energy efficiency would yield significant economic benefits. ACEEE estimates that by 2050, significant investments in energy efficiency at the state and federal level could benefit all parts of the economy, including residential, commercial, industrial and transportation sectors. These efficiency investments would result in a net gain of almost 2 million jobs and save consumers an average of $400 billion per year (or about $2,600 per household).

PRINTED ON RECYCLED PAPER

You have significant influence on energy policy not only at the national level, but at the state level. As you know, the Florida Public Service Commission will vote on November 25 to approve Florida utilities' anemic energy conservation goals for the next 10 years. The big utilities are proposing to eviscerate their already weak energy conservation standards by 90 percent. The average Florida household spends $1,900 every year on electricity, 40 percent more than the U.S. average. Florida ranks 28th in the country in ACEEE's 2014 state scorecard. Even though Florida has the potential to be the 3rd leading solar power producer in the country, it ranks 18th in the country. On November 25, you can help create jobs, reduce consumers' electricity bills, decrease pollution and diversify Florida's fuel mix by voting against the proposed energy conservation goals and urging your fellow commissioners to adopt the greatest use of energy conservation possible.

If you have any questions or comments, please do not hesitate to contact me or my Legislative Assistant, Javier Gamboa at (202) 225-3376.

Sincerely,

Kathy Castor

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Members of the Commission,

A smart solar rebate program can deliver strong value to every ratepayer while meeting consumer demand for renewable energy and providing stability to a growing solar industry. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide value to every ratepayer and a stable business environment during this period of rapid innovation in our energy sector.

You have received many letters in support of a sensible approach to redesigning and extending the Solar Pilot Program, and attached please find an additional150 letters of from the solar industry and individual supporters of solar and ratepayers in Florida.

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Kayla Peacock

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Ann Grewe

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Lisa Bailey

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Pietro Taballione

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Ken Blonder

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Jeremiah Rohr

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Katy Swanson

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Randal Cochrane

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Chris Aloise

By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Leonardo Prieto, Jr.

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Dominick Porretto Jr

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Dave Kandz

Subject: The Importance of Solar In Florida

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am one of the principals at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.

I pray for the PSC to help support our industry and the residents in Florida who have shown to be in favor of further solar deployment in our Sate in order to create a better environment and to significantly contribute to the overall U.S goals of energy independence.

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Subject: Do NOT weaken energy efficiency standards or eliminate solar rebates

Dear PSC Commissioners:
I am longtime resident of Pinellas County,Fl and a Duke Energy customer. I do not want you to support weakening of energy efficiency standards or to eliminate solar rebates. Although a faithful voter without party affiliation, I am not able to elect you to your post. Yet I am your customer and you hear precious little from your customers. But you get to hear a lot from those corporate entities you regulate in the power business - and that access is shame! So I am taking the initiative to let you know my views and wishes for your action tomorrow in this email - and I am willing to bet my views echo the majority of your other customers. I hope you will take this opportunity to at least prevent further degradation of power customers bank accounts and the future generation's climate and environment. Tomorrow the very least you can do is take no action to further weaken power company's energy efficiency standards and do not end solar rebates in Florida. Resist the power company's request to further plunder my natural resources and charge me for it and to eliminate their competition so they remain technologically complacent.

Sincerely,
Merrie Beth Neely

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Members of the Commission,

A smart solar rebate program can deliver strong value to every ratepayer while meeting consumer demand for renewable energy and providing stability to a growing solar industry. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide value to every ratepayer and a stable business environment during this period of rapid innovation in our energy sector.

You have received many letters in support of a sensible approach to redesigning and extending the Solar Pilot Program, and attached please find an additional150 letters of from the solar industry and individual supporters of solar and ratepayers in Florida.

Thank you,

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

James Marchese

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Kenneth B Reuel

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Karen Hepworth

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Bill Gallagher

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Lawrence Maxwell AIA

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Joe Collins

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Enrique Baza

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

andy maguire

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Deborah K. Thompson

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Dean Villalva

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Gary

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

James Leary

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Cheryl Adams

Re: Docket #s 130199,130200, 130201, 130202, 130203, 130204, 130205

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Sincerely,

Chairman Art Graham

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: The Importance of Solar In Florida

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am one of the principals at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.

I pray for the PSC to help support our industry and the residents in Florida who have shown to be in favor of further solar deployment in our Sate in order to create a better environment and to significantly contribute to the overall U.S goals of energy independence.

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

RE: Docket #s 130199-EI, 130200-EI, 130201-EI, 130202-EI, 130203-EI, 130204 EI, and 130205-EI

Dear Chairman Graham:

Attached, please find copies of a petition signed by more than 1000 Floridians who support the Florida NAACP's intervention into the Florida Demand Side Management docket. After learning about the issue, several family members, friends and I decided to gather signatures from across the state to demonstrate support for their efforts.

We are very thankful that our voices were represented on this very important issue and because of the FL NAACP, we actually had a seat at the table.

We hope the Florida Public Service Commission will consider the FL NAACP's concerns regarding the negative impact of renewable energy policies on our communities as you move forward because they SPEAK FOR US---low and fixed income consumers.

I can be reached at the number provided below if you have any questions.

Sincerely,

Claudia Campbell

PETITION
Urging Support of Fair, Affordable, and Equitable Renewable Energy Policies for ALL Floridians

The Florida State Conference of the NAACP supports clean energy and all of the benefits it promises, especially to low-income, working class and minority communities. We encourage the development of more clean energy programs and initiatives in which **ALL** communities can participate.

Currently, the Florida Public Service Commission (FPSC) is considering rules that would increase energy efficiency in the state and increase the development of renewable energy sources such as solar, as required by the Florida Energy Efficiency and Conservation Act (FEECA). On **Tuesday, November 25**, the Commission is expected to vote on whether to continue, revise or eliminate many of these energy efficiency programs.

This year, the NAACP Florida State Conference intervened and filed a brief at the FPSC urging that the companies' existing Solar Pilot Programs, which subsidize wealthy homeowners' rooftop solar installations, not be extended because of the Pilot Programs' negative impact on low-income, working class and minority communities. By discontinuing the Pilot Programs unless their regressive impact is corrected, the Commission can ensure that renewable energy programs are not being subsidized on the backs of non-affluent, financially struggling, non-participating ratepayers.

The undersigned encourage the Commission to design renewable energy efficiency programs, including solar, in which everyone can benefit. The undersigned further request that the Florida Public Service Commission, the Office of Public Counsel, and the regulated companies develop more energy assistance programs like the federally funded Low Income Home Energy Assistance Program (LIHEAP) and Florida's Emergency Home Energy Assistance for the Elderly Program.

We ask that from this point forward, the Florida Public Service Commission adopt renewable energy policies that make participation in energy efficiency programs affordable for ALL Floridians.

PETITION
Urging Support of Fair, Affordable, and Equitable Renewable Energy Policies for ALL Floridians

The Florida State Conference of the NAACP supports clean energy and all of the benefits it promises, especially to low-income, working class and minority communities. We encourage the development of more clean energy programs and initiatives in which **ALL** communities can participate.

Currently, the Florida Public Service Commission (FPSC) is considering rules that would increase energy efficiency in the state and increase the development of renewable energy sources such as solar, as required by the Florida Energy Efficiency and Conservation Act (FEECA). On **Tuesday, November 25**, the Commission is expected to vote on whether to continue, revise or eliminate many of these energy efficiency programs.

This year, the NAACP Florida State Conference intervened and filed a brief at the FPSC urging that the companies' existing Solar Pilot Programs, which subsidize wealthy homeowners' rooftop solar installations, not be extended because of the Pilot Programs' negative impact on low-income, working class and minority communities. By discontinuing the Pilot Programs unless their regressive impact is corrected, the Commission can ensure that renewable energy programs are not being subsidized on the backs of non-affluent, financially struggling, non-participating ratepayers.

The undersigned encourage the Commission to design renewable energy efficiency programs, including solar, in which everyone can benefit. The undersigned further request that the Florida Public Service Commission, the Office of Public Counsel, and the regulated companies develop more energy assistance programs like the federally funded Low Income Home Energy Assistance Program (LIHEAP) and Florida's Emergency Home Energy Assistance for the Elderly Program.

***We ask that from this point forward, the Florida Public Service Commission adopt renewable energy policies that* make participation in energy efficiency programs affordable for ALL Floridians.**

PETITION
Urging Support of Fair, Affordable, and Equitable Renewable Energy Policies for ALL Floridians

The Florida State Conference of the NAACP supports clean energy and all of the benefits it promises, especially to low-income, working class and minority communities. We encourage the development of more clean energy programs and initiatives in which **ALL** communities can participate.

Currently, the Florida Public Service Commission (FPSC) is considering rules that would increase energy efficiency in the state and increase the development of renewable energy sources such as solar, as required by the Florida Energy Efficiency and Conservation Act (FEECA). On **Tuesday, November 25,** the Commission is expected to vote on whether to continue, revise or eliminate many of these energy efficiency programs.

This year, the NAACP Florida State Conference intervened and filed a brief at the FPSC urging that the companies' existing Solar Pilot Programs, which subsidize wealthy homeowners' rooftop solar installations, not be extended because of the Pilot Programs' negative impact on low-income, working class and minority communities. By discontinuing the Pilot Programs unless their regressive impact is corrected, the Commission can ensure that renewable energy programs are not being subsidized on the backs of non-affluent, financially struggling, non-participating ratepayers.

The undersigned encourage the Commission to design renewable energy efficiency programs, including solar, in which everyone can benefit. The undersigned further request that the Florida Public Service Commission, the Office of Public Counsel, and the regulated companies develop more energy assistance programs like the federally funded Low Income Home Energy Assistance Program (LIHEAP) and Florida's Emergency Home Energy Assistance for the Elderly Program.

We ask that from this point forward, the Florida Public Service Commission adopt renewable energy policies that **make participation in energy efficiency programs affordable for ALL Floridians.**

Subject: The Importance of Solar In Florida

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am one of the principals at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.

I pray for the PSC to help support our industry and the residents in Florida who have shown to be in favor of further solar deployment in our Sate in order to create a better environment and to significantly contribute to the overall U.S goals of energy independence.

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Regards,

Subject: Vote Against Gutting FL's Energy Conservation Plans

Dear Commissioner,

I am asking you to vote against the proposals by Florida's power companies to gut conservation goals. I'm sorry they might not be able to keep ballooning their profits, but as a citizen I have taken every step available to me to conserve, not only to reduce my electric bills, but because I care about the future and the state of this planet for my children and grandchildren.

I resent the utility companies proposing to gut their efforts so they can make more money. They don't care about anything but their bottom line. I have done my share, now they must do theirs. We need to protect future generations, and FL taxpayers do not deserve to get ripped off by greedy power companies, nor see their environment destroyed even more.

Your job is not to serve the utilities but to serve the citizens of this state first and foremost. Vote down the proposed plans.

Subject: Solar Rebate Program

Dear Julie:

Our firm represents Florida Alliance for Renewable Energy and the Florida Solar Energy Industries Association. We believe that termination of the current solar program would be a setback for renewable energy in Florida and a strategic mistake for Florida utility policy. I note that solar energy plays an increasingly prominent role in regions which receive a fraction of the sunshine as Florida. Striking solar energy from the range of renewable options seems antithetical to sound utility, economic and environmental policy. All trends indicate that solar energy will be economically competitive and a critical component for achieving environmental standards. As you may know, the industry is on record of supporting a more efficient program, but it seems that the staff's response is to throw the proverbial "baby out with bath water." In this case, metaphor is fitting, as solar is in the relevant infancy compared to traditional "big electricity" options.

The better approach would appear to be to take a pro-active position to discern methods for fostering and implementing this non-polluting, jobs-creating option instead of wholly foreclosing it. Further, given that the PSC has sanctioned the development of expensive capital options such as nuclear energy, with which solar energy compares favorably in today's market, we submit that a sensible and efficient solar energy program should be part of our energy mix and Florida's future.

We appreciate your consideration, and hope that you will provide strong policy guidance to the staff to reconsider their position, and return to the Board with a workable and efficient program that can be implemented in 2016 --- one that will benefit the ratepayers, the environment and the state of Florida in the 21st century.

Subject: Do NOT weaken energy efficiency standards or eliminate solar rebates

Dear PSC Commissioners:
I am longtime resident of Pinellas County,Fl and a Duke Energy customer. I do not want you to support weakening of energy efficiency standards or to eliminate solar rebates. Although a faithful voter without party affiliation, I am not able to elect you to your post. Yet I am your customer and you hear precious little from your customers. But you get to hear a lot from those corporate entities you regulate in the power business - and that access is shame! So I am taking the initiative to let you know my views and wishes for your action tomorrow in this email - and I am willing to bet my views echo the majority of your other customers. I hope you will take this opportunity to at least prevent further degradation of power customers bank accounts and the future generation's climate and environment. Tomorrow the very least you can do is take no action to further weaken power company's energy efficiency standards and do not end solar rebates in Florida. Resist the power company's request to further plunder my natural resources and charge me for it and to eliminate their competition so they remain technologically complacent.

Sincerely,
Merrie Beth Neely

Dear Chairman Graham and Commissioners Edgar, Brisé, Balbis, and Bowen:

Florida Refrigeration and Air Conditioning Contractors Association (Florida RACCA) is a statewide professional association representing approximately 325 contractor and associate members. On behalf of our members, we oppose the request of various utility companies and the PSC staff recommendations to eliminate rebates for air conditioning systems that are more energy efficient.

It is our position that rebates for air conditioning systems with greater efficiency meet the PSC rules requirement to be cost-effective by directly and proportionately (or greater) reducing the utility costs for the customer. We understand this reduces revenue for any utility company.

We disagree with the point made by utility companies and the PSC staff that improved building codes make rebates unnecessary as these improved codes apply only to new construction - which is only a fraction of the overall residential energy use. The existing building stock still constitutes the largest portion, for which energy efficiency is still very much needed. It is reasonable to estimate that it will take at least another ten years for Florida's residents and businesses to transition from existing inefficient air conditioning systems to new ones. Until then, it only makes sense to continue with this part of the rebate program.

In addition to simply improving energy efficiency for air conditioning systems, the rebate program also provides a very important impact for Florida in that it increases

permitted installations by licensed contractors because the rebate makes the perceived savings in hiring unlicensed contractors who will install substandard or illegal equipment without a permit much less attractive for the consumer.

Complete elimination of rebates benefits only the utility companies and hurts the consumer, the State of Florida, and businesses that participate in this worthwhile program. It hurts the consumer by virtually mandating higher utility expenditures by encouraging higher use of energy that results in what the utility companies really want – a reason to impose higher rates on consumers in order to build (or plan to build) additional power plants. It hurts the State of Florida by leaving it alone to try to meet upcoming federal goals while utility companies pull Florida in the wrong direction. It hurts participating businesses by requiring a sudden and costly shift in business structure to account for elimination of the rebates, which cost cannot be passed on to ratepayers as it can be by and for utility companies.

In the best interests of most involved, it would be prudent to modify, rather than eliminate, the rebates and to delay the deadline to end the program. We understand that falls short of what the utility companies want, but this should not be driven by what the utility companies want. This should be about what is best for the consumers and the State of Florida.

We respectfully request that the Public Service Commission deny complete elimination of the rebates in favor of a modification of the program to allow continued rebates for a minimum of ten years for air conditioning systems with greater efficiency.

Your favorable consideration in this matter is greatly appreciated. If you have any questions or would like additional information, please feel free to contact me.

Sincerely,

Cheryl Harris

Chairman Graham and Commissioners of the Florida Public Service Commission,

I work at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

From: Kathryn Walters <walterskr@hotmail.com>
Sent: Saturday, November 22, 2014 3:49 PM
To: Office of Commissioner Brown
Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Kathryn Walters
5193 Lake Blvd
Delray Beach, FL 33484

Christopher Cooney

From: Carlos Boueres <Cboueres@msn.com>
Sent: Saturday, November 22, 2014 4:50 PM
To: Office of Commissioner Brown
Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Beverly Jones

November 22, 2014

Re: Docket 130199, 130200, 130201, 130202, 130203, 310204 and 130205
Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar and renewable energy industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you **not** to terminate the solar pilot program and consider the following request:

- Reduce the incentive for January 2015 for Residential Solar PV to $0.40
- Apply a similar reduction to the commercial solar PV program
- Require a MW goal
- Require a predictable declining incentive structure
- Maintain the current funding cap

Sighting the most recent Staff recommendations the installed solar photovoltaic prices have dropped in Florida to $4.13/watt for the average residential solar system and lower for commercial. As compared to slightly over $8.00/watt in 2009 .

In 2009 the Florida Solar Coalition, an intervener in Docket 080407 suggested the following:

FSC (Florida Solar Coalition) suggests that annual support should continue for five years, and decrease every year to account for market development and reductions in technology costs.

At that time 25% of the installed cost per watt was subsidized by this program. This coming January if left unchanged the incentive will have actually increased to approximately 50% of the installed cost. Everything in the middle was purposefully over subsidized in order to promote the Utility argument toward the termination of this program - all at the expense of the ratepayers who provide them their guaranteed profits. The utilities could have avoided this by following the Florida Solar Coalitions recommendations in 2009 and followed a simple market price decline and the residential solar rebate would be approximately $1.00/watt.

The Utilities have blatantly avoided a simple way of increasing the programs participation rates and it is time to require the utilities to lower the incentive amount for the 2015 program launch to $0.50 cents per watt. This would positively impact promoting solar energy in Florida all while maintaining the funding cap established in order PSC-09-0855-FOF-EG. Though this appears to be a dramatic step downward in incentive, it signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staffs favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and reasonable use of funds it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Regarding the future of the Solar Pilot Programs, we believe that they should have been designed to have a MW goal accompanied with a smooth transition to an incentive less market. We urge the Commission, rather than terminate the Solar Pilot Programs, extend them for 1 more year following the 2015 launch with a MW Goal combined with declining incentives as we approach zero incentives and the programs end.

Though it is not part of the mandate of the commission to consider these statistics we feel that it is important to note that the solar industry employs nearly 150,000 Americans and is growing every day. Every 3 and half minutes a new solar energy system is installed in the United States. These are well paying construction jobs that cannot be outsourced overseas. The sun provides Florida with stable energy that does not come from across our border. It is energy that is generated here in Florida using our most popular resource.

The Florida industry is not asking for overly rich subsidies to promote solar, but simply for a clear and stable business environment in which to operate. One that sends the appropriate signals to ratepayers - incentives that decrease over time, not increase. The utilities have ignored this request on all accounts which is why the staff was easily able to come to the conclusions to terminate the programs. We are now relying on you the Commissioners to heed our requests and enforce make sense policy for the ratepayers of Florida.

Professionally Yours,

Scott McIntyre

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Cristina Strobel

Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Judith Kaye

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject:	Solar Pilot Program Helps Minorities

Dear Chairman Graham and Commissioners of the Florida Public Service Commission,

As a City of Tampa certified Minority Business Enterprise and Service Disabled Veteran Owned Small Business – Florida Licensed Solar Contractor, I cannot stress sufficiently how integral the Solar Pilot Program (SPP) was in getting my business out of the "starting block" and how important it is to providing opportunities to those who cannot afford the upfront cost of installing solar on their home.

Tampa Energy Solutions began installing solar panels in 2012 shortly after my retirement from the military. My first customers were Solar Pilot Program recipients. Two these customers (SPP recipients) are your average hard working single women located in the heart of Tampa's blue collar district. They would not have solar on their roof today without this important program and remain grateful for the opportunity to receive the support provided by this critical program. Contrary to what has been described in other publications, these individuals are NOT well paid doctors, lawyers or big business owners. Their homes are modest two bedroom places.

Overall, we have been fortunate to support solar installations on 6 customers in the past two years that received support from this critical program. The Solar Pilot Program is for many the only way for those in this economic category to obtain solar on their home. The majority of my mainstream customers that purchase solar without the rebate are more affluent and possess the financial means to afford systems at today's cost.

For the reasons stated above, I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By simply reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Steve Rutherford

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject:	Florida Solar Energy Debacle

Chairman Graham -

Those of us who have lived all or most our lives in Florida, as have I, realize the "Sunshine State" is largely a Chamber of Commerce notion when one finds that Florida is in the second quartile of annual insolation of the 50 states.

Nevertheless, being in the second quartile is significant, worthy of the State being much more creative and supportive of distributed solar electric generation, as is occurring in several states (e. g., New Jersey and Minnesota) of less solar resource than Florida.

Net metering has been characterized as the solar elite being subsidized by the non-solar masses. A few months ago economists with the Minnesota equivalent of the PSC debunked this subsidy perception, when all true values and all true costs of solar versus conventional generation are considered.

I look forward to the PSC adding renewed emphasis to the "Public" and the "Service" components of its name in

regard to the big picture of electric power production and usage in Florida.

Respectfully,

Robert R. Bullard, P. E.

Re: Docket 130199, 130200, 130201, 130202, 130203, 310204 and 130205
Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar and renewable energy industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you **not** to terminate the solar pilot program and consider the following request:

- Reduce the incentive for January 2015 for Residential Solar PV to $0.40
- Apply a similar reduction to the commercial solar PV program
- Require a MW goal
- Require a predictable declining incentive structure
- Maintain the current funding cap

Sighting the most recent Staff recommendations the installed solar photovoltaic prices have dropped in Florida to $4.13/watt for the average residential solar system and lower for commercial. As compared to slightly over $8.00/watt in 2009 .

In 2009 the Florida Solar Coalition, an intervener in Docket 080407 suggested the following:

FSC (Florida Solar Coalition) suggests that annual support should continue for five years, and decrease every year to account for market development and reductions in technology costs.

At that time 25% of the installed cost per watt was subsidized by this program. This coming January if left unchanged the incentive will have actually increased to approximately 50% of the installed cost. Everything in the middle was purposefully over subsidized in order to promote the Utility argument toward the termination of this program - all at the expense of the ratepayers who provide them their guaranteed profits. The utilities could have avoided this by following the Florida Solar Coalitions recommendations in 2009 and followed a simple market price decline and the residential solar rebate would be approximately $1.00/watt.

The Utilities have blatantly avoided a simple way of increasing the programs participation rates and it is time to require the utilities to lower the incentive amount for the 2015 program launch to $0.50 cents per watt. This would positively impact promoting solar energy in Florida all while maintaining the funding cap established in order PSC-09-0855-FOF-EG. Though this appears to be a dramatic step downward in incentive, it signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staffs favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and reasonable use of funds it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Regarding the future of the Solar Pilot Programs, we believe that they should have been designed to have a MW goal accompanied with a smooth transition to an incentive less market. We urge the Commission, rather than terminate the Solar Pilot Programs, extend them for 1 more year following the 2015 launch with a MW Goal combined with declining incentives as we approach zero incentives and the programs end.

Though it is not part of the mandate of the commission to consider these statistics we feel that it is important to note that the solar industry employs nearly 150,000 Americans and is growing every day. Every 3 and half minutes a new solar energy system is installed in the United States. These are well paying construction jobs that cannot be outsourced overseas. The sun provides Florida with stable energy that does not come from across our border. It is energy that is generated here in Florida using our most popular resource.

The Florida industry is not asking for overly rich subsidies to promote solar, but simply for a clear and stable business environment in which to operate. One that sends the appropriate signals to ratepayers - incentives that decrease over time, not increase. The utilities have ignored this request on all accounts which is why the staff was easily able to come to the conclusions to terminate the programs. We are now relying on you the Commissioners to heed our requests and enforce make sense policy for the ratepayers of Florida.

Professionally Yours,

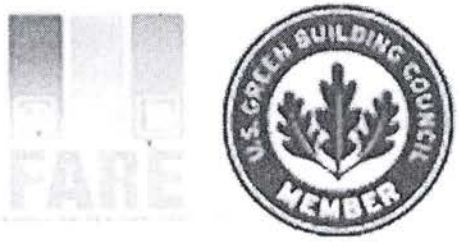

Scott McIntyre

Subject: Defies common sense

Dear Commissioner:

I, like many other Floridians, marvel at the illogic of the utilities as they ask the PSC to lower energy goals. The request defies common sense despite the industry's attempt to say that " We are all better off when we make money. Trust us."

I implore you to turn down this request, and provide the kind of leadership average citizens depend on in order to survive in a world which seems evermore determined to make the Almighty dollar supreme in all deliberations.

Thank you for your consideration.

Subject:	FW: Support Solar Energy NOW

Chairman Graham and Commissioners of the Florida Public Service Commission,

I work at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Judy Munro

Subject:	Solar Pilot Program Helps Minorities

Dear Chairman Graham and Commissioners of the Florida Public Service Commission,

As a City of Tampa certified Minority Business Enterprise and Service Disabled Veteran Owned Small Business – Florida Licensed Solar Contractor, I cannot stress sufficiently how integral the Solar Pilot Program (SPP) was in getting my business out of the "starting block" and how important it is to providing opportunities to those who cannot afford the upfront cost of installing solar on their home.

Tampa Energy Solutions began installing solar panels in 2012 shortly after my retirement from the military. My first customers were Solar Pilot Program recipients. Two these customers (SPP recipients) are your average hard working single women located in the heart of Tampa's blue collar district. They would not have solar on their roof today without this important program and remain grateful for the opportunity to receive the support provided by this critical program. Contrary to what has been described in other publications, these individuals are NOT well paid doctors, lawyers or big business owners. Their homes are modest two bedroom places.

Overall, we have been fortunate to support solar installations on 6 customers in the past two years that received support from this critical program. The Solar Pilot Program is for many the only way for those in this economic category to obtain solar on their home. The majority of my mainstream customers that purchase solar without the rebate are more affluent and possess the financial means to afford systems at today's cost.

For the reasons stated above, I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By simply reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Steve Rutherford

All,

I've had a solar system since 2008. It's serviced me and my immediate neighbors very well. They use my excess production during peak hours of the day (via a shared transformer). I am not a drain on the utility as they try to claim. I do, of course, buy power at night when demand for it is lower. This makes me a Florida ratepayer as well as supporter of solar energy in our state.

I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me continue to have the opportunity to invest and benefit from local solar power.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Beverly Jones

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Defies common sense

Dear Commissioner:

I, like many other Floridians, marvel at the illogic of the utilities as they ask the PSC to lower energy goals. The request defies common sense despite the industry's attempt to say that " We are all better off when we make money. Trust us."

I implore you to turn down this request, and provide the kind of leadership average citizens depend on in order to survive in a world which seems evermore determined to make the Almighty dollar supreme in all deliberations.

Thank you for your consideration.

Subject: FW: Support Solar Energy NOW

Chairman Graham and Commissioners of the Florida Public Service Commission,

I work at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Christopher Cooney
