**Subject:** Please Deny FPL's Request for Fracked Gas

Dec 9, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Delta Murtz

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Katherine Weaver

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Arlene Heredia

I, for one, knew this would rear its ugly head as soon as Scott was bought-I mean re-elected. He has investments in fracking corporations. Our beautiful natural springs are continuous, connected. One fracking screw up, and our water supply for the whole state of FL is ruined.

We as people of Florida, know every fracking state has incidents of water pollution. We do not even have dirt, just shale and limestone!!!

Why not take advantage of Florida's natural energy- the SUNSHINE?

Fracking would be tragic for this state and its natural springs, its Everglades, any area it is done. PLEASE DO NOT ALLOW FRACKING IN FLORIDA. Our state's makeup isn't made for this vile method.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Linda Kyvik

We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment.

Dear Public Service Commissioners:

We need to implement a greater mix of energy sources to power Florida particularly with a focus on sustainable, renewable and abundant sources such as solar. Florida ranks third in the nation for solar potential but 18th for total installed solar power capacity. This needs to change and change rapidly. I speak for many Floridians when saying:

we don't want to be burdened with cost recovery for fracking in other people's backyards, possibly despoiling their aquifers, when we can easily deploy widespread distributed solar to readily, reliably and affordably fill our present and future electrical power needs.

Futhermore what guarantee does the Florida ratepayer have that the fracked gas recovered from distant wells will even benefit Florida? It could just as easily be commodified and sold on the open market with the benefit inuring to investors NOT ratepayers. As Public Servants each of you took an oath to act in the Public's interests. FPL's fracking plans are a risky and ill-conceived venture in every regard for Florida and for Floridians and must not be advanced. Floridians demand a Renewable Portfolio Standard for our state in lieu of more fracked gas.

Sincerely,

Patty Whitehead

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Patty Whitehead

FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

William West

Energy and environment headlines for the afternoon of Monday, December 8, 2014

## More 'man caves' found at EPA warehouse

**By Edward Felker**

The Environmental Protection Agency's internal watchdog has discovered more misuse of government warehouses, beyond the "man caves" for weightlifting and watching TV revealed last year at a government facility in suburban Washington.

Contract employees were using an EPA facility in Woburn, Mass., for personal purposes, according to the latest findings published Monday from a warehouse audit by agency Inspector General Arthur A. Elkins, Jr.

"The EPA contractors at the Woburn, Mass. warehouse engaged in unauthorized activities such as having personal packages received at the EPA warehouse, storing and potentially using exercise equipment and bicycle repair equipment, and storing personal sleeping bags in vacant spaces," Elkins said.

The misuse of government space reflected EPA's weak management of 62 leased and government-owned facilities. Those sites include more than 500,000 square feet of

capacity to store equipment, furniture and documents.

The department has since moved to comply with nine reform recommendations by Elkins, such as conducting annual inventories, strengthening controls of contractors and freeing up unused space. Those actions could save taxpayers up to nearly \$9 million, he said.

The audit report is the third by Elkins on EPA's problems at its warehouses. He began last year with a look at the disposal of excess government computers.

In the audit, which ran through August, Elkins examined eight EPA sites with combined annual management contract costs of \$50 million.

That probe followed past reviews by his office of EPA's inventory management in 2009 and 2011. His investigation in 2011 found that EPA had lost track of 638 computers with a combined value of more than \$1 million.

A management alert Elkins issued in May 2013 got national attention when it detailed the use of weightlifting equipment and construction of personal hideaways to watch TV and sleep -- known as "man caves" -- by contractor staff at an EPA warehouse in Landover, Md.

The same was found at the Massachusetts site, which Elkins said happened in part because EPA did not periodically review operations at the facilities.

The two sites were being run for EPA at a combined cost of about \$1.6 million a year. EPA subsequently ended its contract for management of the Landover site.

Elkins issued a second alert in March after his staff discovered last year that an EPA warehouse in Blue Ash, Ohio, near Cincinnati, was holding a six-year supply of publications rather than printing them as needed.

Elkins estimated the oversupply was costing taxpayers more than \$1.5 million annually.

EPA last year, in response to visits by staff for Elkins, recycled more than 2 million documents from the warehouse that amounted to more than 140 tons.

He also scored EPA for maintaining stocks of supplies, such as refrigerators, envelopes and toner cartridges at four locations -- materials that could be easily obtained from commercial suppliers. The agency at the same time was unaware that some of the stocks existed because of inadequate records.

The agency responded to the probe by disposing of unused property to other federal and state agencies, in moves that will save taxpayers \$3.5 million.

An EPA spokeswoman on Monday had no additional comment on the report, but noted that the agency had accepted recommendations by Elkins and was acting on them.

## Energy stocks lead a decline as price of oil sinks

**By The Associated Press**

NEW YORK (AP) — Stocks were closing lower, led by a slump in energy stocks after the price of crude oil sank again.

Exxon Mobil and Chevron were among the biggest decliners in the Dow Jones industrial average Monday.

The Dow lost 106 points, or 0.6 percent, to 17,852.

The Standard & Poor's 500 index fell 15 points, or 0.7 percent, to 2,060. The Nasdaq composite fell 40 points, or 0.8 percent, to 4,740.

Benchmark crude oil dropped \ \$2.79, or 4 percent, to \ \$63.05 a barrel in New York, its lowest price in five years.

## High court rejects BP appeal of spill settlement

**By Janet McConnaughey**

NEW ORLEANS (AP) — The Supreme Court is leaving in place BP's multibillion-dollar settlement with lawyers for businesses and residents over the 2010 oil spill in the Gulf of Mexico.

The justices did not comment Monday in rejecting the London-based oil giant's arguments that lower courts misinterpreted settlement terms and put BP on the hook to pay inflated and bogus claims by businesses.

The court's decision makes the economic and property damage settlement final, starting a six-month deadline for filing claims, said plaintiffs' attorney Joe Rice of Mount Pleasant, South Carolina.

BP PLC wanted the court to consider whether people and businesses seeking payments under the settlement included some who haven't actually suffered any injury related to the spill.

## Justices seem divided over Amtrak regulatory role

**By Sam Hananel**

WASHINGTON (AP) — Supreme Court justices exchanged conflicting viewpoints Monday on whether Amtrak had the legal authority to help craft federal regulations over the use of railroad tracks.

The court heard arguments over a 2008 law that directed Amtrak to work with government agencies to develop new standards for improving the passenger railroad's on-time performance.

The American Association of Railroads, which represents the freight railroad industry, says it's unconstitutional for Congress to give a private company the power to create regulations. The industry objects to some of the new standards that allow

Amtrak to keep its priority over freight trains that share common railroad tracks.

The Obama administration argues that Amtrak simply worked with the Federal Railroad Administration to devise the rules and, at any rate, the government retained ultimate control over how they were approved. The government is appealing a decision from the U.S. Court of Appeals for the D.C. Circuit which sided with the freight railroads.

## **GOP seeks to ease regulations on spending bill**

**By David Espo and Andrew Taylor**

WASHINGTON (AP) — Republicans sought to ease federal regulations on the trucking industry, financial sector, federally-funded school lunch program and more on Monday in last-minute bargaining over a \$1.1 trillion spending bill to keep the government operating past a Thursday midnight deadline.

The funding legislation was one of a handful of must-pass items clogging the agenda for lawmakers eager to adjourn for the new year. Others were bills to extend dozens of expiring tax breaks, authorize President Barack Obama's policy of arming Syrian rebels to fight Islamic state forces and a Democratic drive to confirm as many administration nominees as possible before the Republicans take control of the Senate in January.

Legislation to continue preventing state or local governments from imposing a tax on Internet access also seems likely to make it to Obama's desk.

There was relatively little controversy over spending levels themselves in what was shaping up as a classic year-end measure that rolled numerous unrelated issues into a single package. The \$1.1 trillion in total spending adhered to spending caps approved in previous negotiations between Obama and House Republicans. It included more than \$5 billion of the \$6.2 billion the president requested to fight Ebola at home and overseas.

## **Feds: Don't blame California drought on warming**

**By Seth Borenstein**

WASHINGTON (AP) — Don't blame man-made global warming for the devastating California drought, a new federal report says.

A report issued Monday by the National Oceanic and Atmospheric Administration said natural variations — mostly a La Nina weather oscillation — were the primary

drivers behind the drought that has now stretched to three years.

Study lead author Richard Seager of Columbia University said the paper has not yet been published in a peer-reviewed scientific journal. He and NOAA's Martin Hoerling said 160 runs of computer models show heat-trapping gases should slightly increase winter rain in parts of California, not decrease.

"The conditions of the last three winters are not the conditions that climate change models say would happen," Hoerling said. But he said the La Nina, which is the cooler flip side of the warming of central Pacific ocean, can only be blamed for about one-third of the drought. The rest of the causes can be from just random variation, he said.

## **Poland rejects toxic waste sent from El Salvador**

**By The Associated Press**

WARSAW, Poland (AP) — Poland has decided to refuse a toxic waste shipment from El Salvador that was to be destroyed at an incineration plant in a southern town, environment officials said Monday, after the local community raised concerns.

The 69 tons of liquid and solid waste, and contaminated earth, from a pesticide plant in El Salvador is en route by sea, where it was to be burned at the SARP Industries plant in Dabrowa Gornicza this month.

Environment Minister Maciej Grabowski said after talks at the ministry that the plant director decided against accepting the waste.

Grabowski pointed to protests by residents, who argue that the presence and the processing of the waste will add to the already polluted air of the industrial, coal mining town.

**To:** Office of Commissioner Balbis  
**Subject:** Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Donald Utzman

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Phellicia Perez

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jane Gilbert

Dec 8, 2014

Commissioner Julie Imanuel Brown  
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health. Not to mention the detriment that fracking would also cause to the health of wildlife and vegetation.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit. This is not something consumers will appreciate when they see their utility bills going up.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians. With Floridians still slowly climbing out of the recession we can not afford to add factors that would negatively affect our economy.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

**Subject:** Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

nancy minyon

33480-5800

We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Ellen Simon

**Subject:** Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

deborah jones

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

The environment of Florida is very fragile. It's up to all of us to protect it for not only future generations the planet.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Helaine Friedlander

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit. Customers of FP & L are still paying bills for nuclear energy! Thank you very much!

Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Protect our water sources. We cannot survive without water that can be consumed by humans and animals. Use renewable energy. The sunshine state is a perfect place for solar energy.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mary L White

33756-1983

With fresh water at a premium, we simply can not afford to allow fracking to destroy what we have. My area is full of natural springs. There are many dependent upon them as their source of income. If they are contaminated much will be lost.

It simply is not worth the risk of destruction to the fresh water. There must be a safer way to obtain the gas than this. Until it is discovered, leave the gas where it is so we still have water to drink, wash and grow with. If you expose our springs and water supply to contamination with chemicals and the resulting gas as well, what will farmers use? What will people eat? What will we drink? Use common sense, we have too much tied up in agriculture. Do you want our orange crop flammable? Imagine a vodka and orange juice explosion. How do we know it won't be absorbed by the crops? We don't. We do know people all over America have lost the use of their own water and the animals they raise for profit are drinking water filled with chemicals and that catches on fire straight from the tap.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

E Carole Barrett

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

O. Lamoree

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

As a Floridian and a taxpayer, I urge that the Florida Public Service commission deny any permits that allow fracking in Florida. With so much free sunshine in Florida, the Solar Industry should be given taxbreaks and strongly encouraged in Florida. With such porous limerock in Florida, Fracking would lead to a contaminated aquifer. Deny Florida Power and Light permits to frack. I agree with the rest of this message.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

**Subject:** Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

David Steiner

**Subject:** Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

DAVID GARRUTO

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Michael Harrison

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mark Polsky

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Richard Beaulieu

FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Harness the sun, it is whole lot less dangerous to humans and the environment. I was always glad to say I had FPL, but not anymore, especially if you go ahead with these extreme methods

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Linda Shirey

34974-4740

Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

When you consider how easily accessible unlimited sustainable energy is in Florida, Floridian geology and the fact that we've got a problem with catastrophic sinkholes as it is, the fact that we're liable to be underwater within the next century anyway, the fact that our economy relies above all on tourism and agriculture, the fact that birth defects within 10 miles of a single fracked well are significantly elevated, the fact that we're running out of potable water as it is, and any number of other indisputable facts, it would be not only foolish but irresponsible to do anything to encourage fracking in or anywhere near Florida.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Michelle Gale

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

The PSC has a duty to protect the public and put Earth and people over corporate profits.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Dr Martha Martinez

Dec 6, 2014

Commissioner Eduardo Balbis  
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

Please remember that the best energy policy starts with conservation, leaves fossil fuels in the ground and uses renewable energy.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking will contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.
