Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Dorian Atchison

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Diana Kirby

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

It is utter suicide for the State of Florida to use fracking. First of all, we are the SUNSHINE State. Why are we not using more Solar Power.

Second of all, we are a drought state. Are we really going to mess with our aquifers and risk polluting our water sources?

PLEASE do not approve FPL's request. It is way beyond crazy.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Patricia Greiner

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Brenda Mabbitt

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

DENY FPL's fracking request and EXPAND support of Solar which was taken away right before Thanksgiving. I will be voting in 2016 and will vote against anyone supporting FPL or duke energy's attack on solar and sustainable energies.

KH

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

NORMA AYUSO

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Gustav Sallas

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health. - Instead of contaminating the air and water of our Sunshine State, we need to focus on green energy like Solar and wind. Say NO to fracking!

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Rotraud Coffey

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Terrence Grywinski

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

I know that you and your legislators are bought and paid for by big business, in this case our large utilities, so I don't really expect you to do what is right for Florida and its environment. You have already demonstrated your lack of concern for Florida's citizens and environment with your dismantling of incentives for renewable energy.

Even though I am probably tilting at another windmill, I urge you to deny FPL's request to get into the fracking business.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Frederick McVeigh

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Maria Tourino

Subject: Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health. Not to mention the detriment that fracking would also cause to the health of wildlife and vegetation.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit. This is not something consumers will appreciate when they see their utility bills going up.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians. With Floridians still slowly climbing out of the recession we can not afford to add factors that would negatively affect our economy.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health. This is especially true here in Florida where our ecosystem is more fragile than many others in the United States. It is imperative that we keep our environment as pristine as possible, and fracking will damage said ecosystem in ways that could not be repaired for generations.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit. I am against allowing Florida Power & Light (FPL) to damage our ecosystem for any amount of profit, and I say this as a shareholder in FPL's parent company, NewEra.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians. This is unacceptable, especially since the reason for it was a relatively small amount of profit for one company for a relatively short amount of time.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Brett Robert

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Tita Sokoloff

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jason Collins

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Russell Bauer

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

Fracking has been proven to be dangerous as it pollutes aquifers, allows the escape of methane - often into the water supply as well as the air, and cause small earthquakes. In a limestone area like Florida, it is likely to increase the number of sinkholes. In addition to the environmental disasters, economically fracking and tar sand oil become far less profitable, and even costly, as oil and gas prices drop because of the increased supply in the U. S.

Worst of all, the Republican unwavering support of big energy as global climate change intensifies is heading this nation and the world into a less pleasant and possibly an UNINHABITABLE planet. The facts, which Republicans deny, are clear. Scientists and many world leaders have recognized the seriousness of the present conditions and the real, albeit conservative, estimates until human demise -- only a couple of generations away at this accelerated fossil fuel rate. If you value the lives of your own children and grandchildren, you will turn to safe alternative energy including solar and algal/bacteria produced oil which uses carbon dioxide and adds oxygen to the atmosphere while providing safe oil.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy and destroying our own state (rising water levels and sink holes) and life forms when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment? Vote for a safer planet that protects all life, including people, not profits for big energy and utilities.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Darlene Wolfe

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Tom Reps

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Nancy O'Byrne

FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Lance Gawthrop

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

With all the earthquakes occurring in places where they haven't occurred before (Oklahoma Nevada Arizona etc etc etc) let us finally realize that not only is the residue of fracking highly toxic to people, the procedure itself is upsetting the earth as we know it.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.
