Subject: Please Deny FPL's Request for Fracked Gas

Dec 30, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Vince L.

Subject: Fracking at Rate Payers Expense

Dear Governor Scott,

I'm writing to urge you and our representatives in Tallahassee to not allow the Florida PSC to move forward with approval of Florida Power charging rate payers \$750 million for the expense of a joint venture to initiate "fracking" activities in Florida. A high risk venture is something that should not be put on the shoulders of FPL rate payers to pay for.

There are two elements of this that I wish to bring to your attention.

First "hydraulic fracking" is not without 2 risks. One is the risk of failure and the financial burden that comes with it. The second is the potential environmental risks that comes with it when the chemicals being used can harm the environment and the costs associated with mitigation and reclamation that might be required to correct damage to the ground water, drinking water and deep underground strata that may leech chemicals well beyond the immediate area.

Why should rate payers be exposed to the potential financial losses of FPL? Speculative ventures belong in the private sector and not in the public sector for the citizens of Florida to be exposed to. Many times the environmental remediation expenses can be well in the millions which Florida rate payers should not be exposed to.

Other states have put a halt to "hydraulic fracking" for similar reasons when the chemicals used show up in the drinking water of people living in the watershed. Plus they have created some severe damages due to earthquakes and destruction of underground natural geologic barriers which protect the migration of toxic chemicals from moving into other watersheds and underground water sources.

If FPL wishes to invest their equity in such a process it should not be at rate payers expense. If they are successful they can enjoy the potential profits, but they must take the risks themselves. Today there is an excess of both oil and natural gas being found in the domestic states. Buying forward supplies on the open market would be an acceptable idea to include in the rate base without assuming the risks with "fracking" if that's what FPL has in mind.

I make these recommendations as one who was in the energy industry for 37 years and speak from experience. I was involved with deep water directional drilling before "fracking" became the new frontier. We hit it big sometimes and we lost sometimes. Serving the Mid Atlantic states we never asked for or were given regulatory approval to ask rate payers to take

on these risks. Now that "fracking in some case has proven to have even greater risks it should not be done without environmental impact assessments as the risks can be even greater.

Thank you for giving these concerns your immediate attention.

Sincerely,

Wayne A. Mills

Mr. Wayne A. Mills
wamills25@yahoo.com

Dear Mr. Mills:

The Governor's office forwarded a copy of your email regarding Florida Power & Light Company (FPL) to the Florida Public Service Commission (PSC). The PSC regulates investor-owned electric, and natural gas utilities throughout the state, and investor-owned water and wastewater utilities in those counties which have opted to transfer jurisdiction to the PSC. The PSC has authority in the telephone industry which is limited to the Lifeline Assistance Program, Florida Relay Service, and pay telephone service. We appreciate the opportunity to respond to you.

We will add your comment to the correspondence side of Docket No. 140001-EI regarding FPL's fuel and purchased power cost recovery clause with generating performance incentive factor.

If you have any questions or concerns please call Ellen Plendl at 1-800-342-3552 or by fax at 1-800-511-0809.

Sincerely,

Randy Roland

Message Body: The Florida Public Service Commission used to work for the people, now they all (with maybe one exception) are just giving the utility companies permission to rip us all off. What is their charter? Are they not supposed to protect the rights of the citizens of Florida, instead of allowing these companies to continually come up with new ways to steal our hard earned money?

Why are we providing the capital for these utilities to do nothing? And by the way, why didn't we get to vote on the nuclear cost recovery tax, and yes it is a tax!! Where is the interest going that this money is earning? If FPL and Duke aren't putting up the capital then they shouldn't be getting the interest on all that cash while they do nothing. This money needs to come back to the customers who paid it out, with interest.

So now they (and you) have given them permission to pollute the state of Oklahoma, with fracking. Haven't you paid any attention to the new reports, about how many different ways this is a bad practice? Once again where was the vote by the people? How are you given the right to take money from my bank account and put it in FPL's bank account to earn profit for it's share holders? We're putting up the cash, why aren't we receiving the earnings off this money? Oh that's right because it's going in the coffers of the crooked politicians and their appointees, who quit doing the right thing for the citizens of this state. You don't need their money, you should do the right thing for the people in this state who elected you to do just that!!

Sincerely a disgusted Citizen of the once great state of Florida, Veronica Stein

Subject: to ALL Commissioners: FPL gas permit to drill

Dear Commissioners,

I am a resident of Florida and I am dismayed by your ill informed decision to allow FPL the permit to frack in another State, in our Country, to feed fossil fuel to it's customers in Florida AND making their customers pay for their corporate bill.

Florida does not need another fracking well with a pipeline (Sabal Trails) to carry it to their citizens. You have very poor judgement to be in your leadership roles. You have allowed continued destruction to our planet at the expense of our precarious environment and at the financial gain of an energy behemoth.

You should have made the known solar energy company, FPL, to pursue solar for it's citizens.

Thank you Chairman Graham for your leadership and your no vote on this matter, it is truly devastating that your fellow board members did not follow your lead.

Merrillee Malwitz-Jipson

Comments:

I see where the PSC has approved (by a 4-1 vote) the request by FPL to get into the natural gas production business with our customer money! Just because this is to be done in Oklahoma, does not make it right for Florida! We all live in USA, and FRACKING is BAD for all of us! Current information shows the very negative environmental effects of FRACKING on water supplies as well as causing many negative side effects!

Comments:

I am disturbed and disappointed in your decision to make consumers pay for FPL's speculative natural gas extraction investment, and to even support natural gas extraction at all.
The supposed cost-savings to the consumer is a farce.
At a time when the long-term dangers of natural gas are coming to light, you can hardly claim that you are living to your mission.

The most egregious are your claims to:

Encourage and facilitate responsible use of resources and technology in the provision and consumption of utility services.

AND

Facilitate the provision of safe utility services at levels of quality and reliability that comply with established industry standards and practices.

Please reconsider this terrible decision that will harm the environment, poison and (locally) deplete precious waters, and have devastating effects on human and animal health. Even though the poisoning will not happen in our state, you are complicit in terrible harm if you go ahead with this decision.

Rather I would prefer that a supposed Public Service Commission will lead Florida's utilities to true safe, reliable and affordable utilities.

You should be ashamed of your self.
Please recall this decision and do the right thing.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 25, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

M.E. Ram

Subject: SHAME ON YOU!!!

The Florida Public Service Commission used to work for the people, now you all (with maybe one exception) are just giving the utility companies permission to rip us all off. What is your charter? Are you not supposed to protect the rights of the citizens of Florida, instead of allowing these companies to continually come up with new ways to steal our hard earned money?

Why are we providing the capital for these utilities to do nothing? And by the way, why didn't we get to vote on this nuclear cost recovery tax, and yes it is a tax!! Where is the interest going that this money is earning? If FPL and Duke aren't putting up the capital then they shouldn't be getting the interest on all that cash while they do nothing. This money needs to come back to the customers who paid it out, with interest.

So now you've given them permission to pollute the state of Oklahoma, with fracking. Haven't you paid any attention to the new reports, about how many different ways this is a bad practice? Once again where was the vote by the people? How are you given the right to take money from my bank account and put it in FPL's bank account to earn profit for it's share holders? We're putting up the cash, why aren't we receiving the earnings off this money? Oh that's right because it's going in the coffers of the crooked politicians and their appointees, who quit doing the right thing for the citizens of this state.

Sincerely a disgusted Citizen of the once great state of Florida,
Veronica Stein

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Alden Gatt

Phone Number: 7277433855

Message Body: Rick,

I can't believe that the PSC just approved FPL to bill its customers in advance to explore "fracking". Really, I am still reeling from Duke (Progress) 25% rate hike a few years back and I'm sure we did not even notice the "rebate" from the failed Crystal River plant. Who does business like this?? Guaranteed profits regardless of your performance on our dime--awesome! This is BS--i'm sure Duke and the rest are already celebrating this victory--while millions of hard working, honest Floridians are still struggling to pay for electric service. And please, do not have someone from the PSC contact me with another tale of woe--really not in the mood--does anyone really believe the PSC puts Floridians first?? Not anyone I know--Merry "Frackin" Christmas!

Comments:

Why are you allowing Florida Power and Light to charge consumers for investment in natural gas production? Why aren't you telling them to use shareholder's money? We are already paying for Duke Energy's rape of us as consumers.

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Dear Mr. Graham:

You have made a grave error by approving, against the will of nearly all Floridians, Florida Power and Light, A.K.A. NextEra Energy Resources to frack at our expense.

You are probably aware that Mr. Scott was reelected by the narrowest of margins by only 16% of the eligible voters.

Do not scorn the public will.

Dec 22, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Natalie Peterman

Dear Commissioner Balbis,

You have made a great mistake in supporting fracking. Right on the heels of implementing actions on Amendment 1, we see this monstrous environmental enemy. I spoke recently before our delegation of elected officials on measures to stop discharges from Lake Okeechobee and help restore the Everglades. Fracking works against our efforts to restore and protect our environment.

Have you not read about the dangers of fracking and how it wrecks our environment? How can you support this?

We are supposed to protect our environment. We depend on it to support life. If we don't stop making mistakes like this, we will suffer the consequences.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

KATHY MAILHOT

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit. I don't want the money I pay for electricity to go towards fracking. Fracking is dangerous and will exert more energy than it would reap in the State of Florida. Invest my money in solar energy, because we have plenty of sun to fuel our electricity.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Dear Commissioner Brown,

You have made a great mistake in supporting fracking. Right on the heels of implementing actions on Amendment 1, we see this monstrous environmental enemy. I spoke recently before our delegation of elected officials on measures to stop discharges from Lake Okeechobee and help restore the Everglades. Fracking works against our efforts to restore and protect our environment.

Have you not read about the dangers of fracking and how it wrecks our environment? How can you support this?

We are supposed to protect our environment. We depend on it to support life. If we don't stop making mistakes like this, we will suffer the consequences.

After reading about the decision to stop alternative fuel incentives I planned to send you an email expressing my disgust. Now, before I even had a chance to write it I have yet another reason to send an email.

Fracking, Really? Have you read anything about it? This is an embarrassment.

I simply can not understand how you can make these decisions with a clear conscience.

All of you either need to read your mission statement and take it to heart or just change it to reflect what you actually do.

Dee Sheppard

Subject: Please Deny FPL's Request for Fracked Gas

Dec 19, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Frederick Schiller

Dear Sir,

Look at Germany... in 10 years time they have produced more than 11% of their power from solar - in a climate much like the north east United States. You cite statistics to imply that solar power in the SUNSHINE STATE is foolishness. As Mark Twain has said " Facts are stubborn things, but statistics are pliable.". Look at the facts of what has occurred.

To be Chair of the PSC and in the pocket of corporate interests is regrettable... to be staggeringly ignorant of the facts is embarrassing.

Regards,

James O'Gara

Mr. James O'Gara
PO Box 1286
Indian Rocks Beach, Florida 33785

Dear Mr. O'Gara:

Thank you for your letter.

Germany has indeed implemented a great deal of solar generation. German households pay as much as 38-40 cents per kilowatt hour of electricity use. Florida's residential customers pay approximately 12 cents per kilowatt hour.

While increasing use of renewable energy is an important public policy goal in Florida, utility customers here also feel it's important to hold down their electricity cost. Tripling their home electric bills to something like the German level would not be acceptable to them.

In reviewing our solar subsidy program, the PSC examined the facts. The many millions of dollars we take from all utility customers in order to give incentives for solar don't produce nearly enough additional solar generation to justify the cost.

In the new year the PSC will develop a comprehensive and rational renewables strategy that we will require to have some prospect of succeeding. I hope we can be ready to implement this new approach when the current subsidy programs expire on January 1, 2016.

Sincerely,

Subject: Decision regarding Fracking for Natural Gas

Dear Mr. Graham,

Thank you for opposing Fracking. The other Commissioners have made a great mistake in supporting it. Right on the heels of implementing actions on Amendment 1, we see this monstrous environmental enemy. I spoke recently before our delegation of elected officials on measures to stop discharges from Lake Okeechobee and help restore the Everglades. Fracking works against our efforts to restore and protect our environment.

We are supposed to protect our environment. We depend on it to support life. If we don't stop making mistakes like this, we will suffer the consequences.

Thank you again.

Subject: FPL

So, you support FPL's bid to enter into fracking with the customers footing the bill! Don't you think that is 20th century thinking? When fossil fuel is quickly becoming an industry of the past it's a no brainer that we should be encouraging the renewable energy industry, not the fossil fuel industry.

Why do the customers have the privilege of paying for this deal when it should be the stockholders doing the investment?

We will not be saving money on our future bills since this industry is fast becoming a fossil itself.

New York has banned fracking as does many communities around the country for health and environmental issues. Shouldn't we?

Below is an article from Credo reporting on gas leaks in Ohio. Please take this into consideration as you move forward.

Another day, **another toxic spill thanks to fracking:**

About 25 families in eastern Ohio have been unable to live in their houses for the past three days because of a natural-gas leak at a fracking well that crews cannot stop.

Bethany McCorkle, a spokeswoman for the Ohio Department of Natural Resources, the state agency that regulates oil and gas, said crews lost control of the Monroe County well on Saturday. [...]

The well is not on fire, but the gas could be explosive.

Ohio has had its share of fracking accidents this year. In May, a blowout **resulted in an oil spill into an Ohio river tributary**. And then **this happened the following month**:

On the morning of June 28, a fire broke out at a Halliburton fracking site in Monroe County, Ohio. As flames engulfed the area, trucks began exploding and thousands of gallons of toxic chemicals spilled into a tributary of the Ohio River, which supplies drinking water for millions of residents. More than 70,000 fish died.

In October, a well ruptured in eastern Ohio, spreading natural gas and methane, and **resulted in the evacuation of over 400 families**.

[This] incident was the third in three days tied to fracking operations in eastern Ohio. On Sunday, a worker at a fracking site in Guernsey County was burned in a fire. On Monday, a pipeline carrying natural-gas condensate ruptured in Monroe County, igniting several acres of woods.

Explosions resulting in frequent evacuations, leaks into drinking-water supplies, earthquakes—but don't worry, folks. Fracking is perfectly safe.

Florida Public Service Commission

Dear Florida Public Service Commission:

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Comments:

It would be absolutely ridiculous to allow FPL to charge customers for gas exploration. They seem to make enough money for that as it is without adding charges to customers and fracking is a lousy way to go anyway. Totally against fracking period.

Dear Florida Public Service Commission:

If you are asking me to fund a venture out of state for a state regulated monopoly, that makes me a potential involuntary investor for something that belongs in the private sector. This is beyond the scope of a state regulated monopoly (over its service area even though it doesn't cover the whole state). I would not stop Florida Power and Light if they has privately raised investor capital, with those investors willing to take the risk (they could even make money that's OK). This is besides my opinion that fracking in its present form is too damaging to water supplies, especially in places where drought can strike hard and ground water is that more valuable. Also due to Saudi Arabia's recent action for low crude oil prices, fracking is for the time being not so profitable.
Three times: NO NO NO!

Subject: Solar Incentives

Dear Chairman Graham,

I am in strong disagreement with the recent ruling of the Florida Public Service Commission that will allow the state's investor owned utilities to reduce their energy conservation goals by 90% and to remove the solar energy incentives.

This now encourages more electric use so that the utilities have justification to build more fossil fuel generation plants. These plants will require rate increases to fund.

In addition, there is a significant environmental impact of using more fossil fuel produced electricity. These fuel sources increase greenhouse gases and other toxic by-products.

Wouldn't it be better to invest in job creating clean energy technologies that will grow Florida's economy while saving customer's money?

In this day and age of climate change awareness, it seems very shortsighted & irresponsible to reduce conservation goals by 90% and eliminate solar energy incentives.

As a member of the public that you serve, and based on the goals you have established for your commission, I am calling for you to retain both the solar energy incentives and the conservation goals that were in place on 11/1/14.

Thank you,
Julie Levine

Subject: Solar Energy Incentives

Chairman Graham;

I am incredibly appalled with the recent ruling of the Florida Public Service Commission that will allow the state's investor owned utilities to reduce their energy conservation goals by 90% and to remove the solar energy incentives.

This now encourages more electric use so that the utilities have justification to build more fossil fuel generation plants. These plants will require rate increases to fund.

In addition, there is a significant environmental impact of using more fossil fuel produced electricity. These fuel sources increase greenhouse gases and other toxic by-products.

Wouldn't it be better to invest in jobs creating clean energy technologies that will grow Florida's economy while saving customer's money?

In this day and age of climate change awareness, it seems very shortsighted & irresponsible to reduce conservation goals by 90% and eliminate solar energy incentives.

As a member of the public that you serve, and based on the goals you have established for your commission, I am calling for you to retain both the solar energy incentives and the conservation goals that were in place on 11/1/14.

Sent: Saturday, December 13, 2014 12:29 PM
To: Office Of Commissioner Graham
Subject: Solar

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Sherri Price

Subject: Wake Up Florida: We demand solar incentives for the Sunshine State.

Hello Chairman Graham,

As a resident, business owner, mother of 2 young boys, and leader of an active citizen based not for profit organization that protects the Santa Fe River in north central Florida, I could not be more appalled by the PSC decision last week to not incentivize solar use in public utilities.

And, please do not give FPL or any energy utility the right to fossil fuel frack another State for their customers. Make energy utilities responsible for building solar designs in our state. Bridge fuel found in gas is not our answer to energy independence.

I am not pleased that another assault on our Floridan Aquifer and Florida Springs Heartland is eminent from FPL, SpectraEnergy or Sabal Trails regarding the construction of a natural gas pipeline.

Please consider your leadership on energy and my future here with my family and all residents in our sunshine state.

Dec 18, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

barbara knutson

Dear Mr. Meals:

The Governor's office forwarded a copy of your email regarding Duke Energy Florida (DEF) to the Florida Public Service Commission (PSC). The PSC regulates investor-owned electric, and natural gas utilities throughout the state, and investor-owned water and wastewater utilities in those counties which have opted to transfer jurisdiction to the PSC. The PSC has authority in the telephone industry which is limited to the Lifeline Assistance Program, Florida Relay Service, and pay telephone service. We appreciate the opportunity to respond to you.

We will add your comment to the correspondence side of Docket Nos. 140001-EI regarding DEF's fuel and purchased power cost recovery clause with generating performance incentive factor.

If you have any questions or concerns please call Ellen Plendl at 1-800-342-3552 or by fax at 1-800-511-0809.

Sincerely,

Randy Roland

To: Office of Commissioner Balbis
Subject: Perhaps what we need is a peaceful protest

On 12/-9/14 I sent the following email to you and all the other Public Service Commissioners. Not one of you had the courtesy to respond to my delivery request.

Do not give me the argument that you read it on your phone and do not have the option. I have a tablet and I can respond to such requests. Floridians are writing LTE to Palm Beach Post and the like. Columns are written about FP&L and the PSC apparently to no avail. Perhaps what we need is a Peaceful Protest. It appears to be the only way for politicians and the like to take notice.

Commissioner *Eduardo E. Balbis*,

Public Service Commission or Private Sector Consortium?

*In my opinion the PSC is a **Private Sector Consortium** that grants the demands of Florida Power and Light. Perhaps a better name for FP&L is **Fleece Plunder and Loot**.*

*FP&L has been granted the right to charge customers for infrastructure and maintenance of a **FOR PROFIT** Company, for nuclear power plants that may not be built, storm damage and Customer Charges.*

An operating expense that somehow becomes the customer responsibility. The customer has to pay FP&L for maintaining the company's billing records. How often do they service the meter? Yet they are allowed to bill for it on an ongoing basis.

Definition of Customer charge: A fixed monthly amount that covers the cost of service to the meter including installation and the administrative cost of billing an account. The customer charge is billed on all accounts regardless of electrical usage and is a component of the base rate

I have read in the Palm Beach Post Oct 16, 2014:

FP&L is asking the Florida Public Service Commission to allow it to collect \$228,500 from its ratepayers for advocacy against the proposed water rules. Another operating expense, cost of doing business, they want the customer to pay.

Somehow they feel that they have the right to pollute and do not have to adhere to the Clean Water Act.

Their latest foray is the demand to charge customers for FRACKING. A gas fracking expedition that may or may not be profitable.

It has been argued that the risks of operating the hydraulic fracturing, or fracking, outweigh the rewards. FP&L can't be sure that the natural gas wells will produce enough gas to meet its needs and customers will shoulder the costs of dry wells, environmental impacts and market changes for the next 50 years.

This is an attempt by FP&L to earn a guaranteed profit on their investment and to foster the risk on customers not shareholders.

It was also stated by Jon Moyle, attorney for the Florida Industrial Power Users Group, that FP&L had another motive: profits. The company had built out its power plants with \$1.5 billion investment in upgrading its fleet in recent years, and is now looking to find a way to add new costs to its base rates so that it can continue to enhance shareholder profits.

“How are they going to grow the company? Here’s one way: They want to get into the oil and gas business,”

Also from reports:

The PSC, which rarely rejects an FPL request, will decide the fate of the proposal by the end of the year. If approved, the investment will take place next year and FPL is asking for permission to go forward with similar proposals in the future without first seeking regulatory approval.

Their ARROGANCE is beyond comprehension.

The PSC has, in my opinion apparently already made up their mind to grant this request:

The following statement says it all:

PSC chairman Art Graham said the issue was taking the commission into “uncharted territory” and wanted to proceed carefully, in the event the panel’s ruling is challenged.

*I repeat the PSC in my opinion is a **Private Sector Consortium** doing the bidding of FP&L. There is **NOTHING** Public about the PSC*

When will the PSC start serving the Public?

Perhaps when we can vote for the people on the commission.

*Carol M. Medeiros
2166 SW Mainsail Terrace
Stuart, FL*

Subject: Please Deny FPL's Request for Fracked Gas

Dec 17, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Kathryn Younkin

Subject: fracking

Dear Commissioners:

I recently saw a news article describing a fracking study to be paid for by Florida residents. My question is why this risky and environmentally damaging process is even being considered without first massively and permanently deploying renewable technologies that are already proven. I have had personal involvement with some of them. They are, for the most part, not being taken seriously.

Among these are:

- 1) Solar production/storage of hot water, ice, and compressed air, in addition to electrical grid supplements.
- 2) Heat recovery from AC and refrigeration used for hot water in every new home and office constructed in the state of Florida. This should be in the building codes now.
- 3) Precision monitoring of electrical loads to reduce peaks and waste. I have an app on my phone that does this right now KVA, KW, Power Factor, on every circuit in the house.
- 4) Buildings using natural light and cross-ventilation for housing, industry and storage. Simple pole barns, even.

I would like to receive one valid reason why we are not doing any of this. I returned from a recent trip to Costa Rica. They have mountains and have a lot of windmills. They work! We have tides. I once saw an inventor with something here but he died penniless. One good reason. Please.

I find gambling with utility costumers money WRONG. I know no one that would want to pay for Fracking exploration. In this day and age for our country to be so lax when it comes to clean energy. I am appalled that solar and wind are being thrown aside for filthy fuel sources. Why are you all as overseers of FLORIDAS energy being led down this path? No need to answer ask it of yourselves. I am just one person who is heartbroken by the events happening in our state.

Subject: Natural Gas Fracking Proposal

Dear Public Service Commission,

As customers of Duke Energy, we **do not support** the natural gas fracking proposal you are to be discussing tomorrow, December 18, 2014. The State of Florida elected officials, as well as the appointed ones, should all be ashamed of themselves for ever allowing the utility companies to charge ratepayers hundreds of millions of dollars for nuclear power plants they never will build! That law should and **WILL BE REPEALED!** Now they want the ratepayer to be forced to pay for natural gas fracking! Absolutely Ridiculous - They are nuts! The Public Service Commission is suppose to represent the Public - now is the time to do the right thing and **DENY, DENY, DENY** this natural gas fracking proposal!

Sincerely,

David J and Pamela L Phillips

Comments:

I am opposed to FPL fracking in Florida because of the ecological hazards of this procedure. It is not part of their mandate to search for oil. The price of oil has dropped to such an extent that fracking for oil is not economically sound. I am also opposed to their charging me for the expenses they will incur by fracking. Please do Not authorize FPL to fract in Florida or elsewhere. Thank you.

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Debbie LeBlanc

I just read in the newspaper that a proposal is coming up for vote that would allow Florida Power and Light to shift the cost of exploratory drilling for natural gas from the stockholders to the customers. This is an extremely bad idea. Stockholders invest money to make money but they also know that there is a risk involved in that. This proposal would shift all of the risk over to the customers who have to have electricity. This is very unfair on many levels. Please do not allow this proposal to pass.

I hope the Commissioners and Staff understand why many Southwest Florida residents like me have little respect for its 2014 anti-ratepayer decisions that have further empowered Duke Energy and FP&L to minimize alternative energy investments and services. It will either take Legislative reforms elsewhere or new Commissioners to better represent Florida residents than what this PSC has inflicted cost wise and alternative fuels wise in what should be a more competitive environment. Awful work all around here in spite of a nice newsletter. Shame on the PSC. mark

Public service that's what we expect from you, NOT being a servant to Duke Energy and doing their bidding. A company pays their own expenses, (such as exploring for natural gas to frack) buys their own equipment (such as nuclear power plants), and does not use their customers for a free bank with no interest, and no monthly payments, besides exploring for natural gas is for the oil companies to do, not our electric company. I hope this time you will be on the side of the PUBLIC, like you are supposed to be.

RE: Docket 140001 (Fuel and purchased power cost recovery clause with generating performance incentive factor.)

Dear Commissioners:

On behalf of the Sierra Club, and its members and supporters in Florida, I write to urge you to reject the FPL proposal to provide for ratepayer funding through fuel cost recovery of speculative and dangerous development of potential natural gas resources, whether in Oklahoma or anywhere.

The utility is asking you to move the risk of investment, exploration, and development of very uncertain fuel resource and to provide for guaranteed returns to the company's shareholders—using its customer's money.

FURTHER, as has been demonstrated in many channels and across our country, development of natural gas using hydraulic fracturing (fracking) techniques is dangerous and polluting. The risks of this method of resource extraction are so dangerous that the governor of New York today announced that fracking in that state will be prohibited.

The Sierra Club Board of Directors recently affirmed its opposition to fracking.

Fracking poses unacceptable risks to our communities, our environment and our climate. There is clear evidence that natural gas and oil extracted by fracking are major greenhouse gas contributors. Methane released via extraction and transport is 86 times more potent as a greenhouse gas than CO₂ over a 20-year time frame. The climate-disruption impacts from methane and carbon dioxide emitted by extraction, transport and burning clearly point to the urgent need of keeping fossil fuels in the ground.

Fracking has contaminated the drinking water of hundreds of thousands of Americans. Fracking's physical impacts have devastated thousands of neighborhoods and thousands of square miles of landscapes that are important to people and/or wildlife. Fracking has negative impacts on air and water quality and frequently necessitates unacceptable drawdowns on surface water and groundwater. Fracking and its associated waste disposal can cause seismic

events; mining for fracking sand causes air contamination and public-health impacts.

The better alternative is for the Public Service Commission to lead our big power companies soon to a future of reliable electricity generated for us by clean energy sources free of fossil fuels—using sun, wind, geothermal, biomass and large-scale energy storage systems, in addition to substantially expanded energy efficiency and conservation. Only by immediate action will we avoid unprecedented disruption of our climate.

Thank you for your consideration.

Sincerely,

A handwritten signature in dark ink, appearing to read "Thomas Lawson". The signature is fluid and cursive, with the first name "Thomas" written in a larger, more prominent script than the last name "Lawson".

From the New York Times website today:

Cuomo to Ban Fracking in New York State, Citing Health Risks

By JESSE McKINLEY, DEC. 17, 2014

ALBANY — The Cuomo administration announced Wednesday that it would ban hydraulic fracturing in New York State, ending years of uncertainty by concluding that the controversial method of extracting gas from deep underground could contaminate the state's air and water and pose inestimable public-health risks.

"I cannot support high volume hydraulic fracturing in the great state of New York," said Howard Zucker, the acting commissioner of health.

That conclusion was delivered publicly during a year-end cabinet meeting called by Gov. Andrew M. Cuomo in Albany. It came amid increased calls by environmentalists to ban fracking, which uses water and chemicals to release natural gas trapped in deeply buried shale deposits.

The state has had a de facto ban on the procedure for more than five years, predating Mr. Cuomo's first term. The decision also came as oil and gas prices continued to fall, in part because of surging American oil production, as fracking boosted output.

The decision has been fraught for Mr. Cuomo, a Democrat.

In June 2012, he flirted with approving a limited program in several struggling Southern Tier counties along New York's border with Pennsylvania. But later that year, Mr. Cuomo bowed to entreaties from environmental advocates,

announcing instead that his administration would start the regulatory process over by beginning a new study to evaluate the health risks.

As months and years passed, the governor repeatedly suggested that the Health Department's report was near completion, but its findings did not surface until Wednesday.

The delays angered environmentalists and oil companies alike. Advocates for fracking have argued that it could bring jobs to economically depressed areas atop the Marcellus Shale, a gigantic subterranean deposit of trapped gas that extends across much of New York State, Pennsylvania and West Virginia.

But the governor has also faced strong opposition from groups worried about the effects of fracking on the state's watersheds and aquifers, as well as on tourism and the quality of life in small upstate communities.

Dozens of towns and cities across New York have passed moratoriums and bans on fracking, and in June, the state's highest court, the Court of Appeals, ruled that towns could use zoning ordinances to ban fracking. Opponents have also consistently protested at the governor's public events and during his successful re-election campaign, where his Republican opponent, Rob Astorino, called for legalizing fracking.

Dec 16, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

chantal mirabile

Subject: Please Deny FPL's Request for Fracked Gas

Dec 16, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Susan Perez

Comments:

It would be absolutely ridiculous to allow FPL to charge customers for gas exploration. They seem to make enough money for that as it is without adding charges to customers and fracking is a lousy way to go anyway. Totally against fracking period.

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Caroline Randall

Dear Ms. Humphries:

Thank you for contacting the Florida Public Service Commission. Your email will be placed in the correspondence for Docket #140001, so commissioners can review your concerns with Florida Power & Light Company's Gas Reserve request. Commissioners are expected to discuss and decide this issue on Thursday, December 18. I encourage you to visit our home page, www.floridapsc.com, where press releases are posted detailing recent commission decisions.

Thank you,
Cindy Muir

Subject: Cost shift of energy exploration

I understand that some utility companies are trying to shift the costs of exploring and finding more gas and oil. I do not understand how this could even be an issue. If the companies have to answer to their stockholders for their costs of exploring, they will try to make prudent business decisions. However if they can just shift the cost to customers, they can gamble on anything and we, the customers pay the bill with no oversight like being voted out of office or their stock price going down. This really seems a no brainer to me. Would you please do me the honor of keeping me informed on this issue.

Respectfully,
Joanne Humphries

Re: Docket number: 140001-EI

Dear Chairman Graham and Commissioners:

On behalf of America's Natural Gas Alliance (ANGA), I submit this letter regarding natural gas' important role in power generation in Florida. Representing North America's leading independent natural gas exploration and production companies, ANGA works with industry, government and customer stakeholders to promote increased demand for and availability of our nation's abundant natural gas resource for a cleaner and more secure energy future. ANGA commends the Public Service Commission's consideration of transparent and predictable guidelines governing long-term transactions.

Without commenting on the specific merits of this filing, we are encouraged by proposals that enable long-term procurement of fuel supplies for customers. As producers, we are confident that our nation has abundant supplies of natural gas available for generations. Natural gas has long provided Floridians with a reliable, clean source of electricity and has been, and increasingly will be, a significant contributor to America's energy security and economic strength.

Recent breakthroughs in drilling technology have greatly enhanced our ability to develop natural gas resources economically and in a safe and responsible way. These technological advances and the geographic diversity of the shale plays have led to higher drilling success rates, lower development costs and a reliable and abundant supply. As a result of efficiency improvements, the industry is using fewer rigs to produce more gas, with production rising in tandem with demand growth.

The United States is now the world's largest producer of natural gas. The Energy Information Administration (EIA), the Potential Gas Committee and many public and private experts project abundant long term domestic supplies of natural gas. The most recent forecasts show a range of technically recoverable gas, using today's technology, from 2,203 to 3,545 trillion cubic feet. To put these findings into context, the total volume of natural gas consumed in 2013 in the United States was 26 trillion cubic feet. This paradigm shift gives producers and utilities the opportunity to consider entering into transactions to provide (1) long-term price stability and (2) long-term reliability of supply.

The key to effectively using this American resource is the pipeline infrastructure that links natural gas supplies to markets. Existing and proposed pipeline infrastructure to the Southeast will create robust and flexible access to all major supply areas. With expanding infrastructure, gas produced in multiple shale basins will be available to meet long term commitments.

We want to ensure that Florida consumers take advantage of the opportunity presented by our nation's abundant natural gas resources. Natural gas provides reliable, affordable, and flexible power generation and will do so for decades to come.

We appreciate the Commission's consideration of our comments.

If you have any questions, please call me at 202-789-2642, or you may email me at afarrell@anga.us.

Sincerely,

A handwritten signature in dark ink, appearing to read 'Amy Farrell', with a stylized, cursive script.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 16, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Avineshwari Maharaj

Subject: Power companies asking for my \$\$\$\$ for their natural gas exploration

I read in the Tampa Tribune that Duke Energy, TECO and possibly others are asking for the Utility Rate payer to "guarantee via infrastructure cost to go into the rate base or some iteration there on" their cost of exploring for natural gas.

As far as I can see, there are natural gas companies that explore and assume the risk associated with exploration that if they win, they make \$\$ if they are terrible at it they loose \$\$\$\$. So why would we ever think that this is part of the utility's core business? I would never think that it was... they are in the distribution and generation of power.

Oil and natural gas exploration is not in their generation of power wheelhouse and their customer's required to guarantee them success.

I urge you to tell them no. I know that their charming spoke persons and experts that tell you that it is advantageous for this to occur. Natural gas is a commodity and requires scale... They will never have the scale to do this given their distribution. Instead, they should if they want to go that direction, let their shareholders of the stock bear the risk.

PS the deal with F1 Power to bill the rate payers back for the decommission cost after they failed at getting that plan running is wrong; if they are the experts, they should treat their expertise and if they are wrong their share holders should foot the bill.

To: Office of Commissioner Brown
Subject: Perhaps what we need is a peaceful protest

On 12/-9/14 I sent the following email to you and all the other Public Service Commissioners. Not one of you had the courtesy to respond to my delivery request.

Do not give me the argument that you read it on your phone and do not have the option. I have a tablet and I can respond to such requests. Floridians are writing LTE to Palm Beach Post and the like. Columns are written about FP&L and the PSC apparently to no avail. Perhaps what we need is a Peaceful Protest. It appears to be the only way for politicians and the like to take notice.

Commissioner *Julie Imanuel Brown*

Public Service Commission or Private Sector Consortium?

*In my opinion the PSC is a **Private Sector Consortium** that grants the demands of Florida Power and Light. Perhaps a better name for FP&L is **Fleece Plunder and Loot**.*

*FP&L has been granted the right to charge customers for infrastructure and maintenance of a **FOR PROFIT** Company, for nuclear power plants that may not be built, storm damage and Customer Charges.*

*An operating expense that somehow becomes the customer responsibility. The customer **has to pay** FP&L for maintaining the company's billing records. How often do they service the meter? Yet they are allowed to bill for it on an ongoing basis.*

***Definition of Customer charge:** A fixed monthly amount that covers the cost of service to the meter including installation and the **administrative cost of billing an account**. The customer charge is billed on all accounts regardless of electrical usage and is a component of the base rate*

I have read in the Palm Beach Post Oct 16, 2014:

FPL is asking the Florida Public Service Commission to allow it to collect \$228,500 from its ratepayers for advocacy against the proposed water rules. Another operating expense, cost of doing business, they want the customer to pay.

Somehow they feel that they have the right to pollute and do not have to adhere to the Clean Water Act.

Their latest foray is the demand to charge customers for FRACKING. A gas fracking expedition that may or may not be profitable.

It has been argued that the risks of operating the hydraulic fracturing, or fracking, outweigh the rewards. FPL can't be sure that the natural gas wells will produce enough gas to meet its needs and customers will shoulder the costs of dry wells, environmental impacts and market changes for the next 50 years.

This is an attempt by FP&L to earn a guaranteed profit on their investment and to foster the risk on customers not shareholders.

It was also stated by Jon Moyle, attorney for the Florida Industrial Power Users Group, that FP&L had another motive: profits. The company had built out its power plants with \$1.5 billion investment in upgrading its fleet in recent years, and is now looking to find a way to add new costs to its base rates so that it can continue to enhance shareholder profits.

"How are they going to grow the company? Here's one way: They want to get into the oil and gas business,"

Also from reports:

The PSC, which rarely rejects an FPL request, will decide the fate of the proposal by the end of the year. If approved, the investment will take place next year and FPL is asking for permission to go forward with similar proposals in the future without first seeking regulatory approval.

Their ARROGANCE is beyond comprehension.

The PSC has, in my opinion apparently already made up their mind to grant this request:

The following statement says it all:

PSC chairman Art Graham said the issue was taking the commission into “uncharted territory” and wanted to proceed carefully, in the event the panel’s ruling is challenged.

*I repeat the PSC in my opinion is a **Private Sector Consortium** doing the bidding of FP&L. There is **NOTHING** Public about the PSC*

When will the PSC start serving the Public?

Perhaps when we can vote for the people on the commission.

Subject: Proposal for exploratory drilling

Dear Commissioners,

I have read in Sunday's Tampa Tribune that on Thursday, 12-18, there is a hearing to allow FPL and other Utility companies to shift the cost of exploratory drilling for natural gas from stockholders to customers. I am opposed to this for the following reasons:

1. FPL should be held accountable for the millions it has already passed on to customers for the nuclear plants that will never be built. Where is that money?
2. This is the cost of doing business that should be born by these companies as "Research & Development". A normal part of doing business that is already built into the cost customers pay.
3. Chemicals used for this process may leak into our underground water supplies. Testing should be part of the request to confirm that the process does not cause widespread pollution of underground water supplies done by independent companies.
4. Most importantly, this process uses tons of water. Where is all the water coming from that is needed for this process? A most precious commodity and should be the forefront of any discussions.

It must be said that I am not an FPL customer at the moment, but that could change. Taxpayers should not be forced to pay for a hope and a pray that may never pan out. Case in point the nuclear plant fiasco.

Please deny any request to pass along exploratory costs to taxpayers.

Thanks for considering the above.

Sincerely,

Catherine Dempsey

Subject: FPL Fracking Proposal

I am a relatively new resident of Florida (2 1/2 years) and I wonder why the Sunshine State is not investing in solar energy. It seems this is the perfect place to take advantage of a known and safe way to produce energy. Fracking on the other hand is relatively unknown in its effects on the environment, will pollute our groundwater and contribute to problems in the future.

I am no expert on fracking but why we would even consider it over solar is beyond me. Also, why would FPL get into the oil extraction business. Is this the mission of the company?

I do hope you will consider alternatives to this proposal.

Subject: FPL passing costs to consumers

People who buy stock take risks. They expect to invest in commodities that may use monies to improve the value of their stocks. FPL customers do not choose to take that risk. They are actually held hostage to costs in order to get a service, for which they pay. I do not think it is humane or fair to pass investment costs of a utility company on to consumers.

Have a Great Day as you Dance at dawn. Sing at sunset. Laugh in the moments between.

Comments:

I read that FPL has asked the PSC for permission to bill their customers for the lobbying fees they have chosen to spend on lawmakers.

Please, pretty please stand up to this request and say a loud "NO". Their board of directors made the decision to spend money. They will reap the rewards of this expenditure. I think it would be a travesty to let them "profit" but not only getting the reward, but also getting the reward without cost because their consumer is footing the bill.

No way on earth should they even be asking for this reimbursement!

My household, which contain three voting adults and two children absolutely do NOT approve of the utilities companies passing on the costs to us, the residents, for fracking! It is bad enough we have no choice over utility companies who service our homes without moving OR paying for nuclear plants that aren't working even after we paid to have them built BUT now I have to pick up more basic operating cost. Duke Engergy has been raping the public since they came in. Enough!

I read in the local paper that FPL wants customers to pay for oil exploration. Our rates are already high, many in FL are retired and on a fixed income. I worked for FPL years ago and I know with them as with other large companies the folks at the top of the income level have no idea how we struggle at the bottom and much waste goes on at the upper levels. Our CEO had a relative flown by company chopper to see the turtles. Also, my personal opinion is I feel fracking is cause of much of our environmental problems. How can you remove so much underground substances and not have a collapse of the above structure?

re: Florida Power & Light gas extraction

Please deny FPL's petition to extract gas through fracking in Florida. We already lack adequate environmental oversight for the process, and I don't believe the state needs man-made earthquakes added to our depleting aquifer sinkholes.

Comments:

I do not want customers charged for exploratory fracking or any kind of natural gas exploration.
The utility company should pay for any exploration, not the customers.

Comments:

Board of Commissioners,

With respect to Thursday's Commission Meeting, I urge the commission to deny FPL and the other utility companies from conducting fracking in the State of Florida and charging the customer's for this activity. Fracking is bad for our fragile aquifer and bad for tourism.

Please urge our states' utility companies to increase investment in renewable energy sources.
There's a reason we're called the Sunshine State!

Sincerely,
Jerald Woloszynski

Comments:

I have read of a proposal before the Florida Public Service Commission on 12/18/14 in Tallahassee that would allow Florida Power & Light Co. to shift the cost of exploratory drilling for natural gas from stockholders to customers. As a citizen of Florida and a customer of FPL, I object to this outrageous proposal in the strongest of terms. This consumer boondoggle is unconscionable, which should be self-evident to anyone with good morals and sense of fairness. Please do your job of protecting the consumers by denying FPL's proposal. It's the right thing to do. I would welcome your response to my comments via the email address I have provided. Thank you!

Angela Charles

Subject: Please Deny FPL's Request for Fracked Gas

Dec 15, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

John & Sandra Mercer

Dear Commissioner:

Please take no action requiring ratepayers of Florida Utilities to bear the cost of "fracking" in the exploration and recovery of natural resources such as oil and gas. There has to come a time when the public is not responsible for investors making money on project which will only benefit the investors.

Thank you for your consideration.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 14, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

julia gibbins

NO DRILLING IN FLORIDA--EVER.

Our entire water system in South Florida depends on the aquifer. Poison that with the fracking chemicals and the entire lower third of the state--where the majority of Floridians live--would become uninhabitable.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

There is plenty of evidence that gas drilling, AKA "fracking," is harmful to groundwater. With the topography in Florida, it should be a NO-BRAINER, e.g., any idiot should understand, that fracking would be catastrophic for Florida.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Dale Flowers

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Kate Holy

NO DRILLING IN FLORIDA--EVER.

Our entire water system in South Florida depends on the aquifer. Poison that with the fracking chemicals and the entire lower third of the state--where the majority of Floridians live--would become uninhabitable.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

There is plenty of evidence that gas drilling, AKA "fracking," is harmful to groundwater. With the topography in Florida, it should be a NO-BRAINER, e.g., any idiot should understand, that fracking would be catastrophic for Florida.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Say NO to fracking in Florida!!!!!!!!!!

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

David hollister

Subject: Please Deny FPL's Request for Fracked Gas

Dec 12, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Florida Public Service Commission

Dear Florida Public Service Commission:

If you are asking me to fund a venture out of state for a state regulated monopoly, that makes me a potential involuntary investor for something that belongs in the private sector. This is beyond the scope of a state regulated monopoly (over its service area even though it doesn't cover the whole state). I would not stop Florida Power and Light if they has privately raised investor capital, with those investors willing to take the risk (they could even make money that's OK). This is besides my opinion that fracking in its present form is too damaging to water supplies, especially in places where drought can strike hard and ground water is that more valuable. Also due to Saudi Arabia's recent action for low crude oil prices, fracking is for the time being not so profitable.
Three times: NO NO NO!

Sincerely,

Robert Friedman

Florida Public Service Commission

Dear Florida Public Service Commission:

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

James Bateman

Florida Public Service Commission

Dear Florida Public Service Commission:

I do not support Fpl fracking!

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Catherine Juliano

Subject: concerning FPL request to get into the fracking business

Come on people! Any idiot knows that this whole fracking thing is ridiculous and will cause nothing but destruction and catastrophe. Even a five year old could see that. There are plenty of untapped and unused methods of energy production but they're just not ones that people have their stocks invested in or can make a load of money pursuing. When all the fish are dead and all the water is polluted what are you going to do, throw some money at people? You can't eat or drink money - get a clue.

Dear Florida Public Service Commission:

To Whom It May Concern,

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Linda Brown

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

Sincerely,

John Kirkpatrick

Florida Public Service Commission

Dear Florida Public Service Commission:

As a customer of FPL I write to ask you to deny them the right to charge customers to get into oil and gas production. I would much rather see \$750 million invested in renewable energy resources which would be safer for our environment and our economy. This Woodford proposal would only protect investors (maybe) and be a negative precedent for other utilities to pursue gas projects that could damage our fragile environment without responsible review.

Sincerely,

Elizabeth Black

Sent: Saturday, December 06, 2014 3:16 PM
To: Consumer Contact
Subject: Charging the Public for Fracking

Not only are the frackers gravely endangering Florida's water supply and environment, but now FPL wants the citizens of Florida to pay the bill so that a few can make a lot of money. Fracking in Florida, especially in and around Collier County, is extremely dangerous to the purity and quantity of the water supply and is not worth the short term profits.

It is the responsibility of the government to protect the public water supply from special interests out for their own profit. The amount of gas obtained does not warrant the risks involved.

As a citizen of Florida, I am insulted at the gall of the proposal to have the consumer pay for the contamination of its water and the wasting of millions of gallons of our scarce supply of clean water.

Stop catering to special monied interests and do the job you were elected to do. Let FPL put solar panels on the roofs of Florida instead of in fields and instead of building nuclear plants or coal fired plants. Do the right thing. Thank you.

Dec 12, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

James Bateman

Subject: Please Deny FPL's Request for Fracked Gas

Dec 11, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jackie Beatty

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Leah Emberton

Dec 10, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. To whom it may concern,

I received email that said you were moving to invest in fracking technology here in Florida for gas production. The email is from the Food and Water Watch and it states, rather boldly, "**We have a bill to BAN FRACKING, But... Florida Power and Light Wants to Expand into Fracked Gas!**" I know the current administration has created a bottle neck in energy production, but I question on several levels fracking in Florida for gas or oil.

1. My first concern is cracking up the lime base we are resting on. There is certainly enough evidence all over the State of sink holes, and the damage they can cause. Fracking, and the powerful shocks it induces to the surrounding material would seem to exasperate that problem by causing more caves to collapse, and change the pure water aquifers Florida depends on. The Florida aquifer depends on the porous nature of Florida's foundational structure.
2. My second concern is how is fracking going to complicate the ASR (Aquifer Storage and Recovery) wells currently in place. Controversy swirls around the ASR wells already in use. Arsenic, bacterial build up in the underground environment, and leaching into clean water sources are only some of the current concerns that science seems to miss a lot. With fracking damage to the foundation of Florida, this ability to allow water to transfer, up, down, and sideways will be made far too complicated for geologists, hydrologists, and drilling experts and their computer resources to handle. There is no consensus now on how the water will move in the ASR wells. Science "Assumes" certain things, but can not determine exactly what will happen.
3. I have for many years understood that there are no gas or oil sources under the Florida peninsula.

I'm not 'against' fracking. To cut the dependence on Middle East oil would be the best thing America could possibly do. Messing with fresh water sources with technology that can not be fully understood by science is the worst thing we can do. It can, and historically will, endanger our sources of fresh water at some point in the future. I enjoy a glass of fresh, clean water, without undo fear of poisons, salt, or bacterial contamination.

Please be mindful that this generation is (hopefully) not the last generation here in Florida. Consider carefully the future of the State and the resources we have. My ground water is already seriously salt intruded, and I can no longer use it to irrigate my gardens. Using this technology in a beautifully balanced , but delicate ecosystem, as the Florida aquifer is, is unwise.

Sincerely,

David Humphrey

FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

NO POLLUTING, INCLUDING FRACKING.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

A Myerscough

Dec 10, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Renee Andrews

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

LIST OF POISONOUS FRACKING CHEMICALS from the NIH:
http://toxtown.nlm.nih.gov/text_version/locations.php?id=140

Chemicals in Hydraulic Fracturing

Benzene
Crude Oil
Diesel
Ethylene Glycol
Ethylene Oxide
Formaldehyde
Lead
Methane
Methanol
Ozone
Phthalates
Radon
Solvents
Toluene
Volatile Organic Compounds (VOCs)

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

Fracking is dangerous due to the Florida limestone which is unstable already and it is nowhere else in the continental US. This will lead to earthquake and wide spread destruction of property values due to opening of sink holes and draining of our lakes. In sandy areas, fracking fluids will not be contained due to the friability of the soils. We already have problems from leaking gas tanks, we don't need additional carcinogens in our ground water or aquifers.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

Your PR campaigns claim to be helping the environment...but if this request for tracking is approved, Florida Power & Light will be doing the opposite.

I grew up here in Florida and in those 40 years of sunshine, I always expected that FP& L would lead in the research and development of Solar Power...instead, it's been just the opposite. Other states with less sunshine have actually exceeded Florida in the race to win the greatest quota in solar power.

Old school techniques, such as drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health. The Canadians laugh at the way tracking is done in the US...so poorly and with so much water contamination. This can't happen.

Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jose Perez

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Sherrill Wible

Please Deny FPL's Request for Fracked Gas

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Florida Power & Light (FPL) is looking to invest in PetroQuest, an Oklahoma-based oil and gas company known for its fracking.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit. This proposal could cost customers up to \$750 million a year. This cost is unreasonable, especially with our high potential for local, renewable energy like solar power.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

This was proposed at the same time that Senator Soto and Senator Bullard introduced their bill to ban fracking in Florida.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy like solar that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Comments:

I read that FPL is planning on having permission for fracking at the customers expense. Fracking pollutes ground water and increases earthquakes and Florida is prone to sinkholes as well. Please protect our loved state, it is a paradise for all to enjoy, don't destroy it.

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

December 9, 2014

Florida Public Service Commission

Dear Florida Public Service Commission:

Please deny the request from Florida Power and Light to bill the rate payors \$750,000,000 so they can get into the fracking business.

This is a very risky investment for a company with no experience in gas and oil exploration/production. Especially since the rate payors are responsible for all the risk.

In addition, fracking consumes huge amounts natural resources and the by products of the process are extremely dangerous.

Please deny this request.

Thank you

Sincerely,

Lisa Ray

Florida Public Service Commission

Dear Florida Public Service Commission:

Please do not allow this.
You have the owner to help our country.
Please help.

Sincerely,

Shelley Reynolds

Subject: to ALL PSC Commissioners

Hello Public Service Commissioners,

As a resident, business owner, mother of 2 young boys, and leader of an active citizen based not for profit organization that protects the Santa Fe River in north central Florida, I could not be more appalled by the PSC decision last week to not incentivize solar use in public utilities.

And, please do not give FPL or any energy utility the right to fossil fuel frack another State for their customers. Make energy utilities responsible for building solar designs in our state. Bridge fuel found in gas is not our answer to energy independence.

I am not pleased that another assault on our Floridan Aquifer and Florida Springs Heartland is eminent from FPL, SpectraEnergy or Sabal Trails regarding the construction of a natural gas pipeline.

Please consider your leadership on energy and my future here with my family and all residents in our sunshine state.

Merrillee Malwitz-Jipson

Dear Florida PSC,

History will judge us poorly if we fail to embrace the logic and efficiency of solar power NOW. We must value the wellbeing of the planet over profits. We need your leadership NOW.

Comments:

fpl's proposal to seek permission to expand its business to fracking at the expense of its customers is outrageous! first, they are an energy provider company, not an oil and gas supplier, second, they are trying to make its customers pay for their investment in this new industry without any risk to themselves, third, this new venture does not ensure that its customers will benefit from lower energy costs in the present or future, and fourth, they did this proposal to you without advising its customers or the media of its intentions, and fifth, fracking is not a proven, environmentally safe way to extract oil and gas..it has been linked to affecting water quality and causing earth quakes in areas where it is being done. please do not grant them this open checkbook from its customers to pursue fracking in oklahoma for now and in florida possibly in the future. at least table this request until this information has been reviewed by the public and studied by an appropriate commission. thank you for your consideration.

Dec 10, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I AM EXTREMELY WORRIED ABOUT OUR DRINKING WATER. IT'S SO PRECIOUS. TIME AND TIME AGAIN, FRACKING HAS PROVEN TO BE DETRIMENTAL TO THE ENVIRONMENT AND TO OUR DRINKING WATER. DO NOT ALLOW THIS.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Susan Brennan

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Tom Bennett

Sent: Tuesday, December 09, 2014 2:08 PM
To: Office of Commissioner Balbis
Subject: Public Service Commission ?????

Commissioner Eduardo E. Balbis,

Public Service Commission or Private Sector Consortium?

*In my opinion the PSC is a **Private Sector Consortium** that grants the demands of Florida Power and Light. Perhaps a better name for FP&L is **Fleece Plunder and Loot**.*

*FP&L has been granted the right to **charge** customers for infrastructure and maintenance of a **FOR PROFIT** Company, for nuclear power plants that may not be built, storm damage and Customer Charges.*

*An **operating expense** that somehow becomes the customer responsibility. The customer **has to pay** FP&L for maintaining the company's billing records. How often do they service the meter? Yet they are allowed to bill for it on an ongoing basis.*

***Definition of Customer charge:** A fixed monthly amount that covers the cost of service to the meter including installation and the **administrative cost of billing an account**. The customer charge is billed on all accounts regardless of electrical usage and is a component of the base rate*

I have read in the Palm Beach Post Oct 16, 2014:

***FPL is asking the Florida Public Service Commission to allow it to collect \$228,500 from its ratepayers for advocacy against the proposed water rules.** Another operating expense, cost of doing business, they want the customer to pay.*

Somehow they feel that they have the right to pollute and do not have to adhere to the Clean Water Act.

*Their latest foray is the demand to charge customers for **FRACKING**. A **gas fracking expedition** that may or may not be profitable.*

It has been argued that the risks of operating the hydraulic fracturing, or fracking, outweigh the rewards. FPL can't be sure that the natural gas wells will produce enough gas to meet its needs and customers will shoulder the costs of dry wells, environmental impacts and market changes for the next 50 years.

This is an attempt by FP&L to earn a guaranteed profit on their investment and to foster the risk on customers not shareholders.

It was also stated by Jon Moyle, attorney for the Florida Industrial Power Users Group, that FP&L had another motive: profits. The company had built out its power plants with \$1.5 billion investment in upgrading its fleet in recent years, and is now looking to find a way to add new costs to its base rates so that it can continue to enhance shareholder profits.

"How are they going to grow the company? Here's one way: They want to get into the oil and gas business,"

Also from reports:

The PSC, which rarely rejects an FPL request, will decide the fate of the proposal by the end of the year. If approved, the investment will take place next year and FPL is asking for permission to go forward with similar proposals in the future without first seeking regulatory approval.

Their ARROGANCE is beyond comprehension.

The PSC has, in my opinion apparently already made up their mind to grant this request:

The following statement says it all:

PSC chairman Art Graham said the issue was taking the commission into "uncharted territory" and wanted to proceed carefully, in the event the panel's ruling is challenged.

*I repeat the PSC in my opinion is a **Private Sector Consortium** doing the bidding of FP&L. There is **NOTHING** Public about the PSC*

When will the PSC start serving the Public?

Perhaps when we can vote for the people on the commission.

FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Christine Gasco

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mercedes Montes

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Subject: Public Service Commission ?????

Commissioner *Julie Imanuel Brown*

Public Service Commission or Private Sector Consortium?

In my opinion the PSC is a Private Sector Consortium that grants the demands of Florida Power and Light. Perhaps a better name for FP&L is Fleece Plunder and Loot.

FP&L has been granted the right to charge customers for infrastructure and maintenance of a FOR PROFIT Company, for nuclear power plants that may not be built, storm damage and Customer Charges.

An operating expense that somehow becomes the customer responsibility. The customer has to pay FP&L for maintaining the company's billing records. How often do they service the meter? Yet they are allowed to bill for it on an ongoing basis.

Definition of Customer charge: A fixed monthly amount that covers the cost of service to the meter including installation and the administrative cost of billing an account. The customer charge is billed on all accounts regardless of electrical usage and is a component of the base rate

I have read in the Palm Beach Post Oct 16, 2014:

FPL is asking the Florida Public Service Commission to allow it to collect \$228,500 from its ratepayers for advocacy against the proposed water rules. Another operating expense, cost of doing business, they want the customer to pay.

Somehow they feel that they have the right to pollute and do not have to adhere to the Clean Water Act.

Their latest foray is the demand to charge customers for FRACKING.

A gas fracking expedition that may or may not be profitable.

It has been argued that the risks of operating the hydraulic fracturing, or fracking, outweigh the rewards. FPL can't be sure that the natural gas wells will produce enough gas to meet its needs and customers will shoulder the costs of dry wells, environmental impacts and market changes for the next 50 years.

This is an attempt by FP&L to earn a guaranteed profit on their investment and to foster the risk on customers not shareholders.

It was also stated by Jon Moyle, attorney for the Florida Industrial Power Users Group, that FP&L had another motive: profits. The company had built out its power plants with \$1.5 billion investment in upgrading its fleet in recent years, and is now looking to find a way to add new costs to its base rates so that it can continue to enhance shareholder profits.

"How are they going to grow the company? Here's one way: They want to get into the oil and gas business,"

Also from reports:

The PSC, which rarely rejects an FPL request, will decide the fate of the proposal by the end of the year. If approved, the investment will take place next year and FPL is asking for permission to go forward with similar proposals in the future without first seeking regulatory approval.

Their ARROGANCE is beyond comprehension.

The PSC has, in my opinion apparently already made up their mind to grant this request:

The following statement says it all:

PSC chairman Art Graham said the issue was taking the commission into "uncharted territory" and wanted to proceed carefully, in the event the panel's ruling is challenged.

*I repeat the PSC in my opinion is a **Private Sector Consortium** doing the bidding of FP&L. There is **NOTHING** Public about the PSC*

When will the PSC start serving the Public?

Perhaps when we can vote for the people on the commission.

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Nadia Barsamian

December 9, 2014

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Linda Peckett

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Dear Florida Public Service Commission:

Why are we considering fracking in Florida when WE ARE THE SUNSHINE STATE?? Could you please show the leadership and good common sense to go the route of the most sustainable and cost effective means by which to provide power supply for the citizens of the state of Florida? Must we continue the debate of the most pocket lined in defiance of the simplest solutions? Let the voters (not the FPL shareholders) please have a say in forwarding sustainable energy in Florida!

Sincerely,

Karen Bickford

Subject: fpl's request for public financing of their investment into fracking

fpl's request for it's customers to pay for their investment into the oil and gas fracking business is totally unjustified on many grounds. first, they are an energy supply company, not an oil and gas company, second, they are trying to use our money to finance their business venture without our consent, third, there is no guarantee that this will save their customers money in the short run or in the long run, fourth, they are proposing to initially invest in fracking in oklahoma, but eventually they could start fracking in florida which could be a threat to our environment (fracking has been linked to water quality and earthquake issues), and fifth, this whole proposal has not been presented to the public, but was pushed through to your commission in an underhanded way so that public response was bypassed. please use your authority for the good of florida fpl customers and future residents and stop this issue or at least postpone this issue until this can be reviewed by the public for its merits. your consideration on this issue is appreciated. michael gillespie, a long time florida resident

Comments:

based upon the info submitted from conservancy e mail, it appears this could be experimental and costly if permitted in florida at fpl charging the consumer. this should not occur unless approved by state Of fla. Other states should also take a position with known costs to the consumers of fpl interested in follow up information

To: Office of Commissioner Balbis
Subject: Please Deny FPL's Request for Fracked Gas

Dec 9, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mary Nazitto

Subject: Please Deny FPL's Request for Fracked Gas

Dec 9, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Gary Warren

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Meghan Houston

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Tracy Ellison

Dec 9, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

December 8, 2014

Florida Public Service Commission

Dear Florida Public Service Commission:

As an FPL customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Kari Kittur

Dear Florida Public Service Commission:

We need to implement a greater mix of energy sources to power Florida particularly with a focus on sustainable, renewable and abundant sources such as solar. Florida ranks third in the nation for solar potential but 18th for total installed solar power capacity. This needs to change and change rapidly. I don't want to see Floridians burdened with cost recovery for fracking in other people's backyards possibly, despoiling their aquifers when we can easily deploy widespread distributed solar to readily fill the need for our present and future electrical power needs.

Sincerely,

Patty Whitehead

Dear Florida Public Service Commission:

Pursuing unsustainable, environmentally hazardous and naturally degrading means of energy does not reflect values in companies we can support.

Your website states: "[FPL] was recognized in 2014 as the most trusted U.S. electric utility by Market Strategies International..."

-and-

"[FPL's] highly fuel-efficient power plant fleet is one of the cleanest among utilities nationwide".

Pursuit of natural gas and fracking investments will destroy your reputation as an energy efficient and trustworthy company.

I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Florida Public Service Commission

Dear Florida Public Service Commission:

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Sincerely,

Madeline Seefeld

Dear Florida Public Service Commission:

I respectfully request that the Florida Public Service Commission deny the FPL Woodford proposal - I do not approve of fracking & resent that FPL would charge myself and the people of Florida for this incursion & destructive practice.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Sincerely,

Carmel Severson

Comments:

FPL Should not be allowed to FRACK as a source of combustion power generation.
We in the Sunshine State" have aggressively ignored WIND-POWER and SOLAR POWER instead expanding limited resources.
NOW ITS SUGGESTED WE PAY EXTRA TO ENCOURAGE FPL to POLLUTE OUR WATERS.

Also

The idea of charging FPL power customers extra just to EXPAND, FPL's PROFIT MARGIN, to EXPAND FPLs ability to BILL us more is ludicrous.

I reject the idea that FPL should collect twice - The rates are already established - Their profits are remarkable. MUST we feather their bed even more? Must we give FPL EXECUTIVES an even higher rate of return? In what way, do you PUBLIC SERVICE COMMISSION Members actually represent the people?

Should the PUBLIC SERVICE COMMISSION be re-named the FPL EXTRA-SUPER SURPLUS-PROFIT GUARANTEE COMMISSION?

Comments:

FPL should not be subsidized by increasing rates to proceed with a business plan to use fracking for natural gas in Florida (or any other state). They need to expand renewal energy sources, not fossil fuels. Especially since fracking puts our drinking water supply in danger, and no one knows what to do with leftover water from fracking (let alone the chemicals in it.). To protect our precious water supply, Florida must legislate regulations that make business take precautions to ensure public safety and health.

JUDICIAL BRANCH

[Chapter 28](#)
CLERKS OF THE CIRCUIT COURTS

[View Entire Chapter](#)

28.345 State access to records; exemption from court-related fees and charges.—

(1) Notwithstanding any other provision of law, the clerk of the circuit court shall, upon request, provide access to public records without charge to the state attorney, public defender, guardian ad litem, public guardian, attorney ad litem, criminal conflict and civil regional counsel, and private court-appointed counsel paid by the state, and to authorized staff acting on their behalf. The clerk of court may provide the requested public record in an electronic format in lieu of a paper format if the requesting entity is capable of accessing such public record electronically.

(2) Notwithstanding any other provision of this chapter or law to the contrary, judges and those court staff acting on behalf of judges, state attorneys, guardians ad litem, public guardians, attorneys ad litem, court-appointed private counsel, criminal conflict and civil regional counsel, public defenders, and state agencies, while acting in their official capacity, are exempt from all court-related fees and charges assessed by the clerks of the circuit courts.

(3) The exemptions from fees or charges provided in this section apply only to state agencies and state entities and the party represented by the agency or entity.

History.—s. 35, ch. 2003-402; s. 22, ch. 2004-265; s. 10, ch. 2005-236; s. 15, ch. 2007-62; s. 5, ch. 2013-109.

Chapter 350
FLORIDA PUBLIC SERVICE
COMMISSION

View Entire
Chapter

350.06 Place of meeting; expenditures; employment of personnel; records availability and fees.—

(1) The offices of said commissioners shall be in the vicinity of Tallahassee, but the commissioners may hold sessions anywhere in the state at their discretion.

(2) All sums of money authorized to be paid on account of said commissioners shall be paid out of the State Treasury only on the order of the Chief Financial Officer.

(3) The commissioners may employ clerical, technical, and professional personnel reasonably necessary for the performance of their duties and may also employ one or more persons capable of stenographic court reporting, to be known as the official reporters of the commission.

(4) When needed, the commission may engage supplementary qualified reporters at their usual rate of compensation; however, the supplementary reporters shall furnish the commission the original certified transcripts of testimony taken by them.

(5) The commission shall make available to the public counsel the original copy of all transcripts for use and study in the commission offices. If the commission makes any copies of transcripts for internal use and if the public counsel has so requested in writing to the clerk of the commission, the commission shall supply the public counsel with a copy of the transcript at no charge.

(6) The commission shall collect for copying, examining, comparing, correcting, verifying, certifying, or furnishing orders, records, transcripts of testimony, papers, or other instruments no more than the same fees that are allowed clerks of the circuit courts of this state. In cases where the fee would amount to less than \$1, no fee shall be charged.

(7) Copies of commission orders furnished to public officials, newspapers, periodical publications, federal agencies, state officials of other states, and parties to the proceeding in which the order was entered and their attorneys shall be without charge. However, the commission may in its discretion charge fees for the furnishing of more than one copy of any order to any of the foregoing.

(8) The commission shall keep accounting records in which all fees collected by it as provided for herein shall be recorded, together with the amount and purpose for which collected. The accounting records shall be public records. All moneys collected pursuant to this section by the commission shall be deposited in the State Treasury to the credit of the Florida Public Service Regulatory Trust Fund.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 9, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Meghan Houston

Subject: Please Deny FPL's Request for Fracked Gas

Dec 9, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Maria Tomaro

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

patricia maguire

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

I, for one, knew this would rear its ugly head as soon as Scott was bought-I mean re-elected. He has investments in fracking corporations. Our beautiful natural springs are continuous, connected. One fracking screw up, and our water supply for the whole state of FL is ruined.

We as people of Florida, know every fracking state has incidents of water pollution. We do not even have dirt, just shale and limestone!!!
Why not take advantage of Florida's natural energy- the SUNSHINE?

Fracking would be tragic for this state and its natural springs, its Everglades, any area it is done. PLEASE DO NOT ALLOW FRACKING IN FLORIDA. Our state's makeup isn't made for this vile method.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Linda Kyvik

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Betty Osceola

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment.

Dear Public Service Commissioners:

We need to implement a greater mix of energy sources to power Florida particularly with a focus on sustainable, renewable and abundant sources such as solar. Florida ranks third in the nation for solar potential but 18th for total installed solar power capacity. This needs to change and change rapidly. I speak for many Floridians when saying:

we don't want to be burdened with cost recovery for fracking in other people's backyards, possibly despoiling their aquifers, when we can easily deploy widespread distributed solar to readily, reliably and affordably fill our present and future electrical power needs.

Futhermore what guarantee does the Florida ratepayer have that the fracked gas recovered from distant wells will even benefit Florida? It could just as easily be commodified and sold on the open market with the benefit inuring to investors NOT ratepayers. As Public Servants each of you took an oath to act in the Public's interests. FPL's fracking plans are a risky and ill-conceived venture in every regard for Florida and for Floridians and must not be advanced. Floridians demand a Renewable Portfolio Standard for our state in lieu of more fracked gas.

Sincerely,

Patty Whitehead

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Patty Whitehead

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jorge Gonnzalez

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. Florida Public Service Commission

Dear Florida Public Service Commission:

I do not support Fpl fracking!

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Catherine Juliano

Subject: concerning FPL request to get into the fracking business

Come on people! Any idiot knows that this whole fracking thing is ridiculous and will cause nothing but destruction and catastrophe. Even a five year old could see that. There are plenty of untapped and unused methods of energy production but they're just not ones that people have their stocks invested in or can make a load of money pursuing. When all the fish are dead and all the water is polluted what are you going to do, throw some money at people? You can't eat or drink money - get a clue.

To: Consumer Contact
Subject: Charging the Public for Fracking

Not only are the frackers gravely endangering Florida's water supply and environment, but now FPL wants the citizens of Florida to pay the bill so that a few can make a lot of money. Fracking in Florida, especially in and around Collier County, is extremely dangerous to the purity and quantity of the water supply and is not worth the short term profits.

It is the responsibility of the government to protect the public water supply from special interests out for their own profit. The amount of gas obtained does not warrant the risks involved.

As a citizen of Florida, I am insulted at the gall of the proposal to have the consumer pay for the contamination of its water and the wasting of millions of gallons of our scarce supply of clean water.

Stop catering to special monied interests and do the job you were elected to do. Let FPL put solar panels on the roofs of Florida instead of in fields and instead of building nuclear plants or coal fired plants. Do the right thing. Thank you.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Paula Tagalos

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Dan McCarthy

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mark Grzegorzewski

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Rob Florio

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

RC Weimann

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Judy Loose

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

S Purtell

33785

Angela Charles

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Van Deist

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

In addition to these risks, this project could cost customers an estimated \$750 million a year, while allowing Florida Power & Light to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Kelli LeBlanc

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

Florida is far too fragile for fracking! If only for economic reasons, think what poisoning the water, creating more sinkholes, and decimating Florida's unique ecology would do to tourism. The loss to future generations of Floridians would be irreparable, but you don't have to care that far ahead to know this is a bad idea just for short term gain, and those who support it won't be popular after the first disaster. Think about your grandchildren or think about yourself...and stop this in its tracks, Money can't buy back Florida...don't sell us out.

If you're not convinced, run a referendum and see. Remember the support for Amendment 1 in the last election.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

Based solely on both the problems resulting from fracking, and the industry's refusal to divulge the chemicals used in the process, fracking should be outlawed.

Why is it important for government to be transparent but not so for companies using potentially cancer causing chemicals with long active lives?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

bob wolf

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Helen Mourra

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

The Sunshine state should be the Solar powered state not the toxic swamp state which would happen if FPL is allowed to frack.

Our right to clean water, land and air, essential to life, liberty and the pursuit of happiness trumps FPL's request to frack and pollute our drinking water!

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Bernice Nepon

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Miriam Rahmanparast

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Kellee Herington

NO FRACKING IN FLORIDA - LAND OF THE SINKHOLES. Ask any property insurance company - they know fracking results in tremors, earthquakes and unstable ground. We all know that oil companies do not pay for the damage they cause. Citizens do not want to pay for damage caused by oil companies.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jann Levin

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Thomas Rascon

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Nicola & Barbara Giorgio

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

As a citizen of Florida I am outraged at FP&L's request to invest in fracked gas.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking contaminates air and water, is a danger to public health and may even cause earthquakes.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

I am not against tracking in all cases, but the Florida aquifer and the marvelous springs that give water and sport to rich and poor alike will inevitably be damaged by tracing in our especially fragile environment.

I must say, I am really troubled by the recent record of FPL, for a fistful of dollars you are willing to pollute our water and, in another inexplicable case, put what amounts to a surcharge on solar power.

These actions run counter to energy and water security and constitute, in a time of war, unpatriotic acts.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Frank McNeil

Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

PS. If you start fracking, you can say good-bye to tourist dollars...

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Drew Duncan

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Joan DeVaughn

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Don Crist

We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Amanda Kirkpatrick

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

It is bad enough that there might be fracking in the Midwest, but to add it to the environment near the Everglades is absurd. SAY NO.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Lynn Wheeler

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Gregory Esteve

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

Have you heard of sink holes? Do you know the geology of Florida? Have you heard of the environmental issues already impacting our aquifer?

Yes all of these are linked to why we should not crack in Florida.

There are already numerous reports on the issues with fracking in states that have a "better" geological framework to handle fracking. Florida's geology is soft porous limestone. Think of your kitchen sponge full of water, that is our geology and water supply. It is fragile and vulnerable. Because of our geology, fracking in Florida is an environmental disaster waiting to happen. Please encourage more investment into wind and solar. Florida is probably one of the best places for these technologies. And all of the nay sayers that claim we don't have enough sunlight need only look to Germany and other countries with far less sun that are doing just fine. Why not invest in clean energies now, rather than destructive ones?

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.
