Docket No. 150142-EU Petitioner Responses to Staff Data Request requested by Ms. Rosanne Gervasi via letter dated 5/27/2015 The following responses and Support Documentation is included in pdf form.

For Clarity all Support documentation is provided at the end of my responses:

1. The store experienced a small fire in 2011 due to a faulty electrical component and the Disconnect Switch was locked out by the Fire Marshall until resulting damages could be repaired. The Previous Owner of the Store hired an Engineer, filed the required building permits, and hired a contractor to make the repairs. During the timeframe while the repairs were being made the Association Manager (who serves at the discretion of the board of Directors and does what they request) called the Utility Company and had them disconnect the power supply lines to the locked out Disconnect Switch. Please note that the fire was not located in the vicinity of the Disconnect Switch or power supply lines and it was not requested by the Fire Marshall to disconnect the power supply lines. This is when I first wrote to the Directors asking them to reconnect the electric supply to the Store and this is when I suspect I first became another target for their discriminatory actions. Please note that I never received one phone call, email, or comment from any of the Directors on my letter request.

In accordance with the building permits all repairs were completed and all building department inspections were completed with the exception of the Final Inspection which required the building to have electric power. At this point the Condominium Manager refused the previous store owner's request to have the Utility Company reconnect the power supply lines to the building thereby preventing the Store from reopening. <u>Support Documentation</u>

- A. Fire Marshall report dated (not available at this time will forward when received)
- B. Orange County Building Permit 7/15/11
- C. Ken Wegner letter to Association Board Directors 11/20/11.

2. There is a history of bad relations between the Condominium Association and the Developer (Sun Resorts) that also owned and operated the Store. This history is based on failed friendships; bitter memories of terminated employees and terminated Developer appointed Directors (several of whom now served as Directors); and the inability of Sun Resorts to make the monthly Association payments, for lots the Developer owned, when the economy hit the skids (gas prices spiked causing the snowbirds not to come, or quit paying their membership dues, and quit buying the developer's remaining lots in the Resort). Basically, the developer could not pay his dues or property taxes, but continued to pay his electric bills and water/sewer/trash removal bills (on the Store, on the Developer's personal Residence and on some additional buildings the Developer owned all subject to a private mortgage). The Association initiated legal action in October, 2009 to foreclose on the Sun Resort Properties, but after many months of legal saber rattling and no results a Board of Directors plan to disconnect electric services was enacted. This prompted a Sun Resorts lawsuit counterclaim 2010-CA-006703-O (later consolidated into lawsuit Counterclaim Case 09-CA-34416-O that resulted in a court order granting Sun Resorts an injunction preventing the Association from disconnecting the electric services. It was after

this injunction was issued that the power to the Store was disconnected which following the precedence of the court injunction was in my opinion an illegal action.

# Support Documentation

- D. CRCA Lawsuit History dated 6/7/2014
- E. Sun Resorts Lawsuit 09-CA-34416-O Counterclaim dated September 4, 2012
- F. Orange County injunction Order

3. (A). Immediately after I bought the Store at a Tax Deed Sale in September of 2014, I contacted the Manager of the Association and requested that the Power be reconnected and I was told that it could not be connected due to the fact that Wiscan, LLC was a for profit enterprise while the Association was a not for profit organization and therefore it would be unlawful for the Association to provide power or any other services as provided for a fee to the previous Store Owner.

I then contacted Duke Energy and they sent an Engineer to the site and he informed me that the property was landlocked by the Association and I could not use any of the existing overhead service to provide a dedicated service to the store. Furthermore, the Engineer advised that I could not bring a new overhead service to the Store because it was against Duke Energy Policy for new overhead lines to cross over existing service lines. The only way to bring a new service to the facility would be to go underground and that would require an easement from any owners of land which I need to go under. The Engineer said he would prepare a back of the envelope cost estimate on what seemed to be a feasible routing, but I never received it and I neglected to follow up with him because the underground solution seemed like a bad approach to me. Three (3) easements would be required, expensive construction going several blocks under two roads in an area with many existing obstacles, unmapped underground services, and traversing areas where future construction and occupancy is anticipated. The estimated cost is \$40,000 for legal, engineering, permitting, and construction with a one year implementation time (11 months to obtain easements).

I contacted a couple of attorneys and each told me the Association was wrong and that the Association could provide electricity and other services to the store but the attorneys could not guarantee a result, provide a fixed cost for legal fees, or a time frame for a judgment. Additionally, it occurred to me that a Judge could rule that the entire community had to be placed on the individual meter Duke Energy plan which would be very expensive for the community to do and this ruling would be blamed on the Store and it's owner (Ken Wegner a newly elected Director of the Association, elected 12/2014).

These alternative solutions <u>do create a financial hardship</u> as the initial costs and implementation times are significant and success is not guaranteed. This Store was never anticipated to be a big money maker, but instead it was intended to return a valued service center and social benefit to the community. Located adjacent to the Community Pool and within walking distance of all 750 residences; in addition to providing basic groceries and minor services (delivery, bulletin board, public telephone, and free information), the store included a small snack shop and game room where neighbors would meet and socialize.

I believe the Association refused Wiscan, LLC electric service in a discriminatory action because the Association Directors believed that they would own the Store when the lawsuit was settled and were shocked when it was sold at a tax deed sale. In fact, as Mr. Randy Jackson ( a Director at the time) will testify the settlement agreement offered by the Association to Sun Resorts late in 2014 had to be withdrawn and corrected when the Store was sold. If Wiscan, LLC had not bought the Store at the tax deed sale, ownership would have been transferred to a California Company that owned the tax liens and had called for the sale ( Wiscan, LLC made the only bid at the sale). Please note that the Association bylaws prohibit the Association from buying any Real Estate without the consent of the Owners and in the last 20+ years the Association has never received the consent of the Owners (not even to hold an annual meeting).

3.(B). The purchase of the Store was motivated by a desire to return what I considered to be a valued service center to the community. Prior to purchasing the Store I was told by one of the Directors of the Association of a person that had offered to buy the Store from the Developer but the deal fell through because the person died. I told the Director that he and I should buy it and end this ridiculous situation once and for all. He did not seem to keen on the idea, but he did not mention that if somebody did buy the store they would be denied services (I don't believe he felt this way). As a small private company a one year delay and a \$40,000 investment for electrical service is a substantial hardship; it doubles my initial investment and there is no financing available from Duke Energy or outside investors. As an engineer it also is a mental hardship for me because the alternative solutions I've proposed only require some jurisdictional consideration and are so quick and easy to implement.

3.C. Obtaining an underground easement from the Association and the other private parties would require legal, engineering, and permit work that is estimated at \$20,000, actual construction is estimated at another \$20,000 for labor and materials assuming Duke can provide the necessary metering equipment for \$2,000 and the routing is straight line accomplished by simple water jetting. If the Association opposes the easement (challenges in court or delays approval), or the actual routing is complex due to special requirements imposed by the landowners or County or Duke Energy (special casings, construction methods, preferential routing requirements, a myriad of Florida electrical safety rules and regulations pertaining to underground transmission lines that I'm presently unaware of, or

unforeseen site problems) the estimated costs could easily double or triple. As the owner of Technology Properties, a company that was sued by the Association over what was later determined to be an improper land ownership claim, advised me "The Association has an unlimited legal budget and you don't." It cost Technology Properties over \$100,000 in legal fees before the Association settled.

## Support Documentation

# K. Technology Properties settlement dated 11/05/2014

4. The park is serviced by a Duke Energy master meter located outside the park, but the association owns all the individual meters inside the park and handles all collections. The association meters are old analog meters and would not be acceptable to Duke Energy and would require replacement with Duke Energy's current digital meters. Additionally, the Park owns the majority of the <u>underground</u> wiring used in the park and the quality of this wiring would not meet Duke Energy load and termination requirements and would require replacement. I've estimated \$300,00 (\$250 per meter and \$125,000 for underground wiring assuming it can be accomplished as simple repair and no engineering or permitting is required) but others in the park seem to recall a Progressive Energy estimate of \$1,000,000). In addition to the implementation costs the monthly electric costs would also be higher as evidenced by the bills from a property in the Association and a nearby community that has Duke Energy individual meters. Note that the Association electric bills have no monthly minimum charges and a lower charge per kilowatt unit.

# Support Documentation

- L. CRCA monthly electric bill
- M. Zellwood Station monthly electric bill

5.A. Yes the store would be billed for the amount of electricity the store actually consumes. The Association also rents some equipment from Duke energy (fixed charge every month) and I offered to pay for a part of that as well.

5.B. No, not specifically, I'm not sure if Duke Energy looked at it since their position is that it was against PSC regulations; but with their digital meters and computerized billing it should not be a difficult problem. Their marketing campaign theme is "Power for your life; highlights memorable moments in our customers' lives that Duke Energy and our employees quietly help to make happen". When it comes to the details I would do whatever Duke Energy needs, including maintaining a minimum balance to ensure there is no late payment. I have two Duke accounts at Zellwood Station and they manage to send me the bills in one envelope, but they will not let me send them one payment online, but they do allow me to prepay. I have seven accounts with Wisconsin Energies and they send me the bill in one envelope and let me pay them with one online payment. Again, I don't think billing would be an overwhelming problem, but if Duke can't do it they could just switch to my second recommendation and put the master meter in my name and I will collect from the Association. The Association holds a \$200

deposit from most of the meter holders and that could be prepaid to Duke to ensure payment (the deposits exceed the monthly bill from Duke Energy).

6. The Store was built in 1970, according to Orange County Property Appraiser Records, and had electric service until it was disconnected at the direction of the Association Manager in 2011. The Association was formed in November of 1982 and took over the primary meter sometime thereafter. I've attached the Amended counterclaim from Orange County Case 09-CA-34416-O (See Item 2) which speaks to the illegality and discrimination involved in the termination of Electric Service to the Store called "Trading Post" by the previous owner. For your information this case was later combined with Orange County Case 2010-CA-006703-O which resulted in a settlement negotiated by the Association's Directors Liability Insurance Company that paid \$125,000 to the previous Store Owner (Developer) and gave the Association some land controlled by the Developer (previous store owner) that is encumbered by back taxes and mortgage. This legal action cost the litigants over \$700,000 and over 5 years to settle. Recently a petition has been prepared and is being circulated to recall the Association Directors that orchestrated these discriminatory practices. Also attached is a Nextdoor article written by a former director that has offered to testify under oath to their discriminatory practices (Nextdoor is a National Community electronic Bulletin Board and Blog).

# Support Documentation

- N. Sun Resorts Settlement Agreement
- O. Director Recall Petition
- P. Nextdoor Randy Jackson excerpt

7A,7B, 7C I, Ken Wegner, did add the language shown in the parenthesis when I received the staff comments. I did this as a matter of record because these items were discussed with the staff, but their comments made no mention of these items and therefore their comments were in my opinion incomplete and somewhat misleading. Please note that the first staff member I spoke to told me over the phone that there was nothing in 25-6.049 that would prohibit the installation of a second meter and another staff member told me over the phone there was nothing in the tariff agreement that would prohibit the installation of a second meter. Therefore, I was surprised when I received the staff email and felt that it needed clarification to reflect my telephone discussions with the staffers. Please note that I am paying Orange County Property Taxes on an improved property, but I am being denied basic Utility services and therefore use of this property due to the discrimination of an Association board with a history of discrimination and manipulating the legal system to achieve their objectives.

Sincerely,

Ken Wegner

#### C. Ken Wegner letter to Association Board Directors 11/20/11.

6/8/2015

Clarcons\_Board\_Elect. (2).docx

**TO: All Board Members** 

11/22/11

SUBJECT: Need to Restore Power to the Trading Post

After attending the Candidates Meeting at the Home Owner Forum and hearing the sentiment of 1 Home Owners at the meeting, talking informally with Erich, and exchanging emails with Deidre, 1 that it is imperative that the power be restored to the Trading Post when the repairs are complete and the Fire Marshall removes his tag. My reasons are as follows:

- 1. This would not have been done if there wasn't a fire as the Courts had stopped the termination until the matter could be decided by the Court and for the interim a bond was placed to ensure payment of electrical usage.
- 2. Lee Adkinson announced that he is filing suit against the association for interfering with hi right to earn a living and announced that he will seek damages in excess of \$1,000,000. No providing the Trading Post power will be another example of the abuse he has suffered an this after he placed \$30,000 bond at the Court's request.
- 3. Not supplying power to the Trading Post infuriates many of the voters in the park and eras voter's complimentary comments on the front entry improvements.
- 4. If Lee prevails in his lawsuit it will result in a minimum \$1,250 special assessment for each and each million he is awarded. If the Association paid \$20,000 for a dedicated power sup as some agreements and judges recommended, it would result in less than a \$30 special assessment per lot. Simply put it is not worth the risk to not restore service to the Trading Post.
- 5. Kevin Burke has told me he should have the Fire Marshall's tag cleared around 12/1/11. I would ask the board be proactive and have the Power Company coordinate with Kevin to restore the power main prior to his completion to ensure a smooth start-up. It might ever help the incumbents in the elections if mothers can get milk for their children.

I would appreciate an email or phone call from each board member telling me if they are for or against restoring the power and if required, I hereby formally request that the board schedule an emergency meeting and vote on this as the record of the vote would help some Owners determin candidate preferences and could have bearing on future legal action. I don't care who is at fault a who did what to whom; I just don't want the Association to shoot itself in the foot. Let the Court's decide the right thing to do for the long term as they would have done without the fire.

Thanks,

- N. Sun Resorts lawsuit Settlement Agreement dated 12/09/2014 (large document sent as separate pdf)
- O. Director Recall Petition

## Clarcona Resort Condominium Association

# **RECALL PETITION**

According to Florida Statutes 718.301 (j) Recall of board members, any member of the board of administration may be recalled and removed from office **with or without cause** by the vote or agreement in writing by a majority of all the voting interests. A special meeting of the unit owners to recall a member or members of the board of administration may be called by 10 percent of the voting interests giving notice of the meeting as required for a meeting of unit owners, and the notice shall state the purpose of the meeting.

This is a Recall Petition to remove certain 2015 Board Members.

Following the release of the CRCA vs Sun Resorts and Technology Property lawsuit Settlement Agreements, in late 2014 but detailed results withheld from Unit Owners until after the 2014 election, it is now recognized that the results of these long time lawsuits were not in the best interest of the Association and actually resulted in the loss of Hundreds of Thousands of Dollars of Association Funds.

The (combined) CRCA vs SRI lawsuit was to recover \$250,000 in unpaid assessments. NO Assessments were recovered and the CRCA spent \$250,000 in legal fees trying to recover the original \$250k. This was a loss of \$500k of Association Funds over the past 4 years plus our D&O Liability Insurance had to pay a settlement of \$125k to Sun Resorts based on the Counter lawsuit. \$625k of Your Money is gone!

The CRCA vs Technology Property lawsuit was to recover a clear title to property claimed to be owned by the CRCA. The result was the CRCA did not own the property as claimed, and a settlement of \$25,000 had to be paid to Technology Property plus over \$100,000 was lost in legal fees and thousands more in lost walls and other valuable considerations that had to be given to Technology Property.

These Legal/Financial matters are now a matter of open Public Record and details are available upon request by Any Owner. (Make Your request to Manager, CRCA)

For the past 6 years Our Board Members have told YOU that our Infrastructure was sound, no issues, as reported in Gazette after Gazette and repeated Presidents Annual messages too Owners. Also, that our Reserves were strong and capable of performing for the intended use. Unfortunately, none of these statements are the full truth, much was a total falsehood.

While telling the Owners, We were looking good on our lawsuits and also that our Sewer Plant WAS sound and meeting all requirements, the truth was there was little to no chance of recovering the \$250k, we took NO steps to protect the major asset that might have been transferred to the CRCA, and that the CRCA had been on notice, (by the FDEP) since 2004, that the Sewer plant must meet the current 2004 guidelines by 2014 and that the current plant was not meeting those guidelines as required. It took us 10 years to address the problems but then only after we had been fined by the FDEP for failure to meet the Guidelines. (another \$3,000 wasted)

It is Time to Change Our Direction, it is time to protect our community from even more hundreds of thousands in lost dollars, due to poor or negligent planning and a sincere lack of honest and forthright Directors.

We, the undersigned hereby request a Recall election be held to remove the following Directors from the 2015 Board of Directors:

Vince Bufalini, Jim Botsacos, Peter Anzelon, Gary Baugh, Kevin Jarvis, Erich Hohm and Charlie Moore.

## P. Nextdoor Randy Jackson excerpt

6/8/2015

С

Nextdoor Clarcona: General

If the level of dues was the main issue, the association would not have thrown away \$5, 6, 7 hundred thousand dollars of Association money chasing a personal vendetta. "We we will crush them (Sun Resorts), take over their property and drive them from our community". Yes, those words were told to me by officers on our BOD, almost three years ago. (owners names were used – not Sun Resorts) And, btw, I have agreed to testify under oath to that statement, which has been repeated a number of times, not just once and by more than one person.
