FILED NOV 24, 2015 DOCUMENT NO. 07556-15 FPSC - COMMISSION CLERK

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Petition for determination of need for Okeechobee Clean Energy Center Unit 1, by Florida Power & Light Company. DOCKET NO. 150196-EI ORDER NO. PSC-15-0546-PCO-EI ISSUED: November 24, 2015

ORDER GRANTING IN PART, AND DENYING IN PART, FLORIDA POWER & LIGHT COMPANY'S MOTION TO STRIKE OR EXCLUDE PORTIONS OF THE DIRECT TESTIMONY OF NATALIE A. MIMS FILED ON BEHALF OF THE SOUTHERN ALLIANCE FOR CLEAN ENERGY

On September 3, 2015, Florida Power & Light Company (FPL) filed a Petition and supporting testimony to determine need for the construction of a combined cycle generating unit in Okeechobee County, together with the associated facilities, including transmission lines and substation facilities, pursuant to Sections 366.04 and 403.519, Florida Statutes (F.S.), and Rules 25-22.080, 25-22.081, 25-22.082, and 28-106.201, Florida Administrative Code (F.A.C.). In its Petition, FPL proposed to construct a natural gas, combined cycle power plant, with an expected summer peak rating of about 1,622 megawatts (MW), at a greenfield site in northeast Okeechobee County owned by FPL. According to FPL's petition, the Okeechobee Clean Energy Center Unit 1 will enable FPL to meet a projected need for additional generation resources that begins in 2019, continues into 2020, and increases each year thereafter.

On September 16, 2015, Order No. PSC-15-0394-PCO-EI (Order Establishing Procedure) was issued, scheduling the matter for an administrative hearing on December 1–2, 2015. On September 23, 2015, the Southern Alliance for Clean Energy (SACE) filed a Petition for Intervention, which was granted by Order No. PSC-15-0424-PCO-EI.¹ On October 14, 2015, SACE filed testimony and supporting exhibits of two witnesses, Natalie A. Mims² and John D. Wilson.³ On October 26, 2015, FPL filed rebuttal testimony and supporting exhibits of Dr. Steven R. Sim and Richard Feldman.⁴ On November 6, 2015, FPL filed a Motion to Strike or Exclude Portions of the Direct Testimony of Natalie A. Mims Filed on Behalf of SACE.⁵ On November 16, 2015, SACE filed a Response in Opposition to FPL's motion.⁶ The parties presented oral argument on the motion and response at the Prehearing Conference held on November 17, 2015.

Pursuant to Rule 28-106.211, F.A.C., as Prehearing Officer in this proceeding, I am tasked with the duty of issuing rulings on prehearing motions. I have carefully considered FPL's motion and SACE's response, reviewed the testimony of SACE Witness Mims, and heard the argument of counsel for the parties.

⁵ Document No. 07094-15, FPL's Motion to Strike or Exclude Portions of the Direct Testimony of Natalie A. Mims Filed on Behalf of SACE, filed in Docket 150196-EI.

⁶ Document No. 07258-15, SACE's Response in Opposition to FPL's Motion to Strike or Exclude Portions of the Direct Testimony of Natalie A. Mims, filed in Docket 150196-EI.

FPL's Motion to Strike

In its motion, FPL seeks to strike or exclude from inclusion in the record page 5, line 9 (starting at "In the FEECA docket...") through page 17, line 18 of Witness Mims' Direct Testimony. FPL asserts these portions of Ms. Mims' testimony attempt to re-litigate and/or seek reconsideration of Commission Order No. PSC-14-0696-FOF-EU, which set numeric conservation goals for FPL.⁷

FPL argues it is untimely for SACE to seek reconsideration of Order No. PSC-14-0696-FOF-EU, which was issued December 16, 2014. Further, FPL contends reintroduction of the same evidence that we previously considered, and determined not to be persuasive is improper and inconsistent with the doctrines of administrative finality, collateral estoppel, and *res judicata*. FPL also argues it would be an inefficient use of the Commission's time and resources to consider, for a second time, evidence that it previously considered and declined to adopt. Further, FPL argues that SACE, through Ms. Mims' testimony, attempts to re-litigate our final order where we set the most recent numeric conservation goals for FPL and that administrative finality prohibits further review. FPL asserts that should its motion be granted, it will withdraw the portions of FPL Witness Sim's rebuttal testimony that addresses the challenged portions of Witness Mims' testimony.

SACE's Response in Opposition

In its response, SACE requests that FPL's motion to strike be denied. SACE asserts that it is not, through Witness Mims' testimony, requesting reconsideration of, or attempting to relitigate, the Commission's Final Order No. PSC-14-0696-FOF-EU. SACE contends the purpose of Witness Mims' testimony at issue is to demonstrate that there are additional conservation measures "reasonably available" to FPL that might mitigate the need for the OCEC Unit 1. SACE acknowledges that the Commission was required to set "appropriate" or "reasonably achievable" conservation goals in Docket No. 130199-EI. However, SACE argues that the issue in this docket, pursuant to Section 403.519, F.S., is whether there are additional "reasonably available" conservation measures that may mitigate FPL's need for the OCEC Unit 1, which is distinct from the issue of "appropriate" or "reasonably achievable" conservation measures. Therefore, SACE asserts because the issue in this docket and Docket No. 130199-EI are separate and distinct, administrative finality, collateral estoppel, and *res judicata* are not applicable. Because there is no legal basis for striking or excluding Witness Mims' testimony, SACE further argues that to strike testimony based on administrative efficiency would be erroneous as a matter of law.

⁷ Order No. PSC-14-0696-FOF-EU, "Final Order Approving Numeric Conservation Goals," issued on December 16, 2014, in Docket 130199-EI, <u>In Re: Commission review of numeric conservation goals (Florida Power & Light Company)</u>.

<u>Ruling</u>

FPL argues that SACE attempts to challenge the Commission's final order in Docket No. 130199-EI, through Witness Mims' testimony, is barred by the doctrine of administrative finality. The doctrine of administrative finality applies to final orders of the Commission, and both the parties and the public are entitled to final agency orders they can rely upon. While an agency's power to modify its orders is "inherent by reason of the nature of the agency and the functions it is empowered to perform," this power is not without limitation.⁸ FPL correctly describes the doctrine of administrative finality, which limits such power as stated by the Florida Supreme Court in <u>Peoples Gas v. Mason</u>:

[O]rders of administrative agencies must eventually pass out of the agency's control and become final and no longer subject to modification. This rule assures that there will be a terminal point in every proceeding at which the parties and the public may rely on a decision of such an agency as being final and dispositive of the rights and issues involved therein. This is, of course, the same rule that governs the finality of decisions of courts. It is as essential with respect to orders of administrative bodies as with those of courts.

Peoples Gas v. Mason, 187 So. 2d 335, 339 (Fla. 1966).9

Even when finality has attached to an order, the Commission has limited authority to modify prior orders where public interest warrants such modification because of changes in conditions or circumstances not present in the previous proceedings.¹⁰ However, that is not the case here.

The Commission's Final Order in Docket No. 130199-EI sets numeric conservation goals for FPL. In that proceeding, the Commission took into consideration evidence proffered by SACE regarding the methodology used by FPL to set conservation goals. The issues already resolved in Order No. PSC-14-0696-FOF-EU, issued in Docket No. 130199-EI, are not appropriate issues to be raised in this docket.

SACE's argument that Witness Mims' testimony does not challenge Final Order No. PSC-14-0696-FOF-EU is incorrect given the sum and content of Witness Mims' testimony. Unlike the testimony of SACE Witness Wilson, a review of witness Mims' testimony shows that the issue of whether reasonably available alternative conservation measures, in addition to the

⁸ <u>Reedy Creek v. Fla. Public Serv. Com</u>, 418 So. 2d 249, 253, (Fla. 1982); <u>Richter v Fla. Power Corp.</u>, 366 So. 2d 798, 800 (Fla. 3rd DCA 1979).

⁹ <u>See also, Austin Tupler Trucking v. Hawkins</u>, 377 So. 2d 679 (Fla. 1979) (finding that the Commission could not reopen dormant trucking certificate case after time for reconsideration had passed); <u>Fla. Power Corp. v. Garcia</u>, 780 So. 2d 34, 44 (Fla. 2001) (citing with approval <u>Austin Tupler</u>).

¹⁰ See, Peoples Gas v. Mason, 187 So. 2d at 339; <u>Austin Tupler Trucking v. Hawkins</u>, 377 So. 2d 681; <u>Fla. Power</u> <u>Corp. v. Garcia</u>, 80 So. 2d at 44.

DSM reasonably achievable goals, is not addressed. In fact, Witness Mims' testimony contradicts SACE's arguments in opposition to FPL's motion that SACE does not seek to challenge the Commission's final order in Docket 130199-EI.

As outlined in attachment A to FPL's motion, the arguments made by Witness Mims' testimony in this docket are virtually identical to her testimony filed in Docket 130199-EI.¹¹ In the 18 page Direct Testimony filed by Witness Mims in this docket on behalf of SACE, there are over 20 references to Docket No. 130199-EI. Tellingly, Witness Mims' testimony does not address FPL's witnesses' testimony filed in the instant docket. Instead, Witness Mims' testimony challenges the direct testimony of FPL's witnesses in Docket 130199-EI, including the testimony of FPL's Witness Koch, who is not a witness in this proceeding.

The testimony clearly challenges the Commission's findings in the final order in Docket No. 130199-EI by stating that FPL's calculations are flawed because it used erroneous methodology in that docket. Witness Mims' testimony attempts to advance SACE's arguments rejected by Final Order PSC-14-0696-FOF-EU, by stating that the energy efficiency goals proposed by SACE would have resulted in more savings than what the Commission ultimately approved. Furthermore, Witness Mims' Direct Testimony Exhibit NAM-2 is the same exhibit that was attached to her testimony filed in Docket No. 130199-EI. Thus, I find Witness Mims' testimony to be an attempt to inappropriately revisit the evidence and findings of this Commission in Docket 130199-EI and an untimely challenge to Final Order PSC-14-0696-FOF-EU.

I agree that, pursuant to Section 403.519, F.S., SACE may offer testimony and provide evidence of <u>additional</u> conservation measures that are reasonably available to FPL that may mitigate the need for the proposed power plant. Witness Mims' testimony does not accomplish what it is purported to do in SACE's response to FPL's motion (i.e., proffer evidence of additional reasonably available conservation measures). Upon review of the portions of Witness Mims' testimony that FPL moves to strike, I find that the effect of allowing it in the record would be allowing SACE to re-litigate the Commission's Final Order in Docket No. 130199-EI. Moreover, I find no change in circumstances or conditions that would require us, in the public interest, to modify Final Order No. PSC-14-0696-FOF-EU. Finally, in making this ruling, I do not need to address the arguments regarding collateral estoppel, *res judicata*, or administrative efficiency.

For the reasons stated above, the portions of Witness Mims' testimony, Page 2, Line 6, Page 5, Line 9 (starting at "in the FEECA docket...") through Page 16, Line 19, and Page 17, Line 7 (starting with "FPL continues...") through Line 18, as shown in Attachment "A" to this Order, shall be stricken. Exhibit NAM-2 to Witness Mims' testimony shall also be stricken. Page 17, Lines 3-7 (ending "...efficiency than with less.") of Witness Mims' testimony shall not be stricken as it addresses how FPL determines the best generation option in this present proceeding.

¹¹ Document No. 07094-15, Attachment A to FPL's Motion to Strike or Exclude Portions of the Direct Testimony of Natalie A. Mims Filed on Behalf of SACE, filed in Docket 150196-EI.

Pursuant to its motion, FPL shall withdraw the portions of FPL Witness Sim's Rebuttal Testimony discussing the stricken portions of Witness Mims' Direct Testimony, which include: Page 4, Lines 4-6; Page 6, Line 14; Page 8, Lines 17-23; Page 51, Line 8; Page 51, Lines 10-13; Page 53, Line 19 – Page 58, Line 12; Page 58, Line 17; Page 62, Line 20; Page 62, Line 22 – Page 63, Line 7; Page 63, Lines 8-9; Page 64, Lines 20-22; Exhibit SRS-6: Pages 10-14; and Exhibit SRS-12 in its entirety.

Based on the foregoing, it is

ORDERED by the Florida Public Service Commission that Florida Power & Light Company's Motion to Strike or Exclude Portions of the Direct Testimony of Natalie A. Mims, filed on behalf the Southern Alliance for Clean Energy is granted in part and denied in part, as described herein. It is further,

ORDERED that the Direct Testimony of Natalie A. Mims, filed on behalf the Southern Alliance for Clean Energy shall be stricken as attached hereto as Attachment "A." It is further,

ORDERED that Florida Power & Light Company shall withdraw the portions of the Rebuttal Testimony of Dr. Steven R. Sim outlined herein that address the stricken portions of Witness Mims' Direct Testimony and shall file Amended Rebuttal Testimony of Dr. Steven R. Sim by 12:00 p.m. on Wednesday, November 25, 2015.

By ORDER of Commissioner Ronald A. Brisé, as Prehearing Officer, this <u>24th</u> day of <u>November</u>, <u>2015</u>.

RONALD A. BRISÉ Commissioner and Prehearing Officer Florida Public Service Commission 2540 Shumard Oak Boulevard Tallahassee, Florida 32399 (850) 413-6770 www.floridapsc.com

NOTICE OF FURTHER PROCEEDINGS OR JUDICIAL REVIEW

The Florida Public Service Commission is required by Section 120.569(1), Florida Statutes, to notify parties of any administrative hearing or judicial review of Commission orders that is available under Sections 120.57 or 120.68, Florida Statutes, as well as the procedures and time limits that apply. This notice should not be construed to mean all requests for an administrative hearing or judicial review will be granted or result in the relief sought.

Mediation may be available on a case-by-case basis. If mediation is conducted, it does not affect a substantially interested person's right to a hearing.

Any party adversely affected by this order, which is preliminary, procedural or intermediate in nature, may request: (1) reconsideration within 10 days pursuant to Rule 25-22.0376, Florida Administrative Code; or (2) judicial review by the Florida Supreme Court, in the case of an electric, gas or telephone utility, or the First District Court of Appeal, in the case of a water or wastewater utility. A motion for reconsideration shall be filed with the Office of Commission Clerk, in the form prescribed by Rule 25-22.0376, Florida Administrative Code. Judicial review of a preliminary, procedural or intermediate ruling or order is available if review of the final action will not provide an adequate remedy. Such review may be requested from the appropriate court, as described above, pursuant to Rule 9.100, Florida Rules of Appellate Procedure.

In re: Florida Power & Light Company for Determination of Need for Okeechobee Clean Energy Center Unit 1

DOCKET NO. 150196-EI

1 I. INTRODUCTION

- 2 Q. Please state your name, position, and business address.
- A. My name is Natalie Mims. I am a principal at Mims Consulting, LLC and my
 business address is 1035 Santa Barbara Street, Suite 8, Santa Barbara, California
- 5 93101.
- 6 Q. On whose behalf are you testifying?
- 7 A. Southern Alliance for Clean Energy ("SACE").

8 Q. Please summarize your qualifications and work experience.

9 A. I graduated from the Pennsylvania State University in 2002 with a Bachelor of 10 Arts degree in English and Political Science. I received a Master of Environmental Law and Policy from the Vermont Law School in 2004. Since 11 then I have worked on a wide range of energy and environmental policy issues, 12 13 including energy efficiency potential studies; energy efficiency program design and implementation; and evaluation, measurement and verification of efficiency 14 15 programs. A copy of my resume is included as Exhibit SACE-NAM-1. 16 Q. Have you testified previously before the Florida Public Service Commission

- 17 ("the Commission")?
- 18 A. Yes. I testified in front of the Commission during the 2014 Florida Energy
- 19 Efficiency Conservation Act ("FEECA") proceeding. In addition, I presented to
- 20 the Florida Commissioners during an Internal Affairs meeting in January 2012 on
- 21 the importance of robust evaluation, measurement and verification ("EMV") of

1	DSM	impacts.	I ha	ve also	testified	before	the	North	Carolina,	South	Carolina,	

- 2 Georgia and Indiana commissions.
- 3 Q. Are you submitting exhibits along with your testimony?
- 4 A. Yes. I am submitting the following exhibits with my testimony:
- Exhibit NAM-1: Resume of Natalie Mims
- 6 Exhibit NAM-2: Letter re: Measures Not Included in FPL's EE Potential Study
- 7 Q. FPL is seeking approval from the FPSC to construct and operate a new
- 8 natural gas combined cycle plant. What are the statutory requirements for
- 9 the FPSC to determine the need for this power plant?
- 10 A. Florida statute requires that the Commission take into account several factors

11 when determining if a new power plant is needed including: (1) the need for

- 12 electric system reliability and integrity; (2) the need for adequate electricity at a
- 13 reasonable cost; (3) the need for fuel diversity and supply reliability; (4) whether
- 14 the proposed plant is the most cost-effective alternative available; (5) whether
- 15 renewable energy sources and technologies; as well as conservation measures, are
- 16 utilized to the extent reasonably available. Finally, the Commission shall consider
- 17 the conservation measures taken by or reasonably available to the applicant or its
- 18 members which might mitigate the need for the proposed power plant.

19 Q. Based on your review of FPL's application and their DSM plan, do you

- believe that FPL has met the statutory requirements for proving the need for
 the OCEC Unit 1?
- 22 A. No, I do not, for several reasons. Based on this fact, I recommend that the
- 23 Commission deny FPL's Petition for Determination of Need for the OCEC Unit
- 24

1

25

1	Q.	Will you address any of these reasons in your testimony?
2	Α.	Yes, I will. The purpose of my testimony is to address (1) how increasing natural
3		gas capacity does not maintain or enhance FPL's fuel diversity; (2) conservation
4		measures are not being utilized to the extent reasonably available; (3) there are
5		additional conservation measures reasonably available to FPL and its customers
6		that might mitigate the need for the proposed power plant; and (4) the proposed
7		plant is not the most cost-effective alternative for FPL's customers.
8 9 10	П.	INCREASING FLORIDA'S DEPENDENCE ON NATURAL GAS DOES NOT MAINTAIN OR ENHANCE FPL'S FUEL DIVERSITY.
11	Q.	As referenced above, the Commission is required by statute to consider the
12		need for fuel diversity in making its determination regarding the need for
13		FPL's proposed OCEC Unit 1. Will the OCEC Unit 1 improve FPL's fuel
14		diversity if constructed and placed into operation?
15	А.	No, and FPL witness Dr. Sim concedes as much in his prefiled testimony. In fact,
16		even though FPL's 2014 ten year site plan, at p. 7, lists "maintaining/enhancing
17		fuel diversity in the FPL system" as an ongoing concern, FPL still now seeks
18		Commission approval to build another plant which will only increase its reliance
19		on natural gas. This is certainly not maintaining, and much less enhancing, fuel
20		diversity in the FPL system.
21	Q.	However, Dr. Sim does state that OCEC Unit 1 will not "significantly"
22		increase FPL's reliance on natural gas. Does this alleviate your concern?
23	Α.	No. In 2014, Florida was second in the nation to Texas in net electricity
24		generation from natural gas. ¹ As such, Florida's, and FPL's, reliance on natural
25		gas is already significant, and OCEC Unit 1 will only exacerbate this reliance.

¹ US Energy Information Administration, Florida State Profile and Energy Estimates. Available at: http://www.eia.gov/state/?sid=FL

FPSC Docket No. 150196-EI Direct Testimony of Natalie Mims

1	In fact, in FPL's 2015 Ten Year Site Plan, natural gas contributed to 68%
2	of the Company's energy generation in 2014, and the Company forecasted that it
3	is the only fuel type that will increase in 2016, and continue to grow from 2019
4	(when OCEC unit 1 is scheduled to come online) to 2024. ² Ultimately, FPL
5	anticipates that natural gas will be used to generate 73% of its energy in 2024. ³
6	However, FPL anticipates solar energy contributing about 0.5% annually from
7	2019 to 2024, and the amount of energy coming from nuclear declining as a
8	percentage of total generation in the same time frame. It would seem that if FPL
9	is truly trying to diversify its fuel sources, at least one of these resources would be
10	increasing as a percent of total generation over time, not just natural gas.

11 Table 1. FPL's fuel mix as a percentage of total generation⁴

	Natural Gas	Nuclear	Coal	Solar
2015	66.7%	23.2%	3.5%	0.2%
2016	69.2%	23.3%	3.1%	0.3%
2017	64.0%	22.8%	2.7%	0.6%
2018	64.1%	22.7%	2.6%	0.6%
2019	69.5%	22.9%	2.9%	0.5%
2020	71.7%	22.3%	2.4%	0.5%
2021	71.7%	22.1%	2.6%	0.5%
2022	71.3%	22.3	2.5%	0.5%
2023	71.9%	21.8	2.5%	0.5%
2024	72.5%	21.5	2.3%	0.5%

FPSC Docket No.	150196-EI
Direct Testimony	of Natalie Mims

1 2 3	III.	CONSERVATION MEASURES WHICH MIGHT MITIGATE THE NEED FOR THE PROPOSED OCEC UNIT 1 ARE NOT BEING UTILIZED BY FPL TO THE EXTENT THEY ARE REASONABLE AVAILABLE.
4	Q.	FPL states that they took account of all identified cost-effective conservation
5		measures prior to determining the need for the proposed OCEC Unit 1. Is
6		this true?
7	Α.	No, they did not. FPL relies on its energy efficiency goals from the 2014 FEECA
8		docket to determine the level of efficiency that is used as "all cost-effective
9		efficiency" in this docket. In the FEECA docket, the Company used an erroneous
10		methodology to calculate its DSM potential, and thus vastly underestimated the
#		amount of cost-effective DSM available.
12	Q.	What was the process that FPL used to determine its DSM potential?
13		First, the Company resurrected a five-year old DSM potential study to evaluate its
14		technical potential, which I will refer to as the "2009 Potential Study," and
15		utilized the 2009 Potential Study as the starting point for its 2014 Potential Study.
16		In a DSM potential study, technical potential should take into account all of the
17		savings that are available, regardless of economics or concerns about
18		participation. The EPA's National Action Plan for Energy Efficiency ("NAPEE")
19		defines technical potential as, "the theoretical maximum amount of energy use
20		that could be displaced by efficiency, disregarding all non-engineering constraints
21		such as cost-effectiveness and willingness of end-users to adopt the efficiency
22		measures."5
23	Q.	What flaws are there in FPL's technical potential analysis?
24	A.	There were several. The most significant was the flawed assumption that codes
25		and standards reduce FPL's technical potential by 4200 GWh. ^{6,7} The existence of

⁴ US EPA National Action Plan for Energy Efficiency, Guide for Conducting Energy Efficiency Potential Studies. p2 4. ⁴ FL PSC Docket No 130199-EI, Direct Testimony Koch (FPL). Exhibit TRK-4

3

4

5 61

8

16

FPSC Docket No. 150196-EI Direct Testimony of Natalie Mims

- 4 a code or standard is <u>not</u> an engineering constraint, and therefore should not be an
- 2 element in determining technical potential. Table 2 displays FPL's conclusion that
 - summer MWs were reduced by 14%, winter MWs by 12% and energy savings by
 - 13% due to this inaccurate assumption.

Table 2. FPL's flawed reduction in 2014 technical potential due codes and standards ⁸

	Summer MW	Winter MW	Annual GWh
2009 Potential Study	8,000	4,784	31,849
Technical Potential			
Reduction due to	1,086	575	4,183
eodes and standards			
2014 Potential Study	6914	4209	27,666
Technical Potential, reduced from codes and standards			

9 This flaw was both methodologically and statutorily incorrect. The statutory

10 guidance for the technical potential study in Florida is Section 366.82, F.S., which

11 directs the Commission to evaluate the technical potential of all demand side and

12 supply side energy conservation measures, including demand side renewable

13 energy systems. Clearly, eliminating measures associated with codes and

14 standards results in the evaluation of less than all demand side and supply side

15 conservation measures.

The second major flaw in the technical potential that FPL calculated for its

17 2014 Potential Study was the limited amount of efficiency measures evaluated.

18 Again, the technical potential should, if properly calculated, include all energy

19 efficiency measures except those that are impossible due to engineering

20 constraints. SACE reviewed the measures from the 2009 Potential Study, as they

³ The Company reduced the 2009 technical potential by 4200 GWh to account for codes and standards as the first step in updating the 2009 Potential Study. See Florida PSC Staff Recommendation in Docket 130199 EL Table 1-1 for more detail.

^{*} FL PSC Docket No 130199-EI, Direct Testimony Koch (FPL). Exhibit TRK-4

+		were the starting point for the 2014 Potential Study, and compared them to recent
2		energy efficiency potential studies for TVA ⁹ and Georgia Power. ¹⁰ There are
3		many measures that appear to have been excluded from both the 2009 and 2014
4		Potential Studies that were included in the TVA and Georgia Power energy
5		efficiency potential studies, a list of which measures are included as Exhibit
6		NAM-2.
7		Finally, as in the 2009 Potential Study, FPL excluded several sectors from
8		the technical potential in the 2014 Potential Study. As stated in the 2009 Potential
9		Study:11
10		It should also be noted that energy and peak savings opportunities
++		in a few end-use sectors were specifically excluded from this
12		study. These sectors were agriculture, transportation,
13		communications and utilities (TCU), construction, and
14		outdoor/street lighting the out-of-scope sectors accounted for just
15		over 10% of total sales [for FEECA utilities].
16	Q.	What is the impact of the technical potential, the starting point for
17		determining the amount of energy efficiency that is available to FPL, being
18		fundamentally flawed and inaccurate?
19	A.	The technical potential is the first calculation that is made when determining
20		energy efficiency potential, thus all other calculations are dependent on that
21		calculation. This means that FPL's entire 2014 Potential Study is flawed, and
22		furthermore, the basis for FPL's statement that it evaluated all cost-effective
23		energy efficiency prior to determining its need for the proposed OCEC Unit 1 is
24		inaceurate.
25		

^{*} Tennessee Valley Authority Potential Study. Final Report, December 21, 2011, Global Energy Partners,

available at http://www.tva.gov/news/releases/energy_efficiency/GEP_Potential.pdf ⁴⁹ Achievable Energy Efficiency Potentials Assessment. Submitted to Georgia Power Company by Nexant, January 31, 2012, available at

http://www.pse.state.ga.us/factsv2/Document.aspn?documentNumber=140174 ⁺⁺ Itron, Inc., Technical Potential for Electric Energy and Peak Demand Savings in Florida. March 2009.

+	Q.	Putting aside the fact that the rest of the 2014 Potential Study was flawed
2		from the start, were there other flaws when FPL moved to the second step of
3		the potential study, calculating the ceonomic potential?
450	A.	Yes. The NAPEE defines economic potential as:
6		the subset of the technical potential that is economically cost-
7		effective as compared to conventional supply side energy
8		resourcesthey [technical and economic potential] ignore market
9		barriers to ensuring actual implementation. Finally, they only
10		consider the costs of energy efficiency measures themselves,
++		ignoring any programmatic costs (e.g. marketing, analysis,
12		administration) that would be necessary to capture them.
13		Again, FPL did not use the best practices outlined by the EPA when it calculated
14		economic potential in its 2014 Potential Study. FPL Witness Koch stated:
15		
16		After the TP [technical potential] was updated, FPL's resource
17		needs during the DSM Goals timeframe were determined and other
18		facets of FPLs resource planning process were then used to
19		conduct an Economic Potential (EP) or cost effectiveness
20		screening of the DSM measures. ¹²
21		It is inappropriate to evaluate the Company's resource needs prior to determining
22		if measures are economic. The only factor that should be considered when
23		calculating economic potential is whether or not the energy efficiency is less
24		expensive than avoided cost. By creating, and using, additional criteria to define
25		both the technical and economic potential, FPL invalidated its 2014 Potential
26		Study.
27		FPL further miscalculated the amount of cost effective energy efficiency
28		in the 2014 Potential Study by applying yet another inappropriate screen to
29		ealculate the economic potential the "years to payback screening to account for
30		free riders." ¹³ As explained by FPL:

 ⁴³ FL PSC Docket NO 130199, Direct Testimony Thomas R Koch (FPL). Page 17, lines 21-23.
 ⁴³ FL PSC Docket No 130199, Direct Testimony Steven R Sim (FPL). Page 6 lines 12-14.

.

FPSC Docket No. 150196-EI Direct Testimony of Natalie Mims

+	
2	the intent of the years to payback test is to address the "free rider"
3	issue so that the utility, and all of its customers, are not making
4	incentive payments and incurring administrative costs, for DSM
5	measures that customers will likely purchase even without an
6	incentive payment. ¹⁴
7	Evaluating free ridership, in every other jurisdiction I am aware of, is a
8	component of utility evaluation, measurement and verification of energy
9	efficiency programs. It is completely invalid and a flawed methodology to include
10	this screen when calculating economic potential. As shown in Table 3 and 4, this
#	sereen eliminated 1,550 - 6,392 GWh from FPL's energy efficiency potential
12	under the Company's RIM and TRC portfolio. ¹⁵
13	
14	Table 3. FPL's flawed reduction in 2014 technical potential due to free rider
15	sereen (RIM)

¹⁷ 18

Table 4. FPL's flawed reduction in 2014 technical potential due to free rider sereen (TRC)

		portfolio						
+		I am aware that Florida utilities are required to consider free riders when						
2		proposing their energy efficiency goals. There are other ways to "consider free						
3		riders" than using a proxy that arbitrarily eliminates energy efficiency and						
4		eapacity savings. As I have suggested in the past, including free rider rates from						
5		other utilities in the Southeast would be more accurate than what FPL current						
6		uses. The free rider rates from other southeastern utilities could be applied at the						
7		residential, commercial and industrial class level as the last step of setting the						
8		goal, and that would also be more accurate than the two year proxy. Further,						
9		Southeastern utilities have found that with free ridership and spillover, their						
10		realization rates go above 100%, meaning that no savings would be eliminated						
##		from the energy efficiency goals when considering free ridership.						
12	Q.	How does the National Action Plan for Energy Efficiency define achievable						
13		potential?						
13 14		potential? The NAPEE breaks achievable potential into two categories, achievable potential						
	4.

+		FPL's calculation of achievable potential ¹⁶ is very illogical, and unconventional.
2		FPL's ten year 2015-2024 Achievable Potential "is determined based on the
3		maximum rebate levels for all measures that passed the prior [economic]
4		screening." ¹⁷ I am not aware of any other utility that use this criteria to establish
5		its achievable potential. Somehow, FPL managed to whittle its Summer MW
6		savings from over 7,100 MW (technical potential) to a goal of approximately 50
7		MW a year of achievable potential.
8	Q.	Please summarize the flaws present in FPL's energy efficiency potential
9		study.
10		There are many flaws, including: (1) removing savings from codes and standards
11		prior to calculating technical potential; (2) excluding entire sectors and measures
12		from the technical potential; (3) determining utility resource needs prior to
13		ealculating economic potential; and (4) using a two year payback proxy to
14		ealculate economic potential. Finally, FPL used maximum rebate levels to
15		determine achievable potential. While this is not necessarily impermissible, it is
16		eertainly not a best practice methodology.
17	Q.	Do you believe that the flaws referenced above result in an inaccurate
18		representation by FPL as to whether or not there are energy efficiency
19		measures that are reasonably available to the Company that might mitigate
20		the need for OCEC Unit 1?
21	A.	Yes. Based on the erroneous methodology used by FPL to calculate its energy
22		efficiency potential, there are additional measures that are reasonably available.
23		First, there are savings associated with codes and standards. While FPL may

¹⁶ As mentioned above, achievable potential, as defined by NAPEE, was not conducted by FPL. However, for simplicity, I will continue to refer to FPL's achievable potential as that, not as program potential, as defined by NAPEE. ⁴⁷ FL PSC Docket No 130199, Direct Testimony Thomas R Koch (FPL). Page 6 lines 12-14.

+		eapture the reduction in consumption due to codes and standards in its load
2		forceast, and not in its efficiency forceast, it could still implement an energy
3		efficiency program to improve and assist in code compliance, therefore generating
4		additional reasonable savings. Second, FPL did not include reasonably available
5		energy efficiency measures in its 2014 Potential Study, and completely excluded
6		several sectors from the 2014 Potential Study.
7		Finally, FPL further miscalculated the amount of reasonably available
8		energy efficiency in the 2014 Potential Study by applying yet another
9		inappropriate screen to calculate the economic potential the "years to payback
10		screening to account for free riders." ¹⁸ This inappropriate screen eliminated
11		between 1,550 - 6,392 GWh from FPL's energy efficiency potential under the
12		Company's RIM and TRC portfolio. ¹⁹

÷		goal of the Total Resource Cost ("TRC") test. The use of TRC to determine
2		energy efficiency investments is a well-established best practice in the nation. In
3		contrast, besides FPL and other Florida utilities, only one other state (Virginia)
4		relies on the RIM test to make investment decisions. ²¹
5		FPL has aggressively opposed the use of the TRC test to determine energy
6		efficiency investments in Florida for many years. In 2014, FPL insisted that,
7		between the RIM and TRC tests, "only the RIM test really addresses the issue of
8		whether it makes sense for a utility to offer a [demand-side management] measure
9		when considering all customers on a utility system."22
10		By focusing on the impacts on customers that do not participate in
++		demand-side programs, FPL's narrow perspective ignores opportunities for
12		benefits and savings for all customers. Likewise, by focusing on lost revenues,
13		FPL's perspective does little to promote reduced customer usage and fossil fuel
14		consumption, but rather serves to protect its utility business model against the
15		impacts of reduced usage, whether through energy efficiency or renewable
16		generation. Moreover, policy solutions are available to address the financial
17		impact demand-side resources can have on electric utilities, yet FPL has opposed
18		exploring any such mechanism to make it financially neutral to such resource
10		decisions ²²
20		The use of TRC and utility incentives to support efficiency adoption are
21		not novel or advanced concepts, and have been recognized in the industry for
22		decades, beginning in the early 1990s.
23	Q.	Is the RIM test used as the primary cost-effective test to make energy

 ⁴⁴ http://database.accece.org/state/evaluation_measurement_verification
 ⁴³ FL_PSC Docket No. 130199, Direct Testimony Sim, p. 23, starting at line 16.
 ⁴⁴ FL_PSC Docket No. 130199, Order No. PSC-14-0696-FOF-EU, p. 7.

+		efficiency decisions by regulators in the United States?
2	A.	No. Only one state, Virginia, relies on the RIM test as its primary benefit-cost
3		test. 71% of states that have designated a primary cost-test use the Total Resource
4		Cost ("TRC") test.
5	Q.	How does FPL justify this extreme perspective?
6	A.	FPL justifies its reliance on this extremely conservative perspective by eiting that
7		the Commission found that "consideration of both the RIM and TRC is necessary
8		to fulfill the requirements of Section 366.82(3)(b), F.S. ²⁴
9	Q.	How does FPL interpret the word "consideration"?
10	A.	FPL's interpretation of the word "consideration" clearly shows their conservative
11		perspective on energy efficiency economics. Using FPL's interpretation, to
12		"consider" the RIM tests means that energy efficiency goals are "set based on the
13		use of the RIM test." ²⁵ That does not appear to me to be the same as "taking into
14		consideration the TRC test" and in fact, appears to be only using the RIM test.
15	Q.	What was the difference between FPL's TRC and RIM DSM goals in the
16		2014 FEECA proceeding?
17	A.	The energy savings FPL projected from 2015-2017, under the TRC test was 23-46
18		GWh higher than when using the RIM test. As FPL noted, there are not
19		significant differences between the summer MW in the RIM and TRC eases—
20		about 50 MW over the ten year planning period but this is due to the flawed
21		modeling I discussed above. FPL's refusal to allow energy efficiency to reduce
22		the size of a natural gas power plant is just one of the factors that FPL used to
23		undervalue energy efficiency in its 2014 ten year site plan, and subsequently in

²⁴ FL PSC Docket No 130199 EI, Order No. FPSC 14 0696 FOF EU. ²⁶ FL PSC Docket No 130199-EI, Rebuttal of Terry Deason (FPL). June 10, 2014. Page 41, lines 7-8.

2 Q. Did SACE propose energy efficiency goals in the FEECA proceeding?

3 A. Yes, SACE proposed that FPL achieve 1% of prior year retail sales with energy

4 efficiency. SACE proposed this level of savings because FPL's entire analysis

5 was so flawed, that it could not be used as the basis for goal setting. I discuss

- 6 these flaws above, and in particular the major flaw that the entire energy
- 7 efficiency potential study is based on an inappropriate, inaccurate methodology
- 8 that trickles down to the rest of the analysis.

SACE's energy efficiency goal would have resulted in the company

- 10 saving over 15,000 GWh more than what FPL proposed (60 GWh) and what the
- 11 Commission ultimately approved (526 GWh).30
- 12 Q. Did FPL find that SACE's proposed level of savings would cost less than
- 13 FPL's proposed goals?
- 14 A. Yes. FPL found that the cumulative present value revenue requirement for
- 15 SACE's energy efficiency goal would cost less than FPL's goal. This is
- 16 particularly important because SACE's goal was 15,000 GWh more than the
- 17 Commission approved FPL goal, and it still resulted in lower cumulative present
- 18 value revenue requirements. Specifically, FPL witness Sim stated, "I would agree
- 19 the SACE plan is lower in total cost or revenue requirements."³¹

²⁰ FL PSC Docket 130199. Order No. PSC 14 0696 FOF EU. Tables 4 6 and 5 1.

³⁴ FL PSC Docket 130199. Hearing Transcript, Volume 6, page 1488, line 16-18.

1	Q.	How does FPL use the cumulative present value revenue requirement in this
2		proceeding?
3	Α.	FPL uses the cumulative present value revenue requirement to determine the best
4		generation option from a cost and electric rate perspective. FPL does not allow
5		DSM to be part of this calculation by holding it constant across each option.
6		The bottom line is that it is cheaper to operate FPL's system with more
7		efficiency than with less. FPL continues to refuse to acknowledge this by falling
8		back on to the argument that lost revenues, or "unrecovered revenue
9		requirements" as FPL likes to call it, increase rates. However, the critical piece of
10		knowledge that FPL refuses to discuss is that "unrecovered revenue requirements"
++		result from policy decisions, not from resource decisions. The costs can be
12		avoided or mitigated with minor changes to FPL's business model. These minor
13		changes would result in a cleaner, cheaper, more efficient electric system.
14	Q.	What are your conclusions in this regard?
15	A.	Quite simply, FPL had the opportunity to seek and obtain much higher levels of
16		energy efficiency, at a much lower cost than building new power plants, like the
17		OCEC Unit 1, and did not do so. Thus, FPL, and more importantly its customers,
18		missed out on more cost effective alternatives.
19		
20	V.	CONCLUSION
21	Q.	Please summarize your conclusions.
22	А.	In conclusion, I recommend that the Commission deny FPL's petition for
23		affirmative determination of need of OCEC Unit 1. The Company has failed to
24		demonstrate: (1) that OCEC Unit will maintain or enhance FPL's fuel diversity;
25		(2) that all conservation measures are being utilized to the extent reasonably

- 1 available; (3) that there are not additional conservation measures reasonably
- 2 available to it and its customers that might mitigate the need for the proposed
- 3 OCEC Unit 1; and (4) that OCEC Unit 1 is the most cost-effective option its
- 4 customers.
- 5 Q. Does this conclude your testimony?
- 6 A. Yes.

Energy Efficiency Director, January 2013 - current

Earlier position: Energy Policy Manager, October 2010- December 2012

- Testifies as expert witness before the Public Service Commissions on energy efficiency cost recovery, program plans and financial incentive mechanisms in Georgia, North Carolina and South Carolina
- Responsible for ongoing energy efficiency portfolio and program level quantitative and qualitative
 research and analysis of major utilities in the Southeast
- Track and participate in energy efficiency regulatory proceedings. Current regulatory proceedings include IRP, cost-recovery filings, energy efficiency program pilots and existing program modifications
- Responsible for reviewing and writing comments and/or testimony for all major energy efficiency
 regulatory proceedings for utilities in Tennessee, North and South Carolina, Georgia and Florida
- Responsible for managing energy efficiency staff and establishing and implementing efficiency strategy for the SACE
- · Assists in development/fundraising to ensure energy efficiency work funded in upcoming years
- Lead participant for SACE at TVA, Duke Energy and Georgia Power energy efficiency working groups

ROCKY MOUNTAIN INSTITUTE

Senior Consultant, July 2009 - October 2010

- Earlier positions: Intern, Fellow, Analyst, and Consultant October 2004- July 2009
 - Project manager for nine-person team creating energy efficiency component of national analysis to eliminate US fossil fuel consumption by 2050
 - Project manager for company-wide energy efficiency strategy and development
 - Lead on energy efficiency analysis for major southeastern IOU low-carbon strategy
 - Lead author on published national analysis on electric productivity
 - Member of senior leadership of Energy and Resources Team at the organization. Contributed to team strategy, resource planning and staffing for 12-20 person team and hiring as well as organizational professional development strategy
 - Contributed to writing Hawaii Energy Strategy 2007 and planning Hawaii Biofuels Summit Contributed to RMI filings in Energy Efficiency docket before Hawaii Public Utility Commission
 - Participated in Hawaii Energy Policy Forum Energy Efficiency working group
 - Significant contributor to consulting and research projects including: national and state energy policies, utility revenue adjustment mechanisms, utility regulatory structures, private sector investment in energy efficiency, corporate carbon management strategy, renewable energy market assessments, large and small scale sustainable development projects, Hawaii agricultural sustainability barriers and solutions

Tom Ballinger, Director Division of Engineering 2540 Shumard Oak Blvd. Tallahassee, FL 32399-0850

Dear Mr. Ballinger,

SACE wishes to thank Commission staff for holding an informal meeting on June 17th to discuss how to make the upcoming FEECA process more transparent and administratively efficient. In the spirit of that goal, we offer the following comments on the ideas and discussion that took place at the meeting to Commission staff and the parties that attended the meeting.

Quality Technical Potential Study

In 2009, Itron conducted the base technical potential study to determine the energy efficiency potential of the FEECA utilities. Based on the June 17th FEECA meeting, this study will be updated as part of the upcoming FEECA proceeding. SACE is concerned about the methodology that will be used to update this information. The concerns are twofold. First, we are concerned about what the source for the updated cost and deemed savings is; and second that the utilities will not update the cost and deemed savings for each measure using a uniform methodology. Both of these issues, if not appropriately addressed will result in an opaque and inaccurate representation of the technical potential for energy efficiency by FEECA utilities. We encourage the Commission staff to provide clear direction to the utilities about the sources for updating the cost and deemed savings for measures, and the methodology to do so; or request that the utilities hire a third party to update the entire catalog of measures to ensure it is done in a uniform fashion.

Additionally, the utility parties have provided a deadline of July 5th for SACE to submit any new measures for consideration in the technical potential study along with Florida-specific savings and cost data. SACE reviewed the measures from the 2009 energy efficiency potential study and compared them to TVA¹ and Georgia Power's² recent energy efficiency potential studies. There are many measures that appear to have been excluded from the 2009 Itron energy efficiency potential study. SACE has provided a list of these measures in Appendix 1, but will not be able to provide more detailed information beyond what is included in the TVA and Georgia Power potential

studies. As these measures were included in energy efficiency potential studies that were completed in 2011 and 2012, it seems reasonable to assume that an update to the Florida utilities' energy efficiency potential study will also include these measures as part of a thorough analysis, and should not rely on stakeholders to provide this information to the companies. Finally, as SACE pointed out during the 2009 FEECA proceeding, there are a number of energy sectors that were excluded from the energy efficiency potential study. We have also identified these in Appendix 1, and trust that the utilities will include energy efficiency measures for these sectors in the 2013 energy efficiency potential study.

Transparency in the Economic and Achievable Potential Analysis

In the past, SACE has expressed its concern about Florida utilities using a two year measure payback as a proxy for free ridership. As we have mentioned many times, this methodology is not used by other utilities in the Southeast, and results in an incomplete picture of energy efficiency savings. Based on the informal FEECA meeting on June 17th, it is our understanding that staff has asked the utilities to provide the economic potential, including kWh savings, and RIM and TRC scores for all measures as part of their testimony in the next FEECA docket. If this is not correct, please notify us as soon as possible. While staff's request to the FEECA utilities for a sensitivity analysis of 1 year and 3 year paybacks mitigates the lack of transparency of the 2 year payback screen, we believe that there should be a sensitivity analysis without screening out any measures related to customer payback assumptions. Such an analysis will promote full transparency and will fully inform the Commission on the complete universe of measures at a utility's disposal to meet conservation goals.

Consistent CO² Sensitivities

The FEECA statute requires that the Commission to consider costs imposed by state and federal regulations on the emission of greenhouse gases.³ The staff's suggestion that the base case sensitivity be a zero dollar amount is inconsistent with utility filings in other dockets that utilize sensitivities for CO² emission compliance. For example, DEF uses CO² sensitivities ranging from \$20 to \$82 dollar a ton in the year 2020 in this year's nuclear cost recovery clause docket.⁴ Using a base case of zero in the FEECA docket unfairly undermines the value of efficiency measures in this docket. Fundamental fairness and consistency dictate that CO² sensitivities used for supply side resources as well as demand side resources be judged under the same standard.

DSM Financial Incentives

SACE supports the use of DSM financial incentives for meeting meaningful goals in a costefficient manner. Investor-owned utility directors and executive officers have a fiduciary duty to maximize shareholder value. Investor-owned utilities do not earn a rate of return on efficiency implementation in Florida. Moreover, efficiency measures delay or displace the need for new supply side generation on which utility shareholders earn a return. Therefore, there is a distinct regulatory disincentive for an investor-owned utility to deliver meaningful cost-efficient energy efficiency services unless they can provide value to its shareholders. Properly designed energy

^{3 §366.82(3)(}d), Fla. Stat.

⁴ Direct Testimony of Chris Fallon, Docket No. 130009, (CMF-4) p. 11 of 18, May 1, 2013.

efficiency incentives can place demand side resources on a regulatory "level playing field" with supply side options.

We look forward to working with the Commission staff and other parties to ensure a fair, transparent, and administratively efficient FEECA proceeding.

Sincerely,

Notelie Mins

Natalie Mims, SACE Energy Efficiency Director

George Cavros, Attorney for SACE

Attachment 1: List of Measures and Sectors to be Included in 2013 Energy Efficiency Potential Study

1) Residential Measures

- Interior and exterior LEDs
- Interior and external halogen
- T-5, Super T-8
- Occupancy sensors
- · Efficient ballasts and fixtures
- Attic Fan
- Ceiling Fan
- Whole house fan
- De-humidifer
- Room AC SEER 10.8 (energy star)
- AC SEER 21
- Central AC ductless mini split
- · Heat pump ductless mini split
- Geothermal heat pump EER 14.1, 16, 18, 30
- Heat pump SEER 19
- Duct sealing (could be part of duct repair, don't know)
- · Locate ducts in insulated space
- · New construction insulation (foundation, wall sheathing, wall cavity)
- Storm and thermal doors
- · Refrigerator, freezer, dishwasher high efficiency versions beyond energy star
- Compact freezer
- Compact refrigerator
- Stoves
- Programmable thermostats
- Room air cleaner
- Printer/fax/copier
- Pool heater
- · Hot tub pumps and heaters
- Well pump
- Hot water saver
- Solar hot water with peak period lock out
- Refrigerator, freezer and room AC recycling
- Smart strip surge protection
- · Energy Star Home
- · Behavior changes from utility provided information
- 2) Commercial Measures
 - · Building commissioning (in the measure list there is refrigerator commissioning)
 - T-5, super T-8
 - LEDs

ATTACHMENT "A"

EXHIBIT STRICKEN IN ITS ENTIRETY

- HID lighting
- · Delamping and reflectors
- Daylighting
- Dimmable ballasts
- Indoor lighting controls
- Task lighting
- Air cooled chillers
- Duct less mini split for rooftop AC
- Rooftop heat pump EER 9.3 12
- Heat pump maintenance
- Rooftop AC EER 11.2, 12
- Chiller economizer
- Energy Management System
- Programmable thermostats
- Hotel guest room controls
- Plug load occupancy sensors
- Pool Pump timers
- Refrigerator recycling
- Refrigerator door gasket replacement
- · High efficiency windows
- · Hot water saver
- Hot water pipe wrap
- Hot water high efficiency circulation pump
- Icemaker
- Hot food container
- Ventilation hoods
- Steamers
- Griddle
- POS terminal
- Dishwasher
- Server
- Pool pump
- Pool heater
- Elevator motor
- Data center virtualization
- · Clothes washers
- Clothes dryers
- · Refrigerated vending machines

3) Industrial Measures

- · Properly sized fans
- Synchronous fans
- HVAC improved controls
- HVAC Recommissioning

- · Efficient lighting
- · Lighting controls
- Plant Energy Management
- Transformers
- · Motor management plan for air compressors and other motors

4) Sectors omitted from 2009 FEECA energy efficiency potential study

- Agriculture
- · Transportation, communications and utilities
- Construction
- Outdoor lighting
- Street lighting
