Subject: FPL rate increase

I'm shocked that Florida Power & Light is asking for a rate increase. I understand there is no direct correlation between the price of fuel at the gas pump and the price of electricity but even so, this seems odd.

FPL has a long history of spending its customers' money in a less than conservative manner. Yet they seem to have plenty of money to fight efforts to put solar power within reach.

I hope you will protect FPL's customers and turn this request by FPL for still more money.
