

# CISPP allows FPL to build commercial scale distributed generation and prepare for demand side solar growth

## C&I Solar Partnership Program (CISPP)

- Solar partnering and research opportunity to develop 5MW of distributed generation
- Select circuits allows us to begin research analysis to understand how the integration of high volumes of solar generation impacts our grid
- Customer negotiations are underway at the following locations to support the first 5 MWs of installations:
  - Florida International University – 1.8 MW<sub>DC</sub> carport system at Miami engineering campus
  - Sun Life Stadium – 1.3 MW<sub>DC</sub> carport and new stage rooftop system
  - Daytona Speedway – 2.2 MW<sub>DC</sub> walkway pavilion system and ground mount

**Understanding the broad impact of solar on the grid prepares us for increasing penetrations of USS and DG**
