Subject: Gulf Power Rate Hike

We have the cheapest and most plentiful supply of natural gas in the world. Yet, Gulf Power has spent millions of dollars on solar and wind generated energy systems, none of which are cost effective. I know because I once had a solar system for my home. I sold it. I do not believe Gulf Power deserves a rate increase because of their lack of fiscal constraint policies. I just received my social security notice on my 2017 monthly benefit. After paying for the increase in medicare, my benefit will be the same as 2016. Yet you are proposing an increase of over \$10 a month for electrical useage. I think you should be looking at how Gulf Power is spending the money received from its many customers. Since they are the only game in town, it appears that they do what they want. They purchase 59% of the power they sell. They use 0% on natural gas to generate power.

Sincerely,

Carl Block

Subject: Gulf power proposal to increase rates

I would like to respectfully submit my concerns and opposition to the rate hike proposed by gulf power for the area of my residence. This change would likely increase my monthly bill by ten dollars or more and I don't foresee any improvement in my service, so I'm encouraging you to deny gulf power's request to increase rates. We already have inordinately high rates in Florida as it is and I don't feel that we would get anything in return for the increased outlay of money.

Thank you,
Angie Williamson
