Re: Docket No. 160222-WS - Application for staff-assisted rate case in Highlands County by LP Waterworks, Inc.– Response to Customer Meeting

Dear Commission Clerk:

Attached please find LP Waterworks, Inc.'s (LPW) response to the customer meeting held on April 18, 2017 in the above referenced docket.

## Quality of Service

LPW was in attendance at the April 18, 2017 customer meeting in the above referenced docket and offers its response to the customers' concerns expressed at the meeting. LPW notes that in Order No. PSC-14-0413-PAA-WS, issued August 14, 2014, the Commission found LPW's quality of service satisfactory.

Prior to the customer meeting, LPW has only received four (4) water quality customer complaints since obtaining ownership of this utility. One complaint was recorded in each year 2013; 2014; 2015; and early 2016. LPW water supply routinely meets all secondary standards set by the Florida Department of Environmental Protection and customers rarely complain about the water. However, on the Thursday and Friday prior to the meeting – April 13 & 14<sup>th</sup>, LPW did experience issues at the front water treatment plant. LPW was having difficulties maintaining a chlorine residual. The operations contractor, U.S. Water Services, was on site and replaced a booster pump and chlorine injection tubing. At the time it was believed that corrected the issue. However, upon returning for a follow up inspection, it was discovered that the hydropneumatic storage tank had holes on the top of the tank and all the air was leaking out and causing the tank to become water-logged with no required air. These tanks require air for pressure so the well pump will turn off and for the water to have the required chlorine contact time.

Once this was discovered, the technician and operator were instructed to take the well out of service and to utilize the second well located within the park. There were difficulties isolating the well with the valves; however, it was successfully accomplished and the first well was taken out of service. The technician was on-site on Saturday and flushed the system. Due to the isolation of the well and the flushing, this caused the sediments in the distribution line to be

disturbed causing discolored water. This was primarily the cause of the discolored water that was brought into the meeting by the customers.

Unfortunately, the hydropneumatic tank will need to be replaced. First, LPW is contacting a welder to temporarily fix the holes in the tank so the water treatment plant can be brought back online. The temporary repairs will be completed the week of April 24<sup>th</sup> - 28<sup>th</sup>. LPW is also obtaining quotes for the tank replacement. LPW may have to file a subsequent limited proceeding (LIMP) after the decision in this instant SARC.

Aesthetic water quality involves non-health related characteristics of water such as taste, color, odor, hardness and turbidity. The United States Environmental Protection Agency ("EPA") has developed secondary drinking water standards that pertain to aesthetic water quality, which standards have been adopted by the FDEP. Unlike primary drinking water standards, typically secondary standards are not enforced by EPA and FDEP, but simply function as guidelines.

Concerning the lead issue, LPW had elevated levels of lead in the drinking water of some homes where the tests were taken. LPW was required to send out customer notices to these homes (see attached). Subsequent to that LPW worked closely with FDEP and the FRWA to permit and install two (2) Poly/Orthophosphate Blend sequestering systems at each water treatment plant to inhibit and control corrosion for aggressive water. The permit was received and the sequestering systems were installed in 2016. The systems received final clearance in June 2016. During this period the FDEP required quarterly noticing of the customers on the customers' bills. However, the last quarter's test results passed the FDEP requirements and FDEP placed LPW on annual sampling for a period of two years. If those annual tests pass, then LPW will then be placed on tri-annual sampling. (See Attachments).

In addition LPW received a call from a customer located at 36 Beachfront Lane on April 24<sup>th</sup> who indicated he was unable to attend the customer meeting. However, he stated that his quality of water had improved tremendously and was "excellent." He stated he would attempt to write a letter indicating so in the docket file.

### **Billing Issues**

Six (6) customers provided comments on billing issues they had experienced. Below is a summary of these issues and the resolutions of each:

- 1) **David (Rosemary) Boyle** – Mr. Boyle is a new customer who began service in October 2016. Mr. Boyle was charged for 81,000 gallons in January 13, 2017 for his December 2016 consumption. Mr. Boyle received an adjustment of \$242.33 on January 16, 2017 to reflect the gallons being billed at the lowest tier. Mr. Boyle was contacted on January 18, 2017 to inform him of the adjustment. Mr. Boyle was again contacted on February 15, 2017 concerning his January bill. Mr. Boyle requested a field bucket test. Two (2) field bucket test were performed on February 24, 2017 and both meter tests passed. Due to the unusual circumstances of the account, LPW issued an additional credit of \$143.29 on April 12, 2017 representing 39,000 gallons credited. Mr. Boyle was contacted on April

- 12, 2017 and was satisfied with the adjustments. The customer indicated that he agreed to make the payment to clear up the issue. (See attached Billing History Report)
- 2) **Cathy (Richard) Ferrando** – This customer has two adjacent lots and receives two bills. In June 2015, Ms. Ferrando sent two checks in for payments and both payments were applied to only one account. One of the services was disconnected due to non-payment. Ms. Ferrando contacted LPW on June 17, 2015 concerning her payments and disconnect. She was asked to send copies of the check to verify payment. After receipt of the checks, Ms. Ferrando was contacted on June 29, 2015 and was told the error was corrected. The CSR asked that in the future the customer should write the account numbers on the checks to ensure proper posting. Ms. Ferrando agreed to do so. In reviewing the accounts, there have been no further issues since 2015.
  - 3) **Edward Raynor** – In April 2017, Mr. Raynor was billed for 13,000 gallons. Mr. Raynor contacted LPW on April 14, 2017 asking about the tierd rates. He said he had a contractor doing cement work in the area and he was satisfied. On April 19, 2017, Mr. Raynor called LPW and stated that he took a meter reading and it didn't match the reading on the bill. A re-read meter reading was taken on April 20, 2017 and it was discovered the Mr. Raynor had been overbilled by 9,000 gallons. Mr. Raynor was contacted on April 21, 2017 and was informed that a credit of \$64.89 was applied to his account for the 9,000 gallons overbilled.
  - 4) **Trudy Butrum** - Ms. Butrum received bills with zero consumption from July 2016 – December 2016 with a meter reading of 460. On January 13, 2017, the meter reading came back at 643, but the customer was billed for 3,000 due to the high reading. On February 11, 2017, the meter reading came back at 647 and the customer was billed for 184,000 gallons. A meter re-reading was obtained on February 8, 2017 with a meter reading of 650. A voice mail was left for Ms. Butrum on February 17, 2017 in reference to the high consumption and advised the customer of a possible leak. CSR indicated that if a leak is repaired to send in the repair invoice for a leak adjustment consideration. Ms. Butrum contacted LPW on February 20, 2017 and requested a second re-reading. A second re-reading was obtained on February 23, 2017 with a meter reading of 653 with no apparent leaks being detected at that time. On February 28, 2017 Ms. Butrum provided a copy of the plumber's repair of the leak (Attached) and a credit of \$652.50 was applied to the account. Due to the amount of the balance, a payment arrangement has been provided to the customer.
  - 5) **Anthony Tornatore** – Mr. Tornatore expressed concerns over his past billings. Mr. Tornatore filed a Consumer Complaint at the FPSC – Request No. 1207833W in March 2016. LPW provided its responses to the customer and FPSC on March 22, 2017 and found nothing irregular with his account. Attached, please find the responses to this request as well as a Billing History from 2013 through present.
  - 6) **Margaret Graham** – Ms. Graham stated that she is the agent for Blackwell Investments and has several accounts under LP Leisure Properties. She questioned the past billings. LPW reviewed 115 active accounts for the period of April 2014 through April 2017 – or a thirty-seven (37) month period. Over the period of 4,255 billing cycles for these account, LPW discovered seven (7) instances where there were some issues or calls from the customers. This represents less than 0.0016% issues over this period. Many of the accounts have zero consumption. Four of the calls resulted in service orders where the technician went out and obtained re-reads of meters and stated that no leaks were

indicated. The other two resulted in credits to the accounts for overbillings related to estimated reads. Attached are the Billing History for these accounts.

Also, as indicated in PSC Order No. PSC-14-0413-PAA-WS, issued August 14, 2014 in the last SARC, LPW replaced 97 water meters with over 900,000 gallons recorded as part of the Settlement Agreement with the Office of Public Counsel and Camp Florida Property Owners Association. These meters were replaced in 2015. LPW will conduct another audit of the meters in the upcoming month.

Many customers questioned the necessity of having to pay a base facility charge for the months they are not in residence. Currently, there is one predominate type of rate structure the Public Service Commission approves for water and wastewater utilities. Pursuant to the Rule 25-30.437(6), Florida Administrative Code, utilities are required to use the base facility and usage charge rate structure, unless an alternative rate structure is adequately supported. The base facility charge incorporates fixed expenses of the utility and is a flat monthly charge. This charge is applicable as long as a person is a customer of the utility, regardless of whether there is any usage. The usage charge incorporates variable expenses and is billed on a per 1,000 gallon or 100 cubic feet basis in addition to the base facility charge.

This rate structure is the preferred rate structure for a number of reasons. The base facility charge is based upon the concept of readiness to serve all customers connected to the system. This type of structure allows each customer to pay his/her fair share of the costs, regardless of whether the customer receives residential, commercial, or other type of service. Also, customers that have high consumption levels have higher bills than those with low consumption levels. By using the base facility charge rate structure, a utility recovers its fixed costs through the base charge and its variable costs through the gallonage charge. The base facility charge is applicable to all customers each month, the gallonage charge is based on each customer's actual consumption during the month.

Pursuant to Rule 25-30.335(9), Florida Administrative Code, if a utility utilizes the base facility and usage charge rate structure and does not have a Commission authorized vacation rate, the utility shall bill the customer the base facility charge regardless of whether there is any usage. This allows the utility to recover its fixed expenses.

In addition, many customers questioned the Commission approved inclining block conservation rate structure. LPW does not provide any comments to the approved rate structure, but since implementation the consumption has dropped dramatically, as previously stated, the main reason for the need to request the SARC is due to the significant decrease in water consumption. The chart below shows this decrease in water consumption:

<b>Year</b>	<b>Billed Consumption</b>
2013 (February – December)	12,277,000
2014	11,656,000
2015	8,881,000
2016	9,603,000

## **IMPORTANT INFORMATION ABOUT LEAD IN YOUR DRINKING WATER**

### ***The Woodlands of Lake Placid Water Treatment Plant***

#### **Situation**

*LP Waterworks, Inc. found elevated levels of lead in drinking water in some homes/buildings. Lead can cause serious health problems, especially for pregnant women and children 6 years and younger. Please read this notice closely to see what you can do to reduce lead in your drinking water.*

This notice is brought to you by *LP Waterworks, Inc*  
State Water System ID# 628-0304  
Date: **December 08, 2015**

#### **Health Effects of Lead**

*Lead can cause serious health problems if too much enters your body from drinking water or other sources. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of lead exposure is to infants, young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones and it can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development.*

#### **Sources of Lead**

Lead is a common metal found in the environment. Drinking water is one possible source of lead exposure. The main sources of lead exposure are lead-based paint and lead-contaminated dust or soil, and some plumbing materials. In addition, lead can be found in certain types of pottery, pewter, brass fixtures, food, and cosmetics. Other sources include exposure in the work place and exposure from certain hobbies (lead can be carried on clothing or shoes).

New brass faucets, fittings, and valves, including those advertised as "lead-free," may contribute lead to drinking water. The law currently allows end-use brass fixtures, such as faucets, with up to 8 percent lead to be labeled as "lead free." However, plumbing fixtures labeled National Sanitation Foundation (NSF) certified may only have up to 2 percent lead. Consumers should be aware of this when choosing fixtures and take appropriate precautions.

"The source of water from *LP Waterworks, Inc* does not have any lead in its source water or water mains in the street." When water is in contact with service lines or plumbing that contains lead for several hours, the lead may enter drinking water. Homes built before 1986 are more likely to have plumbing containing lead. New homes may also have lead; even "lead-free" plumbing may contain some lead.

EPA estimates that 10 to 20 percent of a person's potential exposure to lead may come from drinking water. Infants who consume mostly formula mixed with lead-containing water can receive 40 to 60 percent of their exposure to lead from drinking water. Don't forget about other sources of lead such as lead paint, lead dust, and lead in soil. Wash your children's hands and toys often as they can come into contact with dirt and dust containing lead.

#### **Steps You Can Take To Reduce Your Exposure To Lead In Your Water**

**1. Run your water to flush out lead.** Run water for 15-30 seconds or until it becomes cold or reaches a steady temperature before using it for drinking or cooking, if it hasn't been used for several hours. This flushes lead-containing water from the pipes.

- 2. Use cold water for cooking and preparing baby formula.** Do not cook with or drink water from the hot water tap; lead dissolves more easily into hot water. Do not use water from the hot water tap to make baby formula.
- 3. Do not boil water to remove lead.** Boiling water will not reduce lead.
- 4. Look for alternative sources or treatment of water.** You may want to consider purchasing bottled water or a water filter. Read the package to be sure the filter is approved to reduce lead or contact NSF International at 800-NSF-8010 or [www.nsf.org](http://www.nsf.org) for information on performance standards for water filters. Be sure to maintain and replace a filter device in accordance with the manufacturer's instructions to protect water quality.
- 5. Test your water for lead.** Please contact Ron DeRossett at 727 848-8292 to find out how to get your water tested for lead. *LP Waterworks, Inc* does not provide free testing? Short Laboratory in your area is certified to do lead in water testing.
- 6. Get your child tested.** Contact your local health department or healthcare provider to find out how you can get your child tested for lead if you are concerned about exposure.
- 7. Identify if your plumbing fixtures contain lead.** New brass faucets, fittings, and valves, including those advertised as "lead-free," may contribute lead to drinking water. The law currently allows end-use brass fixtures, such as faucets, with up to 8% lead to be labeled as "lead free." Visit the National Sanitation Foundation Web site at [www.nsf.org](http://www.nsf.org) to learn more about lead-containing plumbing fixtures.

#### **What Happened? What is Being Done?**

- The routine lead and copper sampling completed this year (2015) revealed the of lead in the drinking water.
- This public education pamphlet is provided to help *LP Waterworks, Inc* to reduce the lead levels in the community water system.
- *LP Waterworks, Inc* has no service lines that contain lead or copper. All service lines are of PVC pipe or tubing. When any service line is not PVC we replace it from the main lines to the customer's meter. Any replacement from the meter to the homes is the customer's responsibility. However, we will continue to assess the water treatment plant and begin lead and copper monitoring every 6 months until the situation is resolved.
- Have they been low and risen recently? There is no known reason for any lead level changes.

#### **Additional Information**

**For More Information** please contact Ron DeRossett at 727 848-8292 or visit our Web site at [www.mywaterservice.com](http://www.mywaterservice.com) For more information on reducing lead exposure around your home/building and the health effects of lead, visit EPA's Web site at [www.epa.gov/lead](http://www.epa.gov/lead) or contact your health care provider. Please share this information and notice with all the people who drink this water, especially those who may not have received this notice directly.

**Re: Poly/Orthophosphate Blend (AquaGold) installation to Inhibit and Control Corrosion for Aggressive Waters that Might Leach Lead & Copper Woodlands of Lake Placid, Highlands Co., PWS: 6280304**

Dear Mr. DeRossett,

Florida Rural Water Association is pleased to assist The Woodlands of Lake Placid with its Aqua Gold® Installation as a membership service. FRWA is dedicated to helping water and wastewater systems provide Floridians with an ample affordable supply of high quality water, while protecting natural systems.

Florida Rural Water Association will reimburse the permit application fee once the application has been received by - FDEP District Office, and the equipment installation once the installation is complete and cleared by FDEP – District Office for operation.

FDEP-SRF has agreed to pay for the required chemical through the end of the current contract, October 1, 2016. The contract is expected to be renewed moving forward and the chemical cost will be reimbursed for the life of the project.

Monies allocated for this program in 2016 are limited and offered on a first come first served basis. Any delays may rescind the offer as the monies are committed and depleted. The project will be considered funded completely once FDEP-SRF has approved qualifications and the permit application has been submitted.

We have enjoyed serving you and wish you the best.

Sincerely,

Michael Chase, P.E.

Good Morning Ms. Baron,

Mr. Eppely from FRWA has completed the corrosion study and sampled the WQP (see attached), I have also attached the proposed permit for the Poly/Orthosphosphate Blend recommended through SFWMD.

At this time LP Waterworks/ US Water Services will wait on the upcoming customer's lead and copper results before moving forward with this permit. If the test results meet the requirements, we believe that it may not be necessary to move forward with the sequestering project.

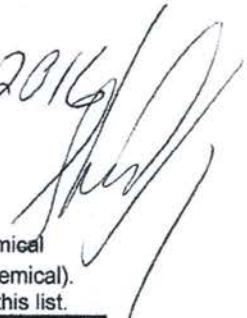

To date, LP Waterworks/US Water Services Corp has completed the following:

Public Notices (being updated quarterly on customer's billing), as required by rule  
Sample bottles are being distributed this week for the next test samples.

## Permit & Final Certification Approval Process

You are currently at the very first step at the top of the chart "Permit Application."

### Notes:

1. Do **NOT** begin construction until after permit is ISSUED.
2. **CAUTION FDEP fines can be up to \$5,000!** The new water system components must go through all the steps above -- be permitted and cleared by Florida Department of Environmental Protection **BEFORE** it can be turned on. FDEP must clear the system for operation -- the final step in the process -- before you can use the new equipment. You are currently at the very first step at the top of the chart "Permit Application."

SEQUESTRATION, TREATMENT FACILITIES FOR SMALL OR MEDIUM PWSs**

**INSTRUCTIONS:** This notice shall be completed and submitted by small or medium public water systems (i.e., public water systems serving less than or equal to 50,000 people) proposing to construct projects permitted under the "General Permit for Construction of Lead or Copper Corrosion Control, or Iron or Manganese Sequestration, Treatment Facilities for Small or Medium Public Water Systems" in Rule 62-555.401, F.A.C. **AT LEAST 30 DAYS BEFORE BEGINNING CONSTRUCTION OF A LEAD OR COPPER CORROSION CONTROL, OR IRON OR MANGANESE SEQUESTRATION, TREATMENT FACILITY PROJECT**, complete and submit one copy of this notice to the appropriate Department of Environmental Protection (DEP) District Office or Approved County Health Department (ACHD) along with payment of the proper permit processing fee. (When completed, Part II of this notice serves as a preliminary design report for a lead or copper corrosion control, or iron or manganese sequestration, treatment facility project, and thus, it is unnecessary to submit a separate preliminary design report or drawings, specifications, and design data with this notice.) All information provided on this notice shall be typed or printed in ink. The DEP permit processing fee for projects requiring the services of a professional engineer during design is \$650, and the DEP permit processing fee for projects not requiring the services of a professional engineer during design is \$500.\* Some ACHDs charge a county permit processing fee in addition to the DEP permit processing fee. Checks for permit processing fees shall be made payable to the Department of Environmental Protection or the appropriate ACHD. **NOTE THAT A SEPARATE NOTIFICATION AND A SEPARATE PERMIT PROCESSING FEE ARE REQUIRED FOR EACH NON-CONTIGUOUS PROJECT.†**

\* *Except as noted in paragraphs 62-555.520(3)(a) and (b), F.A.C., projects shall be designed under the responsible charge of one or more professional engineers licensed in Florida.*

† *Non-contiguous projects are projects that are neither interconnected nor located nearby one another (i.e., on the same site, on adjacent streets, or in the same neighborhood).*

**I. General Project Information**

A. Name of Project: Woodlands WTP #1 Corrosion Control using Aqua Gold 150

B. Description of Project and Its Purpose:

We propose to inject Aqua Gold 150, a poly/orthophosphate blend to control Lead and Copper leaching and corrosion. We believe that Aqua Mag will buffer the pH and place a microscopic film coating on the interior walls of the pipes to reduce and eliminate further leaching and deterioration of Lead and Copper. We propose to inject Aqua Mag into the system at the Woodlands WTP #1 wired to start up with the well pump for proportional control.

**I. General Project Information**

A. Name of Project: Woodlands WTP #2 Corrosion Control using Aqua Gold 150

B. Description of Project and Its Purpose:

We propose to inject Aqua Gold 150, a poly/orthophosphate blend to control Lead and Copper leaching and corrosion. We believe that Aqua Mag will buffer the pH and place a microscopic film coating on the interior walls of the pipes to reduce and eliminate further leaching and deterioration of Lead and Copper. We propose to inject Aqua Mag into the system at the Woodlands WTP #1 wired to start up with the well pump for proportional control.

RE: Request No 1207833W – Anthony Tornatore – Account # 1189173

Dear Mr. Bermude-Frau ,

An attempt to contact Mr. Tornatore was made on March 16, 2016 by customer service but the customer's phone contained on the request and account indicated that "the party you are calling is not currently accepting calls, please call back at another time". We have been unable to contact Mr. Tornatore. Therefore, we have sent the attached letter concerning this request to the customer.

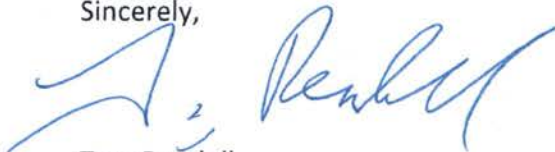

Customer: Anthony Tornatore – Account 1189173

Complaint #1: Gallons billed in October 2015.

Response: In response to the customer's concerns on his October 2015 billing, I have reviewed the account billing history for the past 18 months. (See Attached) A review of the account indicates that there was no abnormal usage on the account. However, as a onetime courtesy we have adjusted the account to reflect that all of the gallons for that month were billed at the lowest tier gallonage charge. A credit of \$23.00 was applied to the account on March 17, 2016. This adjustment was made to reflect all of the gallons being billed at the lowest gallonage charge.

If you have any questions or concerns please contact me, at (727) 848-8292 ext. 245. Thank you.

Sincerely,
