SPECIAL INSTRUCTIONS:		None	I.	9:50	SC

Case Background

On March 30, 2017, Duke Energy Florida, LLC (Duke or Company) filed a petition for approval of revisions to its underground residential distribution (URD) tariffs. The URD tariffs apply to new residential subdivisions and represent the additional costs Duke incurs to provide underground distribution service in place of overhead service. The proposed (legislative version) URD tariffs are contained in Attachment A to the recommendation. Duke's current charges were approved in Order No. PSC-14-0396-TRF-EI (2014 Order).¹

¹ Order No. PSC-14-0396-TRF-EI, issued July 31, 2014, in Docket No. 140067-EI, In re: Petition for approval of revised underground distribution tariffs, by Duke Energy Florida, Inc.

Docket No. 170069-EI Date: June 29, 2017

,

١

The Commission suspended Duke's proposed tariffs in Order No. PSC-17-0166-PCO-EI.² Duke responded to staff's first data request on May 16, 2017. The Commission has jurisdiction over this matter pursuant to Sections 366.03, 366.04, 366.05, and 366.06, Florida Statutes (F.S.).

² Order No. PSC-17-0166-PCO-EI, issued May 11, 2017, in Docket No. 170069-EI, In re: Petition for approval of revised underground residential distribution tariffs, by Duke Energy Florida, Inc.

Discussion of Issues

Issue 1: Should the Commission approve Duke's proposed URD tariffs and associated charges?

Recommendation: Yes, the Commission should approve Duke's proposed URD tariffs and associated charges as shown in Attachment A, effective July 13, 2017. (Ollila)

Staff Analysis: Rule 25-6.078, Florida Administrative Code (F.A.C.), defines investor-owned utilities' (IOU) responsibilities for filing updated URD tariffs. Duke has filed the instant petition pursuant to subsection (3) of the rule, which requires IOUs to file supporting data and analyses for URD tariffs at least once every three years.

The URD tariffs provide standard charges for underground service in new residential subdivisions and represent the additional costs, if any, the utility incurs to provide underground service in place of standard overhead service. The cost of standard overhead construction is recovered through base rates from all ratepayers. In lieu of overhead construction, customers have the option of requesting underground facilities. Any additional cost is paid by the customer as contribution-in-aid-of construction (CIAC). Typically, the URD customer is the developer of a subdivision.

Traditionally, three standard model subdivision designs have been the basis upon which each IOU submits URD tariff changes for Commission approval: low density, high density, and a high density subdivision where dwelling units take service at ganged meter pedestals (groups of meters at the same physical location). Examples of this last subdivision type include mobile home and recreational vehicle parks. While actual construction may differ from the model subdivisions, the model subdivisions are designed to reflect average overhead and underground subdivisions.

Table 1-1 shows the current and proposed URD differentials for the low density, high density, and ganged meter subdivisions. The charges shown are per-lot charges.

Companson of OKD Differential per Lot				
	Current Differential	Proposed Differential		
Low Density	\$768	\$694 ³		
High Density	\$459	\$403		
Ganged Meter	\$211	\$158		

Table 1-1Comparison of URD Differential per Lot

Source: 2014 Order and 2017 Petition

As shown in Table 1-1, the proposed URD differentials show a decrease for all model subdivisions. The calculations of the proposed URD charges include updated labor and material costs, as well as updated operational costs.

 $^{^{3}}$ \$694 is calculated as follows: \$408 (Table 1-2) + \$286 (Table 1-3) = \$694.

Updated Labor and Material Costs

The installation costs of both overhead and underground facilities include the labor and material costs to provide primary, secondary, and service distribution lines, as well as transformers. The cost to provide overhead service also includes poles. The cost to provide underground service includes the cost of trenching and backfilling. Duke reevaluated each subdivision design to determine if the designs still met current construction standards for the National Electric Safety Code (NESC) and Duke. According to Duke, all subdivision designs had minor modifications to meet NESC and Duke standards. Duke reported that it upgraded certain padmounted transformers in the underground designs, resulting in a minor increase in the differential cost.

Labor and material costs decreased from 2014 to 2017. Duke explained that material costs have fluctuated marginally, i.e., plus or minus five percent; thus, the decrease in labor cost is the primary driver in cost reduction. Overhead construction continues to be performed by Duke employees and underground construction continues to be performed by contractors. Labor rates for Duke employees have remained relatively flat; the decrease is due to a decrease in Duke's other (i.e., non-pension) post-employment benefit plan. Other post-employment benefits do not include pension, but may include healthcare or life insurance premiums. In response to staff's data request, Duke explained that its predecessor company's (Progress Energy Florida, Inc.) benefit plan was harmonized, i.e., blended, with Duke's plan, resulting in a plan amendment which reduced benefits for a four-year period beginning in the fourth quarter of 2014.

Contractor labor costs decreased due to the move from hourly pricing to unit-based pricing. Duke explained that hourly pricing compensates contractors for the duration to complete the work, including, for example, any unforeseen delays. Under unit-based pricing, contractors are compensated based on fixed prices for specific work; therefore, contractors absorb the cost of any unforeseen delays.

Loading factors decreased from 2014 to 2017. The Design and Project Management loading factor decreased from 17.90 to 13.90 percent of labor. The Management and Supervision loading factor decreased from 35.67 to 28.86 percent of labor. Both factors decreased because the investment in distribution costs increased at a greater rate than the actual management and supervision costs.

Table 1-2 below compares total 2014 and 2017 labor and material costs for the three subdivisions. As Table 1-2 shows, the total labor and material cost differentials decreased for all three model subdivisions because the cost of underground construction decreased at a greater rate than the cost of overhead construction.

Labor and Material Costs per Lot					
	2014 Costs	2017 Costs	Difference		
Low Density					
Underground Labor/material Costs	\$1,654	\$1,477	(\$177)		
Overhead Labor/material Costs	\$1,168	\$1,069	(\$99)		
Per lot Differential	\$486	\$408	(\$78)		
High Density					
Underground Labor/material Costs	\$1,309	\$1,181	(\$128)		
Overhead Labor/material Costs	\$946	\$865	(\$81)		
Per lot Differential	\$363	\$316	(\$47)		
Ganged Meter					
Underground Labor/material Costs	\$753	\$686	(\$67)		
Overhead Labor/material Costs	\$627	\$609	(\$18)		
Per lot Differential	\$126	\$77	(\$49)

Updated Operational Costs

Rule 25-6.078(4), F.A.C., requires that the differences in net present value (NPV) of operational costs between overhead and underground systems, including average historical storm restoration costs over the life of the facilities, be included in the URD charge. The inclusion of the operational cost is intended to capture longer term costs and benefits of undergrounding.

Operational costs include operations and maintenance costs and capital costs and represent the cost differential between maintaining and operating an underground versus an overhead system over the life of the facilities. The inclusion of the storm restoration cost in the URD differential lowers the differential, since an underground distribution system generally incurs less damage than an overhead system as a result of a storm, and therefore, less restoration costs when compared to an overhead system. Duke's operational costs, last updated for the 2014 filing, represent a five-year average (2012 - 2016). The methodology used by Duke in this filing for calculating the NPV of operational costs was approved in Order No. PSC-12-0348-TRF-EI.⁴

Duke's NPV calculation used a 34-year life of the facilities and a 6.80 percent discount rate. Staff notes that operational costs may vary among IOUs as a result of differences in size of service territory, miles of coastline, regions subject to extreme winds, age of the distribution system, or construction standards.

Table 1-3 below compares the 2014 and 2017 NPV calculations of operational and storm restoration cost differentials between overhead and underground systems on a per lot basis. As Table 1-3 shows, there are minor differences in the differentials from 2014 to 2017.

⁴ Order No. PSC-12-0348-TRF-EI, issued July 5, 2012, in Docket No. 110293-EI, In re: Petition for approval of revised underground residential distribution tariffs, by Progress Energy Florida, Inc.

NFV Of Operational Costs Differential per Lot					
	2014 Calculation	2017 Calculation	Difference		
Low Density					
Underground NPV - Operational Costs	\$1,022	\$1,189	\$167		
Overhead NPV - Operational Costs	\$741	\$903	\$162		
Per lot Differential	\$282	\$286	\$4		
High Density					
Underground NPV - Operational Costs	\$520	\$605	\$85		
Overhead NPV - Operational Costs	\$424	\$517	\$93		
Per lot Differential	\$96	\$87	(\$9)		
Ganged Meter					
Underground NPV - Operational Costs	\$400	\$466	\$66		
Overhead NPV - Operational Costs	\$315	\$385	\$70		
Per lot Differential	\$85	\$81	(\$4)

Other Proposed Tariff Changes

In addition to the proposed tariff changes discussed above, Duke proposed modifications to the charges and credits for feeder mains within the subdivision, customer-provided trenching and backfilling, new underground service laterals from overhead distribution systems, and for the conversion of existing service laterals from overhead to underground. Factors which contributed to the changes include the updated labor and material charges. In addition, Duke proposed a change in language in the construction contract's facility charge from cost-specific information to a description of the costs themselves.

Conclusion

Staff has reviewed Duke's proposed URD tariffs and associated charges, its accompanying work papers, and its responses to staff's data request. Staff believes the proposed URD tariffs and associated charges are reasonable. Staff recommends approval of Duke's proposed URD tariffs and associated charges as shown in Attachment A, effective July 13, 2017.

Docket No. 170069-EI Date: June 29, 2017

Issue 2: Should this docket be closed?

Recommendation: If Issue 1 is approved and a protest is filed within 21 days of the issuance of the order, the tariffs should remain in effect, with any revenues held subject to refund, pending resolution of the protest. If no timely protest is filed, this docket should be closed upon the issuance of a consummating order. (DuVal)

Staff Analysis: If Issue 1 is approved and a protest is filed within 21 days of the issuance of the order, the tariffs should remain in effect, with any revenues held subject to refund, pending resolution of the protest. If no timely protest is filed, this docket should be closed upon the issuance of a consummating order.

	(3) Point	of Delivery:
	The p buildi prope under allow servic desig	point of delivery shall be determined by the Company and will be on the front half of the side of the ing that is nearest the point at which the underground secondary electric supply is available to the retry. The Company will not install a service on the opposite side of the building where the rground secondary electric supply is available to the property. The point of delivery will only be ed on the rear of the building by special exception. The Applicant shall pay the estimated full cost of re lateral length required in excess of that which would have been needed to reach the Company's nated point of service.
	(4) Locat	ion of Meter and Socket:
	The A Comp order	Applicant shall install a meter socket at the point designated by the Company in accordance with the vany's specifications. Every effort shall be made to locate the meter socket in unobstructed areas in that the meter can be read without going through fences, etc.
	(5) Devel	lopment of Subdivisions:
	The a is req devel depose will be the d Applie portio to ren	above charges are based on reasonably full use of the land being developed. Where the Company quired to construct underground electric facilities through a section or sections of the subdivision or opment where service will not be required for at least two (2) years, the Company may require a sit from the Applicant before construction is commenced. This deposit, to guarantee performance, e based on the estimated total cost of such facilities rather than the differential cost. The amount of eposit, without interest, in excess of any charges for underground service will be returned to the cant on a prorata basis at quarterly intervals on the basis of installations to new customers. Any n of such deposit remaining unrefunded, after five (5) years from the date the Company is first ready uder service from the extension, will be retained by the company.
	(6) Reloc	ation or Removal of Existing Facilities:
	If the faciliti Applic the fa	Company is required to relocate or remove existing overhead and/or underground distribution ies in the implementation of these Rules, all costs thereof shall be borne exclusively by the cant. These costs shall include costs of relocation or removal, the in-place value (less salvage) of acilities so removed, and any additional costs due to existing landscaping, pavement or unusual tions.
	(7) Other	Provisions:
	If soi additi on the	I compaction is required by the Applicant at locations where Company trenching is done, an onal charge may be added to the charges set forth in this tariff. The charge will be estimated based e Applicant's compaction specifications.
11.04	UNDERG	ROUND SERVICE LATERALS FROM OVERHEAD ELECTRIC DISTRIBUTION SYSTEMS.
	(1) New (Inderground Service Laterals:
	When	n requested by the Applicant, the Company will install underground service laterals from overhead ms to newly constructed residential buildings containing less than five (5) separate dwelling units.
	(2) Contri	ibution by Applicant:
	(a)	The Applicant shall pay the Company the following average differential cost between an overhead service and an underground service lateral:
		For Service Lateral up to 80 feet \$486439.00
		For each foot over 80 feet up to 300 feet\$ 0.0 per foot
		Service laterals in excess of 300 feet shall be based on a specific cost estimate.
	(b)	Credits will be allowed where, by mutual agreement, the Applicant provides trenching and backfilling in accordance with the Company specifications and for the use of the Company facilities, in lieu of a portion of the cash payment described above. These credits, based on the Company's design drawings, are as follows:
		For each Foot of Trench
		The provisions of Paragraphs 11.03(3) and 11.03(4) are also applicable.
