Re: Ten-Year Site Plan Supplemental Data Request #1 - FMPA Responses

May 14, 2020

Dear Doug and Donald:

Pursuant to the Commission's 2019 Data Request #1, dated March 6, 2020, FMPA is hereby filing one electronic copy of its Response (both narrative and non-narrative).

Under separate cover as directed by the Commission, FMPA will submit an electronic PDF copy of combined narrative and non-narrative responses to the Office of Commission Clerk.

Please do not hesitate to contact me at (321) 239-1028 if you have any questions.

Sincerely,

— Docusigned by: Navid Nowaklutar

Navid Nowakhtar

Resource and Strategic Planning Manager

Enc.

cc. File

General Items

1. Please provide an electronic copy of the Company's Ten-Year Site Plan (TYSP) for the period 2020-2029 (current planning period) in PDF format.

The TYSP information was provided electronically on March 24, 2020.

2. Please provide an electronic copy of all schedules and tables in the Company's current planning period TYSP in Microsoft Excel format.

The TYSP information was provided electronically on March 24, 2020.

3. Please refer to the Microsoft Excel document accompanying this data request titled "Data Request #1 – Excel Tables," (Excel Tables Spreadsheet). Please provide, in Microsoft Excel format, all data requested in the Excel Tables Spreadsheet for those sheets/tabs identified as associated with this question. If any of the requested data is already included in the Company's current planning period TYSP, state so on the appropriate form.

The information has been provided as requested.

Environmental Compliance Costs

- 4. Please explain if the Company assumes CO₂ compliance costs in the resource planning process used to generate the resource plan presented in the Company's current planning period TYSP. If the response is affirmative:
 - a. Please identify the year during the current planning period in which CO₂ compliance costs are first assumed to have a non-zero value.
 - b. [Investor-Owned Utilities Only] Please explain if the exclusion of CO₂ compliance costs would result in a different resource plan than that presented in the Company's current planning period TYSP.
 - c. [Investor-Owned Utilities Only] Please provide a revised resource plan assuming no CO₂ compliance costs.

For the current planning period TYSP, FMPA assumes no incremental CO₂ compliance costs.

Flood Mitigation

5. Please explain the Company's planning process for flood mitigation for current and proposed power plant sites and transmission/distribution substations.

With respect to flood mitigation for the existing All-Requirements Project generation fleet, only the facilities at Stock Island are within the 100-year flood map. All generating assets at Stock Island are elevated above sea level on concrete padded mounts and securely bolted to the pad. Generation elevations at Stock Island are equal to or greater than the 100-year flood plan risk of 9 feet. One asset, Combustion Turbine #4, has an elevation equal to the 500-year

flood plan risk of 11 feet. The Stock Island CTs have additional strapping to mitigate windstorm or flood related floating risk and have been sealed to prevent water intrusion. The Cane Island Power Park and Treasure Coast Energy Center plant sites are outside the 500-year flood zone, and FMPA has not taken any additional flood mitigation steps at these sites.

FMPA does not have any new proposed power plant sites in our current TYSP. FMPA does not operate or manage the transmission and distribution assets of the All-Requirements Project participants nor are we proposing any new transmission substations in our current TYSP.

Load & Demand Forecasting

6. [Investor-Owned Utilities Only] Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing, on a system-wide basis, the hourly system load in megawatts (MW) for the period January 1 through December 31 of the year prior to the current planning period. For leap years, please include load values for February 29. Otherwise, leave that row blank. Please also describe how loads are calculated for those hours just prior to and following Daylight Savings Time.

FMPA is not an Investor-Owned Utility.

7. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on the monthly peak demand experienced during the three-year period prior to the current planning period, including the actual peak demand experienced, the amount of demand response activated during the peak, and the estimated total peak if demand response had not been activated. Please also provide the day, hour, and system-average temperature at the time of each monthly peak.

The information has been provided as requested.

8. Please identify the weather station(s) used for calculation of the system-wide temperature for the Company's service territory. If more than one weather station is utilized, please describe how a system-wide average is calculated.

The 13 FMPA ARP participants that purchase capacity and energy from FMPA range in location from Gadsden County in the Big Bend to Monroe County, including Key West. As a power supply project, the ARP does not have a service territory. FMPA used the temperature at the Orlando International Airport as a statewide average in responding to Question 7, but in the development of the forecast, various weather stations within or near our participants' service territories are used.

For purposes of analyzing and forecasting ARP energy requirements, monthly weather data from the following weather stations are utilized:

- Ft. Pierce-St. Lucie County Int'l Airport
- Gainesville Regional Airport
- Jacksonville Beach
- Key West Int'l Airport

- Orlando Int'l Airport
- Tallahassee Airport
- Tampa Airport
- West Palm Beach

For purposes of analyzing ARP peak demand data, daily weather data from the following weather stations are utilized:

- Gainesville Regional Airport
- Orlando Int'l Airport
- West Palm Beach
- 9. Please explain, to the extent not addressed in the Company's current planning period TYSP, how the reported forecasts of the number of customers, demand, and total retail energy sales were developed. In your response, please include the following information: methodology, assumptions, data sources, third-party consultant(s) involved, anticipated forecast accuracy, and any difference/improvement made compared with those forecasts used in the Company's most recent prior TYSP.
 - a. Third Party Consultants: FMPA contracted with nFront Consulting LLC to prepare the load forecast.
 - b. Methodology: FMPA bases its forecast of demand and energy for the ARP on econometric models that have been developed over the years to correlate each of FMPA's All Requirements Project (ARP) Participant's historical energy requirements with demographic and economic variables associated with each ARP Participant's service territory, while also reflecting local issues and trends. These models, when supplied with economic and demographic data forecasts as input, produce a forecast of monthly energy usage by ARP Participant. FMPA then adds the anticipated losses across the relevant transmission systems used by FMPA to deliver capacity and energy to its All-Requirements Customers to the monthly energy usage by ARP Participant to produce a Net Energy for Load (NEL) at the generation level. Peak demand is then derived based on an analysis of historical load factors.
 - c. Data Sources and assumptions:
 - i. Historical Participant retail sales, customer accounts, electric sales, and revenues are gathered and analyzed. Within this process, data on the estimated impact of the ARP Conservation Program for each Participant are collected and tracked. Similarly, the level of activity and estimated impacts of the ARP Net Metering Program are tracked and projected. Estimated Conservation and Net Metering Program impacts are compared to a planning threshold for potential incorporation of such impacts explicitly into the forecast.
 - ii. Historical and projected economic and demographic data were also provided by the Bureau of Economic and Business Research at the University of Florida and Woods & Poole Economics, Inc. (both nationally recognized providers of such data).

- iii. Weather data was provided by the National Oceanic and Atmospheric Administration (NOAA) for a variety of weather stations in close proximity to the ARP Participants and was used to produce the forecast on a weather-normalized basis. That is, we assume that weather conditions in the future will be the same as the 30-year normal weather, which is similar to average weather conditions over the latest 30 year period (1981-2010) as reported by the NOAA. For purposes of comparing actual data to forecast data, we weather-normalize (i.e., mathematically adjust) actual energy usage data to estimate energy requirements had the weather been normal.
- iv. Real Electricity Price Data was derived from the information gathered in item i (above).

d. General assumptions:

- i. The future influence on energy sales of the economic, demographic, and weather factors, on which the econometric models are based, was assumed to be similar to the estimated influence of such factors generally over the period 1992 through 2018.
- ii. Although the econometric models implicitly account for the historical relationships between energy usage and the following factors to the extent they have occurred in the past, the 2019 Load Forecast does not explicitly reflect extraordinary potential future effects of: (a) increases in appliance design efficiency or building insulation standards; (b) significant conservation efforts, including those funded by the ARP, the state of Florida, and the federal government, that are not a function of changes in electricity or natural gas prices; (c) development of substitute energy sources, or demand-side generation; (d) consumers switching to traditional or new types of electrical appliances from other alternatives (e.g., electric vehicles); (e) consumers switching from electrical appliances to other alternatives; or (f) variations in load that might result from legal, legislative, regulatory, or policy actions.
- iii. The recent average historical relationships between annual summer and winter non-coincident demands and annual NEL and between monthly NCP demands and annual winter and summer NCP demands were assumed to represent reasonable approximations of future load relationships between demands and energy requirements.
- iv. Data regarding the historical impacts of load management resources operated by the Participants and reported to FMPA are assumed to be accurate (note: Participants' peak load management activities have ceased, effective September 30, 2015).
- v. The data regarding the ARP Conservation Program, including historical participation and marginal impacts, are assumed to be accurate. nFront

¹ The primary weather determinants used in the forecast are heating and cooling degree days, which measure differences in daily average temperature from 65 degrees Fahrenheit (dF). Cooling degree days are the summation of positive differences in daily average temperature from 65 dF; heating degree days are the summation of the absolute value of negative differences.

Consulting LLC has independently reviewed and assisted in the development of the marginal impact estimates of the programs and believes them to be reasonable. As discussed previously, nFront Consulting LLC has prepared, with FMPA's assistance, simplified projections of Conservation Program activity and load impacts, which reflect that projected load impacts will not exceed FMPA's threshold for explicit inclusion in the Load Forecast of 0.5 percent of load over the 20-year planning horizon. To the extent the Conservation Program expands in a significant way relative to these projections, the future impacts may have a significant impact on future loads to be served by the ARP not captured herein.

- vi. Data regarding installed distributed generation as part of FMPA's Net Metering Program are assumed to be accurate and represent all distributed generation (other than certain generation resources utilized by the Participants for emergency purposes). As discussed previously, nFront Consulting LLC has prepared, with FMPA's assistance, a simplified projection of impacts from FMPA's Net Metering Program, which reflect that load impacts will not exceed FMPA's threshold for explicit inclusion in the Load Forecast of 0.5 percent of load over the 20-year planning horizon. To the extent activity in the Net Metering Program expands in a significant way relative to these projections, the future impacts may have a significant impact on future loads to be served by the ARP not captured herein.
- 10. Please identify all closed and open Florida Public Service Commission (FPSC) dockets and all non-docketed FPSC matters which were/are based on the same load forecast used in the Company's current planning period TYSP.

FMPA does not have any open or closed FPSC dockets, or non-docketed FPSC matters currently based on the load forecast used in the 2020 TYSP.

- 11. Please explain if your Company evaluates the accuracy of its forecasts of customer growth and annual retail energy sales presented in its past TYSPs by comparing the actual data for a given year to the data forecasted one, two, three, four, five, or six years prior.
 - a. If your response is affirmative, please explain the method used in your evaluation, and provide the corresponding results, including work papers, in Microsoft Excel format for the analysis of each forecast presented in the TYSPs filed with the Commission during the 20-year period prior to the current planning period. If your Company limits its analysis to a period shorter than 20 years prior to the current planning period, please provide what analysis you have and a narrative explaining why your Company limits its analysis period.
 - b. If your response is negative, please explain why.

FMPA does not have any retail energy sales. FMPA provides wholesale energy to Member Participants in the All Requirements Project. FMPA updates our load forecast on an annual basis and does not view variance decomposition for periods longer than 5 years to provide meaningful information for planning purposes due to a wide range of factors, such as (i) dated economic projections, (ii) periods of above or below average economic expansion or

contraction (e.g. Great Recession) that greatly skew the underlying variance contribution of the statistical models upon which projections were based, and importantly (iii) the number of Participants in the All Requirements Project, which has not remained constant over a 20 year historical period (and which would influence the load projected at a given point in time that would have assumed a specific set of Participants for whom current load obligations may have ceased or changed). FMPA does work with nFront Consulting LLC to examine weather-adjusted projections for the prompt year as compared to actual energy sales. The table below provides a weather-adjusted variance to actual net energy for load over the most recent 5 years of available data.

Year	Variance
2014	1.3%
2015	<0.1%*
2016	<0.1%*
2017	1.5%**
2018	2.1%

*Weather-adjusted essentially equal to budget.

**Variance significantly impacted by Hurricane Irma.

FMPA also works within the FRCC Resource Subcommittee on FRCC-level variance decomposition summaries on a longer time scale, which are available for review as part of the FRCC's annual work products. Such reports represent raw variance that does not account for weather normalization or other compound factors noted above that may influence total FRCC load.

- 12. Please explain if your Company evaluates the accuracy of its forecasts of Summer/Winter Peak Energy Demand presented in its past TYSPs by comparing the actual data for a given year to the data forecasted one, two, three, four, five, or six years prior.
 - a. If your response is affirmative, please explain the method used in your evaluation, and provide the corresponding results, including work papers, in Microsoft Excel format for the analysis of each forecast presented in the TYSPs filed with the Commission during the 20-year period prior to the current planning period. If your Company limits its analysis to a period shorter than 20 years prior to the current planning period, please provide what analysis you have and a narrative explaining why your Company limits its analysis period.
 - b. If your response is negative, please explain why.

FMPA does not have any retail energy sales. FMPA provides wholesale energy to Member Participants in the All Requirements Project. FMPA updates our load forecast on an annual basis and does not view variance decomposition for periods longer than 5 years to provide meaningful information for planning purposes due to a wide range of factors, such as (i) dated economic projections, (ii) periods of above or below average economic expansion or contraction (e.g. Great Recession) that greatly skew the underlying variance contribution of the statistical models upon which projections were based, and importantly (iii) the number of Participants in the All Requirements Project, which has not remained constant over a 20 year historical period (and which would influence the load projected at a given point in time that would have assumed a specific set of Participants for whom current load obligations may have

ceased or changed). FMPA does work with nFront Consulting LLC to examine weather-adjusted projections for the prompt year as compared to actual peak demand. The table below provides a weather-adjusted variance to actual for system peak demand over the past 5 years.

Year	Variance
2014	-0.3%
2015	-5.9%
2016	-3.1%
2017	-7.0%**
2018	-1.7%

^{**}Variance significantly impacted by Hurricane Irma.

FMPA also works within the FRCC Resource Subcommittee on FRCC-level variance decomposition summaries on a longer time scale, which are available for review as part of the FRCC's annual work products. Such reports represent raw variance that does not account for weather normalization or other compound factors noted above that may influence total FRCC load.

13. Please explain any historic and forecasted trends in:

In aggregate, usage has been flat to declining in both the residential and non-residential sectors after controlling for weather variation from normal conditions. There are countervailing factors that influence usage. In general, declines in electricity prices, improvements in the employment situation, increased average income, and reductions in vacancy rates and under-occupied accounts have a small upward impact on usage. Concurrently, the lingering effects of the recent recession in terms of reduced propensity to spend, a continued orientation to conservation, and continued improvement in energy efficiency, driven primarily from technological advances, equipment standards, and building codes, places downward pressure on average usage. FMPA continually monitors usage trends across our Members as part of our load forecasting process. These impacts have been offset by strong customer count gains in certain areas of the All Requirements Project Participant service territories, which has resulted in continued recovery in net energy for load since the Great Recession. As noted in our response to Question #9, FMPA continually updates estimates of our Conservation Program and Net Metering Program impacts to determine if incremental adjustments to the forecast are warranted.

- a. **Growth of customers**, by customer type (residential, commercial, industrial) as well as Total Customers, and identify the major factors (historically, currently, and in the forecasted period) that contribute to the growth/decline of the trends.
- b. Average KWh consumption per customer, by customer type (residential, commercial, industrial), and identify the major factors (historically, currently, and in the forecasted period) that contribute to the growth/decline of the trends.

- c. Total Billed Retail Energy Sales (GWh) [for FPL], or Net Energy for Load (GWh) [for other companies], identify the major factors (historically, currently, and in the forecasted period) that contribute to the growth/decline of the trends. Please include a detailed discussion of how the Company's demand management program(s) and conservation/energy-efficiency program(s) impact the growth/decline of the trends.
- 14. Please explain any historic and forecasted trends in each of the following components of Summer/Winter Peak Demand:
 - a. **Demand Reduction due to Conservation and Self Service**, by customer type (residential, commercial, industrial) as well as Total Customers, and identify the major factors (historically, currently, and in the forecasted period) that contribute to the growth/decline in the trends.
 - b. **Demand Reduction due to Demand Response,** by customer type (residential, commercial, industrial), and identify the major factors (historically, currently, and in the forecasted period) that contribute to the growth/decline of the trends.
 - c. **Total Demand**, and identify the major factors (historically, currently, and in the forecasted period) that contribute to the growth/decline in the trends.
 - d. **Net Firm Demand,** by the sources of peak demand appearing in Schedule 3.1 and Schedule 3.2 of the current planning period TYSP, and identify the major factors (historically, currently, and in the forecasted period) that contribute to the growth/decline in the trends.

Please refer to the responses provided in Questions 9 and 13, which reflect the same trends and drivers that impact peak demand.

15. Please explain any anomalies caused by non-weather events with regard to annual historical data points for the period 10 years prior to the current planning period that have contributed to the Company's Summer/Winter Peak Energy Demand.

The primary anomalous impact over the period in question relates to the protracted economic contraction caused by the Great Recession, which impacted the All Requirements Project through generally the end of 2012.

16. Please refer to the Company's respective Utility Perspective section in the Commission's "Review of the 2019 Ten-Year Site Plans of Florida's Electric Utilities." Please answer your Company's respective questions below regarding the growth of customers and retail energy sales, of which the associated figure in the Utility Perspective section is based on the values reported on Schedule 2 of your respective Company's 2019 TYSP:

FPL:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers starting in 2011.
- b. Please explain why the divergence in the growth rates of customers and retail energy sales increases during the forecast period.
- c. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy sales in the period 2011-2012 and the decline in the growth rate in 2017, respectively.

DEF:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers starting in 2011.
- b. Please explain why the divergence in the growth rates of customers and retail energy sales increases during the forecast period.
- c. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy sales in the period 2011-2013, the decline in the growth rate in 2017, and the projected decline in the growth rate in 2019, respectively.

TECO:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers.
- b. Please explain why the divergence in the growth rates of customers and retail energy sales increases during the forecast period.
- c. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy in 2011.

GPC:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers starting in 2012.
- b. Please explain why the divergence in the growth rates of customers and retail energy sales increases during the forecast period.

c. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy sales in the period 2011-2013, the decline in the growth rate in 2017, and the increase in the growth rate in 2018, respectively.

GRU:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers starting in 2011.
- b. Please identify the drivers which contribute to the sharp fall in the growth of retail energy sales in the period 2011-2014 and the decline in the growth rate in 2017, respectively.

JEA:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers starting in 2011.
- b. Please explain why the divergence in the growth rates of customers and retail energy sales increase during the forecast period.
- c. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy sales in the period 2011-2013, and the decline in the growth rate in 2017, respectively.

LAK:

- a. Please explain, in general, why the Company's growth rate of retail energy sales is projected to lag the growth rate of customers starting in 2020.
- b. Please explain why the divergence in the growth rates of customers and the retail energy sales is projected to increase during the forecast period.
- c. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy sales in the period 2011-2012, and the relatively high growth rates in 2015 and 2018, respectively.

OUC:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers.
- b. Please identify the drivers which contribute to the decline in the growth rate of retail energy sales in 2012 and 2017, respectively.

SEC:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers starting in 2011.
- b. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy sales in the period 2010-2014, and the decline in the growth rate in 2017, respectively.

TAL:

- a. Please explain, in general, why the Company's growth rate of retail energy sales lags the growth rate of customers starting in 2012.
- b. Please explain why the divergence in the growth rates of customers and retail energy sales is projected to increase during the forecast period.
- c. Please identify the drivers which contribute to the sharp fall in the growth rate of retail energy sales in the period 2010-2013, and the decline in the growth rate in 2017, respectively.
- 17. [Investor-Owned Utilities Only] If not included in the Company's current planning period TYSP, please provide load forecast sensitivities (high band, low band) to account for the uncertainty inherent in the base case forecasts in the following TYSP schedules, as well as the methodology used to prepare each forecast:
 - a. Schedule 2.1 History and Forecast of Energy Consumption and Number of Customers by Customer Class.
 - b. Schedule 2.2 History and Forecast of Energy Consumption and Number of Customers by Customer Class.
 - c. Schedule 2.3 History and Forecast of Energy Consumption and Number of Customers by Customer Class.
 - d. Schedule 3.1 History and Forecast of Summer Peak Demand.
 - e. Schedule 3.2 History and Forecast of Winter Peak Demand.
 - f. Schedule 3.3 History and Forecast of Annual Net Energy for Load.
 - g. Schedule 4 Previous Year and 2-Year Forecast of Peak Demand and Net Energy for Load by Month.

FMPA is not an Investor-Owned Utility.

18. Please discuss whether the Company included plug-in electric vehicle (PEV) loads in its demand and energy forecasts for its current planning period TYSP. If so, how were these impacts accounted for in the modeling and forecasting process?

As part of our on-going load forecast process for the ARP, FMPA inquires about load characteristics, new customers and new initiatives associated with demand and energy for load in the ARP Participants' territories. As Participants become aware of plug-in electric vehicle market saturation in their service territories, FMPA will incorporate these estimations into the load forecast for the ARP. FMPA has recently conducted a meta-analysis of electric vehicle

market potential and energy impacts in the FRCC region, which was updated in March 2020. While our analysis suggests that market uptake will be protracted and is unlikely to result in material changes to electric demand over the ten-year planning horizon that would be indigenous to the ARP Participants, we continually monitor a variety of trends that could impact load growth or contraction, and consequently, future forecasts may reflect an evolving understanding of such factors.

19. Please discuss the methodology and the assumptions (or, if applicable, the source(s) of the data) used to estimate the number of PEVs operating in the Company's service territory and the methodology used to estimate the cumulative impact on system demand and energy consumption.

The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. As Participants become aware of significant plug-in electric vehicle market saturation in their service territories, FMPA will incorporate these estimations in the demand and energy forecasts for the Ten-Year Site Plan.

20. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing estimates of the requested information within the Company's service territory for the current planning period. "Quick-charge" PEV charging stations are those that require a service drop greater than 240 volts and/or use three-phase power.

The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. FMPA does not collect this information on behalf of the ARP Participants.

- 21. Please describe any Company programs or tariffs currently offered to customers relating to PEVs, and describe whether any new or additional programs or tariffs relating to PEVs will be offered to customers within the current planning period.
 - a. Of these programs or tariffs, are any designed for or do they include educating customers on electricity as a transportation fuel?
 - b. Does the Company have any programs where customers can express their interest or expectations for electric vehicle infrastructure as provided for by the Utility, and if so, please describe in detail.

The All-Requirements Project is a wholesale power supply project and as such, does not have programs or tariffs for retail customers.

22. Please describe how the Company monitors the installation of PEV public charging stations in its service area.

The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. FMPA does not collect this information on behalf of the ARP Participants.

- 23. Please describe any instances since January 1 of the year prior to the current planning period in which upgrades to the distribution system were made where PEVs were a contributing factor.
 - The All-Requirements Project is a wholesale power supply project and as such, does not own, maintain, or operate a distribution system. FMPA does not collect this information on behalf of the ARP Participants.
- 24. Has the Company conducted or contracted any research to determine demographic and regional factors that influence the adoption of PEVs applicable to its service territory? If so, please describe in detail the methodology and findings.
 - The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. FMPA does not collect this information on behalf of the ARP Participants.
- 25. What processes or technologies, if any, are in place that allow the Company to be notified when a customer has installed a PEV charging station in their home?
 - FMPA does not collect this information on behalf of the ARP Participants.
- 26. **[FEECA Utilities Only]** For each source of demand response, please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing annual customer participation information for 10 years prior to the current planning period. Please also provide a summary of all sources of demand response using the table. FMPA is not a FEECA Utility.
- 27. **[FEECA Utilities Only]** For each source of demand response, please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing annual usage information for 10 years prior to the current planning period. Please also provide a summary of all demand response using the table. FMPA is not a FEECA Utility.
- 28. **[FEECA Utilities Only]** For each source of demand response, please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing annual seasonal peak activation information for 10 years prior to the current planning period. Please also provide a summary of all demand response using the table. FMPA is not a FEECA Utility.

Generation & Transmission

29. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each utility-owned traditional generation resource in service as of December 31 of the year prior to the current planning period. For multiple small (<250 kW per installation) distributed resources of the same type and fuel source, please include a single combined entry. For capacity factor, use the net capacity as a basis.

This information has been provided as requested.

- 30. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each utility-owned traditional generation resource planned for in-service within the current planning period. For multiple small (<250 kW per installation) distributed resources of the same type and fuel source, please include a single combined entry. For projected capacity factor, use the net capacity as a basis.
 - a. For each planned utility-owned traditional generation resource in the table, provide a narrative response discussing the current status of the project.

This information has been provided as requested.

31. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each utility-owned renewable generation resource in service as of December 31 of the year prior to the current planning period. For multiple small (<250 kW per installation) distributed resources of the same type and fuel source, please include a single combined entry. For capacity factor, use the net capacity as a basis.

This information has been provided as requested.

- 32. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each utility-owned renewable generation resource planned for in-service within the current planning period. For multiple small (<250 kW per installation) distributed resources of the same type and fuel source, please include a single combined entry. For projected capacity factor, use the net capacity as a basis.
 - a. For each planned utility-owned renewable resource in the table, provide a narrative response discussing the current status of the project.

This information has been provided as requested.

33. Please list and discuss any planned utility-owned renewable resources that have, within the past year, been cancelled, delayed, or reduced in scope. What was the primary reason for the changes? What, if any, were the secondary reasons?

FMPA currently has no plans for additional utility-owned renewable resources for the period 2020 through 2029. FMPA's solar development efforts have been through partnerships and power purchase agreements that can bring to bear the lowest cost renewable power for our Participants, and such efforts are summarized in the 2020 TYSP. There have been no cancellations, delays or reductions in scope during the past year.

34. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each purchased power agreement with a traditional generator still in effect by December 31 of the year prior to the current planning period pursuant to which energy was delivered to the Company during said year.

This information has been provided as requested.

- 35. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each purchased power agreement with a traditional generator pursuant to which energy will begin to be delivered to the Company during the current planning period.
 - a. For each purchased power agreement in the table, provide a narrative response discussing the current status of the project.

This information has been provided as requested. FMPA does not have any planned traditional power purchase agreement that has been executed for delivery to the Company during the planning period. FMPA has determined a seasonal peaking need within the planning period as described in the 2020 TYSP document, but has not made any determinations as to the nature of the fuel or renewable source of the purchase for the All Requirements Project at this time.

36. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each purchased power agreement with a renewable generator still in effect by December 31 of the year prior to the current planning period pursuant to which energy was delivered to the Company during said year.

This information has been provided as requested.

- 37. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each purchased power agreement with a renewable generator pursuant to which energy will begin to be delivered to the Company during the current planning period.
 - a. For each purchased power agreement in the table, provide a narrative response discussing the current status of the project.

This information has been provided as requested. Narratives associated with the tabular information are as follows:

• FMPA will purchase a 58 MW-AC share from two larger solar facilities. FMPA will receive its pro-rata amount of energy based on the actual output of the facilities, and has assigned an estimated amount of firm capacity associated with these PPAs as contributing to meeting summer peak for reliability purposes (a percentage of the firm capacity shown in the table).

- FMPA will purchase a 96.25 MW-AC share from two larger solar facilities. FMPA will receive its pro-rata amount of energy based on the actual output of the facilities, and has assigned an estimated amount of firm capacity associated with these PPAs as contributing to meeting summer peak for reliability purposes (a percentage of the firm capacity shown in the table).
- 38. Please list and discuss any purchased power agreements with a renewable generator that have, within the past year, been cancelled, delayed, or reduced in scope. What was the primary reason for the change? What, if any, were the secondary reasons?

In March 2018, the FMPA Executive Committee approved Power Purchase Agreements (PPA) for a total of 58 MW-AC of solar energy as an ARP resource. The PPAs identified June 2020 as the Commercial Operation Date for delivery of the solar energy. One of the PPAs (total 40.5 MW) is currently on schedule for June 2020, however the second PPA (total 17.5 MW) has been delayed until June 2023, due to the developer's inability to achieve interconnection with the transmission system within the scheduled timeframe. The difficulty in arranging interconnection with the Transmission Owner in a timely manner is the sole reason for the revised energy delivery date, with no secondary reasons identified.

39. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each power sale agreement still in effect by December 31 of the year prior to the current planning period pursuant to which energy was delivered from the Company to a third-party during said year.

This information has been provided as requested.

- 40. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on each power sale agreement pursuant to which energy will begin to be delivered from the Company to a third-party during the current planning period.
 - a. For each power sale agreement in the table, provide a narrative response discussing the current status of the agreement.

FMPA does not have any additional planned power sales agreements reflective of firm capacity and energy over the planning period.

41. Please list and discuss any long-term power sale agreements within the past year that were cancelled, expired, or modified.

There have been no long-term power sales or purchase agreements that have expired or have been cancelled or modified within the past year.

42. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing the actual and projected annual energy output of all renewable resources on the Company's system, by source, for the 11-year period beginning one year prior to the current planning period.

This information has been provided as requested.

- 43. [Investor-Owned Utilities Only] Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on all of the Company's plant sites that are potential candidates for utility-scale (>2 MW) solar installations. FMPA is not an Investor-Owned Utility.
- 44. Please describe any actions the Company engages in to encourage production of renewable energy within its service territory.

The All-Requirements Project is a wholesale power supply project and as such, does not have a service territory. However, FMPA fully supports and facilitates renewable energy projects and initiatives within our member/owner territories. FMPA, on behalf of the ARP and as separate FMPA power supply projects not associated with the ARP, has entered into PPA's totaling 373.3 MW of solar energy expected to be online by 2023. The All Requirements Project will receive 154.25 MW of this solar energy.

- 45. [Investor-Owned Utilities Only] Please discuss whether the Company has been approached by renewable energy generators during the year prior to the current planning period regarding constructing new renewable energy resources. If so, please provide the number and a description of the type of renewable generation represented. FMPA is not an Investor-Owned Utility.
- 46. Does the Company consider solar PV to contribute to one or both seasonal peaks for reliability purposes? If so, please provide the percentage contribution and explain how the Company developed the value.

FMPA has performed historical evaluations of hourly load shapes for the All Requirements Project as compared to typical metrological year based solar outputs. PV performance has been simulated using both industry tools (e.g. PV Watts) as well as shapes provided to FMPA by our power purchase agreement developers. Based on this statistical analysis, we have assigned 40% of the nominal AC rating of a solar facility as being available during the summer seasonal peak period. FMPA does not assign any PV contribution for reliability for the winter seasonal peak period.

47. Please identify whether a declining trend in costs of energy storage technologies has been observed by the Company.

While FMPA is aware of cost declines in storage technologies, our recent analysis of the benefits of utility-scale energy storage suggest that the costs of energy arbitrage (storing energy when it is less needed for strategic discharge during peak periods to avoid peaking resources that would otherwise serve load) continue to outweigh the benefits, and that other ancillary services that are offered by storage technologies are offered in a cost-competitive fashion by native/existing resources. As the amount of utility-scale solar on the grid increases over time, FMPA will continue to evaluate the cost and performance of available storage technologies

that may be operationally advantageous (e.g. due to quick start/response capabilities or shaping/firming of solar energy) to the ARP.

48. Briefly discuss any progress in the development and commercialization of non-lithium battery storage technology the Company has observed in recent years.

FMPA recently retained Burns & McDonnell to prepare a market characterization and presentation to the FMPA Board of Directors on storage. Burns & McDonnell summarized estimated costs and technology trends related to competing battery storage technologies, which included a matrix detailing the optimal operational parameters (or "use cases") for each type of battery technology and the level of commercialization and prior successful deployment for each option. The presentation generally concluded that lithium-ion technology represents the most attractive combination of cost, commercialization, and flexibility to support key use cases.

49. Briefly discuss any considerations reviewed in determining the optimal positioning of energy storage technology in the Company's system (e.g., Closer to/further from sources of load, generation, or transmission/distribution capabilities).

In 2019, FMPA released a request for proposals for additional solar generation for our Members that included a bolt-on storage option, allowing the bidders to provide descriptions of current best-in-class, least cost storage solutions based on our anticipated use cases. Upon evaluation, it was determined that such an investment is not beneficial to our Members from a cost and performance perspective at this time. FMPA has not performed any independent evaluations of optimal storage positioning.

50. Please explain whether ratepayers have expressed interest in energy storage technologies. If so, how have their interests been addressed?

The All-Requirements Project is a wholesale power supply project and as such, does not have retail customers or ratepayers. FMPA does not collect this information on behalf of ARP Participants.

51. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on all energy storage technologies that are currently either part of the Company's system portfolio or are part of a pilot program sponsored by the Company.

This information has been provided as requested.

52. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on all energy storage

technologies planned for in-service during the current planning period either as part of the Company's system portfolio or as part of a pilot program sponsored by the Company.

This information has been provided as requested.

- 53. Please identify and describe the objectives and methodologies of all energy storage pilot programs currently running or in development with an anticipated launch date within the current planning period. If the Company is not currently participating in or developing energy storage pilot programs, has it considered doing so? If not, please explain.
 - a. Please discuss any pilot program results, addressing all anticipated benefits, risks, and operational limitations when such energy storage technology is applied on a utility scale (> 2 MW) to provide for either firm or non-firm capacity and energy.
 - b. Please provide a brief assessment of how these benefits, risks, and operational limitations may change over the current planning period.
 - c. Please identify and describe any plans to periodically update the Commission on the status of your energy storage pilot programs.

FMPA is not currently participating in or developing energy storage pilot programs on behalf of ARP Participants. As noted above, FMPA, on a recurring basis, interfaces with technology providers and vendors to monitor cost declines in available storage technologies and will continue to evaluate the cost and performance of available storage technologies that may be operationally advantageous to the ARP.

- 54. If the Company utilizes non-firm generation sources in its system portfolio, please detail whether it currently utilizes or has considered utilizing energy storage technologies to provide firm capacity from such generation sources. If not, please explain.
 - a. Based on the Company's operational experience, please discuss to what extent energy storage technologies can be used to provide firm capacity from non-firm generation sources. As part of your response, please discuss any operational challenges faced and potential solutions to these challenges.

At this time, FMPA does not rely on non-firm generation sources for capacity. As FMPA's solar projects become energized, FMPA will enhance our operational experience with intermittent generation, and we have assigned summer season capacity value to PV output. We continue to work with our developers to frame the value proposition for energy storage, which can provide benefits in the areas of (i) energy arbitrage, (ii) instantaneous ramp-up, (iii) instantaneous ramp-down, and (iv) various other ancillary services. Longer duration storage can also provide a mirror to peaking capacity for a constrained number of hours. All such value

areas, and others, are continually monitored by FMPA staff to determine the appropriate timing for potential implementation from a cost-benefit perspective.

- 55. Please identify and describe any programs the Company offers that allows its customers to contribute towards the funding of specific renewable projects, such as community solar programs.
 - a. Please describe any such programs in development with an anticipated launch date within the current planning period.

The All-Requirements Project is a wholesale power supply project and as such, does not have retail customers. A portion of FMPA's Members offer individual solar subscription programs, and FMPA is actively engaged in supporting our Members with development of new such programs to coincide with the anticipated online date of our utility scale solar resources (summer 2020).

56. Please identify and discuss the Company's role in the research and development of utility power technologies. As part of this response, please describe any plans to implement the results of research and development into the Company's system portfolio and discuss how any anticipated benefits will affect your customers.

FMPA has not participated in the research and development of utility power technologies.

- 57. [Investor-Owned Utilities Only] Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing, on a system-wide basis, the historical annual average as-available energy rate in the Company's service territory for the 10-year period prior to the current planning period. Also, provide the projected annual average as-available energy rate in the Company's service territory for the current planning period. If the Company uses multiple areas for as-available energy rates, please provide a system-average rate as well. FMPA is not an Investor-Owned Utility.
- 58. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on all planned traditional units with an in-service date within the current planning period. For each planned unit, provide the date of the Commission's Determination of Need and Power Plant Siting Act certification, if applicable.

FMPA currently has no planned unit additions for the period 2020 through 2029.

59. For each of the planned generating units, both traditional and renewable, contained in the Company's current planning period TYSP, please discuss the "drop dead" date for a decision on whether or not to construct each unit. Provide a timeline for the construction of each unit, including regulatory approval, and final decision point.

FMPA currently has no planned unit additions for the period 2020 through 2029.

60. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing the actual and projected capacity factors for each existing and planned unit on the Company's system for the 11-year period beginning one year prior to the current planning period.

This information has been provided as requested.

- 61. [Investor-Owned Utilities Only] For each existing unit on the Company's system, please provide the planned retirement date. If the Company does not have a planned retirement date for a unit, please provide an estimated lifespan for units of that type and a non-binding estimate of the retirement date for the unit. FMPA is not an Investor-Owned Utility.
- 62. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on all of the Company's steam units that are potential candidates for repowering to operation as Combined Cycle units.

This information has been provided as requested.

63. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on all of the Company's steam units that are potential candidates for fuel-switching.

This information has been provided as requested.

64. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing a list of all proposed transmission lines for the current planning period that require certification under the Transmission Line Siting Act. Please also include in the table transmission lines that have already been approved, but are not yet in-service.

This information has been provided as requested.

Environmental

65. Provide a narrative explaining the impact of any existing environmental regulations relating to air emissions and water quality or waste issues on the Company's system during the previous year. As part of your narrative, please discuss the potential for existing environmental regulations to impact unit dispatch, curtailments, or retirements during the current planning period.

During the 2019 period, FMPA has been able to manage our fleet operations and capital and O&M expenditures in a manner that avoids negative impacts such as curtailments or unplanned retirements. FMPA fully anticipates that existing environmental regulations will not have any

negative impacts on unit dispatch, curtailments or retirements during the 2020 through 2029 period.

66. For the U.S. EPA's Standards of Performance for Greenhouse Gas Emissions for New Stationary Sources: Electric Utility Generating Units Rule:

FMPA has no immediate plans to develop, modify or reconstruct any units; therefore this rule is not currently applicable to FMPA.

- a. Will your Company be materially affected by the rule?
- b. What compliance strategy does the Company anticipate employing for the rule?
- c. If the strategy has not been completed, what is the Company's timeline for completing the compliance strategy?
- d. Will there be any regulatory approvals needed for implementing this compliance strategy? How will this affect the timeline?
- e. Does the Company anticipate asking for cost recovery for any expenses related to this rule? Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing information on the costs for the current planning period.
- f. If the answer to any of the above questions is not available, please explain why.
- 67. Explain any expected reliability impacts resulting from each of the EPA rules listed below. As part of your explanation, please discuss the impacts of transmission constraints and changes to units not modified by the rule that may be required to maintain reliability.

FMPA actively participates on the FRCC Planning Committee and other committees and sub-committees, and contributes to statewide reliability planning activities. The full impact of the EPA's rules on the long-range reliability of FMPA and the FRCC Region is still unknown. With the transition of the FRCC Regional Entity to SERC effective July 1, 2019, further evaluations on a broader basis may be conducted in the future. FMPA does not anticipate that, under current planning assumptions, ARP's wholly owned units and ARP Participants' wholly owned units for which FMPA has been assigned operational responsibility will be required to be offline due to retirements, curtailments, installation of additional emissions controls, or additional maintenance related to emissions control. Therefore, FMPA operations should not contribute to any potential transmission constraints resulting from the EPA's rules.

- a. Mercury and Air Toxics Standards (MATS) Rule.
- b. Cross-State Air Pollution Rule (CSAPR).
- c. Cooling Water Intake Structures (CWIS) Rule.
- d. Coal Combustion Residuals (CCR) Rule.
- e. Standards of Performance for Greenhouse Gas Emissions for New Stationary Sources: Electric Utility Generating Units.
- f. Affordable Clean Energy Rule.
- g. Effluent Limitations Guidelines and Standards (ELGS) from the Steam Electric Power Generating Point Source Category.

68. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by identifying, for each unit affected by one or more of EPA's rules, what the impact is for each rule, including; unit retirement, curtailment, installation of additional emissions controls, fuel switching, or other impacts identified by the Company.

This information has been provided as requested.

69. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by identifying, for each unit impacted by one or more of the EPA's rules, what the estimated cost is for implementing each rule over the course of the planning period.

This information has been provided as requested.

70. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by identifying, for each unit impacted by one or more of EPA's rules, when and for what duration units would be required to be offline due to retirements, curtailments, installation of additional controls, or additional maintenance related to emission controls. Include important dates relating to each rule.

This information has been provided as requested.

71. If applicable, identify any currently approved costs for environmental compliance investments made by your Company, including but not limited to renewable energy or energy efficiency measures, which would mitigate the need for future investments to comply with recently finalized or proposed EPA regulations. Briefly describe the nature of these investments and identify which rule(s) they are intended to address.

There are no currently approved capital investments being made by FMPA at its wholly owned units or units for which FMPA has operational responsibility for environmental compliance associated with recently finalized or proposed EPA regulations.

For the units in which FMPA has a minority ownership interest, including the Stanton, Indian River and St. Lucie units, FMPA defers to the responses submitted by OUC and FPL as the Majority Owners and Operators of these facilities. FMPA will be responsible for a percentage share of all capital additions and O&M costs.

Fuel Supply & Transportation

72. Please complete and return, in Microsoft Excel format, the table associated with this question found in the Excel Tables Spreadsheet by providing, on a system-wide basis, the actual annual fuel usage (in GWh) and average fuel price (in nominal \$/MMBTU) for each fuel type utilized by the Company in the 10-year period prior to the current planning period. Also, provide the forecasted annual fuel usage (in GWh) and forecasted annual average fuel price (in nominal

\$/MMBTU) for each fuel type forecasted to be used by the Company in the current planning period.

This information has been provided as requested.

73. Please discuss how the Company compares its fuel price forecasts to recognized, authoritative independent forecasts.

FMPA's fuel price forecast data is obtained from authoritative, independent consultants. These forecasts are then compared to information received from other utilities, suppliers, market exchanges, and trade literature. FMPA staff evaluates the reasonableness of the data contained in any fuel price forecast and works with its independent consultants as is deemed appropriate.

- 74. Please identify and discuss expected industry trends and factors for each fuel type listed below that may affect the Company during the current planning period.
 - a. Coal: FMPA has a minority ownership interest in OUC's Stanton Units 1 and 2, and OUC is the sole operator for the facility. FMPA will defer to OUC's responses for this issue.
 - b. Natural Gas: Please see the responses in the following questions 75 and 76.
 - c. Nuclear: FMPA has minority ownership interest in FPL's St. Lucie Unit 2, and FPL is the sole operator for the facility. FMPA will defer to FPL's responses for this issue.
 - d. Fuel Oil: The dual fuel capable resources of the ARP are designed predominantly to use distillate fuel oil. Except for ARP generation resources in Key West, this service capability is for back-up purposes only for those instances when natural gas supply is restricted or unavailable. Consumed volumes of fuel oil are replaced at market pricing to maintain defined inventory levels based upon risk mitigation criteria. Given the limited circumstances when FMPA operates certain ARP resources on fuel oil, changing market trends have little impact upon the ARP and its operations.
 - e. Other (please specify each, if any)
- 75. Please identify and discuss steps that the Company has taken to ensure natural gas supply availability and transportation over the current planning period.

FMPA continually explores opportunities to diversify its natural gas supply portfolio and reviews industry trends as production sources change over time. FMPA also continues to evaluate its gas transportation capacity requirements to ensure an optimal amount of firm transportation capacity is reserved to ensure reliable delivery of natural gas to its generating units as they are optimally dispatched. At this time over the planning period, FMPA has firm gas transportation contract capacity sufficient to meet its projected needs.

76. Please identify and discuss any existing or planned natural gas pipeline expansion project(s), including new pipelines and those occurring or planned to occur outside of Florida that would affect the Company during the current planning period.

Sabal Trail Transmission, LLC has commenced operation of an interstate natural gas pipeline in the state of Florida. Our additional electric demand through the planning period does not justify contracting for additional firm natural gas pipeline capacity; however, FMPA is considering a connection to Sabal Trail due to its proximity to the Cane Island Power Park facility. A potential connection to the new pipeline will further support our efforts to increase reliability and reduce costs for our customers.

77. Please identify and discuss expected liquefied natural gas (LNG) industry factors and trends that will impact the Company, including the potential impact on the price and availability of natural gas, during the current planning period.

Prior to the extremely successful and prolific development of unconventional production (shale), LNG was viewed as a necessity in meeting the supply requirements for natural gas in the US. This view is no longer the case. Currently, all LNG facility development in the US is focused upon exporting natural gas to countries around the globe. FMPA believes this additional export demand has played a role in mitigating market price declines. The actual number of facilities to go online will potentially create a higher floor price for the commodity. FMPA does not expect to be significantly impacted by the increase of LNG exports. The central and southern areas of the State of Florida are now served by three pipelines and we do not expect the reliability of natural gas as a fuel source to be negatively impacted by LNG export facilities.

As to availability and pricing of natural gas impacts due to US LNG exports, such impacts are very difficult to predict. There are many factors that can impact these considerations. Currently, due to the success of unconventional production development, the country is experiencing a supply surplus that has significantly reduced price and price volatility. Due to the current low price of natural gas, as well as other factors, the use of natural gas has increased substantially for power generation. This fuel switching to natural gas for power generation is expected to continue.

78. Please identify and discuss the Company's plans for the use of firm natural gas storage during the current planning period.

FMPA has 500,000 MMBtu of storage capacity with a firm withdrawal delivery capacity of 50,000 MMBtu/day. FMPA's primary use of its firm natural gas storage capacity is to provide daily operational pipeline balancing flexibility and increased supply reliability to mitigate potential gas production interruptions, such as hurricane impacts to offshore production.

79. Please identify and discuss expected coal transportation industry trends and factors, for transportation by both rail and water that will impact the Company during the current planning period. Please include a discussion of actions taken by the Company to promote competition among coal transportation modes, as well as expected changes to terminals and port facilities that could affect coal transportation.

FMPA is a joint owner in the coal-fired steam units Stanton Units 1 and 2, which are operated

- by OUC. OUC is the majority owner of these facilities and is responsible for all coal supply and transportation related arrangements for these units.
- 80. Please identify and discuss any expected changes in coal handling, blending, unloading, and storage at coal generating units during the current planning period. Please discuss any planned construction projects that may be related to these changes.
 - FMPA is a joint owner in the coal-fired steam units Stanton Units 1 and 2, which are operated by OUC. OUC is the majority owner of these facilities and is responsible for all coal supply and transportation related arrangements for these units.
- 81. Please identify and discuss the Company's plans for the storage and disposal of spent nuclear fuel during the current planning period. As part of this discussion, please include the Company's expectation regarding short-term and long-term storage, dry cask storage, litigation involving spent nuclear fuel, and any relevant legislation.
 - FMPA has minority ownership interest in FPL's St. Lucie Unit 2, and FPL is the sole operator for the facility. FMPA will defer to FPL's responses for this issue.
- 82. Please identify and discuss expected uranium production industry trends and factors that will affect the Company during the current planning period.

FMPA has minority ownership interest in FPL's St. Lucie Unit 2, and FPL is the sole operator for the facility. FMPA will defer to FPL's responses for this issue.

[1] Estimate represents simulated expected unserved energy across the FMPP without consideration of interties and other reserve sharing arrangements.

Any unserved energy situation forecasted to occur during the summer period within our simulations could be eliminated by importing power from outside the FMPP.

Note: Reserve margin projections can be obtained from Schedules 7.1 and 7.2 of FMPA's 2020 Ten-Year Site Plan.

Notes							

^{1.} System-Average Temperature is the temperature at the Orlando International Airport at the time of the ARP coincident peak.

2. Actual Peak Demand is at the Generation level and includes wholesale obligations to parties other than ARP Participants, if applicable, and transmission losses.

Notes
FMPA does not have any planned traditional power purchase agreement that has been executed for delivery to the Company during the planning period. FMPA has determined a seasonal peaking need with the planning period as described in the 2020 TYSP document, but has not made any determinations as to the nature of the fuel or renewable source of the purchase for the All Requirements Project at this ...

US Sugar	US Sugar		Hendry	ST	AB	48[1]	48[1]			0	0	04/1990	On-going with 90 days cancellation notice

Notes

[1] US Sugar has 3 generators. The first generator was installed in September 2004 (14 MW), the second, in November 2006 (20 MW) and the third in 2007 (14 MW) for a total of 48 MW on-site generation. The facility uses 45MW in-house which leaves 3MW available for the market on-peak. There is a 20 MW transformer at the site which limits the total amount of generation available to sell to the grid to a maximum of 20 MW at any time. This biomass facility is a non-firm resource and energy is received on an "As Available" basis. The contract is on-going but may be terminated with a 90 day cancellation notice.

^[1] FMPA will purchase a 58 MW-AC share from two larger solar facilities. FMPA will receive its pro-rata amount of energy based on the actual output of the facilities, and has assigned an estimated amount of firm capacity associated with these PPAs as contributing to meeting summer peak for reliability purposes (a percentage of the firm capacity shown in the table).

[2] FMPA will purchase a 96.25 MW-AC share from two larger solar facilities. FMPA will receive its pro-rata amount of energy based on the actual output of the facilities, and has assigned an estimated amount of firm capacity associated with these PPAs as contributing to meeting summer peak for reliability purposes (a percentage of the firm capacity shown in the table).

Notes					-	•			•		

^[1] Utility - Non-Firm renewable source is two parts: 1) FMPA's share of generation from landfill gas that is combusted in the Stanton Units 1 and 2; and 2) Energy from FMPA's share of the PV system on the roof of the NOAA Eco-Discovery Center.

^[2] Purchase - Non-Firm source is generation from bagasse combusted by US Sugar and sold to FMPA plus the projected energy purchased under the future solar PPAs entered into by the All Requirements Project.

Plant Name	Land Available (Acres)	Potential Installed Net Capacity (MW)	Potential Obstacles to Installation

FMPA is not an Investor-Owned Utility, however at this time, FMPA has not considered any of our plant sites as potential candidates for utility scale solar installations.

Project Name	Pilot Program (Y/N)	In-Service/ Pilot Start Date (MM/YY)	Max Capacity Output (MW)	Max Energy Stored (MHh)	Conversion Efficiency (%)
	(, ,	, ,			

Notes

FMPA does not currently include energy storage technologies as part of the ARP system portfolio.

Project Name	Pilot Program (Y/N)	In-Service/ Pilot Start Date (MM/YY)	Projected Max Capacity Output (MW)	Projected Max Energy Stored (MHh)	Projected Conversion Efficiency (%)

Notes

FMPA does not have any energy storage technologies planned for in-service during the current planning period.

- [1] Historical operating data for this unit is available from Florida Power and Light.
 [2] Historical operating data for this unit is available from Orlando Utilities Commission.
 [3] Historical operating data for this unit is available from NextEra Energy Resources.
 [4] FMPA has a PPA with NextEra Energy Resources for Oleander Unit 5. Historical operating data for the unit is available from NextEra Energy Resources. PPA expires in 2027.
 [5] Projected capacity factors are based on production modeling using assumptions suitable for long-term planning purposes.

Plant Name	Fuel Type	Summer Capacity (MW)	In-Service Date (MM/YYY)	Potential Conversion	Potential Issues

Notes

FMPA has no steam units in our wholly owned and/or assigned generating fleet. FMPA has a minority ownership interest in OUC's Stanton Units 1 and 2; for those units, FMPA defers to the response submitted by OUC as the Majority Owner and Operator.

Notes

- [1] The units listed in this table include only the generation units that FMPA, as agent for FMPA's All-Requirements Power Supply Project (ARP) directly owns, in whole or in part through ownership shares and entitlements, as well as those generation units for which FMPA does not own but has been assigned operational (including environmental) responsibility from individual Participants. FMPA's answers to all of the questions in this Environmental Issues Section of this Ten Year Site Plan Supplemental Data Request are based on this list of units. However, FMPA's responses to other sections of this Supplemental Data Request may be based upon the larger set of resources used by FMPA to serve the ARP, which includes purchased power resources, and resources owned and operated by individual ARP Participants that have been contractually dedicated to serve the combined ARP load.
- [2] The State of Florida is excluded from the CSAPR Update. If future CSAPR modeling demonstrates that Florida is impacting downwind states, these units will continue to operate within prescribed limits of permits and CSAPR allowances, as assigned and purchased.
- [3] FMPA has a minority ownership in Stanton Units 1 and 2, which are affected by the ACE, MATS and CCR Rules. Other FMPA units are not impacted by these rules. FMPA will defer to OUC's compliance strategy for these units, and FMPA will be responsible for a percentage share of the costs for compliance.
- [4] FMPA has a minority ownership in St. Lucie 2, which will be affected by the ELGS and CWIS rules. Other FMPA units are not impacted by these rules. FPL has all compliance responsibility and FMPA will be responsible for a percentage share of all capital additions and O&M costs.

Notes													

^[1] The state of Florida is excluded from the CSAPR Update. If future CSAPR modeling demonstrates that Florida is impacting downwind states, these units will continue to operate within prescribed limits of permits and CSAPR allowances, as assigned and purchased; if allowances continue to be readily available, FMPA does not anticipate any substantial increas in costs due to CSAPR for our wholly owned and/or assigned generating units.

^[2] FMPA has a minority ownership in Stanton Units 1 and 2, which will be affected by the ACE, MATS and the CCR Rules. FMPA will be responsible for a percentage share of all required capital additions and additional O&M costs.

^[3] FMPA has a minority ownership in St. Lucie 2, which will be affected by the ELGS and CWIS rules. Other FMPA units are not impacted by these rules . FPL has all compliance responsibility and FMPA will be responsible for a percentage share of all capital additions and O&M costs.

	Unit	Fuel	Net Summer	Estimated EPA Rule Impacts: Unit Availability (Month/Year - Duration)							
Unit	Type	Type	Capacity	Capacity			CSAPR/		CCR		
Cint			(MW)	ELGS	ACE	MATS	CAIR	CWIS	Non- Hazardous Waste	Special Waste	
Notes											

FMPA does not anticipate any units being offline due to retirements, curtailments, installation of additional controls, or additional maintenance related to emission controls. FMPA defers to the responses of OUC for the Stanton 1 and 2 units and FPL for the St. Lucie 2 unit.

 ^[1] Historical natural gas values are the annual average of daily spot market prices for Gas Daily FGT Zone 3. Transportation and other charges would be in addition to these spot prices.
 [2] Historical Uranium pricing is available from FPL and Duke Energy Florida.
 [3] Historical coal pricing is available from OUC.
 [4] Historical Distillate Oil values (\$MMBtu) reflect the value of inventory as it was taken from the fuel oil tanks.
 [5] Projected fuel values (\$MMBtu) represent FMPA's projection of delivered fuel prices.
