Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

As the owners of solar panels powering our home and a Net metering customer of FPL we urge you to support our right to be fairly compensated by the electric power we return to the GRID and help power our neighbors homes as well as increase the reliability of the energy grid.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Joel Jevotovsky
8198 Cypress Point Rd West Palm Beach, FL 33412-2443

Dear Chairman Art Graham,

You have a duty to protect the environment and to serve the best interests of Florida residents and you can help do those by strengthening net metering here in Florida.

Eliminate the 10Kw Tier 1 restriction on home solar and eliminate the onerous and counterproductive requirement for an insurance policy on Tier 2 systems. Residents want to add electric cars and a 10 Kw solar system is too small for household and electric vehicle needs.

The solar industry provides many jobs in Florida. And solar panels and batteries contribute to the resilience of the electric grid and reduce greenhouse gas emissions.

Please defend our solar industry. Please help our solar workers, business owners, and homeowners by preserving and improving net metering here in Florida.

Net metering helps pay back the investment I made to have my panels and system installed. That incentive is why I decided to go solar, which helps save our environment and reduces the peak demand for electricity for everyone, including those who don't yet have solar panels.

Please don't remove the net metering incentive for me and other Floridians who want to benefit from this beneficial economic and environmental source of electricity.

Sincerely,

Dear Chairman Art Graham,

We installed solar panels on our house so that they could make earth-friendly electricity and pay for themselves with the money we save on our electric bill. Many Floridians are already struggling financially because of COVID and its repercussions, and need the net metering money to pay for their solar panels. Florida, at our latitude, is also one of the best places to produce solar electricity, and we should be encouraging more people to install it. Please do not take away net metering! The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Daniel Brown

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida. We installed solar panels five years ago on our home, and they are producing clean energy as promised....with the regularity and dependability of a fine Swiss watch. And we installed them to help the environment, and future generations. P.S. I had a 32 year career with Maryland's EPA, and knew Florida was the perfect location for solar power....as should every politician in this State, and elsewhere.

Sincerely,
John Rafter

Dear Chairman Art Graham,

I have begun the installation of solar panels on my home, using net metering. It is unconscionable that the Sunshine State would act to deter residential and business solar energy production. I am not going off the grid. I am putting energy into it. Utility companies try to SELL customers solar energy that they produce in a limited way, instead of offering incentives to increase the solar industry. That industry is growing in a time when the economy is stagnating. I know more and more people who are installing solar. Think about it.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.
