Subject: Protect our solar rights! Docket: 2020-0000

Dear Florida Public Service Commission,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

In addition, President Trump has stated that we need to reduce our reliance on foreign energy sources and our own homegrown solar is one way to achieve this!

Not to mention that we are facing the most existential crisis of our time as thousands of scientists are warning of extreme global warming as a result of excessive methane and carbon dioxide levels in our atmosphere, much related to

the coal and petroleum industries. Solar is one way to reduce our dependence on pollution and greenhouse gas causing businesses.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Carina Ferrante
Englewood, FL 34223
