Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Michael Simpson

Dear Commissioner Julie Imanuel Brown,

I spent a lot of money on my solar system because I think it is the responsible thing to do to protect the environment. I did it with the understanding that during times that my rooftop panels make more electricity than i am using, I will get repaid by my utility company at the wholesale rate. Please do not make pollution-less poser more expensive than it already is.

Please preserve the net metering rules here in Florida.

Sincerely,  
Scott Duink

Dear Commissioner Julie Imanuel Brown,

I noticed that the PSC has a workshop scheduled on September 17 to discuss Customer-Owned Renewable Generation.

Residential and Commercial rooftop solar generation is a tremendously successful program in Florida under the current net-metering rule of the PSC. Net metering is an incentive for Floridians to install solar on their roofs, bearing the initial capital expense. This allows public owned utilities to avoid the huge capital cost of new generation facilities. If there are any changes, the net metering rule should increase the incentive for residential and commercial installation of solar that feeds back into the energy grid.

Residential and commercial solar installation has also created a lot of job in Florida. Solar reduces green house gas emissions, and Florida has so much at risk from rising sea level and intense hurricanes.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Julie Morris

Dear Commissioner Julie Imanuel Brown,

Florida residents have already voted 2x to keep solar power choice. Please do not override the people's chosen direction. That would be antithetical to the principles of democracy.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.
