Subject: Net metering 2020-00000

1)
Doesn't the growth in Residential solar (which repealing Net Metering would strongly impact) greatly diminish any Cyber threat as a distributed solar environment of thousands is much safer from an attack than a few power plants that are single points of failure.

2)
Surplus power via Net Metering is returned to the Grid which is sent to neighboring residences. Does the utilities make some profit from all of the solar installations as they do not have the generation cost, loss of electricity atianation due to transmission (over high voltage lines, Power Stations, Sub-stations, Transformers)? If so, is this profit reported?
