Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Douglas Beeson

Subject: Keep Net meeting the same and make solar better for FL residents

Polmann, Graham, Clark, Brown, Fay

Since we are having a hearing about Solar I have a problem. I want the Tier 1 threshold to be raised to 30kW, so I can install more panels without incurring the liability insurance expenses associated with installing a Tier 2 system. The Tier level thresholds and the insurance requirement for Tier 2 are established in Rule 25-6.065, Florida Administrative Code, Interconnection and Net Metering of Customer-Owned Renewable Generation (generally referred to as the Net Metering Rule). The rule can be viewed here: <https://www.flrules.org/gateway/ruleNo.asp?id=25-6.065>

I have 36 solar panels installed on my roof it's a rated 7.6 KW system. We do not produce anything near 7.6 kw. The system cost \$31,500. And our electric bill is \$163. That to me seems a high bill for a person that is making electricity. I would like to put as much solar panels as possible on my roof but with the limit of requiring me to have additional insurance is cost prohibitive. With Solar panels becoming cheaper it seems that this level should be changed to 30,000 watts of power because if I go over 10,000 watt then I need to get a Million dollar insurance policy added when you go to a Tier 2 and that is an additional \$400 a year for this policy and not very many companies will do it. I went to 3 different insurance agencies. 10,000 watts of power is not a lot of power. My house power demands are not being meet and I have a PV solar system installed. My house is a block house and is not a large home only 1392 SQFT built in 2003.

I would think the "Sunshine" state would encourage people to go to cleaner form of power but when I need to get additional insurance for a very safe form of power it does the opposite. If I have to get insurance for the life of the 25 year warranty system it would be an additional \$10,000 spent. That is a lot of money just to produce safe clean renewable power.

How many Solar systems have caused harm to the electric grid? Where is the data that says 10,000 watt system is the correct level for Tier 1.

I also want the net metering to stay where it is or to be better for consumers. When you compare PV solar in other states FL is in the dark ages. Why is FPL installing so many PV solar systems but does not want customers to put it on their roofs? My power flickers all the time.

Please call me at 352-514-6426 to discuss further.

Sincerely

Jared

Subject: Net-Metering Works for Floridians

Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Bill Bowen

Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Christopher Terrell

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
