Subject: Please defend solar workers, business owners, and Florida residents by preserving net metering here in Florida.

Dear FL PSC Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, solar installer was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools, not less, in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and Florida residents from additional uncertainty by preserving net metering here in Florida

Sincerely,

Karen Branen

From: I.Neil Irwin <ian.neil.irwin@gmail.com>
Sent: Thursday, September 17, 2020 4:29 AM
To: Consumer Contact
Subject: Solar Power Initiative Meeting

Greetings:

In March of this year, noticing the sharp decline in CO2 emissions, I wanted to continue the trend by installing solar panels on my small 60 X 60 sqft office building. The quotes averaged \$85,000 to install the system to cover the small office building. Obviously, this is very cost prohibitive versus the benefit of keeping CO2 emissions in check. Based on the average electric bill of \$500 It would take 14 years or so to pay back.

Additionally, Florida has a PR problem with being backwards, it is undeniable. I didn't know the depth of the problem until I began living part time in other states and overseas, finally hearing the true perceptions of my home state.

One way to combat this problem is, just as when you fly into any Florida city, you see swimming pools behind many homes, imagine if a visitor saw solar panels on top of most homes and businesses, harnessing renewable energy? That person might say, 'Wow, Florida has it together and thanks for reducing CO2 emissions for all of us'.

Warm regards, standing by to do my part to reduce CO2 emissions,

I. Neil Irwin

Dear FL PSC Commissioners,

Solar power is Floridians way of using the sun for free power that they can also sell back into the power grid for profit. I think solar should be more efficient at increasing the percentage of watts created by the panels.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, ?solar installer? was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.
