**Subject:** Net-Metering Works for Floridians

Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Michale Daly

Dear Commissioner Julie Imanuel Brown,

Please save net metering and Florida's growing solar industry! It's only fair, and it's what we were promised when we invested in solar for our household. We are all trying to move to clean energy. Your agency should be paving the way, not creating new obstacles.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. **Sent:** Friday, September 18, 2020 12:52 AM  
**To:** Office of Commissioner Brown  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
MARC-ANDRE CHARTRAND

Dear Commissioner Julie Imanuel Brown,

PLEASE do not roll back solar. In these current times with storms & fires, it's so very important that we harness nature vs ruin it.

FLORIDA must be FORWARD thinking as a state!!!

FPL is & remains profitable (& they deserve to make a profit as a corporation) HOWEVER, we MUST begin to be more self sufficient as households & a state.

Energy & water are the 2 things that must utilize breakthroughs in technology wherever & whenever possible.

That's how the wheel was invented. Can you imagine ever going back???

Sincerely,  
Ann McKenna

Dear Commissioner Julie Imanuel Brown,

As a house with solar, and investing tens of thousands of dollars to add to my home, the benefits of net metering were heavily considered when making this purchase. Taking away net metering would put myself and thousands of others in a tough financial position.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Roberto Mezquia

**Sent:** Thursday, September 17, 2020 5:21 PM  
**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Antonio Sanchez  
18384 NW 61AVE Miami, FL 33015

**Sent:** Thursday, September 17, 2020 11:21 PM  
**To:** Office of Commissioner Brown  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As a purchaser of a solar system in 2019, a large part of my decision to make this purchase rested on net metering making it a cost-effective solution for me. Currently 47 states have some form of net metering. At my house in Winter Garden, FL, I routinely convert 26% of sunlight hitting my solar panels directly to energy. Net metering allows me to sell excess production to Duke Energy (easing the burden on power plants) during the daytime, and buy it back during the evenings. Done this way, my solar output equals 97% of my home's energy consumption. I still pay Duke energy \$12 monthly in administrative fees and the normal rate for any additional electricity needed from them.

The threat to the net metering program in Florida not only jeopardizes my return on investment in the solar panels I purchased, but will also drastically reduce the number of houses going solar in the coming years. I am skeptical of claims from these companies, Duke Energy in particular, that they plan on rapidly switching to renewables, and it's certain that a switch to renewable energies would occur faster if net metering were allowed to remain in place in its current form. These companies enjoy monopolies in the communities they serve, so absent of competition from rooftop solar, there is no recourse for consumers looking to obtain their energy through other means.

Sincerely,  
Kevin OBrien  
Winter Garden, FL 34787

**From:** jvanleer@everyactioncustom.com on behalf of John Van Leer  
<jvanleer@everyactioncustom.com>  
**Sent:** Friday, September 18, 2020 12:16 AM  
**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

I installed my solar array 8 years ago, with the knowledge that I could net meter my power to the grid and not need battery backup at my property. I am looking into adding Tesla power walls to my property, so I can either contribute to the overall stability of the grid, or go offline if the public service commission tries to screw utility customers like me, by interfering with our net metering after the fact.

This has worked very well for me as a senior citizen. I invested in a solar array not a 401K. Now I can rely on my array to supply most of the power I need and when I have excess, it is shared with my neighbors with minimum transmission losses. I think the grid becomes more robust when the homeowners are all contributing to our energy security with as many solar arrays as possible. I think it would be unfair to interfere with my net metering after I paid for my array with the current system in mind.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
John Van Leer  
1200 NE 89th St Miami, FL 33138-3479

**Sent:** Friday, September 18, 2020 1:02 AM  
**To:** Office of Commissioner Brown  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid. As a Floridian, we already pay an exorbitant amount for power. The credit we receive not only gives us a much needed break in utilities, it also helps to promote clean energy, such as solar power, and allows us to put energy back into the grid while producing less emissions. Taking this credit away will only benefit fossil fuel based companies and their greed for profit. It will also deter the growth of clean energy in our beautiful sunshine State. It is our responsibility to make sure that we lower our emissions and promote the development and use of clean, affordable energy. We strongly urge you to uphold current policies, such as net metering.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Heather Armbruster

Dear Commissioner Julie Imanuel Brown,

My husband and I took the responsible move for our home, community and our children's' future by investing in solar panels. Do not take away our solar rights to serve monopoly interests.

We should have the right to choose a renewable energy source and generate it on our own. We are still paying our share for the infrastructure to the monopoly you empower.

In addition, solar jobs and the industry overall are an opportunity for jobs and can help drive our suffering economy.

Please do the right thing.

Dear Commissioner Julie Imanuel Brown,

It sounds to me like deciding to decrease the benefits of net metering in Florida is focusing on big business rather than what will benefit the people of Florida.

Net metering benefits in multiple ways. We are already suffering economically and this removes one more financial benefit to customers. Second, less people will move to clean energy and the world is struggling to reverse environmental global issues.

Our current net metering rule all

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules in Florida.

Sincerely,

Jennifer Williamson

**To:** Office of Commissioner Brown  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,

**Sent:** Thursday, September 17, 2020 5:19 PM  
**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Dave Cherry

Dear Commissioner Julie Imanuel Brown,

Citizens need net metering if Florida ever hopes to be energy independent. Why are we importing and burning coal in a state with so much sunshine? The people have already spoken. Don't put dirty power profits ahead of Florida's future.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Dear Commissioner Julie Imanuel Brown,

I strongly, very very strongly, support solar energy initiatives in Florida. Rolling back net metering measures is wrong and NOT what we voted for several years ago on Amendment 1.

Let's figure a way to offer some supports to electric companies, if that is necessary, and then let's be a national leader in solar installations. We are the sunshine state.

Dear Commissioner Julie Imanuel Brown,

One only has to watch the evening news to know that the impact of climate change is already being felt throughout our country and the world. It is imperative that we pursue a course of action in our daily decision-making that will help us to mitigate the damage from our energy intensive economy. One of the proven ways to achieve this is through the transition to renewable energy sources. Florida is blessed with abundant sunshine and, by all rights, should be a world leader in this transition. Net-metering is an essential element in fostering the growth of rooftop solar in our state. It is vital to all Floridians that we support and protect this important component of our supply of renewable energy. As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Val Ketcham  
Tulsa, OK 74106

**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Connie Lee  
9915 SW 170th St Archer, FL 32618

Dear Commissioner Julie Imanuel Brown,

I have solar and I live in NJ. Not only do they do net metering but they have SRECs. I generate surplus electricity when it is most needed- on hot sunny days when electricity is most expensive. Win-win for everyone! Everyone who does not support solar should be required to have a power plant built next door to them!

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. **From:** Debbie Bonnet <Debbie.Bonnet.55432623@p2a.co>  
**Sent:** Thursday, September 17, 2020 7:06 PM  
**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,

**To:** Office of Commissioner Brown  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,

Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

David Norton

**To:** Office of Commissioner Brown  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Doris Emrich

**From:** Jim Jackson <Jim.Jackson.75037134@p2a.co>  
**Sent:** Thursday, September 17, 2020 6:08 PM  
**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,  
Jim Jackson

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Solar should be encouraged as we continue to see the effects of climate change. It makes more sense for Florida than any other state in our nation. We also need to promote solar jobs as other careers continue to evaporate. As federal incentives for solar power continue to dwindle, this added uncertainty will dissuade more people from considering a switch to solar.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Cheryl Underhill

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

First, I want to say I am a current owner and strong proponent of solar. I do not view this or any specific energy source as the only energy to focus on. I believe we should have a diversified portfolio of energy options. Net metering encourages the use of solar on personal homes and businesses and this practice should continue. Not everyone will adopt such an investment but for those that do, we need to continue to support net metering.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. **Sent:** Thursday, September 17, 2020 5:56 PM  
**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
JURATE NAVICKAS

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

As a retired HVAC consultant/designer it is important that there are as many energy choices available as possible to individuals and businesses. NET Metering is crucial at "fair national market rates" to incentivize investments ! Libertarian CAPITALISM depends on fair economic rules and avoids at all costs subsidies to monopoly utilities that discourage market competition. Please, incentivize FLORIDA to be a net-energy Exporter to other states by strengthening Net-Metering rules - THANKS!

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Dear Commissioner Julie Imanuel Brown,

Residential solar metering forces less affluent customers to pay retail power prices to more affluent patrons. More natural gas and nuclear plants is a logical and equitable way to insure reliable low emission electricity. Tax credits and subsidies would be much better allocated to sewage treatment plants to reduce septic systems.

Sincerely,

**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Gene Jongsma  
8724 51st Ter E Bradenton, FL 34211-3741

**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

I would like to ask how just how many more tens of thousands of acres of trees and thousands of houses will have to be destroyed in fire seasons that are now 2.5 MONTHS longer than they used to be because our planet is burning up from the devastating climate change? How many BILLIONS of dollars must we spend every single year, making it trillions upon trillions in total, just to get not even back to where we were, because the air quality is worse and worse without the trees, and we keep using fossil fuels due to these “utility front companies” who just won’t recognize how much better off we ALL will be, including THEM, when we migrate to 100% Clean Energy?! The jobs will be there, they will pay well, they will be cleaner, and our AIR AND WATER will be cleaner!

Because of the pandemic and the horribly irresponsible response from the executive branch and lethargic response from the republican senate, we are likely headed into a depression! The senate’s GOP just can’t grasp that the states and localities MUST have financial aid to make up for their horrendous covid expenditures that should have been covered by a federal plan that was NON-EXISTANT!

As a result, an already totally shaken economy—Wall Street is NOT, NOT, NOT “the economy”—will be even worse, much worse. So now is absolutely NOT the time to be messing around and making it even MORE uncertain, not that there is a time anyway. We The People have a clear right to our solar energy AND its output, meaning our utility companies absolutely owe us fair price for the energy WE and OUR panels produce. Stealing from us should be just like stealing anything else and punishable by law along with “pain and suffering.”

I am sick and tired of having corporations and their “front men” think they own the world. That is EXACTLY why the Consumer Protection Agency was created: to deal with exactly this kind of theft FROM consumers.

We will not stand for it.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people’s pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. **To:** Office of Commissioner Brown  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Chen Tsai

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
TiLynn Scheller

**Subject:** Net-Metering Works for Floridians

Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Gisele Gauvin

**To:** Office of Commissioner Brown  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,  
Vincent Lopez
