Good Afternoon, Ms. Philips.

We will be placing your comments below in consumer correspondence in Docket No. 20200000, and forwarding them to the Office of Consumer Assistance and Outreach.

Thank you!

Toni Hover

Subject: Protect our solar rights! Docket: 2020-0000

Dear Florida Public Service Commission,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

I have had solar power for years. I pay a fee for being connected to the grid. I get a bit over 2 cents for every kWh I contribute to FP&L. However, they turn around and charge over 8 cents for the same kWh. This exchange is not fair. I can understand paying to be connected to the grid they built and mostly maintain. I don't understand why FPL makes so much of a profit from my kWhs. If they aren't making enough profit, perhaps they should stop pouring money into self-promoting, self-congratulatory advertisement.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Sally Philips
