**Sent:** Sunday, September 27, 2020 2:40 PM  
**To:** Office of Commissioner Graham  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Ryan Fraley

**From:** mdp\_ccm@everyactioncustom.com on behalf of Mark Powell  
<mdp\_ccm@everyactioncustom.com>  
**Sent:** Sunday, September 27, 2020 2:26 PM  
**To:** Office of Commissioner Graham  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

I am writing to ask you to preserve Florida's Net Metering policies that encourage residential and commercial investment in solar and storage. I have recently invested in a 7.5 kw residential PV system with two Tesla Powerwalls. This system has only been online for a month and has already provided seamless backup power through 16 grid power interruptions adding up to 2 hours. When I produce more than I consume, I save the utility money by exporting power back to the grid so my nearby neighbors can use it without having to endure generation and transmission line costs.

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,  
Mark Powell  
1548 Shell Point Rd Crawfordville, FL 32327-4605

**To:** Office of Chairman Clark; Office of Commissioner Graham; Office of Commissioner Polmann; Office of Commissioner Fay; Office of Commissioner Brown  
**Subject:** Net-Metering Works for Floridians

Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Raymond Lucas

**From:** Patrick Mead <pat.mead12@gmail.com>  
**Sent:** Saturday, September 26, 2020 8:28 PM  
**To:** Office of Commissioner Graham  
**Subject:** Please remove roadblocks to energy efficiency in Florida

Dear Public Service Commissioner Graham,

Florida's largest utilities badly trail leading utilities in the Southeast and across the nation in delivering energy savings to customers. That's short-sighted because energy efficiency is the quickest, cheapest, and cleanest way to meet our energy needs and tackle climate change -- but outdated practices in setting state energy efficiency goals are holding us back. Let's fix that through this rulemaking process.

As you consider changes to your goal setting rule, I ask that you reform the cost-effectiveness and screening practices that previously led many utilities to propose goals of zero to this Commission. I understand that Florida is the only state that relies primarily on these practices.

Energy efficiency programs have taken on new importance in light of the economic fallout from the COVID-19 crisis. Florida families should not have to make a choice between paying a power bill or buying essentials like food and medicine. Now is the time to remove the roadblocks to energy savings in order to provide more and better energy efficiency programs to customers.

It's time to use the new rulemaking to update your decades-old practices, and consider ways to get utilities to do more on efficiency, in particular for low-income customers. Please use this opportunity to get input from the public and experts in this field before rushing to revise the rule on conservation goal-setting.

Regards,  
Patrick Mead  
Madison Wisconsin

Dear Chairman Art Graham,

I have lived in Florida my entire life. That means over 60 years of hurricanes and power outages. I finally have solar with a battery backup to add resilience to my home and neighborhood as neighbors share around here.

Why, in a state like Florida, with an abundance of free power, would you, a PUBLIC service commission, do anything to inhibit the growth in that industry?

Like it or not we will get away from fossil fuels so I suggested doing it in a way that helps the people of Florida and sends a message to the power industry that we are ready to make that switch and they need to get on board by investing in and encouraging the people of this state to invest in anything that is not fossil fuel-based.

Dear Chairman Art Graham,

I had solar panels installed on my roof 2 years ago. My savings on my electric bills have amazed me. However, my main reason for installing them was to take action against climate change. This is the crucial issue facing the world. Each year shows us that we are in eminent danger of reaching the tipping point. Florida is prime target of impact of Climate change. Heat deaths, agricultural output reduction, sea level rise. Please protect Florida by protecting the solar industry in Florida. You would be protecting Florida citizens by doing your part for our climate.

The Public Service Commission is pledged to serve and protect our citizens. Fulfill your mandate and save solar panels.

Sincerely,  
Desta Horner

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Deborah Rivera

**Subject:** Power outages 4170 La Playa Blvd, Miami GI 33133

Dear Commissioner Graham

I am writing you to register a complaint and make you aware of the multiple power outages in our area affecting approximately 35 families in Coconut Grove over the last month or so.

These outages are prolonged, they disrupt our lives and are not related to inclement weather but to FPL's negligence.

We insist that you resolve this problem immediately to prevent further hardship to our family and the others.

We appreciate your immediate action in resolving this problem.

Sincerely,

Michael and Saralee Weitz

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,  
Thomas Murphy  
1 P4 SAN SEBASTIAN Ave Coral Gables, FL 33134

**Subject:** Renewable Energy is Dumb Energy - Inconvenient Facts

## ***Renewable Energy is Dumb Energy - Inconvenient Facts***

*Choose an Item from the dropdown list*

Renewable energy: A cult and a scam

### **Renewable energy: A cult and a scam**

Many think that the implements of industrial civilization are suspect; that there should be a purer path to a civilization better for the Earth and humanity. This feeling that something is wrong makes individuals susceptible to fake schemes and scams that are offered as a part of that better path. Wind and solar energy cost five times as much as the alternatives, but the promoters, profit-making and non-profit, lie about the cost, claiming that these methods of generating electricity are actually competitive. The lies pass muster because we want to believe. The lies amount to accounting scams, neglecting subsidies and neglecting the massive cost associated with energy that only works when the wind is blowing or the sun is shining.

I hope you will find these bite-sized facts to be informative.

Sincerely,  
Norman Rogers
