Subject: Rate Increase Request from FPL

Good Morning -

My husband and I understand that FPL has requested an additional increase in rates charged for electricity due to the increase in natural gas prices. For as long as we have resided in Florida, the commission has never denied a rate increase to FPL. We could only wish that our income had increased with the same percentage and regularity as our electricity rates.

We are asking that, just once, you actually consider those of us who are impacted by these increases. FPL continues to enjoy record profits while those of us needing their services watch our buying power continue to erode due, in part, to astronomical utility bills. To my knowledge, no other electrical utility in the state finds it necessary to charge as much, or request increases as frequently, as FPL. We humbly request that, for once, you consider the "public" in Public Service and decline FPL's request for higher rates.

Thank you,
Linda Hanson-White & Richard White
