Subject: Minimum Bill Charge

I am disappointed to learn that the electric bill for my small solar home has increased significantly based upon the recent actions of the Florida Public Service Commission. Previously I was billed a customer service fee of \$11.52 plus tax per month. My home is a small, 2 bedroom solar home with gas heater, range and dryer. The Commission's recent authorization to allow utility companies to bill customers a minimum fee well in excess of costs is a disincentive to build smaller, energy efficient structures. The action appears to prop up Florida utilities at the expense of solar homeowners. If higher rates are needed to pay for electric services, they should not be structured in such a way as to penalize smaller, energy efficient structures.
