WATER LISTING OF SYSTEM GROUPS

List below the name of each reporting system and its certificate number. Those systems which have been consolidated under the same tariff should be assigned a group number. Each individual system which has not been consolidated should be assigned its own group number.

The water financial schedules (W-2 through W-10) should be filed for the group in total.

The water engineering schedules (W-11 through W-14) must be filed for each system in the group.

All of the following water pages (W-2 through W-14) should be completed for each group and arranged by group number.

CALCULATION OF THE WATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one water equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:
 ERC = (Total SFR gallons sold (Omit 000) / 365 days / 350 gallons per day)

WASTEWATER LISTING OF SYSTEM GROUPS

List below the name of each reporting system and its certificate number. Those systems which have been consolidated under the same tariff should be assigned a group number. Each individual system which has not been consolidated should be assigned its own group number.

The wastewater financial schedules (S-2 through S-10) should be filed for the group in total.

The wastewater engineering schedules (S-11 through S-13) must be filed for each system in the group.

All of the following wastewater pages (S-2 through S-13) should be completed for each group and arranged by group number.

CALCULATION OF THE WASTEWATER SYSTEM EQUIVALENT RESIDENTIAL CONNECTIONS

Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC). Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:

ERC = (Total SFR gallons treated (Omit 000) / 365 days / 280 gallons per day)

For wastewater only utilities:

Subtract all general use and other non residential customer gallons from the total gallons treated.

 $Divide \ the \ remainder \ (SFR \ customers) \ by \ 365 \ days \ to \ reveal \ single \ family \ residence \ customer \ gallons \ per \ day.$

NOTE: Total gallons treated includes both treated and purchased treatment.

ERC Calculation:

 $ERC = \ (189,\!167\ thousand\ gallons\ sold\ /\ 365\ days\ /\ 173\ gallons\ per\ day) = 2,\!995.76\ ERCs$

^{*} An ERC is determined based on the calculation on S-11.

^{*}The ERCs above treat the 4" and 6" meter bulk customers as 25 ERCs and 50 ERCs based on the S-11 meter equivalent calculation. In November 21, 2016 Order PSC-16-0525-PAA-WS, the Florida PSC found that these customers represented 380 and 201 ERCs, respectively. These 506 additional ERCs are excluded from line 1 above. Also excluded were two 2022-approved bulk customers with 2" and 6" meters representing an additional difference in ERCs of 150.
