 If so, how much capacity is required? 500 gpm for 4 hours
7. Attach a description of the fire fighting facilities Hydrants
8. Describe any plans and estimated completion dates for any enlargements or improvements of this system.
The Company is continuing to upgrade and perform long neglected maintenance of the system by the previous owners
9. When did the company last file a capacity analysis report with the DEP? None
10. If the present system does not meet the requirements of DEP rules, submit the following:
 - a. Attach a description of the plant upgrade necessary to meet DEP rules.
 - b. Have these plans been approved by DEP? _____
 - c. When will construction begin? _____

 - a. Is the system in compliance with the requirements of the CUP? Yes
 - b. If not, what are the utility's plans to gain compliance? N/A

* An ERC is determined based on one of the following methods:
 (a) if actual flow data are available from the preceding 12 months:
 Divide the total annual single family residence (SFR) gallons sold by the average number of single family residents (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.

 (b) If no historical flow data available are available for use:
 ERC = (Total SFR gallons sold (omit 000)/365 days/350 gallons per day).
