1. Present ERC's * the system can efficiently serve.

Number of ERCs * which can be served.

3. Present system connection capacity (in ERCs *) using existing lines.

4. Future connection capacity (in ERCs *) upon service area buildout

5. Estimated annual increase in ERCs *.

6. Is the utility required to have fire flow capacity?

If so, how much capacity is required?

7. Attach a description of the fire fighting facilities.

8. Describe any plans and estimated completion dates for any enlargements or improvements of this system.

9. When did the company last file a capacity analysis report with the DEP?

10. If the present system does not meet the requirements of DEP rules, submit the following:

a. Attach a description of the plant upgrade necessary to meet the DEP rules.

b. Have these plans been approved by DEP?

c. When will construction begin?

d. Attach plans for funding the required upgrading.

e. Is this system under any Consent Order with DEP?

11. Department of Environmental Protection ID #

12. Water Management District Consumptive Use Permit #

a. Is the system in compliance with the requirements of the CUP?

b. If not, what are the utility's plans to gain compliance?

* An ERC is determined based on one of the following methods:

(a) If actual flow data are available from the preceding 12 months:

Divide the total annual single family residence (SFR) gallons sold by the average number of single family residents (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.

(b) If no historical flow data are available use:

ERC = (Total SFR gallons sold / 365 days) / 350 gallons per day.

• An ERC is determined based on one of the following methods:

(a) If actual flow data are available from the preceding 12 months:
Divide the total annual single family residence (SFR) gallons sold by the average number of single family residents (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.

(b) If no historical flow data are available use:
ERC = (Total SFR gallons sold (omit 000/365 days)/280 gallons per day).
