Subject: smart meters
Importance: High

Good morning, Mr. Clemence,

Please reconsider installing smart meters without notifying residents. I do not want one at either of the two homes we own. I don't believe enough studies have been done and I don't want anyone controlling my electricity usage.

I believe the Public Service Commission should be focusing on using the energy supplies in Florida and not worrying how we use electricity.

Thank you for your consideration,

Sally Gillies
Ormond Beach, FL 32174

Dear Mr. Clemence,

Thank you for your prompt reply. I appreciate your description of the meeting and the video link.

However, in light of the fact that we don't know how these smart meters will affect us, nor do we wish to have any part of Agenda 21, we have written to FPL in a certified letter advising them we do not want smart meters.

We are completely satisfied with the metering system currently in use and have marked our meters with a red label saying, **DO NOT INSTALL SMART METER.**

FPL told us this morning that their installers are working in our neighborhood for the next two days.

We are opting out of the installation of the new meters. Since our Republic has not become completely socialist with the government deciding what happens in all parts of our lives, I expect our letters regarding this issue are sufficient.

Again, I appreciate your taking the time to address this issue.

Dear Ms. Gillies,

Thank you for your correspondence regarding smart meters. The Florida Public Service Commission (FPSC) appreciates the opportunity to assist you.

FPSC staff held a public workshop on September 20, 2012 to gather information on smart

meters and to address concerns raised by consumers. Topics addressed during the workshop included jurisdiction of government agencies, health, privacy, data security and alternatives to smart meters. Presentations were made by subject matter experts and several consumers provided public comment.

The agenda and presentations may be accessed at the smart meter workshop web page (see link below) as well as video and audio recordings of the proceedings.

http://www.floridapsc.com/utilities/electricgas/smartmeter/09_20_2012/index.aspx.

The workshop transcript and post-workshop comments will be posted to this page as well.

The information gathered on smart meters will be reviewed and options, if any, will be presented to the FPSC for consideration.

Again, thank you for your correspondence with the FPSC. I hope the above information is helpful to you.
