Subject: Solar Energy Ideas
Date: Monday, June 22, 2015 6:49:12 PM

Below are 2 ideas that could make a big difference for Solar Energy in Florida:

1. Solar Panels embedded in roadways. Maybe one day the heat generated on the asphalt will assist in gathering more energy besides the solar cells we could currently use. This has been implemented in some other countries.
2. There is a new type of Solar Cell that has been created in the U.S. but has not been mass produced as of yet that can generate electricity using the invisible spectrum from the sun's energy as well as the visible. This would permit electricity to be generated and stored on cloudy days as well as on sunny days.
