As a senior citizen, living on social security, and watching my children struggling to raise a family in todays economy, I do not support any policies that will drive up the costs of every Florida household and business. These include any policies that will create subsidies and mandates for high cost rooftop solar systems.

Please protect me and your family as you move forward in discussing the future of solar energy in our state and I am thankful for your previous vote to end solar subsidies in Florida.

While I believe solar energy is important in todays world, I also believe the solar industry must stand on their own two feet, allowing them to become more cost competitive and affordable. In the meantime seniors and vulnerable families shouldn't have to subsidize developing programs.
