Subject: Support Solar Development in Florida
Date: Thursday, June 18, 2015 3:36:58 PM

Dear all at the PSC,

I stand with over 82% of all Floridians across all political party lines imploring you to incorporate more solar into Florida's energy mix. We export \$300 million every day to keep the lights on at our homes and businesses. Florida has the most abundant solar resource east of the Mississippi yet we pale in comparison to other states adopting solar like Georgia and North Carolina. Solar makes real dollars and cents by saving businesses and Floridians money for electrical power. The economic impact with relation to the jobs we can add for our great state are staggering!

Stop carrying the water of the Investor owned utilities and stand up for what the people want and what you already know is right, just and makes the most sense for hard working Floridians.

Distributed solar residentially, commercial and supply side.
