

JUPITER BACH

DEVOTED TO WIND

CORRESPONDENCE

6/12/2025

DOCUMENT NO. 04441-2025

DET. #: 20250011

To whom it may concern,

I am writing this mail to give testimonial to the quality of service from FP&L. At Jupiter Bach we have over 100,000 square feet of manufacturing space in Ellison Industrial Park. Our business supplies the nacelle covers for wind turbines. Our business in Pensacola supports the GE Vernova Turbine Assembly plant. We have 250 employees at our plant in Ellison Industrial who rely on the power to stay up and running to perform their duties. The parts we supply here ensure that GE Vernova can continue to supply their customers and perform their necessary work. The impact of the wind turbine business in the Pensacola area represents over 2,000 jobs. It is imperative that we stay up and run for 20 hours a day five to six days per week to support those over 2,000 people who rely on work we do. FPL is our provider for electrical service and Gregory Jackson is our account representative. FP&L has been very responsive and always deploys trucks immediately to power outages which are primarily caused by extreme weather events like lightning and tornados. Our team has been very happy with the fast service and reliability of FPL. We also recently invested 4.5 million dollars in new facilities here at our Ellison Industrial site and FPL worked closely with us through the entire process. They sent priority teams to connect our building once occupancy was approved so that we could continue to meet the demand of our customers and keep our employees working. FPL has been a strong partner for ensuring our facility can operate.

Respectfully,

Sean Guidry
