In response to Docket #20250011-EI, FPL Rate Increase Petition. This petition should be categorically denied. A 40% rate increase on the base of energy consumers is wholly unacceptable, in furtherance of a bullshit "green" agenda. Solar and battery storage is inefficient and costs 4 to 5 times the amount conventional energy production does. In addition to this, solar only generates power approximately 5 hours a day, when the skies are clear, which is not that often in the summers of Florida. Also, the amount of land needed to produce and house these solar farms is astronomical and extremely negative to the environment. As a FPL consumer, I am adamantly opposed to this plan and protest the usage of intermittent, unreliable power production sources that leave the State in the position of being at the mercy of the People's Republic of China, which is an existential

threat to the safety, security and well being of American citizens. Deny this petition for a rate increase. If FPL wishes to go this route, let them eat the cost of their own faulty decisions.
