| Total | | \$ 18,147,375 | | 55,997,232 | | | | |

Consistent with Tampa Electric's non-speculative risk management plan objective, Tampa Electric's natural gas hedging plan provided price stability and certainty during 2008. The net gain is a combination of large gains during the summer offset by losses during the mild winter at the beginning of 2008 and losses due to low prices during the economic downturn at the end of 2008. The gains during the summer were the result of a dramatic rise in the price of all energy commodities, including natural gas. The losses at the beginning of 2008 were driven primarily by the mild winter of 2007/2008 that allowed natural gas prices to decrease. The losses at the end of 2008 were due to the severe and abrupt economic downturn that reduced demand for natural gas; as a result, the price of natural gas dropped dramatically during the third and fourth quarters of 2008.

To enhance its physical reliability of gas supply, Tampa Electric has increased its natural gas storage capabilities since summer 2005, and in 2008, the company maintained this storage capacity at 225,000 MMBtu. The storage provides Tampa Electric with improved access to "intraday" natural gas when an operational need arises, provides improved hurricane coverage, and can be used to cost-effectively manage swings in gas supply needs during extreme weather conditions, weekends and holidays.

Tampa Electric also continues to improve its physical access to natural gas supply by diversifying its receipt points along the Gulf Coast and other areas when opportunities arise.

**TAMPA ELECTRIC COMPANY
FUEL PROCUREMENT AND WHOLESALE POWER PURCHASES
RISK MANAGEMENT PLAN
2009**

Introduction

Tampa Electric serves its retail customers' electricity needs through a portfolio of generation and wholesale purchases. Tampa Electric's generation fuel mix is a balanced blend of coal and natural gas. While fuel mix diversity enhances long-term reliability, the reliance on natural gas can potentially increase variation in fuel prices. The company's risk management activities reduce the impact of price uncertainty and volatility to the Fuel and Purchased Power Cost Recovery Clause.

I. Qualitative and Quantitative Risk Management Objectives

- A. Qualitative objectives:** Tampa Electric's goals in managing risks associated with fuel or power purchases are focused on minimizing supply risk to ensure reliability of electric service to its customers at a reasonable price. To the extent that price risk can be reduced without compromising supply reliability or imposing unnecessary costs on its customers, Tampa Electric is committed to executing strategies to accomplish its risk management goals.
- B. Quantitative objectives:** Tampa Electric's quantitative objective is to prudently manage its fuel and wholesale energy procurement activities to minimize the variance from projected expenditures while taking advantage of cost-saving opportunities that do not result in increased supply risk. Tampa Electric has established a portfolio of fuel and purchased power products with creditworthy counterparties for known volumes and prices.

II. Oversight & Reporting of Fuel Procurement Activities

The company provides its fuel and wholesale energy procurement activities with independent and unavoidable oversight.

- A.** The TECO Energy Board of Directors established an Energy Risk Management Policy ("Risk Policy"). This policy governs all energy commodities transacting activity at each of TECO Energy's operating units. The scope of the policy includes:
 - Roles and responsibilities of various persons and functions with respect to risk management
 - Authorized transacting activity

- Risk limits
 - Valuation and data management
 - Credit risk management
 - Reporting
 - Compliance and enforcement
- B. The Risk Policy established the Risk Advisory Committee ("RAC"). The responsibilities of the RAC include the following:
- Reviewing the Risk Management Policy periodically and recommending changes and enhancements for approval by the Board of Directors ("Board")
 - Reviewing corporate risk limits for recommendation to the Board
 - Within Board approved corporate risk limits, establishing the quantitative limits for operating companies. The RAC may, at its discretion, delegate approval of sub-limits to operating company management
 - Approving parameters for counterparty credit limits and the allocation of limits among the operating companies
 - Establishing guidelines for risk management and measurement
 - Overseeing and reviewing the risk management process and infrastructure
 - Reviewing and approving transacting strategies proposed by the operating companies
 - Understanding and approving methodologies used for valuation and risk measurement
 - Reviewing and approving corporate and operating company risk limits
 - Establishing credit underwriting standards, and monitoring credit risk-taking activities and related exposures
 - Reviewing risk reports, including portfolio risk summaries and profitability and performance summaries
 - Enacting, maintaining, and enforcing limit violation and trader misconduct policies
 - Taking appropriate courses of action when the risk position of a transacting group has exceeded or is approaching the established limits
 - Reviewing and approving new risk management products
 - Presenting periodic reports to the Board or its committees
- C. TECO Energy established a corporate risk management function ("middle office"), which is overseen by the Director of Independent Risk Oversight.

- D. Tampa Electric established additional oversight or control mechanisms to ensure compliance with policies and procedures. The following practices provide checks and balances on procurement activities.
- Fuel and wholesale energy procurement activities are conducted in accordance with company guidelines, including review by the operating stations, Environmental Health and Safety Department and other management.
 - All agreements are formalized in a written contract that is reviewed by the company's Legal Department.
 - The contracts are reviewed by the Corporate Credit Manager of TECO Energy's Energy Risk Management Department for potential credit risks and incorporation of appropriate credit protection.
 - The company maintains approval authority restrictions based on term and value of the transaction.
 - Payments of invoices under each contract are settled by an independent department, approved by the Manager(s) and/or Director of the Wholesale Marketing and Fuels Department, and reviewed by the Regulatory Accounting Department.
 - Each transaction is eligible for review by outside, internal and regulatory auditors.
 - Implementation of an information system that provides transaction authority control, credit monitoring, mark-to-market and value-at-risk analysis and other key controls.
- E. In accordance with the Risk Policy, Tampa Electric established commodity transaction limits for related commodity transactions.
- The Risk Authorizing Committee reviews and approves commodity transaction limits on an individual basis.
The limits include commodity, physical or financial, tenor (time limit), and dollar amount.
Only a few individuals, all manager level or above, are authorized to execute financial hedging transactions.
- F. Tampa Electric's Fuels Management Department has updated and formalized its policies and procedures. The key elements of its policies and procedures are:
- Financial hedging of fuel commodities are for mitigation of risk to fuel price uncertainty and volatility.
 - Hedging will be conducted in a manner consistent with the Risk Management Plan approved by the Risk Authorizing Committee.
 - Execution of hedges under the Risk Management Plan will be consistent with approved transaction limits for authorized transactors.

- Duties will be separated to assure sufficient control over hedging transactions.
 - Hedging activity will be monitored regularly and reported at least once a month to insure consistency with the Risk Management Plan.
- G. Reports are generated that summarize the fuel procurement activities of the company. These include monthly financial reports produced by Regulatory Accounting, FERC Electric Quarterly Reports, FERC Form 1, FERC Form 580, FERC Form 423, FPSC A schedules and FPSC E schedules. In addition, position and mark-to-market reports are produced and reviewed by the Director of Independent Risk Oversight. The appropriate entries and related disclosures are made in the company's books and records as required by accounting standards.

III. Risk Assessment

In its Risk Policy, TECO Energy has identified the following types of risks for its commodity portfolio:

A. Market Risk

Market risk is the potential change in value of a commodity contract caused by adverse changes in market factors (price and volatility). The following are types of market risk.

Price Risk: Price risk refers to the uncertainty associated with changes in the price of an underlying asset. For instance, if a company has a short position in the market (e.g., needs to meet load requirements by purchasing electricity or natural gas), it will be susceptible to price increases. Conversely, if a company is in a long position (e.g., excess generation or natural gas supply), it is exposed to decreases in market prices. Tampa Electric manages its price risk using physical and financial hedges.

In 2009, Tampa Electric is subject to limited price risk related to variation in coal prices. That price risk is mitigated in part because the company has already contracted for most of its expected coal needs at known prices. Expected market conditions do not currently require further price risk mitigation, for the reasons described in Section IV of this plan.

Tampa Electric evaluated its exposure to changes in the price for natural gas in 2009 based on the forward price and estimated uncertainty in the price of natural gas and the company's expected usage under both low

CONFIDENTIAL

and high price natural gas cases. As expected, natural gas expenditures decrease in the low case by an estimated [REDACTED] and total fuel and purchased power costs decrease by [REDACTED] due to lower prices. In the high case, natural gas expenditures increase by an estimated [REDACTED] and the total fuel and purchased power costs increase by [REDACTED]. This exposure estimate does not take into account any hedges the company may implement to limit its exposure. Tampa Electric's hedging strategy with respect to natural gas is outlined in Section IV of this plan.

Tampa Electric's expected expenditures for purchased power have an open position of approximately [REDACTED] for 2009. Tampa Electric's hedging strategy with respect to purchased power is outlined in Section IV of this plan.

Tampa Electric requires small quantities of fuel oil and maintains a contract that eliminates its supply risk. Due to the small quantities of fuel oil needed for generation, the cost impact caused by price risk is minimal and is therefore not quantified.

Time Spread Risk: This is the risk that the relationship between two points (i.e., one month versus six months) on the forward curve changes. Because the shape of the fuel or electricity forward curve changes to reflect the market's expectations of spot and future fuel or electricity prices, the relationship between any two points on the curve is not always constant. Because of the nature of its business Tampa Electric has little reason or opportunity to offset energy commodity requirements in one month with resources delivered in another month. Therefore, time spread risk is not a significant issue for Tampa Electric.

Liquidity Risk: Liquidity risk is associated with the lack of marketability of a commodity. It includes the risk of an adverse cost or return variation stemming from the lack of marketability of a financial instrument. Liquidity risk may arise because a given position is very large relative to typical trading volumes of like commodity and contract tenor, or because market conditions are unsettled. Liquidity risk is usually reflected in a wide bid-ask spread and large price movements in response to any attempt to buy or sell. A firm facing the need to quickly unwind a portfolio of illiquid instruments may find it necessary to sell at prices far below fair value. Tampa Electric is not exposed to liquidity risk for natural gas financial instruments since the company does not purchase instruments for resale. Tampa Electric does have some liquidity risk for wholesale power transactions since the Florida market has a limited number of participants.

Basis Risk: Basis risk is the risk exposure due to a difference in commodity value between different delivery points. Electricity markets are regional. Prices can be different at different locations because of differences in both supply costs and the cost of transmission between the two locations. These price differences are dynamic, primarily due to changes in transmission availability between the two locations. Due to the stability of the coal market, Tampa Electric's negligible use of oil, and the indexing of its natural gas contract pricing, basis risk is not a significant issue for the company.

Fundamentally, market risk is created by the existence of "open" positions. An open position is the difference between an existing requirement and the ability to meet that requirement with existing resources.

B. Volume Risk

Volume risk is the potential adverse economic impact of unanticipated changes in supply or demand. Tampa Electric faces supply risk, because there is uncertainty associated with the availability of generating units or fuel availability for those units. If a generating unit fails, Tampa Electric must replace the power with another unit's generation or with purchased power at market prices. Tampa Electric also faces demand risk since there is uncertainty associated with customer demand, and thus uncertainty in the determination of the fuel or energy purchase volumes necessary to supply such demand. Tampa Electric's volume risk for fuel and purchased power in 2009 is managed operationally and through contract terms enforcement, including appropriate legal remedies, should a party default.

C. Credit Risk

Credit risk is the risk of financial loss due to a counterparty's failure to fulfill the terms of a contract on a timely basis. It includes both settlement risk associated with payment for fuel or energy received, as well as potential risk, which reflects the risk that the counterparty defaults on an obligation to provide or receive fuel or energy. Credit risk depends on the probability of counterparty default, the concentration of credit exposure with a small number of counterparties, the total amount of exposure, and the volatility of markets. Tampa Electric's credit risk will vary based on the number of its trading counterparties and the mark-to-market value of its hedge transactions. Tampa Electric's existing credit risk is minimal since it uses a wide variety of counterparties, and has systems and processes in place to monitor and control Credit Risk.

D. Administrative Risk

Administrative risk is risk of loss associated with deficiencies in a company's internal control structure and management reporting due to human error, fraud or a system's inability to adequately capture, store and report transactions. The company has consistently maintained appropriate administrative controls for entering and administration of commodity transactions.

IV. Risk Management Strategy and Current Hedging Activity

Tampa Electric's risk management strategy is designed to limit exposure to different types of risk that are applicable to the company's operation.

Market Risk

Tampa Electric's potential market risk is the result of open positions in four commodities:

- Coal
- Natural Gas
- Fuel Oil
- Purchased Power

System energy requirements during 2009 are projected to be served in the proportions shown in the following table.

| Commodity | Percent of System Energy |
|-----------------|--------------------------|
| Coal | 50 |
| Natural Gas | 37 |
| No. 2 Oil | <1 |
| No. 6 Oil | <1 |
| Purchased Power | 13 |

Based on Tampa Electric's assessment of market risk factors, the company has implemented the market risk management strategies described below.

Coal. Tampa Electric has contracted for most of its expected coal needs for 2009 through bilateral agreements with coal producers. The company provided the projected amounts in both tons and dollars in its 2009 projection filing submitted September 2, 2008. The coal market has experienced significant price increases in 2008, and prices are expected

to remain near 2008 levels in 2009. Low-sulfur coal prices increased to a greater degree than Illinois Basin coal prices, and Tampa Electric's ability to utilize the high-sulfur, Illinois Basin coal in its units has reduced its exposure to price volatility. While the Illinois Basin has recently experienced production difficulties due to labor and geologic issues, it is a region where coal production may increase relatively quickly to respond to increased needs. As a result, Tampa Electric's coal volume risk in 2009 is diminished. Tampa Electric's contracts with suppliers incorporate legal remedies in the event of default, which address volume risk.

Fuel Oil. In 2009, Tampa Electric will continue to purchase its fuel oil needs at indexed market prices. Oil represents less than one percent of the company's needs on a GWH basis, and therefore, associated price risk is minimal. Tampa Electric maintains a contract with a local supplier to deliver all of its needs, which mitigates supply risk.

Natural Gas. Tampa Electric continues to implement prudent financial hedging strategies for natural gas requirements. In 2008, the company used swap agreements—the exchange of a payment tied to the value of a natural gas index for a fixed payment—to hedge natural gas. In keeping with the company's approved risk management plan, Tampa Electric plans to hedge a significant percentage of its ~~projected~~ natural gas usage in 2009.

Tampa Electric uses the forward pricing information of the New York Mercantile Exchange ("NYMEX") natural gas forward price curve in developing natural gas price hedging strategy. Tampa Electric also subscribes to energy consulting services that provide information about underlying issues affecting the availability and price of natural gas and other commodities. The purpose of Tampa Electric's natural gas hedge plan is to reduce natural gas price volatility by utilizing financial instruments relying on three key variables: price, volume and time.

Tampa Electric projects prices during the company's annual fuel budgeting process. The volume of natural gas that the company will hedge falls between a minimum and a maximum percentage of the expected natural gas burn. The percentages vary according to the time remaining until the contract month.

Tampa Electric's approved Risk Management Plan describes the following key elements of the company's natural gas hedging strategy: (1) natural gas prices can be hedged up to 24 months into the future; (2) nearer months can be hedged for a greater percentage of the expected volume than outer months; and (3) natural gas options can be used for financial hedging.

CONFIDENTIAL

Currently, Tampa Electric estimates over [REDACTED] percent of its total 2008 natural gas purchases will be covered by financial hedges. The net effect of these hedges is estimated to be a [REDACTED] of approximately [REDACTED]. For 2009, Tampa Electric has approximately 28 percent hedged with a currently estimated [REDACTED].

Purchased Power. Total forecasted purchased power for 2009 is 2,753 GWH. As of August 2008, Tampa Electric has physically hedged [REDACTED] percent of its 2009 expected purchased power needs through pre-scheduled purchased power agreements. The remaining [REDACTED] GWH or [REDACTED] percent of 2009 forecasted wholesale energy purchases will be purchased from as-available cogenerators or on the short-term, non-firm market for economy purposes, which are not hedged. The table below shows the expected spot purchased power amounts by month.

**EXPECTED PURCHASES
2009**

| | Total Purchases (MWh) | Open Position Purchases (MWh) | Open Position (% of Total) | Projected Transaction Price (\$/MWh) | Open Position (\$) |
|--------------|-----------------------|-------------------------------|----------------------------|--------------------------------------|--------------------|
| JAN | 295,137 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| FEB | 204,485 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| MAR | 227,613 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| APR | 223,681 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| MAY | 255,206 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| JUN | 220,491 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| JUL | 254,457 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| AUG | 267,898 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| SEP | 214,918 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| OCT | 208,539 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| NOV | 169,645 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| DEC | 210,923 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |
| TOTAL | 2,752,992 | [REDACTED] | [REDACTED] | [REDACTED] | [REDACTED] |

The company's purchased power contracts include a fuel component; therefore, Tampa Electric has exposure to fuel price risk for its wholesale energy purchases, particularly for purchased power supplied from natural gas-fired generation. Tampa Electric does not currently hedge wholesale energy transactions with financial instruments due to the lack of a liquid, published wholesale energy market and appropriate available instruments.

Tampa Electric is responsible for fuel delivery on new purchased power contracts that began in 2008 and 2009. Tampa Electric is not currently including these contract volumes in its hedging portfolio. Once Tampa Electric has more experience with these contracts, the company will reassess whether this natural gas volume should be added to its natural gas hedge portfolio.

In summary, Tampa Electric's planned operations in 2009 result in nominal market risk associated with coal and fuel oil. Non-price risks associated with natural gas and purchased power are also minimal. Therefore, while the company continues to evaluate risk for all fuel and energy commodity transactions, it is currently focused on mitigating the price risk associated with natural gas and purchased power.

Volume Risk

Hedging of volumetric risk is problematic due to a limited number of viable financial hedging instruments. Tampa Electric has identified the following hedges.

- Maintaining appropriate inventory stockpiles provides a physical hedge against volume risk.
- "Swing" contracts enable the buyer to take variable volumes up to a predefined limit.
- Full requirement contracts enable the buyer to take any volume up to total usage.

Tampa Electric uses inventory swing contracts and full requirements contracts where needed commodity volumes are small and in situations where commodity volumes are unpredictable in volume and/or timing. Other alternatives will continue to be identified, assessed and implemented as necessary.

Credit Risk

TECO Energy's credit risk management process is composed of the following primary steps.

- Gather counterparty information for initial evaluation
- Assess counterparty creditworthiness and assign credit limit
- Determine credit collateral requirements, as needed
- Request, review and monitor contractual requirements, legal covenants, collateral documents and credit provisions
- Quantify counterparty exposure and measure against approved limits
- Monitor counterparty and credit support provider qualities
- Prepare credit exposure reports on a daily basis that are reviewed prior to entering into transactions

Administrative Risk

Tampa Electric maintains energy trading risk management systems and processes to efficiently track, monitor and evaluate hedging activities. Tampa Electric's administrative processes and system controls have passed repeated internal and external (Sarbanes-Oxley) audits.

14

**TAMPA ELECTRIC COMPANY
FUEL PROCUREMENT AND WHOLESALE POWER PURCHASES
RISK MANAGEMENT PLAN
2008**

Introduction

Tampa Electric services its retail customers' electricity needs through a portfolio of generation and wholesale purchases. Since the completion of the Bayside Station in 2004, Tampa Electric's fuel mix in its generation has been a balanced blend of coal and natural gas. While fuel mix diversity enhances long-term reliability, the reliance on natural gas can potentially increase variation in fuel prices. The company's risk management activities reduce the impact of price volatility to the Fuel and Purchased Power Cost Recovery Clause.

I. Qualitative and Quantitative Risk Management Objectives

- A. Qualitative objectives:** Tampa Electric's goals in managing risks associated with fuel or power purchases are focused on minimizing supply risk to ensure reliability of electric service to its customers at a reasonable price. To the extent that price risk can be reduced without compromising supply reliability or imposing unnecessary costs on its customers, Tampa Electric is committed to executing strategies to accomplish its risk management goals.
- B. Quantitative objectives:** Tampa Electric's quantitative objective is to prudently manage its fuel and wholesale energy procurement activities to minimize the variance from projected expenditures while taking advantage of cost-saving opportunities that do not result in increased supply risk. Tampa Electric has established a portfolio of fuel and purchased power products with creditworthy counterparties for known volumes and prices.

II. Oversight & Reporting of Fuel Procurement Activities

The company provides its fuel and wholesale energy procurement activities with independent and unavoidable oversight.

- A.** The TECO Energy Board of Directors established an Energy Risk Management Policy ("Risk Policy"). This policy governs all energy commodities transacting activity at each of TECO Energy's operating units. The scope of the policy includes:
 - Roles and responsibilities of various persons and functions with respect to risk management

- Authorized transacting activity
 - Risk limits
 - Valuation and data management
 - Credit risk management
 - Reporting
 - Compliance and enforcement
- B.** The Risk Policy established the Risk Advisory Committee ("RAC"). The responsibilities of the RAC include the following:
- Reviewing the Risk Management Policy periodically and recommending changes and enhancements for approval by the Board of Directors ("Board")
 - Reviewing corporate risk limits for recommendation to the Board
 - Within Board approved corporate risk limits, establishing the quantitative limits for operating companies. The RAC may, at its discretion, delegate approval of sub-limits to operating company management
 - Approving parameters for counterparty credit limits and the allocation of limits among the operating companies
 - Establishing guidelines for risk management and measurement
 - Overseeing and reviewing the risk management process and infrastructure
 - Reviewing and approving transacting strategies proposed by the operating companies
 - Understanding and approving methodologies used for valuation and risk measurement
 - Reviewing and approving corporate and operating company risk limits
 - Establishing credit underwriting standards, and monitoring credit risk-taking activities and related exposures
 - Reviewing risk reports, including portfolio risk summaries and profitability and performance summaries
 - Enacting, maintaining, and enforcing limit violation and trader misconduct policies
 - Taking appropriate courses of action when the risk position of a transacting group has exceeded or is approaching the established limits
 - Reviewing and approving new risk management products
 - Presenting periodic reports to the Board or its committees
- C.** TECO Energy established a corporate risk management function ("middle office"), which is overseen by the Director of Independent Risk Oversight.

D. Tampa Electric established additional oversight or control mechanisms to ensure compliance with policies and procedures. The following practices provide checks and balances on procurement activities.

- Fuel and wholesale energy procurement activities are conducted in accordance with company guidelines, including review by the operating stations, Environmental Health and Safety Department and other management.
- All agreements are formalized in a written contract that is reviewed by the company's Legal Department.
- The contracts are reviewed by the Corporate Credit Manager of TECO Energy's Energy Risk Management Department for potential credit risks and incorporation of appropriate credit protection.
- The company maintains approval authority restrictions based on term and value of the transaction.
- Payments of invoices under each contract are approved by the Manager(s) and/or Director of the Wholesale Marketing and Fuels Department and reviewed by the Regulatory Accounting Department.
- Each transaction is eligible for review by outside, internal and regulatory auditors.
- Implementation of an information system that provides transaction authority control, credit monitoring, mark-to-market and value-at-risk analysis and other key controls.

E. In accordance with the Risk Policy, Tampa Electric established commodity transaction limits for related commodity transactions.

F. Tampa Electric's Wholesale Marketing and Fuels Department ~~and updated~~ and formalized its policies and procedures.

G. Reports are generated that summarize the fuel procurement activities of the company. These include monthly financial reports produced by Regulatory Accounting, FERC Electric Quarterly Reports, FERC Form 1, FERC Form 580, FERC Form 423, FPSC A schedules and FPSC E schedules. In addition, position and mark-to-market reports are produced and reviewed by the Director of Independent Risk Oversight. The appropriate entries and related disclosures are made in the company's books and records as required by accounting standards.

III. Risk Assessment

In its Risk Policy, TECO Energy has identified the following types of risks for its commodity portfolio:

CONFIDENTIAL

A. Market Risk

Market risk is the potential change in value of a commodity contract caused by adverse changes in market factors (price and volatility). The following are types of market risk.

Price Risk: Price risk refers to the uncertainty associated with changes in the price of an underlying asset. For instance, if a company has a short position in the market (e.g., needs to meet load requirements by purchasing electricity or natural gas), it will be susceptible to price increases. Conversely, if a company is in a long position (e.g., excess generation or natural gas supply), it is exposed to decreases in market prices. Tampa Electric manages its price risk using physical and financial hedges.

In 2007, Tampa Electric is subject to limited price risk related to variation in coal prices. That price risk is mitigated in part because the company has already contracted for most of its expected coal needs at known prices. Expected market conditions do not currently require further price risk mitigation, for the reasons described in Section IV of this plan.

Tampa Electric evaluated its exposure to changes in the price for natural gas in 2008 based on the forward price and estimated uncertainty in the price of natural gas and the company's expected usage under both low and high price natural gas cases. As expected, natural gas expenditures decrease in the low case by an estimated [REDACTED] and total fuel and purchased power costs decrease by [REDACTED] due to lower prices. In the high case, natural gas expenditures increase by an estimated [REDACTED] [REDACTED] and the total fuel and purchased power costs increase by [REDACTED]. This exposure estimate does not take into account any hedges the company may implement to limit its exposure. Tampa Electric's hedging strategy with respect to natural gas is outlined in Section IV of this plan.

Tampa Electric's expected expenditures for purchased power have an open position of approximately [REDACTED] for 2008. Tampa Electric's hedging strategy with respect to purchased power is outlined in Section IV of this plan.

Tampa Electric requires small quantities of fuel oil and maintains a requirements contract that eliminates its supply risk. Due to the small quantities of fuel oil needed for generation, the cost impact caused by price risk is minimal and is therefore not quantified.

Time Spread Risk: This is the risk that the relationship between two points (i.e., one month versus six months) on the forward curve changes. Because the shape of the fuel or electricity forward curve changes to reflect the market's expectations of spot and future fuel or electricity prices, the relationship between any two points on the curve is not always constant. Because of the nature of its business Tampa Electric has little reason or opportunity to offset energy commodity requirements in one month with resources delivered in another month. Therefore, time spread risk is not a significant issue for Tampa Electric.

Liquidity Risk: Liquidity risk is associated with the lack of marketability of a commodity. It includes the risk of an adverse cost or return variation stemming from the lack of marketability of a financial instrument. Liquidity risk may arise because a given position is very large relative to typical trading volumes of like commodity and contract tenor, or because market conditions are unsettled. Liquidity risk is usually reflected in a wide bid-ask spread and large price movements in response to any attempt to buy or sell. A firm facing the need to quickly unwind a portfolio of illiquid instruments may find it necessary to sell at prices far below fair value. Tampa Electric is not exposed to liquidity risk for natural gas financial instruments since the company does not purchase instruments for resale. Tampa Electric does have some liquidity risk for wholesale power transactions since the Florida market has a limited number of participants.

Basis Risk: Basis risk is the risk exposure due to a difference in commodity value between different delivery points. Electricity markets are regional. Prices can be different at different locations because of differences in both supply costs and the cost of transmission between the two locations. These price differences are dynamic, primarily due to changes in transmission availability between the two locations. Due to the stability of the coal market, Tampa Electric's negligible use of oil, and the indexing of its natural gas contract pricing, basis risk is not a significant issue for the company.

Fundamentally, market risk is created by the existence of "open" positions. An open position is the difference between an existing requirement and the ability to meet that requirement with existing resources.

B. Volume Risk

Volume risk is the potential adverse economic impact of unanticipated changes in supply or demand. Tampa Electric faces supply risk, because there is uncertainty associated with the availability of generating units or fuel availability for those units. If a generating unit fails, Tampa Electric must replace the power

with another unit's generation or with purchased power at market prices. Tampa Electric also faces demand risk since there is uncertainty associated with customer demand, and thus uncertainty in the determination of the fuel or energy purchase volumes necessary to supply such demand. Tampa Electric's volume risk for fuel and purchased power in 2007 is managed operationally and through contract terms enforcement, including appropriate legal remedies, should a party default.

C. Credit Risk

Credit risk is the risk of financial loss due to a counterparty's failure to fulfill the terms of a contract on a timely basis. It includes both settlement risk associated with payment for fuel or energy received, as well as potential risk, which reflects the risk that the counterparty defaults on an obligation to provide or receive fuel or energy. Credit risk depends on the probability of counterparty default, the concentration of credit exposure with a small number of counterparties, the total amount of exposure, and the volatility of markets. Tampa Electric's credit risk will vary based on the number of its trading counterparties and the mark-to-market value of its hedge transactions. Tampa Electric's existing credit risk is minimal since it uses a wide variety of counterparties, and has systems and processes in place to monitor and control Credit Risk.

D. Administrative Risk

Administrative risk is risk of loss associated with deficiencies in a company's internal control structure and management reporting due to human error, fraud or a system's inability to adequately capture, store and report transactions. The company has consistently maintained appropriate administrative controls for entering and administration of commodity transactions.

IV. Risk Management Strategy and Current Hedging Activity

Tampa Electric's risk management strategy is designed to limit exposure to different types of risk that are applicable to the company's operation.

Market Risk

Tampa Electric's potential market risk is the result of open positions in four commodities:

- Coal
- Natural Gas
- Fuel Oil
- Purchased Power

System energy requirements during 2008 are projected to be served in the proportions shown in the following table.

| Commodity | Percent of System Energy |
|-----------------|--------------------------|
| Coal | 48 |
| Natural Gas | 39 |
| No. 2 Oil | <1 |
| No. 6 Oil | <1 |
| Purchased Power | 12 |

Based on Tampa Electric's assessment of market risk factors, the company has implemented the market risk management strategies described below.

Coal. Tampa Electric has contracted for most of its expected coal needs for 2008 through bilateral agreements with coal producers. The company provided the projected amounts in both tons and dollars in its 2008 projection filing submitted September 4, 2007. Tampa Electric's contracts with suppliers incorporate legal remedies in the event of default, which address volume risk. In addition, the coal market is expected to remain relatively stable for Tampa Electric in 2008. Tampa Electric's ability to utilize high-sulfur, Illinois Basin coal in its units reduced its exposure to price volatility because the Illinois Basin coal has maintained relatively stable pricing in comparison to low-sulfur coals. In addition, the Illinois Basin is a region where coal production may increase relatively quickly to respond to increased needs. As a result, Tampa Electric's coal volume risk in 2008 is minimal. Tampa Electric has continued to strengthen its credit review process. Newly established agreements incorporate stricter credit provisions; and as older contracts expire, the company plans to include the stricter provisions in future coal supply agreements.

Fuel Oil. In 2008, Tampa Electric will continue to purchase its fuel oil needs at indexed market prices. Oil represents less than one percent of the company's needs on a GWH basis, and therefore, associated price risk is minimal. Tampa Electric maintains a requirements contract with a local supplier to deliver all of its needs, which mitigates supply risk.

Natural Gas. Tampa Electric continues to implement prudent financial hedging strategies for natural gas requirements. In 2007, the company used swap agreements—the exchange of a payment tied to the value of a natural gas index for a fixed payment—to hedge natural gas. In keeping with the company's approved risk management plan, Tampa Electric plans

CONFIDENTIAL

to hedge a significant percentage of its projected natural gas usage in 2008, using a portfolio of financial hedging instruments.

Tampa Electric uses the forward pricing information of the New York Mercantile Exchange ("NYMEX") natural gas forward price curve in developing natural gas price hedging strategy. Tampa Electric also subscribes to energy consulting services that provide information about underlying issues affecting the availability and price of natural gas and other commodities. The purpose of Tampa Electric's natural gas hedge plan is to reduce natural gas price volatility by utilizing financial instruments relying on three key variables: price, volume and time.

Tampa Electric projects prices during the company's annual fuel budgeting process. The volume of natural gas that the company will hedge falls between a minimum and a maximum percentage of the expected natural gas burn. The percentages vary according to the time remaining until the contract month.

In 2005, Tampa Electric reviewed its Risk Management Plan and as a result approved several enhancements for natural gas pricing. The enhancements approved were 1) prices can be hedged up to 24 months into the future, 2) outer months can be hedged for a greater percentage of the expected volume, and 3) to a limited extent natural gas options were approved as a financial hedging structure.

Currently, Tampa Electric estimates over [redacted] percent of its total 2007 natural gas purchases will be covered by financial hedges. The net effect of these hedges is estimated to be a [redacted] of approximately [redacted]. For 2008, Tampa Electric has approximately [redacted] percent hedged with a currently estimated [redacted].

Purchased Power. Total forecasted purchased power for 2008 is 2,596 GWH. As of August 2007, Tampa Electric has physically hedged [redacted] percent of its 2008 expected purchased power needs through pre-scheduled purchased power agreements. The remaining [redacted] GWH or [redacted] percent of 2008 forecasted wholesale energy purchases will be purchased from as-available cogenerators or on the short-term, non-firm market for economy purposes, which are not hedged. The table below shows the expected spot purchased power amounts by month.

CONFIDENTIAL

| EXPECTED PURCHASES 2008 | | | | |
|----------------------------|-----------------------|-------------------------------|----------------------------|--------------------------------------|
| | Total Purchases (MWh) | Open Position Purchases (MWh) | Open Position (% of Total) | Projected Transaction Price (\$/MWh) |
| JAN | 379,481 | [REDACTED] | | 23,993,700 |
| FEB | 167,390 | [REDACTED] | | 9,241,700 |
| MAR | 281,806 | [REDACTED] | | 14,220,500 |
| APR | 205,687 | [REDACTED] | | 17,301,500 |
| MAY | 168,546 | [REDACTED] | | 5,513,100 |
| JUN | 239,626 | [REDACTED] | | 10,381,200 |
| JUL | 215,107 | [REDACTED] | | 6,996,400 |
| AUG | 218,390 | [REDACTED] | | 6,932,800 |
| SEP | 230,572 | [REDACTED] | | 12,415,300 |
| OCT | 135,101 | [REDACTED] | | 5,763,700 |
| NOV | 111,054 | [REDACTED] | | 4,215,400 |
| DEC | 142,942 | [REDACTED] | | 6,761,000 |
| TOTAL | 2,595,702 | [REDACTED] | | 123,826,300 |

The company's purchased power contracts include a fuel component; therefore, Tampa Electric has exposure to fuel price risk for its wholesale energy purchases, particularly for purchased power supplied from natural gas-fired generation. The fuel component of the price risk could be hedged with financial derivatives, but Tampa Electric does not currently hedge wholesale energy transactions with financial instruments due to the lack of a liquid, published wholesale energy market and appropriate available instruments.

In summary, Tampa Electric's planned operations in 2008 result in nominal market risk associated with coal and fuel oil. Non-price risks associated with natural gas and purchased power are also minimal. Therefore, while the company continues to evaluate risk for all fuel and energy commodity transactions, it is currently focused on mitigating the price risk associated with natural gas and purchased power.

Volume Risk

Hedging of volumetric risk is problematic due to a limited number of viable financial hedging instruments. Tampa Electric has identified the following hedges:

- Maintaining appropriate inventory stockpiles provides a physical hedge against volume risk
- "Swing" contracts enable the buyer to take variable volumes up to a predefined limit
- Full requirement contracts enable the buyer to take any volume up to total usage
- Weather derivatives enable the buyer to take variable volumes depending on weather temperatures and have significant price premiums

Of these, Tampa Electric uses swing contracts and full requirements contracts where needed commodity volumes are small and in situations where commodity volumes are unpredictable in volume and/or timing. Other alternatives will continue to be identified, assessed and implemented as necessary.

Credit Risk

TECO Energy's credit risk management process is composed of the following primary steps.

- Gather counterparty information for initial evaluation
- Assess counterparty creditworthiness and assign credit limit
- Determine credit collateral requirements, as needed
- Request, review and monitor contractual requirements, legal covenants, collateral documents and credit provisions
- Quantify counterparty exposure and measure against approved limits
- Monitor counterparty and credit support provider qualities
- Prepare credit exposure reports on a daily basis that are reviewed prior to entering into transactions

Administrative Risk

Tampa Electric maintains energy trading risk management systems and processes to efficiently track, monitor and evaluate hedging activities. Tampa Electric's administrative processes and system controls have passed repeated internal and external (Sarbanes-Oxley) audits.

A large black rectangular redaction box covers the majority of the page content, from approximately [106, 107] to [895, 895]. The redaction is irregular, with some white space visible at the top left and bottom right corners.

2.4. Front Office

Front Office management has the primary responsibility for managing risks for the individual operating companies. In executing risk management activities, they must seek the advice and involvement of qualified individuals for issues related to areas beyond the unit's expertise. For example, certain sources of risk, such as credit, tax, accounting, and legal/regulatory, give rise to a high degree of reliance on persons with specialized knowledge.

Specifically, Front Office management is responsible for:

- Developing and executing transacting strategies that are consistent with the strategies, limits and products approved by the RAC;
 - Proposing strategies and market risk trading limits for RAC approval (following input from the DIRO);
 - Assuring that the operations group and systems infrastructure supports the volume and complexity of transactions;
 - Developing a process for identifying new products, initiating and managing the review of new products and presenting new products for RAC approval;
 - Supervising transactors and all activity;
 - Managing and reviewing overall transacting portfolio and risk profile as well as ensuring and verifying that hedges are appropriate and well maintained;
 - Enforcing market risk limits and observing credit risk policies;
 - Assuring that transactors understand the risk exposures of transactions and understand the risk policies, procedures, and limits; and
 - Assuring understanding of all applicable regulatory issues.

Energy Risk Management Policy

10-3A

2.6. Middle Office

The Middle Office is a TECO Energy corporate function reporting through the DIRO. It consists of three main areas: market risk management, credit risk management and contract management/compliance. The Middle Office will have the following responsibilities:

- Ensure the proper recording of Front Office transactions;
- Negotiate, administer and maintain enabling agreements with counterparties;
- Exchange written and/or verbal confirmations with counterparties;
- Monitor the aging of confirmations;
- Source forward curves for portfolio valuation as needed
- Perform end-of-period portfolio valuation;
- Perform market and credit risk measurement;
- Review counterparty credit and establish appropriate credit limits;
- Determine mark-to-market valuation adjustments;
- Ensure awareness of pertinent regulatory provisions/standards and monitor transactional compliance; and
- Developing appropriate control procedures to monitor compliance with Energy and Credit risk policies.

The activities of the Middle Office do not reduce the Front Office's primary responsibility for accurately assessing and managing the risk associated with their business profile. A strong segregation of duties must exist between Front and Middle Office activities.

2.7. Back Office

The Back Office function is responsible for financial and accounting activities relating to the transaction process independent of the Front Office. The Back Office will have the following responsibilities:

- Track and process transactions;
- Maintain customer information;
- Perform P&L reconciliation;
- Prepare customer billings;
- Issue payment receipt/instructions; and
- Support or perform transaction settlements.

As of June 26, 2009

3. Scope of Authorized Activities

3.1. Permitted Instruments

TECO Energy or its operating companies transacts, or may transact in:

- *Spot Transactions,*
- *Forwards,*
- *Futures,*
- *Options,*
- *Spreads,*
- *Price Swaps,*
- *Basis Swaps, and*
- *Exchanges of Futures for Physicals.*

The underlying commodities to which transactions must relate are:

- Electricity including capacity, energy, ancillary services and transmission
- Natural gas, including transportation and storage, and
- Crude Oil or refined products, including transportation.
- Coal

For physical transactions, the deal terms must specify receipt or delivery of commodities at locations where TECO Energy has obligations or needs associated with its primary business (gas supply, electricity generation, etc.). Some of the listed instruments are standard products currently in use by TECO Energy while others may be considered for future use. However, in all instances due consideration should be given to a transaction's probable accounting, tax and regulatory treatment, and all transactions should comply with the market and credit risk limits that have been established including transacting only with counterparties that have proper enabling agreements and approved credit limits (see Section 4 for New Product Approval Process).

Although management of risks unrelated to energy commodities is not intended to be within the scope of this policy, any transactions in financial derivatives (e.g. interest rates, currency) require the approval of the RAC and must otherwise comply with the requirements of this policy.

3.2. Authority to Commit on Trades

Only persons who have been specifically authorized by the RAC to execute commodities transactions may do so. A list of authorized transactors will be maintained as Appendix A to this RMP. Only the authorized transacting individuals may sign (either manually, by facsimile, or otherwise) a customized trading confirmation or any other trading agreement including (without limitation) any master trading agreement.

The Front Office Manager will assure that any authorized person pursuant to this section understands the risk exposures arising from the transactions in question, the applicable risk

management guidelines, and the management control procedures for documenting, recording, and reporting such transactions.

3.3. Specific Contract Approval Thresholds

Notwithstanding any other specific approval requirements detailed in this policy, any energy transaction that has a fixed-price notional value greater than \$50 million must be reviewed and approved by the RAC, while any energy transaction that has a fixed-price notional value greater than \$100 million must also be reviewed and approved by the Board of Directors.

4. New Product Approval

4.1. Definition

A new product is defined as a commodity transaction and/or financial structure that exposes TECO Energy to market, credit, regulatory and/or administrative risks which the Company has not previously managed.

4.2. New Product Parameters

Examples of new transaction terms that may require a new product review include the following:

- Geographic point;
- Contract tenor;
- Significantly increased rate of acceleration of loss for the risk type; and
- Change in the capacity in which the operating company transacts in the product.

4.3. Approval Process

New products must be approved by the RAC. Prior to presenting a new product to the RAC, the Front Office will work with the DIRO to coordinate a review of the new product to address considerations such as regulatory, legal, credit, and market risks, accounting and tax consequences, and measurement and reporting implications.

To augment the responsiveness and efficiency of the assignment of ratings and credit lines, as part of the new product approval process, the Front Office will include a description of the types of counterparties it expects to transact within the new product/market, including the following:

- Typical company size, approximate expected range, distribution;
- Business types, approximate expected distribution if volume variability will be used;
- Product tenor and volume expected;
- The names of any major counterparties in the given region, and;
- Expected collateral types.

The Credit Manager will use this information to obtain as much of a "lead" in credit analysis as is practicable.

II. DERIVATIVES AND HEDGING

A. General

TECO uses derivatives solely to limit its exposure to price fluctuations for physical purchases and sales of natural gas in its normal operations. Due to the volatile nature of price spikes that may affect load retention and expansion, TEC utilizes hedge transactions to manage price uncertainty. The FPSC has allowed the cost of these hedges to be passed through to customers. Customers benefit when prices are stabilized as a result. TECO enters into the following types of hedge transactions for natural gas:

- Forwards
- Futures
- Options
- Spreads
- Swaps
- Basis Swaps
- Exchanges of Futures for Physicals

10-5
2

B. Hedge Plan

An Energy Risk Management Policy defines the guidelines for limiting, monitoring and controlling the financial risks related to energy commodity transacting. This policy is designed to assure that the risks incurred and the returns attained are consistent with the expectations of TECO Energy's Board of Directors. The RAC approves the hedge plan which sets goals for the percentage of gas purchases to be hedged and products to be purchased. The RAC set a pre-determined approval level on all transactions for the notional limit (contract value) as well as the Tenor Limit (contract length) on any hedge agreements.

C. Front Office

The Director, Gas Origination & Trading (DGOT) initiates transactions based on the Hedge Plan approved by RAC. An International Swap and Derivatives Agreement (ISDA) is required for all trading partners.

TEC uses NUCLEUS for recording derivative transactions, risk reporting, credit management, invoicing and settlement. Transactions may be initiated and approved by the following:

- Director, Gas Origination & Trading (DGOT)
- Director, Gas Supply & Wholesale Origination
- Director, Wholesale Marketing & Fuels
- Vice President, Fuels Management

DGOT attempts to hedge at least the minimum amount of gas according to the hedge plan. As stated in the plan, DGOT may hedge to the maximum if there is a price advantage. DGOT evaluates market data to locate the best price and checks the counterparty's available credit. DGOT confirms agreed-upon prices with the counterparty on a recorded telephone line and enters into the transaction online.

All hedge transactions include the name of the approver and date of approval. DGOT reviews the trading activity worksheet used to track transactions to compare the MMBTU's hedged to the expected MMBTU's to be burned (Physical gas).

D. Middle Office

See A21 TECO Energy Derivatives and Hedging Process narrative.
See A20 TECO Energy Contracts Administration Process Narrative.
See A19 TECO Energy Credit Management Process Narrative.

E. Back Office

Settlement

All derivative transactions due to settle for the month are settled on the day specified in the transaction. Open derivative transactions are valued as of the last day of the month. Accountant, Settlements generates purchase and sales invoices from NUCLEUS. The invoices are compared to

the in-house copy of the confirmations. Then the sales invoices are faxed to the counterparties, and a copy to Plant Accounting. See *Natural Gas: Purchases and Sales C. Back Office Sales*. Purchase invoices matched to the counterparty's invoice, stamped, dated, initialed. The invoices are reviewed by the Manager. Settlements then forwarded to the DGOT or Director, Gas Operations and Wholesale Origination for approval by signature. See *Natural Gas C. Back Office Sales or Purchases*. In Financial Reporting, the Financial Reporting Analyst reconciles all fuel related payments (hedging transactions) to verify that payments equal recorded amounts. See **Key control B6-2 B/O Purchase and Sales Reports** are not provided for Derivatives.

Accounting - Realized Derivatives ("Closed")

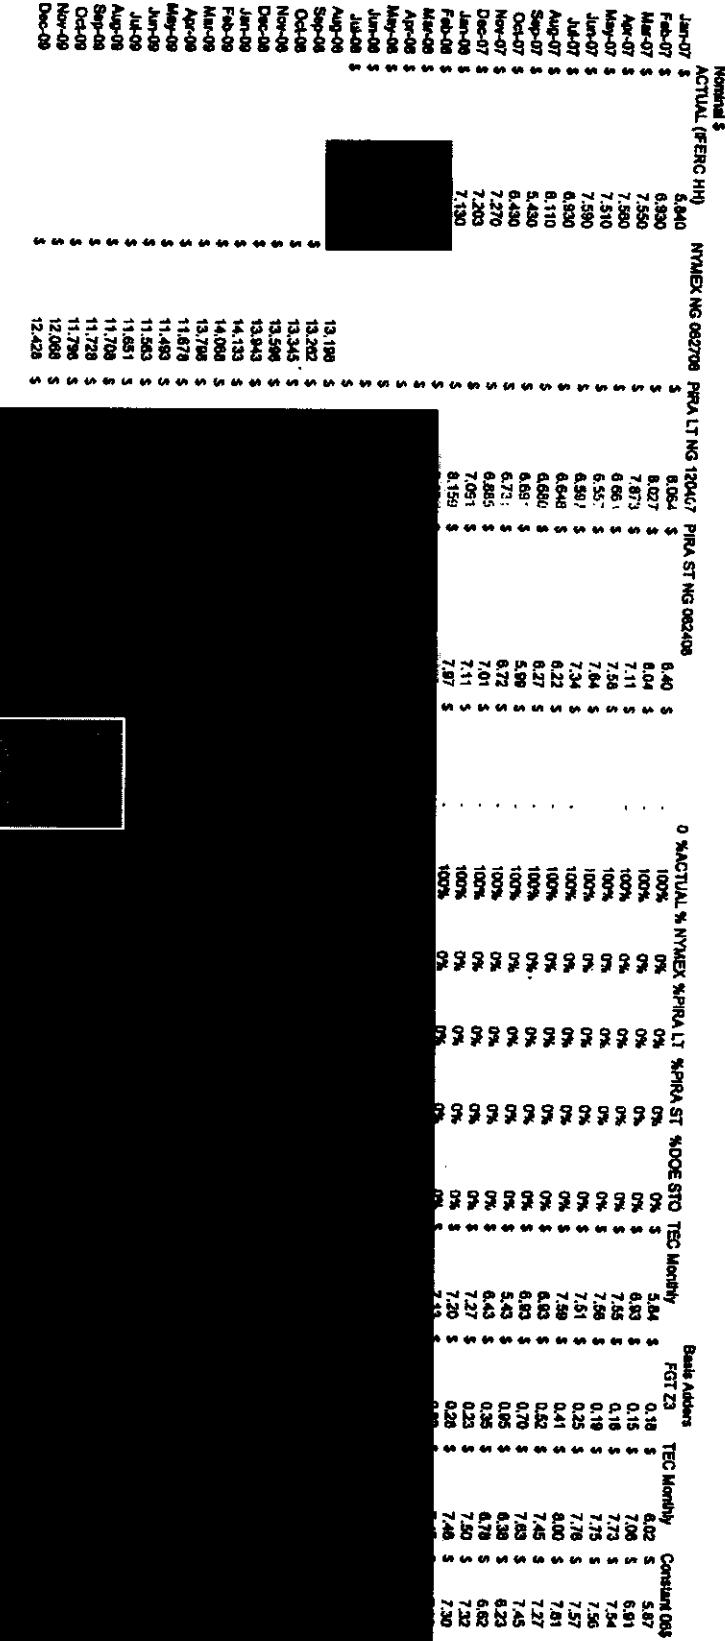

The Manager Settlements submits Derivative Natural Gas Reports for the month to the Financial Reporting Analyst. (This report contains the same transactions as the *Mark to Market Position Report* mentioned above.)

Tampa Electric Company
Review of Accounting Treatment for Hedging Activities
Docket # 090001-EI
Audit Request 8

What is the percentage range limit for hedging (please provide source documentation)? If the Percent Hedged is higher than the range limit please explain.

Tampa Electric projects natural gas burn volumes during the company's annual fuel projection process. The volume of natural gas the company will hedge falls between a minimum and maximum percentage of these natural gas burn projections. The hedge plan targets hedges between [REDACTED] minimum and [REDACTED] maximum of the projected natural gas consumption when the natural gas is needed. These percentages (of projected volume) are the Risk Authorization Committee (RAC) approved hedge targets. The attached graph shows these targets.

Variances between the actual hedge percentage and the RAC approved targets are caused by the variance between actual natural gas burn versus the projected natural gas burn. In general, weather and unit outages drive the amount of natural gas consumed, so particularly in low load shoulder months such as April and October, the actual consumption of natural gas may vary significantly between the projected burn and the actual burn.

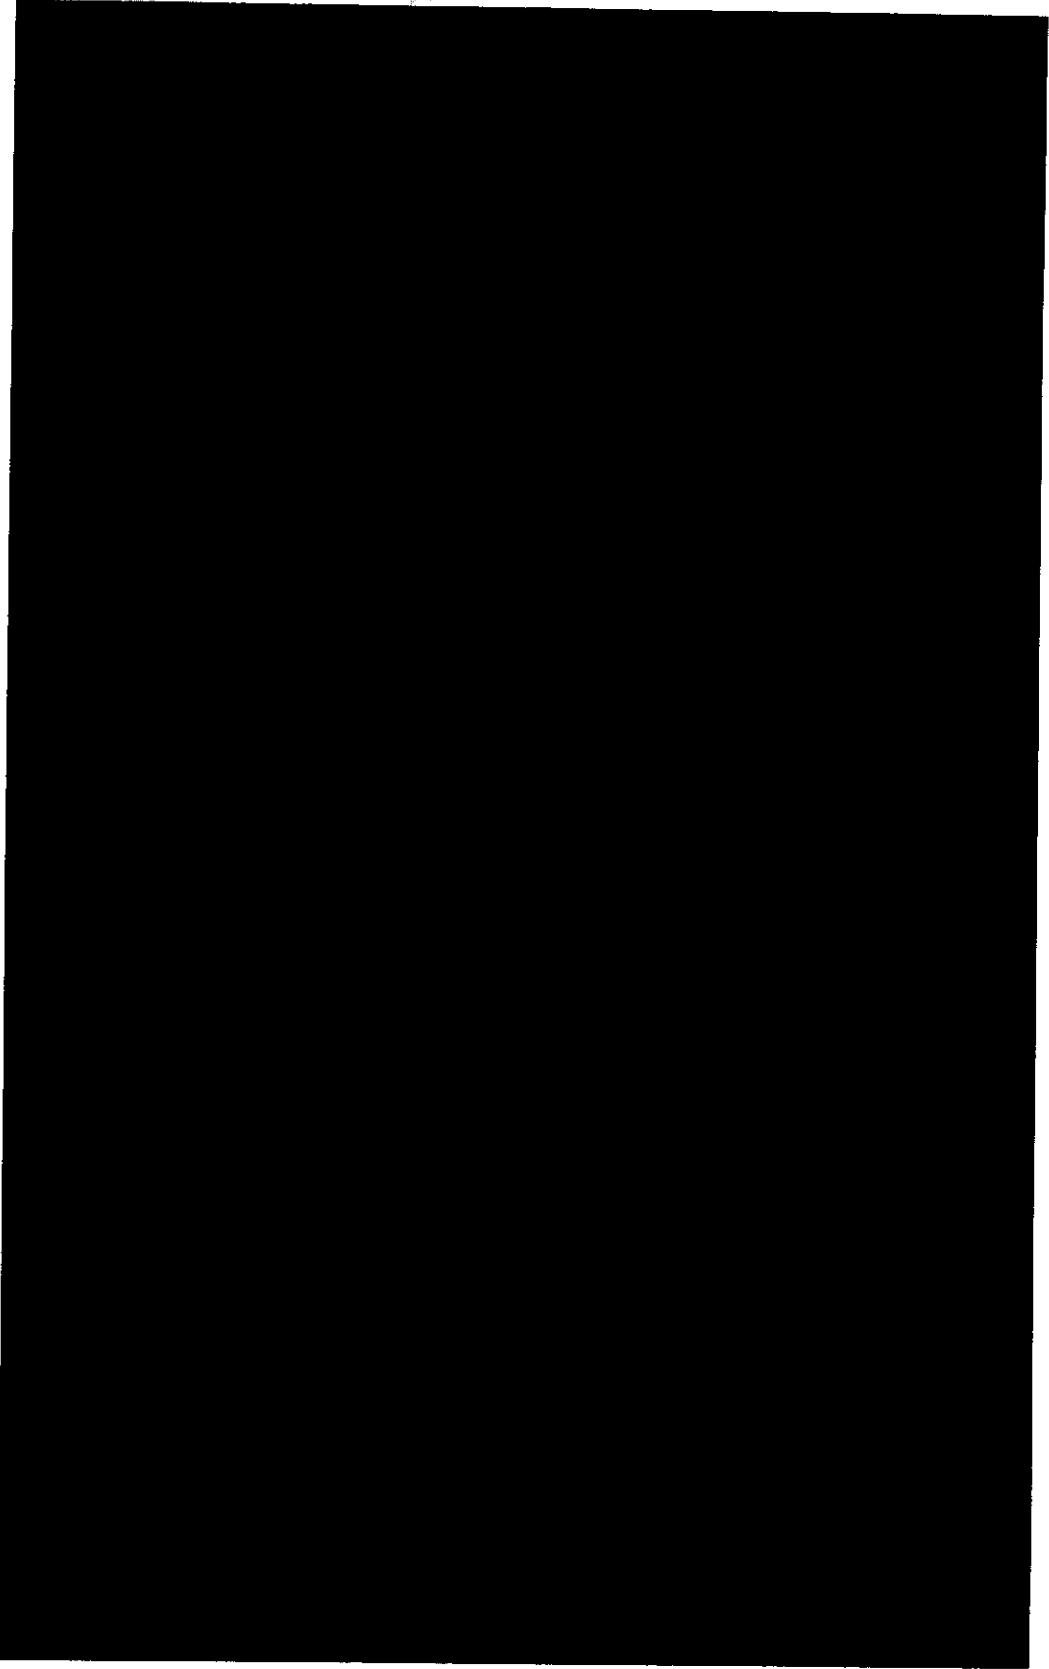

The volume hedged exceeded the target maximum range of [REDACTED] for the months of August, 2008, October, 2008 and April, 2009. The percentage hedged compared to actual natural gas burn was [REDACTED] for August, October and April, respectively. However, the percentage hedged compared to projected natural gas burn was within the target range. The percent hedged exceed the target because the actual natural gas consumption was much less than the projected natural gas consumption. Actual fuel consumption, particularly for natural gas, always varies compared to projected consumption due to unit failures, changes to planned outages, weather, wholesale power market changes, fuel prices, and economic changes. These factors drove the percentages hedged for August, October and April to exceed the target range.

Tampa Electric

Summary of Natural Gas Hedge Volumes Relative to Actual Consumption
August, 2008 - July, 2009

| Month-Year | Target Minimum | Target Maximum | % of Actual Consumption Hedged | Within Limits | % Outside Target Range | Explanation |
|------------|----------------|----------------|--------------------------------|---------------|------------------------|--|
| Aug-08 | [REDACTED] | [REDACTED] | [REDACTED] | No | 12% | Higher than projected generation from coal lowered actual gas consumption. |
| Sep-08 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |
| Oct-08 | [REDACTED] | [REDACTED] | [REDACTED] | No | 16% | Higher than projected generation from coal lowered actual gas consumption. |
| Nov-08 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |
| Dec-08 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |
| Jan-09 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |
| Feb-09 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |
| Mar-09 | [REDACTED] | [REDACTED] | [REDACTED] | No | -2% | Natural gas unit outage delayed to April. |
| Apr-09 | [REDACTED] | [REDACTED] | [REDACTED] | No | 11% | Natural gas unit outage reduced gas burn. |
| May-09 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |
| Jun-09 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |
| Jul-09 | [REDACTED] | [REDACTED] | [REDACTED] | Yes | | |

Tampa Electric Company
 Review of Hedging Activities
 Docket # 090001-EI
 Audit Request 2 (Page 1)

Please provide the following items: (If possible in Excel format)

44-1

To

44-13

1. The volumes of each fuel the utility actually hedged using a fixed price contract or instrument.

Please see the attached CD.

2. The types of hedging instruments the utility used, and the volume and type of fuel associated with each type of instrument.

Tampa Electric Company enters into OTC NYMEX Natural Gas fixed for float swaps. Volumes (in contracts) entered into for natural gas swaps for the period requested are as follows:

PBC 45 45-2

| | Contracts | Total MMBtu's |
|---------|-----------|---------------|
| Aug '08 | 522 | |
| Sep '08 | 410 | |
| Oct '08 | 345 | |
| Nov '08 | 255 | |
| Dec '08 | 304.5 | |
| Jan '09 | 290 | |

Audit Request 2 (Page 2)**

3. The average period of each hedge, options premiums, futures gains and losses, swaps settlements.

Tampa Electric Company only enters into OTC NYMEX Natural Gas fixed for float swaps.

The average period of months that each hedge covers is approximately 1.4 months per hedge entered into.

Swap settlement per contract month are as follows:

| | | |
|------|---------|----------------|
| 4/5 | Aug '08 | \$ 143,640 |
| | Sep '08 | \$(3,935,050) |
| | Oct '08 | \$(7,883,100) |
| | Nov '08 | \$(9,200,050) |
| | Dec '08 | \$(8,482,265) |
| CK-2 | Jan '09 | \$(11,809,700) |
| | Feb '09 | \$(17,177,650) |
| | Mar '09 | \$(17,319,950) |
| | Apr '09 | \$(16,691,910) |
| | May '09 | \$(22,402,965) |
| | Jun '09 | \$(17,992,550) |
| | Jul '09 | \$(18,249,465) |

4. The actual total cost (fees, commissions, associated with using each type of hedging instrument).

There are no direct costs such as fees or commissions associated with Tampa Electric's hedge instruments.

2 Tampa Electric Company enters into OTC NYMEX Natural Gas fixed for float swaps.

Volumes (in contracts) entered into for natural gas swaps for the period requested are as follows:

| Contracts | Total MMBtus |
|-----------|--------------|
| Aug '08 | [REDACTED] |
| Sep '08 | [REDACTED] |
| Oct '08 | [REDACTED] |
| Nov '08 | [REDACTED] |
| Dec '08 | [REDACTED] |
| Jan '09 | [REDACTED] |
| Feb '09 | [REDACTED] |
| Mar '09 | [REDACTED] |
| Apr '09 | [REDACTED] |
| May '09 | [REDACTED] |
| Jun '09 | [REDACTED] |
| Jul '09 | [REDACTED] |

3 The average period of months that each hedge covers is approximately:

1.4 months per hedge entered into.

Swap settlement per contract month are as follows:

| | |
|---------|-----------------|
| Aug '08 | \$ 143,640 |
| Sep '08 | \$ (3,935,050) |
| Oct '08 | \$ (7,883,100) |
| Nov '08 | \$ (9,200,050) |
| Dec '08 | \$ (8,482,265) |
| Jan '09 | \$ (11,809,700) |
| Feb '09 | \$ (17,177,650) |

| Total | | \$ 18,147,375 | | 56,997,232 | | | | |

Consistent with Tampa Electric's non-speculative risk management plan objective, Tampa Electric's natural gas hedging plan provided price stability and certainty during 2008. The net gain is a combination of large gains during the summer offset by losses during the mild winter at the beginning of 2008 and losses due to low prices during the economic downturn at the end of 2008. The gains during the summer were the result of a dramatic rise in the price of all energy commodities, including natural gas. The losses at the beginning of 2008 were driven primarily by the mild winter of 2007/2008 that allowed natural gas prices to decrease. The losses at the end of 2008 were due to the severe and abrupt economic downturn that reduced demand for natural gas; as a result, the price of natural gas dropped dramatically during the third and fourth quarters of 2008.

CONFIDENTIAL

To enhance its physical reliability of gas supply, Tampa Electric has increased its natural gas storage capabilities since summer 2005, and in 2008, the company maintained this storage capacity at 225,000 MMBtu. The storage provides Tampa Electric with improved access to "intraday" natural gas when an operational need arises, provides improved hurricane coverage, and can be used to cost-effectively manage swings in gas supply needs during extreme weather conditions, weekends and holidays.

PBC

Tampa Electric also continues to improve its physical access to natural gas supply by diversifying its receipt points along the Gulf Coast and other areas when opportunities arise.

Tampa Electric Company
Review of Accounting Treatment for Hedging Activities
Docket # 090001-EI
Audit Request 8

What is the percentage range limit for hedging (please provide source documentation)? If the Percent Hedged is higher than the range limit please explain.

Tampa Electric projects natural gas burn volumes during the company's annual fuel projection process. The volume of natural gas the company will hedge falls between a minimum and maximum percentage of these natural gas burn projections. The hedge plan targets hedges between [REDACTED] minimum and [REDACTED] maximum of the projected natural gas consumption when the natural gas is needed. These percentages (of projected volume) are the Risk Authorization Committee (RAC) approved hedge targets. The attached graph shows these targets.

Variances between the actual hedge percentage and the RAC approved targets are caused by the variance between actual natural gas burn versus the projected natural gas burn. In general, weather and unit outages drive the amount of natural gas consumed, so particularly in low load shoulder months such as April and October, the actual consumption of natural gas may vary significantly between the projected burn and the actual burn.

The volume hedged exceeded the target maximum range of [REDACTED] for the months of August, 2008, October, 2008 and April, 2009. The percentage hedged compared to actual natural gas burn was [REDACTED] for August, October and April, respectively. However, the percentage hedged compared to projected natural gas burn was within the target range. The percent hedged exceed the target because the actual natural gas consumption was much less than the projected natural gas consumption. Actual fuel consumption, particularly for natural gas, always varies compared to projected consumption due to unit failures, changes to planned outages, weather, wholesale power market changes, fuel prices, and economic changes. These factors drove the percentages hedged for August, October and April to exceed the target range.

2.4. Front Office

Front Office management has the primary responsibility for managing risks for the individual operating companies. In executing risk management activities, they must seek the advice and involvement of qualified individuals for issues related to areas beyond the unit's expertise. For example, certain sources of risk, such as credit, tax, accounting, and legal/regulatory, give rise to a high degree of reliance on persons with specialized knowledge.

Specifically, Front Office management is responsible for:

- Developing and executing transacting strategies that are consistent with the strategies, limits and products approved by the RAC;
- Proposing strategies and market risk trading limits for RAC approval (following input from the DIRO);
- Assuring that the operations group and systems infrastructure supports the volume and complexity of transactions;
- Developing a process for identifying new products, initiating and managing the review of new products and presenting new products for RAC approval;
- Supervising transactors and all activity;
- Managing and reviewing overall transacting portfolio and risk profile as well as ensuring and verifying that hedges are appropriate and well maintained;
- Enforcing market risk limits and observing credit risk policies;
- Assuring that transactors understand the risk exposures of transactions and understand the risk policies, procedures, and limits; and
- Assuring understanding of all applicable regulatory issues.

PBC

A large rectangular area of the page has been completely redacted with black ink, obscuring several paragraphs of text. To the right of this redacted area, the letters "PBC" are handwritten in blue ink inside a circle.

**Tampa Electric Company
Review of Hedging Activities
Docket # 090001-EI
Audit Request 3B**

Please provide answers to the following questions:

Front Office:

A copy of the transacting limits for each individual authorized to transact derivatives and hedging activities and the related approved products by the RCA?

See attached CONFIDENTIAL transacting limits for TECO Energy and the attached Scope of Authorized Activities for related approved transactions (approved products).

How often do you assess market and credit risk?

Market and credit risk are assessed daily and an internal credit report is issued by Middle Office which shows available credit by counterparty.

What process is used in approving a new derivative or hedging product?

See the attached New Product Approval.

How do you ascertain that hedges are appropriate and well maintained?

The middle office provides daily reports showing hedge position relative to limits required by the pre-set hedge plan.

How do you ensure regulatory issues are enforced?

Front Office follows the Tampa Electric Risk Management plan filed annually with the Commission which was provided in Request #3.

As of June 26, 2009
TECO Energy

3. Scope of Authorized Activities

3.1. Permitted Instruments

TECO Energy or its operating companies transacts, or may transact in:

- *Spot Transactions,*
- *Forwards,*
- *Futures,*
- *Options,*
- *Spreads,*
- *Price Swaps,*
- *Basis Swaps, and*
- *Exchanges of Futures for Physicals.*

The underlying commodities to which transactions must relate are:

- Electricity including capacity, energy, ancillary services and transmission,
- Natural gas, including transportation and storage, and
- Crude Oil or refined products, including transportation.
- Coal

For physical transactions, the deal terms must specify receipt or delivery of commodities at locations where TECO Energy has obligations or needs associated with its primary business (gas supply, electricity generation, etc.). Some of the listed instruments are standard products currently in use by TECO Energy while others may be considered for future use. However, in all instances due consideration should be given to a transaction's ~~probable accounting, tax and regulatory treatment, and all transactions should comply with the market and credit risk limits that have been established including transacting only with counterparties that have proper enabling agreements and approved credit limits (see Section 4 for New Product Approval Process).~~

Although management of risks unrelated to energy commodities is not intended to be within the scope of this policy, any transactions in financial derivatives (e.g. interest rates, currency) require the approval of the RAC and must otherwise comply with the requirements of this policy.

3.2. Authority to Commit on Trades

Only persons who have been specifically authorized by the RAC to execute commodities transactions may do so. A list of authorized transactors will be maintained as Appendix A to this RMP. Only the authorized transacting individuals may sign (either manually, by facsimile, or otherwise) a customized trading confirmation or any other trading agreement including (without limitation) any master trading agreement.

The Front Office Manager will assure that any authorized person pursuant to this section understands the risk exposures arising from the transactions in question, the applicable risk

management guidelines, and the management control procedures for documenting, recording, and reporting such transactions.

3.3. Specific Contract Approval Thresholds

Notwithstanding any other specific approval requirements detailed in this policy, any energy transaction that has a fixed-price notional value greater than \$50 million must be reviewed and approved by the RAC, while any energy transaction that has a fixed-price notional value greater than \$100 million must also be reviewed and approved by the Board of Directors.

TAMPA ELECTRIC COMPANY

FRONT OFFICE

08/01/08 - 07/31/09

DOCKET NO.: 090001-EI

4. New Product Approval

4.1. Definition

A new product is defined as a commodity transaction and/or financial structure that exposes TECO Energy to market, credit, regulatory and/or administrative risks which the Company has not previously managed.

4.2. New Product Parameters

Examples of new transaction terms that may require a new product review include the following:

- Geographic point;
- Contract tenor;
- Significantly increased rate of acceleration of loss for the risk type; and
- Change in the capacity in which the operating company transacts in the product.

4.3. Approval Process

New products must be approved by the RAC. Prior to presenting a new product to the RAC, the Front Office will work with the DIRO to coordinate a review of the new product to address considerations such as regulatory, legal, credit, and market risks, accounting and tax consequences, and measurement and reporting implications.

To augment the responsiveness and efficiency of the assignment of ratings and credit lines, as part of the new product approval process, the Front Office will include a description of the types of counterparties it expects to transact within the new product/market, including the following:

- Typical company size, approximate expected range, distribution;
- Business types, approximate expected distribution if volume variability will be used;
- Product tenor and volume expected;
- The names of any major counterparties in the given region, and
- Expected collateral types.

The Credit Manager will use this information to obtain as much of a "lead" in credit analysis as is practicable.

| INTEGRITY BUSINESS FORMS, INC. Phone: (847) 699-2626 Fax: (847) 699-4908 Email: integbvs@sol.com | | |

2.6. Middle Office

The Middle Office is a TECO Energy corporate function reporting through the DIRO. It consists of three main areas: market risk management, credit risk management and contract management/compliance. The Middle Office will have the following responsibilities:

- Ensure the proper recording of Front Office transactions;
- Negotiate, administer and maintain enabling agreements with counterparties;
- Exchange written and/or verbal confirmations with counterparties;
- Monitor the aging of confirmations;
- Source forward curves for portfolio valuation as needed
- Perform end-of-period portfolio valuation;
- Perform market and credit risk measurement;
- Review counterparty credit and establish appropriate credit limits;
- Determine mark-to-market valuation adjustments;
- Ensure awareness of pertinent regulatory provisions/standards and monitor transactional compliance; and
- Developing appropriate control procedures to monitor compliance with Energy and Credit risk policies.

The activities of the Middle Office do not reduce the Front Office's primary responsibility for accurately assessing and managing the risk associated with their business profile. A strong segregation of duties must exist between Front and Middle Office activities.

2.7. Back Office

The Back Office function is responsible for financial and accounting activities relating to the transaction process independent of the Front Office. The Back Office will have the following responsibilities:

- Track and process transactions;
- Maintain customer information;
- Perform P&L reconciliation;
- Prepare customer billings;
- Issue payment receipt/instructions; and
- Support or perform transaction settlements.

**Tampa Electric Company
Review of Hedging Activities
Docket # 090001-EI
Audit Request 3C**

Please provide answers to the following questions:

Middle Office:

Do you deal with counterparties? If yes describe your interactions with counterparties and the procedures it follows.

Middle Office interacts with counterparties to establish enabling agreements, asses counterparty creditworthiness and confirm forward transactions.

How do you monitor the aging of confirmations?

For physical and financial transactions that have a delivery date beyond the next business day, the Middle Office analyst will create and send a new confirmation, and/or respond to the counterparty's confirmation. As each confirmation is sent or received, the Middle Office analyst uses the Nucleus system to track the status of applicable confirmations.

How often do you perform end of period portfolio valuation?

The hedging portfolio is valued at the end of each month.

Do you have established credit limits for counterparties? If yes, could you provide me with copies of the credit limits? (In excel format)

Yes, please see the attached CONFIDENTIAL credit limits for counterparties.

DOCKET NO.: 090001-EI

Tampa Electric Company
Review of Hedging Activities
Docket # 090001-EI
Audit Request 3D

Please provide answers to the following questions:

Back Office:

How are transactions tracked and recorded?

Tampa Electric uses the computer software Nucleus to track gas transactions.

How often do you perform account reconciliation?

Monthly

How are billing and payments separated and processed as far as settlements is concern?

The Back Office performs the settlement process for gas purchases, sales and settled hedging. Once an invoice is settled (payable) or created (receivable), it is approved and forwarded to the Accounting Department. The Accounts Payable department disburses funds for payables and the Accounts Receivable receives funds for receivables.

JULY 29/08 DOCKET NO.: 090001-E1

GAS DAILY

TUESDAY, SEPTEMBER 2, 2008

nor Tony Knowles, in the general election.

At an event in Dayton, Ohio, where he formally introduced her as his running mate, presumptive GOP presidential candidate John McCain said her track record as a reformer would bolster the party's ticket. Her selection is designed to counter Democratic attacks that McCain is in lock step with the policies of the unpopular President Bush.

"The people of America expect us to seek public office and to serve for the right reasons," Palin said at the event. "The right reason is to challenge the status quo and to serve the common good."

McCain, an Arizona senator whose party's convention was to start Monday in St. Paul, Minnesota, said Palin would "best help me shake up Washington" in light of its many problems. "She's exactly who I need, she's exactly who this country needs to help me fight the same old Washington politics of me first and country second," the four-term Arizona senator said.

The Obama campaign — while praising McCain's choice of a woman as his running mate — criticized the pick given McCain's assertion that Obama as a first-term Illinois senator did not have sufficient experience to lead the country. "Today, John McCain put the former mayor of a town of 9,000, with zero foreign policy experience a heartbeat away from the presidency," Obama spokesman Bill Burton said of the former Wasilla, Alaska, mayor. He also accused her for pushing "the agenda of Big Oil."

Palin and McCain differ on the need to open up ANWR as McCain has opposed opening up the refuge. When asked if Palin's support for ANWR drilling would change McCain's view, one of his top advisers dismissed the possibility. "No. His positions are his positions and obviously that's not going to change," Douglas Holtz-Eakin said.

But McCain earlier this year reversed his opposition to expanding offshore oil and gas drilling — another core issue for Palin — in light of record gasoline prices. The McCain campaign noted that "Alaska has significant energy resources and she has been a leader in the fight to make America energy independent."

American Gas Association CEO David Parker said "Governor Palin knows a lot about the energy industry, and that will be important to all of us."

If Palin becomes the vice president, Republican Lieutenant Governor Sean Parnell would normally be in line to step in as governor. But Parnell, a former lobbyist for ConocoPhillips, is locked in a tight primary race against Representative Don Young, Alaska's lone congressman. If Parnell defeats Young, he would run against Democrat Ethan Berkowitz in November.

And, if the McCain-Palin ticket and Parnell win in November as well, the governor's post would go to Attorney General Talia Colberg, whom Palin appointed in 2006, until a special election is held. Parnell has supported many of Palin's gas pipeline initiatives. — Alexander Duncan, Mark Davidson, Tim Bradner
