P R O C E E D I N G S

(Transcript follows in sequence from
Volume 3.)
(Whereupon, prefiled rebuttal testimony of Dylan
D'Ascendis was inserted.)

1 **BEFORE THE PUBLIC SERVICE COMMISSION**

2 **REBUTTAL TESTIMONY**

3 **OF**

4 **DYLAN W. D'ASCENDIS**

5 **ON BEHALF OF PEOPLES GAS SYSTEM**

6
7 **I. INTRODUCTION**

8 **Q.** Please state your name, business address, occupation and
9 employer.

10
11 **A.** My name is Dylan W. D'Ascendis. My business address is
12 3000 Atrium Way, Suite 241, Mount Laurel, NJ 08054. I am
13 a Director at ScottMadden, Inc. (ScottMadden).

14
15 **Q.** On whose behalf are you submitting this testimony?

16
17 **A.** I am submitting this rebuttal testimony before the Florida
18 Public Service Commission ("Commission") on behalf of
19 Peoples Gas System ("Peoples" or the "Company").

20
21 **Q.** Did you submit direct testimony in this proceeding?

22
23 **A.** No, I did not.

24
25 **Q.** Do you intend to adopt the direct testimony sponsored by

1 Robert B. Hevert in this proceeding?

2

3 **A.** Yes, I am adopting and incorporating as my own the direct
4 testimony and Exhibit, as well as all responses to discovery
5 requests, sponsored by Robert B. Hevert in this proceeding.
6 In adopting witness Hevert's direct testimony, I refer to
7 his direct testimony as my own in my rebuttal testimony.
8 Mr. Hevert is no longer employed at ScottMadden, taking a
9 position at Unitil Corporation as the Senior Vice President
10 effective July 23, 2020, and subsequently elected Chief
11 Financial Officer and Treasurer, effective July 31, 2020.

12

13 **Q.** Please describe your educational and professional
14 background.

15

16 **A.** I have offered expert testimony on behalf of investor-owned
17 utilities in over 20 state regulatory commissions in the
18 United States, one Canadian province, and one American
19 Arbitration Association panel on issues including, but not
20 limited to, common equity cost rate, rate of return,
21 valuation, capital structure, relative investment risk,
22 class cost of service, and rate design.

23

24 On behalf of the American Gas Association ("AGA"), I
25 calculate the AGA Gas Index, which serves as the benchmark

1 against which the performance of the American Gas Index
2 Fund ("AGIF") is measured on a monthly basis. The AGA Gas
3 Index and AGIF are a market capitalization weighted index
4 and mutual fund, respectively, consisting of the common
5 stocks of the publicly traded corporate members of the AGA.

6
7 I am a member of the Society of Utility and Regulatory
8 Financial Analysts ("SURFA"). In 2011, I was awarded the
9 professional designation "Certified Rate of Return Analyst"
10 by SURFA, which is based on education, experience, and the
11 successful completion of a comprehensive written
12 examination.

13
14 I am also a member of the National Association of Certified
15 Valuation Analysts and was awarded the professional
16 designation "Certified Valuation Analyst" in 2015.

17
18 I am a graduate of the University of Pennsylvania, where I
19 received a Bachelor of Arts degree in Economic History. I
20 have also received a Master of Business Administration with
21 high honors and concentrations in Finance and International
22 Business from Rutgers University.

23
24 The details of my educational background and expert witness
25 appearances are shown in Attachment A to my rebuttal

1 testimony.

2
3 **II. PURPOSE AND OVERVIEW OF TESTIMONY**

4 **Q.** What is the purpose of your rebuttal testimony in this
5 proceeding?

6
7 **A.** The purpose of my rebuttal testimony is two-fold. First,
8 I update my analytical results. Second, I respond to and
9 address serious shortcomings in the prepared direct
10 testimony of witness David J. Garrett, testifying on behalf
11 of the Florida Office of Public Counsel ("OPC"), regarding
12 the Company's Cost of Common Equity ("ROE").

13
14 **Q.** Please summarize your conclusions.

15
16 **A.** As discussed in Section III below, due to the fluid market
17 conditions as a result of the COVID-19 pandemic, I have
18 updated my ROE analyses as of August 31, 2020. Based on my
19 updated analyses, I reaffirm the range of reasonable ROEs
20 attributable to Peoples is between 10.00 percent to 11.00
21 percent and maintain my specific recommendation of 10.75
22 percent as an appropriate measure of ROE applicable to
23 Peoples at this time. In view of current markets and the
24 results of my ROE models, ROEs of 6.50 percent and 7.30

1 percent,¹ proffered by witness Garrett, are woefully
2 inadequate.

3
4 **Q.** Please summarize your interpretation of current capital
5 markets.

6
7 **A.** As explained in my direct testimony² and discussed in
8 Section IV below, the turmoil in capital markets
9 attributable to the COVID-19 pandemic has increased risk
10 for the entire economy, generally, and utilities,
11 specifically. Key takeaways include:

- 12 • The full impact and duration of the COVID-19 pandemic
13 are unknown, and outcomes are still highly uncertain;
- 14 • This uncertainty increases capital market volatility;
15 and volatility increases the risk of investment
16 losses. As a result, investors tend to flee to bonds
17 to limit their investment losses, which is known as a
18 "flight to safety". Increased levels of bond
19 purchases increase their price and drive down their
20 yields, *i.e.*, interest rates. Because of this, the
21 current low-interest rate environment is due to
22 increased volatility in the market, and not a steady
23 lowering of the cost of debt over time; and

¹ The ROE estimates of 6.50 percent and 7.30 percent reflect the results of witness Garrett's CAPM and Quarterly DCF models, respectively.

² Prepared Direct Testimony and Exhibit of Robert B. Hevert, at 14-34.

- 1 • The same increased market volatility that caused
2 investors' "flight to safety" also created a situation
3 where utilities traded in tandem with market indices.
4 The correlated returns of utility stocks and market
5 indices, in combination with increased volatility,
6 increases Beta coefficients (a measure of risk), and
7 by extension, investor-required returns.

8

9 **Q.** Please summarize your response to OPC's witness Garrett.

10

11 **A.** In my response to witness Garrett's estimate of the
12 Company's ROE (see, Section V below), I explain the
13 shortcomings of witness Garrett's analyses and conclusions,
14 including, but not limited to:

- 15 • How far disconnected his recommended ROE is from his
16 own analytical results and observable and relevant
17 data;
- 18 • His misinterpretation of the relationships between
19 various returns;
- 20 • His misunderstanding of the nature of utility
21 regulation;
- 22 • His misapplication of the Discounted Cash Flow ("DCF")
23 model;
- 24 • His misapplication of the Capital Asset Pricing Model
25 ("CAPM"); and

- 1 • His refusal to consider flotation costs and other
2 Company-specific factors in his ROE recommendation.

3
4 In addition, I also respond to witness Garrett's unfounded
5 critiques of my direct testimony.

6
7 **Q.** Have you prepared an exhibit supporting your rebuttal
8 testimony?

9
10 **A.** Yes, I have. My analyses and conclusions are supported by
11 the data presented in Document Nos. 1 through 20 of Exhibit
12 No. __ (DWD-1), which have been prepared by me or under my
13 direction and supervision.

14
15 **III. UPDATED ROE ANALYSIS**

16 **Q.** Have you revisited your analyses to reflect current market
17 conditions?

18
19 **A.** Yes, I have. As stated above, as a result of the fluid
20 nature of current market conditions since my direct
21 testimony, I re-ran my ROE analyses as of August 31, 2020.
22 The results are summarized in Document No. 1, and the
23 analyses are contained in Document Nos. 2 through 8 of my
24 Exhibit.

25

1 Q. Have you applied the ROE models in the same manner and to
2 the same proxy group as you applied them in your direct
3 testimony?

4
5 A. Yes, I have. The range of results³ produced by my four
6 approaches using more recent data are as follows:

- 7 • The Constant Growth DCF method median results indicate
8 an ROE in the range of approximately 7.27 percent to
9 11.41 percent (please refer to Document No. 2);
- 10 • The CAPM model suggests an ROE in the range of
11 approximately 12.00 percent to 14.93 percent; and the
12 Empirical CAPM ("ECAPM") model indicates an ROE in the
13 range of approximately 12.45 percent to 15.18 percent
14 (please refer to Document No. 6);
- 15 • The Bond Yield Plus Risk Premium approach suggests an
16 ROE in the range of 9.90 percent to 10.38 percent (see,
17 Document No. 7); and
- 18 • The Expected Earnings approach indicates an ROE in the
19 range of approximately 9.14 percent to 9.29 percent
20 (see, Document No. 8).

21
22 **IV. CAPITAL MARKET CONDITIONS**

23 Q. Have capital market conditions changed significantly since

³ My estimate of the indicated range is narrower than the overall range of model results.

1 you filed your direct testimony?

2

3 **A.** No, they have not. Since the filing of my direct testimony,
4 capital markets have continued to be characterized by high
5 levels of volatility and market instability, and utility
6 returns have continued to be highly correlated with the
7 overall market.

8

9 **Q.** Please briefly summarize witness Garrett's observations of
10 utility stocks in relation to the capital market and the
11 conclusions he reached.

12

13 **A.** While witness Garrett provides no discussion of the capital
14 market environment, in general, and the effects of the
15 recent capital market dislocation on the utility sector, in
16 particular, he argues that the Company's "true" Cost of
17 Equity is low because "utilities are defensive firms that
18 experience little market risk and are relatively insulated
19 from market conditions."⁴

20

21 **Q.** Do you agree with witness Garrett's statements that
22 utilities are "low risk" investments and "relatively
23 insulated from market conditions" in the current capital
24 market?

⁴ Direct Testimony of David J. Garrett, at 40.

1 **A.** No, I do not. While witness Garrett considers utility
2 stocks as "low-risk" investments, in this period of extreme
3 market volatility, they are not.

4
5 **Q.** Have you conducted an analysis to determine whether natural
6 gas distribution utility stocks are "low-risk" investments
7 in the current market?

8
9 **A.** Yes, I have. Specifically, I analyzed the relative
10 performance and annualized volatilities⁵ of my proxy group,
11 the Dow Jones Utility Average ("DJU"), the Utilities Select
12 SPDR ("XLU"), the Dow Jones Industrial Average ("DJI"), and
13 the S&P 500 to gauge whether utilities weathered the COVID-
14 19 pandemic better than the overall market. As shown in
15 Document No. 9 of my exhibit, from January 31, 2020⁶ to
16 August 31, 2020, utilities were generally more volatile
17 (*i.e.*, risky) than the market indices, and had returns that
18 underperformed the DJI and the S&P 500.

19
20 In addition to the analysis in Document No. 9, I also
21 calculated the correlation coefficients of the price

⁵ The annualized volatility of a stock is measured by taking the standard deviation of the price changes within the sample and multiplying by the square root of 252 (the assumed number of trading days in a year).

⁶ I chose January 31, 2020 because on June 8, 2020, the National Bureau of Economic Research determined that a peak in monthly economic activity occurred in the U.S. economy in February 2020. The peak marks the end of the expansion that began in June 2009 and the beginning of a recession. <https://www.nber.org/cycles/june2020.html>.

1 changes of the utility groups relative to the S&P 500 and
2 the DJI from February 1, 2020 to August 31, 2020.
3 Specifically, in Document No. 10 of my exhibit, I calculated
4 correlation coefficients for the following relationships:

- 5 • The price changes of the S&P 500 relative to the price
6 changes of my proxy group;
- 7 • The price changes of the S&P 500 relative to the price
8 changes of the DJU;
- 9 • The price changes of the S&P 500 relative to the price
10 changes of the XLU;
- 11 • The price changes of the DJIA relative to the price
12 changes of my proxy group;
- 13 • The price changes of the DJIA relative to the price
14 changes of the DJU; and
- 15 • The price changes of the DJIA relative to the price
16 changes of the XLU.

17
18 As shown in Document No. 10 of my Exhibit, the correlations
19 between utility stocks and the market indices are similar
20 indicating that utility stocks have been trading in tandem
21 with market indices during the current market dislocation,
22 which is consistent with the risk and return data shown in
23 Document No. 9 of my exhibit. The behavior of utility
24 stocks to move in tandem with the market during market
25 distress is not limited to the current period. During the

1 Great Recession (December 2007 to June 2009), correlations
2 between these same groups were also similar, as also shown
3 in Document No. 11 of my exhibit.

4
5 Thus, in view of the above, witness Garrett's statements
6 regarding the "low-risk" nature of utility stocks should be
7 dismissed, especially in this volatile capital market.

8
9 **Q.** Witness Garrett claims that "awarded ROEs have
10 appropriately been decreasing in accordance with declining
11 capital costs."⁷ Is he correct?

12
13 **A.** No, he is not. As stated in my direct testimony⁸ and
14 demonstrated in Exhibit No. __ (RBH-1), Document No. 16,
15 awarded ROEs have not followed the decline in interest
16 rates, but remained relatively consistent since 2015.
17 Thus, witness Garrett's claim should be dismissed.

18
19 **Q.** What conclusions did you draw from your review of the
20 current capital market and its implications on the
21 Company's Cost of Equity?

22
23 **A.** In view of the above and my direct testimony, current

⁷ Direct Testimony of David J. Garrett, at 7.

⁸ Prepared Direct Testimony and Exhibit of Robert B. Hevert, at 24.

1 capital markets are indicating higher investor-required
2 returns for utility companies due to the COVID-19 pandemic.
3 Because of this, witness Garrett's "true" Cost of Equity of
4 6.90 percent and his recommended ROE of 9.50 percent are
5 woefully inadequate, and my recommended range of ROEs
6 between 10.00 percent and 11.00 percent is reasonable.
7 Within that range, my recommended point estimate of 10.75
8 percent for the Company is appropriate, if not
9 conservative.

10
11 **V. RESPONSE TO OPC WITNESS GARRETT**

12 **Q.** Please provide a brief summary of witness Garrett's
13 analyses and recommendations regarding the Company's Cost
14 of Equity.

15
16 **A.** Although witness Garrett believes the Company's "true" Cost
17 of Equity is 6.90 percent, he recommends an ROE of 9.50
18 percent.⁹ Witness Garrett estimates the Cost of Equity
19 using the Quarterly DCF model (7.30 percent) and the CAPM
20 (6.50 percent).¹⁰

21
22 **Q.** Are witness Garrett's analytical results and recommendation
23 reasonable measures of the Company's Cost of Equity?

⁹ Direct Testimony of David J. Garrett, at 13; and Exhibit DJG-12. Witness Garrett specifically argues the models he applies estimate the "true cost of equity"; the average of his model results is 6.90 percent.

¹⁰ Exhibits DJG-6 and DJG-11, respectively.

1 **A.** No, they are not. Witness Garrett's recommended ROE of
2 9.50 percent is fundamentally disconnected from his own
3 analyses and conclusions; and his analytical model results
4 of 7.30 percent and lower are far removed from observable
5 and relevant data, including the 2019 average authorized
6 ROEs provided in his testimony of 9.64 percent and 9.67
7 percent for electric and gas utilities, respectively.¹¹
8 Throughout his testimony, witness Garrett believes his
9 analytical results indicate that the "true" Cost of Equity
10 for the Company is 6.90 percent. He views the decisions of
11 utility commissions to have been significantly and
12 consistently wrong, but suggests moving all the way to the
13 "true" Cost of Equity would be "a significant, sudden change
14 in the awarded ROE anticipated by regulatory stakeholders"
15 that "could have the undesirable effect of notably
16 increasing the Company's risk profile and would arguably be
17 at odds with the *Hope* Court's 'end result' doctrine."¹² On
18 those points, we agree. However, while I appreciate the
19 need for judgment in developing ROE recommendations, I
20 believe there should be some empirical basis for them.
21 Since witness Garrett's 9.50 percent recommendation is so
22 far removed from his analytical model results, we cannot
23 assess the basis of his ultimate recommendation, empirical

¹¹ Exhibit DJG-14.

¹² Direct Testimony of David J. Garrett, at 14.

1 or otherwise. To justify his recommendation for an ROE
2 which has no connection to his analytical results, witness
3 Garrett argues that the Commission should apply the
4 ratemaking concept of "gradualism" to move the Company's
5 ROE to his "true" Cost of Equity.¹³
6

7 **Q.** Do you agree with witness Garrett's recommendation to the
8 Commission regarding the use of "gradualism" in determining
9 the appropriate ROE for the Company?
10

11 **A.** No, I do not. The role of ROE witnesses is to testify
12 regarding the return required by equity investors, *i.e.*,
13 the Cost of Equity, as will be discussed in detail below.
14 It is the Commission's difficult task in fixing just and
15 reasonable rates to balance that cost with all other
16 elements of the revenue requirement. As witness Garrett
17 himself stated, "gradualism" is "usually applied from the
18 customer's standpoint to minimize rate shock,"¹⁴ and
19 therefore would not be applicable to the ROE
20 recommendation. In view of the above, witness Garrett's
21 recommendation is without merit and should be given no
22 weight by the Commission.
23

¹³ *Ibid.*

¹⁴ *Ibid.*

1 Q. In what key areas are witness Garrett's analyses and
2 recommendations incorrect or unsupported?

3
4 A. In addition to recommending a specific ROE with seemingly
5 no empirical basis, there are several areas in which witness
6 Garrett's analyses and conclusions are incorrect or
7 unsupported, including: (1) his incorrect assessment of the
8 relationships between returns and their applicability to
9 the Company's ROE; (2) his incorrect observation that
10 authorized ROEs have exceeded the investor-required return
11 on the market for 30 years; (3) his misapplication of the
12 DCF model; (4) his misapplication of the CAPM; and (5) his
13 refusal to consider flotation costs and other Company-
14 specific risk factors in his ROE recommendation. Those
15 points are discussed in turn, below.

16
17 **1. Incorrect Assessment of Relationships Between Various**
18 **Returns and Applicability to the Company's ROE**

19 Q. Please summarize witness Garrett's views on the
20 relationship between the Cost of Equity, the investor-
21 required ROE, earned ROE, and awarded ROE for regulated
22 utilities.

23
24 A. Witness Garrett believes the above specified returns are

1 all interrelated, but technically different.¹⁵ He
2 summarizes his view on the relationship between the returns
3 on page 4 of his testimony in the following sentence: "If
4 the awarded ROE reflects a utility's cost of equity, then
5 it should allow the utility to achieve an earned ROE that
6 is sufficient to satisfy the required return of its
7 investors."¹⁶ Witness Garrett also discusses another type
8 of return, the "expected" return, which in his words, "has
9 nothing to do with what the investor 'expects' the ROE
10 awarded by a regulatory commission to be."¹⁷

11
12 **Q.** Does witness Garrett's views regarding the relationship
13 between allowed and investor-required ROEs for utilities
14 change throughout the course of his testimony?

15
16 **A.** Yes. On page 11 of his testimony, witness Garrett
17 contradicts his earlier assertion, stating that awarded
18 ROEs and Cost of Equity (*i.e.*, investor-required returns)
19 are very different concepts because of the regulatory
20 process being carried out by elected and appointed
21 officials.¹⁸

22
23 However, on page 23 of his testimony, witness Garrett again

¹⁵ *Ibid.*, at 3.

¹⁶ *Ibid.*, at 4.

¹⁷ *Ibid.*

¹⁸ *Ibid.*, at 11.

1 changes track, stating:

2
3 The *Hope* Court makes it clear that the allowed
4 return should be based on the actual cost of
5 capital. Under the rate base rate of return
6 model, a utility should be allowed to recover all
7 its reasonable expenses, its capital investments
8 through depreciation, and a return on its capital
9 investments sufficient to satisfy the required
10 return of its investors. The "required return"
11 from the investors' perspective is synonymous
12 with the "cost of capital" from the utility's
13 perspective. Scholars agree that the allowed rate
14 of return should be based on the actual cost of
15 capital:

16 Since by definition the cost of capital
17 of a regulated firm represents
18 precisely the expected return that
19 investors could anticipate from other
20 investments while bearing no more or
21 less risk, and since investors will not
22 provide capital unless the investment
23 is expected to yield its opportunity
24 cost of capital, the correspondence of
25 the definition of the cost of capital

1 with the court's definition of legally
2 required earnings appears clear.^{19,20}

3
4 Witness Garrett continues to change his position regarding
5 the equivalency, or non-equivalency, of the allowed and
6 required ROE, sometimes in consecutive sentences. For
7 example, on page 24 of his testimony, witness Garrett states
8 that "The two concepts [allowed and required ROEs] are
9 related in that the legal and technical standards
10 encompassing this issue require that the awarded return
11 reflect the true cost of capital. On the other hand, the
12 two concepts are different in that the legal standard do
13 not mandate that awarded returns exactly match the cost of
14 capital."²¹

15
16 **Q.** What is your reaction to witness Garrett's views on the
17 relationship between allowed and required ROEs for utility
18 companies?

19
20 **A.** Witness Garrett is unnecessarily complicating a simple
21 relationship. For regulated utilities, the ROE equals the
22 investor-required ROE which equals the allowed ROE, as

¹⁹ A. Lawrence Kolbe, George A. Read, Jr, George Hall, *The Cost of Capital: Estimating the Rate of Return for Public Utilities*, The MIT Press, 1984, at 21.

²⁰ Direct Testimony of David J. Garrett, at 23.

²¹ *Ibid.*, at 24. Clarification and emphasis added.

1 reflected in the *Hope* and *Bluefield* Supreme Court decisions
2 cited in both my direct testimony²² and witness Garrett's
3 testimony.²³ This relationship holds because utility
4 regulation by regulatory commissions acts as a substitute
5 for competition.

6
7 **Q.** Is the concept of utility regulation as a substitute for
8 market competition widely accepted as a fact and reflected
9 as such in academic literature?

10
11 **A.** Yes, it is. The *Cost of Capital Manual*, which is the
12 training manual for SURFA, of which witness Garrett and I
13 are members, states:

14 In a sense, the "visible hand of public
15 regulation was (created) to replace the invisible
16 hand of Adam Smith in order to protect consumers
17 against exorbitant charges, restriction of
18 output, deterioration of service, and unfair
19 discrimination." [footnote omitted]

20 * * *

21 As indicated above, regulation of public
22 utilities reflects a belief that the competitive
23 mechanism alone cannot be relied upon to protect

²² Prepared Direct Testimony and Exhibit of Robert B. Hevert, at 28-31.

²³ Direct Testimony of David J. Garrett, at 23.

1 the public interest. Essentially, it is
2 theorized that a truly competitive market
3 involving utilities cannot survive and, thereby,
4 will fail to promote the general economic
5 welfare. But this does not mean that regulation
6 should alter the norm of competitive behavior for
7 utilities. On the contrary, the primary
8 objective of regulation is to produce market
9 results (*i.e.*, price and quantity supplied) in
10 the utility sectors of the economy closely
11 approximating those conditions which would be
12 obtained if utility rates and services were
13 determined competitively.²⁴

14
15 Additionally, in *Principles of Public Utility Rates*, Dr.
16 Bonbright states:

17 Lest the reader of this chapter gain the
18 impression that it is intended to deny the
19 relevance of any tests of reasonable rates
20 derived from the theory or the behavior of
21 competitive prices, let me state my conviction
22 that no such conclusion would be warranted. On
23 the contrary, a study of price behavior both

²⁴ David C. Parcell, *Cost of Capital Manual*, Society of Utility and
Regulatory Financial Analysts, 2010 Edition, at 3-4.

1 under assumed conditions of pure competition and
2 under actual conditions of mixed competition is
3 essential to the development of sound principles
4 of utility rate control. Not only that: any good
5 program of public utility rate making must go a
6 certain distance in accepting competitive-price
7 principles as guides to monopoly pricing. For
8 rate regulation must necessarily try to
9 accomplish the major objectives that unregulated
10 competition is designed to accomplish, and the
11 similarity of purpose calls for a considerable
12 degree of similarity of price behavior.

13
14 Regulation, then, as I conceive it, is indeed a
15 substitute for competition; and it is even a
16 partly imitative substitute. But so is a Diesel
17 locomotive a partly imitative substitute for a
18 steam locomotive, and so is a telephone message
19 a partly imitative substitute for a telegraph
20 message. What I am trying to emphasize by these
21 crude analogies is that the very nature of a
22 monopolistic public utility is such as to
23 preclude an attempt to make the emulation of
24 competition very close. The fact, for example,
25 that theories of pure competition leave no room

1 for rate discrimination, while suggesting a
2 reason for viewing the practice with skepticism,
3 does not prove that discrimination should be
4 outlawed. And a similar statement would apply
5 alike to the use of an original-cost or a fair
6 value rate base, neither of which is defensible
7 under the theory or practice of competitive
8 pricing.²⁵

9
10 Finally, Dr. Phillips states in *The Regulation of Public*
11 *Utilities*:

12 Public utilities are no longer, if they were ever
13 were, isolated from the rest of the economy. It
14 is possible that the expanding utility sector has
15 been taking too large a share of the nation's
16 resources, especially of investment. [footnote omitted]
17 At a minimum, regulation must be viewed in the
18 context of the entire economy - and evaluated in
19 a similar context. Public utilities have always
20 operated within the framework of a competitive
21 system. They must obtain capital, labor and
22 materials in competition with unregulated
23 industries. Adequate profits are not guaranteed

²⁵ James C. Bonbright, *Principles of Public Utility Rates*, Columbia University Press, 1961, at 106-107.

1 to them. Regulation then, should provide
2 incentives to adopt new methods, improve quality,
3 increase efficiency, cut costs, develop new
4 markets and expand output in line with customer
5 demand. In short, regulation is a substitute for
6 competition and should attempt to put the utility
7 sector under the same restraints competition
8 places on the industrial sector.²⁶

9
10 In view of the legal standard cited by me and witness
11 Garrett, and treatises on regulation likening regulation of
12 utilities and the competitive market, it is plain to see
13 that allowed returns and investor-required returns are also
14 equal.

15
16 **Q.** What is the relationship between the earned ROE and the
17 required/allowed ROE for utility companies?

18
19 **A.** The earned ROE is the return realized by the utility. The
20 regulatory commission allows the utility an opportunity to
21 earn its required return, but what the utility earns is
22 generally subject to several factors, which may include
23 regulatory lag and management efficiency.

²⁶ Charles F. Phillips, *The Regulation of Public Utilities*, Public Utility Reports, Inc., 1993, at 173.

1 Q. What is the relationship between expected returns and
2 required/allowed ROE?

3
4 A. In this instance, I agree with witness Garrett that the
5 expected return has nothing to do with what the investor
6 expects the required/allowed return should be. Expected
7 returns from investment houses or pension funds are
8 expectations of what earned returns will be, not what
9 investors require, which means that expected returns have
10 no bearing on ROE determinations.

11
12 2. Incorrect Observations that Allowed ROEs for Utilities
13 Exceed the Investor-Required Return on the Market

14 Q. Please summarize witness Garrett's claim that allowed
15 returns for utility companies exceed the required return on
16 the market.

17
18 A. Witness Garrett estimates the investor-required return on
19 the market by adding the annual average 10-year Treasury
20 bond yield to a market risk premium (MRP) calculated by the
21 New York University School of Business for the period 1990-
22 2019. He then compares that return to the average annual
23 authorized returns for electric and gas utilities over that

1 same period²⁷ to support his argument that "awarded ROEs
2 have been consistently above the market cost of equity for
3 many years."²⁸ Witness Garrett further argues that the
4 excess returns awarded to utilities result in a transfer of
5 wealth from customers to shareholders.²⁹

6
7 Witness Garrett also refers to an article published in
8 *Public Utilities Fortnightly*,³⁰ suggesting that utility
9 stocks have outperformed the broader market and will
10 continue to do so in the future.

11
12 **Q.** What is your response to witness Garrett's observations,
13 and the conclusions he draws from them?

14
15 **A.** Witness Garrett's observations and resulting conclusions
16 are misplaced. As a preliminary matter, witness Garrett's
17 conclusion that allowed returns for utility companies
18 exceed the required return on the market is his opinion and
19 driven by the inputs he has chosen to estimate the required
20 return on the market. As discussed below, applying more
21 reasonable models and inputs demonstrate allowed ROEs
22 average about 70.00 percent of the required return on the

²⁷ See, for example, Direct Testimony of David J. Garrett, Figure 4; and Exhibit DJG-14.

²⁸ Direct Testimony of David J. Garrett, at 27.

²⁹ *Ibid.*, at 77.

³⁰ *Ibid.*, at 28.

1 market, consistent with utility betas over the period from
2 1990-2019.

3
4 Regarding the *Public Utilities Fortnightly* article, it was
5 published in August 2016, shortly after the 30-year
6 Treasury yield fell to its prior cyclical low of 2.11
7 percent on July 8, 2016. Between July and December 2016,
8 the utility sector, as represented by witness Garrett's
9 proxy group, lost 2.77 percent of its value as the broader
10 market (measured by the S&P 500) increased by 6.71 percent.
11 That is, despite the article's conviction that utilities
12 would continue to outperform the market, shortly after its
13 publication utility stocks meaningfully underperformed the
14 broad market. From August 2016 through August 2020, the
15 utility sector (measured by the XLU, and the Dow Jones
16 Utility Average) significantly underperformed the S&P 500.³¹

17
18 Finally, regarding witness Garrett's required return on the
19 market, I disagree with his calculation of the implied MRP
20 because reasonable changes in his assumptions have
21 considerable effects on the calculation (as will be
22 discussed in detail in my critique of witness Garrett's
23 CAPM analysis).

³¹ The XLU and DJU gained 13.61 percent and 13.01 percent, respectively, while the S&P 500 gained 61.24 percent. Source: S&P Capital IQ.

1 Q. Have you calculated the investor-required return on the
2 market for the period from 1990-2019?

3

4 A. Yes, I have. Using the Predictive Risk Premium Model
5 (PRPM), I calculated the investor-required MRP for every
6 month in the period from 1990-2019. I then averaged the
7 monthly MRPs for each year and added the average 30-year
8 Treasury bond yield to those averages to arrive at investor-
9 required returns on the market for each year.

10

11 Q. Please explain the PRPM.

12

13 A. The PRPM, as published in the Journal of Regulatory
14 Economics (JRE)³² and The Electricity Journal (TEJ),³³ was
15 developed from the work of Dr. Robert F. Engle, who shared
16 the Nobel Prize in Economics in 2003, "for methods of
17 analyzing economic time series with time-varying volatility
18 (ARCH)"³⁴ (with "ARCH" standing for autoregressive
19 conditional heteroskedasticity). Based on his work, Dr.
20 Engle found that the volatility in market prices, returns,

³² See, Pauline M. Ahern, Frank J. Hanley and Richard A. Michelfelder, Ph.D., *A New Approach for Estimating the Equity Risk Premium for Public Utilities*, *The Journal of Regulatory Economics*, December 2011, 40:261-278.

³³ See, Pauline M. Ahern, Richard A. Michelfelder, Ph.D., Rutgers University, Dylan W. D'Ascendis, and Frank J. Hanley, *Comparative Evaluation of the Predictive Risk Premium Model™, the Discounted Cash Flow Model and the Capital Asset Pricing Model*, *The Electricity Journal*, May 2013.

³⁴ See, www.nobelprize.org.

1 and equity risk premiums cluster over time, making them
2 highly predictable and available to predict future levels
3 of risk and risk premiums.

4
5 The PRPM estimates the risk/return relationship directly as
6 the predicted equity risk premium is generated by the
7 predictability of volatility, or risk. Thus, the PRPM is
8 not based on an estimate of investor behavior, but rather
9 on the evaluation of the actual results of that behavior,
10 *i.e.*, the variance of historical equity risk premiums.

11
12 **Q.** How did you derive the investor-required return on the
13 market using the PRPM?

14
15 **A.** The inputs to the PRPM are the historical returns on large
16 capitalization stocks minus the historical monthly yield on
17 long-term U.S. Treasury securities for the period from
18 January 1990 through December 2019.³⁵ Using a generalized
19 form of ARCH, known as GARCH, each projected MRP was
20 determined using Eviews® statistical software. When the
21 GARCH model is applied to the historical returns data, it
22 produces a predicted GARCH variance series³⁶ and a GARCH

³⁵ Source: 2020 SBBI® Yearbook, Stocks, Bonds, Bills, and Inflation®, Appendix A-1.

³⁶ Illustrated in Columns [1] and [2] on page 2 of Exhibit No. (DWD-1) Document No. 20.

1 coefficient.³⁷ I then averaged the monthly investor-
2 required return for each year to determine an annual
3 investor-required return, and then added the annual average
4 long-term government bond yield for each year³⁸ to arrive
5 at annual investor-required returns on the market for the
6 period from 1990-2019.

7
8 Next, I compared the investor-required return on the market
9 to the average allowed ROEs for gas and electric utilities
10 for each year. As shown on Document No. 12, the investor-
11 required return on the market is consistently, and
12 significantly, higher than the allowed returns for utility
13 companies. These results make intuitive sense, as the ratio
14 of allowed ROE versus required market return averages about
15 0.70 percent, which is consistent with utility betas over
16 the period. Given the above, witness Garrett's claim that
17 allowed ROEs for utilities exceed investor-required market
18 returns is misplaced. In addition, witness Garrett's claim
19 that the excess returns awarded to utilities result in a
20 transfer of wealth from customers to shareholders³⁹ is
21 misplaced as well since Document No. 12 shows that utilities
22 have not been earning excess returns.

³⁷ Illustrated in Column [4] on page 2 of Exhibit No. (DWD-1) Document No. 20.

³⁸ Source: 2020 SBBI® Yearbook, Stocks, Bonds, Bills, and Inflation®, Appendix A-7.

³⁹ Direct Testimony of David J. Garrett, at 77.

1 **3. Misapplication of the DCF Model**

2 **Q.** Please briefly describe witness Garrett's Constant Growth
3 DCF analyses and results.

4
5 **A.** Witness Garrett applies a quarterly form of the Constant
6 Growth DCF Model, which produces an ROE estimate of 7.30
7 percent. For the dividend yield component, witness Garrett
8 relies on announced quarterly dividend payments and 30-day
9 average stock prices as of July 21, 2020.⁴⁰ To estimate
10 expected growth, witness Garrett looks to three measures,
11 including: (1) nominal GDP, (2) inflation, and (3) the
12 current Risk-Free rate.⁴¹ Of those three measures, he
13 chooses the highest estimate, 3.90 percent.⁴²

14
15 **Q.** What are your general concerns with the growth rates on
16 which witness Garrett's DCF analyses rely?

17
18 **A.** First, witness Garrett assumes a single, perpetual growth
19 rate of 3.90 percent for all his proxy companies.⁴³ By
20 reference to the Congressional Budget Office's ("CBO")
21 expected inflation rate of 2.00 percent, witness Garrett's
22 method assumes his proxy companies all will grow at real

⁴⁰ Exhibits DJG-3 and DJG-4.

⁴¹ Exhibit DJG-5.

⁴² Direct Testimony of David J. Garrett, at 57.

⁴³ Exhibit DJG-6.

1 rates of approximately 1.90 percent, in perpetuity.⁴⁴ It
2 is unlikely an investor would be willing to assume the risks
3 of equity ownership in exchange for expected growth only
4 modestly greater than expected inflation. The risk simply
5 is not worth the expected return.⁴⁵

6
7 As to witness Garrett's remaining growth rate estimates
8 (presented in his Exhibit DJG-5), none are appropriate
9 measures of growth for his DCF analysis. As a practical
10 matter, because they are generic in nature, his estimates
11 fail to account for the risks and prospects faced by the
12 proxy companies.

13
14 **Q.** Do you agree with the 3.90 percent growth rate assumed for
15 all companies in witness Garrett's DCF analysis?

16
17 **A.** No, I do not. Witness Garrett's 3.90 percent growth rate
18 is not based on any measure of company-specific growth, or
19 growth in the utility industry in general. Rather, his
20 proxy group serves the sole purpose of calculating the
21 dividend yield. Under the DCF model's strict assumptions,
22 however, expected growth and dividend yields are
23 inextricably related. Witness Garrett's assumption that

⁴⁴ Direct Testimony of David J. Garrett, at 50.

⁴⁵ In the risk/return space, debt securities, with a higher yield and considerably less risk of capital loss (if held to maturity) may be the preferred alternative.

1 one growth rate applies to all companies, even though
2 dividend yields vary across those companies, has no basis
3 in theory or practice.

4
5 **Q.** Witness Garrett also offers his thoughts regarding the need
6 for qualitative analyses in developing expected growth
7 rates.⁴⁶ What is your response to witness Garrett's
8 observations?

9
10 **A.** Witness Garrett suggests that although equity analysts may
11 consider such quantitative factors as historical growth in
12 revenues or earnings, they also should consider
13 "qualitative" factors, such as how a given company may meet
14 some level of "sustainable" growth.⁴⁷ He further observes
15 unregulated companies have options not available to
16 utilities, and suggests it would be more appropriate to
17 consider factors such as load growth in measuring growth
18 rate expectations.⁴⁸

19
20 There is no question analysts consider qualitative factors.
21 To that point, I reviewed Spire, Inc.'s (one of the
22 companies in witness Garrett's proxy group) second quarter
23 2020 conference call held on May 8, 2020. Analysts from

⁴⁶ Direct Testimony of David J. Garrett, at 51-56.

⁴⁷ *Ibid.*, at 46-47.

⁴⁸ *Ibid.*, at 52-54.

1 several firms attended the call, including Bank of America,
2 Crédit Suisse, JP Morgan Chase, and Sidoti & Company.
3 During the call, analysts asked, and were given answers to
4 a number of issues bearing directly on the factors relating
5 to the Return on Common Equity, including sales estimates;
6 earnings growth targets; capital expenditure plans; state
7 regulatory mechanisms; and pending legislative action.⁴⁹

8
9 In Spire Inc.'s third quarter 2020 conference call (which
10 took place on August 5, 2020), analysts were provided with
11 updated and additional information. During the course of
12 the call, the company's management reaffirmed its earnings
13 growth targets and guidance, and discussed the regulatory
14 environment in which it operates. After the company's
15 presentation, the analysts asked questions along several
16 lines, all of which are relevant to witness Garrett's
17 construct, including: investment and development of new
18 storage opportunities; effect of legislative outcomes; O&M
19 expenses; and the impact of COVID-19.⁵⁰ These inquiries
20 reflect the type of considerations analysts typically
21 consider for utility companies.

22
23 In the case of just one of his proxy companies, therefore,

⁴⁹ See, Spire, Inc., Q2 2020 Earnings Call Transcript, May 8, 2020.

⁵⁰ See, Spire, Inc., Q3 2020 Earnings Call Transcript, August 5, 2020.

1 the level of fundamental research performed by analysts on
2 issues directly related to long-term growth reflected a
3 variety of factors, both quantitative and qualitative.
4 They certainly go beyond "mere increases to rate base or
5 earnings."⁵¹ The analysts' research also far exceeded
6 witness Garrett's limited perspective that load growth
7 forecasts, together with other "qualitative factors"
8 support his 3.90 percent expected growth rate.

9
10 **Q.** Why is long-term growth in GDP not an upper limit for
11 terminal growth as witness Garrett contends?

12
13 **A.** First, GDP is not a market measure - rather, it is a measure
14 of the value of the total output of goods and services,
15 excluding inflation, in an economy. While I understand
16 that earnings per share (EPS) growth is also not a market
17 measure, it is well established in financial literature
18 that projected growth in EPS is the superior measure of
19 dividend growth in a DCF model.⁵² Furthermore, GDP is simply
20 the sum of all private industry and government output in

⁵¹ Direct Testimony of David J. Garrett, at 54.

⁵² See, for example, Robert Harris, *Using Analysts' Growth Forecasts to Estimate Shareholder Required Rate of Return*, Financial Management, Spring 1986; Christofi, Christofi, Lori and Moliver, *Evaluating Common Stocks Using Value Line's Projected Cash Flows and Implied Growth Rate*, Journal of Investing, Spring 1999; Robert Harris and Felicia Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management, Summer 1992; and Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management, Spring 1988.

1 the United States, and its growth rate is simply an average
2 of the value of those industries. To illustrate, Document
3 No. 13 presents the compound annual growth rate ("CAGR") of
4 the industries that comprise GDP from 1947 to 2019. Of the
5 15 industries represented, seven industries, including
6 utilities, grew faster than the overall GDP, and eight
7 industries grew slower than the overall GDP.⁵³

8
9 **Q.** Is there a realistic possibility that a single industry
10 would become the entire economy with a perpetual,
11 "sustainable" growth rate higher than the GDP growth rate
12 as witness Garrett contends?⁵⁴

13
14 **A.** No, and even if one assumed it was realistically possible,
15 it would take an extraordinary amount of time to do so. To
16 illustrate this point, I used the value added by industry
17 from 1947 to 2019 in Document No. 13 and applied the CAGR
18 for the highest growth rate industry (*i.e.*, Educational
19 Services, Healthcare, and Social Assistance at 8.71 percent
20 per year) to see when that industry would comprise the
21 entire economy. In the year 2244, or 297 years from the
22 1947 starting point, the industry would comprise over 50
23 percent of GDP, and in the year 5449, 3,502 years after the

⁵³ See, Exhibit No. (DWD-1) Document No. 13.

⁵⁴ Direct Testimony of David J. Garrett, at 16.

1 1947 starting point, the industry would comprise 100
2 percent of GDP.⁵⁵ Therefore, witness Garrett's example⁵⁶
3 and his argument are without merit.

4
5 **Q.** Please respond to witness Garrett's comment regarding
6 "steady-state" growth rates.

7
8 **A.** On page 48 of his direct testimony, witness Garrett states,
9 "...it is not necessary to use multi-stage DCF Models to
10 analyze the cost of equity of regulated utility companies.
11 This is because regulated utilities are already in their
12 'terminal,' low growth stage." While I agree with witness
13 Garrett's statement regarding regulated utilities being in
14 the "mature" stage in the company/industry life cycle, I
15 disagree with his conclusion regarding the long-term growth
16 rates of regulated utilities.

17
18 As witness Garrett describes, the multi-stage DCF and its
19 growth rates reflect the company/industry life cycle, which
20 is typically described in three stages: (1) the growth

⁵⁵ To put the amount of time that will take these two milestones to happen in perspective, 300 years ago, in the year 1719, France and Spain were at war in New France (now Louisiana), and approximately 3,476 years ago, in the year 1457 BC, the first recorded battle in military history, the Battle of Megiddo, was waged between the Egyptians, led by Pharaoh Thutmose III against Kadesh, Canaanite, Mitanni, and Amurru forces. See also, Zager and Evans, *In the Year 2525, on 2525* (Exordium & Terminus) (RCA 1968).

⁵⁶ Direct Testimony of David J. Garrett, at 16.

1 stage, which is characterized by rapidly expanding sales,
2 profits, and earnings. In the growth stage, dividend payout
3 ratios are low in order to grow the firm; (2) the transition
4 stage, which is characterized by slower growth in sales,
5 profits, and earnings. In the transition stage, dividend
6 payout ratios increase, as their need for exponential
7 growth diminishes; and (3) the maturity (steady-state)
8 stage, which is characterized by limited, slightly
9 attractive investment opportunities, and steady earnings
10 growth, dividend payout ratios, and returns on equity.

11
12 Since the utility industry is in the mature phase of the
13 company life cycle, it is the company-specific projected
14 EPS growth rate, not the projected GDP growth rate, that is
15 the appropriate measure of growth in a Constant Growth DCF
16 model.

17
18 **Q.** Are there examples in basic finance texts that support your
19 position?

20
21 **A.** Yes. For example, in *Investments*, life cycles and multi-
22 stage growth models are discussed:

23 As useful as the constant-growth DDM (dividend
24 discount model) formula is, you need to remember
25 that it is based on a simplifying assumption,

1 namely, that the dividend growth rate will be
2 constant forever. In fact, firms typically pass
3 through life cycles with very different dividend
4 profiles in different phases. In early years,
5 there are ample opportunities for profitable
6 reinvestment in the company. Payout ratios are
7 low, and growth is correspondingly rapid. In
8 later years, the firm matures, production
9 capacity is sufficient to meet market demand,
10 competitors enter the market, and attractive
11 opportunities for reinvestment may become harder
12 to find. In this mature phase, the firm may
13 choose to increase the dividend payout ratio,
14 rather than retain earnings. The dividend level
15 increases, but thereafter it grows at a slower
16 pace because the company has fewer growth
17 opportunities.

18
19 Table 18.2 illustrates this pattern. It gives
20 Value Line's forecasts of return on assets,
21 dividend payout ratio, and 3-year growth in
22 earnings per share for a sample of the firms in
23 the computer software industry versus those of
24 east coast electric utilities...

25

1 By in large, the software firms have attractive
2 investment opportunities. The median return on
3 assets of these firms is forecast to be 19.5%,
4 and the firms have responded with high plowback
5 ratios. Most of these firms pay no dividends at
6 all. The high return on assets and high plowback
7 result in rapid growth. The median growth rate
8 of earnings per share in this group is projected
9 at 17.6%.

10
11 In contrast, the electric utilities are *more*
12 *representative of mature firms*. Their median
13 return on assets is lower, 6.5%; dividend payout
14 is higher, 68%; and median growth is lower, 4.6%.

15 ***

16 To value companies with temporarily high growth,
17 analysts use a multistage version of the dividend
18 discount model. Dividends in the early high-
19 growth period are forecast and their combined
20 present value is calculated. Then, once the firm
21 is projected to settle down to a *steady-growth*
22 *phase*, the *constant-growth DDM* is applied to
23 *value the remaining stream of dividends*.⁵⁷

⁵⁷ Bodie, Z., Kane, A., and Marcus, A. J., *Investments*, 7th Edition, McGraw-Hill Irwin, 2008, at 616-617.

1 (Clarification and emphasis added)

2
3 The economics of the public utility business indicate that
4 the industry is in the steady-state, or constant-growth
5 stage of a multi-stage DCF, which would mean that the three-
6 to five-year projected growth rates for each company would
7 be the "steady-state" or terminal growth rate appropriate
8 for the DCF model for utility companies, not the GDP growth
9 rate, which is not a company-specific growth rate, nor is
10 it an upward bound for growth, as discussed previously.

11
12 **Q.** Witness Garrett expressed a concern about using analysts'
13 projected EPS growth rates because he asserts that analysts
14 consider rate base growth in their projected growth rates
15 and that utilities' natural financial incentive is to
16 increase rate base regardless of customer needs.⁵⁸ Please
17 respond.

18
19 **A.** The overall premise of witness Garrett's concern is without
20 merit and should be dismissed. First, regulated utilities
21 are only allowed to earn returns on and of assets that are
22 considered used and useful in serving the needs of its
23 customers. As the U.S. Supreme Court decision in *Duquesne*
24 *Light Co. v. Barasch* states:

⁵⁸ Direct Testimony of David J. Garrett, at 52-53.

1 To the extent utilities' investments turn out to
2 be bad ones (such as plants that are cancelled
3 and so never used and useful to the public), the
4 utilities suffer because the investments have no
5 fair value and so justify no return.⁵⁹

6
7 Additionally, capital projects undertaken by utility
8 companies are often subject to prudence reviews from
9 regulatory commissions, which would allow commissions to
10 review and deny any capital project not deemed in the public
11 interest. These two facts would eliminate any type of
12 investment by the utility that is not needed to expressly
13 provide safe, reliable service to their customers. Because
14 of this, equity analysts correctly consider growth in rate
15 base in determining their recommended growth rates for
16 utilities.

17
18 Finally, as a depreciation expert, witness Garrett should
19 recognize two things: (1) utility assets degrade over time
20 and eventually need to be replaced; and (2) the assets
21 replacing the degraded assets are usually significantly
22 more expensive than the degraded assets. Because of this,
23 rate base will grow consistently *ad infinitum*, which
24 supports both the utility industry's mature position on the

⁵⁹ U.S. Supreme Court, *Duquesne Light Co. v. Barasch*, No. 87-1160 (1989).

1 company/industry life cycle regarding steady and
2 predictable growth, and the use of company-specific
3 projected analysts' EPS growth rates for use in the Constant
4 Growth DCF model.

5
6 **Q.** Witness Garrett claims undue reliance on projected EPS
7 growth rates in the DCF model will lead to upward spiraling
8 ROEs for utility companies due to a feedback loop.⁶⁰ Please
9 respond.

10
11 **A.** As witness Garrett shows in his Figure 1 concerning annual
12 authorized returns, and as illustrated in Exhibit (RBH-1),
13 Document No. 16 of my direct testimony concerning
14 individual authorized returns, an upward spiraling ROE
15 simply does not exist. The independence of authorized ROEs
16 and market data is consistent with conclusions reached by
17 Dr. Bonbright, who states:

18 In the first place, commissions cannot forecast,
19 except within wide limits, the effect their rate
20 orders will have on the market prices of the
21 stocks of the companies they regulate. In the
22 second place, *whatever the initial market prices*
23 *may be, they are sure to change not only with the*
24 *changing prospects for earnings, but with the*

⁶⁰ Direct Testimony of David J. Garrett, at 54-55.

1 *changing outlook of an inherently volatile stock*
2 *market. In short, market prices are beyond the*
3 *control, though not beyond the influence of rate*
4 *regulation. Moreover, even if a commission did*
5 *possess the power of control, any attempt to*
6 *exercise it ... would result in harmful,*
7 *uneconomic shifts in public utility rate levels.⁶¹*
8 (Emphasis added)
9

10 Given this, witness Garrett's concerns should be dismissed.
11

12 **4. Misapplication of the Capital Asset Pricing Model**

13 **Q.** Please summarize witness Garrett's CAPM analysis and
14 results.
15

16 **A.** Witness Garrett's CAPM estimate relies on a risk-free rate
17 of 1.41 percent, an average Market Risk Premium of 6.00
18 percent, and Beta coefficients as reported by Value Line.
19 Those assumptions combine to produce an average CAPM
20 estimate of 6.50 percent.⁶²
21

22 **Q.** Do you agree with witness Garrett's CAPM analysis?
23

⁶¹ James C. Bonbright, Albert L. Danielsen and David R. Kamerschen, *Principles of Public Utility Rates*, Public Utilities Reports, Inc., 1988, at 334.

⁶² Exhibit DJG-11.

1 **A.** No, I disagree with witness Garrett's sole reliance on
2 historical Treasury yields to estimate the risk-free rate
3 and the various methods he uses to estimate the Market Risk
4 Premium. Just as important as our methodological
5 differences, however, is our difference regarding the
6 reasonableness and reliability of an analysis that produces
7 ROE estimates of 6.50 percent.

8

9 **Q.** Turning to the risk-free rate component of the CAPM, do you
10 agree with witness Garrett's use of the average 30-year
11 Treasury yield?

12

13 **A.** Although I agree it is appropriate to consider the current
14 average 30-year Treasury yield, because the Cost of Equity
15 is forward-looking, it also is important to reflect
16 forward-looking expectations of the risk-free rate. For
17 that reason, I relied on the current 30-day average 30-year
18 Treasury yield, as well as the projected near-term 30-year
19 Treasury yield and the projected long-term 30-year Treasury
20 yield as reported by *Blue Chip Financial Forecast*.⁶³
21 Relying on projected Treasury bond yields is especially
22 important considering their recent significant volatility
23 as shown on Document No. 14.

⁶³ Prepared Direct Testimony and Exhibit of Robert B. Hevert, at 70-71 and Document No. 6 of Exhibit No. (RBH-1).

1 Q. How did witness Garrett derive his MRP estimate?

2

3 A. Witness Garrett estimates his MRP by reviewing: (1) surveys
4 of expected returns from IESE Business School and Graham
5 and Harvey (5.6 percent and 4.4 percent, respectively); (2)
6 an expected return reported by Duff & Phelps (6.0 percent);
7 (3) an implied MRP from Dr. Damodaran (5.7 percent); and
8 (4) an "Implied Equity Risk Premium" calculation (5.8
9 percent).⁶⁴ Based on those results, witness Garrett
10 concludes that 6.00 percent, the high end of his range, is
11 appropriate.

12

13 Q. Do you have any concerns regarding witness Garrett's use of
14 an expected MRP as his selected MRP in his CAPM analysis?

15

16 A. Yes, I do. The Duff & Phelps MRP selected by witness
17 Garrett is an expected return, which has no relevance to
18 the investor-required return. As discussed previously,
19 both witness Garrett and I agree that expected returns "have
20 nothing to do with what the investor expects the ROE awarded
21 by a regulatory commission to be."⁶⁵

22

23 Widely used finance texts recommend the use of multiple

⁶⁴ Direct Testimony of David J. Garrett, at 71 and Exhibit DJG-10.

⁶⁵ *Ibid.*, at 4

1 models in estimating the Cost of Equity, in particular the
2 DCF, CAPM, and Risk Premium approaches. I reviewed articles
3 published in financial journals, as well as additional
4 texts that speak to the methods used by analysts to estimate
5 the Cost of Equity. An article published in Financial
6 Analysts Journal surveyed financial analysts to determine
7 the analytical techniques that are used in practice.⁶⁶
8 Regarding stock price valuation and cost of capital
9 estimation, the author asked respondents to comment only on
10 the DCF, CAPM, and Economic Value-Added models. Nowhere in
11 that article did the author consider asking whether surveys
12 of expected returns are relevant to the determination of
13 the Cost of Capital.

14
15 Given witness Garrett's correct view that expected returns
16 have nothing to do with the investor-required return and
17 the lack of use by practitioners, his recommendation to use
18 expected MRPs should be dismissed by the Commission.

19
20 **Q.** Do the surveys referenced by witness Garrett provide
21 reasonable MRP estimates for the purpose of estimating the
22 Company's Cost of Equity?
23

⁶⁶ See, Stanley B. Block, *A Study of Financial Analysts: Practice and Theory*, Financial Analysts Journal, July/August 1999.

1 **A.** No, they do not. For example, the Graham and Harvey survey
2 suggests an expected return on the overall market of 6.79
3 percent, based on a risk-free rate of 2.37 percent and an
4 MRP of 4.42 percent.⁶⁷ Combining those estimates with
5 witness Garrett's average Beta coefficient estimate of 0.85
6 produces a Cost of Equity estimate of 6.13 percent,
7 approximately 77 basis points below witness Garrett's
8 estimate of the "true" Cost of Equity. Because utility
9 stocks tend to be somewhat less risky than the broad market,
10 if the Graham and Harvey survey results are meaningful,
11 witness Garrett's ROE recommendation would be no more than
12 6.79 percent. In fact, his recommendation exceeds the
13 Graham and Harvey estimate by 271 basis points.

14
15 As shown in Document No. 15 of my exhibit, in the past the
16 Graham and Harvey survey respondents have provided
17 forecasts that significantly underestimated actual market
18 returns. As Document No. 15 demonstrates, from 2012 through
19 2018 the average market return was 13.27 percent, about
20 2.50 times greater than the Graham and Harvey survey average
21 expected return of 5.30 percent.

22
23 Graham and Harvey also have noted a distinction between the

⁶⁷ See, Graham and Harvey, *The Equity Risk Premium in 2018*, at 7 for Q4 2017.

1 expected market return on one hand, and the "hurdle rate"
2 on the other. In the Third Quarter 2017 survey, the authors
3 reported an average hurdle rate, which is the return
4 required for capital investments, of 13.50 percent. The
5 authors further reported the average Weighted Average Cost
6 of Capital, which includes the cost of debt, was 9.20
7 percent even though the expected market return was 6.50
8 percent.⁶⁸ As a result, I do not believe the Graham and
9 Harvey surveys are a reasonable reflection of the expected
10 MRP going forward.

11
12 **Q.** Do any of the surveys cited by witness Garrett provide
13 support for your approach to estimating the current MRP?
14

15 **A.** Yes. As discussed in my direct testimony,⁶⁹ I calculated
16 the *ex-ante* MRP in a similar manner to a study by Pablo
17 Fernandez, *et al* (cited by witness Garrett), using the
18 market capitalization weighted Constant Growth DCF
19 calculation on the individual companies in the S&P 500
20 Index.⁷⁰

⁶⁸ See, Duke/CFO Magazine Global Business Outlook survey - U.S., Third Quarter 2017.

⁶⁹ Prepared Direct Testimony and Exhibit of Robert B. Hevert, at 71-72.

⁷⁰ See, Pablo Fernandez, Alberto Ortiz, and Isabel Fernandez Acín, *Market Risk Premium used in 71 countries in 2016: a survey with 6,932 answers*, IESE Business School, May 9, 2016, at 10. Specifically, the study states:

[t]he [implied equity premium] is the implicit [required equity premium] used in the valuation of a stock (or market

1 **Q.** Is there academic literature that supports the conclusion
2 that MRPs using surveys are not widely used by
3 practitioners?

4
5 **A.** Yes. Dr. Damodaran, who was cited several times by witness
6 Garrett throughout his testimony, states the following
7 about the applicability of survey MRPs:

8 While survey premiums have become more
9 accessible, very few practitioners seem to be
10 inclined to use the numbers from these surveys in
11 computations and there are several reasons for
12 this reluctance:

13 1. Survey risk premiums are responsive to
14 recent stock prices movements, with survey
15 numbers generally increasing after bullish
16 periods and decreasing after market decline.
17 Thus, the peaks in the SIA survey premium of
18 individual investors occurred in the bull
19 market of 1999, and the more moderate

index) that matches the current market price. The most widely used model to calculate the [implied equity premium] is the dividend discount model: the current price (P_0) is the present value of expected dividends discounted at the required rate of return (K_e). If d_1 is the dividend per share expected to be received in year 1, and g the expected long-term growth rate in dividends per share:

$$P_0 = d_1 / (K_e - g), \text{ which implies:}$$

$$[\text{implied equity premium}] = d_1/P_0 + g - R_f$$

1 premiums of 2003 and 2004 occurred after the
2 market collapse in 2000 and 2001.

3 2. Survey premiums are sensitive not only to
4 whom the question is directed at but how the
5 question is asked. For instance, individual
6 investors seem to have higher (and more
7 volatile) expected returns on equity than
8 institutional investors and the survey
9 numbers vary depending upon the framing of
10 the question. [footnote omitted]

11 3. In keeping with other surveys that show
12 differences across sub-groups, the premium
13 seems to vary depending on who gets
14 surveyed. Kaustia, Lehtoranta and Puttonen
15 (2011) surveyed 1,465 Finnish investment
16 advisors and note that not only are male
17 advisors more likely to provide an estimate
18 but that their estimated premiums are
19 roughly 2percent lower than those obtained
20 from female advisors, after controlling for
21 experience, education and other
22 factors. [footnote omitted]

23 4. Studies that have looked at the efficacy of
24 survey premiums indicate that if they have
25 any predictive power, it is in the wrong

1 direction. Fisher and Statman (2000)
2 document the negative relationship between
3 investor sentiment (individual and
4 institutional) and stock returns.<sup>[footnote
5 omitted]</sup> In other words, investors becoming
6 more optimistic (and demanding a larger
7 premium) is more likely to be a precursor to
8 poor (rather than good) market returns.

9
10 As technology aids the process, the number and
11 sophistication of surveys of both individual and
12 institutional investors will also increase.
13 However, it is also likely that these survey
14 premiums will be more reflections of the recent
15 past rather than good forecasts of the future.⁷¹
16

17 **Q.** Please now describe the method by which witness Garrett
18 calculated his third estimate, the implied Market Risk
19 Premium.

20
21 **A.** As witness Garrett points out, his method develops the
22 Internal Rate of Return that sets equal the current value
23 of the market index to the projected value of cash flows

⁷¹ Aswath Damodaran, Stern School of Business, *Equity Risk Determinants, Estimation and Implications - The 2020 Edition*, Updated March 2020, at 26-27.

1 associated with owning the market index.⁷² i Witness
2 Garrett observes that Dr. Damodaran "promotes the implied
3 ERP method."⁷³ Although there are some differences, witness
4 Garrett's approach is similar to the model Dr. Damodaran
5 provides on his website.⁷⁴

6
7 Witness Garrett's method, which is a two-stage form of the
8 DCF model, calculates the present value of cash flows over
9 the five-year initial period, together with the terminal
10 price (based on the Gordon Model⁷⁵), to be received in the
11 last (*i.e.*, fifth) year. The model's principal inputs
12 include the following assumptions:

- 13 • Over the coming five years, the S&P 500 Index (the
14 "Index") will appreciate at a rate equal to the
15 compound growth rate in "Operating Earnings" from 2014
16 through 2019;
- 17 • Cash flows associated with owning the Index will be
18 equal to the historical average Earnings, Dividends,
19 and Buyback yields, applied to the projected Index
20 value each year; and
- 21 • Beginning in the terminal year, the Index will
22 appreciate, in perpetuity, at a rate equal to the 30-
23 day average yield on 30-year Treasury securities, as

⁷² Direct Testimony of David J. Garrett, at 68-71.

⁷³ *Ibid.*, at 71.

⁷⁴ See, <http://pages.stern.nyu.edu/~adamodar>.

⁷⁵ Exhibit DJG-9.

1 of July 21, 2020.⁷⁶

2

3 As discussed below, reasonable changes to those assumptions
4 have a considerable effect on witness Garrett's calculated
5 expected market return.

6

7 **Q.** Do you have any observations regarding witness Garrett's
8 assumed first-stage growth rate?

9

10 **A.** Yes. Witness Garrett's 5.37 percent growth rate relates to
11 growth in operating earnings, and does not reflect capital
12 appreciation, growth in dividends, or buy-backs.⁷⁷ In
13 addition, if witness Garrett's position is that historical
14 growth rates are meant to reflect expected future growth,
15 they should reflect year-to-year variation (that is,
16 uncertainty). That is best accomplished using the
17 arithmetic mean. I therefore calculated the average growth
18 (arithmetic mean) for the four metrics included in witness
19 Garrett's exhibit. The average growth rate, 7.35 percent,
20 produces an estimated market return of about 7.91 percent,⁷⁸
21 which is still well below historical experience.

⁷⁶ Exhibits DJG-7 and DJG-9. The model also assumes that all payments are received at year-end, rather than during the year. That assumption also tends to under-state the Implied Market Risk Premium.

⁷⁷ Exhibit DJG-9. Whereas the compound average growth rate in operating earnings was 5.37 percent, dividends and buybacks grew by 6.74 percent and 5.66 percent, respectively.

⁷⁸ See, Document No. 16 of Exhibit No. (DWD-1), page 2.

1 **Q.** Why did the market return increase by only 70 basis points
2 (from 7.21 percent to 7.91 percent) when the first-stage
3 growth rate increased by 198 basis points (from 5.37 to
4 7.35 percent)?

5
6 **A.** Because witness Garrett's model assumes the first stage
7 lasts for five years (and the terminal stage is perpetual),
8 the results are sensitive to changes in the assumed terminal
9 growth rate. To put that effect in perspective, the
10 terminal value (which is directly related to the terminal
11 growth rate) represents approximately 77.15 percent of the
12 "Intrinsic Value" in witness Garrett's analysis.⁷⁹

13
14 **Q.** How did witness Garrett develop his assumed terminal growth
15 rate?

16
17 **A.** The terminal growth rate represents investors' expectations
18 of the rate at which the broad stock market will grow, in
19 perpetuity, beginning in the terminal year. Witness
20 Garrett assumes terminal growth is best measured by the
21 average yield on 30-year Treasury securities over the 30
22 days ended July 21, 2020. That is, witness Garrett assumes
23 the average 30-year Treasury yield between June 2020 and

⁷⁹ See, Document No. 16 of Exhibit No. (DWD-1). Please note that regardless of the assumed first and terminal-stage growth rates, the terminal stage consistently represents approximately 76.00 percent of the Intrinsic Value.

1 July 2020 is the best measure of expected earnings growth
2 beginning five years from now and extending indefinitely
3 into the future.

4
5 **Q.** Do you agree with witness Garrett's assumption?

6
7 **A.** No, I do not. I recognize witness Garrett followed the
8 approach described in Dr. Damodaran's method, which Dr.
9 Damodaran refers to as a "default" assumption.⁸⁰ In terms
10 of historical experience, over the long-term the broad
11 economy has grown at a long-term compound average growth
12 rate of approximately 6.09 percent.⁸¹ Considered from
13 another perspective, Duff & Phelps reports the long-term
14 rate of capital appreciation on Large Company stocks to be
15 7.90 percent.⁸² Witness Garrett's model assumes, however,
16 that the market index will grow by less than one-half that
17 amount, 2.25 percent, over the coming four years.⁸³

18
19 Witness Garrett has not explained why growth beginning five
20 years in the future, and extending in perpetuity, will be
21 less than one-half of long-term historical growth. From a
22 somewhat different perspective, assuming long-term

⁸⁰ See, <http://pages.stern.nyu.edu/~adamodar>.

⁸¹ Source: Bureau of Economic Analysis for the years 1929 to 2019.
<https://www.bea.gov/data/gdp/gross-domestic-product>

⁸² Duff & Phelps, 2020 SBBI® Yearbook, 6-17.

⁸³ See, Exhibit DJG-9. $(3428/3137)^{(1/4)} - 1 = 2.25\%$.

1 inflation will be approximately 2.00 percent⁸⁴ implies
2 perpetual real growth will be approximately -0.578
3 percent.⁸⁵ Again, witness Garrett assumes in the long run,
4 real growth will in fact be negative in perpetuity. Nowhere
5 in his testimony has witness Garrett explained the
6 fundamental, systemic changes that would so dramatically
7 reduce long-term economic growth, or why they are best
8 measured by the long-term Treasury yield over 30 days
9 between June 2020 to July 2020.

10
11 Further, research by the Federal Reserve Bank of San
12 Francisco calls into question the relationship between
13 interest rates and macroeconomic growth. As the authors
14 noted, “[o]ver the past three decades, it appears that
15 private forecasters have incorporated essentially no link
16 between potential growth and the natural rate of interest:
17 The two data series have a zero correlation.”⁸⁶

18
19 Lastly, over the 30 trading days ended July 21, 2020, the
20 30-year Treasury yield fell by 28 basis points, a decline

⁸⁴ For example, in line with the Federal Reserve’s target average rate of inflation. See also, Exhibit DJG-5.

⁸⁵ $-0.578\% = [(1.0141/1.02)-1]$. Please note that the long-term historical average rate of inflation, measured by the difference between real and nominal GDP growth, has been approximately 2.79 percent, which would also imply perpetual negative real growth.

⁸⁶ FRBSF Economic Letter, *Does Slower Growth Imply Lower Interest Rates?*, November 10, 2014, at 3.

1 of about 17.61 percent.⁸⁷ Witness Garrett has not explained
2 why such an abrupt and meaningful decline in Treasury yields
3 should be taken as a measure of a sudden and abrupt decline
4 in expected earnings growth five years from now.

5
6 **Q.** Please briefly summarize your response to witness Garrett's
7 Implied Equity Risk Premium calculation.

8
9 **A.** Witness Garrett's calculation is based on a series of
10 questionable assumptions, to which a small set of very
11 reasonable adjustments produces a market return estimate
12 more consistent with (yet still below) the historical
13 experience he considers relevant. Although the revised
14 results still produce ROE estimates far below any
15 reasonable measure, they do point out the sensitive nature
16 of witness Garrett's analyses, and the tenuous nature of
17 the conclusions he draws from them.

18
19 **Q.** Does witness Garrett employ an Empirical CAPM in his CAPM
20 analysis?

21
22 **A.** No, he does not. Witness Garrett fails to consider the
23 ECAPM, despite the fact that numerous tests of the CAPM
24 have confirmed that the empirical Security Market Line

⁸⁷ Exhibit DJG-7.

1 (SML) described by the traditional CAPM is not as steeply
2 sloped as the predicted SML as described in my direct
3 testimony.⁸⁸ Because of the empirical findings presented
4 in my direct testimony, witness Garrett should have
5 considered the ECAPM in his CAPM analysis.

6
7 **5. Refusal to Consider Flotation Costs and Other Company-**
8 **Specific Factors in his ROE Recommendation**

9 **Q.** Did witness Garrett address the issue of flotation costs in
10 his testimony?

11
12 **A.** Yes. Witness Garrett reasons that flotation costs for stock
13 issuances are not out-of-pocket costs, which investors
14 already have considered when deciding to invest in a
15 company's shares at a given market price.⁸⁹ On that basis,
16 he argues against considering the effect of flotation costs
17 in setting the Company's ROE.

18
19 **Q.** What is your response to witness Garrett regarding the need
20 to recover flotation costs?

21
22 **A.** First, witness Garrett's observation that underwriter fees
23 are not "out-of-pocket" expenses⁹⁰ is a distinction without

⁸⁸ See, Prepared Direct Testimony and Exhibits of Robert B. Hevert, at 42, 74-78.

⁸⁹ Direct Testimony of David J. Garrett, at 60-61.

⁹⁰ *Ibid.*, at 60.

1 a meaningful difference. Whether paid directly or
2 indirectly through an underwriting discount, the cost
3 results in net proceeds that are less than the gross
4 proceeds. Witness Garrett points out that under federal
5 law, the underwriters' compensation must be disclosed in
6 the offering prospectus. I agree. In fact, those
7 prospectuses are the source of the issuance costs included
8 in Document No. 19 of Exhibit No. __ (RBH-1) to my direct
9 testimony. Because those costs were incurred, the net
10 proceeds to the issuing company were less than the gross
11 proceeds. Whether the issuer wrote a check or received the
12 proceeds at a discount does not matter. What does matter
13 is that issuance costs are a permanent reduction to common
14 equity, and absent a recovery of those costs, the issuing
15 company will not be able to earn its required return.

16
17 Lastly, as shown in Document No. 17 of my Exhibit,⁹¹ because
18 of flotation costs, an authorized return of 10.85 percent
19 would be required to realize an ROE of 10.75 percent (*i.e.*,
20 a 10-basis point flotation cost adjustment). If flotation
21 costs are not recovered, the growth rate falls and the ROE
22 decreases to 10.65 percent (*i.e.*, below the required

⁹¹ This example is based on an analysis performed by Dr. Roger Morin. See, Roger A. Morin, *New Regulatory Finance*, Public Utility Reports, Inc., 2006, at 330-332.

1 return).⁹²

2

3 **Q.** Is the fact that investors are aware of equity issuance
4 costs when they decide to purchase stock relevant to the
5 determination of the appropriate compensation for those
6 costs?⁹³

7

8 **A.** No, it is not. Although witness Garrett suggests current
9 prices account for flotation costs, he has provided no
10 explanation as to how market prices compensate shareholders
11 for flotation costs or any analyses to support his position.
12 In that important respect, common stock is closely
13 analogous to long-term debt, both in the sense that its
14 purpose is to provide funding for long-term investments
15 that are part of rate base, and that it remains a part of
16 the utility's operations over the long run. Equity
17 flotation costs and debt issuance expenses both are
18 necessary and legitimate costs enabling the investment in
19 assets needed to provide safe and reliable utility service;
20 both should be recovered.

21

22 **Q.** Does witness Garrett consider the Company's overall growth
23 and performance in his ROE recommendation for Peoples?

⁹² Document No. 17 of Exhibit No. (DWD-1) is provided for illustrative purposes only. Please note that I have not relied on the results of the analysis in determining my recommended ROE or range.

⁹³ Direct Testimony of David J. Garrett, at 60-61.

1 **A.** No, witness Garrett does not consider any company-specific
2 growth or risk factors in his analyses and ROE
3 recommendation. As discussed above, witness Garrett's DCF
4 analysis assumes one single growth rate for all companies
5 in his proxy group. In addition, witness Garrett argues
6 that "Because utilities are in their maturity stage, their
7 real growth opportunities are primarily limited to the
8 population growth within their defined service territories,
9 which is usually less than 2%."⁹⁴ In his recommendation,
10 witness Garrett fails to consider Peoples' total number of
11 customers has increased significantly over the past several
12 years⁹⁵ and most recently, from July 2019 to July 2020, the
13 Company's growth in customer counts was approximately 5.20
14 percent.⁹⁶ Unlike witness Garrett, I've taken into account
15 several Company-specific factors, including the Company's
16 superior performance and growth factors, in determining a
17 reasonable ROE for Peoples. As discussed in my direct
18 testimony, setting an ROE that recognizes the Company's
19 significant customer growth and sustained high level of
20 performance is an appropriate element of the Commission's
21 regulatory discretion and supported by past Commission
22 precedent.⁹⁷

⁹⁴ *Ibid.*, at 49.

⁹⁵ See, Prepared Direct Testimony and Exhibit of Robert B. Hevert, at 53.

⁹⁶ See, Rebuttal Testimony and Exhibit of Sean P. Hillary, at 23; and Exhibit SPH-2.

⁹⁷ Prepared Direct Testimony and Exhibit of Robert B. Hevert, at 53-55.

1 **Q.** Witness Garrett suggests company-specific risks should not
2 be reflected in the Company's Cost of Equity, because those
3 risks are diversifiable.⁹⁸ What is your response to witness
4 Garrett on that point?

5
6 **A.** Looking to witness Garrett's Exhibit DJG-8, the Beta
7 coefficients used in his CAPM analysis range from 0.80 to
8 0.95, a difference of 0.15. Even if we were to apply that
9 difference to witness Garrett's unduly low Market Risk
10 Premium estimate of 6.00 percent, the implied range of CAPM
11 results would be 0.90 percentage points (90 basis points).
12 Similarly, applying the standard deviation of witness
13 Garrett's Beta coefficients (0.065) to his 6.00 percent
14 Market Risk Premium produces a range of 0.39 percent (39
15 basis points). Because the range of witness Garrett's Beta
16 coefficients (0.15) is within one standard deviation
17 (0.39), we cannot say with certainty that company-specific
18 risks are diversifiable (as witness Garrett suggests they
19 will be). Because the range of Beta coefficients produces
20 a rather wide range of CAPM estimates (even assuming witness
21 Garrett's Market Risk Premium), I continue to believe it is
22 reasonable to consider company-specific risks in
23 determining the Company's Cost of Equity.

24

⁹⁸ Direct Testimony of David J. Garrett, at 35-38.

1 specific capital sources employed by the
2 investors. The true cost of capital depends on
3 the use to which the capital is put and not on
4 its source. The *Hope* and *Bluefield* doctrines
5 have made clear that the relevant considerations
6 in calculating a company's cost of capital are
7 the alternatives available to investors and the
8 returns and risks associated with those
9 alternatives.¹⁰⁰

10
11 Additionally, Levy and Sarnat state:

12 The firm's cost of capital is the discount rate
13 employed to discount the firm's average cash
14 flow, hence obtaining the value of the firm. It
15 is also the weighted average cost of capital, as
16 we shall see below. The weighted average cost of
17 capital should be employed for project
18 evaluation... only in cases where the risk profile
19 of the new projects is a "carbon copy" of the
20 risk profile of the firm¹⁰¹

21
22 Although Levy and Sarnat discuss a project's cost of capital
23 relative to a firm's cost of capital, these principles apply

¹⁰⁰ Roger A. Morin, *New Regulatory Finance*, Public Utility Reports, Inc., 2006, at 523.

¹⁰¹ Haim Levy & Marshall Sarnat, *Capital Investment and Financial Decisions*, Prentice/Hall International, 1986, at 465.

1 equally to the use of a proxy group-based cost of capital.
2 Each company must be viewed on its own merits, regardless
3 of the source of its equity capital. As *Bluefield* clearly
4 states:

5 A public utility is entitled to such rates as
6 will permit it to earn a return on the value of
7 the property which it employs for the convenience
8 of the public equal to that generally being made
9 at the same time and in the same general part of
10 the country on investments in other business
11 undertakings which are attended by corresponding
12 risks and uncertainties;¹⁰²

13
14 In other words, it is the "risks and uncertainties"
15 surrounding the property employed for the "convenience of
16 the public" which determines the appropriate level of
17 rates. In this proceeding, the property employed "for the
18 convenience of the public" is the rate base of the Company.
19 Thus, it is only the risk of investment in the Peoples'
20 rate base that is relevant to the determination of the cost
21 of common equity to be applied to the common equity-financed
22 portion of that rate base.

23

¹⁰² *Bluefield Water Works Improvement Co. v. Public Serv. Comm'n*, 262 U.S. 679 (1923), at 6.

1 Consistent with the financial principle of risk and return
2 discussed previously, and the stand-alone nature of
3 ratemaking, company-specific characteristics must be
4 considered in determining the appropriate investor-required
5 return for any particular company, including Peoples.

6
7 **6. Response to witness Garrett's Critiques of Company**
8 **Testimony**

9 **Q.** Does witness Garrett have any critiques of your analyses
10 presented in your direct testimony?

11
12 **A.** Yes, he does. Witness Garrett's critiques of my direct
13 testimony are summarized below:

- 14 1) My requested ROE is in excess of the investor-required
15 return on the market;
- 16 2) My growth rates used in the DCF model exceed GDP
17 growth;
- 18 3) Flotation costs should not be included in the ROE;
- 19 4) My MRP is unreasonable because it is unconventionally
20 derived and not in line with his MRP estimates;
- 21 5) My Risk Premium Model (RPM) is not a "real" risk
22 premium model (not based on Nobel Prize-winning work)
23 and is only used by utility witnesses; and
- 24 6) The approved returns used in my RPM are all in excess
25 of market returns.

1 I have addressed critiques 1 through 3 and 6 during the
2 course of this rebuttal testimony. I will discuss witness
3 Garrett's remaining critiques in turn.

4
5 **Q.** At page 16 of his testimony, witness Garrett criticizes
6 your method of calculating the expected market return by
7 pointing to the expected growth rate for a single company.
8 What is your response to witness Garrett on that point?

9
10 **A.** Witness Garrett's criticism has no merit. In determining
11 the expected growth rate that underlies the expected market
12 return, the salient points are twofold: (1) investors rely
13 on analysts' growth rate projections to frame their
14 investment decisions; and (2) because we are estimating the
15 market return, it is the expected return on the 500
16 companies in the S&P 500 that matters.

17
18 As to the first point, witness Garrett has not shown
19 investors avoid analysts' projections. He certainly has
20 not shown investors find his 7.20 percent expected market
21 return (based on his Implied Equity Risk Premium analysis)
22 more reliable than the combined estimates of the many
23 analysts that follow the companies comprising the S&P 500.
24 Regarding the second point, over time the average annual
25 total return on large company stocks has been about 12.10

1 percent.¹⁰³ From 2014-2019, the period on which witness
2 Garrett's Implied Equity Risk Premium is based, the average
3 return was 12.66 percent.¹⁰⁴

4
5 Additionally, although witness Garrett observes one company
6 in my analysis with a high, positive growth rate, he fails
7 to point out the several with negative growth rates. At
8 any time, the market includes both high and low-growth
9 companies. For example, the expected return on the market,
10 as calculated in Document No. 4 of Exhibit No. (RBH-1) using
11 Bloomberg data, includes 40 growth rates equal to or lower
12 than the 2.00 percent inflation estimate¹⁰⁵ witness Garrett
13 considers in his DCF analysis. Thirty-one of those growth
14 rates are negative, as low as negative 63.83 percent.
15 Although negative growth companies will not exist over the
16 long-term (a company cannot shrink forever), my approach
17 does not remove them; doing so would introduce the sort of
18 "survivorship bias" with which witness Garrett is
19 concerned.¹⁰⁶ The purpose of the analysis is to estimate
20 the return investors expect for the market as a whole,
21 including high and low-growth companies, not to estimate
22 the aggregate return for companies that witness Garrett
23 believes have proper growth rates.

¹⁰³ Duff & Phelps, 2020 SBBI® Yearbook, 6-17.

¹⁰⁴ Duff & Phelps, 2020 SBBI® Yearbook, Appendix A-1.

¹⁰⁵ Direct Testimony of David J. Garrett, at 50.

¹⁰⁶ *Ibid.*, at 66-67.

1 Finally, my MRP estimates are consistent with actual
2 realized MRPs. As shown on Document No. 18, MRPs of 12.51
3 percent and 12.46 percent are in the 59th percentile of
4 historical MRPs.

5
6 **Q.** Is the calculation of the *ex-ante* return using the DCF model
7 on the constituent companies of a market index a commonly
8 accepted practice?

9
10 **A.** Yes, it is. The Chartered Financial Analyst ("CFA")
11 Institute Research Foundation states the following:

12 Approaches to estimating the ERP fall into three
13 broad categories:

14 1. Methods based on a dividend discount model
15 (DDM), earnings discount model, or cash-flow-to-
16 the-investor discount model: forward-looking
17 methods with their roots in discounted cash flow
18 (DCF) analysis, wherein the value of an asset is
19 regarded as the present value of the cash flows
20 the asset is expected to generate... The earliest
21 estimates of the ERP were derived by estimating
22 the expected return on an equity portfolio using
23 the DDM and then subtracting the expected return
24 or yield on the riskless asset. This "DDM
25 approach" which made a comeback at the end of the

1 20th century, is the method most widely used
2 today.¹⁰⁷

3

4 In *New Regulatory Finance*, Dr. Morin states:

5 A second approach is to estimate the MRP is
6 prospective in nature and consists of applying
7 the DCF model to a representative market index,
8 such as the Standard & Poor's 500 Index, *Value*
9 *Line Composite*, or the New York Stock Exchange
10 index... If risk premiums are volatile, this
11 method of directly measuring r_m is preferred.
12 Subtracting the current risk-free rate from that
13 estimate produces a valid estimate of the market
14 risk premium.¹⁰⁸

15

16 Finally, Brigham and Daves state:

17 An alternative to the historical risk premium is
18 to estimate a forward-looking, or *ex-ante* risk
19 premium. The most common approach is to use the
20 Discounted Cash Flow (DCF) model to estimate the
21 expected market rate of return, $r^{\wedge} = r_m$, and then
22 calculate RP_m as $r_m - r_{rf}$ ¹⁰⁹

¹⁰⁷ CFA Institute Research Foundation, Literature Review, *The Equity Risk Premium: A Contextual Literature Review*, at 2.

1 **Q.** Witness Garrett states that your MRP is unreasonable in
2 view of his measures of MRP as presented in his CAPM
3 analysis.¹¹⁰ Please respond.

4
5 **A.** I have discussed the inapplicability of witness Garrett's
6 MRP estimates for cost of capital purposes previously in
7 this rebuttal testimony and will not repeat that discussion
8 here. Since witness Garrett's MRP measures are not valid
9 MRPs, they cannot be comparable to my MRP estimates. In
10 prior proceedings, I have applied several different methods
11 to estimate the estimated market return. As shown in
12 Document No. 19, applying the methods I have used in other
13 testimonies result in estimated returns on the market
14 substantially similar to the estimated market returns
15 applied in this proceeding, which would translate into
16 similar MRPs as calculated in my direct testimony.

17
18 Given all of the above, my calculation of the *ex-ante* MRP
19 in my CAPM and ECAPM analysis is reasonable in view of
20 historical returns and other expected measures of the MRP
21 and is supported by financial literature. Thus, witness
22 Garrett's concern should be dismissed.

23
24 **Q.** Does witness Garrett agree with your application of the

¹¹⁰ Direct Testimony of David J. Garrett, at 10, 75.

1 RPM?

2

3 **A.** No, he does not. Witness Garrett disagrees with the
4 analysis because he believes "these types of risk premium
5 'models' are merely clever devices used to perpetuate the
6 discrepancy between awarded ROEs and market-based cost of
7 equity."¹¹¹ Witness Garrett further believes the Bond Yield
8 Plus Risk Premium analysis is unnecessary because "we
9 already have a real risk premium model to use: the CAPM."¹¹²
10 He then asserts "the risk premium models used by utility
11 witnesses are almost exclusively found in the texts and
12 testimonies of such witnesses."¹¹³ Lastly, witness Garrett
13 suggests my Bond Yield Plus Risk Premium analysis
14 contradicts my position that Cost of Equity is a forward-
15 looking concept.¹¹⁴

16

17 **Q.** What is your response to witness Garrett's assertion that
18 authorized returns are disconnected from the "true" Cost of
19 Equity?¹¹⁵

20

21 **A.** I disagree. As explained in detail above, allowed returns
22 are indeed measures of the investor-required return and the

¹¹¹ *Ibid.*, at 76.

¹¹² *Ibid.*, at 77.

¹¹³ *Ibid.*, at 78.

¹¹⁴ *Ibid.*, at 76.

¹¹⁵ *Ibid.*, at 76-77.

1 allowed returns for utility companies are indeed lower than
2 the investor-required return on the market. Despite
3 witness Garrett's concerns, authorized returns and their
4 associated proceedings reflect the same type of market-
5 based analyses at issue in this proceeding. Because
6 authorized returns are publicly available (the proxy
7 companies disclose authorized returns, by jurisdiction, in
8 their 2019 SEC Form 10-Ks),¹¹⁶ it therefore is reasonable to
9 conclude that data is reflected, at least to some degree,
10 in investors' return requirements.

11
12 Further, although there is no disagreement that every case
13 has its unique set of issues and circumstances, reviewing
14 approximately 1,160 cases over many economic cycles and
15 using that data to develop the relationship between the
16 Equity Risk Premium and interest rates mitigates that
17 concern. As such, witness Garrett's concerns that
18 authorized returns may be influenced by factors other than
19 objective market drivers is unfounded.

20
21 **Q.** Is witness Garrett correct when he asserts that Bond Yield
22 Plus Risk Premium models are not covered in financial texts,

¹¹⁶ See, for example, Atmos Energy Corporation, SEC Form 10-K for the year ended September 30, 2019, at 7-8; Southwest Gas Corporation., SEC Form 10-K for the year ended December 31, 2019, at 9-12; Northwest Natural Gas Company, SEC Form 10-K for the year ended December 31, 2019, at 39.

1 but almost exclusively found in texts written by utility
2 witnesses?¹¹⁷

3
4 **A.** No, witness Garrett's statement is incorrect in several
5 respects. Although once again witness Garrett does not
6 explain what he means by "almost exclusively" in this
7 context, the Bond Yield Plus Risk Premium approach
8 generally is covered in basic finance texts, including for
9 example, Brigham and Gapenski:

10 Whereas debt and preferred stocks are contractual
11 obligations which have easily determined costs,
12 it is not at all easy to estimate [the Cost of
13 Equity]. However, three methods can be used: (1)
14 the Capital Asset Pricing Model (CAPM), (2) the
15 discounted cash flow (DCF) model, and (3) the
16 bond-yield-plus-risk-premium approach. These
17 methods should not be regarded as mutually
18 exclusive-no one dominates the others, and all
19 are subject to error when used in practice.
20 Therefore, when faced with the task of estimating
21 a company's cost of equity, we generally use all
22 three methods and then choose among them on the
23 basis of our confidence in the data used for each

¹¹⁷ Direct Testimony of David J. Garrett, at 78.

1 in the specific case at hand.¹¹⁸

2
3 The point made by my Risk Premium approach, which is that
4 the Equity Risk Premium is inversely related to interest
5 rates, also is the subject of published academic research,
6 as noted at page 79 of my direct testimony. Although
7 witness Garrett believes such research is only provided by
8 utility witnesses, public academic research performed by
9 Staff members of the Virginia Corporation Commission (*i.e.*,
10 Maddox, Pippert, and Sullivan) has also shown the Equity
11 Risk Premium to be inversely related to interest rates.¹¹⁹
12 Those authors also found that the Equity Risk Premium is
13 not stable over time, and increases as interest rates
14 decrease. In short, witness Garrett's assertion is highly
15 questionable, but the important finding that Equity Risk
16 Premiums are nonconstant and vary with interest rates is
17 not.

18
19 Lastly, witness Garrett's statement that Risk Premium
20 models are "almost" exclusively found in utility witness'
21 testimony is dubious, as well. In recent cases, I have
22 seen regulatory staff witnesses include Risk Premium

¹¹⁸ Eugene F. Brigham, Louis C. Gapenski, *Financial Management, Theory and Practice*, The Dryden Press., 1994, at 341.

¹¹⁹ Farris M. Maddox, Donna T. Pippert, and Rodney N. Sullivan, *An Empirical Study of Ex Ante Risk Premiums for the Electric Utility Industry*, *Financial Management*, Autumn 1995, at 89-95.

1 analyses in Texas (PUC Docket Nos. 49421 and 49494), North
2 Carolina (Docket No. G-9, Sub 743), and Arkansas (Docket
3 No. 19-008-U). I am not sure what witness Garrett intends
4 by "almost exclusively", but his assertions that the method
5 "is used to justify a cost of equity that is much higher
6 than one that would be dictated by market forces"¹²⁰, and
7 that the model is "used to perpetuate the discrepancy
8 between awarded ROEs and market-based cost of equity"¹²¹,
9 simply are incorrect. An alternative, and a more likely
10 interpretation, is that witness Garrett's view that the
11 Cost of Equity is less than 7.30 percent is inconsistent
12 with the findings of regulatory commissions who have
13 considered expert testimony from many sources over many
14 years.

15
16 **Q.** What is your response to witness Garrett's position that
17 your Bond Yield Plus Risk Premium analysis is not forward-
18 looking?¹²²

19
20 **A.** Witness Garrett's conclusion is incorrect. The approach
21 quantifies the longstanding principle that the Equity Risk
22 Premium is not constant, but varies over time, and with
23 market conditions. The model I have applied reflects

¹²⁰ Direct Testimony of David J. Garrett, at 78.

¹²¹ *Ibid.*, at 76.

¹²² *Ibid.*

1 variable market conditions in changing interest rates.
2 Applying forward-looking (that is, projected) interest
3 rates will produce varying estimates of the Equity Risk
4 Premium (see, Document No. 7 of Exhibit No. (RBH-1) and
5 Document No. 7 of Exhibit No. (DWD-1)). The model, and its
6 results, therefore, are forward-looking.

7
8 **Q.** Do you have a response to witness Garrett's claim that your
9 RPM is not a "real" RPM because it is not based on Nobel
10 Prize-winning work?

11
12 **A.** While my RPM is not based on Nobel Prize-winning work, it
13 is based on considerable empirical research, as noted
14 above. Additionally, the DCF model is not based on Nobel
15 Prize-winning work, either, but it does not prevent me or
16 witness Garrett from considering the DCF model's results in
17 our ROE analyses. Finally, I performed the PRPM (which is
18 based on Nobel Prize-winning work, as discussed above) on
19 the companies in my proxy group. As shown on Document No.
20 20, PRPM results for my proxy group range from 9.38 percent
21 to 11.90 percent, averaging 10.39 percent. Despite witness
22 Garrett's concerns, all of these models provide valuable
23 insight into the investor-required ROE.

24
25 **VI. SUMMARY AND CONCLUSIONS**

1 **Q.** Should any or all of the arguments made by witness Garrett
2 persuade the Commission to lower the ROE it approves for
3 Peoples below your recommendation?
4

5 **A.** No, they should not. Based on the analyses discussed
6 throughout my rebuttal testimony, and given the current
7 capital market conditions, I continue to believe that the
8 reasonable range of ROE estimates is from 10.00 percent to
9 11.00 percent, and within that range 10.75 percent
10 continues to be a reasonable, although conservative,
11 estimate of the Company's Cost of Equity. It will provide
12 Peoples with sufficient earnings to enable it to attract
13 necessary new capital efficiently and at a reasonable cost.
14

15 **Q.** Does this conclude your rebuttal testimony?
16

17 **A.** Yes, it does.

3

4 A. Yes, I have. My Exhibit No. __ (SPH-2), consisting of
5 two documents prepared by me or under my direction and
6 supervision.

7 Document No. 1 Moody's Updated Inflation Forecast

8 Document No. 2 Customer Growth - Customer Count

9 July 2020 vs July 2020

10

11 Q. Please summarize the key concerns and disagreements you
12 have regarding the substance of witness Crane's
13 testimony.

14

15 A. I will not address all of the Company's concerns and
16 disagreements with witness Crane's testimony. That
17 responsibility is being apportioned between Company and
18 expert witnesses filing rebuttal testimony. Globally, I
19 am very concerned with witness Crane's overall
20 recommendation to only provide for a revenue increase of
21 no more than \$18.6 million, or approximately 30 percent
22 of the Company's \$61.7 million request. Witness Crane's
23 reckless suggestion gives no consideration to the fact it
24 has been twelve-years since Peoples' last rate case.
25 Commission acceptance of witness Crane's recommendation

1 would put immense pressure on Peoples' financial
2 integrity immediately in 2021 and would result in reduced
3 system reliability, customer service, and the ability to
4 meet customer demand as described in the rebuttal
5 testimony of Company witnesses Richard F. Wall and
6 Timothy O'Connor.

7
8 Furthermore, the specific key concerns and disagreements
9 addressed in my rebuttal testimony are as follows:

- 10 1. Witness Crane's exclusion of all 2021 capital
11 expenditures in determining 2021 projected test year
12 rate base,
- 13 2. Witness Crane's exclusion of the Company's O&M
14 payroll costs and related employee costs for 2020
15 and 2021 new positions,
- 16 3. Witness Crane's exclusion of cost increases due to
17 inflation for trending 2019 Non-Labor O&M costs to
18 the 2021 projected test year,
- 19 4. Witness Crane's exclusion of a portion of short-term
20 incentive compensation costs included in the
21 Company's claim,
- 22 5. Witness Crane's exclusion of a portion of the
23 Company's American Gas Association membership dues,
- 24 6. Witness Crane's exclusion of increased costs for
25 Marketing and Advertising expenses, and

1 7. Witness Crane's errors made in her calculations that
2 inflate her recommended adjustments.

3
4 **Q.** Are there any other items you will address in your
5 rebuttal testimony regarding witness Crane's proposals?

6
7 **A.** Yes. Witness Crane does not contest certain O&M costs
8 included in the Company's claim, but she does propose
9 amortization and recovery of these costs over a 5-year
10 period. I will discuss her proposals and my agreement or
11 disagreement with each.

12
13 **1. Exclusion Of All 2021 Capital Expenditure From**
14 **Determination Of 2021 Projected Test Year Rate Base**

15 **Q.** Please summarize the rate base adjustments witness Crane
16 recommended in her testimony regarding Gross Plant in
17 Service and Construction Work in Process ("CWIP").

18
19 **A.** Witness Crane arbitrarily uses the Company's projected
20 December 31, 2020 balances for Gross Plant and CWIP in
21 determining the 13-month average of the 2021 test year
22 for her rate base adjustments shown on Exhibit ACC-2,
23 Schedules 4 and 5. In doing this, witness Crane is in
24 effect converting the Company's claim from one based on a

1 projected 2021 "test year" to a randomly determined
2 December 31, 2020 single point in time based "test date".
3

4 **Q.** Please explain further your concern and disagreement with
5 witness Crane's recommended adjustments to Gross Plant in
6 Service and CWIP.
7

8 **A.** Witness Crane's simplistic methodology for determining
9 the 2021 test year rate base totally disregards the 2021
10 capital expenditure activity that should be factored into
11 the ratemaking process of determining a 13-month average
12 balance for Gross Plant in Service and CWIP. Witness
13 Crane has not provided any systematic or detailed
14 mathematical analysis to justify the total exclusion of
15 the Company's 2021 capital expenditures in her
16 recommended adjustments. Instead, the only analysis
17 witness Crane has presented is simply to (i) compare the
18 total 2020 and 2021 budgeted capital expenditures with
19 the 2015-2019 budgeted amounts, (ii) state the amount of
20 rate base growth between 2009 to 2021, and (iii)
21 calculate growth in Gross Plant in Service and CWIP from
22 2009 to 2019 and 2019 to 2021. As a result of these
23 three calculations, witness Crane arbitrarily and
24 inexplicably determined that Peoples should use the
25 Company's December 31, 2020 balances for Gross Plant in

1 Service and CWIP and should not be allowed recovery of
2 any capital expenditures occurring in the 2021 projected
3 test year. The only explanation proffered up by witness
4 Crane for this conclusion is that the "Company's claim is
5 based on speculative projections" while conceding that
6 her adjustments will "also be subjective" (see witness
7 Crane testimony page 12, lines 5-10).

8
9 **Q.** Are the Company's capital budgets "speculative"?

10
11 **A.** No. The Company's capital expenditure budgets for 2020
12 and 2021 specifically identify projects and recurring
13 capital that can be analyzed and reviewed in detail.
14 Evaluating capital projections on their merits at a
15 detailed level is a well-established process undertaken
16 by the Commission in prior projected test year rate cases
17 for this Company and other utilities. The Commission
18 should not unsystematically remove a complete year of
19 capital spending activity based on witness Crane's
20 "subjective" belief that "some adjustment to the
21 Company's proposed revenue requirement is appropriate"
22 (see witness Crane testimony page 12, lines 2-6). To do
23 so would be arbitrary and manifestly unfair to Peoples
24 and would put its customers at risk.

25

1 **Q.** Does the Company's actual capital spending typically vary
2 from the projected budgets?

3
4 **A.** Yes. Because the Company's budget process is finalized
5 months before the budgeted year, changes do occur. As
6 discussed in the rebuttal testimony of witness Wall,
7 these changes occur for a variety of reasons. As shown
8 in the Peoples' response to OPC's First Set of
9 Interrogatories No. 30, the Company's actual capital
10 spending from 2015 to 2019 has varied from the budget,
11 however, the actual variance was only five percent lower
12 over the 5-year period. In 2019, Peoples' capital budget
13 was \$240.0 million, and the Company's actual capital
14 expenditures were \$234.2 million, which was within 2.4
15 percent of the budgeted amount. Although capital
16 construction may vary based on typical project changes,
17 that alone does not justify the suggestion of removing
18 the capital expenditures in the test year.

19
20 **Q.** Has Peoples recently updated its forecast of the 2020 and
21 2021 Capital expenditures?

22
23 **A.** Yes. The most up-to-date capital expenditure forecast
24 for all projects is being provided in response to Staff's
25 Seventh Request for Production of Documents No. 15, which

1 is being filed coincident with this testimony. In
2 addition, in response to Staff's Seventh Set of
3 Interrogatories No. 58, updated CWIP and AFUDC balances
4 by project, year and month are also provided. The
5 Company's response to Staff's Seth Request for Production
6 of Documents No. 15 includes highlighted changes and
7 explanations by project and by recurring capital item.
8 This updated 2020 and 2021 capital spending forecast
9 reflects delayed, canceled, and new capital projects
10 added since the Company's original rate case filing 2020
11 and 2021 budgets were completed. For added projects, the
12 response to Staff's Seventh Request for Production of
13 Documents No. 15 includes documentation similar to what
14 was provided in response to Staff's First Set of
15 Interrogatories No. 1. For 2020 and 2021, the Company is
16 now projecting capital expenditures to exceed the budgets
17 contained in the rate case by \$8.4 million and \$31.0
18 million, respectively.

19
20 **Q.** Do you agree with witness Crane's analysis shown in the
21 table at the top of page 9 in her testimony related to
22 growth in Gross Plant in Service and CWIP for the periods
23 2009 to 2019 and 2019 to 2021?

24
25 **A.** No. Witness Crane's calculations of growth for the two

1 periods fails to properly recognize that Cast Iron Bare
2 Steel Rider ("CI/BSR") investments had been made during
3 the 2009 to 2019 period. Although these investments were
4 not included in adjusted rate base during that period,
5 they should be included in determining the actual growth
6 of Gross Plant in Service and CWIP for the 2009 to 2019
7 period. Instead, witness Crane's calculations are made
8 on the incorrect assumption that the entirety of the
9 cumulative CI/BSR investments made from the inception of
10 the program in 2013 through 2020, totaling \$200.7 million
11 were in effect made in the 2019 to 2021 period.
12 Therefore, witness Crane's analysis is misleading in that
13 it dramatically overstates the true 2019 to 2021 period
14 growth percentage.

15
16 **Q.** Does witness Crane fail to acknowledge the CI/BSR
17 investments made through 2019 elsewhere in her testimony?

18
19 **A.** Yes. On page 14, line 6-9 of witness Crane's testimony
20 she states that her recommendation results in an increase
21 in gross plant-in-service and CWIP of approximately \$570
22 million from the Base Year (2019) to the Projected Test
23 Year (2021) which she justifies as reasonable because it
24 is a very significant increase relative to the Company's
25 historic spending levels. Witness Crane's calculation of

1 the \$570 million amount once again fails to properly
2 reflect the cumulative investments made in CI/BSR from
3 2013 through the 2019 base year that are included in the
4 \$200.7 million being rolled into adjusted rate base at
5 the beginning of 2021.

6
7 **Q.** What do you suggest the Commission do with witness
8 Crane's recommendation on Gross Plant in Service, CWIP
9 and other related items?

10
11 **A.** Witness Crane's recommendation is an attempt to shortcut
12 the ratemaking process of evaluating the Company's 2021
13 test year capital expenditures and assessing them for
14 inclusion in the test year rate base. I suggest that the
15 Commission reject what witness Crane has proffered on
16 Exhibit ACC-2, Schedules 3-5.

17
18 **Q.** Do you have concerns with witness Crane's other plant
19 related recommendations?

20
21 **A.** Yes. For reasons previously stated, I suggest the
22 Commission reject witness Crane's related fall-out
23 adjustments to (i) Depreciation Expense reflected on her
24 Exhibit ACC-2, Schedule 20, (ii) Property Tax Expense
25 reflected on Exhibit ACC-2, Schedule 22, and (iii)

1 Interest Synchronization reflected on Exhibit ACC-2,
2 Schedule 23.

3
4 **2. Exclusion of Any New Positions over Trended 2019 O&M**
5 **Payroll Costs and Removal of Other Related Expenses**

6 **Q.** Please summarize the Operating Income adjustments witness
7 Crane recommended in her testimony regarding Additional
8 Employee Expense.

9
10 **A.** In witness Crane's Additional Employee Expense adjustment
11 shown on Exhibit ACC-2, Schedule 8, she proposes removing
12 all O&M payroll costs related to every new position
13 included in the Company's claim for 2020 and 2021. In
14 other words, witness Crane has recommended that the
15 Company's revenue requirement should only reflect the O&M
16 workforce level that existed during the 2019 historical
17 base year, ignoring the effects of the significant
18 customer growth and system expansion she otherwise
19 acknowledges have in fact occurred when arguing that
20 there is no need for an increase in marketing expenses.
21 (See pages 33 and 34 of her testimony).

22
23 **Q.** How does the Company's filing reflect O&M requirements
24 related to the workforce that existed in the 2019
25 historical test year and the new hires after 2019?

1 **A.** As correctly noted on page 21 of witness Crane's
2 testimony, the Company has trended it's 2019 actual O&M
3 related payroll costs of \$34,671,527 by three percent
4 annually to the 2021 test year, resulting in \$36,783,023
5 of 2021 O&M payroll costs. This is reflected on MFR
6 Schedule G-2, page 19, total "Payroll trended". Payroll
7 O&M costs related to 2020 and 2021 new hires were
8 reflected on the "Payroll not trended" line in that MFR
9 and totaled \$4,282,254 for the year 2021. This is the
10 amount witness Crane is recommending be removed from O&M
11 costs on Exhibit ACC-2, Schedule 8. Details by position
12 of the \$4,282,254 of "Payroll not trended" was provided
13 in response to OPC's First Set of Interrogatories No. 50.

14
15 **Q.** Please describe further what was included in the
16 Company's response to OPC's First Set of Interrogatories
17 No. 50?

18
19 **A.** Peoples' response to OPC's First Set of Interrogatories
20 No. 50 provided a detailed listing of each new positions
21 budgeted to be added in 2020 and 2021, the start
22 month/year, and the O&M related payroll cost for each
23 year. In addition, the response indicated the positions
24 that had been filled at the time of the response. For
25 each position that was unfilled in 2020 or budgeted for

1 2021, the Company provided an explanation of the position
2 need in the response.

3

4 **Q.** Regarding the positions that were indicated as being
5 filled, how much of the \$4,282,254 is related to those
6 filled positions?

7

8 **A.** The 2020 filled positions account for \$1,375,027 of the
9 \$4,282,254 and is reflected on pages 4 and 5 of the
10 Company's response to OPC's First Set of Interrogatories
11 No. 50 (highlighted positions are unfilled, non-
12 highlighted positions are filled).

13

14 **Q.** Did witness Crane acknowledge the filled positions or
15 reference the Company's response to OPC's First Set of
16 Interrogatories No. 50?

17

18 **A.** No. There is no reference to OPC's First Set of
19 Interrogatories No. 50 in witness Crane's testimony nor
20 any acknowledgement that some of the positions accounting
21 for the \$4,282,254 have already been filled.

22

23 **Q.** Regarding the 2020 unfilled positions shown on the
24 Company's response to OPC's First Set of Interrogatories
25 No. 50, why has the Company not filled those positions?

1 **A.** Although the Company's customer growth is very strong and
2 exceeding its 2020 budget, warm winter weather and the
3 COVID-19 pandemic impacts on commercial customers
4 operations has resulted in Peoples year-to-date August
5 2020 base revenues being well below its 2020 budget
6 projections included in its filing. As a result, Peoples
7 is earning well below the 9.25 percent bottom of the ROE
8 range at 8.46 percent ROE (see Peoples June 2020 Earnings
9 Surveillance Report), which is also well below what was
10 included in its 2020 budget. Therefore, due to the
11 unplanned temporary earnings challenges and initial
12 difficulties in onboarding and training new employees due
13 to the pandemic, Peoples had temporarily held off filling
14 20 of the 33 positions budgeted for O&M in year 2020 as
15 shown on pages 4-5 of its response to OPC's First Set of
16 Interrogatories No. 50.

17
18 **Q.** Please provide an overview of the 2020 unfilled positions
19 and 2021 budgeted positions reflected on the response to
20 OPC's First Set of Interrogatories No. 50?

21
22 **A.** In general, the need for the 2020 unfilled and budgeted
23 2021 positions is related to (i) the Company's strong
24 customer growth, (ii) ensuring safe operations of an
25 expanding system, (iii) meeting increasing and rapidly

1 evolving customer expectations, and (iv) increased
2 resources to support business development and data
3 analytics. As mentioned previously, a need explanation
4 for each of the 2020 unfilled positions and new 2021
5 budgeted positions were provided in the response to OPC's
6 First Set of Interrogatories No. 50, pages 2-3. Further
7 details are included in the rebuttal testimony of
8 witnesses Wall, O'Connor and Buzard.

9
10 **Q.** What do you suggest the Commission do with witness
11 Crane's recommendation to eliminate all O&M costs related
12 to the Company's new 2020 and 2021 positions?
13

14 **A.** Once again witness Crane is making an arbitrary
15 recommendation to sweep out the Company's claim with no
16 specific support. Justifications for the unfilled 2020
17 positions and to be filled positions in 2021 have been
18 provided. Therefore, I recommend the Commission reject
19 witness Crane's indiscriminate recommendation to not
20 include any new positions above the 2019 workforce
21 included in the Company's 2021 claim for O&M related
22 payroll.
23

24 **Q.** Do you agree with witness Crane's other recommendations
25 related to the new 2020 and 2021 positions?

1 **A.** No. After recommending elimination of all 2020 and 2021
2 new positions O&M payroll costs, witness Crane then
3 suggests a reduction to related Payroll Tax Expense, 401K
4 Expense and to remove O&M costs associated with
5 additional employees such as travel, meals, mileage,
6 uniforms etc. These recommended adjustments are included
7 in Exhibit, AAC-2, Schedules 11 and 12. As stated above,
8 justification for the 2020 and 2021 new positions has
9 been provided which also supports the Company's claim for
10 these related expenses. In addition, I disagree with
11 witness Crane's recommendation to completely remove the
12 Company's claim for incremental increases in Information
13 Technology ("IT") of \$607,242, Human Resources ("HR") of
14 \$246,994 and Other Shared Services Expenses of \$65,652
15 (see page 26 and 27 of her testimony and Exhibit ACC-2,
16 Schedule 12), on the basis of my response to her previous
17 recommendation to eliminate all new positions. I also
18 note that on page 26 of her testimony, witness Crane made
19 a transposition error on the HR item by stating it was
20 \$264,994 rather than the correct amount of \$246,994 shown
21 on Exhibit ACC-2, Schedule 12.

22
23 **Q.** Please explain further your disagreement with witness
24 Crane's recommendations on the IT, HR and Other Shared
25 Services Allocation Expense?

1 **A.** I generally agree with witness Crane' statement that
2 increased headcount is the cost causative driver for
3 assessing IT, HR and Other shared services. However,
4 witness Crane is incorrect in her implied inference that
5 both the 2020 and 2021 budgeted new positions impact the
6 IT, HR and Other shared services assessments. The three
7 referenced shared services assessments for 2021 were
8 budgeted based on the 2020 budgeted positions.
9 Therefore, Peoples' 2021 budgeted new positions did not
10 affect the 2021 IT, HR or Other shared service
11 assessments. In addition, regarding the \$607,242 of
12 incremental 2021 IT assessments, approximately 33 percent
13 of this is due to increased costs for additional
14 enterprise software system support in the IT department
15 at Tampa Electric, as indicated in the Company's response
16 to OPC's First Set of Interrogatories No. 50, page 7.
17 Therefore, approximately one-third of the \$607,242 is not
18 related to Peoples adding new positions as inferred by
19 witness Crane.

20
21 **3. Exclusion of Any Inflation Considerations for Trending**
22 **2019 Non-Labor Costs to 2021**

23 **Q.** Please summarize the adjustment witness Crane recommended
24 in her testimony regarding Other (Non-Labor) Trended
25 Expense.

1 **A.** As reflected in witness Crane's Exhibit ACC-2, Schedule
2 13, she proposes eliminating any inflation consideration
3 in trending 2019 non-labor O&M expense to the 2021
4 projected test year. The primary basis of witness
5 Crane's proposal is to not use Consumer Price Index
6 ("CPI") forecasts for general inflation trending of non-
7 labor O&M expense.

8
9 **Q.** Please explain your disagreement with witness Crane's
10 recommendation to not use CPI forecasts for trending Non-
11 Labor O&M expense.

12
13 **A.** Witness Crane's recommendation disregards the Commissions
14 long-standing practice of utilizing Consumer Price Index
15 - All Urban ("CPI-U") as an acceptable general inflation
16 index for evaluating and assessing utilities cost of
17 service trends over years. Specifically, the Commission
18 has precedent in utilizing CPI-U on MFR Schedules C-34
19 and C-37. In addition, in the Company's prior rate case
20 filings it has used CPI-U to trend its non-labor costs on
21 MFR Schedule G-2, and it has been accepted by the
22 Commission. For witness Crane to question the use of
23 CPI-U for trending historical base year cost to the
24 projected test year is questioning the judgment and
25 decisions made by all the prior Commissions in prior rate

1 case orders. The CPI-U is a reasonable indication of
2 general inflation for use in determining the projected
3 test O&M revenue requirements for projected test years
4 rate cases. Furthermore, witness Crane's statements
5 regarding using CPI for Energy Services and for CPI Gas
6 Service is inappropriate and unreasonable as volatility
7 in those indexes primarily reflects reductions in
8 commodity prices of natural gas and oil.

9
10 **Q.** Is Peoples use of Moody's inflation forecast of 2.2
11 percent for 2020 and 2021 consistent with the
12 Commission's prior acceptance of Moody's in the Company's
13 last rate case?

14
15 **A.** Yes. In Order No. PSC-09-0411-FOF-GU, page 22-23, the
16 CPI-U forecast from Moody's Economy.com was ultimately
17 used by the Commission for determining the Inflation
18 trend factor.

19
20 **Q.** Has the Company received an updated forecast from
21 Moody's?

22
23 **A.** Yes. Moody's updated forecast now being used by the
24 Company reflects expected CPI-U inflation of 2.5 percent
25 for 2021, 2.8 percent in 2022 and 2.4 percent from 2023-

1 2027 (see Exhibit No. ___ SPH-2, Document No. 1). As
2 mentioned by witness Crane on page 28 of her testimony,
3 the CPI-U data for the twelve months ended July 2020
4 reflects a 1.0 percent inflation rate. This low 1.0
5 percent CPI-U rate was significantly impacted by
6 decreases in energy prices including natural gas, which
7 has rebounded due in part to production disruption from
8 Hurricane Laura in late August. Moody's forecast for
9 2021 forward reflects increased inflationary pressures
10 from the \$2 trillion CARES Act fiscal stimulus package
11 and the potential for further stimulus, including Federal
12 Reserve actions, to bolster the U.S. economy through the
13 pandemic. On August 27, 2020, Federal Reserve Chairman
14 Jerome Powell announced a major policy shift to "average
15 inflation targeting", which signals the central bank will
16 be more inclined to allow inflation to run higher than
17 the standard two percent target before hiking interest
18 rates. This was further reiterated by the Federal
19 Reserve announcement on September 16, 2020. In summary,
20 assuming zero inflation in this docket as recommended by
21 witness Crane is not reasonable.

22
23 **Q.** Witness Crane mentions on page 27 of her testimony that
24 certain costs were adjusted by a Customer Growth X
25 Inflation factor. As mentioned previously, for the

1 twelve-months ended July 2020, witness Crane stated that
2 CPI-U was 1.0 percent. Over that same period, what was
3 Company's actual Customer Growth?
4

5 **A.** From July 2019 to July 2020, the Company's customer count
6 has grown from 398,228 to 418,813 (see Exhibit No. ___
7 SPH-2, Document No. 2). That represents a 5.2 percent
8 customer growth rate compared to the 3.32 percent rate
9 assumed for 2020 on MFR Schedule G-2, pages 10-19.
10

11 **Q.** What do you suggest the Commission do regarding any
12 changes to the trend factors on MFR Schedule G2, pages
13 10-19?
14

15 **A.** As previously stated, there is a strong long-standing
16 Commission precedent in utilizing the CPI-U as the
17 general inflation factor. Therefore, that precedent
18 should be recognized. If the Commission does ultimately
19 update the CPI-U based Inflation factor, then an update
20 to the Customer Growth factor should also be reflected in
21 the final trend factors. Although 2020 has been a very
22 volatile year with July actual CPI-U data suggesting 2020
23 general inflation has been lower and fiscal stimulus and
24 Federal Reserve policy changes suggesting 2021 and beyond
25 inflation will be higher, overall the 2.2 percent rate

1 assumed in the Company's filing for both years appears to
2 remain a reasonable inflation factor considering Moody's
3 long-term forecast for CPI-U that reaches as high as 2.8
4 percent in 2022.

5
6 **4. Misunderstanding of Short-Term Incentive Compensation**
7 **Costs included in the Company's Claim**

8 **Q.** Do you agree with witness Crane's recommended adjustments
9 to incentive compensation as shown on her Exhibit ACC-2,
10 Schedule 9?

11
12 **A.** No. As discussed in the rebuttal testimony of Company
13 witness McQuaid, the Company overall disagrees with
14 witness Crane's recommendations on removing financial
15 metric-based short and all long-term incentive
16 compensation from the revenue requirement as shown on her
17 Exhibit ACC-2, Schedule 9. In addition, I have specific
18 disagreement with witness Crane's proposed adjustment
19 that deals with her misunderstanding of the actual short-
20 term incentive compensation included in the Company's
21 claim. Witness Crane is correct that 50 percent of the
22 potential PSP short-term incentive awards are based on
23 financial metrics as provided in the Company's response
24 to OPC's First Set of Interrogatories No 10. However,
25 what witness Crane did not understand is that there are

1 zero dollars in the Company's claim related to
2 achievement of the PSP net income financial goal. The
3 PSP net income goal is only paid out to PSP program
4 participants if the Company achieves earnings above the
5 budget, which makes this a self-funded goal. Therefore,
6 the Company did not include any O&M in its 2021 revenue
7 requirement for the PSP net income goal that is worth
8 five percent of the 12 percent potential payout. The
9 other financial metric incentive in the PSP program is
10 the cash flow from operations goal that is worth one
11 percent of the 12 percent potential payout that was
12 included in the Company's claim.

13
14 **Q.** Did witness Crane make any other errors in her statement
15 that 50 percent of the Company's short-term incentive
16 awards are based on financial metrics?

17
18 **A.** Yes. In Peoples' response to OPC's First Set of
19 Interrogatories No. 10, which is referenced in witness
20 Crane's Exhibit ACC-2, Schedule 9, the Company provided
21 the current Peoples Balanced Scorecard summary document.
22 This document on Bates Stamp page 9, clearly shows the
23 financial metric goals for net income of 35 percent and
24 cash flow of five percent. This adds to 40 percent, not
25 the 50 percent as stated in witness Crane's testimony.

1 The 40 percent total was also reflected in the Company's
2 response to OPC's First Request for Production of
3 Documents No. 14, Bates Stamp page 2070, which reflects
4 the 2020 Balanced Scorecard Program.

5
6 **5. Adjustment to American Gas Association's ("AGA")**
7 **Membership Dues**

8 **Q.** Do you agree with the adjustment witness Crane has
9 recommended on pages 30-31 of her testimony regarding
10 lobbying activities conducted by AGA?

11
12 **A.** No. Witness Crane claims the AGA is under reporting
13 their lobbying activities on the invoices provided to
14 Peoples for membership dues, which effectively is
15 questioning AGA's integrity. After reviewing statements,
16 she read on the AGA's website, she breezily and without
17 evidence concludes that AGA's lobbying activities must
18 constitute 20 percent of membership dues and that the 3.5
19 percent explicitly stated on AGA's invoice is incorrect.
20 She provides nothing of substance to support that
21 conclusion. The Company's claim is based on the 3.5
22 percent stated on AGA's invoice for lobbying activities.
23 Therefore, I recommend that the Commission reject this
24 proposed \$36,343 adjustment by witness Crane.

25

1 **6. Removal of Additional Marketing and Advertising Expenses**

2 **Q.** Do you agree with witness Crane's recommendation on page
3 34 of her testimony to exclude \$829,871 of additional
4 Advertising and Marketing expense from the Company's
5 claim on the basis that Peoples has been successful in
6 its past marketing efforts as evidenced by its relatively
7 strong growth rate?

8
9 **A.** No. Although Peoples has had strong customer growth
10 exceeding Florida's population growth, there is still
11 potential for further market penetration and retention of
12 customers. Retaining and adding new customers provides
13 benefits to existing customers by increasing economies of
14 scale and spreading fixed costs over more customers and
15 therms. Although Peoples is a regulated utility, using
16 natural gas is a choice in Florida, which makes marketing
17 an essential component to the success of the Company's
18 long-term customer and sales growth.

19
20 **Q.** What is the current natural gas market penetration in
21 Florida?

22
23 **A.** Currently, the market penetration of natural gas in
24 Florida is only about 10 percent. And while Peoples has
25 good market penetration across its installed

1 infrastructure, it is not at 100 percent. In colder U.S.
2 climates, natural gas is a staple in most buildings as a
3 main heating energy resource. Due to Florida's tropical
4 climate, there is very little heating demand which makes
5 natural gas less prevalent and more of a choice.
6 Therefore, there is significant room for increased market
7 penetration as well as increased usage in the long-term
8 if additional marketing and advertising efforts are
9 consistently made to customers, land developers and
10 business leaders. As Peoples expands its system to
11 unserved areas, it is equally as important to advertise
12 and market to these future customers about natural gas
13 service coming to these communities.

14
15 **Q.** Regarding customer retention, what is the opportunity for
16 potential improvement?

17
18 **A.** For the three-year period 2017 through 2019, almost 7,800
19 residential and over 1,500 commercial customer premises
20 left Peoples' system. Every year thousands of customers
21 either leave Peoples' system entirely or take single
22 appliances off the system and replace them with electric.
23 Peoples can retain customers by educating them on the
24 reasons why natural gas is an affordable, safe, and
25 reliable energy resource as well as their options for

1 financing appliances and connecting them with qualified
2 installation contractors and dealers of gas appliances.

3
4 **Q.** What specifically would the increased marketing and
5 advertising expenses cover?

6
7 **A.** The additional marketing and advertising expenses include
8 outside services for creative development and production
9 of new marketing collateral and videos; digital, radio,
10 print and television advertisements across the Company's
11 14 service areas, digital assets like microsites, videos,
12 applications and interactive media elements. Other costs
13 include web hosting and gas industry-focused presentation
14 material. Some of these service areas cover some of the
15 most expensive media markets in Florida, which require
16 additional expense to reach targeted audience in these
17 markets.

18
19 **Q.** Do you agree with witness Crane's recommendation on page
20 34 of her testimony to eliminate the \$35,000 of
21 additional customer communications?

22
23 **A.** No. As mentioned in the Company's response to OPC's
24 Second Set of Interrogatories No. 109, the objective of
25 the additional communications is to improve the

1 customer's experience through customer research and
2 segmentation. As discussed on page 5 of the testimony of
3 Company witness Monica A. Whiting and adopted by witness
4 Karen Sparkman, the Company recognizes that customers'
5 needs and expectations are quickly changing and will
6 continue to evolve. As part of Peoples' "Voice of the
7 Customer" program, these costs are associated with
8 customer research and surveys to gain insight into
9 customers' needs, wants, perceptions, preferences, and
10 expectations. As well, "digitalization" of commerce and
11 the evolution of customer expectations is accelerating
12 even faster as a result of the COVID-19 pandemic. The
13 need for further research and customer segmentation is
14 driven by the need to keep up with these changing
15 expectations.

16
17 **7. Errors made by witness Crane**

18 **Q.** Have you noted any other errors made in OPC witness
19 Cranes testimony that are impacting her recommended
20 adjustments?

21
22 **A.** Yes. Below is a listing of errors made by witness Crane
23 in her testimony that happen to inflate her recommended
24 adjustments.

25 1. On her Exhibit ACC-2, Schedule 7, witness Crane has

1 used a recommended pre-tax amount of \$1,064,871 for
2 Advertising and Marketing Expense from her Schedule
3 16 rather than the correct after-tax amount of
4 \$803,745. Witness Crane makes a similar mistake
5 again on Schedule 7 in using a recommended pre-tax
6 amount of \$325,676 for 401K Expense from her
7 Schedule 11 rather than the correct after-tax amount
8 of \$245,814. The impact of these errors is the
9 income tax amounts of \$79,862 from Schedule 11 and
10 \$261,126 from Schedule 16, which is then carried
11 into her Exhibit ACC-2, Schedule 26 and multiplied
12 by the 1.3361 Revenue Multiplier, which results in a
13 total error of \$455,594.

14 2. On page 26, lines 1-3, witness Crane indicates she
15 did not include the long-term incentive compensation
16 in her recommended payroll tax adjustment because
17 these awards are not made in cash and have
18 potentially different tax treatment. However, she
19 then includes long-term incentive compensation in
20 her payroll tax adjustment calculation in Schedule
21 10. The impact of this error is overstating her
22 recommended payroll tax adjustment on Schedule 10 by
23 \$89,998, which is then carried into her Exhibit ACC-
24 2, Schedule 26 and multiplied by the 1.3361 Revenue
25 Multiplier, which results in a total error of

1 \$120,246.

2 3. On page 26, lines 4-8, witness Crane states:

3 "it is my understanding the Company's
4 401K claim is based on total
5 compensation, including short-term
6 incentive compensation awards that are
7 made in cash. Therefore, I made an
8 adjustment in Exhibit ACC -2, Schedule
9 11 to eliminate the Company's 401K match
10 on the labor and short-term incentive
11 compensation costs that I recommend be
12 disallowed."

13

14 This implies that she has only included short-term
15 incentive compensation and she has not included the long-
16 term incentive compensation in her recommended 401K match
17 adjustment, which would be correct. However, in her
18 calculated adjustment on Schedule 11 she does include
19 long-term incentive compensation in her 401K Expense
20 adjustment, which is incorrect. The impact of this error
21 is overstating her recommended adjustment on Schedule 11
22 by another \$47,319, which is then carried into her
23 Exhibit ACC-2, Schedule 26 and multiplied by the 1.3361
24 Revenue Multiplier, which results in a total additional
25 401K Expense adjustment error of \$63,223 on top of the

1 401K Expense error impact mentioned in item 1. above.

2
3 **Q.** Does witness Crane make any other errors in her
4 testimony?

5
6 **A.** Yes. On page 45, line 18 of her testimony in her overall
7 summary she states that her recommendation reflects
8 revenue requirement adjustments of \$42,103,332. However,
9 on her Revenue Requirement Summary shown on Exhibit ACC-
10 2, Schedule 1, it indicates total adjustments of
11 \$43,103,332. This inconsistency makes it unclear which
12 amount is her total recommendation.

13
14 **7. Proposed Amortization and Recovery of Certain O&M Costs**
15 **Over 5-year Periods**

16 **Q.** Please summarize witness Crane's proposals to amortize or
17 recover certain O&M costs over 5-year periods.

18
19 **A.** First, on Exhibit ACC-2, Schedule 17, witness Crane
20 proposes amortizing the Company's Rate Case Expense over
21 a five-year period. Second, on Exhibit ACC-2, Schedule
22 19, and on page 40 of her testimony, witness Crane
23 proposes a five-year recovery of the New Work Asset
24 Management O&M Expenses that cannot be capitalized by the
25 Company due to FASB accounting rules codified under ASC

1 350-40-25. Similarly, on page 37 and 38 of witness
2 Crane's testimony, she proposes that the Commission
3 normalize Transmission Integrity Management Program
4 ("TIMP") Pipeline Reassessment and Risk Analysis costs
5 using a five-year average of the anticipated costs, based
6 on the Company's current schedule for 2021-2025. In none
7 of the three items does witness Crane dispute the
8 Company's cost amounts, just the annual expense amount
9 recognized in its 2021 test year revenue requirements.
10

11 **Q.** Do you agree with witness Crane's proposal to amortize
12 rate case expense over 5 years?
13

14 **A.** No. While it is difficult to predict when Peoples will
15 file its next best rate case, I am relatively certain it
16 will be less than five years. Three years is an
17 appropriate amortization period for rate case expense and
18 no adjustment should be made.
19

20 **Q.** Do you disagree with witness Crane's recommendation to
21 amortize over 5 years the software implementation costs
22 not capitalized under GAAP rules?
23

24 **A.** No. I do not disagree with this alternative proposal to
25 allow the Company to amortize software implementation

1 costs not capitalizable over a 5-year period. This
2 proposed accounting treatment would be similar to rate
3 case expenses that are amortized over a period of time,
4 which is a long-standing Commission practice.

5
6 **Q.** Do you disagree with witness Crane's recommendation to
7 normalize TIMP Pipeline Reassessment and Risk Analysis
8 costs to reflect a five-year average of the anticipated
9 costs?

10
11 **A.** No. I do not disagree with witness Crane's alternative
12 proposal to annually amortize \$1,439,980 as shown on
13 Exhibit ACC-2, Schedule 18, as long as implementation of
14 this alternative proposal to normalize the TIMP costs is
15 fair to both customers and the Company. There is
16 Commission precedent to levelize certain costs where
17 significant fluctuations occur through reserve
18 accounting. In Order No. PSC-98-0739-FOF-GU, pages 2-3,
19 the Commission approved the Company's request for reserve
20 accounting due to wide fluctuations in annual costs for
21 environmental remediation expense. Reserve accounting
22 treatment levelizes the expenses included in revenue
23 requirements and the earnings impact on Peoples, thereby
24 being fair to both customers and the Company. As stated
25 by witness Crane on page 38 of her testimony, these TIMP

1 Pipeline Reassessment and Risk Analysis costs can vary so
2 significantly from year-to-year. Therefore, I recommend
3 that if the Commission adopts witness Crane's proposal to
4 normalize TIMP Pipeline Reassessment and Risk Analysis
5 costs at \$1,439,980 annually, then Commission should also
6 authorize the Company to apply reserve accounting
7 treatment for these fluctuating TIMP costs consistent
8 with the prior Commission decision in Order No. PSC-98-
9 0739-FOF-GU.

10
11 **SUMMARY**

12 **Q.** Please summarize your rebuttal testimony.

13
14 **A.** I have delineated my concerns and disagreements regarding
15 the recommendations included in the testimony of witness
16 Crane. Many of witness Crane's assertions contain
17 positions that are inaccurate, unreasonable,
18 inappropriate, and/or not in accordance with prior
19 Commission practice and decisions. I have presented
20 facts and information that support the Company's
21 petition, the reasonableness and prudence of amounts and
22 positions presented by Peoples, and the appropriateness
23 of the revenue requirement contained in its filing.

24
25 **Q.** Does this conclude your rebuttal testimony?

1

2 **A.** Yes, it does.

1 **BEFORE THE PUBLIC SERVICE COMMISSION**

2 **REBUTTAL TESTIMONY**

3 **OF**

4 **VALERIE STRICKLAND**

5
6 **Q.** Please state your name, business address, occupation and
7 employer.

8
9 **A.** My name is Valerie Strickland. My business address is
10 702 North Franklin Street, Tampa, Florida 33602. I am
11 employed by Peoples Gas System ("Peoples" or the
12 "Company").

13
14 **Q.** Are you the same Valerie Strickland who filed direct
15 testimony in this proceeding?

16
17 **A.** Yes, I am.

18
19 **Q.** What is the purpose of your rebuttal testimony?

20
21 **A.** The purpose of my testimony is to rebut the direct
22 testimony of witness Crane, testifying on behalf of the
23 Office of Public Counsel.

24
25 **Q.** Please summarize the areas of disagreement in witness

1 Crane's testimony that you are addressing in your
2 rebuttal testimony.

3
4 **A.** I disagree with witness Crane in the following three
5 areas:

6
7 1. Witness Crane's arguments presented on pages 43 - 45
8 of her testimony about the application of F.A.C Rule
9 25-14.004, Effect of Parent Debt on Federal Corporate
10 Income Tax.

11 2. Witness Crane's position on page 44 of her testimony
12 on the amount of federal tax expense the Company has
13 requested in the projected test year.

14 3. Witness Crane's proposal on page 45 of her testimony
15 to adjust the parent company interest adjustment
16 using Emera Incorporated's ("Emera") capital
17 structure.

18
19 **Q.** Why do you disagree with Witness Crane's interpretation
20 of F.A.C Rule 25-14.004, "Effect of Parent Debt on
21 Federal Corporate Income Tax"?

22
23 **A.** Witness Crane's logic for applying the Parent Debt
24 Adjustment Rule misapprehends the intent of the rule.
25 The intent of F.A.C. Rule 25-14.004 is to require an

1 adjustment to the income tax expense of a regulated
2 company to reflect the income tax benefit of the parent
3 debt that may have been invested as equity of the
4 subsidiary, and has nothing to do with cash payments made
5 to the Internal Revenue Service ("IRS") by a utility or
6 its parent company. To the extent the rule applies, MFR
7 Schedule C-26 properly reflects the application of the
8 rule to Peoples.

9
10 **Q.** Witness Crane states that there is a major disconnect
11 between the statutory rate used to calculate the federal
12 income taxes for ratemaking purposes and the actual taxes
13 being paid by the consolidated group. Do you agree with
14 this statement?

15
16 **A.** No. The total tax expense has been calculated consistent
17 with the Commission's longstanding policy of determining
18 a utility's revenue requirement by calculating income tax
19 expense on a stand-alone basis. Witness Crane has not
20 identified a valid reason for departing from the
21 Commission's policy for calculating income tax expense.

22
23 **Q.** Witness Crane recommends a parent debt adjustment using
24 the capital structure of Emera. Do you agree with this
25 conclusion?

1 **A.** No. On August 31, 2020, the Company responded to Staff's
2 Fourth Set of Interrogatories, No. 36, which requested a
3 parent debt adjustment calculation using Emera's capital
4 structure. Peoples' response explained that that it
5 correctly applied the rule as provided in F.A.C Rule
6 25.14.004 "Effect of Parent Debt on Federal Corporate
7 Income Tax" when it concluded that Emera U.S. Holdings,
8 Inc ("EUSHI") and not Emera, should be the parent company
9 used for purpose of calculating a parent debt adjustment.
10 As noted in my direct testimony, Peoples is a division of
11 Tampa Electric Company, which is a wholly owned
12 subsidiary of TECO Energy, Inc. TECO Energy, Inc. is a
13 subsidiary of EUSHI, which is a subsidiary of Emera, a
14 Canadian company. Peoples files a consolidated U.S.
15 income tax return with EUSHI. Emera is a Canadian
16 company that is not a party to the U.S. federal
17 consolidated tax return, so the plain language of the
18 rule does not impose the adjustment at the Emera level.
19 The rule states: "the income tax expense of a regulated
20 company shall be adjusted to reflect the income tax
21 expense of the parent debt that may be invested in the
22 equity of the subsidiary where a parent - subsidiary
23 relationship exists and the parties to the relationship
24 join in the filing of a consolidated income tax return"
25 (emphasis added).

1 Additionally, paragraph (2) of this rule provides that
2 "where the regulated utility is a subsidiary of tiered
3 parents, the adjusted income tax effect of the debt of
4 all parents invested in the equity of the subsidiary
5 utility shall reduce the income tax expense of the
6 utility". Since EUSHI is the highest tiered parent and
7 the ultimate parent company which files the U.S.
8 consolidated tax return, and Emera does not join in the
9 filing of a consolidated U.S. income tax return with
10 Peoples, the Company used the capital structure of EUSHI
11 parent for the purpose of calculating the parent debt
12 adjustment. Witness Crane's view of how the parent debt
13 adjustment rule should be applied misapplies the plain
14 language of the rule.

15
16 **SUMMARY**

17 **Q.** Please summarize your rebuttal testimony.

18
19 **A.** I have described the concerns and disagreements I have
20 regarding the substance of witness Crane's testimony.
21 Her assertions contain a variety of points that are not
22 only inaccurate, but also in contradiction with the
23 Commission's longstanding policy. I have presented facts
24 and information that support Peoples' position on the
25 parent company debt adjustment and the appropriateness of

1 the conclusions reached by Peoples with respect to the
2 parent company debt adjustment.

3

4 **Q.** Does this conclude your rebuttal testimony?

5

6 **A.** Yes, it does.

1 **BEFORE THE PUBLIC SERVICE COMMISSION**

2 **REBUTTAL TESTIMONY**

3 **OF**

4 **CHARLENE MCQUAID**

5
6 **Q.** Please state your name, business address, occupation and
7 employer.

8
9 **A.** My name is Charlene McQuaid. My business address is 5151
10 Terminal Road, Halifax, Nova Scotia, Canada. I am employed
11 by Emera Inc. (the "Company").

12
13 **Q.** Are you the same Charlene McQuaid who filed direct
14 testimony in this proceeding?

15
16 **A.** Yes, I am.

17
18 **Q.** What is the purpose of your rebuttal testimony?

19
20 **A.** The purpose of my rebuttal testimony is to address serious
21 errors and shortcomings in the prepared direct testimony of
22 witness Andrea C. Crane, testifying on behalf of the Office
23 of Public Counsel.

24
25 **Q.** Have you prepared an exhibit supporting your rebuttal

1 testimony?

2

3 **A.** No, I have not.

4

5 **Q.** Please summarize the key concerns and disagreements you
6 have regarding the substance of witness Crane's testimony.

7

8 **A.** I disagree with witness Crane's recommendation that
9 incentive compensation costs that are tied to financial
10 metrics be removed from the rate case and instead be
11 recovered from the Company's shareholders. I further
12 disagree that these costs do not benefit or could harm
13 Peoples' customers.

14

15 **INCENTIVE COMPENSATION**

16 **Q.** Do you agree with witness Crane that incentive compensation
17 based in financial metrics is inconsistent with a utility's
18 mandate?

19

20 **A.** No, I do not. Financial measures are a standard and expected
21 component of balanced incentive compensation plans. The
22 argument that financial measures are not in the best
23 interest of customers because they are tied to shareholder
24 success is a fallacy as the two are most definitely not
25 diametrically opposed. It is absolutely possible that both

1 groups can be aligned and benefit from the Company's
2 financial performance.

3
4 Strong financial performance is good for the shareholder
5 and can also mean low cost to deliver natural gas. This is
6 good for customers. Strong financial performance can be
7 derived from operational efficiencies and system growth
8 yields opportunities to expand and strengthen the service
9 into areas where it does not exist, which is good for
10 customers. Strong financial performance provides the funds
11 to invest in social programs that are important to the
12 public good. Strong financial performance allows the
13 Company to maintain/improve its credit rating, which is
14 important to ensure Peoples can continue to provide energy
15 in an affordable manner.

16
17 **Q.** Witness Crane recommends that the costs related to
18 financial measures in the incentive programs be excluded
19 from revenue requirement. Is that recommendation
20 appropriate?

21
22 **A.** No. There is no basis for any adjustment to incentive
23 compensation, which includes Peoples' short-term incentive
24 (STIP) and long-term incentive (LTIP) plans. Witness Crane
25 has provided no study or any other evidence to suggest that

1 Peoples' total compensation program is either imprudent or
2 unreasonable. She does not suggest an alternative method of
3 determining how employees should be paid for the work they
4 perform or how the prudence or reasonableness of their
5 compensation should be judged. Incentive compensation is a
6 portion of the total Peoples' market-based compensation
7 program. Incentive compensation is at risk and may or may
8 not be paid, depending on whether or not certain goals are
9 or are not achieved. As described in detail above and in my
10 testimony, Peoples' incentive compensation is part of an
11 overall total compensation program. The goals provide safe,
12 reliable service with consideration for cost containment
13 and financial prudence. Peoples' witness Sean P. Hillary's
14 rebuttal testimony speaks specifically to the costs
15 included in the Company's revenue requirement.

16
17 Accepting witness Crane's recommendation to disallow
18 components of the incentive program as identified in
19 witness Hillary's rebuttal testimony would adversely affect
20 the Company's ability to attract and retain a high-quality
21 skilled workforce. If the financial component of incentive
22 pay was removed, then total compensation would be below
23 market for comparable jobs putting Peoples at a competitive
24 disadvantage in the challenge to attract and retain a
25 talented workforce.

1 It is also worthy to note that using incentive compensation
2 programs can be less costly than increasing base salary
3 because incentive compensation is "at risk" and by
4 definition not guaranteed and based on achieving
5 objectives. The "at risk" component motivates employees to
6 perform at high levels and can drive more efficiency which
7 translates to direct benefits for Peoples' customers. With
8 a balance of goals, participation in these plans helps
9 ensure the Company's goals of providing customers with safe
10 and reliable service is achieved. The participation also
11 focuses on ensuring adequate return to the Company's
12 shareholders. Both these objectives benefits customers. The
13 first benefits customers who rely on natural gas to meet
14 their energy needs and the second benefits customers by
15 having a company that can attract needed capital at a
16 reasonable cost to provide service.

17
18 **SUMMARY**

19 **Q.** Please summarize your rebuttal testimony.

20
21 **A.** Each component of the Company's total compensation program,
22 including the STIP and LTIP are beneficial to customers and
23 directly consistent with the mandate to provide safe and
24 reliable customer service at fair prices. Incentive
25 compensation plans are particularly important as the amount

1 of award paid depends on the achievement of results. This
2 motivates officers, leaders and employees to achieve goals
3 focused directly or indirectly achieving the Company
4 mandate. Peoples' total compensation program ensures the
5 Company continues to attract and retain the skilled and
6 talented employees needed to support achieving the Company
7 mandate.

8
9 **Q.** Does this conclude your rebuttal testimony?

10
11 **A.** Yes, it does.

14

15

16

17

18

19

20

21

22

23

24

25

1 Q. Have you prepared an exhibit supporting your rebuttal
2 testimony?

3

4 A. No.

5

6 Q. Please summarize the key concerns and disagreements you
7 have regarding the substance of witness Andrea C. Crane's
8 testimony.

9

10 A. My key concerns and disagreements are as follows:

11 1. I disagree with witness Crane's conclusion that the
12 increase of \$200,000 in incremental pipeline safety
13 awareness advertising should be disallowed.

14 2. I disagree with witness Crane's conclusion that
15 \$98,000 in additional A&G employee expenses for
16 "additional preventive staffing" in the Pipeline
17 Safety Compliance Department should be disallowed.

18

19 **PIPELINE SAFETY AWARENESS ADVERTISING**

20 Q. Why is the public awareness program important for
21 Peoples?

22

23 A. Peoples is the largest natural gas company in the state
24 of Florida and receives over 560,000 locate request
25 annually, with a historical annual increase of +\- seven

1 percent. This growth is expected to increase and
2 parallel the construction growth forecasted for Florida.

3
4 Pipeline damages caused by excavation associated with
5 this growth, continues to subject the public, first
6 responders, Peoples' team members, and the Company's
7 pipeline facilities to the dangers of a hazardous and
8 potentially fatal incident. Over 50 percent of Peoples'
9 pipeline damages are by excavators digging without a
10 locate request/ticket. Witness Crane ignores these facts
11 in her testimony, favoring the elimination of funding for
12 programs designed to prevent these occurrences.

13
14 **Q.** How will the increase of \$200,000 to the public awareness
15 program improve safety for the general public, Peoples'
16 customers and team members?

17
18 **A.** This increase in funding for advertising and awareness
19 will enhance pipeline damage prevention, awareness,
20 outreach, and education of the dangers of hitting a
21 natural gas main across the state.

22
23 Industry best practices have shown that targeted
24 awareness campaigns and education materials directed to
25 industries and associated contractor's increases the

1 awareness to the requirements of calling for a locate
2 request and safe digging practices and contributes to the
3 reduction of hazardous pipeline damages.

4
5 **Q.** Are there further benefits to Peoples increasing spending
6 in the damage prevention and public awareness campaigns?

7
8 **A.** Yes. Not only will the increase in the campaign
9 positively influence safety, the investment in these
10 campaigns will have a positive impact on customer rates
11 in the future. Every instance of pipe damage results in
12 costs to Peoples from pipeline repairs and associated
13 expenses, legal expenses and potentially other liability
14 costs. By increasing awareness messaging promoting safe
15 digging practices and further protecting pipelines, in a
16 state that only very recently made changes to enforcement
17 rules surrounding underground damages, Peoples is
18 improving safety for customers, the general public and
19 team members.

20
21 Not only does the prevention of a damage impact Peoples
22 and its customers, it furthers reliability by preventing
23 a potential outage to businesses and reduces the need for
24 other first responders and municipal services to deal
25 with the damage.

1 **ADDITIONAL PREVENTIVE STAFFING**

2 **Q.** Does witness Crane ignore why damage prevention
3 activities are important to Peoples?

4
5 **A.** Yes. Witness Crane does not appear to have any
6 understanding of why these programs are important to the
7 Company, to its customers and to the public at large.
8 Based on industry data, Peoples arguably experiences the
9 most damages per miles of mains and services of any other
10 gas utility of similar size in customer base. These
11 conditions are due to the significant amount of
12 residential and commercial growth in Florida and the
13 corresponding roadway construction, which in conjunction
14 with lacking enforcement actions, results in significant
15 underground pipeline damages compared to other areas of
16 the country.

17
18 Peoples' Damage Prevention team is dedicated to work with
19 contractors to ensure the process of locating and
20 protecting underground facilities prevents damage to an
21 underground pipeline from ever occurring.

22
23 Florida has one of the highest volumes of locate ticket
24 requests in the country and it is critical that Peoples
25 continues to improve programs to enhance safety and

1 reliability for its customers. Peoples' experiences over
2 1,300 damages per year and although Peoples works
3 diligently to drive to a lower damages per 1,000 ticket
4 requests it requires the continued pursuit of improvement
5 to our systems and programs to reduce damages.

6
7 **Q.** Contrary to witness Crane's conclusion, why does Peoples
8 need additional staffing in damage prevention?

9
10 **A.** Peoples serves essentially all the major metropolitan
11 areas across Florida. Due to that geographic challenge
12 and given the Company's high damage rate, the Company is
13 pursuing additional staffing to have more onsite presence
14 at active state and municipal expansion of roadway and
15 water/sewer construction projects to proactively
16 coordinate with contractors and protect a potential
17 damage to a gas line. Industry best practice of onsite
18 presence at active construction sites to collaborate with
19 contractors has proven to significantly contribute to
20 lowering the occurrence of a damage.

21
22 Peoples is also adding staffing to continue to enhance
23 quality control and quality assurance over locating
24 activities. The accuracy and reliability of these
25 processes are critical to assist with preventing

1 excavation damages to pipelines.

2
3 **Q.** What is the need for the additional A&G of \$98,000
4 employee expenses for additional preventive staffing in
5 the 2021 test year?

6
7 **A.** As Peoples expands the staffing of the damage prevention
8 and quality assurance teams, it is necessary to expand
9 the employee expenses to support their annual activities.
10 These damage prevention coordinators and quality
11 assurance associates incur employee expenses related to
12 tools and equipment, uniforms, training, travel and other
13 incidental expenses. The increase of \$98,000 to A&G is
14 to adequately provide for the expansive territory being
15 served by critical resources that are dedicated to
16 reducing the occurrence of underground excavation damages
17 to natural gas pipelines in our service area.

18
19 **SUMMARY**

20 **Q.** Please summarize your rebuttal testimony.

21
22 **A.** The increase of \$200,000 to Peoples' Public Awareness
23 campaign is reasonable and necessary due to the
24 conditions that persist in the state of Florida
25 surrounding underground excavation damage to gas lines.

1 Due to over 50 percent of damages being driven by
2 excavators not calling prior to digging, Peoples has an
3 obligation to further advance these efforts in the
4 interest of protecting the safety of the general public,
5 team members and customers.

6
7 The increase to A&G expenses of \$98,000 associated with
8 employee expenses for preventive safety staffing is
9 justified due to the expansion of resources to further
10 protect underground gas pipelines. Witness Crane's
11 recommendation to eliminate these expenses ignores their
12 necessity to ensure compliance and safe operations.

13
14 **Q.** Does this conclude your rebuttal testimony?

15
16 **A.** Yes, it does.

1 **BEFORE THE PUBLIC SERVICE COMMISSION**

2 **REBUTTAL TESTIMONY**

3 **OF**

4 **DANE A. WATSON**

5 **ON BEHALF OF PEOPLES GAS SYSTEM**

6
7 **Q.** Please state your name, business address, occupation and
8 employer.

9
10 **A.** My name is Dane A. Watson. My business address is 101 E.
11 Park Blvd, Suite 220, Plano, TX 75704. I am a Partner
12 with Alliance Consulting Group.

13
14 **Q.** Are you the same Dane A. Watson who filed direct
15 testimony in this proceeding?

16
17 **A.** Yes, I am.

18
19 **Q.** What is the purpose of your rebuttal testimony?

20
21 **A.** The purpose of my rebuttal testimony is to address
22 serious errors and shortcomings related to depreciation
23 recommendations in the prepared direct testimony of
24 witness David J. Garrett, testifying on behalf of the
25 Florida Office of Public Counsel ("OPC").

1 Q. Please explain how your rebuttal testimony is organized.

2

3 A. OPC witness Garrett has made recommendations for selected
4 life and net salvage parameters which produce lower
5 depreciation rates than those I recommend. First, I will
6 discuss the issues with witness Garrett's life
7 recommendations. Next, I will discuss his differing
8 positions on net salvage parameters.

9

10 Q. Have you prepared an exhibit supporting your rebuttal
11 testimony?

12

13 A. Yes, I have. My Exhibit No. __ (DAW-2), consisting of six
14 documents prepared by me or under my direction and
15 supervision.

16 Document No. 1 Email response to discovery questions
17 sent from OPC, dated September 9,
18 2020.

19 Document No. 2 Comparison of Account 380 - Steel
20 Services Observed Life Table using
21 witness Garrett's non-existent 1970-
22 2020 experience band compared to the
23 actual longest experience band of
24 1983-2018.

25 Document No. 3 RTU Detail for Accounts

1 Document No. 4 Account 378 - M&R Stations Sum of
2 squared differences computations
3 (correcting witness Garrett's
4 calculations).

5 Document No. 5 Account 380 - Steel Services sum of
6 squared differences computations
7 (correcting witness Garrett's
8 calculations).

9 Document No. 6 Account 385 - Industrial M&R Stations
10 Sum of squared differences revised
11 computations (correcting witness
12 Garrett's calculations).

13

14 **Q.** Please summarize the key concerns and disagreements you
15 have regarding the substance of witness Garrett's
16 testimony.

17

18 **A.** My key concerns and disagreements are as follows:

19 1. The four life parameter changes recommended by OPC
20 witness Garrett are inappropriate and based on
21 flawed analysis.

22 2. The six-net salvage parameter changes recommended by
23 OPC witness Garrett are arbitrary, not supported by
24 Company experience and should be rejected.

25

1 **PROPOSED LIFE PARAMETERS**

2 **Q.** What recommendations does witness Garrett make with
3 regard to various account service lives?

4
5 **A.** Witness Garrett suggests that the proposed service lives
6 for four distribution accounts should be extended.¹

7
8 **Q.** How does witness Garrett's proposed lives and survivor
9 curves for the four accounts at issue compare with those
10 currently approved for Peoples' and your proposals?

11
12 **A.** Table 1 below compares my proposals to witness Garrett's
13 proposals for the existing life and survivor parameters
14 for the four accounts at issue.

15
16 **TABLE 1**

<u>Acct</u>		Existing		Company		OPC	
				Proposed		Proposed	
		<u>Life</u>	<u>Curve</u>	<u>Life</u>	<u>Curve</u>	<u>Life</u>	<u>Curve</u>
378	M&R Station Equipment	31	R1	40	R1.5	46	R1
380	Services – Steel	50	R0.05	52	R0.5	57	R0.5
380	Services –Plastic	55	R1.5	55	R1.5	64	R1.5
385	Industrial M&R Station	32	R4	37	R3	41	R3

19
20
21
22
23
24

¹ Witness Garrett's Direct Testimony, page 91.

1 Q. Do you agree with witness Garrett's recommendations?

2

3 A. No. Witness Garrett's proposed service lives for the
4 four distribution mass property accounts are unreasonable
5 and are not based on sound depreciation practices.
6 Witness Garrett's recommendations should be rejected, and
7 my proposed service lives should be adopted.

8

9 Q. Would you elaborate on your disagreement with witness
10 Garrett's life selections?

11

12 A. Yes. There are a number of global and systematic errors
13 in witness Garrett's analysis which lead to inappropriate
14 life recommendations. I will address those in this
15 section. Later, I will discuss account-specific issues
16 with witness Garrett's four life recommendations.

17

18 Q. Would you describe the global errors in witness Garrett's
19 analysis?

20

21 A. Yes. Witness Garrett's analysis:

22 • Used a non-existent experience band as his only band
23 that included 12 or more years with no retirements.
24 This skewed his analytical results and ultimately his
25 recommendations.

- 1 • Violated the principles behind actuarial analysis by
- 2 only using one placement and experience band (the full
- 3 band) thereby not analyzing trends in life through
- 4 time.
- 5 • Discarded relevant data in analyzing his single band by
- 6 using a novel (non-industry standard) approach that cut
- 7 off and ignored Company-specific experience.
- 8 • Ignored both company-specific operational information
- 9 and reasonable engineering expectations for the life of
- 10 assets.

11

12 **ERRONEOUS EXPERIENCE BAND**

13 **Q.** What band(s) did witness Garrett use in his life

14 analysis?

15

16 **A.** Based on witness Garrett's testimony, workpapers and

17 response to a Data Request (See Exhibit DAW-1), his

18 analyses solely used a single placement/experience band

19 as shown below²:

20

21

22

23

24

² See witness Garrett's Exhibit 23 and my Exhibit No. ___ (DAW-1)

Table 2: Garrett Band for Each Account

Account	OPC Placement Band	OPC Experience Band
378	1940-2019	1970-2020
380 Steel	1910-2020	1970-2020
380 Plastic	1959-2020	1970-2020
385	1958-2019	1970-2020

Q. Do these bands witness Garrett used match the underlying data he used?

A. No. Witness Garrett responded to a data request in Exhibit No. __ (DAW-1) that he used the same data for his analysis as contained in the Company's Depreciation Study ("Study"). This admission points out the error in witness Garrett's band selections. The data for the Company's Study did not contain transactions back to 1970 (which would be necessary for an experience band back to 1970) and the data did not contain transactions from 2019 or 2020 since the study date was at December 31, 2018.

Q. Would you expand on the issue with using an experience band starting in 1970?

A. Yes. Witness Garrett's life analysis experience bands of 1970-2020 or 1970-2019 include periods where no Peoples'

1 history is available. The Company's available actuarial
2 history begins in 1983, consistent with other
3 depreciation studies the Company has presented before
4 this Commission. Witness Garrett's inclusion of
5 experience band periods where data does not exist
6 (including 1970-1982 and 2019-2020) makes it appear
7 (incorrectly) that the Company had no retirements of any
8 kind during those periods. This created a flawed
9 analysis that witness Garrett then used as the basis of
10 his recommendations.

11
12 **Q.** Has Peoples used historical data prior to 1983 in its
13 previous Study?

14
15 **A.** No. Consistent with the current Study, in Account 378,
16 the Company retirement history is shown on pages 215-224
17 of the 2016 Study ending in transaction year 1983. In
18 Account 380-Steel Services, Company retirement history is
19 shown on pages 296-309 of the 2016 Study ending in
20 transaction year 1983. In Account 380 Plastic Services,
21 the Company retirement history is shown on pages 333-340
22 of the 2016 Study ending in transaction year 1986. In
23 Account 385, the Company retirement history is shown on
24 pages 504-511 of the 2016 Study ending in transaction year
25 1985. Although in the past Study (and the current Study),

1 there is no historical experience available between 1970
2 and 1982, witness Garrett still included that period in
3 his analysis.

4
5 **Q.** Why does it matter if the experience band uses 1970-2018
6 instead of the correct 1983-2018?

7
8 **A.** The use of the non-existent years creates different
9 results in the observed life table if the experience band
10 is the incorrect 1970-2018 as compared to the actual
11 1983-2018 range. In some accounts, the difference can be
12 large. For example, in Account 380 Steel Services, the
13 wider experience band of 1970-2020 (of which the first 12
14 years do not exist in reality) produced curve points as
15 much as **7.15 percent** higher than the correct 1983-2018
16 band. See my Exhibit No. __ (DAW-2), Document No. 2, to
17 show the computations for Account 380-Steel Services.
18 This may not seem significant on the surface; it can
19 erroneously move the life observed in the analysis by
20 several years in the graphical analysis. Additionally,
21 given witness Garrett's reliance on mathematical fitting,
22 the life with the best least squares curve fit will also
23 erroneously change if curve points related to Company
24 experience are overstated by including the blank years.
25 In the individual account discussions, I will show how

1 using the correct experience band can calculate
2 statistical matches that are better under my
3 recommendation than witness Garrett's.

4
5 **Q.** Would you demonstrate how using this erroneous experience
6 band will skew the results of the graphical analysis?

7
8 **A.** Yes. Below is my recommendation and witness Garrett's
9 recommendation for Account 380-Steel Services using the
10 correct experience band

11
12
13
14
15
16
17
18
19
20
21
22 As seen, my recommendation is a much better match to the
23 Company's actual experience. Next is a graph of the mine
24 and witness Garrett's recommendations using his erroneous
25 band.

1
2

13
14
15
16
17
18
19
20
21
22
23
24
25

Using the erroneous band, witness Garrett's recommendation would appear to be a better match, however, it based on inaccurate calculations. Demonstrated another way, the graph below shows the observed life table data points using the correct calculation (i.e. the actual range of Company experience) and using witness Garrett's erroneous band.

1
2

13
14
15
16
17
18
19
20
21
22
23
24

Simply using an erroneous experience band in his calculation skewed the data to incorrectly suggest a longer life than is experienced by the Company in reality. For this reason (if no other), witness Garrett's life recommendations should not be accepted.

SINGLE BAND

Q. What placement and experience bands did witness Garrett use in his analysis?

1 **A.** Witness Garrett only used one placement and experience
2 band in his testimony and workpapers for each account, as
3 summarized in Table 2.

4
5 **Q.** Do you agree with witness Garrett's decision to use only
6 one placement and experience band?

7
8 **A.** No. The erroneous experience band was discussed above.
9 witness Garrett's use of only one placement and
10 experience band is an additional issue that does not
11 follow sound depreciation practice or guidance, and in my
12 expert opinion, does not lead to accurate results in this
13 case. NARUC's *Public Utility Depreciation Practices*
14 advocates the use of multiple bands:

15 Banding is compositing a number of years of
16 data in order to merge them into a single data
17 set for further analysis. Often, several bands
18 are analyzed. By making determinations of the
19 life and retirement dispersion in successive
20 bands, the analyst can get a clear indication
21 of whether there is a trend in either the life
22 of the plant or in the dispersion of the
23 retirements.³

24

³ NARUC, *Public Utility Depreciation Practices*, at 113 (1996).

1 Another learned treatise, *Depreciation Systems*, offers
2 similar guidance:

3 The analyst must use good judgment when
4 determining band widths. Many empirical
5 procedures governing this choice have been
6 developed. These include the selection bands
7 of fixed width, often 3, 5, or 10 years;
8 rolling bands, in which one band overlaps the
9 next; and shrinking bands, in which the width
10 of the band systematically decreases.

11 A preferred approach is to select the bands
12 based on the history and the activities that
13 occurred during the period defined by the
14 bands. Because placement bands are often used
15 to describe property of a particular
16 technology, a band could be chosen that will be
17 wide enough to include all property of a
18 similar technology. Experience bands may be
19 chosen to include the calendar years during
20 which a single force of retirement was of
21 particular interest.

22 Bands may be chosen to detect change in the
23 survivor characteristics.⁴
24

⁴ F.K. Wolf and W. C. Fitch, *Depreciation Systems*, at 186 (1994).

1 Witness Garrett does not explain why he has decided not
2 to follow this guidance and instead choose only one
3 placement and experience band.

4
5 **Q** What placement and experience bands did you use for
6 purposes of your Study?

7
8 **A.** I used five or more placement/experience bands for each
9 account at issue in this proceeding. I ran an overall
10 placement band with two experience bands: the overall
11 experience band, 1983-2018, and 1999-2018 to isolate
12 experience in those transaction years. I also ran the
13 1969-2018 placement band with the 1983-2018 and 1999-2018
14 experience bands. If sufficient data existed for life
15 analysis, I also ran an overall band of 1999-2018.

16
17 **CURVE TRUNCATION**

18 **Q.** Do you agree with witness Garrett's proposal to remove
19 certain portions of the OLTS for the purpose of making
20 mathematical comparisons?

21
22 **A.** No. By eliminating certain relevant data, witness
23 Garrett seeks to match only the top segment of the curve.

24
25

TABLE 3

Account	OLT Matched by Garrett
378	100% to 55.24% ¹
380 Steel Services	100% to 40.79% ²
380 Plastic Services	100% to 84.16% ³
385	100% to 68.12% ⁴

¹ Exhibit DJG-19 page 1

² Exhibit DJG-20, page 2

³ Exhibit DJD-21, page 1

⁴ Exhibit DJD-22, page 1

Particularly in the case of Account 380 Plastic Services, witness Garrett disregards significant portions of the OLT curve completely. His mathematical fitting criteria truncates the curve at age 37.5 with 84 percent surviving as he computes the OLT in Exhibit DJD-21, page 1. While I agree, less weight should be given to points at the bottom of the curve compared to other points along the curve, this data should not be completely excluded from the analysis. *Depreciation Systems* provides authoritative guidance as to what part of the curve to match:

After plotting the observed curve, the analyst should first visually match the plotted data to make an initial judgment about the type curve that may be good fits. The analyst also must decide which points or section of the curve

1 should be given the most weight. Points at the
2 end of the curve are often based on fewer
3 exposures and may be given less weight than the
4 points based on larger samples. The weight
5 placed on those points will depend on the size
6 of the exposures. Often the middle section of
7 the curve (that section ranging from
8 approximately 80 percent to 20 percent
9 surviving) is given more weight than the first
10 and last sections. This middle section is
11 relatively straight and is the portion of the
12 curve that often best characterizes the survivor
13 curve.⁵

14

15 Witness Garrett has provided no authority in support of
16 his position to disregard entire segments of the observed
17 life table curves. By ignoring results from the 80 to 20
18 percent surviving period, his methodology runs counter to
19 academic guidance.

20

21 **SUBJECT MATTER EXPERTS**

22 **Q.** You state earlier that witness Garrett did not
23 incorporate information from SMEs in his recommendations.

⁵ F.K. Wolf and W. C. Fitch, *Depreciation Systems*, at 46-47 (1994) (emphasis added).

1 Why do you take issue with this?

2

3 **A.** Witness Garrett makes no indication in his testimony,
4 exhibits, or workpapers that he reviewed or incorporated
5 any information from Company experts in his life
6 recommendations. Information provided by SME's on the
7 specific plant and equipment being studied is of critical
8 importance in the depreciation study process. In its
9 1996 edition of the publication *Public Utility*
10 *Depreciation Practices*, NARUC advises against strict
11 reliance on historical data and fitting, stating:

12 Depreciation analysts should avoid becoming
13 ensnared in the historical life study and
14 relying solely on mathematical solutions. The
15 reason for making an historic life analysis is
16 to develop a sufficient understanding of
17 history in order to evaluate whether it is a
18 reasonable predictor of the future. The
19 importance of being aware of circumstances
20 having direct bearing on the reason for making
21 an historical life analysis cannot be
22 understated. The analyst should become
23 familiar with the physical plant under study
24 and its operating environment, including

1 talking with the field people who use the
2 equipment being studied.⁶

3

4 For instance, witness Garrett ignores important
5 information for Account 385-Industrial and Measuring
6 Equipment. My interview notes state, that

7 "Meters for these stations are in the meter
8 account. This consists of all other assets
9 serving the customer. They would be more
10 parallel to a DRS than to a city gate. The
11 environment where the industrial M&R
12 stations are set is harsher than most DRS
13 and they would have a slightly shorter life
14 than the DRS."

15

16 Witness Garrett's recommendation of 41 years ignores this
17 crucial information.

18

19 **REASONABLENESS TEST**

20 Q. You stated above that witness Garrett did not consider
21 the life characteristics that would be normal or expected
22 for similar assets found across North America. Why is
23 this problematic?

⁶ NARUC, *Public Utility Depreciation Practices*, at 126 (1996)
(emphasis added).

1 **A.** The lives witness Garrett selected for the four accounts
2 at issue are beyond what would reasonably be expected for
3 the mix and types of assets within these accounts.
4 Witness Garrett fails to take into account the shorter
5 life expectations for individual retirement units
6 (assets) within each account as compared to his
7 recommendations. A summary of retirement units by
8 account is presented in Exhibit No. __ (DAW-2), Document
9 No. 3. If the majority of the dollars in a particular
10 account are associated with assets that have projected
11 lives between 20 and 40 years, an overall life for the
12 account of 60 years for that account will not be
13 reasonable. This is true even if mathematical curve
14 matching on historical data for that account over the
15 last 80 years mechanically produces a 60 year overall
16 life. Simply recommending the output of a statistical
17 model without validating against operational realities or
18 reasonable norms is not an accurate way to set asset
19 lives.

20
21 **ACCOUNT LEVEL DISCUSSION**

22 **Account 378 - Measuring and Regulating Equipment**

23 **Q.** Please describe you and witness Garrett's recommendations
24 for Account 378- Measuring and Regulating Equipment?
25

1 **A.** I recommend increasing the existing service life for
2 Account 378, which is currently 31 R1, to a 40 R1.5.
3 This represents an increase of nine years. Witness
4 Garrett proposes 46 R1, which is an increase of 15 years
5 over the existing and six years beyond my recommendation.
6 At December 31, 2018, the average age of survivors in
7 this account is 9.07 years and the average age of
8 retirements in this account is 20.70 years. This
9 information demonstrates that this is a young account
10 with little retirement experience for the majority of the
11 assets.

12
13 **Q.** Do you agree with witness Garrett's basis for proposing a
14 46 R1 Curve?

15
16 **A.** No. There are a number of reasons I disagree with
17 witness Garrett on the life for this account. First,
18 witness Garrett does not appear to factor in the life
19 expectations for specific assets in this account as
20 communicated by Company SMEs. My interview notes on this
21 account indicate the following factors that influence the
22 life of this account:

23 "They would expect a shorter life for DRS
24 than for City Gates. They are more likely
25 to be relocated and changed due to capacity

1 needs, and road improvement needs than the
2 gates. The existing 31 years seems short
3 operationally. DRS are on the side of the
4 road in many cases. They are in the process
5 of reviewing all of the DRS and will be
6 replacing many of the DRS over the next few
7 years. There were a number that were
8 retired when moving away from low pressure
9 areas."⁷

10
11 Second, witness Garrett's life analysis is flawed as
12 discussed in an earlier section. Thus, his life analysis
13 graphs are flawed as well.

14
15 Third, as also discussed earlier, witness Garrett only
16 examines one band for his proposal. In contrast, I used
17 five different placement and experience bands as shown in
18 my workpapers. As stated in NARUC's *Public Utility*
19 *Depreciation Practices*, it is important to look at
20 different placement bands and experience bands:

21 "Placement bands may be used to show the
22 effects and technological and material
23 changes, whereas experience bands are used
24 the show the effects of business and

⁷ Watson Direct Workpapers, Interview Notes.

1 operational changes. Such banding is
2 necessary because the analyst does not have
3 access to a database wherein each factor
4 (e.g., change in materials/technology or
5 operational environment) is held constant.”⁸
6

7 **Q.** What does a visual comparison over multiple bands show
8 when correcting the previously discussed errors in
9 witness Garrett’s analysis?
10

11 **A.** Below are graphs over various placement and experience
12 bands. The dark triangles represent the observed life
13 table, the rectangles represent the Company’s proposal,
14 and the slanted triangles show witness Garrett’s
15 proposal. The first graph shows the period 1940–2018 for
16 the placement and correct 1983–2018 experience band with
17 both my recommendation and that of witness Garrett. My
18 recommendation is clearly a better match.
19

22
23
24
25

A narrower experience band of 1999-2018 with the same placement year 1940-2018 again shows the Company's proposal is a better visual match.

1 A change in the placement band to 1969-2018 with the
 2 experience band of 1983-2018 again shows the Company's
 3 proposal is a better visual match.

15 A change in the placement band to 1969-2018 with the
 16 experience band of 1999-2018 again shows the Company's
 17 proposal is a better visual match.

By selecting only one band (and having the errors discussed earlier), witness Garrett's analysis doesn't fully analyze or accurately represent the Company's historical experience.

Q. Are there other aspects that you considered in your 40 R1.5 recommendation?

A. Yes. The fit I selected was one of 21 different fits across multiple placement and experience bands, which can be found in my workpapers. There are a variety of assets with a mix of lives recorded in this account and my movement to a 40-year life is reasonable. Further, witness Garrett's data is flawed.

1 Q. Do you have any additional comments on the life
2 recommendation for this account?

3

4 A. Yes. My life recommendation of 40-R1.5 recognizes both
5 the indications in the life analysis and the Company-
6 specific information from the SMEs. Further, my analysis
7 recommends an *increase* of 9 years over the existing life,
8 which translates to a 29 percent increase to the life.
9 To move the life another six years from my recommendation
10 is excessive. When compared to existing parameters,
11 witness Garrett's life represents an increase of 15 years
12 or a 48 percent change. This level of change without
13 operational reasons at one time is unreasonable, is not
14 supported by the evidence, and should be rejected.

15

16 Q. How do witness Garrett's mathematical fitting criteria
17 appear using the historical data using the appropriate
18 bands?

19

20 A. When using the 1940-2018 placement band and 1983-2018
21 experience band, the overall sum of squares difference of
22 my recommendation is 0.1260 versus witness Garrett's of
23 0.9109. It should be noted that the smaller the number,
24 the closer the match. Using witness Garrett's proposed 1
25 percent exposure criteria, the sum of squares difference

1 is 0.0565 and 0.1879 between the Company's proposal and
2 OPC's, respectively. See Exhibit (DAW-2), Document No.
3 4. Using Company history and the correct placement and
4 experience band, the Company's proposal is the superior
5 proposal for visual fitting as well as mathematical
6 fitting.

7
8 **Q.** What life did witness Garrett recommend for this account
9 in the recent Florida City Gas case?

10
11 **A.** In Docket 20170179-GU for Florida City Gas, witness
12 Garrett recommended a 30 S3⁹ life for this account. It
13 does not seem logical that Peoples would have assets in
14 this account that last 53.3 percent¹⁰ longer than witness
15 Garrett's recommendation for another Florida utility.

16
17 **Account 380 - Services Steel**

18 **Q.** Please describe your and witness Garrett's
19 recommendations for Account 380- Services Steel?

20
21 **A.** I recommend increasing the existing service life for
22 Account 380, Services Steel, which is currently 50 R0.5,
23 to a 52 R0.5. This represents an increase of 2 years.

⁹ Docket 20170179-GU, Exhibit DJG-20 and 21.

¹⁰ $(46 - 30) / 30 = 53.3$ percent

1 witness Garrett proposes 57 R0.5, which is an increase of
2 seven years over the existing and five years beyond my
3 recommendation. At December 31, 2018, the average age of
4 survivors in this account is 23.14 years and the average
5 age of retirements in this account is 26.29 years. This
6 information demonstrates the account is more mature with
7 assets that are replaced on an ongoing basis.

8
9 **Q.** Do you agree with witness Garrett's basis for proposing a
10 57 R0.5 Curve?

11
12 **A.** No. There are a number of reasons I disagree with
13 witness Garrett on the life for this account. First,
14 witness Garrett does not appear to factor in the life
15 expectations for specific assets in this account as
16 communicated by Company SMEs. My interview notes on this
17 account indicate the following factors that influence the
18 life of this account:

19 Forces of retirements are corrosion, dig-
20 ins, and relocations. Other factors
21 influencing the life of this account are the
22 Company's policy to replace steel services
23 with plastic if a main changes from steel to
24 plastic.¹¹

¹¹ Watson Exhibit No. __ (DAW-1), Page 87.

1 Second and third, as discussed earlier, witness Garrett's
2 life analysis is flawed and he only examines one band for
3 his proposal. In contrast, I used seven different
4 placement experience bands as shown in my workpapers. As
5 stated earlier, NARUC's *Public Utility Depreciation*
6 *Practices* notes that it is important to look at different
7 placement bands and experience bands: "Placement bands
8 may be used to show the effects and technological and
9 material changes, whereas experience bands are used the
10 show the effects of business and operational changes.
11 Such banding is necessary because the analyst does not
12 have access to a database wherein each factor (e.g.,
13 change in materials/technology or operational
14 environment) is held constant."¹²

15
16 **Q.** What does a visual comparison over multiple bands show?

17
18 **A.** Below are graphs over various placement and experience
19 bands. The dark triangles represent the observed life
20 table, the rectangles represent the Company's proposal,
21 and the slanted triangles show witness Garrett's
22 proposal. The graph below shows our competing selections
23 for the period 1910-2018 for the placement band and 1983-

¹² NARUC, *Public Utility Depreciation Practices*, at 125 (1996).

1 2018 experience band. My recommendation is clearly a
 2 superior match.

13

14

15 **Q.** Are there other aspects that you considered in your 52
 16 R0.5 recommendation?

17

18 **A.** Yes. The fit I selected was one of 25 different fits
 19 across multiple placement and experience bands, which can
 20 be found in my workpapers. There are a variety of assets
 21 with a mix of lives recorded in this account and my
 22 movement to a 52-year life is reasonable.

23

24 **Q.** Do you have any additional comments on the life
 25 recommendation for this account?

1 **A.** Yes. My life recommendation of 52-R0.5 recognizes both
2 the indications in the life analysis and the Company-
3 specific information from the SMEs. Further, my analysis
4 recommends an *increase* of two years over the existing
5 life, which translates to a 4 percent increase to the
6 life. To move the life another five years from my
7 recommendation is excessive. When compared to existing
8 parameters, witness Garrett's life represents an increase
9 of seven years or a 14 percent change. This level of
10 change without operational reasons at one time is
11 unreasonable, is not supported by the evidence, and
12 should be rejected.

13
14 **Q.** How do witness Garrett's mathematical fitting criteria
15 appear using the historical data through 2018?

16
17 **A.** Yes. When using the 1910-2018 placement band and the
18 correct 1983-2018 experience band, the overall sum of
19 squares difference of my recommendation is 0.0643 versus
20 witness Garrett's of 0.1644. Again, the smaller the
21 number, the closer the match. Using witness Garrett's
22 proposed 1 percent exposure criteria, the sum of squares
23 difference is 0.0239 and 0.0992 between the Company's
24 proposal and witness Garrett's, respectively. See
25 Exhibit No. ___ (DAW-2), Document No. 5. Using Company

1 history and the correct placement and experience band,
2 the Company's proposal is the superior proposal for
3 visual fitting as well as mathematical fitting.
4

5 **Q.** What life did witness Garrett recommend for this account
6 in the recent Florida City Gas case?
7

8 **A.** In Docket 20170179-GU for Florida City Gas, witness
9 Garrett recommended a 45 S6¹³ life for this account. It
10 does not seem logical that Peoples would have assets in
11 this account that last 26.7 percent¹⁴ longer than witness
12 Garrett's recommendation for another Florida utility.
13

14 **Account 380 - Plastic Services**

15 **Q.** Please describe your and witness Garrett's recommendations
16 for Account 380-Plastic Services?
17

18 **A.** I recommend retaining the existing service life for
19 Account 380-Plastic Services, which is currently 55 R1.5.
20 Witness Garrett proposes 64 R1.5, which is an increase of
21 nine years over the existing and my recommendation. In
22 Peoples' last Study filed in Docket No. 20160159-GU,
23 witness Garrett proposed 55 R.15 and only five years
24 later his recommendation has changed significantly. At

¹³ Docket 20170179-GU, Exhibit DJG-20 and 21.

¹⁴ $(57 - 45) / 45 = 26.7$ percent

1 December 31, 2018, the average age of survivors in this
2 account is 11.74 years and the average age of retirements
3 in this account is 16.28 years. This information
4 demonstrates that this is a young account with little
5 retirement experience for the majority of the assets.

6
7 **Q.** Do you agree with witness Garrett's basis for proposing a
8 64 R1.5 Curve?

9
10 **A.** No. There are a number of reasons I disagree with
11 witness Garrett on the life for this account. First, as
12 discussed earlier, witness Garrett's life analysis is
13 flawed. Second, as discussed earlier and as with his
14 other accounts, witness Garrett only examines one band
15 for his proposal. In contrast, I used eight different
16 placement experience bands as shown in my workpapers.
17 Third, the use of witness Garrett's 1 percent of exposure
18 criteria models only 100 percent to 84 percent, losing
19 valuable data in his proposed truncation.

20
21 **Q.** What does a visual comparison over multiple bands show?

22
23 **A.** Below are graphs over various placement and experience
24 bands. The dark triangles represent the observed life
25 table, the rectangles represent the Company's proposal,

1 and the slanted triangles show witness Garrett's
 2 proposal. The first graph shows Peoples' competing
 3 recommendations over the period 1959-2018 for the
 4 placement band and the correct 1983-2018 experience band.
 5 As with other accounts, my recommendation is a better
 6 match to the Company's actual experience.

18

19 A different placement and experience band of 1959 -2000
 20 and 1999-2019 again shows the Company's proposal is still
 21 a better curve match than witness Garrett's proposal.

1
2
3
4
5
6
7
8
9
10
11
12
13
14 **Q.** Are there other aspects that you considered in your 55
15 R1.5 recommendation?

16
17 **A.** Yes. The fit I selected was one of 37 different fits
18 across multiple placement and experience bands, which can
19 be found in my workpapers. There are a variety of assets
20 with a mix of lives recorded in this account and my
21 retention a 55-year life is reasonable.

22
23 **Q.** Do you have any additional comments on the life
24 recommendation for this account?

25

1 **A.** Yes. My life recommendation of 55 R1.5 recognizes both
2 the indications in the life analysis and the Company-
3 specific information from the SMEs. Further, my analysis
4 recommends no change over the existing life. To move the
5 life another nine years from my recommendation is
6 excessive. When compared to existing parameters, witness
7 Garrett's life represents an increase of nine years or a
8 14 percent change. This level of change without
9 operational reasons at one time is unreasonable, is not
10 supported by the evidence, and should be rejected.

11
12 **Q.** What life did witness Garrett recommend for this account
13 in the recent Florida City Gas case?

14
15 **A.** In Docket 20170179-GU for Florida City Gas, witness
16 Garrett recommended a 54 R2.5¹⁵ life for this account. It
17 does not seem logical that Peoples would have assets in
18 this account that last 18.5 percent¹⁶ longer than witness
19 Garrett's recommendation for another Florida utility.

20
21 **Account 385 - Measuring and Industrial Regulating Stations**

22 **Q.** Please describe your and witness Garrett's recommendations
23 for Account 385-Measuring and Industrial Regulating

¹⁵ Docket 20170179-GU, Exhibit DJG-20 and 21.

¹⁶ $(64 - 54) / 54 = 18.52$ percent

1 Stations?

2

3 **A.** I recommend increasing the existing service life for
4 Account 385, which is currently 32 R4, to a 37 R3. This
5 represents an increase of five years. Witness Garrett
6 proposes 41 R3, which is an increase of nine years over
7 the existing and four years beyond my recommendation. At
8 December 31, 2018, the average age of survivors in this
9 account is 21.35 years and the average age of retirements
10 in this account is 21.89 years. This information
11 demonstrates that this is an account with older assets
12 and retirements that retirement age similar to the asset
13 of the asset.

14

15 **Q.** Do you agree with witness Garrett's basis for proposing a
16 41 R3 Curve?

17

18 **A.** No. There are a number of reasons I disagree with
19 witness Garrett on the life for this account. First,
20 witness Garrett does not appear to factor in the life
21 expectations for specific assets in this account as
22 communicated by Company SMEs. As stated in Exhibit No.
23 ___ (DAW-1), page 58-59 of my direct testimony, I mention
24 factors that influence the life of this account:

25

Company personnel stated that meters for

1 these stations are booked in the meter
2 account, and that the assets in this account
3 include all other assets needed to serve the
4 customer Company personnel believe that the
5 assets in this account are more similar to a
6 distribution regulator station in account
7 37800 than a city gate station in account
8 37900. Operationally Company personnel state
9 that the operating environment in this
10 account is harsher than most assets in a
11 district regulator station. Consequently,
12 from an operational perspective, Company
13 personnel anticipate that the life of this
14 account would be shorter than the life of
15 Account 37800.

16
17 Second, as, with other accounts, witness Garrett only
18 examines one band for his proposal. In contrast, I used
19 seven different placement and experience bands as shown
20 in my workpapers.

21
22 Third, the use of an incorrect experience band distorts
23 the observed life table results.

24
25 Finally, the use Company history as shown below validates

1 the superiority of the Company's proposal compared to
 2 witness Garrett's.

3
 4 **Q.** What does a visual comparison over multiple bands show?

5
 6 **A.** Below are graphs over various placement and experience
 7 bands. The dark triangles represent the observed life
 8 table, the rectangles represent the Company's proposal,
 9 and the slanted triangles show witness Garrett's
 10 proposal. The first graph shows the period 1958-2018 for
 11 the placement band and 1983-2018 experience band.

23
 24 Clearly the Company's proposed 37 R3 is a better visual
 25 choice over all points.

1 A shorter placement band of 1969-2018 and experience band
 2 of 1983-2018 below also again affirms the Company's
 3 proposal is a better fit of the activity in this account.

14

15 **Q.** Are there other aspects that you considered in your 37 R3
 16 recommendation?

17

18 **A.** Yes. The fit I selected was one of 26 different fits
 19 across multiple placement and experience bands, which can
 20 be found in my workpapers. There are a variety of assets
 21 with a mix of lives recorded in this account and my
 22 movement to a 37-year life is reasonable.

23

24 **Q.** Do you have any additional comments on the life
 25 recommendation for this account?

1 **A.** Yes. My life recommendation of 37 R3 recognizes both the
2 indications in the life analysis and the Company-specific
3 information from the SMEs. Further, my analysis
4 recommends an *increase* of five years over the existing
5 life, which translates to a 16 percent increase to the
6 life. To move the life another seven years from my
7 recommendation is excessive. When compared to existing
8 parameters, witness Garrett's life represents an increase
9 of 9 years or a 28 percent change. This level of change
10 without operational reasons at one time is unreasonable,
11 is not supported by the evidence, and should be rejected.

12
13 **Q.** How does witness Garrett's mathematical fitting criteria
14 appear using the historical data through 2018?

15
16 **A.** Yes. When using the 1958-2018 placement band and a
17 correct 1983-2018 experience band, the overall sum of
18 squares difference is a closer 0.0416 for my
19 recommendation than the 0.4313 for witness Garrett's.
20 Using witness Garrett's proposed 1 percent exposure
21 criteria, the sum of squares difference is 0.0100 and
22 .0606 between the Company's proposal and witness
23 Garrett's as well. See my Exhibit No. (DAW-2), Document
24 No. 6. Using Company history and the correct placement
25 and experience band, the Company's proposal is the

1 superior proposal for visual fitting as well as
2 mathematical fitting.

3

4 **Q.** What life did witness Garrett recommend for this account
5 in the recent Florida City Gas case?

6

7 **A.** In Docket 20170179-GU for Florida City Gas, witness
8 Garrett recommended a 37 R2¹⁷ life for this account. It
9 does not seem logical that Peoples would have assets in
10 this account that last 10 percent longer than witness
11 Garrett's recommendation for another Florida utility.

12

13 **NET SALVAGE**

14 **Q.** What accounts are being challenged by witness Garrett?

15

16 **A.** Witness Garrett has recommended changes in life for six
17 accounts in the distribution function.¹⁸ Table 4 shown
18 below is a summary of the plant accounts: the Company's
19 existing and proposed net salvage percentages and OPC's
20 proposed net salvage percentages.

21

22

23

24

¹⁷ Docket 20170179-GU, Exhibit DJG-20 and 21.

¹⁸ Direct Testimony of David J. Garrett, page 102.

Table 4 - Summary by Proposed-Life Parameters by Account

<u>Acct</u>		<u>Approved</u>	<u>Company</u>	<u>OPC</u>
			<u>Proposed</u>	<u>Proposed</u>
		<u>Net Salvage</u>	<u>Net Salvage</u>	<u>Net Salvage</u>
		<u>percent</u>	<u>percent</u>	<u>percent</u>
376	Mains Steel	-40	-60	-50
376	Mains Plastic	-25	-40	-33
380	Services Steel	-100	-150	-125
380	Services Plastic	-55	-80	-68
382	Meter Install	-20	-30	-25
384	House Regulator Install	-20	-30	-25

Q. What is the basic premise of witness Garrett's opposition to your net salvage recommendations?

A. Witness Garrett and I agree on the analysis methods and I believe that witness Garrett has acknowledged the significant cost of removal being incurred by Peoples, which has resulted in much more negative net salvage when comparing to the existing net salvage percentages. However, witness Garrett's opposition is based on his belief that the magnitude of the net salvage changes too substantial.¹⁹ Witness Garrett does not mention that Peoples has not made changes to its net salvage

¹⁹ Direct Testimony of David J. Garrett, 101: 15-17.

1 parameters for these almost all of these six accounts
2 since Florida Docket 20110232, nearly 10 years ago. The
3 Company's last depreciation study in 2016 retained the
4 existing net salvage parameters for those accounts.²⁰
5 Hence, the changes in net salvage rates are needed to
6 align capital recovery for People's assets. Another
7 factor witness Garrett fails to consider is that the goal
8 of setting depreciation rates is to recover remaining
9 investment and future removal cost over the remaining
10 life of the assets. The trends toward higher negative
11 net salvage need to be reflected in the Company's
12 proposed rates so as not to create intergenerational
13 inequities. Also, my net salvage proposals for numerous
14 Peoples' accounts are still moderated when compared to
15 actual experience.

16
17 **Q.** Do you have any other comments on witness Garrett's
18 overall net salvage approach before discussing the
19 individual accounts at issue?

20
21 **A.** Yes. Witness Garrett's proposal for net salvage for all
22 six of the accounts is to arbitrarily halve the increase
23 I recommend. He does not provide any other metrics or

²⁰ In the Company's last case in Docket 201600159-GU, witness Garrett's proposal and the settlement agreement adopted based on his recommendations which left net salvage parameters at existing levels with the exception of Account 376-Steel Mains.

1 analysis to show how his proposals compare to Peoples'
2 actual experience. In the following sections I will
3 provide a brief summary of the account net salvage and
4 present some tables and graphs that will provide
5 explanation and detail to support Peoples' proposals for
6 the accounts in which witness Garrett and I disagree.
7

8 **Q.** What factors are causing removal costs to increase?
9

10 **A.** Many factors are causing an increase in removal cost for
11 distribution plant including: the increase in labor cost
12 due to the longer lives of assets, changes in safety and
13 environmental requirements, requirements of working in
14 urban areas, and overall contract labor cost increases.²¹
15 All these factors are inextricably bound causing an
16 increase in removal cost for each of the accounts
17 discussed above. From this perspective, it is not
18 remarkable that the cost to remove from service (and
19 properly dispose of, when appropriate) steel mains and
20 services, plastic mains and services, meter installations
21 and house regulator installations and other assets are
22 increasing.
23

²¹ Direct Testimony Dane A. Watson, Exhibit No. __ (DAW-1), page 65-67.

1 Q. How have actual removal costs changed for these accounts
2 over time?

3

4 A. The tables and graphs for each of the accounts discussed
5 above provide clear evidence that over time, the Company
6 is experiencing increasingly negative net salvage (caused
7 by increasing removal cost) while the approved net
8 salvage rate has not changed in a number of years.
9 Clearly, the level of negative net salvage and increasing
10 removal cost differs from the currently approved levels
11 and while numerous Peoples' proposed net salvage
12 percentages are a significant increase in negative net
13 salvage, it is warranted and should be approved.

14

15 **A. Account 376-Steel Mains**

16 Q. Will you summarize the proposals regarding net salvage
17 for Account 376-Steel Mains?

18

19 A. Yes. The approved net salvage is a -40 percent. In
20 earlier years, the Commission had higher negative net
21 salvage embedded in Peoples' rates for this account.
22 From 1996-2006, the approved net salvage rate for this
23 account was -45 percent. From 2006-2011, the approved
24 net salvage rate was -50 percent. From, 2011 to 2016,
25 the approved net salvage rate changed to negative 40

1 percent. Witness Garrett is proposing to arbitrarily
 2 halve my recommended change and recommends a -50 percent
 3 net salvage instead of my proposed is a -60 percent. My
 4 proposed net salvage percentage is a gradual movement
 5 that the Commission has approved in the past.

6
 7 **Q.** Can you demonstrate that the net salvage for Account 376-
 8 Steel Mains is moving more negative?

9
 10 **A.** Yes. The information below was extracted from the net
 11 salvage analysis provided in Exhibit No. __ (DAW-1),
 12 Appendix D of my direct testimony. These are Peoples'
 13 moving average net salvage percentages for the past 10
 14 years.

15
 16 **Table 5: Account 376-Steel, Net Salvage 2009-2018**

376	2-yr	3-yr	4-yr	5-yr	6-yr	7-yr	8-yr	9-yr	10-yr	
Steel	Net	Net	Net	Net	Net	Net	Net	Net	Net	
	Salv.	Salv.	Salv.	Salv.	Salv.	Salv.	Salv.	Salv.	Salv.	
Year	%	%	%	%	%	%	%	%	%	
2009	-275%	-183%	-120%	-133%	-81%	-85%	-71%	-71%	-68%	-67%
2010	-38%	-99%	-104%	-87%	-99%	-71%	-75%	-65%	-66%	-63%
2011	-52%	-46%	-76%	-82%	-75%	-84%	-66%	-70%	-63%	-63%
2012	-320%	-113%	-85%	-107%	-108%	-98%	-104%	-83%	-85%	-76%
2013	-53%	-115%	-87%	-75%	-91%	-94%	-87%	-93%	-77%	-80%
2014	-84%	-71%	-98%	-86%	-77%	-89%	-91%	-86%	-91%	-79%
2015	-107%	-94%	-82%	-101%	-90%	-83%	-92%	-94%	-90%	-93%
2016	-98%	-102%	-95%	-86%	-100%	-92%	-86%	-93%	-94%	-91%
2017	-116%	-108%	-107%	-100%	-92%	-103%	-96%	-90%	-96%	-97%
2018	-401%	-187%	-150%	-137%	-123%	-112%	-121%	-112%	-105%	-110%

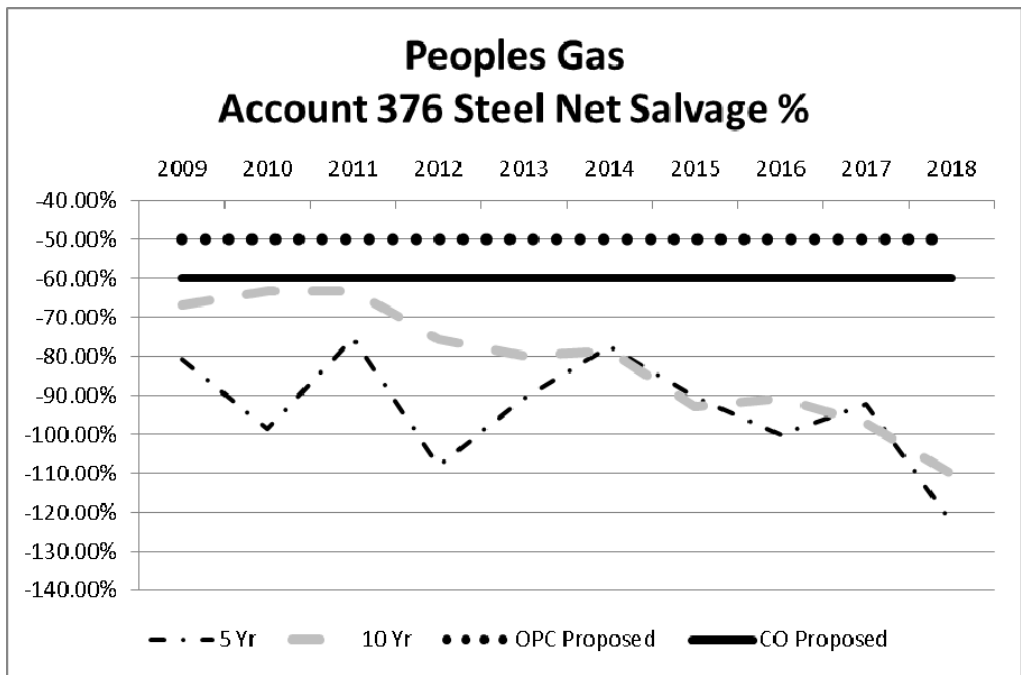

1 **Q.** How should the Commission interpret and correlate the
2 information in the above table to witness Garrett's and
3 Peoples' proposals on net salvage?
4

5 **A.** First and foremost is that even 10 years ago, the net
6 salvage indications were nearly at or above -60 percent.
7 Between 2011-2016, the approved net salvage percentage
8 was -60 percent. This is the most telling and important
9 information for the Commission, in that the approved -40
10 percent was about a third to one half of the Company's
11 experience 10 years ago. Peoples' net salvage proposal
12 for this account is a necessary step to help increase
13 that recovery and reduce the deferral of recovery.
14

15 **Q.** Is there anything else that would assist the Commission
16 in evaluating the net salvage proposals for Account 376-
17 Steel Mains?
18

19 **A.** Yes. The graph below illustrates Peoples' net salvage
20 experience over the past 10 years. The solid black line
21 is my proposed -60 percent, which is above (less
22 negative) than the more recent 5 and 10 year averages.

This further supports the idea that my recommendation includes the gradualism that witness Garrett espouses. While it is a significant change, my proposed -60 percent has been consistently experienced by Peoples over the most recent 10 years and should be approved.

B. Account 376-Plastic Mains

Q. Will you summarize the proposals regarding net salvage for Account 376-Plastic Mains?

A. Yes. The approved net salvage is a -25 percent, which has been the same since 2011. Witness Garrett is proposing to arbitrarily halve my recommended change and move the net salvage to -33 percent. My proposal is a -

1 40 percent.

2
3 **Q.** Can you demonstrate that the net salvage for Account 376
4 Plastic Mains is moving more negative?

5
6 **A.** Yes. The information below was extracted from the net
7 salvage analysis provided in Exhibit No. __ (DAW-1),
8 Appendix D of my direct testimony. These are Peoples'
9 moving average net salvage percentages for the past 10
10 years.

11

14
15
16
17
18
19
20
21 **Q.** How should the Commission interpret and correlate the
22 information in the above table to witness Garrett's and
23 Peoples' proposals on net salvage?

24
25 **A.** First and foremost is that even 10 years ago, the net

1 salvage indications were nearly at or above -40 percent
 2 for most bands. This is the most telling and important
 3 information for the Commission, in that the approved -25
 4 percent is much lower than the Company's experience.
 5 Peoples' net salvage proposal for this account is a
 6 necessary step to help increase that recovery and reduce
 7 the deferral of recovery.

8
 9 **Q.** Is there anything else that would assist the Commission
 10 in evaluating the net salvage proposals for Account 376-
 11 Plastic Mains?

12
 13 **A.** Yes. The graph below illustrates Peoples' net salvage
 14 experience over 10 years. The solid black line is my
 15 proposed -40 percent, which is above (less negative) than
 16 the more recent 5 and 10 year averages.

1 This further supports the idea that my recommendation
2 includes the gradualism that witness Garrett espouses.
3 While it is a significant change, my proposed -40 percent
4 has been consistently experienced by Peoples over the
5 most recent 10 years and should be approved.

6
7 **C. Account 380-Steel Services**

8 **Q.** Will you summarize the proposals regarding net salvage
9 for Account 380-Steel Services?

10
11 **A.** Yes. The approved net salvage is a -100 percent, which
12 has been in place since 2011. From 2006-2011, the
13 approved net salvage for this account was -90 percent.
14 witness Garrett recommends -125, whereas my proposal is a
15 -150 percent.

16
17 **Q.** Can you demonstrate that the net salvage for Account 380-
18 Steel Services is moving more negative?

19
20 **A.** Yes. The information below was extracted from the net
21 salvage analysis provided in Exhibit No. __ (DAW-1),
22 Appendix D of my direct testimony. These are Peoples'
23 moving average net salvage percentages for the past 10
24 years.

4

5

6

7

8

9

10 **Q.** How should the Commission interpret and correlate the

11 information in the above table to witness Garrett's and

12 Peoples' proposals on net salvage?

13

14 **A.** First and foremost is that even 10 years ago, the net

15 salvage indications were nearly at or above -100 percent!

16 This is the most telling and important information for

17 the Commission, in that the approved -100 percent, which

18 is much lower than the Company's recent experience.

19 Peoples' net salvage proposal for this account is a

20 necessary step to help increase that recovery and reduce

21 the deferral of recovery.

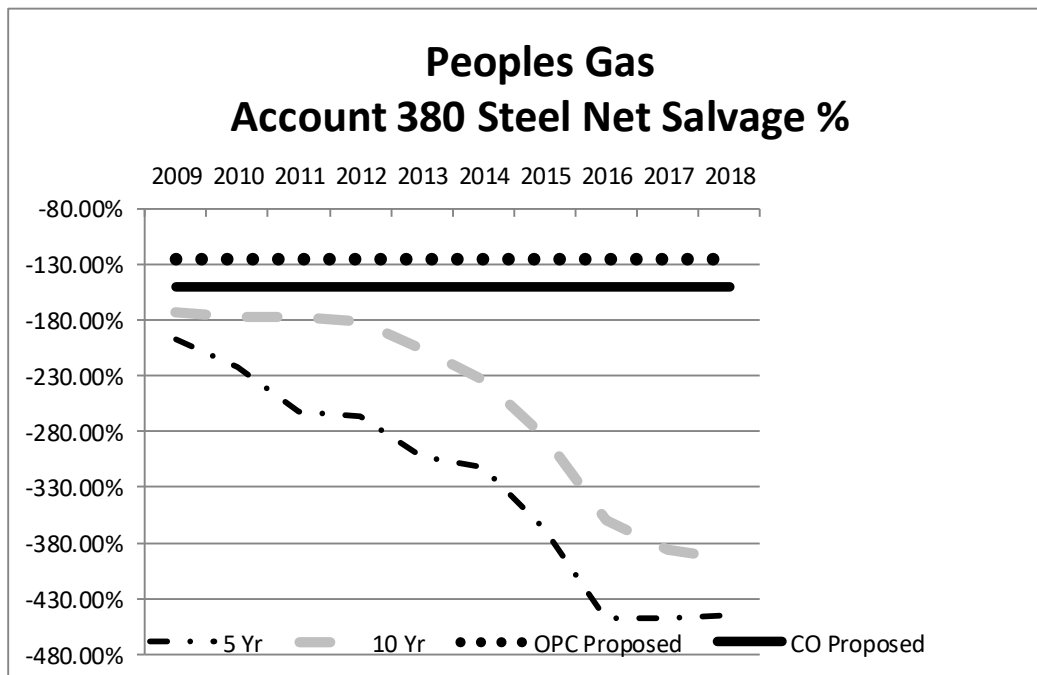

22

23 **Q.** Is there anything else that would assist the Commission

24 in evaluating the net salvage proposals for Account 380-

25 Steel Services?

1 **A.** Yes. The graph below illustrates Peoples' net salvage
 2 experience over the past 10 years. The solid black line
 3 is my proposed -150 percent, which is above (less
 4 negative) than the more recent 5 and 10 year averages.

17 This further supports the idea that my recommendation
 18 includes the gradualism that witness Garrett espouses.
 19 While it is a significant change, my proposed -150
 20 percent has been consistently experienced by Peoples over
 21 the most recent 10 years and should be approved. By
 22 contrast, witness Garrett's -125 percent would lie
 23 entirely above this chart and reflect none of Peoples'
 24 experience over the past decade.

1 **D. Account 380-Plastic Services**

2 Q. Will you summarize the proposals regarding net salvage
3 for Account 380-Plastic Services?

4
5 A. Yes. The approved net salvage is a -55 percent, which
6 has been the same since 2011. From 2006-2011, the
7 approved net salvage rate for this account was -50
8 percent. Witness Garrett's proposal is -68 percent. My
9 proposed is a -80 percent.

10
11 Q. Can you demonstrate that the net salvage for Account 380-
12 Plastic Services is moving more negative?

13
14 A. Yes. The information below was extracted from the net
15 salvage analysis provided in Exhibit No. __ (DAW-1),
16 Appendix D of my direct testimony. These are Peoples'
17 moving average net salvage percentages for the past 10
18 years.

5

6

7

8

9

10 **Q.** How should the Commission interpret and correlate the
 11 information in the above table to witness Garrett's and
 12 Peoples' proposals on net salvage?

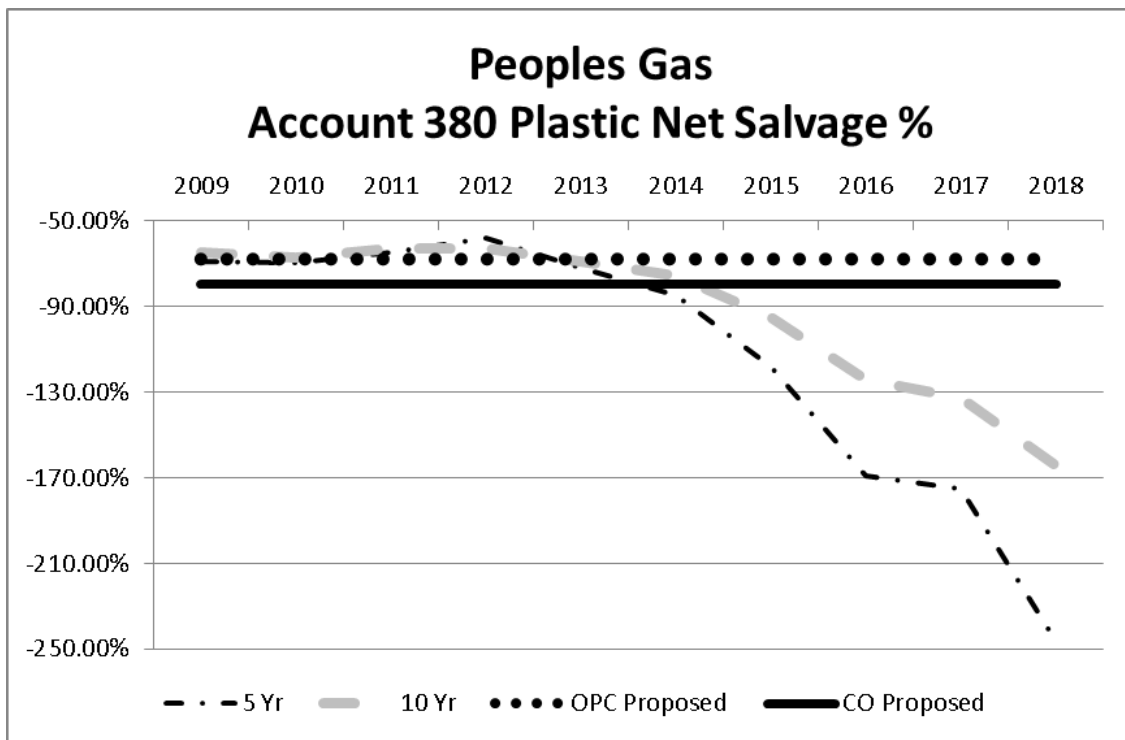

13

14 **A.** First and foremost is that even 10 years ago the net
 15 salvage indications were nearly at or above -80 percent.
 16 This is the most telling and important information for
 17 the Commission, in that the approved -55 percent is not
 18 indicative of the Company's recent experience. Peoples'
 19 net salvage proposal for this account is a necessary step
 20 to help increase that recovery and reduce the deferral of
 21 recovery.

22

23 **Q.** Is there anything else that would assist the Commission
 24 in evaluating the net salvage proposals for Account 380-
 25 Plastic Services?

1 **A.** Yes. The graph below illustrates Peoples' net salvage
 2 experience over the past 10 years. The solid black line
 3 is my proposed -80 percent, which is above (less
 4 negative) than the more recent 5 and 10 year averages.

17
 18 This further supports the idea that my recommendation
 19 includes the gradualism that witness Garrett espouses.
 20 While it is a significant change, my proposed -80 percent
 21 has been consistently experienced by Peoples over the
 22 most recent 10 years and should be approved.

23
 24 **E. Account 382-Meter Installations**

25 **Q.** Will you summarize the proposals regarding net salvage

1 for Account 382-Meter Installations?

2
3 **A.** Yes. The approved net salvage is a -20 percent, which
4 has been the same since 2006. The approved net salvage
5 rate for this account was -18 percent from 1996-2006.
6 Witness Garrett proposal is -25 percent and my proposal
7 is -30 percent.

8
9 **Q.** Can you demonstrate that the net salvage for Account 382
10 Meter Installations is moving more negative?

11
12 **A.** Yes. The information below was extracted from the net
13 salvage analysis provided in Exhibit No. __ (DAW-1),
14 Appendix D of my direct testimony. These are Peoples'
15 moving average net salvage percentages for the past 10
16 years.

17
18 **Table 9 Account 382 Steel Net Salvage 2009-2018**

2018	-51%	-58%	-61%	-62%	-54%	-50%	-45%	-40%	-39%

20
21
22
23
24
25

1 **Q.** How should the Commission interpret and correlate the
2 information in the above table to witness Garrett's and
3 Peoples' proposals on net salvage?
4

5 **A.** First and foremost is that even 10 years ago the net
6 salvage indications were nearly at or above -30 percent.
7 This is the most telling and important information for
8 the Commission, in that the approved -20 percent was
9 about a third to one half of the Company's experience in
10 many recent bands. Given how long it has been since the
11 last change in the net salvage rate for this account,
12 Peoples' net salvage proposal for this account is a
13 necessary step to help increase that recovery and reduce
14 the deferral of recovery.
15

16 **Q.** Is there anything else that would assist the Commission
17 in evaluating the net salvage proposals for Account 382
18 Meter Installations?
19

20 **A.** Yes. The graph below illustrates Peoples' net salvage
21 experience over past 10 years. The solid black line is
22 my proposed -30 percent, which is above (less negative)
23 than the more recent 5 and 10 year averages.

This further supports the idea that my recommendation includes the gradualism that witness Garrett espouses. While it is a significant change, my proposed -30 percent has been consistently experienced by Peoples over the most recent 10 years and should be approved.

F. Account 384-House Regulator Installations

Q. Will you summarize the proposals regarding net salvage for Account 384-House Regulator Installations?

A. Yes. The approved net salvage is a -20 percent, which has been the same since 2006. The approved net salvage rate for this account was -18 percent from 1996-2006.

1 witness Garrett proposal is -25 percent and my proposal
2 is -30 percent.

3
4 **Q.** Can you demonstrate that the net salvage for Account 384-
5 House Regulator Installations is moving more negative?

6
7 **A.** Yes. The information below was extracted from the net
8 salvage analysis provided in Exhibit No. __ (DAW-1),
9 Appendix D of my direct testimony. These are Peoples'
10 moving average net salvage percentages for the past 10
11 years.

12

2017	-245%	-195%	-202%	-154%	-120%	-98%	-78%	-70%	-63%	-58%

15
16
17
18
19
20

21
22 **Q.** How should the Commission interpret and correlate the
23 information in the above table to witness Garrett's and
24 Peoples' proposals on net salvage?

1 **A.** First and foremost is that even 10 years ago the net
2 salvage indications were nearly at or above -30 percent.
3 This is the most telling and important information for
4 the Commission, in that the approved -20 percent was not
5 indicative of the Company's experience in this account
6 over the past 10 years. Given that the current net
7 salvage rate has been unchanged since 2006, Peoples' net
8 salvage proposal for this account is a necessary step to
9 help increase that recovery and reduce the deferral of
10 recovery.

11

12 **Q.** Is there anything else that would assist the Commission
13 in evaluating the net salvage proposals for Account 384-
14 House Regulator Installations?

15

16 **A.** Yes. The graph below illustrates Peoples' net salvage
17 experience over the past 10 years. The solid black line
18 is my proposed -30 percent, which is above (less
19 negative) than the more recent 5 and 10 year averages.

24
25

This further supports the idea that my recommendation includes the gradualism that witness Garrett espouses. While it is a significant change, my proposed -30 percent has been consistently experienced by Peoples over the most recent 10 years and should be approved. By contrast, witness Garrett's -25 percent would not model Peoples' experience over the past decade.

SUMMARY

Q. Please summarize your rebuttal testimony.

A. I conducted a complete depreciation study using standard depreciation processes and methodologies that resulted in the recommended parameters and depreciation rates. My

1 recommended life and net salvage parameters are
2 reasonable and more aligned with other gas utility
3 companies in the state of Florida, as discussed above.
4 The depreciation rates, as provided in Exhibit No. __
5 (DAW-1), Appendices A and B of my direct testimony
6 should be applied to Peoples' plant in-service. Witness
7 Garrett is the only party to oppose my recommendations
8 and resulting depreciation rates. My depreciation rates,
9 when applied to Peoples' forecasted plant in-service
10 balances provide fair and reasonable recovery to both
11 Peoples and its customers and should be adopted by this
12 Commission.

13
14 **Q.** Does this conclude your rebuttal testimony?

15
16 **A.** Yes, it does.

25

1 CHAIRMAN CLARK: Staff, exhibits.

2 MR. SCHRADER: Staff has compiled a
3 comprehensive exhibit list which includes the
4 prefiled attached to the witnesses' testimony in
5 this case, staff exhibits and discovery responses.
6 The list has been provided to the parties, the
7 Commissioners and the court reporter. As per the
8 settlement, the parties have agreed to include all
9 exhibits on the comprehensive exhibit list into the
10 record.

11 Staff requests that this list be marked as the
12 first hearing exhibit, and all other exhibits be
13 marked as set forth in that list.

14 CHAIRMAN CLARK: Okay.

15 (Whereupon, Exhibit Nos. 1-79 were marked for
16 identification.)

17 MR. SCHRADER: At this time, we ask that the
18 Comprehensive Exhibit List, marked as exhibit No.
19 1, be entered into the record.

20 CHAIRMAN CLARK: Exhibit No. 1 is entered.

21 (Whereupon, Exhibit No. 1 was received into
22 evidence.)

23 MR. SCHRADER: We also ask that Exhibit Nos. 2
24 through 79 be moved into the record as set forth in
25 the CEL.

1 CHAIRMAN CLARK: Have all of the parties had
2 an opportunity to review the exhibit list, and if
3 so are there any objections to the entry of these
4 exhibits into the record this morning?

5 Seeing none, Exhibits No. 2 through 79 are so
6 entered.

7 (Whereupon, Exhibit Nos. 2-79 were received
8 into evidence.)

9 CHAIRMAN CLARK: All right. Opening
10 statements. We are going to take opening
11 statements at this time. Per the second order
12 modifying the OEP, each party is going to have five
13 minutes to make their opening statements, and we
14 are going to begin with Mr. Brown.

15 MR. BROWN: Thank you, Mr. Chairman and the
16 rest of the Commissioners.

17 I am going to start just by talking a little
18 bit about the procedural history of this case. As
19 you recall the test year letter was filed on
20 February 7th, 2020, and then in early March, the
21 company asked for, and received, a 60-day extension
22 in which to file its petition due to the effects of
23 COVID-19, which at that time no one really knew how
24 long it would last, and the hope was that it would
25 be a brief -- brief event. That turned out

1 obviously not to be the case, and the company was
2 forced to go ahead and sign -- or file its petition
3 on June 2nd, 2020. And after extensive discovery,
4 on October 22nd, 2020, this stipulation and
5 settlement agreement that is before the Commission
6 was entered into by all of the intervenor parties
7 in the case.

8 What's, I think, important in dealing with
9 addressing this settlement is the fact that this
10 case has essentially been fully litigated except
11 for the actual hearing. There were 500 or more
12 interrogatories propounded when one starts counting
13 the subparagraphs and subparts of all of the
14 discovery. There were hundreds of requests for
15 production.

16 Peoples produced over 17,000 documents in this
17 case, and there were six depositions taken of
18 various Peoples' expert witnesses and company
19 witnesses who would offer testimony along with the
20 petition.

21 And so we come to you at this point with this
22 case having been fully discovered, the parties and
23 the staff being fully aware of virtually anything
24 that has to do with this petition, and with this
25 rate increase. And so it's not a situation where

1 we are coming to you with a lot of issues that
2 haven't been fleshed out and haven't been fully
3 discovered. We are in a situation where that has
4 taken place.

5 I don't want to go into all of the details of
6 the settlement itself, but I do want to talk about
7 just a few highlights.

8 Overall, the settlement ensures the company's
9 financial stability and creates revenue
10 predictability, which is obviously important to
11 Peoples. But more importantly, the impact on
12 individual customers, particularly residential
13 customers, is fairly minimal.

14 For an average residential customer in the
15 RS-2 class, which is where most of the residential
16 customers are -- find themselves, the increase will
17 be approximately \$2.76 a month. And that includes
18 the customer charge, the base increase in
19 volumetric rates and the cast iron/bare steel rider
20 equivalent, even though that's eventually going to
21 be rolled into the base rates.

22 It also, as mentioned by Mr. Schrader, it
23 resolves Peoples' COVID petition, and also sets
24 parameters for the use of the accumulated
25 depreciation credit which the company has.

1 The agreement also sets new depreciation rates
2 for the company, and has a three-year stay-out
3 provision, so Peoples will not be coming back
4 before the Commission for three years. It also
5 makes changes to the accounting treatment for the
6 storm reserve.

7 So all of these things are being accomplished
8 by this settlement, and I think that's the benefit
9 to customers and to the public.

10 This agreement really is in the public
11 interest. The terms are reasonable, and there is a
12 lot of benefits to the public, which I just
13 described, and other benefits contained in the
14 agreement itself. And the testimony that has been
15 put forward, along with the discovery, clearly and
16 substantially provides evidence of the need for the
17 new rates, and certainly supports the agreed amount
18 that is in the settlement of this case -- the
19 agreed amount of new rates that is contained in the
20 stipulation and settlement agreement.

21 I do want to take a moment to thank Staff, the
22 OPC, Staff, particularly Kurt Schrader, who I dealt
23 with most on a day-to-day basis, Tripp Sebring and
24 others on the staff doing a very excellent job on
25 this. There was a lot of stuff to deal with, a lot

1 of documents to deal with, a lot of discovery to
2 deal with, and then we were able to work together
3 very well.

4 For the OPC, Charles Rehwinkel, J.R. Kelly and
5 Mireille Fall-Fry, and for FIPUG, Jon Moyle.

6 We were able to work through a lot of issues.
7 If you recall, there were issues at the front end
8 about the -- there were issues at the front end
9 about the scheduling of the course of events.
10 There were some issues about how quickly this case
11 was coming up, and, you know, there were issues for
12 everybody. The staff had issues; the Commission
13 had issues timing wise; the parties had issues, but
14 we were able to work through all of that.

15 And I think most importantly, once the
16 discovery was completed, the parties were able to
17 do a good job of evaluating the issues in this
18 case, and making realistic assessments and
19 evaluations of their positions, realistic
20 evaluations of the ask itself, and what -- where
21 issues -- where there are issues that were, you
22 know, problematic for parties and where there
23 weren't, and, you know, I think also there was a
24 lot of assistance for the staff on this once this
25 got going. So if I missed people on the staff, I

1 think -- I mean to add Tripp Coston, among others.

2 Particularly after the agreement was sort of
3 agreed to, there was a lot of work by everyone,
4 both to come up with the numbers, to work through
5 those numbers and answer questions and come up with
6 an agreement. And that was all done in very short
7 order, you know, with the hearing coming up, with
8 discovery having been completed.

9 So overall, we believe this settlement is good
10 for Peoples Gas. It is also good for Peoples'
11 customers, and we think it is good for the citizens
12 of Florida overall. We would ask that the
13 Commission adopt this settlement. And as I said at
14 the beginning, we have people available, Luke
15 Buzard and Sean Hillary available to answer
16 questions if the staff -- if the Commission has any
17 questions.

18 So thank you for your attention.

19 CHAIRMAN CLARK: Thank you very much, Mr.
20 Brown.

21 Ms. Fall-Fry, will you be delivering OPC's
22 opening statement?

23 MS. FALL-FRY: Yes, sir.

24 Thank you, Mr. Chair, and good morning to the
25 rest of the Commission.

1 We appreciate the great deal of efforts and
2 consideration that all the parties have taken to
3 get us to this point. The settlement agreement
4 before this commission would resolve outstanding
5 issues in three dockets.

6 We thank Commission Staff for bringing this to
7 hearing so quickly, and for their indefatigable
8 work on this case, our witnesses Andrea Crane and
9 David Garrett, without whom we wouldn't be here,
10 and FIPUG and Peoples Gas for their cooperation and
11 willingness to reach a fair outcome.

12 As a result of the comprehensive witness
13 testimonies and extensive discovery filed in these
14 dockets, OPC is confident that the resolution of
15 these dockets in the manner provided in the
16 settlement and stipulation is in the public
17 interest.

18 First, the settlement and stipulation is fair
19 to both the ratepayers and to the company. The
20 agreement provides sufficient revenue to allow the
21 company to provide safe and reliable service while
22 folding in the rates that are already reflected in
23 the bills for upgrades made pursuant to safety
24 regulations over the last decade, and adding
25 mechanisms to address future changes in state and

1 federal taxes.

2 Second, the settlement and stipulation
3 promotes rate stability and predictability through
4 the three-year rate freeze and stay-out provision.

5 Third, the agreed upon ROE provides the
6 opportunity for a healthy return for the company
7 while moving in a direction that is more in line
8 with nationwide fiscal reality, which is a benefit
9 for ratepayers.

10 Fourth, the settlement and stipulation
11 resolves all outstanding issues related to PGS's
12 petition for a regulatory asset related to COVID-19
13 expenses.

14 In conclusion, we believe that the settlement
15 and stipulation, as supported by the testimony and
16 evidence in the record, establishes rates that are
17 fair, just and reasonable, and promotes regulatory
18 efficiency. We, therefore, ask that the Commission
19 should find that the settlement and stipulation is
20 in the public interest.

21 Thank you.

22 CHAIRMAN CLARK: Thank you very much, Ms.
23 Fall-Fry.

24 Mr. Moyle.

25 MR. MOYLE: Thank you. Thank you, Mr. Chair.

1 And I would like to start by echoing come some
2 of the thank-yous that have already been said, but
3 it's important. These rate cases have a lot of
4 issues, a lot of coordination, and I think the
5 parties worked well on that, as well as your staff.
6 So the legal staff led by Kurt Schrader did a --
7 did a great job, as did the technical staff, and
8 your staff participated in the depositions and the
9 discovery process. So kudos -- kudos to your
10 staff. PGS, Mr. Brown worked with OPC legal, and
11 we were able to make progress. Luke Buzard did a
12 fine job.

13 And, you know, during these settlement
14 discussions, we had some discussion yesterday in
15 the Duke solar about settlement discussions, and I
16 just want to comment for a minute to tell you that
17 these settlement discussions, we don't get into the
18 details of them, but there was give and take.
19 There was, as happens in these settlement
20 discussions, I think robust discussion, and I think
21 the settlement proposal before you today is fair,
22 and FIPUG supports it and believes that it is a
23 fair resolution.

24 I will just comment on a couple of provisions.
25 The three-year set-out stay-out provides some

1 certainty and stability for a period of time that
2 was negotiated and that we believe is in the best
3 interest of all the parties involved.

4 And I would also comment on the return on
5 equity. Mr. Brown spent some time talking about
6 COVID, and COVID has affected proceedings that we
7 have at the Commission. I mean, it's noteworthy
8 that, I think the record may reflect, that we had a
9 couple of issues that all appear to be sorted out
10 as we have this hearing virtually today. And I
11 think the Commission has done a good job doing
12 that, but it's a bit of a new situation where we
13 are not out at the Commission and have all of the
14 Commission there close at hand, but we have, I
15 think, worked through that.

16 And one of the things that I think that COVID,
17 I would remark on, has done is it's had an impact
18 on our economy. The return on equity that is part
19 of this settlement agreement, it's a midpoint under
20 10. And I think that is noteworthy for a few
21 things.

22 One, the federal funds rate, they have -- the
23 fed has kept interest rates very, very low. You
24 know, I am no expert on it, but my reading of
25 things is it's between zero and 25 basis points

1 given the economic situation, and that that, as it
2 represents the cost of money, has resulted in
3 return on equities throughout the country in
4 utility cases coming down.

5 And this return on equity is under 10, has
6 come down, and was the subject of a lot of
7 discussion, but we believe that that is a good sign
8 and a good signal, and it's a significant reason
9 for the support of the settlement agreement.

10 So, Mr. Chair, thank you. Thank you for your
11 convening us today at a Special Agenda Conference
12 to consider this. We hope that the Commission
13 approves it. We would urge the Commission approve
14 it, and think that it is a good result as a work
15 product of the parties rolling up their sleeves,
16 and after a lot of information, discovery,
17 depositions, I think it's a fair resolution of the
18 case.

19 I am happy to answer any questions that
20 anybody may have.

21 CHAIRMAN CLARK: Thank you very much, Mr.
22 Moyle.

23 I would also like to just extend a thank you
24 on behalf of the Commission to all of the parties
25 involved, and to our staff as well for the

1 outstanding work that they did in reaching this
2 settlement agreement. Looking through the terms,
3 and looking through the specific line-by-line
4 items, I agree. I think you guys have done a
5 tremendous job. I know that it was a lot of work
6 based on the early schedule that we were looking
7 at, and the amount of work that was going to be
8 involved in a full blown rate case was going to be
9 enormous. One of the advantages is that cost is
10 not passed on to the consumers, and that's
11 something that's a positive outcome of this as
12 well.

13 But I just want to say on behalf of the
14 Commission, thank you to all of the parties for the
15 outstanding work that you did getting this to the
16 point for the Commission.

17 And with that, I will turn it over to the
18 Commissioners for questions.

19 Commissioners, do you have any questions this
20 morning?

21 There are no questions. Wow.

22 Okay. Then I believe -- where does that put
23 us, Mr. Schrader?

24 MR. SCHRADER: Chairman, if the Commission
25 finds it appropriate, then you may render a bench

1 decision on the settlement agreement at this time,
2 assuming the parties agree to waive post-hearing
3 briefs.

4 CHAIRMAN CLARK: Have all parties agreed to
5 waive post-hearing briefs? I am assuming they
6 have. I have not heard otherwise.

7 MR. MOYLE: Yes, FIPUG has.

8 MS. FALL-FRY: Yes, OPC has.

9 CHAIRMAN CLARK: Ms. Fall-Fry agrees. Mr.
10 Brown is nodding as well. So all parties have
11 agreed to waive briefs.

12 All right. With that, Commissioners, I will
13 entertain a motion.

14 Commissioner Brown.

15 COMMISSIONER BROWN: Thank you.

16 And before I make a motion, I do want to say I
17 think the opening statements really clearly stated
18 all. I mean, this is -- there has been a lot of
19 discovery that has led us to this point, and I echo
20 your comments thanking our staff and the parties
21 for bringing us a very balanced settlement
22 agreement that achieves the furthering the public
23 interest and establishes fair, just and reasonable
24 rates. It's all-encompassing with multiple
25 components and dockets that are being resolved

1 hereby.

2 And I do want to highlight a few things that I
3 find interesting as well, just a few comments.

4 I do think that it does provide some rate
5 certainty to customers, which is an excellent
6 component of the settlement agreement.

7 Also, I believe that the revenue requirement
8 is substantially less than what the petition
9 originally requested. Again, a benefit to the
10 customers.

11 The COVID-19 petition being withdrawn and
12 deferring any costs during the term of this
13 agreement is also a substantial benefit and
14 impressive concession as well.

15 And again, the much needed storm reserve that
16 is being increased here is going to provide much
17 reliability to the territory.

18 So those are just a few things that I really
19 am impressed with and think are in the public
20 interest. And with that, I would move approval of
21 the stipulation and settlement agreement for the
22 rate increase by Peoples Gas.

23 CHAIRMAN CLARK: Do I have a second?

24 COMMISSIONER FAY: Second.

25 CHAIRMAN CLARK: Do I have a second?

1 COMMISSIONER FAY: Can you hear me?

2 CHAIRMAN CLARK: Thank you.

3 COMMISSIONER FAY: Mr. Chairman, can you hear
4 me?

5 CHAIRMAN CLARK: Yes. Got you now,
6 Commissioner Fay. And thank you very much for the
7 second.

8 All right. Any discussion on the motion?

9 All those in favor, say aye.

10 Oh, commissioner Fay, I am sorry, would you
11 like to say something.

12 COMMISSIONER FAY: Yeah, thank you, Mr.
13 Chairman. Just real quick.

14 Commissioner Brown mentioned it, but the
15 20200178 docket that regulatory asked the docket be
16 encompassed in this, I think, is a really good
17 result, so thank the parties for working to get
18 that closed out.

19 And with that said, Mr. Chairman, will we
20 address that on a separate motion?

21 CHAIRMAN CLARK: Yes, we will -- yes,
22 Commissioner, we will.

23 COMMISSIONER FAY: All right. Great. Well, I
24 second.

25 Thank you.

1 CHAIRMAN CLARK: All right. Any other
2 discussion?

3 On the motion, all in favor say aye.

4 (Chorus of ayes.)

5 CHAIRMAN CLARK: All opposed?

6 (No response.)

7 CHAIRMAN CLARK: And the motion carries.

8 All right. Are there other matters, Mr.
9 Schrader?

10 MR. SCHRADER: Yes, Mr. Chairman.

11 The final order is expected to be issued by
12 December 9th, 2020.

13 Staff also recommends that, as a result of the
14 Commission's decision in this matter, that PAA
15 Order No. PSC-2020-0408-PAA-GU, issued on October
16 22, 2020, in Docket No. 20200178-GU, be vacated and
17 staff be authorized to close that docket
18 administratively upon Peoples' withdrawal of its
19 petition in that matter, pursuant to settlement
20 agreement that the Commission has approved today.

21 CHAIRMAN CLARK: All right. Is there a motion
22 to vacate the orders pending Peoples' withdrawal of
23 the motion?

24 Commissioner Fay makes the motion, do I have a
25 second?

1 COMMISSIONER FAY: So moved.

2 COMMISSIONER BROWN: Second.

3 CHAIRMAN CLARK: I have a second from
4 Commissioner Brown.

5 Any discussion?

6 All in favor say aye.

7 (Chorus of ayes.)

8 CHAIRMAN CLARK: Opposed?

9 (No response.)

10 CHAIRMAN CLARK: And the motion carries
11 unanimously.

12 All right. Are there any additional matters
13 that need to be addressed before the Commission at
14 this time?

15 MR. SCHRADER: Staff is aware of none, Mr.
16 Chair.

17 CHAIRMAN CLARK: All right. Thank you, Mr.
18 Schrader.

19 Any of the parties?

20 Seeing none, this hearing will stand
21 adjourned.

22 We will resume at precisely 1:00 p.m. for our
23 second hearing of the day. Thank you, see you
24 then.

CERTIFICATE OF REPORTER

STATE OF FLORIDA)
COUNTY OF LEON)

I, DEBRA KRICK, Court Reporter, do hereby
certify that the foregoing proceeding was heard at the
time and place herein stated.

IT IS FURTHER CERTIFIED that I
stenographically reported the said proceedings; that the
same has been transcribed under my direct supervision;
and that this transcript constitutes a true
transcription of my notes of said proceedings.

I FURTHER CERTIFY that I am not a relative,
employee, attorney or counsel of any of the parties, nor
am I a relative or employee of any of the parties'
attorney or counsel connected with the action, nor am I
financially interested in the action.

DATED this 8th day of December, 2020.

DEBRA R. KRICK
NOTARY PUBLIC
COMMISSION #HH31926
EXPIRES AUGUST 13, 2024
