Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Gary Clark,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
John Leftakis

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Gary Clark,

Florida has been lagging behind the rest of the United States in allowing alternative sources of energy to develop and be efficiently and widely distributed to its citizens.

This is not something Florida utilities don't know how to do or are, in fact, doing in other markets in which they operate. For example, years ago, FPL purchased Central Maine Power Company. CMP has for years promoted the development and distribution of alternative sources of energy. When they purchased that utility, FPL had no choice but to continue those practices because the rules and regulations of Maine demanded that they do so. As a result, Maine industry and residents have abundant and reasonably priced energy from non-fossil fuels.

FPL and other utilities have fought tooth and nail opposing renewable energy. They have spent millions of dollars to do so. They want to maintain the monopoly they have been given for decades. It is an old model and needs to be modified to allow for the State to move into the 21st Century.

Changes might have adverse short-term effects. However, in the long-term, these changes will be good for the State, its citizens and its industries including its utility companies.

Respectfully,

James Chipman Black

Sincerely,

James Black

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

It is especially important to note that in 2021, the overall cost of a zero-energy structure can be less than a similar structure built and operated under current energy codes, i.e., mortgage plus utility bills is less for a zero-energy structure. Furthermore, the utilities are promoting electric vehicles, which is the right thing to do. But to keep them clean as possible, it is important to install about 2 kW of renewable source such as PV to keep each vehicle charged. So, to meet the demand for electricity for electric vehicles, two things need to be done: Promote energy efficiency to free up electricity for vehicles, and encourage the installation of renewables to make up the difference. By doing so, everyone wins - consumer, utility and the planet.

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Raymond Blumel Jr.
