Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Gary Clark,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Lynda Leibowitz

Dear Commissioner Gary Clark,

I have worked hard to make my home efficient in Winter park Florida. From putting solar panels on to an on demand water heater, to a variable speed pool pump and insulation and LED's, I work hard to reduce my energy bill.

Please don't penalize me and others for working to make our homes more efficient.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. On Jan 7, 2021, at 3:24 PM, Rabago Energy <karl@rabagoenergy.com> wrote:

Dear Commissioner:

We invite your participation in an exclusive regulators' briefing on how improved modeling and analysis can reveal huge savings and energy development opportunities in the electric grid.

The Coalition for Community Solar Access (CCSA) has worked with several major solar companies to fund an analysis and report based on a new modeling tool from [Vibrant Clean Energy](#) (Christopher Clack). We released [the report](#) a few weeks ago and will be conducting an [exclusive webinar](#) on **January 19, 2021 ~~January 13, 2021~~, from 1-2:30pm MST / 3-4:30 pm EST** for commissioners and staff to review and answer questions about the findings.

The analysis and associated modeling show the potential benefits of distributed energy resources (DERs) in the broader context of electric system planning. The model that supports the analysis is built both for "big data" and "fine resolution," and combines production-cost, capacity expansion, and resource planning evaluation for the entire continental U.S. grid, from utility scale down to a few square kilometers, a few minutes, and a few kilowatts.

For decades, utility planning has looked to serving load at the distribution interface as the ultimate requirement. But until now, never really looked beyond that point to see if distribution-level resources can reduce and modify load to lower system costs and better grid performance. Our presentation demonstrates that smarter, better modeling and integration of distributed energy resources offers huge cost-effectiveness benefits in building a cleaner, more resilient, and dramatically less expensive grid.

We offer you and your agency staff an exclusive opportunity to spend ninety minutes with the architects of the report and model for a walk-through and the chance to ask questions. While the results are exciting, the only way we're going to realize these savings is if utility planning processes, and regulatory oversight of those processes, begin to incorporate deeper analysis and integration and optimization of distribution level assets.

[Here is a link](#) to register for the webinar. You will also receive a meeting invite from me that you share anyone on your team you think might be interested in learning more.

Thank you. Please reply to this email if you have any questions.
