3	(B)	Entire difference relates to recoverable fuel clause expenses.					
4							
5	(C)	Entire difference relates to recoverable deferred fuel & capacity clause expenses.					
6							
7	(D)	The $4M net increase in account 511 and 512 is primarily due to the timing and scope of outage costs of $2.8M at Anclote and $1.2M at Crystal River.					
8							
9	(E)	The $4M net increase in account 511 and 512 is primarily due to the timing and scope of outage costs of $2.8M at Anclote and $1.2M at Crystal River.					
10							
11	(F)	The $3.4M increase relates to the first year of full cost of the two Clean Energy Connect solar farms placed in service in 2022, and the partial year costs of four solar farms placed in service in 2023 under

15							
16	(H)	The $5.2M increase is primarily attributable to the customer connect system and ending the deferral treatment of O&M costs on the project.					
17							
18	(I)	The $2.8M decrease is primarily attributable to a decrease of $1.4M from improvement in COVID pandemic economic conditions and $.9M decrease from implementation of customer connect.					
19							
20	(J)	The decrease is attributable to a decrease in the storm amortization expense of $57.9M.					
21							
22	(K)	The $20.1M decrease is primarily attributable to the decrease of $26.2M for amortization of independent spent fuel storage costs net of $5.3M first year amortization of the customer connect deferred					
23		O&M costs.					
24							
25	(L)	Entire difference relates to the deferred portion of recoverable ECRC clause expenses.					
26

Line No.	(A) Description	(B) Test Year 2023	(C) Test Year 2022	(D) Prior Year 2021	(E) Prior Year 2020	(F) Historical Year 2019
1	Notes:					
2	1	Projected Benefit Obligation - Calculated by summing the projected benefit obligation of each plan participant assigned to the payroll company.				
3						
4		Plan Assets at Fair Value - Cumulative amount of company contributions and investment return, net of retiree benefits and administrative expenses paid				
5		and attributed to each payroll company. Investment return is allocated so that each payroll company has the same annual return base on the beginning of				
6		year assets adjusted for cash flow. The returns are calculated for each separate return.				
7						
8		Market Related Value of Assets - Allocated to each payroll company in proportion to the payroll company portion of the plan assets at fair value. For the RCBP and DELPP, this allocation applies only to the payroll companies that do not use a fair value basis for market related value of assets.				
9						
10		Benefit Payments - Benefit payments to participants are reported for each payroll company by Duke Energy.				
11						
12		Employer Contributions - Actual plan sponsor contributions are attributed to each payroll company and provided by Duke Energy. Future plan contributions				
13		are estimated for each payroll company based on the sum of service cost, administrative expenses, and a 7-year amortization of unfunded PBO. The most				
14		recently reported information is used for this purpose.				
15						
16		Prior Service Cost - Calculated for each payroll company when an amendment is passed that changes the projected benefit obligation. The amount shown				
17		for each payroll company is the remaining amount to be recognized in the future as a component annual benefit cost.				
18						
19		Amount Recognized in Retained Earnings as a Prepaid Pension Asset or (Accrued Benefit Liability). This item tracks contributions made by the company and				
20		the annual benefit cost calculated for each payroll company. A prepaid pension asset exists when cumulative contributions exceed the cumulative benefit				
21		cost reported since the company began offering the benefit. An (accrued benefit liability) position exists when the accumulation of benefit costs exceeds the				
22		accumulation of contributions made by the company. Adjustments are made to account for the transfer of participants between payroll companies.				
23						
24						
25		Service Cost - Calculated by summing the service cost of each plan participant assigned to the payroll company.				
26						
27		Administrative Expense - Allocated to each payroll company in proportion to the payroll company's portion of the plan assets at fair value.				
28						
29		Interest Cost - Based on the projected benefit obligation for the payroll company and the expected benefit payments of participants assigned to the payroll				
30		company.				
31						
32		Expected Return on Assets - Based on the market related value of assets, expected benefit payments, and expected contributions calculated for each payroll				
33		company.

3		Amortization of Gains and Losses - The amortization of actuarial gains and losses is determined for the plan in aggregate. If an amount is being amortized, it				
4		is allocated to each payroll company on the basis of each payroll company's attributed portion of the unrecognized gain and loss for the plan.				
5						
6		Transfers Between Payroll Companies - If a participant transfers between payroll companies, the projected benefit obligation as of the beginning of the year				
7		is determined. Assets equal to the projected benefit obligation are then transferred from the prior payroll company*. The result of this method is that a				
8		payroll company does not incur an actuarial gain or loss due to transfers. Unrecognized items are transferred pro rata according to the portion of the prior				
9		payroll company's projected benefit obligation that is transferred with corresponding adjustments made to any prepaid pension asset or (accrued benefit				
10		liability).				
11						
12

Line No.	(A)
1	Duke Energy Florida (DEF) is a party to Duke Energy's Tax Sharing Agreement (TSA), which governs the allocation of the income tax liabilities
2	of the consolidated group of which Duke Energy Corporation is the common parent. Under Duke Energy's TSA, allocations of the group's consolidated
3	tax liability are based on the percentage method under Treasury Regulation Section 1.1502–33(d)(3), in conjunction with the method described in
4	Internal Revenue Code Section 1552(a)(1). Using a stand-alone methodology, for purposes of making such allocations, DEF is treated as if it were classified as a
5	corporation for U.S. federal income tax purposes. Using this stand-alone methodology, DEF has not included any tax benefits from other members of the
6	consolidated group in the cost of service for the test year.

Notes:

[1] The $2.79M is related to the state income tax reduction effective January 1, 2019, but was not included in last year's regulatory assessment fee (RAF) filing. The $2.79M difference will be included in the rate refund provision when the 2020 semiannual reporting period is filed.

[2] The RAF filing due date is 1/31, which uses revenues prior to finalization of December year-end reporting. As a result, timing differences exist for Total Other Operating Revenues. Any difference will be an adjusting amount for the 2020 first semiannual reporting period.
