1 P R O C E E D I N G S

2 CHAIRMAN LA ROSA: All right. Let's go ahead
3 and grab our seats and we will get started. I had
4 to wipe the dust off this thing this week. I
5 clearly don't use the gavel very often.

6 Good morning, again, everyone. Today is still
7 October 7th, a little bit after 10:00 a.m., and
8 let's go ahead and convene this hearing.

9 Staff, will you get us started by reading the
10 notice?

11 MR. THOMPSON: Thank you, Mr. Chair.

12 By notice dated September 22nd, 2025, this
13 time and place has been set for a hearing in Docket
14 No. 20250029-GU. The purpose of the hearing is
15 upset forth more fully in the notice.

16 CHAIRMAN LA ROSA: Excellent. Let's now go
17 ahead and take appearance of counsel. We will
18 start with Peoples Gas.

19 MR. WAHLEN: Good morning. I am Jeff Wahlen
20 of the Ausley McMullen Law Firm, appearing with
21 Malcolm Means and Virginia Pondered on behalf of
22 Peoples Gas System, Inc.

23 CHAIRMAN LA ROSA: Great.

24 Office of Public Counsel.

25 MR. REHWINKEL: Good morning. Charles

1 Rehwinkel, Walt Trierweiler on behalf of the Office
2 of Public Counsel and the customers of Peoples Gas.
3 I would also like to enter an appearance for
4 Octavio Ponce.

5 CHAIRMAN LA ROSA: Excellent. Great. Thank
6 you.

7 FIPUG.

8 MS. PUTNAL: Thank you. Good morning, Karen
9 Putnal on behalf of Florida Industrial Power Users
10 Group. And I would like to enter an appearance for
11 Jon Moyle.

12 CHAIRMAN LA ROSA: Thank you.

13 Staff.

14 MR. THOMPSON: Major Thompson, Jacob Imig and
15 Zachary Bloom on behalf of Public Service
16 Commission staff.

17 MS. HELTON: And Mary Anne Helton is here as
18 your Advisor, along with Adria Harper, your General
19 Counsel.

20 CHAIRMAN LA ROSA: Great. Thank you, counsel.

21 Staff, are there any preliminary matters that
22 we need to address?

23 MR. THOMPSON: Yes, Mr. Chairman.

24 Commissioners, we are here today for Peoples
25 Gas, OPC and FIPUG to present evidence in support

1 of a 2025 Stipulation and Settlement Agreement
2 which was signed by all parties to this docket.
3 Staff is unaware of any outstanding preliminary
4 matters.

5 CHAIRMAN LA ROSA: Do the parties have any
6 other preliminary matters that need to be
7 addressed?

8 MR. WAHLEN: No, no items.

9 CHAIRMAN LA ROSA: All right. Then let's go
10 ahead and move to opening statements by the
11 parties. Any party may, of course, waive their
12 opening statement. Otherwise, please keep in mind
13 that opening statements are set for five minutes.

14 Mr. Wahlen, you are recognized.

15 MR. WAHLEN: Good morning. Thank you,
16 Chairman La Rosa, and good morning, Commissioners.

17 Today, Peoples Gas Systems, Inc., seeks
18 approval of its 2025 Stipulation and Settlement
19 Agreement. The 2025 agreement resolves all issues
20 in the case, results in fair, just and reasonable
21 rates and is in the public interest. Peoples urges
22 you to approve it.

23 Peoples filed its petition for rate increase
24 in this docket on March 31st, 2025. Since then,
25 the company has responded to hundreds of

1 interrogatories and produced over 18,000 pages of
2 documents to assist the staff and the parties in
3 their evaluation of the company's case.

4 The PSC staff conducted an audit of the
5 company's initial rate case filing and issued a
6 report, which is going into the record. The
7 parties experts exchanged information and conducted
8 extensive discovery, including over 13 depositions.
9 The Commission held customer service hearings on
10 July 14th, 15th and 17th of this year.

11 The 2025 agreement is a unanimous agreement of
12 the parties in this docket. Each party has
13 expressly agreed that the 2025 agreement is in the
14 public interest, and results in fair, just and
15 reasonable rates. The parties have agreed to
16 support approval of the agreement by the Commission
17 in that they will not appeal a final or order
18 approving it. The parties also expressly agree
19 that no individual provision by itself necessarily
20 represents the position of any party in any future
21 proceeding.

22 The major elements of the settlement are
23 listed and explained in the company's motion to
24 approve, which was filed August 13th, and in the
25 matrix developed by your staff and identified as

1 Exhibit 98. The motion explains the evidence
2 supporting the agreement and why the agreement and
3 its major components are in the public interest.
4 We hope that the motion provides a useful framework
5 for evaluating the settlement.

6 The major elements of the 2025 agreement
7 include a midpoint return on equity of 10.3
8 percent, with a range of plus or minus 100 basis
9 points, 57.7 -- 54.7 percent equity ratio, a \$66.7
10 million base rate increase, including cast
11 iron/bare steel revenues in 2026, and a subsequent
12 year adjustment of 25 million in 2027.

13 It also makes room for the possibility of an
14 up to a \$5 million increase if the company meets
15 certain requirements associated with addressing
16 isolated system pressure challenges caused by the
17 addition of backup electric generators on its
18 system.

19 Peoples appreciates the opportunity to be here
20 and would like to thank your staff for the
21 professional and diligent way they reviewed the
22 settlement and developed the framework for this
23 hearing.

24 We would also like to thank the Office of
25 Public Counsel and FIPUG for their professionalism

1 throughout this proceeding in their tough, but
2 thoughtful and constructive approach to our
3 settlement discussions.

4 We have two witnesses available to testify
5 later on, but I will close by thanking you for your
6 time and asking you to approve the agreement.

7 CHAIRMAN LA ROSA: Great. Thank you. And we
8 will get to those witnesses soon.

9 Let's go to OPC.

10 MR. REHWINKEL: Thank you, Mr. Chairman, I
11 know that you have a lot on your plate today, so I
12 will be very brief.

13 As Mr. Wahlen said, the agreed motion to
14 approve says it all, and we stand on that for our
15 remarks in support of the agreement.

16 I do want to take an opportunity to thank your
17 staff. During the case, they were deeply engaged
18 in discovery, and what they did in the case highly
19 informed the actual outcome of the settlement and
20 facilitated it, and I want to thank them for that.
21 And I also want to thank them for the efficient
22 processing of this unanimous settlement agreement
23 that gets us here today.

24 I do also want to thank Peoples Gas, and
25 especially Mr. Buzard, who went the extra mile on

1 behalf of the company to find a way to bring what
2 looked like an impossible situation into where we
3 are today, and I want to really thank him for that.

4 Our worthy adversaries with Ausley, Mr.
5 Wahlen, Ms. Ponder, Mr. Means and Mr. Jones also
6 helped make this process a worthwhile one, and a
7 valuable one that yielded a good result for all
8 parties.

9 The only thing I want to highlight from the
10 agreement, Mr. Wahlen alluded to it in his
11 comments, is the third year. The company filed for
12 two years, including a subsequent year adjustment.
13 The agreement results in a third year of stay-out
14 with the limited opportunity that's capped at \$5
15 million for the capacity issues related to standby
16 generators.

17 There are specific guardrails and criteria for
18 that. It is an up to \$5 million. It's not an
19 automatic \$5 million increase, but it is a good
20 compromise that balances the interests of the
21 customers and the company in reaching what I view
22 as a keystone element of this agreement. It is
23 well-balanced. It serves the public interest, and
24 it is fair to all, and it meets the three test --
25 the three prongs of the test that Mr. Wahlen set

1 out at the beginning of his remarks, and we urge
2 that you approve it.

3 Thank you.

4 CHAIRMAN LA ROSA: Thank you.

5 FIPUG.

6 MS. PUTNAL: Thank you. Good morning.

7 Briefly.

8 FIPUG supports the settlement agreement as
9 being in the public interest. FIPUG would like to
10 thank the other parties, and in particular the
11 Commission staff, for the hard work put into the
12 case.

13 The settlement agreement, the result of give
14 and take negotiations is fair, just and reasonable,
15 and FIPUG respectfully requests that it should be
16 approved as it is before the Commission today.

17 Thank you.

18 CHAIRMAN LA ROSA: Great. Thank you.

19 Let's go ahead and move to the record. Staff.

20 MR. THOMPSON: Thank you, Mr. Chair.

21 Staff has prepared a Comprehensive Exhibit
22 List, which includes the prefiled exhibits attached
23 to each witnesses' prefiled testimony and exhibits
24 identified by staff and the parties. The list has
25 been provided to the parties, Commissioners and the

1 court reporter.

2 Staff requests that the list, itself, be
3 marked as Exhibit 1 at this time, with all
4 subsequent exhibits marked as indicated on the
5 list.

6 CHAIRMAN LA ROSA: Excellent, so we will go
7 ahead and mark the list as Exhibit 1, then we will
8 -- the others marked 2 through 29.

9 (Whereupon, Exhibit Nos. 1-99 were was marked
10 for identification.)

11 MR. THOMPSON: Thank you.

12 It is staff's understanding that the parties
13 do not object and stipulate to the admission of the
14 Comprehensive Exhibit List, which is Exhibit No. 1.
15 Staff requests that this exhibit be admitted at
16 this time.

17 CHAIRMAN LA ROSA: Okay. Just to correct what
18 I said. I said 29, I meant 99.

19 Are there any objections? None?

20 MR. WAHLEN: No objection.

21 CHAIRMAN LA ROSA: All right. Then Exhibit 1
22 is then admitted.

23 (Whereupon, Exhibit No. 1 was received into
24 evidence.)

25 MR. THOMPSON: Thank you.

1 It is staff's understanding that the parties
2 do not object and stipulate to the admission of
3 each of the remaining exhibits, 2 through 99.
4 These exhibits include the prefiled exhibits
5 attached to each witness's prefiled testimony and
6 exhibits identified by staff and the parties.
7 Staff requests that these exhibits be admitted at
8 this time.

9 CHAIRMAN LA ROSA: No objections?

10 MR. WAHLEN: No objection.

11 CHAIRMAN LA ROSA: Seeing no objections,
12 Exhibit 2 through 99 are admitted.

13 (Whereupon, Exhibit No. 2-99 were received
14 into evidence.)

15 CHAIRMAN LA ROSA: Let's move to the witness
16 testimony. Staff.

17 MR. THOMPSON: Thank you.

18 It is staff's understanding that the parties
19 do not object and stipulate to the admission of the
20 prefiled direct testimony of all the witnesses in
21 this docket. Staff requests that the following
22 witnesses' direct testimony be entered into the
23 record as though read in the following order:

24 For PGS, Donna Bluestone, Luke Buzard, Jeff
25 Chronister, Dylan D'Ascendis, Eric Fox, Andrew

1 Nichols, Timothy O'Connor, Christian Richard, John
2 Taylor, Rebecca Washington and Helen Wesley.

3 For OPC, David Garrett and Lane Kollen.

4 For FIPUG, Jeffrey Pollock.

5 And for Commission staff, Angela Calhoun and
6 Wesley Thurmond.

7 It is also staff's understanding that the
8 parties do not object and stipulate to the
9 admission of the prefiled rebuttal testimony for
10 the following PCS witness, and those would be:
11 Luke Buzard, Jeff Chronister, Dylan D'Ascendis,
12 Andrew Nichols, Christian Richard, John Taylor and
13 Helen Wesley.

14 Those are all the witnesses with prefiled
15 testimony, Mr. Chair.

16 CHAIRMAN LA ROSA: Great. Thank you.

17 Seeing no objection to the prefiled testimony,
18 that will be admitted and moved into the record as
19 though read.

20 (Whereupon, prefiled direct testimony of Donna
21 Bluestone was inserted.)

22

PREPARED DIRECT TESTIMONY

OF

DONNA BLUESTONE

Q. Please state your name, address, occupation and employer.

A. My name is Donna Bluestone. My business address is 702 North Franklin Street, Tampa, Florida 33602. I am the Vice President of Human Resources, and I am employed by Peoples Gas System, Inc. ("Peoples" or the "company").

Q. Please describe your duties and responsibilities in that position.

A. I am responsible for the leadership and strategic direction of the Human Resources ("HR") function for Peoples. My duties include: (1) talent acquisition; (2) HR operations; and (3) leadership and organizational development. I am also responsible for coordinating the HR functions provided to Peoples by Tampa Electric Company ("Tampa Electric") via shared services.

Q. Please provide a brief outline of your educational background and business experience.

1 **A.** I received a Bachelor of Science degree in Psychology
2 from Longwood College in Farmville, Virginia and a Master
3 of Business Administration from the University of Florida
4 in Gainesville, Florida.

5
6 I joined Peoples in September 2022 as the Vice President
7 of Human Resources. Prior to joining Peoples, I served as
8 the Vice President of HR and Shared Services for Bloomin'
9 Brands, Inc., where I was responsible for talent
10 acquisition, leadership development, and shared services.
11 I also provided strategic HR support to the Executive
12 Leadership team. My background includes other HR
13 leadership roles with varying levels of responsibilities.

14
15 **Q.** What are the purposes of your prepared direct testimony
16 in this proceeding?

17
18 **A.** The purposes of my direct testimony are to: (1) provide
19 an overview of the company's HR activities; (2) explain
20 the company's team member compensation system; (3) show
21 that the company's proposed levels of operations and
22 maintenance ("O&M") expenses related to HR for the 2026
23 projected test year are reasonable and prudent; (4)
24 demonstrate that Peoples' payroll and benefits costs for
25 the 2026 projected test year are reasonable; and (5) show

1 that the additional O&M team members included in the rate
2 case are appropriate.

3
4 **Q.** Did you prepare any exhibits in support of your prepared
5 direct testimony?

6
7 **A.** Yes. Exhibit No. DB-1, entitled "Exhibit of Donna
8 Bluestone", was prepared under my direction and
9 supervision. The contents of my exhibit were derived
10 from the business records of the company and are true and
11 correct to the best of my information and belief. My
12 exhibit consists of 10 documents:

13
14 Document No. 1 List of Minimum Filing Requirement
15 Schedules Co-Sponsored by Donna
16 Bluestone

17 Document No. 2 2023 Rate Case Team Member Count
18 Reconciliation

19 Document No. 3 2023 Rate Case Positions
20 Reconciliation

21 Document No. 4 Base Wage Adjustments for Union
22 Members 2020-2025

23 Document No. 5 Total Annual Compensation Analysis
24 for Exempt and Non-Covered/Non-
25 Exempt Benchmarked Positions

1	Document No. 6	Description of TECO Peoples Gas
2		Benefits Package
3	Document No. 7	TECO Benefits Valuation Executive
4		Summary (2023 Mercer BENVAL)
5	Document No. 8	Average Annual Health Benefits Cost
6		per Employee 2011-2024 (Mercer)
7	Document No. 9	Peoples' Retirement Results (2023
8		Mercer BENVAL)
9	Document No. 10	Peoples' FERC Account 926 Pension
10		Benefits 2024-2026

11

12 **I. HUMAN RESOURCES OVERVIEW**

13 **Q.** Please describe the company's Human Resources department.

14

15 **A.** Peoples' Human Resources ("HR") department consists of
 16 three areas: (1) Talent Acquisition; (2) HR Operations;
 17 and (3) Leadership and Organizational Development. As of
 18 December 31, 2024, there were 12 team members within the
 19 HR Department. The Talent Acquisition area is responsible
 20 for attracting and hiring the right candidates. HR
 21 Operations oversees employee and labor relations. The
 22 Leadership and Organizational Development area creates
 23 and conducts training focused on leadership development
 24 and is responsible for the company's employee engagement
 25 survey.

1 Q. Do certain HR functions remain shared with Tampa Electric?

2
3 A. Yes. A few HR functions remain shared with Tampa Electric
4 so we can benefit from the economies of scale available
5 due to the transactional nature of the service, including:
6 (1) HR Technology and Systems, (2) payroll, (3) benefit
7 plan design and administration, and (4) compensation
8 design. The company pays a shared services allocation to
9 Tampa Electric for these functions. Peoples witness
10 Andrew Nichols addresses the shared service allocation in
11 his prepared direct testimony.

12
13 GUIDING PRINCIPLES

14 Q. Please describe the company's commitment to its team
15 members.

16
17 A. Peoples' philosophy with respect to team members is rooted
18 in the belief that they are the key drivers of our
19 company's value to both our customers and the communities
20 we serve. It is essential for our team members to be
21 committed to maintaining a safe work environment to
22 benefit the public, and to commit to safety every moment
23 of every day.

24
25 Peoples is committed to hiring and retaining skilled team

members who: (1) are dedicated to safety, collaboration, and innovation; (2) can adapt to the company's changing industry needs; and (3) embrace innovations that help the company deliver clean, affordable, and reliable energy safely. To support the retention of skilled team members beyond its compensation and benefits package, the company offers various programs such as leadership development, tuition reimbursement, and flexible work options for certain positions. Additionally, apprentices are eligible to earn up to 30 credit hours of college credit towards an associate degree should they choose to pursue that path.

Q. What are the company's core principles in the way it conducts business?

A. Peoples' core principles, as articulated in its Code of Conduct are:

1. Safety, health, and the environment;
2. Customers;
3. Integrity;
4. Respect and collaboration; and
5. Excellence.

1 **Q.** What leadership competencies does the company seek to
2 develop in its team members?

3
4 **A.** The following leadership competencies serve to guide all
5 team members and build upon Peoples' Code of Conduct:

- 6
7 1. Speaks up on Safety, Health, and the Environment;
8 2. Takes Ownership and Acts with Integrity;
9 3. Drives Operational Excellence for Customers;
10 4. Builds Strong, Collaborative Relationships;
11 5. Develops People and Teams;
12 6. Cultivates Innovation and Embraces Change; and
13 7. Thinks Strategically and Exercises Sound Judgment.

14
15 **Q.** What are the objectives of Peoples' total compensation
16 and benefits programs?

17
18 **A.** The company recognizes that a fair and market-based
19 compensation and benefits package is critical to
20 attracting and retaining skilled and experienced team
21 members. The company's total compensation and benefits
22 programs include (1) base salary; (2) short-term
23 incentive; (3) long-term incentive (where applicable);
24 (4) pension/401k; (5) paid time off programs; (6) an
25 Employee Common Share Purchase Plan; and (7) medical,

1 dental and insurance plans. All team members, except for
2 co-op/student team members, are eligible to participate
3 in the company's medical, dental, and vision insurance
4 plans. I will discuss Peoples' compensation system in more
5 detail later in my direct testimony.

6
7 **Q.** What is the Peoples' philosophy with respect to staffing
8 and building team member capability as the organization
9 grows?

10
11 **A.** Peoples is very deliberate as we build our team. The
12 company works to hire internally for skills that are
13 necessary as our organization grows. For example, process
14 improvement and change management skills are essential to
15 building the organizational capability to be more
16 productive and efficient. Another example is reflected in
17 our recent insourcing of the locator role in Gas
18 Operations. By hiring these team members we can
19 significantly reduce the cost of external consultants or
20 service providers, while also becoming more efficient.

21
22 TEAM MEMBER OVERVIEW

23 **Q.** How many team members are employed by Peoples?

24
25 **A.** As of December 31, 2024, Peoples employed 812 team

members.

Q. Does Peoples have team members that are part of a collective bargaining unit?

A. Yes. Approximately 107 team members, as of December 31, 2024, were part of a collective bargaining unit. As of December 31, 2024, the company had Collective Bargaining Agreements ("CBAs") with four unions: (1) International Brotherhood of Electrical Workers 108 ("IBEW 108"); (2) United Food and Commercial Workers International Union Local 1625 ("UFCW"); (3) International Brotherhood of Electrical Workers 2072 ("IBEW 2072"); and (4) Office and Professional Employees International Union ("OPEIU"). The table below reflects the number of team members per union as of December 31, 2024.

Union	Team Member Count
IBEW (2072)	25
IBEW (108)	28
OPEIU (46)	11
UFCW (1625)	43
Grand Total	107

Q. Have there been changes to the collective bargaining units since December 31, 2024?

1 **A.** Yes. In February 2025, the IBEW 2072 officially
2 decertified from union representation. This union
3 previously covered 25 team members in Daytona, Eustis and
4 Lakeland service areas. Also, in February 2025, the IBEW
5 108, which covers 28 team members in our Sarasota service
6 area, submitted a notice of intent to decertify to the
7 National Labor Relations Board. This bargaining unit will
8 hold a decertification vote in April 2025 to determine
9 its status. The decertification notifications signal that
10 these team members recognize the value of the increased
11 engagement support by leadership.

12
13 **Q.** With this recent decertification of the IBEW 2072, how
14 many remaining covered team members do you have?

15
16 **A.** Following the decertification of IBEW 2072, we have 82
17 covered team members, which represents 10 percent of our
18 team members.

19
20 **Q.** What is the status of the remaining three currently active
21 union contracts: (1) IBEW 108; (2) UFCW 1625; and (3)
22 OPEIU.

23
24 **A.** The contract for the IBEW 108 will expire on May 26, 2025,
25 if the decertification process is not complete before that

1 time. As previously mentioned, these members will vote in
2 April on the decertification. UFCW's contract will expire
3 on November 6, 2025. The company will engage in
4 negotiations with this union at the appropriate time. The
5 company recently successfully negotiated a new contract
6 with the OPEIU, with terms effective January 1, 2025 and
7 terminating on December 31, 2027.

8
9 **Q.** What other team member categories does the company have
10 beyond team members that are covered by a CBA as described
11 above?

12
13 **A.** The company also has exempt, non-exempt, part-time and
14 co-op student team members in addition to the company's
15 "covered" team members.

16
17 **Q.** What does "exempt" and "non-exempt" mean?

18
19 **A.** The terms "exempt" and "non-exempt" refer to a team
20 member's status under the Fair Labor Standards Act. Exempt
21 team members are not subject to certain requirements of
22 wage and hour laws, such as provisions governing when
23 overtime must be paid. There are additional wage and hour
24 laws that are applicable to non-exempt team members that
25 the company must follow for such employees.

1 Q. How many non-exempt team members did the company have as
2 of December 31, 2024?

3

4 A. The company had 374 noncovered non-exempt team members as
5 of December 31, 2024.

6

7 Q. How many exempt team members did the company have as of
8 December 31, 2024?

9

10 A. The company had 331 exempt team members as of December
11 31, 2024.

12

13 **II. HR ACCOMPLISHMENTS AND UPDATES SINCE THE LAST RATE CASE**

14 Q. How has Peoples addressed some of the HR needs identified
15 in the prior rate case?

16

17 A. In 2023 and 2024, the company strengthened its HR area
18 by: (1) reviewing internal processes and systems to ensure
19 they effectively support the company's growth, (2)
20 assisting the company's team members with career
21 advancement goals, and (3) providing company leaders with
22 tools to keep Peoples' team members engaged.

23

24 The HR department focused on improving internal processes
25 and systems to better support the company's growth. In

particular, the Talent Acquisition team:

1. Implemented proactive sourcing methods to identify candidates earlier in the recruitment process, which increased the number of qualified candidates,
2. Launched a stand-alone career website that showcases the company's culture and available career opportunities, thereby enhancing its ability to attract talent interested in the gas industry,
3. Introduced an initial candidate screening stage before the panel interview in the hiring process, allowing hiring managers to better evaluate candidates earlier in the process, and
4. Increased communication touchpoints with candidates to keep them engaged throughout the recruitment process.

These improvements in the Talent Acquisition process helped the company reduce the average time to fill a position from 59 days in 2023 to 45 days in 2024.

Additionally, HR made process improvements that reduced the time spent performing transactional items associated with internal transfers, offer approvals, offboarding checklist and onboarding communications.

1 HR developed a "Career Path Tool" for the Gas Operations
2 team to assist team members with career advancement goals.
3 This tool provides a detailed summary of roles, job
4 descriptions, and career path opportunities within the
5 company. It also includes a performance coach guide to
6 facilitate discussions with team members about navigating
7 their careers and supporting development plans. Moreover,
8 the company developed and piloted an "Emerging Leader"
9 Program to enhance career advancement opportunities and
10 team member engagement. The Program prepares team members
11 interested in leadership positions for future leadership
12 roles within our organization. Each participant completes
13 self-paced pre-work, attends facilitated sessions with
14 fellow program members and completes post-work with their
15 performance coach. The HR team facilitated two "Emerging
16 Leader Program" cohorts by the end of 2024, with a total
17 of 25 team members completing the program. Three
18 additional cohorts will complete the program by the end
19 of 2025, totaling approximately 36 team members.

20
21 **Q.** Did the company implement any new programs to support its
22 team members since its last rate case?

23
24 **A.** Yes. Following Hurricanes Helene and Milton, Peoples,
25 Tampa Electric, and TECO Partners, Inc., established an

1 "Employee Relief Fund" for team members with hurricane
2 recovery needs. Both Tampa Electric and Peoples made the
3 initial contributions to establish the fund, with Peoples
4 donating \$50,000. HR helped in the establishment of the
5 fund and the process for team members to submit for
6 financial assistance. This program is intended to assist
7 team members with emergency relief grants when facing
8 certain disaster events. A third party, E4E Relief LLC,
9 administers the fund to ensure both confidentiality and
10 equity in financial distributions.

11
12 **Q.** Has the company experienced any talent market challenges
13 since the last rate case?

14
15 **A.** Yes. The talent market in Florida remains competitive.
16 Compensation continues to be a challenge for us as the
17 cost of living in the state continues to increase. To
18 address these challenges, the company hired a few key
19 roles to work remotely outside the state.

20
21 TEAM MEMBER SURVEYS

22 **Q.** In order to engage, develop, and retain team members,
23 does the company use surveys or other means to get
24 feedback from its team members?

1 **A.** Yes. The company typically conducts a team member
2 engagement survey every two years, supplemented by a
3 shorter "pulse" survey in the off years. Both surveys
4 provide valuable feedback on many subjects, such as
5 satisfaction with leadership, compensation, benefits,
6 retention, opportunities for growth, and communication.
7 The company benchmarks these survey results both
8 internally and externally. In addition to the surveys,
9 the company gathers feedback from town halls, roadshows,
10 and leadership meetings. These events are well attended
11 and encourage open two-way communication. In both 2023
12 and 2024, the company held five town hall meetings each
13 year.

14
15 **Q.** What feedback did the company receive in the most recent
16 2023 engagement survey?

17
18 **A.** The feedback from the 2023 engagement survey revealed
19 several key points, including that our team members (1)
20 desire more career opportunities, (2) have a concern that
21 compensation is not keeping pace with the economy, (3)
22 would like more open and effective communication by
23 leadership, and (4) have an interest in increased
24 visibility from leadership. Despite these concerns, the
25 survey results also indicated that responding team

1 members feel engaged in meaningful work and appreciate
2 the team-oriented culture.

3
4 **Q.** How has the company addressed the feedback from the 2023
5 engagement survey?

6
7 **A.** As discussed above, the company developed both the "Career
8 Path Tool" and the "Emerging Leader Program" in direct
9 response to team member feedback received in 2023. Both
10 initiatives address concerns about career advancement
11 opportunities. We created and rolled out the "Performance
12 Coach Toolkit" to assist performance coaches in their
13 discussions with team members regarding career
14 opportunities.

15
16 The organization held town halls and conducted leadership
17 roadshows to address the desire for more open and
18 effective communication and leadership visibility.
19 Peoples also revamped the way our functional directors
20 interact to boost engagement from mid and senior-level
21 leaders. Additionally, HR enhanced the monthly HR
22 Newsflash to include more relevant information. The HR
23 Newsflash serves to communicate company activities, share
24 resources and education, recognize achievements, and
25 highlight important information across the organization.

1 HR also implemented "drop-in calls" for performance
2 coaches to share important and timely topics. These calls
3 provide an opportunity to share detailed information and
4 resources about key initiatives, enabling performance
5 coaches to effectively engage and educate their team
6 members.

7
8 TEAM MEMBER COUNT

9 **Q.** In the company's last rate case the Florida Public Service
10 Commission ("Commission") approved a total employee count
11 of 824 employees in 2024. You testified above that the
12 company had 812 team members as of December 31, 2024.
13 Please explain this variance.

14
15 **A.** On January 1, 2023, Peoples had 706 active team members.
16 In 2023 and 2024, Peoples had 237 team members who were
17 either hired, rehired or transferred into the company.
18 In addition, we had 131 team members who terminated or
19 transferred out of the company (to another affiliate).
20 Document No. 2 of my exhibit provides a reconciliation of
21 the Commission-approved team member count for 2024 of 824
22 and the actual team member count as of December 31, 2024,
23 of 812.

24
25 **Q.** In the company's last rate case, the Commission found

1 record evidence to support 142 positions between 2023 and
2 2024. Did the company fill all of the 142 approved
3 positions?

4
5 **A.** No. Of the 142 positions approved by the Commission in
6 the 2023 rate case, the company hired 102. Twenty-one of
7 the 142 approved positions were repurposed as different
8 positions or different locations to better align to the
9 business needs and roles directly tied to staffing to
10 meet customer demands. After careful consideration, the
11 company postponed hiring or otherwise did not hire 19 of
12 the 142 approved positions. In January 2024, the company
13 updated the budget for 2024 that it prepared in 2022 and
14 used in its last rate case. During the process, the
15 company faced lower than expected revenues, and higher
16 than expected costs for: transportation; insurance; and
17 labor and employee benefits. We managed through these
18 changes by slightly reducing the number of new employee
19 positions to be filled in 2024, finding operating
20 efficiencies, and updating the amount of administrative
21 and general (A&G) expense we capitalize. Peoples witness
22 Helen Wesley discusses these actions in her prepared
23 direct testimony.

24
25 Document No. 3 of my exhibit provides a reconciliation of

1 the Commission approved team member positions for 2023
2 and 2024 of 142 with the actual positions filled as of
3 December 31, 2024.

4
5 **Q.** Which 16 positions were disallowed by the Commission in
6 the 2023 rate case?

7
8 **A.** The Commission disallowed one Business Development
9 Manager position in FERC Account 920, and the following
10 fifteen positions in the non-finance general A&G area:

- 11 • Marketing - Coordinator
- 12 • Marketing - Manager
- 13 • Strategy - Coordinator
- 14 • Strategy - Co-op
- 15 • Marketing - Service Coordinator
- 16 • Marketing - Manager Strategic Communications and
17 Media Relations
- 18 • Process Improvement - Lead Business Innovation
19 Coordinator
- 20 • Analytics - Business Analytics and Insights Analyst
- 21 • Analytics - Co-op
- 22 • Regulatory Affairs - Senior Analyst (2 positions)
- 23 • Regulatory Affairs - Manager
- 24 • Real Estate - Manager
- 25 • Real Estate - Technician (2 positions)

1 Q. Did the company hire any of the 16 disallowed positions?

2
3 A. Yes. As shown on Document No. 3 of my exhibit, the company
4 made a business decision to hire six of the disallowed
5 positions. In 2023, before the Commission's decision, the
6 company had already filled the (1) Regulatory Affairs
7 Manager position and the (2) Marketing - Manager Strategic
8 Communications and Media Relations positions. Following
9 the Commission's decision, the company hired the
10 following four positions to fill essential functions:
11 Marketing - Manager, Regulatory Sr. Analyst, Regulatory
12 Analyst and Business Development Manager.

13
14 Q. In the last rate case the Commission approved the
15 following three team members for HR in 2023: an (1)
16 Analyst Lead, (2) HR Business Partner, and (3) Talent
17 Acquisition Specialist. Did the HR team hire these team
18 members in 2023?

19
20 A. In December 2023, the HR Business Partner and the Talent
21 Acquisition Specialist positions were filled. The Talent
22 Acquisition Specialist started their position in January
23 2024.

24
25 The company made a business decision not to hire the

Analyst Lead position but instead hire the position of Learning & Development Specialist to allow the company to address talent management, assist with leadership development, and the needs of our growing workforce. The company hired this position in 2024 and the team member began work in January 2025. Therefore, this position is part of this rate case request.

Q. Did HR add any team members since the last rate case that were not part of the 2023 rate case?

A. Yes. In January 2025, the company added one additional position to the Leadership Development team. This "Technical Trainer" position is needed as we continue to prioritize leadership and team member development and enhance engagement among our team members. The addition of this position addresses feedback received from the engagement survey and is included in our current rate case request.

III. EMPLOYEE COMPENSATION

Q. What is Peoples' overall compensation philosophy?

A. The company recognizes that a competitive pay program is a critical component of a team member's total

1 compensation. Peoples must have a reasonable and
2 competitive compensation program to attract and retain
3 skilled team members. The company evaluates the
4 competitiveness of our pay program by focusing on total
5 direct compensation, which includes base pay (salaried
6 and hourly), short-term incentive plans ("STIP"), and
7 long-term incentive plans ("LTIP"). All three elements
8 are important, serve specific purposes, and work
9 together.

10
11 **Q.** Please describe the company's general system for
12 compensating its team members.

13
14 **A.** Peoples compensates its team members with a combination
15 of direct compensation and benefits. The direct
16 compensation component consists of three parts: base
17 compensation, short-term incentive compensation, and
18 long-term incentive compensation. Additionally, the
19 company offers different types of health insurance and
20 retirement plans as part of its benefits package. I will
21 explain these compensation and benefits components later
22 in my direct testimony.

23
24 All team members, whether hourly or salaried, are eligible
25 to participate in the company's benefits program and

1 short-term incentive pay program. The only exception is
2 our co-op/students. In general, department directors and
3 officers are also eligible to participate in the company's
4 long-term incentive pay program. I will describe these
5 programs further in my testimony.

6
7 Peoples' compensation system reflects a pay for
8 performance model that emphasizes total compensation that
9 aligns the interests of our team members and customers.
10 We have designed our compensation system to reflect market
11 values, promote internal equity, and be viewed as
12 reasonable when we establish the rates to be paid by our
13 customers. This approach keeps our compensation packages
14 competitive by making an appropriate portion of a team
15 member's total compensation "variable" or "at-risk"
16 through incentive compensation programs that reward good
17 performance. Peoples' incentive compensation programs
18 encourage team members to prioritize safety, reliability,
19 overall organizational performance, and improving the
20 customer experience.

21
22 **IV. COMPENSATION**

23 BASE COMPENSATION

24 **Q.** What is base compensation?
25

1 **A.** Base compensation (or base pay) is the pay team members
2 regularly receive biweekly and is either paid as hourly
3 wages or salary.

4
5 **Q.** What is compa-ratio?
6

7 **A.** Compa-ratio is a measurement of pay that compares a team
8 member's base compensation to the median compensation for
9 similar positions within the target market. For example,
10 a compa-ratio of 100 percent or 1.0 would mean that a
11 team member's base compensation is considered "at market"
12 because it is at the midpoint of compensation for that
13 role.

14
15 **Q.** What is total direct compensation or TDC?
16

17 **A.** TDC is the relationship between the market and the total
18 compensation package: (1) base pay (which includes base
19 pay plus commissions); (2) STIP; and (3) LTIP, where
20 applicable.

21
22 **Q.** Do non-covered team members automatically get a base pay
23 increase each year?
24

25 **A.** No. Non-covered team members do not automatically receive

1 an annual base pay increase but are eligible for an annual
2 merit increase based on the company's talent management
3 process.

4
5 **Q.** Are covered team members eligible for merit increases?
6

7 **A.** No. Team members who are covered by a CBA do not
8 participate in the company's annual merit process. Team
9 members who are covered by a CBA are eligible for a base
10 pay increase based on the applicable CBA. The company
11 negotiates with each union during each contract cycle,
12 and an annual base wage adjustment is normally included
13 in the final overall agreement. Confidential Document No.
14 4 of my exhibit summarizes the base wage adjustments for
15 each union during the period 2023 to 2024.
16

17 **Q.** Please explain the company's process for making merit pay
18 increases.
19

20 **A.** The company has an annual merit review process designed
21 to offer team members an opportunity to earn an increase
22 in their base pay based on performance. Our merit review
23 process enables the company to retain strong performing
24 team members and remain competitive with the market.
25

1 Our merit process is a component of our talent management
2 process by which we assess the annual performance of each
3 team member. The first part of the process includes goal
4 setting and the second part requires assessment of
5 performance or a performance review.

6
7 At the beginning of each year, team members establish
8 performance goals with their performance coach. During
9 this process, the team members and performance coaches
10 ensure that the annual goals and position
11 accountabilities align with their specific role and are
12 aligned with the company's annual objectives as set out
13 in the company's STIP program. The company evaluates a
14 team member's performance against established goals at
15 least twice a year, once at mid-year and again at the end
16 of the year. Team members and performance coaches also
17 discuss leadership competencies during the annual review
18 process. We assess team members on a five-point scale
19 based on expectations: Significantly Exceeds; Exceeds
20 Many; Fully Meets; Meets Most; and Does Not Meet Job
21 Expectations.

22
23 After the end of year performance reviews are complete,
24 performance coaches can recommend a merit adjustment for
25 each eligible non-covered/non-union team member based on

1 established guidelines. The guidelines for recommending
2 a merit increase are based on the performance rating
3 scale, the position of the team member's base salary
4 within the base salary range, and the annual merit budget.

5
6 Merit adjustments typically are a base pay increase;
7 however, a team member may not be eligible for a base
8 salary increase if the individual's performance does not
9 meet expectations or if the team member's base salary is
10 already positioned competitively relative to the salary
11 grade mid-point. The company's officers review and
12 approve each proposed merit increase, and the President
13 and Chief Executive Officer approves the final total
14 annual merit amount.

15
16 **Q.** How is the compensation set for those team members that
17 participate in collective bargaining units?

18
19 **A.** Compensation for team members who are covered under a CBA
20 is determined by the terms of the contract between the
21 company and the labor union, which governs the working
22 conditions. Specifically, the CBA addresses wage scales,
23 working hours, training, health and safety, overtime,
24 grievance mechanisms, and rights to participate in
25 workplace or company affairs. Most of the company's

1 "covered" team members are non-exempt, are paid by the
2 hour, and are eligible for overtime or shift differential
3 pay. The same market and benchmark comparable data is
4 used during the collective bargaining process to ensure
5 alignment.

6
7 SHORT-TERM INCENTIVE PLAN

8 **Q.** Please describe the company's short-term incentive plan
9 or STIP.

10
11 **A.** The company's STIP compensates team members for the
12 achievement of annual company objectives. This variable
13 bonus plan rewards individual performance and individual
14 contribution to the annual company goals. The objectives
15 for STIP are centered around performance in the areas of
16 Safety, People, Customer, Asset Management, and
17 Financial. The STIP payment is calculated using four
18 components:

- 19
20 1. Eligible Earnings (base pay, sales commission, and
21 overtime, if applicable),
22 2. Incentive Target Level (a pre-defined percentage
23 based on the job level and is standardized across the
24 organization),
25 3. Balanced Scorecard ("BSC") Result Percentage

1 Achieved (annual goals achieved for the organization),
2 and

3 4. Performance Multiplier (calculation to differentiate
4 each eligible team member's level of performance).

5
6 The STIP links the company's success to financial
7 incentives for Peoples' team members for achieving the
8 company's annual goals and objectives. Team members who
9 score higher on the annual performance review are entitled
10 to a higher STIP payout as a percentage of base pay.

11
12 **Q.** How is the STIP applied to team members?

13
14 **A.** All eligible team members receive STIP payment based on
15 company performance (the BSC) and their individual
16 performance multiplier. Team members who have
17 underperformed and received positive discipline (the name
18 of the company's discipline process) and/or a performance
19 rating of "1- Does Not Meet Expectations" are not eligible
20 to receive an STIP payment.

21
22 **Q.** Please describe the Balanced Scorecard or BSC.

23
24 **A.** The company develops its BSC to define the organization's
25 goals for that calendar year. The BSC includes threshold,

target, and stretch goals across the five previously identified categories: Safety, People, Customer, Asset Management, and Financial Goals. The percentage of variable pay potential is based on the BSC results, job grade, and individual team members' performance. The payout ranges from 50 percent to 150 percent depending on the overall achieved results. The BSC is a key component of the STIP, linking the company's success to financial incentives for the team members who achieve or exceed their annual performance goals.

LONG-TERM INCENTIVE PLAN

Q. Please describe the company's long-term incentive plan, or LTIP.

A. The company's LTIP is a compensation and retention program for team members in key senior leadership positions. The LTIP encourages team members to focus on delivering long-term value for customers and aligns the long-term incentive pay for senior leaders with corporate and shareholder goals. LTIPs like ours are commonly offered by companies that compete for senior leadership talent. The company's LTIP is an important part of our competitive total compensation program for senior leaders. Together with our base pay and STIP, the company's LTIP allows

1 Peoples to attract and retain skilled leaders.

2
3 LTIP is administered through the Emera Performance Share
4 Unit ("PSU") Plan and the Emera Restricted Share Unit
5 ("RSU") Plan. A PSU or RSU is an equity-based compensation
6 granted to team members and refers to a unit equivalent
7 value of an Emera common share. Each grant has a
8 performance, or vesting, period of three calendar years.
9 Both PSU and RSU grants are affected by the Emera share
10 price. A PSU grant is subject to the achievement of pre-
11 determined financial objectives. At the end of the three-
12 year vesting or performance period, the grants for that
13 period are paid out. A PSU payout factor is a comparison
14 of Emera's performance results against the financial
15 objectives set for that period. The purpose of these
16 plans is to align leaders' long-term pay with Emera
17 corporate goals that focus on creating and preserving
18 long-term stakeholder value, which in turn, is guided by
19 creating long-term customer value. Each year, team
20 members at the director level or above are awarded PSUs
21 based on a percentage of base pay.

22
23 REASONABLENESS OF TOTAL DIRECT COMPENSATION

24 Q. You have explained that Total Direct Compensation, or TDC,
25 consists of base pay, STIP, and LTIP. What is the

1 company's "target" for TDC?

2

3 **A.** The company targets the median (middle) of the market.
4 Using the market median is considered a compensation best
5 practice and is better than using the mean or average
6 because the median is less sensitive to outliers in the
7 market data. Targeting the median helps balance the
8 company's desire to hire and retain quality team members
9 and to maintain reasonable customer rates.

10

11 **Q.** What tools does the company use to align TDC with the
12 market median?

13

14 **A.** To align TDC with the market, the company first benchmarks
15 positions against the labor market using data from the
16 U.S. Mercer Benchmark database and the Willis Towers
17 Watson MMPS Survey. This determines the appropriate
18 compensation range for specific positions. TDC, as
19 previously explained, comprises base salary (or base
20 pay), STIP, and LTIP. All three elements are important to
21 ensure the company's team members receive competitive
22 compensation and that the company attracts and retains
23 talented people. Peoples then calculates the TDC and
24 measures it against the market to determine where the team
25 members' compensation falls. This is a standard HR

1 practice that looks at the placement of an individual's
2 salary within a defined compensation range.

3
4 **Q.** How does Peoples' compa-ratio compare to the market?

5
6 **A.** The company's team members were at an average .96 compa-
7 ratio in January 2025.

8
9 **Q.** Do you have any analyses showing how Peoples' salary
10 levels compare to the market over time?

11
12 **A.** Document No. 5 of my exhibit shows the total annual
13 compensation analysis for exempt and non-exempt
14 benchmarked positions as of December 22, 2024.

15
16 **Q.** Are the company's compensation systems and levels for 2025
17 reasonable?

18
19 **A.** Yes. As explained above, the company benchmarks its total
20 compensation against applicable markets using relevant
21 and competitive benchmarks for compensation.

22
23 **V. BENEFITS**

24 **Q.** Please describe the company's health and welfare benefits
25 package.

1 **A.** Peoples' benefits are administered as a shared service
2 through Tampa Electric and are held at the parent company
3 (TECO Energy, Inc.) level. The Tampa Electric internal HR
4 team actively manages these benefit plans, partnering
5 with Mercer, to identify and address issues efficiently
6 and implement solutions that operate the benefit programs
7 effectively. The company's benefit package is designed to
8 maintain a competitive position within the market so the
9 company can attract, retain, and develop competent and
10 qualified team members. Our benefits package includes
11 the following: (1) health plans; (2) pharmacy plans, (3)
12 employee family assistance plans; (4), dental and vision
13 plans; (5) flexible benefits plans (Healthcare FSA,
14 Dependent Care FSA, and Transportation and Parking FSA);
15 (6) life insurance (basic life, accidental death &
16 dismemberment, supplemental, spousal and child); (7)
17 short term and long term disability insurance (part-time
18 team members are not eligible for short-term disability);
19 (8) long-term care insurance; (9) paid parental leave;
20 (10) group retirement plans; (11) retiree medical, (12)
21 holiday and paid time off; and (13) employee relief fund.
22 Document No. 6 of my exhibit includes a more detailed
23 description of these plans.

24
25 **Q.** How does the company manage the design and cost of its

benefit programs?

A. The HR Shared Services team partners with Mercer to identify and address issues efficiently and implement solutions that operate the benefits programs effectively.

While the company has a broad benefits program, the cost is driven by two main components; medical and pharmacy. The company uses data from Mercer to ensure that it is aware of its competitive positioning on an ongoing basis. Mercer provides benchmarking data for the benefit program, updated annually, that includes both design details as well as program cost data. The cost data includes employee contributions as well as the company's gross and net costs. The company compares this data to its own information. Thus, the company consistently knows the programs' competitive positioning relative to relevant peer groups (e.g., industry, geography, etc.).

To manage the cost of medical programs, the company employs Blue Cross and Blue Shield ("BCBS") medical management programs. These programs identify and manage patients with chronic and acute conditions who are most likely to increase costs. They work with affected patients and medical providers to ensure optimal treatment in the

1 most cost-effective setting.

2
3 For pharmacy cost management, the company participates in
4 a collective purchasing agreement, which capitalizes on
5 the purchasing power of over a million members to achieve
6 a lower ingredient access cost and maximized net cost
7 efficiency.

8
9 All health providers are routinely evaluated for ongoing
10 cost management effectiveness through discount analyses
11 across all relevant vendors. The company uses competitive
12 bidding exercises every three to five years and routine
13 audits to ensure claims are processing accurately
14 according to plan design.

15
16 The organization also uses the Mercer Benefits Valuation
17 Analysis ("BENVAL") study which was last performed in
18 2023. The company follows best practices and updates this
19 study at least every five years. The company's BENVAL
20 index score is shown in Document No. 7 of my exhibit.

21
22 The BENVAL study is a nationally recognized and accepted
23 actuarial tool that compares the relative value of a
24 company's overall benefit plan and its various components
25 with other companies' plans contained within the Benefits

1 Data Source - United States database. The most recent
2 group used for the comparison included 25 utility
3 companies in addition to Peoples.

4
5 BENCAL uses consistent actuarial methods applied to a
6 fixed population to determine a relative value index for
7 each plan component. As a result, the differences in value
8 among employer plans are exclusively a function of
9 differences in the plan provisions. The BENCAL study
10 includes a relative value index score for each company's
11 benefit plan components. The index score is calculated by
12 analyzing and determining the value of each company's
13 benefit plan component and then dividing each company's
14 value by the average benefit plan value for each component
15 among all the companies in the benchmark group. A relative
16 index of 100 represents an average company value.

17
18 The company's BENCAL index score for each benefit plan
19 component is shown in Document No. 7 of my exhibit. The
20 company's index score is slightly above the market for
21 retirement, dental, and short-term and long-term
22 disability. These components of the company's benefit
23 plan allow it to be competitive in the marketplace and
24 attract skilled team members

25

1 HEALTHCARE BENEFITS

2 **Q.** How does the company evaluate the design and cost of its
3 health care programs?
4

5 **A.** The company manages its health plans with appropriate due
6 diligence. The company assesses the design and costs of
7 these plan using benchmark data provided by Mercer. This
8 allows the company to evaluate its competitive
9 positioning regarding to plan design, employee
10 contributions, and aggregate costs, compared to various
11 groups. Benchmark data is available for all of our
12 benefit plans. The company then compares its current
13 position against these benchmarks with its desired
14 position as outlined in its total rewards philosophies,
15 and adjustments are made as needed. Document No. 8 of my
16 exhibit shows the average annual health benefits cost per
17 employee.
18

19 The company employs Mercer, who uses underwriting
20 techniques based on actuarial guidelines to project
21 future plan costs for the self-funded plans. The key
22 factor in projecting future results is the prior
23 experience of the group. The process of forecasting past
24 claims experience into the future considers plan designs,
25 member demographics, trends, and group credibility. These

1 processes are widely accepted within the insurance market
2 as the standard for establishing budget and premium levels
3 that are appropriate to cover future risks.

4
5 **Q.** Has the company evaluated its healthcare plan against the
6 market?

7
8 **A.** Yes. The company annually benchmarks its medical,
9 pharmacy, and dental plans using Mercer's proprietary
10 database. Additionally, based on the results from Mercer
11 BENVAL (described above) and as shown in Document No. 7
12 of my exhibit, the company's relative value index score
13 of 100 (median value) for medical and 116 (above median
14 value) for dental indicates market competitiveness for
15 medical, and above market positioning for dental, because
16 the company provides a richer dental plan compared to the
17 median plan.

18
19 **Q.** How does the company's healthcare plan compare to industry
20 standards?

21
22 **A.** The company uses Mercer's BENVAL which compares the market
23 value of the company's benefit plan to those of peer
24 organizations. Mercer displays the data by plan grouping
25 and by individual plan, based on Mercer's national

1 composite workforce, which consists of generic employee
2 profiles, representing a typical employee population. The
3 relative value is determined using consistently applied
4 assumptions to estimate the dollar value attributed to
5 all benefits offered by the employer; however, this value
6 does not equate to direct employer costs. This approach
7 removes influences of negotiating power, utilization, and
8 other factors tied to cost so that the focus is on the
9 value determined by plan design and employee cost-share.
10 The group used for the comparison includes 25 utility
11 companies. To compare our competitive position relative
12 to the peer group, the charts referenced in Document No.
13 7 of my exhibit show where Peoples leads and lags
14 according to the following criteria:

- 15
- 16 • Values: Shows the range of dollar values for all
17 organizations in the peer group.
- 18 • Rank: Identifies your organization's plan value
19 position relative to the peer group values.
- 20 • Quartile: Shows the distribution of the peer group's
21 plan values by showing the 1st and 3rd quartiles and
22 median dollar values.
- 23 • Index: Illustrates the relationship of your benefit
24 values to the median values of the peer group (the
25 median value equals an index of 100).

1 The charts reflect the average of the national composite
2 workforce and the company's position is described in terms
3 of the index:

- 4 • Above Median: Index of 106 and above.
- 5 • Aligned with Median: Index between 95 and 105.
- 6 • Below Median: Index of 94 and below.

7
8 As represented on Document No. 7 of my exhibit, the
9 company's BENVAL Index score for its medical benefit
10 program is 100, which indicates the company's plan
11 provisions and cost share fall near the median of the
12 peer group.

13
14 **Q.** What factors are driving healthcare costs in the United
15 States ("U.S.")?

16
17 **A.** The main reasons for increased medical cost in the U.S.
18 are (1) inflation in unit prices; (2) increases in the
19 use of services (primarily due to population aging and
20 the overall deterioration of the health of U.S. citizens);
21 (3) the availability of advanced medical technology; and
22 (4) the expense of high-cost claimants. The increases in
23 cost for prescription drugs are similar, with specialty
24 drugs representing a disproportionately higher percentage
25 of the cost increases than non-specialty drugs. Key trend

1 indices include new drug innovations, legislative
2 changes, and patent expirations.

3
4 The current environment of higher inflation may impact
5 healthcare costs, which makes it important to consider
6 the potential additional impact of inflation on trends
7 for the 2025 plan year. Since the provider contracts
8 typically span multiple years, it may take some time for
9 the full effects of inflation to emerge. At the end of
10 2024, we were at the end of a three-year period where a
11 majority of contracts may have been renewed during an
12 elevated inflationary environment. Those contract
13 negotiations during 2023, 2024, and into 2025 will have
14 the benefit of hindsight in securing higher increases to
15 mitigate historically persistent inflationary pressures.

16
17 Ultimately, the cost increases negotiated by the carriers
18 with network facilities and providers will be a key
19 determinant of the magnitude of inflationary impact. The
20 company is projecting an increase in its health benefit
21 costs in 2025 and beyond. The projected increase in the
22 company's healthcare costs is consistent with and caused
23 by the same factors at work for healthcare costs in the
24 U.S. generally.

25

1 Q. What specific actions has Peoples taken to ensure its
2 healthcare costs are reasonable?

3
4 A. In partnership with industry experts such as Mercer and
5 BCBS, the company has implemented initiatives to ensure
6 its healthcare costs are reasonable. These initiatives
7 include:

- 8
- 9 • Implementation of a pricing strategy to encourage
10 cost effective plan selections;
 - 11 • Annual review and increase in the monthly team member
12 contributions;
 - 13 • Promotion of team member and retiree awareness and
14 education so that they can be smart consumers of the
15 healthcare options available in their healthcare
16 plans (i.e., health advocacy, telemedicine, carrier
17 resources);
 - 18 • Provision of the comprehensive disease management
19 Personal Care Connections program for team members,
20 which includes health coaching, to facilitate the
21 effective medical treatment of plan participants
22 with specific diseases that, if not properly
23 managed, can generate expensive claim costs;
 - 24 • Vendor analyses and determination that BCBS
25 continues to show favorable results in cost

- 1 containment due to network discounts, network
2 breadth, and wellness credits;
- 3 • A prescription coverage collective financial review,
4 confirming the current vendor offered the most
5 competitive pricing and was the least disruptive;
6 and
 - 7 • Annual benchmarking of healthcare programs to ensure
8 value and competitiveness is reasonable.

9

10 **Q.** How does the increase in Peoples' medical and dental costs
11 per team member from 2023 to 2024 compare to the average
12 national increase for those years?

13

14 **A.** For 2023 and 2024, Peoples' healthcare costs for active
15 team members were \$7.9 million and \$9.9 million, which
16 translates to \$10,902 and \$12,491 per team member,
17 respectively. As shown in Document No. 8 of my exhibit,
18 the average national healthcare cost per team member based
19 on the most current data available was \$16,506 for 2021
20 and was \$17,056 for 2022. This shows that Peoples'
21 healthcare costs are lower than the national average.

22

23 PENSION AND RETIREMENT BENEFITS

24 **Q.** Please describe the pension and retirement savings plans
25 and how they compare to industry standards?

1 **A.** Peoples' team members participate in the following
2 retirement plans:

3 1. TECO Energy Group Retirement Plan (a qualified
4 defined benefit pension plan);

5 2. TECO Energy Group Retirement Savings Plan (a
6 qualified defined contribution 401(k) plan);

7 3. TECO Energy Group Benefit Restoration Plan (a non-
8 qualified defined benefit pension plan for applicable
9 employees); and

10 4. TECO Energy Group Postretirement Health and Welfare
11 Plan (a retiree medical plan).
12

13 **Q.** How does the company evaluate these plans for
14 reasonableness?
15

16 **A.** The company uses an independent consultant, Mercer, to
17 evaluate the competitive positioning of these qualified
18 pension and savings plans. Mercer conducted a
19 benchmarking study of 25 peer companies in 2023 and found
20 that 11, including Peoples, provide an active defined
21 benefit plan to newly hired team members. Of the plans
22 that are offered today, the value of Peoples' combined
23 and defined contribution program for non-union team
24 members is at the 50th percentile of all 26 companies in
25 the peer group.

1 Q. Is it common to use an independent actuarial firm to
2 compute pension and post-retirement benefit costs?

3
4 A. Yes. Based on the benefits provided and team member
5 demographics, an actuary for a defined benefit plan
6 estimates the value of employer obligations. The
7 calculation of liabilities considered several complex
8 variables including expected future compensation
9 increases, asset returns, rates of retirement,
10 disability, death, and other reasons for termination.
11 Actuaries use historical data and future expectations to
12 make assumptions for these variables. Actuaries for
13 defined benefit plans also ensure the employer is
14 following laws and regulations regarding pension plans.
15 This includes the timely certification of minimum
16 contributions and the funded status under the Employee
17 Retirement Income Security Act of 1974 ("ERISA"). As there
18 are extensive variables and regulations to consider, it
19 is common and often necessary for companies to engage
20 actuarial firms to compute pension and post-retirement
21 benefit costs.

22
23 Q. Do the actuarial assumptions and methods provide a
24 reasonable basis for determining the level of pension
25 costs to be included in the company's operating cost?

1 **A.** Yes. The actuarial assumptions and methods are reasonable
2 and consistent with Financial Accounting Standards Board
3 ("FASB") standards and industry practice and provide a
4 reasonable basis for determining the level of pension cost
5 included in the company's cost of service studies. The
6 company's pension costs are reflected in FERC Account 926
7 on MFR Schedule G-2, page 18a.

8
9 **Q.** How does the company's pension plan and retirement savings
10 plan compare to industry standards?

11
12 **A.** Based on the results from the 2023 Mercer Benefits
13 Valuation Study, Peoples' relative value index score for
14 the combination of the defined benefit and defined
15 contribution plans is 102 for non-union (Exempt and NC/NE)
16 team members, slightly above the index median of 100,
17 which means the company's defined benefit and defined
18 contribution plans are competitive relative to its peers.
19 This is shown in Document No. 9 of my exhibit.

20
21 **VI. 2026 TEST YEAR TOTAL COMPENSATION EXPENSES**

22 **Q.** Please explain the company's process for deciding on which
23 positions to budget for and fill.

24
25 **A.** A functional leader in each area of the company identifies

1 the need to hire a new position or fill an existing vacant
2 position (known as a "replacement" position). The
3 company's decision to hire a new position or a replacement
4 position is made after careful examination of the
5 justifications provided by the functional leader for that
6 position. Positions are prioritized across the
7 organization based on business need.

8
9 Given the inflationary environment and our need to manage
10 O&M expenses to minimize rate impacts on customers, both
11 new and replacement positions are reviewed and approved
12 by the functional executive leader. The President and
13 Chief Executive Officer must approve all new positions
14 within the company. Each position included in the budget
15 is thoroughly considered to ensure it aligns with the
16 specific business needs of that function.

17
18 **Q.** What is Peoples' projected employee count for 2025 and
19 2026?

20
21 **A.** Peoples' projected employee counts for 2025 and 2026 are
22 892 and 981, respectively. MFR Schedule G-2 pages 19c
23 through 19e, lists all of the budgeted team member
24 additions for 2025 and 2026, including new positions and
25 replacements. As reflected in "Payroll not trended Item"

1 of this MFR schedule, 46 replacement positions and 34 new
2 positions are budgeted for 2025, and 89 new positions in
3 2026. These increases reflect a continued focus on in-
4 sourcing where applicable to remove dependency on more
5 expensive outside contractors.

6
7 The company budgeted its replacement positions as "not
8 trended labor" as there was not a full year of labor
9 expense in the historical base year to use as the starting
10 point to budget for the projected 2026 test year.

11
12 **Q.** Why are the number of team members increasing in 2025 and
13 2026?

14
15 **A.** The company plans to increase the number of team members
16 in 2025 and 2026 to support customer growth.
17 Specifically, this increase will focus on several areas:
18 (1) Gas Operations to support the increase in activity
19 levels due to customer growth on Peoples' system and the
20 addition of new capital assets; (2) Pipeline Safety to
21 mitigate risk, and to ensure safety remains our top
22 priority for the safety of our team members and customers;
23 (3) Engineering and Construction to effectively manage
24 increasingly complex systems and workload as we grow; and
25 (4) Technology Support to provide Peoples with the ability

1 to own, govern and effectively manage its data, enabling
2 more informed business decisions. Some of the additions
3 represent a deliberate move by the company to insource
4 talent and decrease the use of outside services. Overall,
5 these additions are essential to meet the demands of our
6 growing customer base and to maintain our commitment to
7 safety and operational efficiency.

8
9 **Q.** Does the HR area plan to add team members in 2025 and
10 2026?

11
12 **A.** Yes. In 2025, in addition to the new position of Learning
13 & Development Specialist, discussed above, HR added a
14 "Technical Trainer" position within HR's Leadership
15 Development area. This position will address talent
16 management gaps and support the learning and development
17 of our team members. Additionally, this position will
18 design tailored programs aimed at upskilling our team
19 members which will enhance retention and engagement.

20
21 In 2026, HR will add a "Business Partner" position to
22 support our workforce across the state. This role will
23 handle complex HR issues, labor relations, employee
24 engagement, and performance management. By adding this
25 position, we will increase the support HR can provide to

1 the business, improve overall effectiveness, and boost
2 retention and engagement.

3
4 **Q.** Are you supporting any other employee additions in 2025
5 and 2026 as the leader of HR?

6
7 **A.** Yes. The company budgeted to add 12 A&G team members in
8 the following functional areas that I am sponsoring: (1)
9 Strategy, Marketing and Communications (five positions),
10 and (2) Gas Supply and Development (seven positions).

11
12 **Q.** Please explain the responsibilities of the Strategy,
13 Marketing and Communications ("SM&C") department and how
14 many team members are currently employed in this area.

15
16 **A.** The SM&C team includes 13 team members and is responsible
17 for long-range strategic planning, centralized data
18 analytics, business and process improvement projects, and
19 marketing and communications. As Peoples continues to
20 grow and seeks better ways of working, it is imperative
21 that functional support roles, such as those in SM&C,
22 expand to assist with more complex ways of working,
23 meeting internal and external customer needs, and
24 responding to changes in market dynamics. Therefore,
25 Peoples determined additional team members are necessary

1 for these functions to keep pace with the rapidly changing
2 business environment, foster long-term growth, and drive
3 industry-leading initiatives.

4
5 **Q.** Please explain the five new positions in SM&C and why
6 these new team members are necessary for the company.

7
8 **A.** The SM&C area will add one new position - a Director of
9 Project Management and Change in 2025.

10
11 In 2026, this area will add the following four new
12 positions: (1) a Lead Business Innovation Specialist, (2)
13 a Data Scientist, (3) a Digital Communications
14 Coordinator, and (4) a Communications Strategist.

15
16 **1. Director of Project Management and Change (New):**

17 This new position is an example of the company's
18 efforts to insource talent and minimize the use of
19 consultants. This Director will work with ongoing
20 business improvement projects and is needed for
21 change leadership in our rapidly growing and
22 evolving environment. The term "change leadership"
23 refers to the process of leading an organization to
24 manage change and process improvement effectively.
25 This position will direct, lead, and manage

1 strategic business process improvement projects and
2 organizational change management initiatives to
3 drive transformation, improve business performance,
4 and enhance customer service delivery. This position
5 will oversee the Business Innovation team, which
6 currently includes two team members, and collaborate
7 with Business Strategy, Data Analytics,
8 Communications, HR, and other areas within the
9 company to further develop a change leadership and
10 continuous improvement culture.

11
12 **2. Lead Business Innovation Specialist (New):** This
13 position, which is part of the Business Innovation
14 team, will support process improvement strategy
15 implementation across the company. The specialist
16 will expand the Business Innovation team's capacity
17 to meet the organization's needs through increased
18 process improvement and project management technical
19 skills, collaborating at all organizational levels.

20
21 **3. Data Scientist (New):** The Data Scientist will join
22 three existing Data Analytics team members. Adding
23 another data scientist is crucial to enhancing our
24 efforts to transform company data into actionable
25 insights. This transformation will contribute to

1 more efficient operations, improved customer
2 experiences, and optimized decision-making. This
3 position will also strengthen our ability to
4 integrate Artificial Intelligence ("AI") into our
5 daily operations, improving efficiency and
6 productivity across the business. It is essential to
7 have team members educated in AI, including its
8 applications, to maximize its benefits for the
9 organization.

10
11 **4. Digital Communications Coordinator (New):** This
12 position will join six existing team members in
13 Marketing and Communications, serving as an
14 additional resource and backup to the current
15 Digital Communications Channel Manager. This team
16 member will manage and optimize the company's
17 communication strategies and channels in today's
18 digital-first world. As digital engagement becomes
19 increasingly vital for customer satisfaction and
20 operational success, this role will help ensure that
21 Peoples meets the expectations of our customers,
22 stakeholders, and team members by delivering clear,
23 relevant, and engaging communications across all
24 digital platforms.

25

1 **5. Communications Strategist (New):** The Communications
2 Strategist will be an addition to our existing
3 Marketing and Communications team to ensure the
4 effective implementation of the company's internal
5 and external communication strategies across various
6 platforms. This role supports our strategy of
7 ensuring our messaging aligns with the company's
8 mission and strategic goals. Clear, concise, and
9 consistent messaging is crucial to fostering and
10 maintaining strong relationships with customers,
11 regulators, team members, the public, and other
12 stakeholders.

13
14 Our Marketing and Communications team manages the
15 company's websites, social media platforms, and internal
16 communications platforms. This role involves content
17 development and optimization, data analytics,
18 maintenance, and technical support. These functions are
19 difficult to outsource due to the need for specific
20 company knowledge, timely execution, and adherence to
21 security protocols.

22
23 **Q.** Please explain the responsibilities of the Gas Supply and
24 Development ("GS&D") department and how many team members
25 currently work in this area?

1 **A.** GS&D is comprised of two main areas: (1) Gas Supply and
2 Trading, and (2) Large Commercial and Industrial
3 Development. This department develops and implements
4 business activities to meet the growing demand of unserved
5 areas, works to expand the system to new customers, and
6 integrates long-term system resource requirements with
7 new customer growth.

8
9 This team focuses on the full utilization and optimization
10 of the company's existing asset base, including the
11 current gas pipeline system, upstream transportation
12 capacity, and existing customer relationships. GS&D is
13 made up of 26 team members who are responsible for
14 negotiating contracts and overseeing natural gas services
15 for major customers. They also negotiate the construction
16 of expansion facilities to serve the increasing demand
17 for pipeline transportation.

18
19 **Q.** Please explain the seven positions in GS&D and why they
20 are needed.

21
22 **A.** In 2025, GS&D plans to add the following four replacement
23 positions: (1) Manager, (2) Senior Gas Trader, (3) Fuels-
24 Co-op, and (4) Compressed Natural Gas ("CNG") Business
25 Development Manager. In addition, GS&D seeks to add three

1 new positions in 2026: (1) Manager Business Planning and
2 Analysis, (2) Senior Manager, Business Development, and
3 (3) Program Manager. These positions are described in
4 further detail below.

5
6 **1. Manager (Replacement).** The Manager of Business
7 Development position will join nine existing team
8 members in the Large Commercial and Industrial
9 Development area. This replacement position fills a
10 vacancy from 2024.

11
12 The company is experiencing significant interest
13 from Renewable Natural Gas ("RNG") developers and
14 customers seeking pipeline interconnection services.
15 This position will focus on building relationships
16 with RNG developers and customers and will serve as
17 a primary point of contact for corporate or
18 industrial customer representatives looking to
19 utilize cleaner sources of natural gas. The Manager
20 will play a key role in the origination, development,
21 and management of RNG projects to deliver cleaner
22 energy solutions. This team member will implement
23 the company's tariff offerings for RNG
24 interconnection services and coordinate planning and
25 development activities to meet the growing demand

for cleaner energy solutions.

2. **Senior Gas Trader (Replacement).** This replacement position joins 18 existing team members in the Gas Supply and Trading area and is essential for meeting the gas supply demands of our growing customer base. The role is primarily responsible for supporting the company's activities in gas supply and wholesale origination, focusing on the administration of gas supply and upstream transportation capacity activities. This position is responsible for ensuring that the company has adequate gas supply and pipeline transportation capacity to serve our expanding system needs.

3. **Fuels - Co-op (Replacement).** This replacement Co-op position in Gas Supply and Trading will provide an opportunity to assist in creating efficiencies for the fuels team by improving processes and procedures for data collection, data entry, models and reporting.

4. **CNG Business Development Manager (Replacement).** This replacement position in the Large Commercial and Industrial Development will fill a vacancy left in

2024. This position is necessary to meet existing CNG customer needs and manage workload associated with the continued growth in the CNG market that has evolved as a resilient source of energy for our customers. This replacement position restores the team back to its historical count of four team members.

5. **Manager Business Planning and Analysis (New).** This position replaces a previous position due to the internal promotion of an existing team member within the Gas Supply and Trading department. The purpose of this role is to create overall efficiencies in the GS&D department by managing data analysis, modeling, and gas planning to improve system reliability, optimize the portfolio, reduce expenses, and increase revenue for the company.

6. **Senior Manager, Business Development (New).** In response to growing demand, the new role of Senior Manager in the Large Commercial and Industrial Development area will support the addition of large volume customer load. The Senior Manager is responsible for (1) identifying opportunities to add load from existing and new large customers to the

1 system, (2) negotiating agreements with existing and
2 new large customers, (3) preparing the business case
3 for integrating large volumes of load to the system,
4 and (4) coordinating with multiple internal
5 functions required to ensure the needs of the large
6 customer are met.

7
8 **7. Program Manager (New).** In response to the increase
9 in customer growth initiatives, there is a need for
10 a dedicated program manager in the Large Commercial
11 and Industrial Development area. This new role will
12 focus on administering contracts and ensuring proper
13 billing setup for accurate customer bills and
14 revenue tracking. The program manager will build and
15 maintain customer relationships throughout the life
16 cycle of a customer's contract. This position is
17 responsible for managing contracts related to
18 alternative fuels, including RNG, CNG, and Liquefied
19 Natural Gas (LNG). The program manager will ensure
20 adherence to all commercial contract terms, such as
21 term, volume, and rates, while providing excellent
22 customer service to facilitate proper billing.
23 Additionally, the program manager will coordinate
24 and implement all alternative fuel agreements with
25 internal and external stakeholders, e.g., customers,

1 agents, engineering team, customer service team,
2 accounting team, development team and gas supply
3 team.

4
5 **Q.** What actions has Peoples taken since its last rate case
6 in 2023 to manage the increase in the number of employees?

7
8 **A.** As previously mentioned in my testimony, Peoples'
9 decision to hire a new or a replacement position is based
10 on a careful examination of the justifications identified
11 by the functional leader for that position. Positions are
12 prioritized across the organization based on business
13 needs. The new and replacement positions are reviewed and
14 approved by the functional executive leader. The
15 President and Chief Executive Officer must approve all
16 new positions within the company. Each position the
17 company budgets for is well thought through to ensure it
18 meets the business need for that specific function.

19
20 **Q.** What number of employees should be approved for ratemaking
21 purposes for the 2026 test year?

22
23 **A.** Peoples' is seeking approval for 981 team members in 2026.

24
25 **Q.** What is the projected gross average total compensation

1 per active team member for the 2026 test year as compared
2 to 2023?

3
4 **A.** Peoples' 2026 budgeted gross average total compensation
5 per active team member is \$102,061 as compared to \$98,256
6 in 2023. This represents a compound average growth rate
7 ("CAGR") of 1.3 percent since 2023. These increases are
8 reasonable based on the market comparisons described in
9 my testimony.

10
11 **Q.** What is the projected gross average compensation,
12 benefits, and payroll tax cost per team member for 2026
13 as compared to 2023?

14
15 **A.** Peoples' 2026 budgeted gross average compensation,
16 benefits, and payroll tax cost per active team member is
17 \$130,330 as compared to \$124,775 in 2023. This represents
18 a CAGR of 1.5 percent since 2023.

19
20 **Q.** You testified that the company's TDC in 2026 is reasonable
21 and explained why. What level of merit increases is the
22 company projecting for 2025 and 2026?

23
24 **A.** As shown on MFR Schedule G-2, pages 12 to 19, the company
25 has budgeted 4.0 percent for merit increases for 2025 and

2026.

Q. What is the amount of O&M expenses for FERC Account 920: A&G Salaries for 2026 and how does it compare to 2024, and what was approved by the Commission for 2024?

A. The Commission approved costs in FERC Account 920 totaling approximately \$22.7 million for 2024, and the actual 2024 was \$23.6 million, or \$0.9 million higher. The \$0.4 million related to higher than budgeted STIP based on score card performance as well as variances in labor cost contributed to this variance.

The total O&M expenses for FERC Account 920 for 2026 is \$28.4 million, which is \$4.8 million higher than the \$23.6 million for 2024. Approximately \$1.2 million of this increase is administrative salaries that were budgeted on a trended basis using the 4.0 percent merit increase. Approximately \$2.5 million of this increase is not trended labor cost consisting of new and replacement team member positions for 2025 and 2026, as shown on MFR Schedule G-2, page 19e. The not trended labor cost is addressed in the direct testimonies of Peoples witnesses Luke Buzard, Timothy O'Connor, Andrew Nichols, and Christian Richard. The remaining increase, or \$1.7 million, is related to

1 STIP.

2
3 **Q.** What is the company's projected STIP cost for 2026 and
4 how does that amount compare to the 2024 historic base
5 year?

6
7 **A.** Peoples projected STIP costs for 2026 is \$10.1 million,
8 which is shown as a not trended item on MFR Schedule G-
9 2, page 19b. This increase of \$1.7 million is due to the
10 budgeted team member hiring in 2025 and 2026.

11
12 **Q.** What is the company's projected LTIP cost for the 2026
13 projected test year and how does that amount compare to
14 the 2024 historic base year?

15
16 **A.** The company's projected LTIP expenses for the 2026
17 projected test year is approximately \$3.5 million. This
18 compares to the 2024 historical base of \$2.4 million.
19 This represents a 50 percent increase in expenses. This
20 increase is caused by added eligible senior level
21 positions along with increases in stock price per the
22 plan calculation.

23
24 **Q.** Are the 2026 projected amounts for STIP and LTIP
25 reasonable?

1 **A.** Yes. Based on the projected increase in employee count,
2 these amounts are reasonable.

3
4 **Q.** Is the 2026 projected amount of base compensation
5 reasonable?

6
7 **A.** Yes. The company's team members have maintained an average
8 comp-ratio of 0.97 compa-ratio from 2022 through 2024,
9 with the compa-ratio at 0.96 as of January 2025. This
10 indicates that the company is paying team members just
11 below the market median, which is reasonable.

12
13 **Q.** What level of merit increases is the company projecting
14 for 2025 and 2026?

15
16 **A.** For the years 2025 and 2026, the merit increase is 4.0
17 percent for non-covered team members. These adjustments
18 are reflected in the base pay component of projected 2026
19 salary and wages expenses. Based on national market
20 sources such as Mercer, World at Work, and Gartner, salary
21 increases are trending at between 3.5 to 4.0 percent.

22
23 **Q.** What level of payroll cost increases for covered employees
24 were included in projected payroll costs for 2026?

1 **A.** The company negotiated increases included in the current
2 CBA to calculate payroll increases for covered team
3 members. These increases are reflected in confidential
4 Document No. 4 of my exhibit. As previously mentioned in
5 my testimony, Peoples may negotiate two CBAs in 2025,
6 which could impact the budgeted payroll costs for 2025
7 and 2026.

8
9 **Q.** What is the company's gross benefits cost for the 2026
10 projected test year as compared to 2024?

11
12 **A.** Peoples' pension and benefits costs in O&M FERC Account
13 926 are projected to be approximately \$16.6 million in
14 2026 as compared to \$13.0 million in 2024. This increase
15 is primarily attributed to projected employee additions.

16
17 **Q.** How do the gross benefits costs compare with the amounts
18 the company has included in O&M FERC Account 926 Pension
19 and Benefits?

20
21 **A.** A portion of benefits costs are capitalized with labor or
22 are clause recoverable. Therefore, the amount in FERC
23 Account 926 is lower than the gross benefits costs. Please
24 see Document No. 10 of my exhibit which shows the
25 capitalization of a portion of the FERC Account 926 costs.

1 **Q.** What is the company's projected healthcare cost for the
2 2026 test year?

3

4 **A.** The company's projected 2026 healthcare costs are \$11.8
5 million.

6

7 **Q.** What is the appropriate amount of pensions and post-
8 retirement benefits expense to include in the 2026 test
9 year?

10

11 **A.** The total retirement expense for pension in the 2026
12 projected test year is approximately \$3.9 million. The
13 postretirement benefits in the 2026 projected test year
14 is approximately \$1.0 million. These projected expenses
15 are included within the "Other Not Trended" portion of
16 FERC Account 926 on MFR Schedule G-2, page 18.

17

18 **Q.** What is the appropriate amount of salaries and benefits
19 to include in base rate O&M expense for the 2026 projected
20 test year?

21

22 **A.** Peoples' projected total compensation and benefits for
23 the 2026 projected test year is \$92.5 million as shown on
24 MFR Schedule G-2, pages 18a - 19b.

25

1 **Q.** Are the company's total compensation and benefits costs
2 for 2026 reasonable?

3
4 **A.** Yes. As noted above, the company evaluates its total
5 compensation and benefits by comparing them to relevant
6 benchmarks. The results indicate that these costs are at
7 the market median. Furthermore, the company's salaries
8 align with the median of the market, supporting Peoples
9 compensation philosophy aimed at attracting, retaining,
10 developing and incentivizing talent. In addition, Peoples
11 monitors its pay practices to ensure compliance with
12 policy guidelines.

13
14 **Q.** What steps has the HR Department taken to promote
15 affordability?

16
17 **A.** To enhance affordability, the HR Department has focused
18 on cost avoidance and efficiency optimization. In 2024,
19 the Talent Acquisition team enhanced recruitment
20 processes to boost efficiency and avoid previous expenses
21 when third-party recruitment firms were utilized.
22 Additionally, HR identified hard to fill roles and
23 utilized flexible hiring options, such as remote work
24 arrangements. This enabled the recruitment of top-tier
25 talent from outside Florida, thus reducing time-to-fill

1 and outsourcing needs.

2
3 MFR SCHEDULES SPONSORED

4 **Q.** Are you sponsoring any MFR schedules?

5
6 **A.** Yes. I am co-sponsoring MFR Schedules C-38, G-2 and G-6.

7
8 **Q.** Please provide an explanation of the MFR schedules you
9 are co-sponsoring.

10
11 **A.** MFR Schedules C-38, G-2, and G-6 detail O&M expenses for
12 HR labor and employee pensions and benefits.

13
14 **VII. SUMMARY**

15 **Q.** Please summarize your prepared direct testimony.

16
17 **A.** Peoples' total compensation package is reasonable and
18 benefits customers by ensuring the company attracts and
19 retains skilled, talented, and customer-focused team
20 members who can safely and reliably serve the company's
21 customers. Peoples' pay program is structured to align
22 with the market median and is based on total direct
23 compensation, making it a reasonable approach.

24
25 The company's O&M expenses related to HR in the company's

1 2026 projected test year are reasonable and prudent.
2 Additionally, the company's benefits and retirement
3 programs are reasonable and competitive and allow the
4 company to retain and attract high quality team members
5 who are committed to safely and reliably serving Peoples'
6 customers.

7
8 Finally, additional O&M resources are required and will
9 create business value, protect the company from risk,
10 enable business improvements, and ensure the safe and
11 reliable delivery of natural gas to our customers.

12
13 **Q.** Does this conclude your prepared direct testimony?
14

15 **A.** Yes.

PEOPLES GAS SYSTEM, INC.
DOCKET NO. 20250029-GU
FILED: 03/31/2025

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

PREPARED DIRECT TESTIMONY

OF

LUKE BUZARD

Q. Please state your name, address, occupation and employer.

A. My name is Luke Buzard. My business address is 702 North Franklin Street, Tampa, Florida 33602. I am employed by Peoples Gas System, Inc. ("Peoples" or the "company") as Vice President of Regulatory and External Affairs, and interim Vice President of Finance.

Q. Please describe your duties and responsibilities as Vice President of Regulatory and External Affairs.

A. As Vice President of Regulatory and External Affairs, I am responsible for overseeing all aspects of rates, compliance, and regulatory issues governed by the Florida Public Service Commission ("Commission") and Federal Energy Regulatory Commission ("FERC") for Peoples. This includes base rate design, tariff administration, cost recovery clauses, riders, load forecasting, revenue forecasting, and regulatory filings before the Commission and FERC. Additionally, I oversee the External Affairs

1 area which is responsible for maintaining the company's
2 relationships with local governments, community groups,
3 trade associations, and non-profit organizations.
4

5 **Q.** Please describe your duties and responsibilities as the
6 interim Vice President of Finance.
7

8 **A.** As Interim Vice President of Finance, I am responsible
9 for maintaining the financial books and records of the
10 company and for determining and implementing accounting
11 policies and practices for Peoples, which includes
12 general accounting, regulatory accounting, and financial
13 reporting. I am also responsible for budgeting and
14 forecasting activities within the company, which include
15 business planning, financial analytics and long-term
16 forecasting.
17

18 **Q.** Please provide a brief outline of your educational
19 background and business experience.
20

21 **A.** I earned my Bachelor of Science degree with a
22 concentration in Accounting and my Master of Accountancy
23 degree from the College of Business Administration at the
24 University of South Florida. Before my current position,
25 I served as the Director, Pipeline Safety and Operational

1 Services, where I was responsible for technical training,
2 compliance, standards, and technical services, as well as
3 employee and contractor safety. Additionally, I
4 previously held the Director of Internal Audit position
5 at TECO Energy. I am also a Certified Public Accountant
6 in the state of Florida and hold a Certified Internal
7 Audit designation from the Institute of Internal
8 Auditors.

9
10 **Q.** Have you testified before the Commission in a previous
11 docket? If so, please describe.

12
13 **A.** Yes. I testified in the company's last rate case in Docket
14 Number 20230023-GU.

15
16 **Q.** What are the purposes of your prepared direct testimony
17 in this proceeding?

18
19 **A.** The purposes of my testimony are to:
20 (1) describe the functions and job responsibilities of
21 the Regulatory, External Affairs and Finance departments;
22 (2) demonstrate that the Regulatory, External Affairs and
23 Finance operations and maintenance expense ("O&M") levels
24 for the 2026 test year are reasonable and prudent;
25 (3) describe the current status of Peoples recent filings

1 before the Commission;

2 (4) explain Peoples' revenue forecasting process and
3 compare the 2024 actuals to the prior rate case test year
4 projections;

5 (5) present the revenue forecast used in the company's
6 test year budget that supports its request for a base
7 rate increase in this case;

8 (6) propose modifications to the company's miscellaneous
9 service charges;

10 (7) propose modifications to the company's annual
11 residential billing class volume review and describe the
12 changes to the rate design;

13 (8) discuss the impact of the proposed rate increase to
14 customer bills;

15 (9) propose and support tariff modifications as part of
16 the company's request for a base rate increase in this
17 proceeding;

18 (10) support the economic development expenses; and

19 (11) describe the Minimum Filing Requirement Schedules I
20 am sponsoring or co-sponsoring.

21
22 **Q.** Did you prepare any exhibits in support of your prepared
23 direct testimony?

24
25 **A.** Yes. I am sponsoring Exhibit No. LB-1, entitled "Exhibit

of Luke Buzard", consisting of 11 documents, prepared under my direction and supervision. The contents of my exhibit were derived from the business records of the company and are true and correct to the best of my information and belief. My exhibit consists of following documents:

- Document No. 1. List of Minimum Filing Requirement ("MFR") Schedules Sponsored or Co-Sponsored by Luke Buzard
- Document No. 2. Historical and Forecasted Customers, Therms & Revenue
- Document No. 3. 2023 & 2024 Customer Reconciliation
- Document No. 4. 2023 & 2024 Residential and Small Commercial Average Use Reconciliation
- Document No. 5. 2023 & 2024 Revenue Reconciliation
- Document No. 6. Residential & Small Commercial Actual & Weather Normalized Sales
- Document No. 7. Customer Growth by Service Area
- Document No. 8. 2024 Forecast vs Actuals
- Document No. 9. Comparison of Current and Proposed Residential and Business Rates, including Miscellaneous Charges.
- Document No. 10. 2027 Subsequent Year Adjustment

Supplemental Schedules

Document No. 11 Proposed Tariff Modifications
(Legislative Version)

I. REGULATORY, EXTERNAL AFFAIRS AND FINANCE OVERVIEW

Q. Have your duties and responsibilities changed since the last rate case?

A. Yes. On April 1, 2024, after a company reorganization, I took over the External Affairs team from Peoples witness Timothy O'Connor, while the Safety & Compliance team, which was previously under my control, shifted to witness O'Connor. These changes were to better align functional responsibilities and provide professional growth across the organization. Additionally, as stated above, I am currently serving as the interim Vice President of Finance.

A. THE REGULATORY TEAM

Q. Please describe the company's Regulatory team and the duties they perform.

A. The Regulatory team manages all filings and proceedings before the Commission and FERC. These duties include: (1) developing and implementing regulatory activities related

1 to the company's rates; (2) tariff administration; (3)
2 rate design activities; (4) audits; (5) the management of
3 cost recovery clauses and riders; (6) load forecasts; (7)
4 revenue forecasts; and (8) FERC compliance activities and
5 interstate pipeline rate cases. Additionally, the
6 Regulatory team oversees and manages all aspects of a
7 rate case filing including the preparation of testimony,
8 discovery responses, witness training, witness
9 depositions, hearing preparation, and implementing final
10 rates.

11
12 **Q.** How many team members work in Regulatory?
13

14 **A.** The Regulatory department consists of 10 team members.
15 The team includes a Director of Regulatory Affairs and
16 three Regulatory Affairs Managers who oversee clauses and
17 riders, load forecasting, and cost of service.
18 Additionally, there is a supervisor for conservation
19 programs, three Regulatory Analysts, and two customer-
20 facing team members who process payments for energy
21 conservation allowances or rebates for customers.

22
23 **Q.** What regulatory functions does Tampa Electric Company
24 ("Tampa Electric") provide to Peoples as a shared service?
25

1 **A.** Tampa Electric provides regulatory coordination services
2 to Peoples. These coordination services include but are
3 not limited to: (1) docketing and managing deadlines for
4 Commission filings, (2) ensuring compliance with filing
5 requirements, (3) submission of official filings, (4)
6 maintaining file management systems, and (5) maintaining
7 version control of the company's tariff.

8
9 **B.** THE EXTERNAL AFFAIRS TEAM

10 **Q.** Please describe the External Affairs team and the duties
11 they perform.

12
13 **A.** The External Affairs team develops and maintains
14 relationships with local governments, trade associations,
15 non-profit organizations, and community groups across the
16 43 counties that Peoples serves. A core function of the
17 team is to work with local governments to understand their
18 planned construction activities so the company may
19 coordinate with other utilities and diminish disruption
20 and duplication of work. This team also leads the
21 negotiation of franchise agreements, overseeing
22 approximately 121 franchise agreements with local
23 governments. External Affairs engages with nearly 100
24 chambers of commerce and economic development
25 organizations, boards and partnerships which is vital for

1 understanding the economic landscape, identifying
2 opportunities for collaboration, and supporting local
3 community initiatives. They take part in natural gas
4 industry groups and associations, including the American
5 Gas Association, the Southern Gas Association, and the
6 Florida Natural Gas Association, to facilitate industry
7 best practices. They assist with coordination of
8 communications and operational support with Emergency
9 Operations Centers during storm events or other
10 emergencies to provide updates and assist stakeholders in
11 preparation and response efforts.

12
13 **Q.** How many team members did the External Affairs department
14 have as of December 31, 2024?

15
16 **A.** As of December 31, 2024, the External Affairs team
17 consisted of five team members: a Director of External
18 Affairs and four External Affairs (Regional) Managers.

19
20 **C.** THE FINANCE TEAM

21 **Q.** Please describe the Finance team and the duties they
22 perform?

23
24 **A.** The Finance team maintains the financial books and records
25 of the company and determines and implements accounting

1 policies and practices for Peoples, including general
2 accounting, regulatory accounting, and financial
3 reporting. The team is also responsible for budgeting and
4 forecasting activities within the company, which include
5 business planning, long-term forecasting, and financial
6 analytics.

7
8 **Q.** How many team members did the Finance department have as
9 of December 31, 2024?

10
11 **A.** As of December 31, 2024, the Finance team had 24 team
12 members. Three Director positions exist including a
13 Controller, Director of Business Planning and a Director
14 of Financial Analytics. Five Manager positions support
15 the Finance department, and the balance of the team are
16 varying levels of analysts and specialists.

17
18 **Q.** In the company's last rate case, the Commission approved
19 three replacement positions and five new positions in the
20 finance area in FERC Account 920 - Administrative and
21 General Salaries. Did the company hire these positions?

22
23 **A.** Yes. With the exception of one replacement position that
24 the company reclassified from a Senior Portfolio Analyst
25 to a Senior Strategic Financial Analyst, Peoples filled

the positions as approved by the Commission.

**II. REGULATORY, EXTERNAL AFFAIRS AND FINANCE – NON-TRENDED
LABOR O&M EXPENSES – 2026 TEST YEAR**

Q. What are the forecasted non-trended labor O&M amounts you are responsible for, and are these amounts reasonable?

A. The projected non-trended labor O&M expenses for 2025 and 2026 are approximately \$0.4 million and \$0.7 million, respectively. These projected expenses are reasonable and relate to non-trended labor in FERC Account 920, as detailed on MFR Schedule G-2, page 19e. These costs are explained below.

A. REGULATORY DEPARTMENT

Q. Will the Regulatory department be adding team members in 2025 and 2026?

A. Yes. The Regulatory department will add one position in 2025 and one position in 2026.

In 2025, the Regulatory department will add a Director of Rates, Cost of Service, and Financial Analysis to play a critical role in performing activities related to pricing gas distribution rates, conducting comprehensive cost-of-

1 service studies, and engaging in regulatory financial
2 analysis that accurately reflects the company's cost to
3 serve. By hiring this position, the company will
4 significantly enhance its internal expertise, and
5 cultivate a more robust, self-sufficient approach to its
6 regulatory financial operations.

7
8 In 2026, we plan to add a Regulatory Manager to address
9 the increased workload associated with on-going and
10 anticipated regulatory activity, enhanced regulatory
11 research and analysis, and general legislative and
12 Commission activities. The Regulatory Manager will
13 support traditional regulatory filings, coordinate
14 filings between outside counsel and the Commission,
15 prepare and file discovery, and manage necessary
16 platforms, including our case management software and
17 TariffShark.

18
19 Both positions benefit customers by providing ongoing
20 analyses of the company's cost of service, rate design
21 and tariff. Additionally, hiring these positions will
22 decrease the company's reliance on external consultants
23 which will generate cost savings in the long-term.

1 B. EXTERNAL AFFAIRS DEPARTMENT

2 Q. Will the External Affairs department add team members in
3 2025 and 2026?

4
5 A. Yes. The External Affairs department will fill two
6 vacancies and add one additional team member for a total
7 of eight team members in the External Affairs department.

8
9 Q. Please describe these positions?

10
11 A. In 2025, the company will fill two vacancies, an External
12 Affairs (Regional) Manager and a Business Strategy
13 Analyst. The company recently filled the External Affairs
14 Manager position. This role is responsible for
15 developing, cultivating, and managing relationships with
16 elected officials, governmental staff, business and
17 community leaders, economic development organizations and
18 customers for the North Region in the company's service
19 area. This position also supports operations including
20 permits, franchise agreement negotiation, outreach on
21 infrastructure projects, assistance with customer matters
22 and emergency response functions.

23
24 The company will fill a vacancy for a Business Strategy
25 Analyst this year to support the External Affairs team in

1 developing and implementing strategies to advocate for
 2 interests of the company. This position will (1) serve as
 3 a primary contact with local government, various
 4 stakeholder groups and community leaders, (2) identify
 5 local government issues impacting the company and (2)
 6 assist with franchise agreement management.

7
 8 In 2026, External Affairs plans to add an External Affairs
 9 Manager to serve as a key resource with a responsibility
 10 to enhance the company's interactions with the
 11 Commission, other regulatory agencies, and various
 12 stakeholders. Additionally, this position will monitor
 13 regulatory developments, docketed activity and
 14 legislative initiatives. This role is vital for
 15 maintaining effective communication and representation of
 16 the company before the Commission.

17
 18 C. FINANCE DEPARTMENT

19 Q. Will the Finance department add team members in 2025 and
 20 2026?

21
 22 A. Yes. Peoples plans to add two team members in 2025 and
 23 one team member in 2026 to the Finance team.

24
 25 Q. Please explain why the additional Finance team members

are necessary.

A. One of the two Finance team member additions in 2025 is a co-op student, which is a replacement for a vacant position as of the end of 2024. The Finance co-op assists with various accounting and financial activities while receiving an opportunity for practical experience and professional growth. The second position for 2025 is a Fixed Assets Accountant, who will be responsible for supporting the growing volume of transactional data related to the company's expanding capital assets.

In 2026, the Finance team plans to add a Business Planning Analyst, which is needed to provide additional financial support as the company's operational activities increase with the growing pipeline system and customer base.

D. STEPS TAKEN TO PROMOTE AFFORDABILITY

Q. What steps have the Regulatory, External Affairs and Finance departments taken to promote affordability?

A. The Regulatory department promotes affordability by managing costs, evaluating cost recovery, analyzing revenue and bills, managing customer offerings and monitoring natural gas service affordability. Since 2023,

1 we focused on promoting affordability by helping
2 customers save over four million therms of natural gas
3 through conservation programs. We connected more than
4 17,000 residential customers to energy-saving
5 opportunities through our online audit and launched an
6 on-site energy audit for commercial customers.
7 Additionally, the Regulatory team coordinates the overall
8 management of the Purchased Gas Adjustment Clause with
9 the goal of reliability and efficiency in providing
10 natural gas.

11
12 The External Affairs team enhances customer affordability
13 by negotiating adequate franchise agreements, improving
14 permitting processes and contributing to the economic
15 development opportunities within the communities we
16 serve. By providing expertise to chambers and economic
17 development organizations, the External Affairs team
18 assists with maximizing the value of Peoples'
19 distribution system. This team is instrumental in
20 evaluating and providing natural gas services to new
21 businesses and existing governmental agencies, addressing
22 their essential energy requirements.

23
24 The Finance team is responsible for accurately tracking
25 costs, ensuring affiliate charges are appropriate and

properly accounting for the business transactions of the organization. This team ensures the accurate development of budgets and forecasts. Accurate and reliable budgeting and forecasting helps ensure our business is being financially prudent while also maintaining safe and reliable service for customers.

Q. What measures has the company implemented to maintain competitive and affordable customer bills?

A. Peoples regularly reviews its natural gas bills against other gas utilities in Florida, considers alternative fuel options such as propane, and ensures that natural gas constitutes a very reasonable portion of a customer's total household utility expenses.

III. STATUS OF OTHER PENDING DOCKETS BEFORE THE COMMISSION

A. CAST IRON/BARE STEEL PIPE REPLACEMENT RIDER MODIFICATION

Q. What is the status of the company's petition filed in Docket No. 20240107-GU filed on July 26, 2024?

A. On March 3, 2025, the company voluntarily dismissed its petition for approval to modify its Cast Iron/Bare Steel Pipe Replacement Rider ("Rider CI/BSR"). The petition sought approval to expand the definition of eligible

1 replacements under the Rider CI/BSR to include additional
2 safety-driven activities and to rename the rider as the
3 Safety of Facilities and Infrastructure Replacement
4 Rider. On March 6, 2025, staff submitted a memorandum to
5 the Commission Clerk, Document No. 01378-2025,
6 recommending that the docket be administratively closed.
7

8 **Q.** What is the company's proposal regarding the additional
9 safety-driven activities in this proceeding?
10

11 **A.** The company prepared its 2026 test year annual revenue
12 requirement increase request, assuming the investments
13 associated with its proposed additional activities will
14 be recovered through the base rates to be established in
15 this proceeding. The dismissal of our Rider CI/BSR
16 petition eliminates any need to make adjustments in this
17 base rate proceeding and there is no potential for "double
18 recovery" of any investments.
19

20 **B.** WORK AND ASSET MANAGEMENT PETITION

21 **Q.** What is the status of the company's petition filed in
22 Docket No. 20240157-GU filed on November 13, 2024?
23

24 **A.** Peoples filed a petition to establish a new regulatory
25 subaccount for its Work and Asset Management ("WAM")

1 system and to increase the amortization period for WAM
2 from 15 to 20 years, effective January 1, 2025. Peoples
3 voluntarily dismissed its petition without prejudice on
4 March 3, 2025, in order for the company's proposal to be
5 considered in this proceeding. On March 7, 2025, staff
6 submitted a memorandum, Document No. 01408-2025, to the
7 Commission Clerk recommending that the docket be
8 administratively closed.

9
10 **Q.** What is the company's proposal regarding WAM cost recovery
11 treatment in this proceeding?

12
13 **A.** The company prepared its 2026 test year net operating
14 income and annual revenue requirement increase request
15 based on the 15-year amortization period for the WAM
16 system in FERC Account 303.01 approved in the company's
17 last rate case. As part of this proceeding, Peoples
18 requests the Commission (1) authorize the creation of a
19 new sub-account for WAM, (2) increase the amortization
20 period for WAM to 20 years, and (3) if it approves the
21 20-year amortization period, reflect a \$717,633 reduction
22 to WAM amortization expense for the 2026 test year when
23 calculating the final 2026 test year revenue requirement
24 in this proceeding.

25

C. OFF SYSTEM SERVICE SHARING MECHANISM MODIFICATION

Q. What is the status of the company's petition filed in Docket No. 20250026-GU filed on January 13, 2025?

A. Peoples' petition for approval of modifications to its Swing Service Charge, Individual Transportation Service rate schedule, and the sharing mechanism provided in the Off System Service rate schedule, from a 25/75 basis to a 50/50 basis is pending before the Commission.

Q. What is the company's proposal regarding the Off System Service ("OSS") sharing mechanism in this proceeding?

A. The modification to the OSS sharing mechanism relates to the amount of other operating revenue forecasted for the 2026 test year. The company prepared its 2026 test year annual revenue requirement increase request using the currently approved 25/75 OSS sharing mechanism. Accordingly, the company proposes to update its 2025 revenue increase request in this proceeding if the Commission approves the 50/50 sharing and schedules allow.

D. ADOPTION OF RULE 25-7.150, FLORIDA ADMINISTRATIVE CODE

Q. On March 6, 2025, in Order No. PSC-2025-0068-NOR-GU, the

1 Commission proposed the adoption of Rule 25-7.150,
2 Florida Administrative Code, relating to the Natural Gas
3 Facilities Relocation Cost Recovery Clause ("NGFRCRC" or
4 the "NGFRCRC Rule"). What is the company's proposal
5 regarding relocation costs as contemplated under the
6 NGFRCRC in this proceeding?

7
8 **A.** Although the company's financial forecasts for 2025 and
9 2026 include reasonable projected natural gas facilities
10 relocation costs that would be eligible for cost recovery
11 through the NGFRCRC, the company included those costs in
12 calculating its 2026 test year revenue requirement and
13 revenue increase request. The company will evaluate
14 whether to file a petition to transfer those costs to the
15 new NGFRCRC once the rule becomes effective and will
16 ensure that the costs will not be recovered through both
17 base rates and the NGFRCRC, i.e., no double recovery.

18
19 **IV. PEOPLES' REVENUE FORECASTING PROCESS**

20 **Q.** Please describe the company's revenue forecasting
21 process.

22
23 **A.** The revenue forecasting process involves comprehensive
24 analysis that includes examining historical trends,
25 weather behavior, current market conditions, and detailed

1 knowledge of residential and small commercial development
2 at the field level.

3
4 The company considers "Residential" to include customers
5 that take service under these six rate classes: (1)
6 Residential-1 (RS-1), (2) Residential-2 (RS-2), (3)
7 Residential-3 (RS-3), (4) Residential Standby Generator
8 (RS-SG), (5) Residential Gas Heat Pump (RS-GHP), and (6)
9 Residential Transportation Gas Heat Pump (RTP).

10
11 Peoples denotes "Small Commercial" to include customers
12 that take service under these 14 rate classes: (1) Small
13 General Service (SGS), (2) Small General Service
14 Transportation (SGT), (3) General Service 1 (GS-1), (4)
15 General Service 2 (GS-2), (5) General Service 3 (GS-3),
16 (6) General Service-1 Transportation (GT-1), (7) General
17 Service-2 Transportation (GT-2), (8) General Service-3
18 Transportation (GT-3), (9) Commercial Gas Heat Pump (CS-
19 GHP), (10) Commercial Transportation Gas Heat Pump (CTP),
20 (11) Commercial Standby Generator (CS-SG), (12)
21 Commercial Transportation Standby Generator (CTG), (13)
22 Commercial Street Lighting (CSLS), and (14) Commercial
23 Street Lighting Transportation (CSLT).

24
25 Finally, the company classified "Large Customers" to

1 include General Service-4 (GS-4), General Service-5 (GS-
2 5), General Service-4 Transportation (GT4), General
3 Service-5 Transportation (GT5), Wholesale (WHS),
4 Wholesale Transportation (WHT), Small Interruptible
5 Service (SIS), Small Interruptible Transportation Service
6 (SIT), Interruptible Service (IS), Interruptible
7 Transportation Service (ITS), Interruptible Large Volume
8 (ISLV), Contract Interruptible Service (CIS) and Contract
9 Transportation Service (CTS) rate schedules, or service
10 pursuant to a special contract.

11
12 Furthermore, the analysis considers the specific
13 projections for customers requiring complex, large volume
14 gas service. While coordinated by our regulatory team,
15 this process includes the involvement of external and
16 internal specialists. Internally, we coordinate with the
17 company's (1) Business Intelligence and Analytics team
18 within the Strategy, Marketing and Communications
19 department, (2) the Business Development area in the Gas,
20 Supply and Development department, and (3) the Finance
21 department.

22
23 Externally, we work with TECO Partners, Inc. ("TPI"), who
24 is responsible for the residential sales on behalf of
25 Peoples. Our forecasting process has consistently

1 demonstrated reliability and accuracy in relation to our
2 overall budget and actual performance. In my testimony,
3 I will detail our historical projection process, assess
4 the reliability and accuracy of these projections, and
5 provide justification for the revenue projections for
6 2025 and 2026.

7
8 **Q.** Please describe how Peoples' customer and therm forecasts
9 are developed.

10
11 **A.** Using Itron's Statistical Adjusted End-Use ("SAE")
12 models, Peoples' forecast process is a joint effort
13 between our load forecasting team and multiple
14 departments within the company. Each of the company's
15 service areas throughout Florida is forecasted
16 individually and then aggregated to get total company-
17 level forecasts. The company has 14 individual service
18 areas: (1) Miami, (2) Tampa, (3) St. Petersburg, (4)
19 Orlando, (5) Eustis, (6) Jacksonville, (7) Lakeland, (8)
20 Daytona, (9) Avon Park, (10) Sarasota, (11) Jupiter, (12)
21 Panama City, (13) Ocala, and (14) Fort Myers. The forecast
22 process has two tracks of work that go on simultaneously.
23 One track is specific to the Residential and Small
24 Commercial rate classes, and the second track is for the
25 higher usage Large Customers, which are forecasted

1 individually.

2
3 TRACK ONE: This track is based on regression modeling
4 techniques and is done by the company's load forecasting
5 team with input from multiple departments across the
6 organization. The regression modeling techniques are
7 further discussed by company witness Eric Fox in his
8 prepared direct testimony.

9
10 Before regression modeling can take place, it is
11 imperative to obtain a clear understanding of the data to
12 be forecasted (the dependent variable) and the variables
13 that influence the data (independent variables). The
14 primary areas reviewed include recent trends in customer
15 growth, usage patterns, and weather for each service area.
16 Customer (bill) counts and consumption (therms) data for
17 each service area are collected from the company's billing
18 system. The billing data and weather, in terms of degree
19 days, for each service area are reviewed to determine if
20 any abnormal events (e.g., COVID-19, hurricanes, etc.)
21 occurred that affected customers and/or therm
22 consumption. Any data anomalies are investigated, and
23 action plans are developed to appropriately address them
24 during the modeling process.

1 The forecasting team also conducts a detailed analysis of
2 the major assumptions to be used in the forecast process
3 for reasonableness and consistency with recent trends.
4 Witness Fox's direct testimony discusses this further.

5
6 Once historical trends and assumptions are vetted, the
7 data and assumptions are prepared for import into Itron's
8 forecasting software, which utilizes advanced statistical
9 methods for regression analysis and forecasting. This
10 modeling approach is further described in witness Fox's
11 direct testimony.

12
13 TRACK TWO: This track represents a collaboration between
14 the company's Regulatory, Business Development, Gas
15 Supply and Finance teams. The forecasts developed in track
16 two do not utilize economic modeling and regression
17 techniques. Given the relatively small number of
18 customers, Peoples uses customer-specific projected usage
19 and applicable rates to forecast revenues for Large
20 Customers. These forecasts are based on an analysis of
21 recent customer usage trends and, when necessary, input
22 from customers.

23
24 The forecasts for the RS-RHP, RTP, CS-GHP, CTP, CS-SG,
25 CTG, CSLS, and CSLT rates are based on recent historical

1 usage data. Additionally, projections for new customers,
2 therm usage, and revenue from known or anticipated
3 projects are incorporated into the forecast.

4
5 As of December 31, 2024, Peoples served 396 Large
6 Customers which includes industrial and power generation
7 customers. By December 31, 2026, Peoples expects to serve
8 approximately 418 Large Customers, including industrial
9 and power generation customers. This is illustrated in
10 Document No. 2 of my exhibit.

11
12 **Q.** Describe how Peoples prepares the OSS forecast.

13
14 **A.** As further explained in the direct testimony of Peoples
15 witness Andrew Nichols, the projected net revenue from
16 OSS for 2026 is approximately \$2.6 million, based on
17 expected market conditions and historical OSS net
18 revenues. In 2024, Peoples experienced a considerable
19 increase in OSS revenues due to favorable natural gas
20 price spreads and heightened market demand. These factors
21 contributed to a \$2.3 million increase above the budgeted
22 \$2.5 million margin in the last rate case. However, the
23 OSS revenues budgeted for 2026 reflect less favorable
24 market conditions and an appropriate level for setting
25 the OSS sharing mechanism.

V. 2024 TEST YEAR CUSTOMER AND AVERAGE USE RESULTS VS. 2024
TEST YEAR CUSTOMER GROWTH FORECAST

Q. Please describe and compare the company's customer growth since the last base rate proceeding in 2023.

A. In the company's last rate case, the customer growth forecast for 2023 and 2024 projected an overall increase of 3.6 percent and 3.2 percent, equating to approximately 16,638 and 15,184 customers, respectively. However, as illustrated in Document No. 3 of my exhibit, the company experienced significant customer growth during 2023 and 2024, with actual increases of 4.7 percent and 3.8 percent, or 21,776 and 18,538 customers, respectively, over this period.

In the last rate case, the Residential customer growth forecast for 2023 and 2024 projected an increase of 3.8 percent and 3.3 percent, equating to approximately 15,984 and 14,605 customers, respectively. Residential actual increases equated to 4.9 percent and 4.0 percent, or 20,905 and 17,845 customers, respectively, over this period.

In the last rate case, the Small Commercial customer growth forecast for 2023 and 2024 projected an increase

1 of 1.7 percent and 1.5 percent, equating to approximately
2 648 and 580 customers, respectively. Small Commercial
3 actual increases equated to 2.3 percent and 1.7 percent,
4 or 884 and 689 customers, respectively, over this period.

5
6 **Q.** Please describe and compare the company's experience with
7 average use for Residential and Small Commercial
8 Customers.

9
10 **A.** As illustrated in Document No. 4 of my exhibit, in the
11 last rate case, the Residential average use forecast for
12 2023 and 2024 projected 251.6 and 249.2 therms per
13 customer, respectively. Actual Residential average usage
14 was 226.4 and 234.7 therms per customer, respectively,
15 over this period. This demonstrates a (25.2) therms per
16 customer variance in 2023 and a (14.4) therms per customer
17 variance in 2024.

18
19 In the company's last rate case, the Small Commercial
20 average use forecast for 2023 and 2024 projected 8,073.0
21 and 8,291.2 therms per customer, respectively. This is
22 shown in Document No. 4 of my exhibit. Actual Small
23 Commercial average usage was 7,713.6 and 7,760.6 therms
24 per customer, respectively. This demonstrates a (359.5)
25 therms per customer variance in 2023 and a (530.5) therms

1 per customer variance in 2024. The company initially
2 expected that commercial businesses would return to pre-
3 COVID usage levels, as described by witness Fox. However,
4 as businesses resumed operations, the average use among
5 Small Commercial customers has now stabilized at a "new
6 normal". The company forecasts that this new level of
7 usage will persist into 2026. Document No. 6 of my exhibit
8 contains historical data on weather-normalized average
9 use. As stated later in my testimony, even considering
10 the above variances in growth and usage, the overall
11 revenue forecast only varied by 0.3 percent to actuals in
12 2024.

13
14 **VI. CUSTOMER GROWTH, USAGE AND REVENUE FORECAST USED IN 2026**
15 **TEST YEAR**

16 **Q.** Please summarize the customer growth and customer usage
17 forecast results.

18
19 **A.** As shown in Document 3 of my exhibit, the projected total
20 customer growth in 2025 and 2026 is 3.9 percent and 3.5
21 percent, equating to 19,870 and 18,351 customers,
22 respectively. Residential projected customer growth in
23 2025 and 2026 is 4.1 percent and 3.6 percent, equating to
24 19,141 and 17,642 customers, respectively. Small
25 Commercial projected customer growth in 2025 and 2026 is

1 1.8 percent and 1.7 percent, equating to 718 and 698
2 customers, respectively.

3
4 As explained earlier in my testimony and the testimony of
5 witness Fox, Residential and Small Commercial customer
6 usage has declined post-COVID, which the company believes
7 represents a "new normal." Based on this new normal and
8 a 10-year weather normal forecast, Peoples forecasts
9 Residential customer usage at 231.1 therms per customer
10 in 2025 and 230.8 therms per customer in 2026. Small
11 Commercial customer usage is forecasted to be 7,614 therms
12 per customer in 2025 and 7,629.3 therms per customer in
13 2026. These forecasts are illustrated in Document 4 of my
14 exhibit.

15
16 **Q.** What factors are causing the projected decrease in average
17 use for 2026 compared to 2024?

18
19 **A.** Actual sales in 2024 were influenced by colder weather in
20 January, February, and December, as well as increased
21 tourism in April and May. The company expects therm
22 consumption to return to normal levels by 2026, based on
23 10-year normal weather conditions and typical tourism
24 rates. Additionally, due to the conclusion of a short-
25 term sale to Florida Public Utilities Company and a

1 reduction in production reported by a large customer in
2 2026, the Large Commercial and Industrial sector is also
3 expected to decline.

4
5 **Q.** Does the company expect average use per customer to
6 continue to decrease in the future?

7
8 **A.** The company assumes that customers have acclimated to a
9 "new normal" in the aftermath of COVID-19; additionally,
10 appliance efficiency improvements continue to stabilize.

11
12 **A.** EXOGENOUS ADJUSTMENT

13 **Q.** Did the company make an exogenous adjustment to
14 Residential customer growth?

15
16 **A.** Yes. Although the model has proven highly reliable, the
17 company identified an exogenous adjustment that was
18 necessary to meet anticipated future growth expectations
19 within specific Residential service areas. The company
20 included an exogenous adjustment that captures data from
21 areas within and outside the company that have an in-
22 depth understanding of Residential customer growth in the
23 company's service areas. The company's load forecasting
24 team works with and considers data from TPI as well as
25 Peoples' Engineering and Construction team ("E&C") within

1 the Engineering, Construction and Technology department.

2
3 **Q.** Did the company make any exogenous adjustments to Small
4 Commercial customer growth?

5
6 **A.** Yes. Similar to Residential, the model for Small
7 Commercial customer growth has proven highly reliable;
8 however, the company determined that an exogenous
9 adjustment was necessary to align anticipated future
10 growth expectations for Small Commercial customers with
11 Residential growth trends. Accordingly, as with
12 Residential, the company included an exogenous adjustment
13 that captures data from E&C and TPI, who have an in-depth
14 understanding of Small Commercial customer growth in the
15 company's service areas.

16
17 **Q.** Please describe how the company coordinates and
18 incorporates these exogenous adjustments.

19
20 **A.** The company incorporates an exogenous adjustment into the
21 customer models for construction activity and market
22 projections to derive accurate Residential and Small
23 Commercial customer growth by service area. As stated
24 above, determining these explanatory variables is a joint
25 effort between the sales team at TPI and the company's

1 load forecasting and E&C teams. These teams collaborate
2 and analyze the historical trends and compare them to
3 known project activities derived from field intelligence.

4
5 The sales team at TPI provides qualitative insights,
6 including projected activity from builders and
7 developers, as well as market forecasts gathered from
8 multiple sources. Meanwhile, the E&C provide data on
9 current and historical workloads for services and mains,
10 covering a period of up to three years. By combining
11 quantitative regression analysis with field-specific
12 intelligence, they create a comprehensive customer
13 forecast.

14
15 **Q.** Please further explain why an exogenous adjustment that
16 captures construction activity and market projections is
17 necessary.

18
19 **A.** The reliance on the exogenous adjustment is necessary
20 because the company's statistical models do not have
21 explanatory variables that capture known construction
22 activity and market conditions. As described in the
23 testimony of witness Fox, separate forecasts are
24 developed for each of the 14 service areas using
25 regression models that utilize historical actuals through

1 October 2024 combined with predictive variables
2 (coefficients), such as regional household and population
3 data. Florida development, and more specifically natural
4 gas installations at new homes, is highly geographically
5 specific, so it is necessary to adjust these projections
6 based on known construction activity and market
7 conditions. Including this field intelligence from TPI
8 and the E&C teams improves the accuracy of the forecast.

9
10 **Q.** Does the use of exogenous adjustments proven to enhance
11 the accuracy of the forecast?

12
13 **A.** Yes. As demonstrated in Document No. 8 of my exhibit,
14 incorporating these exogenous adjustments in April 2024
15 into the forecast resulted in an actual variance of 0.5
16 percent, or (2,380) customers.

17
18 **Q.** Please provide an example of how the company applies an
19 exogenous update.

20
21 **A.** The Daytona service area provides a good example and is
22 illustrated in Document No. 7 of my exhibit. This service
23 area experienced significant Residential growth over the
24 past seven years due to a major residential development.
25 That development slowed in 2024 due to the full

1 utilization of available lots and the absence of
2 significant new developments in the foreseeable future.
3 By working with E&C and TPI, the company was able to
4 reduce the projected growth rate based on known activity.

5
6 The Ocala service area is another example, as shown in
7 Document No. 7 of my exhibit. The Ocala service area
8 experienced significant growth due to a large residential
9 development. Construction on this development concluded
10 in the first quarter of 2025. Currently, no new large
11 developments are anticipated. Therefore, based on our use
12 of field specific knowledge and capturing data of known
13 construction activity, it was necessary to lower the
14 projected growth rate for 2026.

15
16 **Q.** Does the company use these forecasts for purposes other
17 than rate case proceedings?

18
19 **A.** Yes. The forecast is used for conservation and demand-
20 side management clause projection filings, purchased gas
21 adjustment projection filings, the cast iron/bare steel
22 pipe replacement rider, and future capital plans. For the
23 company's long-term strategic planning, it is crucial to
24 account for the anticipated future changes. Ignoring
25 these adjustments and their impact on future load growth

1 could impair the company's ability to provide reliable
2 service to customers. Moreover, it would obstruct the
3 appropriate planning for future infrastructure needs.
4

5 B. OTHER FACTORS INFLUENCING PROJECTED THERMS AND BASE
6 REVENUE AMOUNTS

7 Q. What additional factors, beyond customer growth, are
8 influencing the projected therms and base revenue amounts
9 for 2025 and 2026?
10

11 A. As elaborated in the testimony of witness Fox, weather
12 conditions significantly influence projected therms and
13 base revenue figures. The actual therm consumption and
14 base revenue for 2024 account for the colder-than-average
15 weather encountered in January, February, and December
16 2024. In contrast, the forecasts for 2025 and 2026 are
17 predicated upon a 10-year normal weather pattern.
18 Furthermore, the robust tourism season observed in the
19 second quarter of 2024 contributed to an uptick in
20 commercial usage, thereby affecting base revenue.
21 Nevertheless, it is anticipated that commercial usage
22 will revert to standard levels in 2025 and 2026, as
23 tourism activities are expected to moderate during these
24 years.
25

1 **Q.** Are there any other impacts to projected therms and base
2 revenue amounts in 2025 and 2026?

3

4 **A.** Base revenue for the Industrial customer class is expected
5 to decline slightly from 2025 to 2026 due to the ending
6 of a short-term sale to a third party and reduced
7 production by a large customer in 2026.

8

9 **Q.** Was Peoples' revenue forecast for the 2024 rate case test
10 year submission reasonable comparing to actuals?

11

12 **A.** Yes. Document No. 5 of my exhibit shows the Residential
13 revenue forecast deviated by 0.4 percent, Small
14 Commercial by -3.0 percent, and total revenue by 0.3
15 percent.

16

17 **Q.** Is the forecast for customer additions, load forecast,
18 and base revenue for 2025 and 2026 both appropriate and
19 reasonable?

20

21 **A.** Yes. The forecasts are theoretically and statistically
22 sound. The average annual growth rates for customers and
23 therms align with recent growth trends and are consistent
24 with model assumptions, and tariff rates are accurately
25 applied in the revenue model.

1 **VII. FORECASTED BASE REVENUES**

2 **Q.** How did the company develop the 2025 and 2026 base revenue
3 forecasts for Residential, Small Commercial, and Large
4 Customer classes?

5
6 **A.** The base revenue is developed in Microsoft Excel
7 spreadsheets. Each of the company's 14 service areas has
8 its own model and are aggregated to arrive at the total
9 base revenue projections.

10
11 The inputs to this model are:

- 12 1. The most recent approved tariff rate schedules of
13 customer charges and per-therm distribution charges;
14 2. Forecasted Residential and Small Commercial therms-
15 per-customer from the regression models;
16 3. Forecasted customer and therms from non-regression
17 techniques;
18 4. Exogenous adjustment for Residential and Small
19 Commercial customer growth not accounted for in the
20 regression models; and
21 5. Billing determinant allocation factors.

22
23 I explained the revenue model inputs one through five
24 earlier in my testimony. The sixth input, known as billing
25 determinant factors, represents the percentage of

1 customers and therms allocated to each rate schedule
2 outlined below, which the model configures automatically.

3
4 Within the revenue models, Residential, Small Commercial,
5 and Large Customers are represented. These forecasts are
6 based on an analysis of recent customer usage trends and,
7 when necessary, input from customers.

8
9 Forecasting therms for base revenues for Large Customers
10 is a joint effort between the following departments within
11 the company: (1) Regulatory, (2) Gas Supply and
12 Development, and (3) Finance. This segment of the
13 company's overall revenue forecast does not necessitate
14 the use of economic modeling and regression techniques,
15 as described by witness Fox for Residential and Small
16 Commercial customers. Rather, since a large volume of
17 demand is concentrated in a small number of Large
18 Customers, the company develops its Large Customer demand
19 and revenue forecast by examining prior and expected usage
20 on a customer by-customer basis. As part of this process,
21 members of our Gas Supply and Development team communicate
22 directly with our Large Customers about their planned
23 natural gas usage and transportation needs for the budget
24 period and beyond. Peoples uses customer-specific
25 projected usage and applicable rates and charges to

1 forecast revenues for the customers taking service under
2 our GS-4, GS-5, WHS, SIS, IS, ISLV, and CIS rate
3 schedules, or service pursuant to a special contract.
4

5 The company includes therms and revenue projections for
6 new Large Customers in our financial forecasts based on
7 the specific service characteristics of the new customer,
8 including projected demand, and the in-service date of any
9 facilities being built to serve a new customer.
10

11 Once the model has allocated customer and therm
12 consumption to all the rate schedules, the resulting
13 customer charges and distribution per-therm charges are
14 applied and totaled to arrive at the 2026 base revenue.
15

16 **Q.** What is the anticipated increase in base revenues for the
17 year 2026?
18

19 **A.** Based on current rates, base revenues are expected to
20 increase by 0.4 percent, or \$1.9 million in 2025 and 3.0
21 percent, or \$13.8 million in the 2026 projected test
22 year. Document No. 5 of my exhibit shows base revenues
23 by customer class included in the adjusted net operating
24 income for the years 2024 through 2026.
25

VIII. MISCELLANEOUS SERVICE CHARGES

Q. Is the company proposing any new miscellaneous service charges?

A. No. The company is not proposing any new miscellaneous service charges.

Q. Is the company proposing changes to its current miscellaneous service charges?

A. Yes. The company proposes to modify five of its current six miscellaneous service charges:

- 1) Meter Turn On/Service Initiation Charge
- 2) Meter Reconnection/Service Restoration Charge
- 3) Trip Charge/Collection At Customer Premises
- 4) Failed Trip Charge At Customer Premises
- 5) Temporary Meter Turn-Off Charge.

These service charges are reflected on Tariff Sheet Nos. 5.101 and 5.101-1 of the legislative versions of the revised tariff sheets contained in MFR Schedule E-9. The company reviewed its miscellaneous service charges and the cost of performing each utility service. The cost associated with each activity is reflected in MFR Schedule E-3. A comparison of the company's current and proposed

1 miscellaneous service charges may be found as part of
2 Document No. 9 of my exhibit. The resulting revenue
3 increases are included in the cost of service and
4 accounted for in the company's final rates as presented
5 in MFR Schedule H.
6

7 **Q.** Please describe the methodology used to perform the cost
8 study of each utility service.
9

10 **A.** The company performed a time study and cost analysis for
11 each utility service. The time study involved the capture
12 and review of the detailed tasks involved. The tasks
13 included: (1) customer communications, (2) order
14 handling, (3) travel times, and (4) job times. The time
15 study incorporated a review and analysis of the labor and
16 material costs required to complete each activity which
17 were integrated into a per-service cost.
18

19 **Q.** What labor and material costs were used in developing the
20 cost of each utility service?
21

22 **A.** The company used payroll and purchasing data as the basis
23 for the labor and material costs. As detailed in MFR
24 Schedule E-3, the labor and material costs were adjusted
25 to reflect the 2026 projected test year assumptions. Cost

1 adjustments were based upon year-over-year cost
2 projections.

3
4 **Q.** Where did you obtain the assumptions used to determine
5 the 2026 projected test year rates and costs?

6
7 **A.** The labor rate assumptions used for the 2026 projected
8 test year as listed in MFR Schedule G-2, page 12a.
9 Material rate assumptions are based on the current rates
10 experienced by the company.

11
12 **Q.** Why are the miscellaneous service charges for Residential
13 and Commercial Meter Turn-on, Commercial Meter Reconnect,
14 and Failed Trip increasing?

15
16 **A.** The proposed charges demonstrate an increase over current
17 rates due to extended travel times in congested areas,
18 elevated labor costs, higher transportation expenses, and
19 additional costs for contractors supplementing the
20 workforce.

21
22 **Q.** Why is the Residential Meter Reconnect charge being
23 reduced?

24
25 **A.** The Residential Meter Reconnect Charge is being reduced

1 primarily due to lower material costs, which results from
2 eliminating certain materials and using prefabricated
3 parts.

4
5 **Q.** Why is the Account Opening Charge being reduced?
6

7 **A.** The Account Opening Charge is being reduced primarily due
8 to a decrease in the average time required to complete
9 orders and a reduction in the allocation of administrative
10 labor, because of lower average labor costs.
11

12 **Q.** Why is the Trip Charge being reduced?
13

14 **A.** The Trip Charge is being reduced primarily due to the
15 discontinuation of using contractors for these orders and
16 the removal of related costs from the charge calculation.
17

18 **Q.** Are Peoples' proposed miscellaneous service charges
19 appropriate?
20

21 **A.** Yes, the proposed miscellaneous service charges are
22 appropriate.
23
24
25

IX. CURRENT RESIDENTIAL BILLING CLASSES AND THE ANNUAL VOLUME REVIEW

Q. What are the current billing classes for a residential customer?

A. As shown on Tariff Sheet No. 7.201, the current residential billing classes are as follows:

<u>Billing Class:</u>	<u>Annual Consumption:</u>
RS-1	0 to 99 Therms
RS-2	100 to 249 Therms
RS-3	250 to 1,999 Therms

Q. When did the company establish three residential billing classes?

A. The company moved from one Residential billing class to three separate billing classes based on annual consumption in our 2008 rate case. As part of this change to three billing classes, the company developed the annual volume review process to ensure customers were classified (or reclassified) in the correct Residential billing class based on usage.

Q. Did the company propose refinements to the annual volume

1 review process in its last rate case?

2
3 **A.** Yes. The Commission approved the company's proposal of
4 the application of a 10 percent band during the annual
5 volume review to avoid unnecessary rate reclassifications
6 which resulted in complexities for customers and revenue
7 instability for the company. In other words, this
8 modification was instituted to better align customers
9 with the RS-1, RS-2 or RS-3 schedules.

10
11 **Q.** Please describe how a customer is reclassified under the
12 current annual volume review.

13
14 **A.** The usage from the most recent 12 months is compared to
15 the current billing class of the customer. If in one
16 twelve-month period, a customer uses more or less than
17 the current consumption parameters of their billing class
18 but is within the 10 percent band, they remain in their
19 current billing class. If in one 12-month period, a
20 customer uses more or less than the current consumption
21 parameters of their billing class and beyond the 10
22 percent band, they are reclassified. If in two consecutive
23 years, a customer uses more or less than the consumption
24 parameters for their billing class and is within the 10
25 percent band, they will be reclassified to the new

appropriate billing class for such usage.

Q. What has been the impact of the change to the annual review process made in the last case?

A. While the refinement reduced the number of reclassifications, it did not achieve the intended outcomes of reduced customer confusion, decreased administrative burden, or rate stability.

Q. What factors influence usage and can cause a customer to be reclassified?

A. Several factors impact usage for residential customers, including general household size and adding or removing an appliance. Additionally, weather is a key factor influencing usage for residential customers with some experiencing seasonal fluctuations as they are part-time residents. While these factors impact usage and can cause a customer to be reclassified, they do not impact or change the cost to serve these customers.

X. RATE DESIGN AND RATE SCHEDULE MODIFICATIONS

A. RATE DESIGN MODIFICATIONS

Q. What changes is the company proposing to its rate design

1 structure in this case?

2
3 **A.** As described by company witness John Taylor's prepared
4 direct testimony, the company plans to close RS-1 to new
5 customers and merge or consolidate RS-2 and RS-3 into a
6 single, unified RS-2 rate class. This consolidation of
7 two classes is an initial step to align costs across all
8 residential billing classes' cost of service. An analysis
9 of the customer's bill impact is included as part of MFR
10 Schedule E-5, and a comparison of current versus proposed
11 rates for residential and business customers, including
12 miscellaneous charges, is included in Document No. 9 of
13 my exhibit.

14
15 **Q.** Please discuss why the company is proposing this
16 consolidation of billing classes.

17
18 **A.** The proposed consolidation of RS-2 and RS-3 will better
19 align with actual cost-of-service principles, reducing
20 intra-class subsidies. By merging these two billing
21 classes, Peoples will streamline the residential rate
22 structure and improve rate transparency for customers.
23 The reduction in the number of billing classes will also
24 (1) alleviate the administrative burden associated with
25 the annual volume review and reclassification of

1 customers, and (2) diminish the revenue instability that
2 resulted from the annual volume review and declining use
3 per customer trend.

4
5 The consolidation moves the company towards ensuring
6 residential customers pay their fair share of system costs
7 rather than segmenting them based on fluctuating
8 consumption levels that have little to no impact on the
9 cost to serve. The goal is to gradually move to a single
10 residential billing class while reducing the impact of
11 rate adjustments on customers. This process will create
12 a more stable, predictable, and equitable rate structure.
13 Witness Taylor provides further details in his testimony
14 regarding the rate structure.

15
16 **Q.** What impact will the requested 2026 base rate increase
17 have on the bills of typical Residential customers?

18
19 **A.** As shown in Document No. 9 of my exhibit, based on the
20 company's current gas commodity price forecast and the
21 proposed base rate increase for 2026, we expect the
22 typical monthly bills for current residential classes to
23 be approximately \$37 for RS-1, \$60 for RS-2, and \$98 for
24 RS-3. Once RS-2 and RS-3 are consolidated into one
25 customer class, we anticipate the typical monthly bill

1 for that class to be approximately \$72 a month.

2
3 **Q.** How does the impact on Residential customers' bills for
4 2026 compare to other energy alternatives such as
5 electricity or propane?

6
7 **A.** As shown in Document No. 9, our proposed 2026 Residential
8 RS-2 bill of \$70 (less tax considerations of \$2 for
9 purposes of comparison) is \$35 less than the energy
10 equivalent electricity bill and approximately \$43 less
11 than the energy equivalent propane bill. These
12 comparisons illustrate that the proposed 2026 rates are
13 reasonable and offer value to customers.

14
15 **Q.** What impact will the requested 2026 base rate increase
16 have on Commercial Bills?

17
18 **A.** The company anticipates that the typical monthly bill for
19 Commercial (GS-1 to GS-5) customers in 2026 will increase
20 between 1% to 11% depending upon usage and the cost of
21 the gas commodity. These increases are also influenced by
22 changes in the cost of service methodology proposed, which
23 has a moderating effect on these billing classes. Under
24 the prior cost of service methodology, these customers
25 would have experienced a larger increase.

1 Although the Small General Service customer class is
2 experiencing an 18% increase to their bill, it is due to
3 ensuring all classes are closer paying for the costs they
4 cause on the system.

5
6 B. RATE SCHEDULE MODIFICATIONS

7 Q. Please describe the proposed revisions to the company's
8 rate schedules.

9
10 A. The rate schedules and riders in Section 7 of the
11 company's proposed tariff reflect the new rates developed
12 and supported by witness Taylor's prepared direct
13 testimony. The company is submitting proposed revisions
14 to its tariff to achieve the proposed revenues for all
15 rate classes as required in both legislative and clean
16 format in MFR Schedule E-9. The rate schedule and rider
17 revisions described herein are filed with the Commission
18 pursuant to the file and suspend provisions of Section
19 366.06, Florida Statutes.

20
21 1. Modifications to Rate Schedule Residential Service

22 Q. Please describe the proposed changes to the Residential
23 billing classes based on the request in this rate case.

24
25 A. The company proposes several modifications to Tariff

1 Sheets 7.201 and 7.201-1 to effectuate its request to
2 consolidate to two billing classes.

3
4 Effective January 1, 2026, the company proposes to move
5 the customers in the RS-3 Billing Class into the RS-2
6 Billing Class. The RS-1 Billing Class will be closed to
7 new customers. All new customers since July 1, 2025, and
8 existing customers without 12 months of usage as of July
9 1, 2025, will automatically be placed in the RS-2 Billing
10 Class.

11
12 The proposed billing classes will be reflected as follows:

13	14 <u>Billing Class:</u>	15 <u>Annual Consumption:</u>
16	RS-1	0 to 99 Therms
17	RS-2	100 to 1,999 Therms

18 As stated above, new residential customers will not be
19 added to the RS-1 billing class subsequent to July 1,
20 2025. Only those customers that existed in RS-1 prior to
21 July 1, 2025 will remain in RS-1 unless their annual
22 consumption review requires a reclassification into RS-
23 2.

24
25 Q. Please describe the tariff modifications in Sheet No.

1 7.201-1 related to the annual volume review.

2
3 **A.** The annual volume review will only analyze RS-1 customers'
4 annual consumption to determine if these customers
5 qualify for reclassification into RS-2. The company
6 contemplates that the review of the RS-1 Billing Class
7 will continue to occur at the end of June each year.

8
9 2. Modifications to the Customer Choice Programs

10 **Q.** Please explain the change to the termination fee for the
11 Natural Choice Transportation ("NCTS") program.

12
13 **A.** The company proposes to increase the NCTS termination fee
14 due to a rise in direct labor costs associated with
15 administering the NCTS program to 27,456 customers as of
16 March 2025. The fee is charged when a pool manager
17 terminates service to a customer.

18
19 **Q.** Please explain the change to the Individual
20 Transportation Administration Fee for the Individual
21 Transportation Service Rider ("Rider ITS").

22
23 **A.** The company proposes an increase in the Rider ITS
24 Administration Fee due to higher direct labor costs
25 associated with (1) managing the ITS program and (2)

1 operating and maintaining the telemetry equipment for the
2 360 ITS meters. This fee includes associated costs for
3 the data collection system service agreement, gas
4 management system, ITS materials such as volume
5 correctors, battery and modem replacements, and vehicle
6 costs.

7
8 **C. REASONABLENESS OF PROPOSED MODIFICATIONS**

9 **Q.** Are Peoples' proposed modifications to the rate schedules
10 appropriate?

11
12 **A.** Yes. Peoples' proposed modifications to the rate
13 schedules are appropriate.

14
15 **XI. SUBSEQUENT YEAR ADJUSTMENT**

16 **Q.** Did the company develop a set of illustrative customer
17 rates that reflect the proposed 2027 Subsequent Year
18 Adjustment ("SYA")?

19
20 **A.** Yes. Document No. 10 of my exhibit contains supplemental
21 schedules E-1, E-2, and E-5, showing how adding the
22 proposed 2027 SYA annual revenue increase to the company's
23 proposed 2026 revenue increase would impact customer
24 rates in 2027. These schedules for 2027 were prepared
25 using the cost-of-service study, class revenue allocation

percentages, and billing determinants that Peoples witness Taylor used to develop the company's proposed 2026 customer rates and charges. These schedules are included in the company's petition filed on March 31, 2025, in Document No. 16 (2027 Subsequent Year Adjustment Supplemental Schedules), and are for illustrative purposes should the Commission approve a SYA in this case, the company proposes to file proposed 2027 SYA rates and tariffs in September 2026 so that they will reflect the then-current billing determinants and the approved 2027 SYA revenue increase. This will allow the Commission to approve the tariffs implementing the 2027 SYA in time to become effective with the first billing cycle in January 2027.

XII. NON-RATE TARIFF CHANGES

CUT AND CAP

Q. Please describe the company's proposed changes to Cut and Cap in Section 5 of its tariff?

A. The company proposes language to clarify that regardless of the circumstance under which Cut and Cap is performed, the customer is responsible for paying for the restoration of gas service.

1 CUSTOMER INSTALLATION

2 **Q.** Is the company proposing any modifications to Article II,
3 Customer's Installation, in Section 5 of its tariff?

4
5 **A.** Yes. The company proposes a modification related to a
6 customer's installation to clarify that the customer is
7 responsible for installing and maintaining carbon
8 monoxide or methane gas detectors on the customer's
9 premises.

10
11 DEPOSITS

12 **Q.** Please describe the company's proposed changes to
13 Deposits in Section 5 of its tariff.

14
15 **A.** The company proposes language to clarify that a cash
16 deposit and the accrued interest may be returned either
17 to the customer or to an agency if the agency paid the
18 deposit on behalf of the customer.

19
20 DELIVERY OF CUSTOMER BILL

21 **Q.** Describe the modifications made in Section 5 of the
22 company's tariff to delivery of bill provisions.

23
24 **A.** The company proposes changes to modernize the tariff,
25 allowing bills to be sent by mail or other means chosen

1 by the customer. Other changes to this section include
2 correcting a reference to the Florida Administrative Code
3 ("F.A.C.") and clarifying language related to bill
4 adjustments for meter errors.

5
6 BUDGET BILLING

7 **Q.** Please describe the company's proposed changes to the
8 Budget Billing program in Section 5 of its tariff.

9
10 **A.** The company proposes language to define good financial
11 standing, clarify Budget Billing program eligibility, and
12 provide that the budgeted payment amount may be
13 recalculated periodically. Additionally, Peoples proposes
14 that customers who voluntarily terminate participation in
15 the program may not rejoin for at least 12 months.

16
17 MEASUREMENT

18 **Q.** Describe the modifications made in Section 5 of the
19 company's tariff to Measurement.

20
21 **A.** The company proposes adding language to its tariff
22 correcting a reference to the F.A.C. and that customers
23 must provide a convenient, safe, and accessible location to
24 install meters, regulators, and ancillary equipment.

25

1 LIABILITY AND COMPANY'S RESPONSIBILITIES

2 **Q.** Please describe the changes the company is proposing to the
3 provisions on (1) limits of the company's responsibility;
4 (2) limitation on consequential damages; and (3) indemnity
5 to the company.

6
7 **A.** Each of these proposed modifications represents an effort
8 to clarify the company's liability circumstances and
9 protect against undue risk that may arise in the conduct of
10 our business.

11
12 CONTRACT INTERRUPTIBLE SERVICE

13 **Q.** What change is Peoples proposing to the Contract
14 Interruptible Service (CIS) Tariff?

15
16 **A.** The company proposes adding economic development as a
17 qualifying condition for offering the CIS rate.

18
19 OFF-SYSTEM SERVICE

20 **Q.** What change is Peoples proposing to the Off-System Service
21 Tariff?

22
23 **A.** The company proposes removing the limitation that the
24 Distribution Charge, as specified in this schedule, shall
25 be no greater than 90 percent of the currently applicable

1 firm distribution rate.

2
3 **Q.** How does this change benefit customers?

4
5 **A.** This change benefits customers by removing the cap on the
6 distribution charge for this service. As a result, the
7 charge will be determined by competitive conditions. This
8 adjustment could potentially increase the amount of dollars
9 that flow back to customers as a reduction to the Purchased
10 Gas Adjustment Clause. Additionally, it ensures Peoples is
11 on a level playing field with Florida Public Utilities
12 Company and Florida City Gas, both of which are not bound
13 by this restriction.

14
15 GAS SUPPLY AGREEMENT

16 **Q.** What change is Peoples proposing to the Gas Supply
17 Agreement?

18
19 **A.** Peoples proposes to remove unused information from the Gas
20 Supply Agreement and add boxes to capture other information
21 to facilitate the collection of information needed for its
22 work and asset management system. We are also adding
23 language clarifying that to the extent that the customer
24 identified in this agreement is the State of Florida, one
25 of its agencies, or one of its subdivisions, nothing herein

1 shall be construed or interpreted as a waiver of sovereign
2 immunity beyond the waiver provided in Section 768.28
3 Florida Statutes, or any successor statute.

4
5 GAS TRANSPORTATION AGREEMENT

6 **Q.** What change is Peoples proposing to the Gas Transportation
7 Agreement?

8
9 **A.** Peoples is proposing several clarifying revisions to this
10 form agreement. The modifications include (1) defining
11 certain costs for which the customer may reimburse Peoples;
12 (2) specifying that Appendix D applies to interruptible
13 customers; (3) simplifying the language in Appendix D
14 regarding the alternatives available to customers under
15 Appendix D in the event of an interruption or curtailment.

16
17 ITS AGENT AGREEMENT

18 **Q.** What change is Peoples proposing to the ITS Agent Agreement?

19
20 **A.** Peoples proposes to add language that to the extent the
21 customer identified in this agreement is the State of
22 Florida, one of its agencies, or one of its subdivisions,
23 nothing herein shall be construed or interpreted as a waiver
24 of sovereign immunity beyond the waiver provided in Section
25 768.28 Florida Statutes, or any successor statute.

1 DATA ACCESS AGREEMENT

2 **Q.** What change is Peoples proposing to the Data Access
3 Agreement?

4
5 **A.** Peoples is proposing adding language that to the extent the
6 subscriber identified in this agreement is the State of
7 Florida, one of its agencies, or one of its subdivisions,
8 nothing herein shall be construed or interpreted as a waiver
9 of sovereign immunity beyond the waiver provided in Section
10 768.28 Florida Statutes, or any successor statute.

11
12 MINIMUM VOLUME COMMITMENT AGREEMENT

13 **Q.** What change is Peoples proposing to the Minimum Volume
14 Agreement?

15
16 **A.** The company proposes several clarifying revisions to this
17 form agreement. The modifications include (1) defining
18 certain costs for which the customer may reimburse Peoples;
19 (2) specifying that Appendix D applies to interruptible
20 customers; (3) simplifying the language in Appendix D
21 regarding the alternatives available to customers under
22 Appendix D in the event of an interruption or curtailment.
23 There are also corrections for typos and formatting.

24
25 **Q.** Are Peoples' non-rate-related tariff changes appropriate?

1 **A.** Yes, Peoples' non-rate-related tariff changes are
2 appropriate.

3
4 MINOR REVISIONS

5 **Q.** Please describe the proposed modifications the company
6 considers to be editorial corrections and clarifications.

7
8 **A.** The company is requesting approval by the Commission for
9 the following tariff corrections and clarifications.

10
11 COMPANY STREET ADDRESS

12 Peoples will update certain Tariff standard forms that
13 contain the company's street address. During the summer
14 of 2025, the company will move from 702 Franklin Street
15 to 3600 Midtown Drive.

16
17 COUNTIES AND COMMUNITIES SERVED

18 The proposed changes to the counties and communities
19 served is an updated list that reflects the new areas in
20 which Peoples has extended its service in response to
21 customer demand.

22
23 TERRITORY SERVICE

24 The proposed change to the territory served section is an
25 updated map that reflects the new areas served by Peoples

1 since its last general base rate proceeding.
2

3 Q. In your opinion, are the company's proposed editorial
4 changes reasonable?

5
6 A. Yes.
7

8 Q. What is the appropriate effective date of Peoples' revised
9 rates and charges?

10
11 A. The appropriate effective date is for the first billing
12 cycle of January 2026.
13

14 **XIII. ECONOMIC DEVELOPMENT EXPENSES**

15 Q. What amount of economic development expense did the
16 Commission approve in the company's last rate case for
17 2024?
18

19 A. At the hearing in Docket No. 20230023-GU, the Commission
20 approved a type 2 stipulation of \$265,498 as the
21 appropriate economic development expense for 2024, as
22 reflected in Order No. PSC-2023-0388-FOF-GU. This amount
23 reflected the \$367,920 stated in the direct testimony of
24 witness O'Connor less a reduction of \$102,422 for certain
25 adjustments.

1 **Q.** What were the actual economic development expenses in
2 2024?

3

4 **A.** The actual amount of economic development expense for 2024
5 was \$348,441.

6

7 **Q.** What level of economic development expense is Peoples
8 proposing to spend for 2025?

9

10 **A.** The company has budgeted \$380,000 of economic development
11 adjusted expense in 2025.

12

13 **Q.** What level of economic development expense is Peoples
14 asking the Commission to approve for the company based on
15 its 2026 test year?

16

17 **A.** The company has budgeted \$388,740 as adjusted, of economic
18 development expense in 2026.

19

20 **Q.** What economic development activities will the company
21 perform at this level of spending?

22

23 **A.** This level of spending supports the company's membership
24 dues and participation in Chamber and economic
25 development groups. These groups are dedicated to

1 fostering an environment that attracts new businesses,
2 and boosts job growth and the economy. Utilities are an
3 essential component of economic development throughout
4 Florida. Natural gas provides affordable, reliable, and
5 safe energy that supports economic development for
6 customers and businesses. The economic development
7 expenditures, which are recoverable pursuant to Rule 25-
8 7.042, F.A.C., will enhance and support the economic
9 vitality in the major metropolitan and rural areas served
10 by the company.

11
12 **Q.** Why is this level of economic development expense
13 reasonable and prudent?

14
15 **A.** The proposed economic development spending is reasonable
16 and prudent, as it invests in Florida's quality of life
17 by supporting industrial development, job growth, and
18 energy reliability for state businesses. The proposed
19 economic development spending is well within the
20 limitations of Rule 25-7.042, F.A.C.

21
22 **XIV. MINIMUM FILING REQUIREMENTS**

23 **Q.** Are you sponsoring any MFR Schedules?

24
25 **A.** Yes. I am the sponsor or co-sponsor of the following MFR

Schedules: C38 - O&M Expense by Function, E3 - Cost Study Connections and Reconnections; E9 - Tariff Sheets, G-2 Budget Historic Base Year 1 and Projected Test Year, and G-6 - Projected Test Year - Major Assumptions.

Q. Please explain the MFR Schedules you are sponsoring or co-sponsoring.

A. MFR Schedule E3 - Connections and Reconnections include those costs associated with the amount of time and the cost for the initial connection of Residential and/or commercial customers; time and costs for the reconnection of a Residential and/or commercial customers, after disconnection for a cause, temporary disconnection costs as well as administrative costs associated with these tasks.

MFR Schedule E9 - Tariff Sheets, provides copies of the proposed tariff sheets in legislative format.

MRF Schedule C38 - O&M Expense by Function includes O&M expenses by function for the historic base year, the benchmark year, and the variance for each functional variance.

1 MFR Schedule G2 - Budget Historic Base Year + 1 and
2 Projected Test Year, provides the calculation of net
3 operating income per books for the historic base year,
4 the projected net operating income for the historic base
5 year + 1, and the projected test year.

6
7 MFR Schedule G6 - Projected Test Year - Major Assumptions
8 depicts the major assumptions used to develop the
9 projected test year ending on December 31, 2026.

10
11 **XV. SUMMARY**

12 **Q.** Please summarize your prepared direct testimony.

13
14 **A.** Peoples' forecasting process is reliable and projected
15 customer growth, customer usage, and resulting revenue
16 forecasts for the 2026 test year reflect the expected
17 economic and operating conditions and are reasonable and
18 prudent. The proposed revisions to Peoples' existing
19 tariff sheets are necessary to address current and
20 anticipated business and customer needs. Taken together
21 with the proposals in the prepared testimony of witness
22 Taylor, these proposed tariff revisions will permit
23 Peoples to recover its prudent costs of providing safe
24 and reliable natural gas service. The proposed rate
25 increase in this petition is reasonable and the company's

1 rates remain competitive compared to other energy
2 sources. Finally, the O&M expenses related to the
3 Regulatory, External Affairs, and Finance departments in
4 the company's 2026 test year are reasonable and prudent.
5

6 **Q.** Does this conclude your prepared direct testimony?
7

8 **A.** Yes.

PREPARED DIRECT TESTIMONY

OF

JEFF CHRONISTER

Q. Please state your name, address, occupation, and employer.

A. My name is Jeff Chronister. My business address is 702 North Franklin Street, Tampa, Florida 33602. I am employed by Tampa Electric Company ("Tampa Electric") as Vice President Finance. I am also Vice President of Finance for TECO Holdings, Inc., which is a parent company of Peoples Gas System, Inc. ("Peoples" or the "company").

Q. Please describe your duties and responsibilities as Vice President of Finance for Tampa Electric and Vice President of Finance for TECO Holdings, Inc.

A. I am responsible for maintaining the financial books and records of Tampa Electric and for determining and implementing accounting policies and practices for Tampa Electric. I am also responsible for budgeting activities within Tampa Electric, which includes business planning and financial planning and analysis, as well as general accounting, regulatory accounting, plant accounting, tax

1 accounting, financial reporting, accounts payable, and
2 payroll.

3
4 I am familiar with how affiliates in the Emera Incorporated
5 ("Emera") family of companies charge costs to each other,
6 including how costs are direct charged, assessed, and
7 allocated to and among affiliates, especially as related
8 to Tampa Electric and Peoples.

9
10 I am also familiar with the capital and financing needs
11 and plans of Tampa Electric and Peoples and how Peoples
12 coordinates with Emera to obtain equity and debt capital
13 to finance its operations. I work with the Peoples finance
14 team on issues of mutual interest and stay abreast of
15 Peoples' financial planning and performance.

16
17 **Q.** Please describe your history with Peoples and your present
18 involvement in its governance and operations.

19
20 **A.** I served as Controller for Peoples (and Tampa Electric)
21 from 2009 to 2018. I attend Peoples Board of Directors
22 meetings and am currently involved in Peoples governance
23 through groups such as the Capital Leadership Team and the
24 Risk Authorization Committee. My Tampa Electric finance
25 team supports Peoples operations by providing day-to-day

1 business functions such as payroll, accounts payable, taxes
2 and plant accounting, as well as the operation and
3 maintenance of the company's accounting system. These
4 activities give me visibility into Peoples' operations,
5 financial plans, and financial performance.

6
7 **Q.** Please summarize your educational background and business
8 experience.

9
10 **A.** I graduated from Stetson University in 1982 with a Bachelor
11 of Business Administration degree in Accounting. I became
12 a Certified Public Accountant in the State of Florida in
13 1983. Upon graduation I joined Coopers & Lybrand, an
14 independent public accounting firm, where I worked for four
15 years before joining Tampa Electric in 1986.

16
17 I started in Tampa Electric's Accounting department, moved
18 to TECO Energy's Internal Audit department in 1987, and
19 returned to the Accounting department in 1991. I have led
20 Tampa Electric's Accounting department since 2003. I became
21 Vice President Finance for Tampa Electric and the parent
22 company of Tampa Electric and Peoples in 2018.

23
24 For the last seven years, I have been responsible for
25 treasury and finance functions, including short-term and

1 long-term debt, cash management, and debt compliance. My
2 team also works with Emera financial personnel when debt
3 is issued, and to prepare financial information and
4 communications for credit rating agencies and investment
5 analysts.

6
7 **Q.** Have you previously testified before the Florida Public
8 Service Commission ("FPSC" or the "Commission")?

9
10 **A.** Yes. I testified for Tampa Electric in Docket Nos.
11 20210034-EI and 20240026-EI, which were Tampa Electric's
12 last two base rate proceeding. I also filed testimony in
13 the following dockets:

14 (1) Docket No. 20130040-EI, Tampa Electric Company's
15 Petition for An Increase in Base Rates and
16 Miscellaneous Service Charges;

17 (2) Docket No. 20080317-EI, Tampa Electric Company's
18 Petition for An Increase in Base Rates and
19 Miscellaneous Service Charges;

20 (3) Docket No. 19960007-EI, Tampa Electric's
21 Environmental Cost Recovery Clause;

22 (4) Docket No. 19960688-EI, Tampa Electric's
23 environmental compliance activities for purposes of
24 cost recovery;

25 (5) Docket No. 20170271-EI, Petition for recovery of costs

1 associated with named tropical systems during the
2 2015, 2016, and 2017 hurricane seasons and
3 replenishment of storm reserve subject to final true-
4 up;

5 (6) Docket No. 20180044-GU, Consideration of the tax
6 impacts associated with Tax Cuts and Jobs Act of 2017
7 for Peoples Gas System; and

8 (7) Docket No. 20200144-EI, Petition for Limited
9 Proceeding to True-Up First and Second SoBRA by Tampa
10 Electric Company.

11

12 I also served on a panel of witnesses during the final
13 hearing in Docket No. 20200065-EI, which addressed Tampa
14 Electric's amortization reserve for intangible software
15 assets.

16

17 **Q.** What are the purposes of your direct testimony?

18

19 **A.** The purposes of my direct testimony are to:

20

21 (1) provide an overview of changes to the company's
22 financial profile and the reasons it needs the rate
23 increase it is proposing in this case;

24 (2) discuss the importance of maintaining the company's
25 financial integrity, why the Commission should

1 approve the company's proposed 54.7 percent equity
2 ratio (investors sources) in its 2026 test year
3 capital structure, and how the company forecasted
4 short-term and long-term debt cost rates for the 2026
5 test year;

6
7 (3) provide a high-level view of the company's long-term
8 financial outlook for serving its current and new
9 customers and explain why approving the company's
10 proposed subsequent year adjustment ("SYA") for 2027
11 is appropriate in this proceeding; and

12
13 (4) describe the processes and procedures used by
14 affiliates in the Emera family of companies to account
15 for costs charged to each other, including how costs
16 are direct charged, assessed, and allocated by, to,
17 and among affiliates, especially Peoples ("affiliate
18 transactions").

19
20 **Q.** Have you prepared an exhibit to support your direct
21 testimony?

22
23 **A.** Yes, Exhibit JC-1, entitled the Exhibit of Jeff Chronister,
24 was prepared under my direction and supervision. The
25 contents of my exhibit were derived from the business

1 records of the company and are true and correct to the best
2 of my information and belief. It consists of four
3 documents, as follows:

4 Document No. 1 List of Minimum Filing Requirement
5 Schedules Sponsored or Co-Sponsored by
6 Jeff Chronister

7 Document No. 2 2027 SYA Calculation

8 Document No. 3 Pages 36a and 36b of the
9 Diversification Activity section of
10 the FPSC Annual Report of Peoples Gas
11 System, Inc., for the year ended
12 December 31, 2024

13 Document No. 4 SeaCoast Comprehensive Procedural
14 Review

15
16 **Q.** Do you sponsor any sections of Peoples Minimum Filing
17 Requirement ("MFR") Schedules?

18
19 **A.** Yes. I sponsor or co-sponsor the MFR Schedules listed in
20 Document No. 1 of my exhibit. The contents of these MFR
21 Schedules were derived from the business records of the
22 company and are true and correct to the best of my
23 information and belief.

24
25 **Q.** How does your prepared direct testimony relate to the

1 prepared direct testimony of other company witnesses?

2
3 **A.** My testimony complements the testimony of Peoples witness
4 Andrew Nichols, who: explains the company's budget and
5 forecasting process; justifies the company's proposed 2026
6 test year; and presents and explains the details of the
7 company's 2026 rate base, 2026 capital structure and
8 overall rate of return, 2026 net operating income, and 2026
9 revenue requirement calculations.

10
11 Peoples used the affiliate transaction processes and
12 procedures described in my testimony to develop the
13 company's 2026 budget and its 2026 test year rate base,
14 capital structure, net operating income, and revenue
15 requirement amounts.

16
17 Peoples witness Nichols used the equity ratio and debt cost
18 rates supported in my testimony to calculate the company's
19 proposed 2026 capital structure, weighted average cost of
20 capital (overall rate of return), and annual revenue
21 requirement increase for the 2026 test year.

22
23 I used financial data in MFR schedules supported by Mr.
24 Nichols to: (1) develop an overview of changes to the
25 company's financial profile, (2) discuss the company's

1 financial integrity and proposed equity ratio, and (3)
2 calculate the 2027 SYA as shown in Document No. 2 of my
3 exhibit.

4
5 **I. FINANCIAL PROFILE CHANGES SINCE LAST RATE CASE**

6 **Q.** How has Peoples' financial profile changed since its last
7 rate case?

8
9 **A.** Peoples filed its last rate case on April 4, 2023, and the
10 case concluded when the Commission issued its order at the
11 end of that year. The Commission approved a 13-month
12 average FPSC Rate Base of \$2,357,327,760 for 2024 (the test
13 year in the previous case). The company's actual 13-month
14 average FPSC Rate Base for 2024 (as reported on the
15 company's December 2024 Earnings Surveillance Report) was
16 \$2,376,657,000.

17
18 In order to meet its obligation to provide reasonably
19 sufficient, adequate, and efficient service for both new
20 and existing customers, Peoples must invest in rate base
21 assets to serve the demand from future customers and to
22 ensure the safety, reliability, resilience, and efficiency
23 of its existing distribution system.

24
25 The company's projected FPSC Rate Base for 2026 (the test

1 year in this filing) is \$2,954,441,634, which is
2 approximately \$580 million higher than the 2024 actual
3 amount. This amounts to rate base growth of about twelve
4 percent a year and is a function of investing in assets to
5 serve the company's growing customer base and improve its
6 gas distribution infrastructure.

7
8 **Q.** How does this rate base growth impact other portions of
9 the company's financial profile?

10
11 **A.** All other things being equal, increasing rate base
12 increases depreciation expense, operations and maintenance
13 ("O&M") expenses, and taxes other than income taxes
14 (primarily ad valorem taxes), because there are more assets
15 to depreciate and to operate and maintain, and that are
16 subject to property taxes. Despite its rate base growth
17 and the impacts of inflation, Peoples has been able to keep
18 its O&M expense growth since the last rate case under the
19 Commission's benchmark.

20
21 **Q.** How do these changes influence the company's proposed 2026
22 rate increase request?

23
24 **A.** The company's rate base growth since the test year in its
25 previous rate case has a 2026 revenue requirement impact

1 of approximately \$48 million. Higher depreciation expense,
2 caused by rate base growth, has a revenue requirement
3 impact in 2026 of about \$19 million. The effect of higher
4 O&M expenses, taxes other than income taxes, and cost of
5 capital have a 2025 revenue requirement impact of
6 approximately \$23 million, \$9 million, and \$15 million,
7 respectively. These impacts total approximately \$114
8 million.

9
10 **Q.** If the collective impact of the items above is
11 approximately \$114 million, why is the company's request
12 for revenue increase for 2026 only \$97 million?

13
14 **A.** The 2026 requested net annual increase of \$96.9 million
15 (\$103.6 million minus \$6.7 million of Rider CI/BSR revenue)
16 is tempered by the increase in base revenue from load
17 growth since 2024. Load growth is expected to generate
18 incremental base revenues of approximately \$17 million in
19 2026. The difference between the \$114 million above and
20 the counterbalancing revenue growth of \$17 million equals
21 \$97 million.

22
23 **Q.** Are the changes in the expense elements referred to above
24 reasonable?

1 **A.** Yes. Depreciation expense, O&M expense, and taxes other
2 than income have increased as a result of asset growth to
3 serve customers as well as economic conditions since the
4 last rate case.

5
6 **Q.** Is the company's forecasted amount for 2026 O&M expense
7 reasonable?

8
9 **A.** Yes. The company's 2026 O&M expense is lower than an amount
10 calculated using the Commission's O&M Benchmark
11 methodology. The Commission's O&M Benchmark measures a
12 company's O&M expense levels against an O&M expense level
13 from a prior year escalated annually by a multiplier
14 reflecting inflation and customer growth.

15
16 The company's actual 2024 O&M expense was lower than the
17 Commission O&M Benchmark, as shown on MFR Schedule C-34,
18 sponsored by Peoples witness Nichols.

19
20 The company's projected 2026 O&M expense is lower than the
21 benchmark, as shown on Document No. 10 of the Exhibit of
22 Peoples witness Nichols.

23
24 Being below the benchmark is important evidence that the
25 company's efforts to control O&M expenses have worked, and

1 that its projected 2026 O&M expense levels are reasonable.

2

3 **Q.** Did inflation impact the company since the last rate case?

4

5 **A.** Yes. General inflation increased the prices Peoples pays
6 for the goods and services it uses to provide service to
7 customers. Peoples witness Christian Richard explains in
8 his testimony that the cost of meters, meter accessories,
9 and valves increased from 2023 to 2024 by 35 percent, 33
10 percent, and 22 percent, respectively. Peoples witness
11 Nichols discusses the general level of inflation in his
12 direct testimony.

13

14 **Q.** Has the company experienced other cost increases since the
15 last rate case?

16

17 **A.** Yes. Company labor costs and the cost of property and
18 casualty insurance have increased due to general economic
19 conditions and market forces beyond the control of the
20 company. Peoples witnesses Donna Bluestone and Nichols
21 discuss these increases in their direct testimony.

22

23 **Q.** What did Peoples do to counteract these price increases?

24

25 **A.** The company's proposed overall 2026 O&M expense level is

1 below the Commission's benchmark because the company
2 focused on cost control and made business decisions to
3 counteract upward cost pressures. The items that resulted
4 in positive impact include:

5
6 (1) The company has a culture that focuses on process
7 improvements, operational optimization, resource
8 allocation, technology enhancements, and innovations
9 for efficiency.

10 (2) The company monitors market conditions and
11 opportunities to reduce expenses or moderate expense
12 increases through prudent decision-making. Examples
13 of this are the supply chain, contracting, and WAM-
14 driven changes discussed in the testimony of Peoples
15 witnesses Richard and Timothy O'Connor.

16 (3) The company recognizes that with the growth in capital
17 investments comes the opportunity to appropriately
18 charge a greater amount of Administrative & General
19 ("A&G") Expense to capital. The company increased the
20 amount of A&G capitalized since its last rate case
21 and reflected this reduction in the forecasted 2026
22 expense. Peoples witness Nichols discusses this
23 change in his direct testimony.

24
25 Q. Given the financial changes discussed above, what net

operating income is forecasted for the company's 2026 test year and what return does that represent?

A. Peoples' forecasted 2026 Jurisdictional Adjusted Net Operating Income is \$146.9 million. Without the company's requested 2026 rate increase, that net operating income would result in an overall rate of return of 4.97 percent and a return on equity ("ROE") of 5.70 percent as shown on MFR Schedule A-1. The effect of these return levels on the company's financial integrity indicators would be negative as shown on MFR Schedule A-6 and could negatively impact Peoples' credit ratings. I will discuss the importance of financial integrity and credit ratings in the next section of my testimony.

II. FINANCIAL INTEGRITY, EQUITY RATIO, AND COST OF DEBT

A. FINANCIAL INTEGRITY

Q. What is financial integrity?

A. Financial integrity refers to a relatively stable condition of liquidity and profitability in which the company can meet its financial obligations to investors while maintaining the ability to attract investor capital as needed on reasonable terms, conditions, and costs.

1 Q. How is financial integrity measured?

2
3 A. Financial integrity is a function of financial risk, which
4 represents the risk that a company may not have adequate
5 cash flows to meet its financial obligations. The level of
6 cash flows and the percentage of debt, or financial
7 leverage, in the capital structure are key determinants of
8 financial integrity. As the percentage of debt in a
9 company's capital structure increases, so do the fixed
10 obligations for the repayment of that debt. Consequently,
11 as financial leverage increases the level of financial risk
12 also increases. Therefore, the percentage of internally
13 generated cash flows compared to these financial
14 obligations is a primary indicator of financial integrity
15 and is relied upon by rating agencies when they assign debt
16 ratings.

17
18 Q. Why is financial integrity important to Peoples and its
19 customers?

20
21 A. As a regulated utility, Peoples has an obligation to
22 provide natural gas distribution services to customers in
23 accordance with its tariff, and the statutes and rules
24 regulating its activities. Meeting new customer demand for
25 gas service while ensuring the safety, reliability,

1 resilience, and efficiency of its services to existing
2 customers requires the company to make significant
3 investments in property, plant, and equipment, both planned
4 and unplanned, which makes Peoples very capital intensive.
5 Peoples expects to invest approximately \$831 million in
6 2025 and 2026 to meet its obligations to both new and
7 existing customers.

8
9 Maintaining financial integrity is important so Peoples
10 will continue to have access to capital on reasonable terms
11 and conditions. Peoples' responsibility to serve is not
12 contingent upon the health or the state of the financial
13 markets. When access to capital is constrained and market
14 conditions are depressed, only utilities exhibiting
15 financial integrity can attract capital under reasonable
16 terms. Maintaining financial integrity provide significant
17 and potentially critical flexibility when accessing
18 capital markets.

19
20 Financial integrity is essential to support the company's
21 need for capital. The strength of Peoples' balance sheet
22 and its financial flexibility are important factors
23 influencing its ability to finance planned infrastructure
24 investments and manage unexpected events. Peoples competes
25 in a global market for capital, and a strong balance sheet

1 with appropriate rates of return attracts capital market
2 investors. Financial strength and flexibility enable
3 Peoples to have ready access to capital with reasonable
4 terms and costs for the long-term benefit of its customers.
5

6 **Q.** Is the company's requested revenue requirement and rate
7 increase for 2026 needed to maintain the company's
8 financial integrity?
9

10 **A.** Yes. The company's requested level of 2026 rate relief is
11 needed to maintain the company's financial integrity
12 indicators and other key credit metrics at levels similar
13 to the recent levels that have supported the company's
14 current credit ratings. Without rate relief, these metrics
15 would deteriorate in 2026 and would continue to deteriorate
16 beyond 2026 as capital spending increases and earned
17 returns decline. This deterioration would not support
18 Peoples' current credit rating and would have negative
19 implications for the company's credit rating, borrowing
20 costs, and access to capital.
21

22 **Q.** How will the company's proposed base rate increase affect
23 Peoples's financial integrity?
24

25 **A.** The requested base rate increase will place Peoples in a

1 prudent and responsible financial position to fund its
2 capital program and continue providing safe and reliable
3 gas service to its customers. To raise the required
4 capital, the company must be able to provide fair returns
5 to lenders and investors commensurate with the risks they
6 assume. Having a strong financial position will ensure that
7 Peoples has a reliable stream of external capital and will
8 allow the company's capital requirements to be met in a
9 cost-effective and timely manner. Uninterrupted access to
10 the financial markets will provide Peoples with the capital
11 it needs on reasonable terms so it can continue to improve
12 and protect the long-term interests of its customers.

13
14 **B.** CREDIT RATINGS

15 **Q.** What are credit ratings and why are they important?
16

17 **A.** The term "credit rating" refers to letter designations
18 assigned by credit rating agencies that reflect their
19 independent assessment of the credit quality of entities
20 that issue publicly traded debt securities. Credit ratings
21 are like the grades a student receives on his or her report
22 card - an A is better than a B letter grade - likewise a
23 AAA is better than a BBB level credit rating.

24
25 Credit ratings reflect the informed and independent views

1 of firms that study borrowers and market conditions and
2 impact the interest rates borrowers must pay when accessing
3 borrowed funds from both banks and capital markets. In
4 general, a higher credit rating means a lower credit spread
5 and a lower credit rating means a higher credit spread.

6
7 The credit spread is the charge added to the underlying
8 variable rate benchmark for overnight funds in the case of
9 short-term bank borrowing and U.S. treasury bonds in the
10 case of long-term debt offerings. Peoples invests capital
11 to serve customers and strong debt ratings will ensure that
12 Peoples will have adequate credit quality to raise the
13 capital necessary to meet these requirements.

14
15 **Q.** Why are strong ratings important considering the company's
16 future capital needs?

17
18 **A.** A strong credit rating is important because it affects a
19 company's cost of capital and access to the capital
20 markets. Credit ratings indicate the relative riskiness of
21 the company's debt securities. Therefore, credit ratings
22 impact the cost of borrowing money. All other factors being
23 equal (i.e., timing, markets, size, and terms of an
24 offering), the higher the credit rating, the lower the cost
25 of funds. Companies with lower credit ratings have greater

1 difficulty raising funds in any market, but especially in
2 times of economic uncertainty, credit crunches, or during
3 periods when large volumes of government and higher-grade
4 corporate debt are being issued.

5
6 Given the capital-intensive nature of the utility industry,
7 it is critical that utilities maintain strong credit
8 ratings sufficiently above the investment grade threshold
9 to retain uninterrupted access to capital. The impact of
10 being investment grade versus non-investment grade is
11 material. A company raising debt that has non-investment
12 grade ("speculative grade") credit ratings will be subject
13 to occasional lapses in availability of debt capital,
14 onerous debt covenants and higher borrowing costs. In
15 addition, companies with non-investment grade ratings are
16 generally unable to obtain unsecured commercial credit and
17 may have to provide collateral, prepayment, or letters of
18 credit for certain contractual agreements.

19
20 Given the high capital needs, obligation to serve existing
21 and new customers, and significant requirements for
22 unsecured commercial credit that gas utilities have, non-
23 investment grade ratings are unacceptable. Peoples'
24 current ratings should also be strong enough to buffer
25 against the costs of hurricane and other weather events.

1 Q. Can the financial credit market be foreclosed by unforeseen
2 events extraneous to the utility industry?

3
4 A. Yes. There have been times when financial credit markets
5 have been closed or challenged due to unforeseen events.
6 Market instability resulting from the sub-prime mortgage
7 problems affected liquidity in the entire financial sector
8 causing a financial recession, and there were periods of
9 time in 2008 and 2009 when the debt markets were
10 effectively closed to all but the highest rated borrowers.
11 This is a good example of how access to the marketplace
12 can be shut off for even creditworthy borrowers by
13 extraneous, unforeseen events, and it emphasizes why a
14 strong credit rating is essential to ongoing, unimpeded
15 access to the capital markets.

16
17 Q. How are credit ratings determined?

18
19 A. Generally, the processes the rating agencies follow to
20 determine ratings involves an assessment of both business
21 risk and financial risk. Business risk is typically
22 determined based on the combined assessment of industry
23 risk, country risk, and competitive position. Financial
24 risk is based on financial ratios covering cash
25 flow/leverage analysis. These two factors are combined to

1 arrive at an overall credit rating for a company. Business
2 risk and financial risk are more fully discussed and
3 described in the direct testimony of Peoples witness Dylan
4 D'Ascendis.

5
6 **Q.** How does regulation affect ratings?

7
8 **A.** The primary business risk the rating agencies focus on for
9 utilities is regulation, and each of the rating agencies
10 have their own views of the regulatory climate in which a
11 utility operates. The exact assessments of the rating
12 agencies may differ but the principles they rely upon for
13 their independent views of the regulatory regime are
14 similar. Essentially, the principles, or categories, that
15 shape the views of the rating agencies as they relate to
16 regulation are based upon the degree of transparency,
17 predictability, and stability of the regulatory
18 environment; timeliness of operating and capital cost
19 recovery; regulatory independence; and financial
20 stability.

21
22 According to the rating agencies, the maintenance of
23 constructive regulatory practices that support the
24 creditworthiness of the utilities is one of the most
25 critical issues rating agencies consider when deliberating

1 ratings. Utility regulation in Florida has historically
2 been supportive of maintaining the credit quality of
3 utilities within the state, and that has benefited
4 customers by allowing utilities to provide for their
5 customers' needs consistently and at a reasonable cost.
6 This has been one of the factors that has helped Florida
7 utilities maintain pace with the growth in the state, which
8 has been essential to economic development.

9
10 A key test of regulatory quality is the ability of
11 companies to earn a reasonable rate of return over time,
12 including through varying economic cycles, and to maintain
13 satisfactory financial ratios supported by good quality of
14 earnings and stability of cash flows. Regulated utilities
15 cannot materially improve or even maintain their financial
16 condition without regulatory support. Thus, the regulatory
17 climate has a large impact on the company, its customers,
18 and its investors.

19
20 **Q.** What have credit rating agencies recently said about the
21 utility industry?

22
23 **A.** Fitch currently has a neutral outlook on North American
24 utilities for 2025. The neutral outlook reflects moderation
25 in inflationary conditions and a continued subdued

1 commodity environment that eases near-term pressure on
2 customer bills. Fitch expects utility capital expenditures
3 to grow at a double-digit rate driven in part by
4 investments to make infrastructure more resilient and
5 growing energy demand. Last, they highlight rate case
6 outcomes will be key to watch with a balanced regulatory
7 framework being a key support for utility sector
8 creditworthiness.

9
10 **Q.** Please describe Peoples Gas System's current credit rating.

11
12 **A.** Peoples Gas System's senior unsecured long-term debt is
13 currently rated A by Fitch.

14
15 **Q.** When did this rating become effective?

16
17 **A.** The current rating for Peoples became effective on October
18 23, 2023. Prior to Peoples' last rate case, the Company
19 was not independently rated as it was a division of the
20 Tampa Electric Company. As part of the 2023 Transaction
21 discussed in its last rate case, Peoples became a
22 corporation and entered into its own short- and long-term
23 borrowing arrangements with unaffiliated, third-party
24 lenders. The assignment of an A rating by Fitch for the
25 Company's long-term debt facilitated Peoples' ability to

1 achieve a long-term debt financing result consistent with
2 the Company's forecast in the last petition for rates.
3 Peoples' inaugural debt offering raised \$925 million in
4 long-term debt at an average coupon of 5.64 percent.

5
6 **Q.** Why is it important for Peoples to maintain a strong credit
7 rating?

8
9 **A.** Peoples' access to capital markets and cost of financing,
10 including the applicability of restrictive financial
11 covenants, are influenced by the ratings of its securities.
12 Maintaining Peoples' current ratings is particularly
13 important for three reasons.

14
15 First, Peoples is making capital investments to serve
16 customers and strong debt ratings ensure Peoples has
17 adequate credit quality to raise the capital necessary to
18 meet these requirements.

19
20 Second, Peoples' current ratings provide a reasonable
21 degree of assurance that ratings will not slip below
22 investment grade in the event of a hurricane or other
23 significant event.

24
25 Third, strong credit ratings result in lower interest rates

1 when accessing capital. Lower interest rates keep the
2 revenue requirement lower, thus keeping customers' bills
3 lower.

4
5 **Q.** Are credit ratings impacted by equity ratio and return on
6 equity?

7
8 **A.** Yes. Rating agencies pay keen attention to equity ratio
9 and ROE when evaluating the company's financial integrity
10 and assigning credit ratings.

11
12 **C.** EQUITY RATIO

13 **Q.** What equity ratio and ROE does Peoples propose in this
14 proceeding?

15
16 **A.** The company's proposed financial equity ratio is 54.7
17 percent. Financial equity ratio refers to investor sources
18 of capital, for which the company is proposing 45.3 percent
19 debt and 54.7 percent common equity. This proposed 54.7
20 percent equity ratio is consistent with the ratio approved
21 by the Commission in Peoples' last general base rate
22 proceeding.

23
24 The company's proposed midpoint ROE is 11.1 percent with
25 an earnings range of plus or minus 100 basis points. Its

1 proposed midpoint ROE and range are fair and reasonable
2 and are supported in the prepared direct testimony of
3 Peoples witness D'Ascendis.

4
5 **Q.** Is Peoples' proposed equity ratio of 54.7 percent
6 reasonable and prudent for use in this proceeding?

7
8 **A.** Yes. Peoples' proposed equity ratio of 54.7 percent is
9 reasonable and prudent as it has a direct impact on the
10 level of cash flows and the percentage of debt giving rise
11 to the financial leverage in the capital structure, which
12 is a key determinant of financial integrity. Peoples'
13 proposed equity ratio is also consistent with the equity
14 ratio approved by the Commission in the company's last
15 three rate cases.

16
17 **Q.** How does the company's proposed equity ratio of 54.7
18 percent compare to the equity ratios approved by the
19 Commission for the gas operations of Florida Public
20 Utilities Company ("FPUC") and Florida City Gas?

21
22 **A.** In 2023, the Commission approved a 55.1 percent equity
23 ratio for FPUC and a 59.6 percent equity ratio for Florida
24 City Gas. Peoples' proposed equity ratio compares favorably
25 to these equity ratios.

1 **Q.** What equity infusions for 2025 and 2026 are necessary to
2 achieve the proposed 54.7 percent equity capital structure?

3
4 **A.** As discussed in the direct testimony of Peoples witness
5 Nichols, the 2025 and 2026 budgeted equity infusions are
6 \$118 million and \$159 million, respectively. These planned
7 equity infusions are based on the company's planned capital
8 structure needs, its planned capital expenditures and
9 business requirements, and a targeted equity ratio of 54.7
10 percent.

11
12 **Q.** Why should the Commission approve the company's proposed
13 54.7 percent equity ratio?

14
15 **A.** Utilities in North America, including Peoples, are
16 navigating increasing physical risks and capital
17 investment plans to continue providing safe and reliable
18 service to its customers. Coupled with the potential for
19 volatility in the capital markets, this warrants a stronger
20 balance sheet to deal with an uncertain macro environment.
21 A conservative financial profile, in the form of a
22 reasonable equity ratio, is consistent with the need to
23 accommodate these uncertainties and maintain the
24 continuous access to capital under reasonable terms that
25 is required to fund operations and necessary system

1 investment, even during times of adverse capital market
2 conditions. A downward change to the company's equity ratio
3 would be considered credit-negative by rating agencies.
4

5 **Q.** Please summarize the relationship of financial integrity
6 and the company's proposed capital structure.
7

8 **A.** Maintaining financial integrity, through a strong,
9 prudent, and responsible financial position, will allow
10 Peoples to attract capital on reasonable terms and continue
11 to provide a safe and reliable gas system for its
12 customers. Financial integrity helps ensure uninterrupted
13 access to capital markets to finance required
14 infrastructure investments as well as to manage unforeseen
15 events. It also keeps costs lower for customers given the
16 relationship of stronger credit ratings to lower debt
17 rates. Peoples' rate increase request, which includes the
18 continued appropriate levels of ROE and equity ratio, will
19 maintain the company's financial integrity and place
20 Peoples in an appropriate financial position to fund
21 capital costs for assets and continue providing its high
22 level of reliable service to its customers.
23

24 **D.** DEBT RATES

25 **Q.** Do the projected short- and long-term debt amounts and cost

1 rates reflect the equity ratio and financial integrity
2 discussed above?

3
4 **A.** Yes. The company's forecasted debt issuances in this case
5 were developed to maintain the equity ratio proposed in
6 this testimony. The company's forecasted debt cost rates
7 for the 2026 test year were developed with the expectation
8 that Peoples will be able to maintain its current level of
9 financial integrity through this rate proceeding.

10
11 **Q.** How did the company determine the short-term debt cost rate
12 for the 2026 projected test year?

13
14 **A.** The short-term debt cost rate of 4.24 percent is based on
15 the estimated cost of the company's credit facilities, the
16 rates for which are based on the Secured Overnight
17 Financing Rate plus credit spreads and program fees.

18
19 **Q.** How does the company's proposed 4.24 percent cost of short-
20 term debt compare with the cost of debt in the Peoples'
21 last rate case?

22
23 **A.** The 2026 test year cost rate of 4.24 percent is lower than
24 the 4.85 percent short-term cost of debt approved by the
25 Commission in the company's last rate case.

1 **Q.** How did the company determine the cost and amount of long-
2 term debt to be included in the capital structure?

3
4 **A.** The long-term debt cost rate of 5.64 percent, as shown on
5 MFR Schedule G-3, page 3, is based on existing long-term
6 debt issued in December 2023 and forecasted debt issuances
7 of \$125 million during 2025 and \$200 million in 2026 that
8 are shown on MFR Schedule G-3, page 8.

9
10 These forecasted debt issuances include: (i) \$125 million
11 of 10-year notes at 5.30 percent issued in June 2025, (ii)
12 \$75 million of 10-year notes at 5.20 percent in June 2026,
13 and (iii) \$125 million of 10-year notes at 5.10 percent in
14 November 2026. When developing the forecasted debt issuance
15 and cost rate, the company considered its targeted equity
16 ratio and assumed ongoing drawn amounts on the company's
17 credit facilities related to the company's normal course
18 of business and liquidity requirements.

19
20 The long-term cost of debt for these forecasted issuances
21 is based upon the underlying U.S. Treasury rates sourced
22 from Bloomberg plus the average forecasted credit spread
23 for a typical gas distribution company with an A credit
24 rating. The assumed debt issue costs are based on Peoples'
25 recent cost to issue debt in 2023.

1 **Q.** How does the company's proposed 5.64 percent cost of long-
2 term debt compare with the cost of debt in the Peoples'
3 last rate case?

4
5 **A.** The 2026 test year cost rate of 5.64 percent is equal to
6 the 5.64 percent long-term cost of debt approved by the
7 Commission in Docket No. 20240028-GU related to the Long-
8 Term Debt Cost Rate True-Up Mechanism for the 2024 test
9 year.

10
11 **Q.** Are these short-term and long-term debt rates reasonable?

12
13 **A.** Yes. They reflect the company's financial plans, its
14 current credit ratings, and market conditions expected at
15 the time.

16
17 **III. 2027 FINANCIAL OUTLOOK AND REGULATORY OPTIONS**

18 **A.** FUTURE FINANCIAL PROFILE

19 **Q.** How do you expect the company's financial profile to change
20 in the subsequent year after the 2026 test year?

21
22 **A.** The company expects the ROE achieved in 2027 to be
23 approximately 200 basis points lower than 2026 ROE. With
24 that projected decrease, the company expects in 2027 to
25 earn below the bottom of the ROE range the company is

1 proposing in this proceeding.

2
3 **Q.** What will cause this reduction in achieved ROE in the year
4 subsequent to the test year?

5
6 **A.** There are two primary causes.

7
8 The first is the way in which revenue requirements are
9 determined. The rate base for a test year revenue
10 requirement calculation is a 13-month average. Since the
11 company invests in capital and places assets in service
12 throughout the test year, the full value of assets included
13 in the test year does not manifest itself in a 13-month
14 average until the following year. Correspondingly, the
15 depreciation expense and property tax expense in a test
16 year does not represent the full year expense that will
17 exist the following year, given the fact that these expenses
18 occur at or after assets are placed in service.

19
20 The second cause of ROE degradation is the capital
21 investments that will be made in the subsequent year.
22 Throughout 2027, the company will continue to prudently
23 invest in assets that enhance the reliability, resilience
24 and efficiency of our distribution system and meet the
25 strong demand for delivering safe and affordable natural

1 gas to our growing number of customers. As the equity
2 support of growing rate base moves upward, there is pressure
3 on ROE. The downward movement in ROE is further impacted by
4 the increasing depreciation expense and property tax for
5 the assets added in the subsequent year. If the pace of
6 base revenue growth does not match the pace of these
7 factors, then subsequent year ROE degrades.

8
9 **Q.** Did Peoples experience an ROE reduction after the 2024 test
10 year in your last rate case similar to the 2027 ROE
11 degradation that you discuss above?

12
13 **A.** Yes. The company's 2025 budget reflects a 251 basis point
14 ROE reduction relative to the 2024 historical base year. As
15 discussed in the testimony of Peoples witness Nichols, the
16 2024 Earnings Surveillance Report reflected an actual ROE
17 of 10.37 percent. The projected 2025 ROE is 7.86 percent,
18 which reflects a 251 basis point decrease from 2024 to 2025.

19
20 **Q.** What are the primary reasons for the ROE degradation in
21 2025 from 2024?

22
23 **A.** The first is the impact of the revenue requirement
24 calculation method. The rate base for the 2024 test year
25 revenue requirement calculation was a 13-month average.

However, 2025 13-month average rate base reflects the full value of the test year assets – which is reflected in the 2024 year end rate base amount. 2024 year end net utility plant included in the Commission approved rate base was \$2,464 million, which was almost \$79 million higher than the Commission approved 2024 13-month average amount. Additionally, the annualized depreciation and property tax expenses in 2025 were higher than the 2024 test year amounts by \$4.1 million and \$3.6 million, respectively.

The second cause for ROE degradation is the continued investment in the company's system in 2025. This is illustrated in this summary of the causes of the company's 2025 revenue deficiency relative to the 2024 test year.

Higher Capital Revenue Requirements	\$30.9 million
Increased O&M Expense	\$5.0 million
Change in Weighted Average Cost of Capital	\$3.9 million
Taxes	\$5.8 million
Growth in Revenue	<u>(\$3.5)million</u>
Total Revenue Requirement Deficiency	<u>\$42.1 million</u>

The \$30.9 million in increased capital revenue requirements reflects three components: (1) rate base return using the 7.05 percent cost of capital approved by the Commission;

1 (2) depreciation expense; and (3) property taxes. These
2 components of the \$30.9 million total are \$19.1 million of
3 rate base return, \$8.7 million of higher depreciation, and
4 \$3.1 million of higher property taxes.

5
6 **Q.** In summary, does the company's 2027 financial outlook
7 reflect negative ROE impacts similar to the impacts that
8 occurred in 2025?

9
10 **A.** Yes. With the impact of the annualized revenue requirements
11 related to the year-end value of 2026 rate base plus
12 continued capital investments in 2027, the company expects
13 the amount of ROE degradation in 2027 from 2026 to be
14 similar to the level of degradation expected in 2025 from
15 2024. Thus, Peoples expects to earn below the bottom of the
16 ROE range the company is proposing in this proceeding in
17 2027.

18
19 **Q.** What are the regulatory options to address a projected
20 decline in the subsequent year ROE below the bottom of the
21 range?

22
23 **A.** One option is to request successive base rate increases in
24 both years 2026 and 2027. The company does not prefer this
25 option, because general base rate proceedings are costly

1 and time consuming for all the parties involved in the
2 proceedings.

3
4 Another option would be to attempt to extend the life of
5 the base rates approved in this proceeding by mitigating
6 the annualized cost of 2026 year end rate base contributing
7 to the ROE degradation in 2027.

8
9 **B.** 2027 SUBSEQUENT YEAR ADJUSTMENT

10 **Q.** Does the company have a proposal for mitigating the
11 annualized cost of 2026 year-end rate base contributing to
12 the ROE degradation in 2027?

13
14 **A.** Yes. The company proposes a year-end 2026 Net Utility Plant
15 based subsequent year adjustment ("2027 SYA") to base rates
16 effective in the first billing cycle of 2027. The proposed
17 2027 SYA would reflect subsequent year incremental revenue
18 requirements that result from annualizing the incremental
19 cost related to assets associated with the Commission-
20 approved year end 2026 Net Utility Plant in excess of the
21 2026 test year 13-month average Net Utility Plant.

22
23 **Q.** Please describe the components of the company's proposed
24 2027 SYA.

1 **A.** The company's proposed 2027 SYA revenue requirement amount
2 includes the following three components:

3 (1) the additional return using Commission approved cost
4 of capital on the difference between 2026 year-end Net
5 Utility Plant and the 2026 13-month average Net
6 Utility Plant amount;

7 (2) the additional depreciation expense based on 2026
8 year-end Plant In Service balance as compared to the
9 2026 test year depreciation expense that is calculated
10 using month end balances during the 2026 test year;
11 and

12 (3) the additional property tax expense in 2027 determined
13 using December year-end 2026 Net Utility Plant and
14 2026 NOI as compared to the 2026 test year Commission
15 approved property tax expense that is determined using
16 December 2025 Net Utility Plant and 2025 NOI.

17
18 The calculation of the company's proposed 2027 SYA of
19 \$26,709,000 is shown on Document No. 2 of my exhibit.
20 Without this increase, the company anticipates that the full
21 annualized cost of its 2026 rate base additions and the
22 associated annualized expenses will cause Peoples to
23 experience a decline in its earned rate of return on equity
24 in 2027 of over 100 basis points.
25

1 **Q.** Should the return portion of the 2027 SYA reflect an
2 annualization of accumulated depreciation related to
3 projects going into service by December 31, 2026?

4
5 **A.** Yes. The company annualized accumulated depreciation in the
6 SYA calculation to reduce the incremental Net Utility Plant
7 by the average amount of incremental depreciation expense
8 shown on line 16, or \$3.267 million. This is shown in the
9 calculation of the proposed 2027 SYA Document No. 2, page
10 1 to my exhibit, line 4.

11
12 **Q.** Should the Commission approve the company's proposed SYA?

13
14 **A.** Yes. The Commission should approve the proposed 2027 SYA as
15 it addresses the additional annualized costs of capital
16 investments made during the 2026 test year not reflected in
17 the Commission approved 2026 revenue requirements, provides
18 Peoples the opportunity to earn adequate returns on its
19 invested capital and maintain its financial integrity in
20 the subsequent year, and mitigates the need for costly
21 successive rate cases.

22
23 **Q.** What rate base and related expense amounts should be
24 recovered through the company's proposed 2027 SYA?

1 **A.** The Commission should approve \$149,043,000 of rate base,
2 \$6,534,000 of depreciation expense, and \$6,080,000 of
3 property tax expense to be recovered through proposed 2027
4 SYA.

5
6 This incremental rate base amount reflects the December 31,
7 2026 Net Utility Plant in excess of the 2026 test year
8 average Net Utility Plant and adjusted for the annualized
9 accumulated depreciation, and is shown on page 1 of Document
10 No. 2 to my exhibit, line 5,

11
12 The incremental depreciation expense included in the SYA
13 calculation is the annualized December 31, 2026 based Plant
14 In Service depreciation expense in excess of the 2026 test
15 year depreciation expense and shown on page 1 of Document
16 No. 2 to my exhibit, line 16.

17
18 The incremental property tax expense included in the SYA
19 calculation is the estimated 2027 assessment, which is
20 determined using the December 31, 2026 Net Utility Plant
21 and 2026 NOI, in excess of the 2026 test year property tax
22 expense, and is shown on page 1 of Document No. 2 to my
23 exhibit, line 19.

1 **Q.** What annual amount of return on rate base should be approved
2 for recovery through the 2027 SYA?

3
4 **A.** The Commission should approve \$3,350,000 and \$10,745,000
5 for the debt and equity components of the return on rate
6 base, respectively, which totals \$14,095,000. These amounts
7 are shown on lines 9 and 13 of Document No. 2 of my exhibit.

8
9 The 2.23 percent rate of return for the debt component is
10 based on the sum of the weighted average cost of long-term
11 debt, short-term debt, and customer deposits as shown on
12 MFR Schedule G-3, page 2. The 5.34 percent rate of return
13 for equity is the weighted cost of equity shown on MFR
14 Schedule G-3, page 2. The calculation of the NOI multipliers
15 used for determining the debt and equity return components
16 is shown on page 4 of Document No. 2 of my exhibit.

17
18 **Q.** Should the calculation of the 2027 SYA reflect additional
19 revenues due to customer growth?

20
21 **A.** No. The inclusion of additional revenues due to customer
22 growth would reduce the intended effects of the 2027 SYA
23 and may cause the need for additional base rate relief in
24 2027 even if the reduced SYA is granted.

1 Q. What annual amount of incremental revenues should be
2 approved for recovery through the 2027 SYA?

3
4 A. The Commission should approve \$26,709,076 of annual
5 incremental revenues for recovery through the 2027 SYA as
6 shown in Document No. 2, page 1 to my exhibit.

7
8 Q. When should the 2027 SYA become effective?

9
10 A. The 2027 SYA should be effective with the first billing
11 cycle in January 2027.

12
13 Q. If the Commission approves a 2027 SYA, when should the
14 company submit proposed rates and tariffs to implement the
15 SYA?

16
17 A. If the Commission approves a 2027 SYA, the company proposes
18 to file proposed 2027 SYA rates and tariffs in September
19 2026 so that they will reflect the then-current billing
20 determinants and the approved 2027 SYA revenue increase.
21 This will allow the Commission to approve the tariffs
22 implementing the 2027 SYA in time to become effective with
23 the first billing cycle in January 2027.

24
25 **IV. AFFILIATE TRANSACTIONS**

1 A. GENERAL

2 Q. Please describe how Peoples fits into the organizational
3 structure of Emera.

4
5 A. Peoples is a wholly owned subsidiary of TECO Gas Operations,
6 Inc., which is a subsidiary of TECO Holdings, Inc., which
7 is a wholly owned subsidiary of Emera U.S. Holdings, Inc.,
8 which is a wholly owned subsidiary of Emera. A diagram
9 showing this structure is included in Document No. 3 of the
10 exhibit of Peoples witness Helen Wesley (HW-1).

11
12 Q. With which of its affiliates does Peoples engage in
13 affiliate transactions?

14
15 A. Peoples has affiliate transactions with Emera, TECO
16 Holdings, Inc., Tampa Electric, TECO Energy, Inc. ("TECO"),
17 New Mexico Gas Company, Emera Energy Services Inc., Emera
18 Caribbean Inc., SeaCoast Gas Transmission, LLC
19 ("SeaCoast"), and TECO Partners, Inc. ("TPI").

20
21 These entities are listed on pages 36a and 36b of the
22 DIVERSIFICATION ACTIVITY section of the company's FPSC
23 Annual Report. These pages show sales and purchases to and
24 from affiliates, types of services and/or products
25 involved, the Peoples FERC account numbers where the

1 transactions are recorded, and the related annual dollar
2 amounts. These two pages from the company's December 31,
3 2024 FPSC Annual Report are included as Document No. 3 of
4 my exhibit.

5
6 **Q.** What do you mean by the term "affiliate transaction?"

7
8 **A.** An affiliate transaction generally means any transaction
9 in which Peoples and an affiliate are each participants
10 but does not include transactions related to filing a
11 consolidated tax return.

12
13 **Q.** Please describe the types of activities that result in
14 affiliate transactions at Peoples.

15
16 **A.** Peoples engages in affiliate transactions when Peoples
17 performs work on behalf of Emera or one of Emera's
18 affiliate companies and when work is performed on Peoples'
19 behalf by Emera or one of Emera's affiliate companies.

20
21 When Peoples provides products or services to an affiliate,
22 Peoples charges the affiliate. When Peoples receives
23 products or services from an affiliate, the affiliate
24 charges Peoples.

1 Even though Rule 25-6.1351, F.A.C. does not specifically
2 apply to gas companies like Peoples, the company accounts
3 for affiliate transactions by following this affiliate
4 transaction rule as guidance.

5
6 **Q.** What types of products and services are exchanged between
7 Peoples and affiliate companies?

8
9 **A.** Peoples sells natural gas to affiliate companies and
10 provides services such as real property subleasing and
11 labor services, including the processing of municipal
12 public service taxes and franchise fees. Peoples purchases
13 natural gas from affiliate companies and purchases services
14 such as marketing, information technology, tax, payroll,
15 and accounts payable.

16
17 **Q.** Does the company report affiliate transactions to the FPSC
18 in any way other than the Diversification Activity report
19 described above?

20
21 **A.** Yes. When Peoples files a request for a general base rate
22 increase, it files a set of MFR Schedules, which include
23 Schedules C-31, C-32, and G-2 pages 19f and 19g. These
24 schedules were included in the MFR Schedules filed with
25 the Commission in this case on March 31, 2025, specifically

1 the volumes labeled PGSI-1 and PGSI-2. I sponsor these MFR
2 Schedules.

3

4 **Q.** How does the company record the source data for the
5 reporting described above in its accounting records?

6

7 **A.** The company records affiliate transactions separately in
8 its general ledger. All affiliate transactions result in
9 either a receivable from an affiliate company (if Peoples
10 sells a product or service) or a payable to an affiliate
11 company (if Peoples purchases a product or service). In
12 accordance with the FERC Uniform System of Accounts, all
13 affiliate receivables are posted to Account 146 and all
14 affiliate payables are posted to Account 234. This ensures
15 an accurate and complete recording of all transactions with
16 affiliate companies and facilitates comprehensive
17 reporting of all affiliate transactions.

18

19 **Q.** How do Peoples and its affiliates charge each other for
20 products purchased from or sold to an affiliate?

21

22 **A.** The charges for product sales and purchases are based on
23 the contract price of the product. Contract prices are
24 determined and documented following the guidelines
25 provided in Rule 25-6.1351.

1 Q. How do Peoples and its affiliates charge each other for
2 services received from or rendered to an affiliate?

3
4 A. There are four possible charging approaches:

5 (1) assigned direct charges that are labor costs sent to
6 an affiliate based on specific hours worked by
7 individuals to provide a service to an affiliate as
8 measured in a time-tracking system;

9 (2) attributed direct charges that are costs sent to an
10 affiliate based on a percentage of work in a
11 functional area that is attributable to an affiliate;

12 (3) assessed charges that use specified statistics like
13 square feet or employee count to assess costs to an
14 affiliate; and

15 (4) allocated charges based on versions of the Modified
16 Massachusetts Method ("MMM") for allocating corporate
17 overhead costs.

18
19 B. CHARGES BY TAMPA ELECTRIC TO PEOPLES

20 Q. Please explain and give examples of how Tampa Electric uses
21 these charging approaches to charge costs to Peoples.

22
23 A. (1) Assigned Direct Charges. When an employee of Tampa
24 Electric works on a specific project to Peoples, his
25 or her fully loaded labor hourly rate is direct

1 charged to Peoples based on specific hours as captured
2 in Tampa Electric's time entry system. An example
3 would be a Tampa Electric engineer who helps Peoples
4 with a specific project, tracks his or her time spent
5 on the project, and charges it directly to a Peoples
6 work order. In most cases, Peoples pays directly for
7 the materials and supplies and non-affiliate outside
8 service costs for specific projects like this.

9 (2) Attributed Direct Charges. Tampa Electric provides a
10 suite of Customer Experience services to Peoples on a
11 shared basis. The costs of the Customer Experience
12 functions (including labor, materials & supplies, and
13 outside service providers) is attributed to Peoples
14 based on the relative number of customers served by
15 Tampa Electric and Peoples Gas. Peoples witness
16 Rebecca Washington discusses this cost distribution
17 approach, how the distribution percentage has changed
18 as Peoples has grown, and the impact on Peoples'
19 customer experience O&M expenses in her direct
20 testimony. Peoples' accounting system reflects the
21 Customer Experience costs attributed to Peoples as
22 direct charges.

23 (3) Assessed charges. Some shared service costs incurred
24 by Tampa Electric are assessed to Peoples based on
25 metrics that reflect cost-causation such as employee

count or square footage. Examples of costs assessed to Peoples on this basis include IT, Benefits Administration, Employee Relations, Administrative Services, Emergency Management, Accounts Payable, Claims, Procurement, Payroll, and Document Services. The metrics used for these assessments are described in the TECO Holdings, Inc. cost allocation manual.

(4) Allocated Charges. Tampa Electric allocates other shared costs to Peoples using a variation of the MMM, which uses a combination of one third each total operating revenues, total operating assets, and net income. Tampa Electric allocates the costs associated with groups such as Legal, Finance, and Federal Affairs to Peoples using this MMM method.

Q. What is the total of assessed charges received from Tampa Electric in the 2024 historical base year and the 2026 projected test year?

A. The total amount of assessed charges from Tampa Electric included in FERC Account 930.2 is \$9.9 million and \$11.0 million in 2024 and 2026, respectively. These amounts are shown on MFR Schedule G-2, page 19b. Further details showing the Tampa Electric area sending the cost and the respective basis for distributing the costs to Peoples are

1 shown on MFR Schedule G-2, page 19f.

2
3 **Q.** Why has the total amount of assessed charges for shared
4 services from Tampa Electric included in FERC Account 930.2
5 increased from 2024 to 2026?

6
7 **A.** The change in the amount of shared service assessed charges
8 from Tampa Electric from 2024 to 2026 primarily reflects
9 (i) inflationary pressures causing overall cost increases
10 at Tampa Electric to provide the related shared services
11 (primarily in Information Technology) and (ii) an increase
12 in the relative number of Peoples' employees and
13 procurement activity causing the company to receive a
14 higher percentage of costs starting in 2025. These are
15 offset by a \$140,000 reduction in 2026 Contract
16 Administration services from Tampa Electric that are being
17 moved to Peoples. Peoples witness Richard discusses changes
18 in the company's Supply Chain team in his direct testimony.

19
20 Peoples prepared its 2026 forecasted amounts for shared
21 services by escalating (trending) 2025 budgeted amounts
22 using the trending factors discussed by Peoples witness
23 Nichols in his direct testimony.

24
25 Peoples' portion of overall assessed charges is assumed to

1 increase from 19.39 percent in 2024 to 21.05 percent in
2 2025 due to increased employee count and procurement
3 activity and will decrease to 19.03 percent in 2026
4 primarily due to the Contract Administration services being
5 moved to Peoples.

6
7 The projected amount of 2026 test year shared service
8 assessed charges from Tampa Electric to Peoples was
9 prepared using consistent methodologies that have been
10 reviewed by the Commission in prior rate cases and is
11 reasonable.

12
13 **Q.** Does Peoples receive any other charges from Tampa Electric?
14

15 **A.** Yes. Tampa Electric charges Peoples a fee primarily related
16 to the depreciation expense for usage of shared software
17 systems. The charge is reflected in the accounting records
18 of Peoples as an O&M "asset-usage fee".
19

20 The largest asset-usage fee received from Tampa Electric
21 is the company's shared SAP customer relationship
22 management and billing system ("CRMB"). Although the CRMB
23 system is shared with Tampa Electric, the cost of the asset
24 is recorded on Tampa Electric's books and Peoples is
25 charged an asset-usage fee for using the system to manage

1 Peoples' customer accounts. Peoples' portion of the shared
2 CRMB cost is based on the approximate ratio of Peoples
3 customers to the total Peoples and Tampa Electric combined
4 customers.

5
6 The asset-usage fee related to the CRMB system is charged
7 to FERC Account 903. The CRMB asset-usage fee is increasing
8 from \$2.188 million in 2024 to \$2.611 million in 2026 as
9 shown on MFR Schedule G-2, page 19b. The increase is
10 primarily related to continued investments in CRMB and an
11 increased allocation of CRMB costs due to the relative
12 increase in Peoples customer count, which is further
13 discussed in the testimony of Peoples witness Washington.

14
15 Peoples records asset-usage fees related to shared systems
16 other than CRMB in A&G FERC Account 930.2 and they are
17 projected to increase from \$1.413 million in 2024 to \$2.306
18 million in 2026 as shown on MFR Schedule G-2, page 19b.
19 This increase is primarily caused by new investments in
20 the shared systems, which is further discussed in the
21 testimony of Peoples witness Richard. The company's 2026
22 test year asset usage fees reflect a consistent allocation
23 methodology that has been reviewed by the Commission in
24 prior rate cases and is reasonable.

25

1 **Q.** How are Customer Experience related costs distributed
2 between Tampa Electric and Peoples, and when was the
3 distribution last updated?

4
5 **A.** As discussed earlier, Tampa Electric incurs shared O&M
6 expenses associated with Customer Experience activities
7 and CRMB system costs and distributes a portion of those
8 costs to Peoples based on customer counts. Following a
9 review performed in 2024 of the distribution, Tampa
10 Electric and Peoples updated the distribution to reflect
11 the growth in Peoples' customer count. As a result, Peoples
12 will be distributed more Customer Experience O&M costs
13 starting in 2025. Peoples witness Washington discusses
14 these changes in her direct testimony.

15
16 **C.** CHARGES BY EMERA TO PEOPLES

17 **Q.** Please explain and give examples of how Emera uses the
18 charging approaches you previously described to charge
19 costs to Peoples.

20
21 **A.** (1) Direct Charges. Sometimes an employee of Emera works
22 full-time for Peoples. The labor and related costs
23 for these employees are direct charged by Emera to
24 Peoples and is recorded by Peoples in the appropriate
25 FERC account based on the functions the team member

1 performs.

2 (2) Assessed Charges. Some costs incurred by Emera are
3 assessed to Peoples based on metrics that reflect
4 cost-causation such as employee count or reporting
5 issuers. Examples of costs assessed to Peoples on this
6 basis include the costs associated with Audit
7 Services, the Emera Board of Directors, Safety,
8 Emera's Office of Chief Data Officer, Human Resources,
9 and Emera's Ethics, Legal, and Investor Relations
10 activities.

11 (3) Allocated Charges. Emera allocates other shared costs
12 to Peoples using a variation of the MMM, which uses a
13 combination of one third each total revenues, adjusted
14 net income, and net operating assets which excludes
15 cash and cash equivalents and goodwill/acquisition
16 adjustments. Emera allocates executive compensation
17 to Peoples using this approach.

18

19 Costs allocated to Peoples from Emera for support services
20 are included in A&G FERC Account 930.2 and are made
21 pursuant to Nova Scotia Power's Cost Allocation Manual that
22 is under the jurisdiction of the Nova Scotia Utility and
23 Review Board, which monitors Nova Scotia Power, Inc. for
24 compliance.

25

Q. What is the total of assessed and allocated charges received from Emera in the 2024 historical base year and the 2026 projected test year?

A. The total amount of assessed and allocated charges from Emera included in FERC Account 930.2 is \$2.825 million and \$3.599 million in 2024 and 2026, respectively. These amounts are shown on MFR Schedule G-2, page 19b. Further details showing the Emera area sending the cost and the respective basis for distributing the costs to Peoples are shown on MFR Schedule G-2, page 19g.

D. CHARGES BY PEOPLES TO AFFILIATES

Q. Please explain and give examples of how Peoples uses the charging approaches you previously described to charge costs to other affiliates.

A. (1) Direct Charges. When employees of Peoples work on a specific project for an affiliate, their labor is direct charged to the affiliate based on specific hours as captured in Peoples' time entry system. Examples of this type of charge would be work done by a Peoples engineer on a project for SeaCoast or work done by a Peoples operations employee inspecting a SeaCoast pipeline.

1 (2) Assessed charges. Some costs incurred by Peoples are
2 assessed to other affiliates based on metrics that
3 reflect cost-causation such as employee count or
4 square footage. For example, Peoples assesses TPI for
5 the portion of Peoples' office used by TPI on a square
6 foot basis.

7 (3) Allocated Charges. Peoples allocates other shared
8 costs to other affiliates using a variation of the
9 MMM, which uses a combination of one third each net
10 revenues, payroll and benefit costs, and plant in
11 service. Peoples charges a portion of its corporate
12 overhead A&G expenses to its non-utility affiliates,
13 SeaCoast and TPI, in this manner.

14
15 **Q.** Did the company perform a comprehensive procedural review
16 and associated cost study of the direct and indirect cost
17 of providing resources to SeaCoast as directed in Order
18 No. PSC-2023-0388-FOF-GU?

19
20 **A.** Yes. In 2024, the company performed a comprehensive
21 procedural revenue ("CPR") and associated cost study of
22 the direct and indirect cost being charged to SeaCoast.
23 The CPR summary document is included in my exhibit as
24 Document No. 4.

25

1 Q. Please summarize the company's conclusions from the CPR
2 regarding its processes of attributing costs to SeaCoast
3 from Peoples.

4
5 A. After adjusting its payroll and benefits factors included
6 in Peoples' MMM calculations, the company concluded that
7 its methods for assigning costs to SeaCoast are reasonable
8 and appropriately apply the cost allocation principles
9 outlined in the National Association of Regulatory Utility
10 Commissioners' "Guidelines for Cost Allocations and
11 Affiliate Transactions".

12
13 As noted on MFR Schedule C-6, the net amount of actual 2024
14 expenses subject to the MMM allocation to SeaCoast and TPI
15 was \$53.9 million, which in the last case for base year
16 2022 was \$34.7 million (see MFR Schedule C-6, Docket No.
17 20230023-GU). As a result of the CPR, in 2024 the company
18 has added several more departments' costs in determining
19 the amount to be allocated to SeaCoast and TPI. Charging
20 SeaCoast directly for labor services when services are
21 specifically provided to SeaCoast is appropriate. For
22 Peoples' individual team members that are routinely on
23 standby to support SeaCoast activity, their time is
24 appropriately being direct charged to SeaCoast through
25 their individual payroll Standard Labor Distribution. For

1 overhead and A&G departments that indirectly support
2 SeaCoast, costs are reasonably allocated using the MMM
3 calculation discussed above that was adjusted in 2024 to
4 appropriately reflect that SeaCoast did not have any
5 employees. Therefore, the costs assigned and allocated to
6 SeaCoast from Peoples in the 2024 historical year are
7 reasonable and appropriate.

8
9 **Q.** Are there any other changes to how costs will be attributed
10 to affiliates in 2026?

11
12 **A.** Yes. Prior to 2025, Tampa Electric charged rent directly
13 to TPI, and SeaCoast received an allocation of facility
14 costs through Peoples' MMM allocation process. Starting in
15 Summer 2025, the company will own its share of a new
16 corporate headquarters building and SeaCoast and TPI will
17 be charged rent directly from Peoples. For the 2026 Budget,
18 Peoples is reflecting \$1,073,707 of rent revenue from
19 affiliates. The 2026 rent revenue reflects Peoples' costs,
20 including depreciation expense and return requirements for
21 the new building, that have been allocated to SeaCoast
22 using the MMM allocation factor and to TPI based on team
23 members working at the Corporate Headquarters.

24
25 **Q.** What amount of costs did Peoples charge or allocate to

1 SeaCoast during the 2024 historical base year?

2
3 **A.** The actual labor, benefits, and payroll tax costs directly
4 charged or allocated to SeaCoast through a standard labor
5 distribution in 2024 was \$1,302,147. The actual costs
6 allocated to SeaCoast through the MMM in 2024 was
7 \$2,407,000. These amounts are higher than the respective
8 projected 2024 test year amounts of \$1,114,451 and
9 \$1,792,911 that were included in the prior case Rebuttal
10 Testimony of witness Rachel B. Parsons filed on July 20,
11 2023, and the MMMM allocation to SeaCoast approved by the
12 Commission in Order No. PSC-2023-0388-FOF-GU. As stated
13 previously, the addition of more departments' costs in
14 determining the MMM allocation was a major cause of the
15 increase and was a conclusion made from the CPR.

16
17 **Q.** What amount of costs does Peoples expect to charge or
18 allocate to SeaCoast for the 2026 test year?

19
20 **A.** In the 2026 Budget, the labor, benefits, and payroll tax
21 costs directly charged or allocated to SeaCoast through a
22 standard labor distribution is \$2,321,444, and costs
23 allocated to SeaCoast through the MMM is \$3,062,916.

24
25 **E.** AFFILIATE TRANSACTION CONCLUSION

1 **Q.** What accounting or business policies and procedures are in
2 place to ensure that the costs charged, assessed and
3 allocated to and from Peoples and affiliates for the 2026
4 test year are reasonable?

5
6 **A.** There are several.

7
8 The company uses intercompany service agreements to reflect
9 the work being done on behalf of an affiliate. The company
10 reviews these agreements annually and updates them as
11 needed.

12
13 The company uses cost allocation manuals that have been
14 reviewed in rate proceedings before the FPSC.

15
16 Most of the affiliates charging costs to Peoples operate
17 in a regulated environment and are subject to expense
18 review, which provides additional comfort that the costs
19 charged by affiliates to Peoples are reasonable.

20 Emera follows the cost allocation manual used by its
21 subsidiary Nova Scotia Power, which is reviewed annually
22 by Nova Scotia Power's regulator.

23
24 Peoples reviews the dollar amounts charged to it each month
25 by affiliates (using any of the four methods) for changes

1 in amounts, changes in charging metrics, variances from
2 prior months, variances from prior year periods, and
3 variances from budgeted amounts.

4
5 These business practices and accounting controls focus
6 considerable attention on affiliate transactions and
7 promote the reasonableness of the related affiliate
8 transaction amounts.

9
10 **Q.** Are the costs direct charged, assessed and allocated to
11 and from Peoples and affiliates as reflected in the
12 company's 2026 test year reasonable?

13
14 **A.** Yes. Peoples and its affiliates have controls and processes
15 in place to ensure that the costs they incur and charge to
16 affiliates are reasonable. Peoples and its affiliates use
17 reasonable methods to account for affiliate transactions
18 and to ensure that the costs charged, assessed and
19 allocated to and from each are reasonable.

20
21 **Q.** What amount of assessed and allocated charges to and from
22 affiliates should be approved for the 2026 test year?

23
24 **A.** The Commission should approve \$10,952,154 of Assessed
25 Charges, \$4,850,818 of MMM Allocated Charges, \$2,306,570

1 of non-CRMB asset-usage fees, and \$2,611,432 of CRMB asset-
2 usage fees for the 2026 test year received from Tampa
3 Electric as shown on MFR Schedule G-2, page 19b. The
4 Commission should approve \$3,599,211 of assessed and
5 allocated charges from Emera as shown on MFR Schedule G-2,
6 page 19b. The Commission should also approve \$3,707,041 of
7 total MMM allocated charges sent to SeaCoast (\$3,062,916)
8 and TPI (\$644,125) for the 2026 test year as shown on MFR
9 Schedule G-2, page 19b.

10
11 **V. SUMMARY**

12 **Q.** Please summarize your direct testimony.

13
14 **A.** My direct testimony describes how Peoples' financial
15 profile has changed since its last rate case, including
16 the growth in plant in service and the corresponding growth
17 in operating expenses. I discuss the importance of
18 financial integrity and its interrelationships with equity
19 ratio and the cost of debt. I also propose an SYA for 2027,
20 given the financial outlook of the company. Finally, I
21 discuss the affiliate transactions reflected in the
22 company's filing and how the charges for them are
23 determined.

24
25 Since its last rate case, Peoples has continued to invest

1 in the resilience and reliability of its gas distribution
2 system and to support the growing demand for natural gas
3 in the state. Its customer-focused changes have also
4 transformed the company's financial profile. It is
5 important to maintain the financial integrity of the
6 company to access capital markets and achieve cost
7 efficiency while providing exceptional customer service
8 and meeting the growing and changing energy needs of
9 Florida.

10
11 **Q.** Does this conclude your direct testimony?

12
13 **A.** Yes, it does.

WITNESS: D'ASCENDIS

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

PREPARED DIRECT TESTIMONY

OF

DYLAN D'ASCENDIS

ON BEHALF OF PEOPLES GAS SYSTEM, INC.

I. INTRODUCTION

Q. Please state your name, address, occupation, and employer.

A. My name is Dylan D'Ascendis. My business address is 1820 Chapel Avenue W., Suite 300, Cherry Hill, NJ 08003. I am employed by ScottMadden, Inc. as a Partner.

Q. Please provide a brief outline of your educational background and relevant business experience.

A. I am a graduate of the University of Pennsylvania, where I received a Bachelor of Arts degree in Economic History. I also received a Master of Business Administration with high honors and concentrations in Finance and International Business from Rutgers University.

I have offered expert testimony on behalf of investor-owned utilities before more than 40 state regulatory commissions in the United States, the Federal Energy Regulatory Commission,

1 the Alberta Utility Commission, an American Arbitration
2 Association panel, and the Superior Court of Rhode Island on
3 issues including, but not limited to, common equity cost rate,
4 rate of return, valuation, capital structure, class cost of
5 service, and rate design.

6
7 On behalf of the American Gas Association ("AGA"), I calculate
8 the AGA Gas Index, which serves as the benchmark against which
9 the performance of the American Gas Index Fund ("AGIF") is
10 measured on a monthly basis. The AGA Gas Index and AGIF are
11 a market capitalization weighted index and mutual fund,
12 respectively, comprised of the common stocks of the publicly
13 traded corporate members of the AGA.

14
15 I am a member of the Society of Utility and Regulatory
16 Financial Analysts ("SURFA"). In 2011, I was awarded the
17 professional designation "Certified Rate of Return Analyst"
18 by SURFA, which is based on education, experience, and the
19 successful completion of a comprehensive written examination.

20
21 I am also a member of the National Association of Certified
22 Valuation Analysts ("NACVA") and was awarded the professional
23 designation "Certified Valuation Analyst" by the NACVA in
24 2015.

1 The details of my educational background and expert witness
2 appearances are provided in Document No. 12 to my direct
3 testimony.

4
5 **Q.** What is the purpose of your prepared direct testimony in this
6 proceeding?

7
8 **A.** The purpose of my direct testimony is to present evidence,
9 provide the Florida Public Service Commission ("Commission")
10 with a recommendation regarding Peoples Gas System, Inc.'s
11 ("Peoples" or the "company") return on common equity ("ROE")
12 for its natural gas operations, and to provide an assessment
13 of the capital structure to be used for ratemaking purposes,
14 as proposed in the direct testimony of Peoples witness Andrew
15 Nichols.

16
17 **Q.** Did you prepare any exhibits in support of your prepared
18 direct testimony?

19
20 **A.** Yes. Exhibit No. DD-1 was prepared by me or under my
21 direction and supervision. My analyses and conclusions are
22 supported by the data presented in Document Nos. 1 through 12
23 of my exhibit, entitled:

24

24 **II. SUMMARY**

25 **Q.** What is your recommended common equity cost rate?

1 **A.** I recommend that the Commission authorize Peoples the
2 opportunity to earn an ROE of 11.10 percent on its
3 jurisdictional rate base, based on its proposed ratemaking
4 capital structure. The company's requested ratemaking
5 capital structure consists of 41.69 percent long-term debt
6 and 54.70 percent common equity, to which my recommended ROE
7 of 11.10 percent would apply. That common equity ratio is
8 consistent with the company's historical equity ratios, and
9 the equity ratios maintained by the Utility Proxy Group
10 (discussed below) and their operating subsidiary utility
11 companies. The overall rate of return is summarized on page
12 1 of Document No. 1.

13

14 **Q.** Please summarize your recommended ROE.

15

16 **A.** My recommended ROE of 11.10 percent is summarized on page 2
17 of Document No. 1. I have assessed the market-based common
18 equity cost rates of companies of relatively similar, but not
19 necessarily identical, risk to Peoples. Using companies of
20 relatively comparable risk as proxies is consistent with the
21 principles of fair rate of return established by the U.S.
22 Supreme Court in two cases: (1) *Federal Power Comm'n v. Hope*
23 *Natural Gas Co.*, 320 U.S. 591 (1944) ("*Hope*"); and (2)
24 *Bluefield Water Works Improvement Co. v. Public Serv. Comm'n*,
25 262 U.S. 679 (1923) ("*Bluefield*"). No proxy group can be

1 identical in risk to any single company. Consequently, there
2 must be an evaluation of relative risk between the company
3 and the proxy group to determine if it is appropriate to
4 adjust the proxy group's indicated rate of return.

5
6 My recommendation results from the application of several
7 cost of common equity models, specifically the Discounted
8 Cash Flow ("DCF") model, the Risk Premium Model ("RPM"), and
9 the Capital Asset Pricing Model ("CAPM"), to the market data
10 of a proxy group of seven natural gas distribution utilities
11 ("Utility Proxy Group") whose selection criteria will be
12 discussed below. In addition, I applied the DCF model, RPM,
13 and CAPM to a Non-Price Regulated Proxy Group similar in total
14 risk to the Utility Proxy Group. To be conservative, I did
15 not consider the analytical results applied to my Non-Price
16 Regulated Proxy Group in the determination of my recommended
17 range. The results derived from each are summarized on page
18 2 of Document No. 1.

19
20 As shown in Document No. 1, I adjusted the indicated common
21 equity cost rate to reflect the effect of flotation costs, as
22 well as Peoples' specific business risks. These adjustments
23 resulted in a company-specific indicated range of common
24 equity cost rates between 10.78 percent and 11.46 percent.
25 The indicated range of ROEs applicable to the Utility Proxy

1 Group excluding the Predictive Risk Premium Model ("PRPM")
2 from the calculation of the market risk premium is 10.78
3 percent to 11.45 percent. Given the Utility Proxy Group and
4 company-specific ranges of common equity cost rates, I
5 recommend the Commission adopt an ROE of 11.10 percent for
6 ratemaking purposes in this case.
7

8 III. GENERAL PRINCIPLES

9 Q. What general principles have you considered in arriving at
10 your recommended common equity cost rate of 11.10 percent?
11

12 A. In unregulated industries, marketplace competition is the
13 principal determinant of the price of products or services.
14 For regulated public utilities, regulation must act as a
15 substitute for marketplace competition. Assuring that the
16 utility can fulfill its obligations to the public, while
17 providing safe and reliable service at all times, requires a
18 level of earnings sufficient to maintain the integrity of
19 presently invested capital. Sufficient earnings also permit
20 the attraction of needed new capital at a reasonable cost,
21 for which the utility must compete with other companies of
22 comparable risk, consistent with the fair rate of return
23 standards established by the U.S. Supreme Court in the
24 previously cited *Hope* and *Bluefield* cases.
25

1 The U.S. Supreme Court affirmed the fair rate of return
2 standards in *Hope* when it stated:

3 The rate-making process under the Act, i.e., the
4 fixing of 'just and reasonable' rates, involves a
5 balancing of the investor and the consumer
6 interests.

7
8 Thus we stated in the *Natural Gas Pipeline Co. Case*
9 that 'regulation does not insure that the business
10 shall produce net revenues.' 315 U.S. at page 590,
11 62 S.Ct. at page 745. But such considerations
12 aside, the investor interest has a legitimate
13 concern with the financial integrity of the company
14 whose rates are being regulated. From the investor
15 or company point of view it is important that there
16 be enough revenue not only for operating expenses
17 but also for the capital costs of the business.
18 These include service on the debt and dividends on
19 the stock. Cf. *Chicago & Grand Trunk R. Co. v.*
20 *Wellman*, 143 U.S. 339, 345, 346 12 S.Ct. 400,402.
21 By that standard the return to the equity owner
22 should be commensurate with returns on investments
23 in other enterprises having corresponding risks.
24 That return, moreover, should be sufficient to
25 assure confidence in the financial integrity of the

1 enterprise, so as to maintain its credit and to
2 attract capital.¹

3
4 In summary, the U.S. Supreme Court has found a return that is
5 adequate to attract capital at reasonable terms enables the
6 utility to provide service while maintaining its financial
7 integrity. As discussed above, and in keeping with
8 established regulatory standards, that return should be
9 commensurate with the returns expected elsewhere for
10 investments of equivalent risk. The Commission's decision in
11 this proceeding, therefore, should provide the company with
12 the opportunity to earn a return that is: (1) adequate to
13 attract capital at reasonable cost and terms; (2) sufficient
14 to ensure its financial integrity; and (3) commensurate with
15 returns on investments in enterprises having corresponding
16 risks.

17
18 Lastly, the required return for a regulated public utility is
19 established on a stand-alone basis, i.e., for the utility
20 operating company at issue in a rate case. Parent entities,
21 like other investors, have capital constraints and must look
22 at the attractiveness of the expected risk-adjusted return of
23 each investment alternative in their capital budgeting
24 process. That is, utility holding companies that own many
25 utility operating companies have choices as to where they

1 will invest their capital within the holding company family.
2 Therefore, the opportunity cost concept applies regardless of
3 the source of the funding, public funding or corporate
4 funding.

5
6 It therefore is important that the authorized ROE reflects
7 the risks and prospects of the utility's operations and
8 supports the utility's financial integrity from a stand-alone
9 perspective, as measured by its combined business and
10 financial risks. Consequently, the ROE authorized in this
11 proceeding should be sufficient to support the operational
12 (*i.e.*, business risk) and financing (*i.e.*, financial risk) of
13 the company's utility subsidiary on a stand-alone basis.

14
15 **Q.** Within that broad framework, how is the cost of capital
16 estimated in regulatory proceedings?

17
18 **A.** Regulated utilities primarily use common stock and long-term
19 debt to finance their permanent property, plant, and
20 equipment (*i.e.*, rate base). The fair rate of return for a
21 regulated utility is based on its weighted average cost of
22 capital, in which, as noted earlier, the costs of the
23 individual sources of capital are weighted by their
24 respective book values.

25

1 The cost of capital is the return investors require to make
2 an investment in a company. Investors will provide funds to
3 a firm only if the return that they *expect* is equal to, or
4 greater than, the return that they *require* to accept the risk
5 of providing funds to the firm.

6
7 The cost of capital (*i.e.*, the combination of the costs of
8 debt and equity) is based on the economic principle of
9 "opportunity costs." Investing in any asset (whether debt or
10 equity securities) represents a forgone opportunity to invest
11 in alternative assets. For any investment to be sensible,
12 its expected return must be at least equal to the return
13 expected on alternative, comparable risk investment
14 opportunities. Because investments with like risks should
15 offer similar returns, the opportunity cost of an investment
16 should equal the return available on an investment of
17 comparable risk.

18
19 Whereas the cost of debt is contractually defined and can be
20 directly observed as the interest rate or yield on debt
21 securities, the cost of common equity must be estimated based
22 on market data and various financial models. Because the
23 cost of common equity is premised on opportunity costs, the
24 models used to determine it are typically applied to a group
25 of "comparable" or "proxy" companies.

1 In the end, the estimated cost of capital should reflect the
2 return that investors require in light of the subject
3 company's business and financial risks, and the returns
4 available on comparable investments.

5
6 **Q.** Is the authorized return set in regulatory proceedings
7 guaranteed?

8
9 **A.** No, it is not. Consistent with the *Hope* and *Bluefield*
10 standards, the ratemaking process should provide the utility
11 a reasonable opportunity to recover its return of, and return
12 on, its reasonably incurred investments, but it does not
13 guarantee that return. While a utility may have control over
14 some factors that affect the ability to earn its authorized
15 return (e.g., management performance, operating and
16 maintenance expenses, etc.), there are several factors beyond
17 a utility's control that affect its ability to earn its
18 authorized return. Those may include factors such as weather,
19 the economy, and the prevalence and magnitude of regulatory
20 lag.

21
22 **A.** BUSINESS RISK

23 **Q.** Please define business risk and explain why it is important
24 for determining a fair rate of return.

1 A. The investor-required return on common equity reflects
2 investors' assessment of the total investment risk of the
3 subject firm. Total investment risk is often discussed in
4 the context of business and financial risk.²

5
6 Business risk reflects the uncertainty associated with owning
7 a company's common stock without the company's use of debt
8 and/or preferred stock financing. One way of considering the
9 distinction between business and financial risk is to view
10 the former as the uncertainty of the expected earned return
11 on common equity, assuming the firm is financed with no debt.

12
13 Examples of business risks generally faced by utilities
14 include, but are not limited to, the regulatory environment,
15 mandatory environmental compliance requirements, customer mix
16 and concentration of customers, service territory economic
17 growth, market demand, risks and uncertainties of supply,
18 operations, capital intensity, size, the degree of operating
19 leverage, emerging technologies, the vagaries of weather, and
20 the like, all of which have a direct bearing on earnings.

21
22 Although analysts, including ratings agencies, may categorize
23 business risks individually, as a practical matter, such
24 risks are interrelated and not wholly distinct from one
25 another. When determining an appropriate return on common

1 equity, the relevant issue is where investors see the subject
2 company in relation to other similarly situated utility
3 companies (e.g., those in the Utility Proxy Group). To the
4 extent investors view a company as being exposed to higher
5 risk, the required return will increase, and vice versa.

6
7 For regulated utilities, business risks are both long-term
8 and near-term in nature. Whereas near-term business risks
9 are reflected in year-to-year variability in earnings and
10 cash flow brought about by economic or regulatory factors,
11 long-term business risks reflect the prospect of an impaired
12 ability of investors to obtain both a fair rate of return on,
13 and return of, their capital. Moreover, because utilities
14 accept the obligation to provide safe, adequate, and reliable
15 service at all times (in exchange for a reasonable opportunity
16 to earn a fair return on their investment), they generally do
17 not have the option to delay, defer, or reject capital
18 investments. Since those investments are capital-intensive,
19 utilities generally do not have the option to avoid raising
20 external funds during periods of capital market distress, if
21 necessary.

22
23 Because utilities invest in long-lived assets, long-term
24 business risks are of paramount concern to equity investors.
25 That is, the risk of not recovering the return on their

investment extends far into the future. The timing and nature of events that may lead to losses, however, also are uncertain and, consequently, those risks and their implications for the required return on equity tend to be difficult to quantify. Regulatory commissions (like investors who commit their capital) must review a variety of quantitative and qualitative data and apply their reasoned judgment to determine how long-term risks weigh in their assessment of the market-required return on common equity.

B. FINANCIAL RISK

Q. Please define financial risk and explain why it is important for determining a fair rate of return.

A. Financial risk is the additional risk created by the introduction of debt and preferred stock into the capital structure. The higher the proportion of debt and preferred stock in the capital structure, the higher the financial risk to common equity owners (i.e., failure to receive dividends due to default or other covenants). Therefore, consistent with the basic financial principle of risk and return, common equity investors require higher returns as compensation for bearing higher financial risk.

Q. Can bond and credit ratings be a proxy for a firm's combined

1 business and financial risks to equity owners (i.e.,
2 investment risk)?

3
4 **A.** Yes, similar bond ratings/issuer credit ratings reflect, and
5 are representative of, similar combined business and
6 financial risks (i.e., total risk) faced by bond investors.³
7 Although specific business or financial risks may differ
8 between companies, the same bond/credit rating indicates that
9 the combined risks are roughly similar from a debtholder
10 perspective. The caveat is that these debtholder risk
11 measures do not translate directly to risks for common equity.

12
13 **Q.** Do ratings agencies account for company size in their bond
14 ratings?

15
16 **A.** No. Neither Standard & Poor's Ratings Services ("S&P") nor
17 Moody's Investors Service ("Moody's") have minimum company
18 size requirements for any given rating level. This means,
19 all else being equal, a relative size analysis must be
20 conducted for equity investments in companies with similar
21 bond ratings.

22
23 **IV. PEOPLES AND THE UTILITY PROXY GROUP**

24 **Q.** Are you familiar with Peoples' operations?
25

1 **A.** Yes. Peoples, a wholly owned subsidiary of TECO Gas
2 Operations, Inc. whose ultimate parent is Emera Incorporated
3 ("Emera"), provides natural gas distribution service to
4 approximately 508,000 residential, commercial, industrial and
5 electric power generation customers in the state of Florida.⁴
6 Peoples has a long-term issuer rating of A- from Fitch
7 Ratings; the company is not rated by Moody's or S&P. Emera
8 has electric generation, transmission and distribution
9 operations, natural gas transmission and distribution
10 operations, and non-regulated energy marketing operations in
11 the U.S., Canada, and Caribbean Islands.⁵ Emera is publicly
12 traded on the Toronto Stock Exchange under ticker symbol EMA.

13
14 **Q.** Why is it necessary to develop a proxy group when estimating
15 the ROE for the company?

16
17 **A.** Because the company is not publicly traded and does not have
18 publicly traded equity securities, it is necessary to develop
19 groups of publicly traded, comparable companies to serve as
20 "proxies" for the company. In addition to the analytical
21 necessity of doing so, the use of proxy companies is
22 consistent with the *Hope* and *Bluefield* comparable risk
23 standards, as discussed above. I have selected two proxy
24 groups that, in my view, are fundamentally risk-comparable to
25 the company: a Utility Proxy Group, and a Non-Price Regulated

1 Proxy Group that is comparable in total risk to the Utility
2 Proxy Group.⁶

3
4 Even when proxy groups are carefully selected, it is common
5 for analytical results to vary from company to company.
6 Despite the care taken to ensure comparability, because no
7 two companies are identical, market expectations regarding
8 future risks and prospects will vary within the proxy group.
9 It therefore is common for analytical results to reflect a
10 seemingly wide range, even for a group of similarly situated
11 companies. At issue is how to estimate the ROE from within
12 that range. That determination will be best informed by
13 employing a variety of sound analyses that necessarily must
14 consider the sort of quantitative and qualitative information
15 discussed throughout my direct testimony. Additionally, a
16 relative risk analysis between the company and the Utility
17 Proxy Group must be made to determine whether or not explicit
18 company-specific adjustments need to be made to the Utility
19 Proxy Group's indicated results.

20
21 **Q.** Please explain how you selected the companies in the Utility
22 Proxy Group.

23
24 **A.** The companies selected for the Utility Proxy Group met the
25 following criteria:

- 1 • They were included in the Natural Gas Utility Group of
- 2 *Value Line's Standard Edition* ("Value Line");
- 3 • They have 60 percent or greater of fiscal year 2023 total
- 4 operating income derived from, and 60 percent or greater
- 5 of fiscal year 2023 total assets attributable to,
- 6 regulated gas distribution operations;
- 7 • At the time of preparation of this testimony, they had
- 8 not publicly announced that they were involved in any
- 9 major merger or acquisition activity (*i.e.*, one publicly-
- 10 traded utility merging with or acquiring another) or any
- 11 other major development;
- 12 • They have not cut or omitted their common dividends during
- 13 the five years ended 2023 or through the time of
- 14 preparation of this testimony;
- 15 • They have *Value Line* and Bloomberg Professional Services
- 16 ("Bloomberg") adjusted Beta coefficients ("beta");
- 17 • They have positive *Value Line* five-year dividends per
- 18 share ("DPS") growth rate projections; and
- 19 • They have *Value Line*, Zacks, or S&P Capital IQ consensus
- 20 five-year earnings per share ("EPS") growth rate
- 21 projections.

22

23 Q. Please identify the companies that met the above-stated

24 criteria.

25

1 **A.** The following seven companies met these criteria: Atmos
2 Energy Corporation (Ticker: ATO); New Jersey Resources
3 Corporation (Ticker: NJR); NiSource Inc. (Ticker: NI);
4 Northwest Natural Gas Company (Ticker: NWN); ONE Gas, Inc.
5 (Ticker: OGS); Southwest Gas Holdings, Inc. (Ticker: SWX) and
6 Spire Inc. (Ticker: SR).

7
8 **Q.** Please describe Document No. 2, page 1.

9
10 **A.** Page 1 of Document No. 2 contains comparative capitalization
11 and financial statistics for the Utility Proxy Group for the
12 five years from 2019 to 2023.

13
14 During the five-year period ending December 31, 2023, the
15 historically achieved average earnings rate on book common
16 equity for the group was 8.41 percent, the average common
17 equity ratio based on total permanent capital (excluding
18 short-term debt) was 48.03 percent, and the average dividend
19 payout ratio was 67.03 percent.

20
21 Total debt to earnings before interest, taxes, depreciation,
22 and amortization for the years 2019 to 2023 ranges between
23 4.81 and 5.72 times, with an average of 5.34 times. Funds
24 from operations to total debt range from 11.51 percent to
25 27.32 percent, with an average of 15.50 percent.

1 **V. CAPITAL STRUCTURE**

2 **Q.** What is Peoples' requested capital structure?

3
4 **A.** Peoples' requested capital structure consists of 41.69
5 percent long-term debt and 54.70 percent common equity, as
6 shown in my Document No. 1 that is based on data included in
7 the company's MFR Schedule G-3, page 2.
8

9 **Q.** What are the typical sources of capital commonly considered
10 in establishing a utility's capital structure?
11

12 **A.** Common equity and long-term debt are commonly considered in
13 establishing a utility's capital structure, because they are
14 the typical sources of capital financing for a utility's rate
15 base.
16

17 **Q.** Please explain.
18

19 **A.** Long-lived assets are typically financed with long-lived
20 securities, so that the overall term structure of the
21 utility's long-term liabilities (both debt and equity)
22 closely match the life of the assets being financed. As
23 stated by Brigham and Houston:

24 In practice, firms don't finance each specific
25 asset with a type of capital that has a maturity

1 equal to the asset's life. However, academic
2 studies do show that most firms tend to finance
3 short-term assets from short-term sources and long-
4 term assets from long-term sources.⁷

5
6 Whereas short-term debt has a maturity of one year or less,
7 long-term debt may have maturities of 30 years or longer.
8 Although there are practical financing constraints, such as
9 the need to "stagger" long-term debt maturities, the general
10 objective is to extend the average life of long-term debt.
11 Still, long-term debt has a finite life, which is likely to
12 be less than the life of the assets included in rate base.
13 Common equity, on the other hand, is outstanding into
14 perpetuity. Thus, common equity more accurately matches the
15 life of the going concern of the utility, which is also
16 assumed to operate in perpetuity. Consequently, it is both
17 typical and important for utilities to have significant
18 proportions of common equity in their capital structures.

19
20 **Q.** Why is it important that the company's requested capital
21 structure, consisting of 41.69 percent long-term debt and
22 54.70 percent common equity, be authorized in this
23 proceeding?

24
25 **A.** In order to continue to provide safe and reliable service to

1 its customers, Peoples must meet the needs and serve the
2 interests of its various stakeholders, including its
3 customers, shareholders, and bondholders. The interests of
4 these stakeholder groups are aligned with maintaining a
5 healthy balance sheet, strong credit ratings, and a
6 supportive regulatory environment, so that the company has
7 access to capital on reasonable terms in order to make
8 necessary investments.

9
10 Safe and reliable service cannot be maintained at a reasonable
11 cost if utilities do not have the financial flexibility and
12 strength to access competitive financing markets on
13 reasonable terms. The authorization of a capital structure
14 that understates the company's actual common equity will
15 weaken the financial condition of its operations and
16 adversely impact the company's ability to address expenses
17 and investments, to the detriment of customers and
18 shareholders. Safe and reliable service for customers cannot
19 be sustained over the long term if the interests of
20 shareholders and bondholders are minimized such that the
21 public interest is not optimized.

22
23 Q. How does the company's requested common equity ratio of 54.70
24 percent compare with the common equity ratios maintained by
25 the Utility Proxy Group?

1 A. The company's requested ratemaking common equity ratio of
2 54.70 percent is reasonable and consistent with the range of
3 common equity ratios maintained by the Utility Proxy Group.

4
5 As shown on page 2 of Document No. 2, common equity ratios
6 for the Utility Proxy Group range from 40.23 percent to 62.38
7 percent for fiscal year 2023.⁸ I also considered *Value Line*
8 projected capital structures for the Utility Proxy Group for
9 2027-2029. That analysis showed a range of projected common
10 equity ratios between 44.00 percent and 60.00 percent for the
11 Utility Proxy Group (see, pages 2 through 8 of Document No.
12 3).

13
14 In addition to comparing the company's proposed common equity
15 ratio with common equity ratios currently and expected to be
16 maintained by the Utility Proxy Group, I also compared the
17 company's proposed common equity ratio with the equity ratios
18 maintained by the operating subsidiaries of the Utility Proxy
19 Group. As shown on page 3 of Document No. 2, common equity
20 ratios of the operating utility subsidiaries of the companies
21 in the Utility Proxy Group range from 37.70 percent to 60.41
22 percent for fiscal year 2023.

23
24 Q. Given the range of equity ratios present within the Utility
25 Proxy Group, is the equity ratio of 54.70 percent proposed by

1 Peoples appropriate for ratemaking purposes?

2
3 **A.** Yes, it is. The company's equity ratio of 54.70 percent is
4 appropriate for ratemaking purposes in the current proceeding
5 because it is within the range of the common equity ratios
6 currently maintained, and expected to be maintained, by the
7 Utility Proxy Group and their utility operating subsidiaries.
8

9 **VI. COMMON EQUITY COST RATE MODEL**

10 **Q.** Is it important that cost of common equity models be market-
11 based?
12

13 **A.** Yes. While a public utility operates a regulated business
14 within the states in which it operates, it still must compete
15 for equity in capital markets along with all other companies
16 of comparable risk, which includes non-utilities. The cost
17 of common equity is thus determined based on equity market
18 expectations for the returns of those companies. If an
19 individual investor is choosing to invest their capital among
20 companies of comparable risk, they will choose a company
21 providing a higher return over a company providing a lower
22 return.
23

24 **Q.** Are your cost of common equity models market-based?
25

1 **A.** Yes. The DCF model uses market prices in developing the
2 model's dividend yield component. The RPM uses bond ratings
3 and expected bond yields that reflect the market's assessment
4 of bond/credit risk. In addition, betas (β), which reflect
5 the market/systematic risk component of equity risk premium,
6 are derived from regression analyses of market prices. The
7 Predictive Risk Premium Model ("PRPM") uses monthly market
8 returns in addition to expectations of the risk-free rate.
9 The CAPM is market-based for many of the same reasons that
10 the RPM is market-based (*i.e.*, the use of expected bond yields
11 and betas). Selection criteria for comparable risk, non-
12 price regulated companies are based on regression analyses of
13 market prices and reflect the market's assessment of total
14 risk.

15
16 **Q.** What analytical approaches did you use to determine the
17 company's ROE?

18
19 **A.** As discussed earlier, I have relied on the DCF model, the
20 RPM, and the CAPM, which I applied to the Utility Proxy Group
21 described above. I also applied these same models to a Non-
22 Price Regulated Proxy Group described later in this section.
23
24 I rely on these models because reasonable investors use a
25 variety of tools and do not rely exclusively on a single

1 source of information or single model. Moreover, the models
2 on which I rely focus on different aspects of return
3 requirements and provide different insights to investors'
4 views of risk and return. The DCF model, for example,
5 estimates the investor-required return assuming a constant
6 expected dividend yield and growth rate in perpetuity, while
7 Risk Premium-based methods (i.e., the RPM and CAPM
8 approaches) provide the ability to reflect investors' views
9 of risk, future market returns, and the relationship between
10 interest rates and the cost of common equity. Just as the
11 use of market data for the Utility Proxy Group adds the
12 reliability necessary to inform expert judgment in arriving
13 at a recommended common equity cost rate, the use of multiple
14 generally accepted common equity cost rate models also adds
15 reliability and accuracy when arriving at a recommended
16 common equity cost rate.

17
18 **Q.** Has the Commission approved the use of multiple methods in
19 determining the cost of equity during past rate cases of
20 Peoples?

21
22 **A.** Yes. In Docket No. 20080318-GU, the Commission stated that
23 there are several models which satisfy the terms for
24 determining a fair rate of return as laid out by *Hope* and
25 *Bluefield*:

1 While the logic of the legal and economic concepts
 2 of a fair rate of return are fairly straight
 3 forward, the actual implementation of these
 4 concepts is more controversial. Unlike the cost
 5 rate on debt that is fixed and known due to its
 6 contractual terms, the cost of equity must be
 7 estimated. **Financial models have been developed to**
 8 **estimate the investor-required ROE for a company.**
 9 Market-based approaches such as the Discounted Cash
 10 Flow (DCF) model and the Capital Asset Pricing
 11 Model (CAPM) are generally recognized as being
 12 consistent with the market-based standards of a
 13 fair return enunciated in Hope, 320 U.S. 591 and
 14 Bluefield, 262 U.S. 679. [Emphasis added]⁹

15
 16 More recently, in Order No. PSC-2023-0388-FOF-GU, issued on
 17 December 27, 2023, the Commission considered the results of
 18 the witnesses DCF, CAPM, and RPM analyses to determine the
 19 appropriate range of ROEs in which to set Peoples' authorized
 20 return.¹⁰

21
 22 A. DISCOUNTED CASH FLOW

23 Q. What is the theoretical basis of the DCF model?

24
 25 A. The theory underlying the DCF model is that the present value

of an expected future stream of net cash flows during the investment holding period can be determined by discounting those cash flows at the cost of capital, or the investors' capitalization rate. DCF theory indicates that an investor buys a stock for an expected total return rate, which is derived from the cash flows received from dividends and market price appreciation. Mathematically, the dividend yield on market price plus a growth rate equals the capitalization rate (i.e., the total common equity return rate expected by investors), as depicted in the formula below:

$$K_e = (D_0 (1+g)) / P + g$$

Where:

K_e = the required return on common equity;

D_0 = the annualized dividend per share;

P = the current stock price; and

g = the growth rate.

Q. Which version of the DCF model did you use?

A. I relied on the single-stage constant growth DCF model in my analyses.

Q. Please describe the dividend yield you used in applying the constant growth DCF model.

1 A. The unadjusted dividend yields are based on the proxy
2 companies' dividends as of January 15, 2025, divided by the
3 average closing market price for the 60 trading days ended
4 January 15, 2025 (see, Column 1, page 1 of Document No. 3).

5
6 Q. Please explain your adjustment to the dividend yield.

7
8 A. Because dividends are paid periodically (e.g., quarterly), as
9 opposed to continuously (daily), an adjustment must be made
10 to the dividend yield. This is often referred to as the
11 discrete, or the Gordon Periodic, version of the DCF model.

12
13 DCF theory calls for using the full growth rate, or D_1 , in
14 calculating the model's dividend yield component. Since the
15 companies in the Utility Proxy Group increase their quarterly
16 dividends at various times during the year, a reasonable
17 assumption is to reflect one-half the annual dividend growth
18 rate in the dividend yield component, or $D_{1/2}$. Because the
19 dividend should be representative of the next 12-month
20 period, this adjustment is a conservative approach that does
21 not overstate the dividend yield. Therefore, the actual
22 average dividend yields in Column 1, page 1 of Document No.
23 3 have been adjusted upward to reflect one-half the average
24 projected growth rate shown in Column 5.

1 Q. Please explain the basis for the growth rates you apply to
2 the Utility Proxy Group in your constant growth DCF model.

3
4 A. Investors are likely to rely on widely available financial
5 information services, such as *Value Line*, Zacks, and S&P
6 Capital IQ. Investors realize that analysts have significant
7 insight into the dynamics of the industries and individual
8 companies they analyze, as well as companies' abilities to
9 effectively manage the effects of changing laws and
10 regulations, and ever-changing economic and market
11 conditions. For these reasons, I used analysts' five-year
12 forecasts of earnings per share growth in my DCF analysis.

13
14 Over the long run, there can be no growth in dividends per
15 share without growth in earnings per share. Security
16 analysts' earnings expectations have a more significant
17 influence on market prices than dividend expectations. Thus,
18 using projected earnings growth rates in a DCF analysis
19 provides a better match between investors' market price
20 appreciation expectations and the growth rate component of
21 the DCF.

22
23 Q. Please summarize the constant growth DCF model results.

24
25 A. As shown on page 1 of Document No. 3, the application of the

1 constant growth DCF model to the Utility Proxy Group results
2 in a range of indicated ROEs from 6.64 percent to 11.74
3 percent. The mean of those results is 10.49 percent, the
4 median result is 10.50 percent, and the average of the two is
5 10.50 percent.

6
7 In arriving at a conclusion for the constant growth DCF-
8 indicated common equity cost rate for the Utility Proxy Group,
9 I relied on an average of the mean and the median results of
10 the DCF, specifically 10.50 percent, applicable to the
11 Utility Proxy Group. This approach takes into consideration
12 all proxy company results while mitigating high and low side
13 outliers of those results.

14
15 B. THE RISK PREMIUM MODEL

16 Q. Please describe the theoretical basis of the Risk Premium
17 Model.

18
19 A. The RPM is based on the fundamental financial principle of
20 risk and return; namely, that investors require greater
21 returns for bearing greater risk. The RPM recognizes that
22 common equity capital has greater investment risk than debt
23 capital, as common equity shareholders are behind debt
24 holders in any claim on a company's assets and earnings. As
25 a result, investors require higher returns from common stocks

1 than from bonds to compensate them for bearing the additional
2 risk.

3
4 While it is possible to directly observe bond returns and
5 yields, common equity returns required by investors cannot be
6 directly determined or observed. According to RPM theory,
7 one can estimate a common equity risk premium over bonds
8 (either historically or prospectively) and use that premium
9 to derive a cost rate of common equity. The cost of common
10 equity equals the expected cost rate for long-term debt
11 capital, plus a risk premium over that cost rate, to
12 compensate common shareholders for the added risk of being
13 unsecured and last-in-line for any claim on the corporation's
14 assets and earnings upon liquidation.

15
16 **Q.** Please explain the total market approach RPM.

17
18 **A.** The total market approach RPM adds a prospective public
19 utility bond yield to an average of: (1) an equity risk
20 premium that is derived from a beta-adjusted total market
21 equity risk premium, (2) an equity risk premium based on the
22 S&P Utilities Index, and (3) an equity risk premium based on
23 authorized ROEs for natural gas distribution utilities.

24
25 **Q.** Please explain how you determined the expected bond yield

1 applicable to the Utility Proxy Group.

2
3 **A.** The first step in the total market approach RPM analysis is
4 to determine the expected bond yield. Because both
5 ratemaking and the cost of capital, including the common
6 equity cost rate, are prospective in nature, a prospective
7 yield on similarly rated long-term debt is essential. I
8 relied on a consensus forecast of about 50 economists of the
9 expected yield on Aaa-rated corporate bonds for the six
10 calendar quarters ending with the first calendar quarter of
11 2026, and *Blue Chip's* long-term projections for 2026 to 2030
12 and 2031 to 2035. As shown on line 1, page 1 of Document
13 No. 4, the average expected yield on Moody's Aaa-rated
14 corporate bonds is 5.18 percent.

15
16 Because that 5.18 percent estimate represents a corporate
17 bond yield and not a utility specific bond yield, I adjusted
18 the expected Aaa-rated corporate bond yield to an equivalent
19 A2-rated public utility bond yield, I made an upward
20 adjustment of 0.42 percent, which represents a recent spread
21 between Aaa-rated corporate bonds and A2-rated public
22 utility bonds (as shown on line 2 and explained in note 2
23 on page 1 of Document No. 4). Adding that recent 0.42
24 percent spread to the expected Aaa-rated corporate bond
25 yield of 5.18 percent results in an expected A2-rated public

1 utility bond yield of 5.60 percent.

2
3 I then reviewed the average credit rating for the Utility
4 Proxy Group from Moody's to determine if an adjustment to
5 the estimated A2-rated public utility bond was necessary.
6 Since the Utility Proxy Group's average Moody's long-term
7 issuer rating is A3, another adjustment to the expected A2-
8 rated public utility bond is needed to reflect this
9 difference in bond ratings. An upward adjustment of 0.06
10 percent, which represents one-third of a recent spread
11 between A2-rated and A3-rated public utility bond yields,
12 is necessary to make the A2 prospective bond yield
13 applicable to an A3-rated public utility bond (as shown on
14 line 4 and explained in note 3 on page 1 of Document No. 4).
15 Adding the 0.06 percent to the 5.60 percent prospective A2-
16 rated public utility bond yield results in a 5.66 percent
17 expected bond yield applicable to the Utility Proxy Group
18 as shown on page 1 of Document No. 4.

19
20 To develop the total market approach RPM estimate of the
21 appropriate return on equity, this prospective bond yield
22 is then added to the average of the three different equity
23 risk premiums, which I now discuss, in turn.

24
25 Q. Please explain how the beta-derived equity risk premium is

1 determined.

2
3 **A.** The components of the beta-derived risk premium model are:
4 (1) an expected market equity risk premium over corporate
5 bonds, and (2) the beta. The derivation of the beta-derived
6 equity risk premium that I applied to the Utility Proxy Group
7 is shown on lines 1 through 8, on page 6 of Document No. 4.
8 The total beta-derived equity risk premium I applied is based
9 on an average of three historical market data-based equity
10 risk premiums, two *Value Line*-based equity risk premiums, and
11 a Bloomberg-based equity risk premium. Each of these is
12 described below.

13
14 **Q.** How did you derive a market equity risk premium based on long-
15 term historical data?

16
17 **A.** To derive an historical market equity risk premium, I used
18 the most recent holding period returns for the large company
19 common stocks less the average historical yield on Moody's
20 Aaa/Aa-rated corporate bonds for the period 1928 to 2023.
21 The use of holding period returns over a very long period of
22 time is appropriate because it is consistent with the long-
23 term investment horizon presumed by investing in a going
24 concern, *i.e.*, a company expected to operate in perpetuity.

1 The long-term arithmetic mean monthly total return rate on
2 large company common stocks was 12.05 percent and the long-
3 term arithmetic mean monthly yield on Moody's Aaa/Aa-rated
4 corporate bonds was 5.95 percent. As shown on line 1, page
5 6 of Document No. 4, subtracting the mean monthly bond yield
6 from the total return on large company stocks results in a
7 long-term historical equity risk premium of 6.10 percent.

8
9 I used the arithmetic mean monthly total return rates for the
10 large company stocks and yields (income returns) for the
11 Moody's Aaa/Aa-rated corporate bonds, because they are
12 appropriate for the purpose of estimating the cost of capital
13 as noted in Kroll's Stocks, Bonds, Bills, and Inflation
14 ("SBBI") Yearbook 2023 ("SBBI - 2023").¹¹ The use of the
15 arithmetic mean return rates and yields is appropriate
16 because historical total returns and equity risk premiums
17 provide insight into the variance and standard deviation of
18 returns needed by investors in estimating future risk when
19 making a current investment. If investors relied on the
20 geometric mean of historical equity risk premiums, they would
21 have no insight into the potential variance of future returns;
22 the geometric mean relates the change over many periods to a
23 constant rate of change, thereby obviating the year-to-year
24 fluctuations, or variance, which is critical to risk
25 analysis.

1 Q. Please explain the derivation of the regression-based market
2 equity risk premium.

3
4 A. To derive the regression-based market equity risk premium of
5 7.03 percent shown on line 2, page 6 of Document No. 4, I
6 used the same monthly annualized total returns on large
7 company common stocks relative to the monthly annualized
8 yields on Moody's Aaa/Aa-rated corporate bonds as mentioned
9 above. I modeled the relationship between interest rates and
10 the market equity risk premium using the observed monthly
11 market equity risk premium as the dependent variable, and the
12 monthly yield on Moody's Aaa/Aa-rated corporate bonds as the
13 independent variable. I then used a linear Ordinary Least
14 Squares ("OLS") regression, in which the market equity risk
15 premium is expressed as a function of the Moody's Aaa/Aa-
16 rated corporate bond yield:

$$17 \quad RP = \alpha + \beta (R_{Aaa/Aa})$$

18 Where:

19 RP = the market equity risk premium;

20 α = the regression intercept coefficient;

21 β = the regression slope coefficient; and

22 $R_{Aaa/Aa}$ = the Moody's Aaa/Aa-rated corporate bond
23 yield.

24
25 Q. Please explain the derivation of the PRPM equity risk premium.

1 A. The PRPM, published in the *Journal of Regulatory Economics*,¹²
 2 was developed from the work of Robert F. Engle, who shared
 3 the Nobel Prize in Economics in 2003 "for methods of analyzing
 4 economic time series with time-varying volatility" or
 5 autoregressive conditional heteroskedasticity ("ARCH")¹³
 6 Engle found that volatility changes over time and is related
 7 from one period to the next, especially in financial markets.
 8 Engle discovered that volatility of prices and returns
 9 clusters over time and is, therefore, highly predictable and
 10 can be used to predict future levels of risk and risk
 11 premiums.

12
 13 The PRPM estimates the risk-return relationship directly, as
 14 the predicted equity risk premium is generated by predicting
 15 volatility or risk. The PRPM is not based on an estimate of
 16 investor behavior, but rather on an evaluation of the results
 17 of that behavior (i.e., the variance of historical equity
 18 risk premiums).

19
 20 The inputs to the model are the historical returns on large
 21 company stocks minus the historical monthly yield on Moody's
 22 Aaa/Aa-rated corporate bonds from January 1928 through
 23 December 2024. Using a generalized form of ARCH, known as
 24 generalized autoregressive conditional heteroskedasticity
 25 ("GARCH"), I calculated each of the projected equity risk

1 premium using Eviews© statistical software. When the GARCH
2 model is applied to the historical return data, it produces
3 a predicted GARCH variance series and a GARCH coefficient.
4 Multiplying the predicted monthly variance by the GARCH
5 coefficient and then annualizing it produces the predicted
6 annual equity risk premium. The resulting PRPM predicted a
7 market equity risk premium of 7.56%.¹⁴

8
9 **Q.** Please explain the derivation of projected equity risk
10 premiums based on the *Value Line* Summary & Index for your RPM
11 analysis.

12
13 **A.** As noted above, because both ratemaking and the cost of
14 capital are prospective, a prospective market equity risk
15 premium is needed. The derivation of the forecasted or
16 prospective market equity risk premium can be found in note
17 4, page 6 of Document No. 4. Consistent with my calculation
18 of the dividend yield component in my DCF analysis, this
19 prospective market equity risk premium is derived from an
20 average of the three- to five-year median market price
21 appreciation potential by *Value Line* for the 13 weeks ended
22 January 17, 2025, plus an average of the median estimated
23 dividend yield for the common stocks of the 1,700 firms
24 covered in *Value Line* (Standard Edition) (as explained in
25 detail in note 1, page 2 of Document No. 5).

1 The average median expected price appreciation is 40 percent,
2 which translates to a 8.78 percent annual appreciation, and
3 when added to the average of *Value Line's* median expected
4 dividend yields of 2.01 percent, equates to a forecasted
5 annual total return rate on the market of 10.79 percent. The
6 forecasted Moody's Aaa-rated corporate bond yield of 5.18
7 percent is deducted from the total market return of 10.79
8 percent, resulting in an equity risk premium of 5.61 percent,
9 as shown on line 4, page 6 of Document No. 4.

10
11 **Q.** Please explain the derivation of an equity risk premium based
12 on the S&P 500 companies.

13
14 **A.** Using data from *Value Line*, Bloomberg, and S&P Capital IQ, I
15 calculated an expected total return on the S&P 500 companies
16 using expected dividend yields and long-term growth estimates
17 as a proxy for capital appreciation. The expected total
18 return for the S&P 500 is 16.33 percent. Subtracting the
19 prospective yield on Moody's Aaa-rated corporate bonds of
20 5.18 percent results in a 11.15 percent projected equity risk
21 premium.

22
23 **Q.** What is your conclusion of a beta-derived equity risk premium
24 for use in your RPM analysis?

1 A. I gave equal weight to all five equity risk premiums based on
2 each source (historical, *Value Line* Summary & Index, and
3 aggregate *Value Line*, Bloomberg, and S&P Capital IQ Market
4 DCF) in arriving at a 7.49 percent equity risk premium, as
5 shown on page 6 of Document No. 4.

6
7 After calculating the average market equity risk premium of
8 7.49 percent, I adjusted it by beta to account for the risk
9 of the Utility Proxy Group. As discussed below, beta is a
10 meaningful measure of prospective relative risk to the market
11 as a whole, and is a logical way to allocate a company's, or
12 proxy group's, share of the market's total equity risk premium
13 relative to corporate bond yields. As shown on page 1 of
14 Document No. 5, the average of the mean and median beta for
15 the Utility Proxy Group is 0.79. Multiplying this beta by
16 the market equity risk premium of 7.49 percent results in a
17 beta-adjusted equity risk premium for the Utility Proxy Group
18 of 5.92 percent.

19
20 Q. How did you derive the equity risk premium based on the S&P
21 Utility Index and Moody's A2-rated public utility bonds?

22
23 A. I estimated three equity risk premiums based on S&P Utility
24 Index holding period returns, and one equity risk premiums
25 based on the expected returns of the S&P Utilities Index,

1 using *Value Line*, Bloomberg, and S&P Capital IQ data. Turning
2 first to the S&P Utility Index holding period returns, I
3 derived a long-term monthly arithmetic mean equity risk
4 premium between the S&P Utility Index total returns of 10.59
5 percent and monthly Moody's A2-rated public utility bond
6 yields of 6.42 percent from 1928 to 2024, to arrive at an
7 equity risk premium of 4.16 percent (as shown on line 1, page
8 9 of Document No. 4). I then used the same historical data
9 to derive an equity risk premium of 4.91 percent based on a
10 regression of the monthly equity risk premiums. The final
11 S&P Utility Index holding period equity risk premium involved
12 applying the PRPM using the historical monthly equity risk
13 premiums from January 1928 to December 2024 to arrive at a
14 PRPM-derived equity risk premium of 4.72 percent for the S&P
15 Utility Index.

16
17 I then derived an expected total return on the S&P Utilities
18 Index of 11.14 percent using data from *Value Line*, Bloomberg,
19 and S&P Capital IQ and subtracted the prospective Moody's A2-
20 rated public utility bond yield of 5.60 percent (derived on
21 line 3, page 1 of Document No. 4). This resulted in equity
22 risk premium of 5.54 percent. As with the market equity risk
23 premiums, I averaged the four risk premiums to arrive at my
24 utility-specific equity risk premium of 4.83 percent, as
25 shown on page 9 of Document No. 4.

1 **Q.** How did you derive an equity risk premium of 4.79 percent
2 based on authorized ROEs for gas utilities?
3

4 **A.** The equity risk premium of 4.79 percent shown on page 10 of
5 Document No. 4 is the result of a regression analysis based
6 on regulatory awarded ROEs related to the yields on Moody's
7 A2-rated public utility bonds, and contains the graphical
8 results of a regression analysis of 848 rate cases for
9 distribution natural gas utilities, which were fully
10 litigated during the period from January 1, 1980 through
11 January 15, 2025. It shows the implicit equity risk premium
12 relative to the yields on A2-rated public utility bonds
13 immediately prior to the issuance of each regulatory
14 decision. It is readily discernible that there is an inverse
15 relationship between the yield on A2-rated public utility
16 bonds and equity risk premiums. In other words, as interest
17 rates decline, the equity risk premium rises and vice versa,
18 a result consistent with financial literature on the
19 subject.¹⁵ I used the regression results to estimate the
20 equity risk premium applicable to the projected yield on
21 Moody's A2-rated public utility bonds. Given the expected
22 A2-rated utility bond yield of 5.60 percent, it can be
23 calculated that the indicated equity risk premium applicable
24 to that bond yield is 4.79 percent.
25

1 **Q.** What is your conclusion of equity risk premium for use in
2 your total market approach RPM for the Utility Proxy Group?

3
4 **A.** The equity risk premium I applied to the Utility Proxy Group
5 is 5.18 percent, which is the average of the beta-adjusted
6 equity risk premium for the Utility Proxy Group, the S&P
7 Utilities Index, and the authorized return utility equity
8 risk premiums of 5.92 percent, 4.83 percent, and 4.79 percent,
9 respectively, as shown on page 5 of Document No. 4.

10
11 **Q.** What is the indicated RPM common equity cost rate based on
12 the total market approach?

13
14 **A.** As shown on line 7, page 1 of Document No. 4, I calculated a
15 common equity cost rate of 10.84 percent for the Utility Proxy
16 Group based on the total market approach RPM, or 10.85 percent
17 excluding the PRPM equity risk premium.

18
19 **C.** THE CAPITAL ASSET PRICING MODEL

20 **Q.** Please explain the theoretical basis of the CAPM.

21
22 **A.** CAPM theory defines risk as the co-variability of a security's
23 returns with the market's returns as measured by the beta
24 (β). A beta less than 1.0 indicates lower variability than
25 the market as a whole, while a beta greater than 1.0 indicates

greater variability than the market.

The CAPM assumes that all non-market or unsystematic risk can be eliminated through diversification. The risk that cannot be eliminated through diversification is called market, or systematic, risk. In addition, the CAPM presumes that investors only require compensation for systematic risk, which is the result of macroeconomic and other events that affect the returns on all assets. The model is applied by adding a risk-free rate of return to a market risk premium, which is adjusted proportionately to reflect the systematic risk of the individual security relative to the total market as measured by the beta. The traditional CAPM model is expressed as:

$$R_s = R_f + \beta (R_m - R_f)$$

Where:

R_s = Return rate on the common stock;

R_f = Risk-free rate of return;

R_m = Return rate on the market as a whole; and

β = Adjusted beta (volatility of the security relative to the market as a whole).

Numerous tests of the CAPM have measured the extent to which security returns and beta are related as predicted by the CAPM, confirming its validity. The empirical CAPM ("ECAPM")

reflects the reality that while the results of these tests support the notion that the beta is related to security returns, the empirical Security Market Line ("SML") described by the CAPM formula is not as steeply sloped as the predicted SML.¹⁶ The ECAPM reflects this empirical reality.

The ECAPM is a well-established model that has been relied on in both academic and regulatory settings. Fama & French clearly state regarding the figure in Document No. 11, below, that "[t]he returns on the low beta portfolios are too high, and the returns on the high beta portfolios are too low."¹⁷

In addition, Morin observes that while the results of these tests support the notion that beta is related to security returns, the empirical SML described by the CAPM formula is not as steeply sloped as the predicted SML. Morin states:

With few exceptions, the empirical studies agree that ... low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted.¹⁸

* * *

Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:

$$K = RF + x (RM - RF) + (1-x) \beta (RM - RF)$$

where x is a fraction to be determined empirically.
 The value of x that best explains the observed
 relationship [is] $\text{Return} = 0.0829 + 0.0520 \beta$ is
 between 0.25 and 0.30. If $x = 0.25$, the equation
 becomes:

$$K = RF + 0.25(RM - RF) + 0.75 \beta (RM - RF)^{19}$$

Fama & French provide similar support for the ECAPM when they
 state:

The early tests firmly reject the Sharpe-Lintner
 version of the CAPM. There is a positive relation
 between beta and average return, but it is too
 'flat.'... The regressions consistently find that the
 intercept is greater than the average risk-free
 rate... and the coefficient on beta is less than the
 average excess market return... This is true in the
 early tests... as well as in more recent cross-
 section regressions tests, like Fama and French
 (1992).²⁰

Finally, Fama & French further note:

Confirming earlier evidence, the relation between
 beta and average return for the ten portfolios is
 much flatter than the Sharpe-Lintner CAPM predicts.
 The returns on low beta portfolios are too high,

1 and the returns on the high beta portfolios are too
2 low. For example, the predicted return on the
3 portfolio with the lowest beta is 8.3 percent per
4 year; the actual return as 11.1 percent. The
5 predicted return on the portfolio with the t beta
6 is 16.8 percent per year; the actual is 13.7
7 percent.²¹

8
9 Clearly, the justification from Morin and Fama & French, along
10 with their reviews of other academic research on the CAPM,
11 validate the use of the ECAPM. In view of theory and
12 practical research, I have applied both the traditional CAPM
13 and the ECAPM to the companies in the Utility Proxy Group and
14 averaged the results.

15
16 **Q.** What betas did you use in your CAPM analysis?

17
18 **A.** With respect to beta, I considered two methods of calculation:
19 (1) the average of the betas of the respective proxy group
20 companies as reported by Bloomberg, and (2) the average of
21 the betas of the respective proxy group companies as reported
22 by *Value Line*. While both of those services adjust their
23 calculated (or "raw") betas to reflect the tendency of beta
24 to regress to the market mean of 1.00, *Value Line* calculates
25 beta over a five-year period, while Bloomberg's calculation

1 is based on two years of data.

2
3 **Q.** Please describe your selection of a risk-free rate of return.

4
5 **A.** As discussed previously, the risk-free rate adopted for both
6 applications of the CAPM is 4.44 percent. This risk-free
7 rate is based on the average of the *Blue Chip* consensus
8 forecast of the expected yields on 30-year U.S. Treasury bonds
9 for the six quarters ending with the second calendar quarter
10 of 2026, and long-term projections for the years 2026 to 2030
11 and 2031 to 2035.

12
13 **Q.** Please explain the estimation of the expected risk premium
14 for the market used in your CAPM analysis.

15
16 **A.** The basis of the market risk premium is explained in detail
17 in note 1 on page 2 of Document No. 5. As discussed above,
18 the market risk premium is derived from an average of three
19 historical data-based market risk premiums, one *Value Line*
20 data-based market risk premium, and one *Value line*,
21 Bloomberg, and S&P Capital IQ data-based market risk premium.

22
23 The long-term income return on U.S. Government securities of
24 4.99 percent was deducted from the monthly historical total
25 market return of 12.29 percent, which results in an historical

1 market equity risk premium of 7.31 percent. I applied a
2 linear OLS regression to the monthly annualized historical
3 returns on the S&P 500 relative to historical yields on long-
4 term U.S. Government securities. That regression analysis
5 yielded a market equity risk premium of 8.06 percent. The
6 PRPM market equity risk premium is 8.45 percent and is derived
7 using the PRPM relative to the yields on long-term U.S.
8 Treasury securities from January 1926 through December 2024,
9 as shown on page 2 of Document No. 5.

10
11 The *Value Line*-derived forecasted total market equity risk
12 premium is derived by deducting the forecasted risk-free rate
13 of 4.44 percent, discussed above, from the *Value Line*
14 projected total annual market return of 10.79 percent,
15 resulting in a forecasted total market equity risk premium of
16 6.35 percent.

17
18 The S&P 500 projected market equity risk premium using *Value*
19 *Line*, Bloomberg, and S&P Capital IQ data is derived by
20 subtracting the projected risk-free rate of 4.44 percent from
21 the projected total return of the S&P 500 of 16.33 percent.
22 The resulting market equity risk premium is 11.89 percent.

23
24 These five market risk premium measures, when averaged,
25 result in an average total market equity risk premium of 8.41

1 percent. Excluding the PRPM from the calculation of the
2 market risk premium produces an 8.40 percent estimate.

3
4 **Q.** What are the results of your application of the traditional
5 and empirical CAPM to the Utility Proxy Group?

6
7 **A.** As shown on page 1 of Document No. 5, the mean result of my
8 CAPM/ECAPM applied to the Utility Proxy Group is 11.20
9 percent, the median is 11.16 percent, and the average of the
10 two is 11.18 percent. Excluding the PRPM from the calculation
11 of the market risk premium, the mean result of my CAPM/ECAPM
12 applied to the Utility Proxy Group is 11.19 percent, the
13 median is 11.15 percent, and the average of the two is 11.17
14 percent. Consistent with my reliance on the average of mean
15 and median DCF results discussed above, the indicated common
16 equity cost rate for each group using the CAPM/ECAPM is 11.18
17 percent and 11.17 percent excluding the PRPM.

18
19 **D.** COMMON EQUITY COST RATES FOR A PROXY GROUP OF DOMESTIC,
20 NON-PRICE REGULATED COMPANIES BASED ON THE DCF, RPM, AND
21 CAPM

22 **Q.** Why do you also consider a proxy group of domestic, non-price
23 regulated companies?

24
25 **A.** Although I am not an attorney, my interpretation of the *Hope*

1 and *Bluefield* cases is that they did not specify that
2 comparable risk companies had to be utilities. Since the
3 purpose of rate regulation is to be a substitute for
4 marketplace competition, non-price regulated firms operating
5 in the competitive marketplace make an excellent proxy if
6 they are comparable in total risk to the Utility Proxy Group
7 being used to estimate the cost of common equity. The
8 selection of such domestic, non-price regulated competitive
9 firms theoretically and empirically results in a proxy group
10 which is comparable in total risk to the Utility Proxy Group,
11 since all of these companies compete for capital in the exact
12 same markets.

13
14 **Q.** How did you select non-price regulated companies that are
15 comparable in total risk to the Utility Proxy Group?
16

17 **A.** In order to select a proxy group of domestic, non-price
18 regulated companies similar in total risk to the Utility Proxy
19 Group, I relied on betas and related statistics derived from
20 *Value Line* regression analyses of weekly market prices over
21 the most recent 260 weeks (*i.e.*, five years). As shown on
22 Document No. 6, these selection criteria resulted in a proxy
23 group of 49 domestic, non-price regulated firms comparable in
24 total risk to the Utility Proxy Group. Total risk is the sum
25 of non-diversifiable market risk and diversifiable company-

specific risks. The criteria used in selecting the domestic, non-price regulated firms were:

- They must be covered by *Value Line* (Standard Edition);
- They must be domestic, non-price regulated companies, i.e., not utilities;
- Their unadjusted betas must lie within plus or minus two standard deviations of the average unadjusted beta of the Utility Proxy Group; and
- The residual standard errors of the *Value Line* regressions, which gave rise to the unadjusted betas, must lie within plus or minus two standard deviations of the average residual standard error of the Utility Proxy Group.

Betas measure market, or systematic, risk, which is not diversifiable. The residual standard errors of the regressions measure each firm's company-specific, diversifiable risk. Companies that have similar betas and similar residual standard errors resulting from the same regression analyses have similar total investment risk.

Q. Did you calculate the common equity cost rate using the DCF model, the RPM, and the CAPM for the Non-Price Regulated Proxy Group?

1 A. Yes. Because the DCF model, RPM, and CAPM have been applied
2 in an identical manner as described above, I will not repeat
3 the details of the rationale and application of each model.
4 One exception is in the application of the RPM, where I did
5 not use public utility-specific equity risk premiums.

6
7 Page 2 of Document No. 7 derives the constant growth DCF model
8 common equity cost rate. As shown, the indicated common
9 equity cost rate, using the constant growth DCF for the Non-
10 Price Regulated Proxy Group comparable in total risk to the
11 Utility Proxy Group, is 11.37 percent.

12
13 Pages 3 through 5 of Document No. 7 contain the data and
14 calculations that support the 12.44 percent RPM common equity
15 cost rates (12.42 percent excluding the PRPM). As shown on
16 line 1, page 3 of Document No. 7, the consensus prospective
17 yield on Moody's Baa2-rated corporate bonds for the six
18 quarters ending in the second quarter of 2026, and for the
19 years 2026 to 2030 and 2031 to 2035, is 6.01 percent.²² Since
20 the Non-Price Regulated Proxy Group has an average Moody's
21 long-term issuer rating of Baal, a downward adjustment of
22 0.09 percent to the projected Baa2-rated corporate bond yield
23 is necessary to reflect a difference in ratings which results
24 in a projected Baal-rated corporate bond yield of 5.92
25 percent.

1 When beta-adjusted risk premiums of 6.52 percent and 6.50
2 excluding the PRPM (as derived on page 5 of Document No. 7)
3 relative to the Non-Price Regulated Proxy Group are added to
4 the adjusted prospective Baal bond yield of 5.92 percent, the
5 indicated RPM common equity cost rates are 12.44 percent and
6 12.42 percent, respectively.

7
8 Page 6 of Document No. 7 contains the inputs and calculations
9 that support my indicated CAPM/ECAPM common equity cost rate
10 of 11.86 percent. Page 7 of Document No. 7 contains the
11 inputs and calculations that support my indicated CAPM/ECAPM
12 common equity cost rate of 11.85 percent excluding the PRPM.

13
14 **Q.** What is the cost rate of common equity based on the Non-Price
15 Regulated Proxy Group comparable in total risk to the Utility
16 Proxy Group?

17
18 **A.** As shown on page 1 of Document No. 7, the results of the
19 common equity models applied to the Non-Price Regulated Proxy
20 Group - which group is comparable in total risk to the Utility
21 Proxy Group - are as follows: 11.37 percent (DCF), 12.44
22 percent (RPM), and 11.86 percent (CAPM). Excluding the PRPM
23 the estimates are as follows: 11.37 percent (DCF), 12.42
24 percent (RPM), and 11.85 percent (CAPM).

1 The average of the mean and median of these models is 11.88
2 percent and 11.87 percent excluding the PRPM, which I used as
3 the indicated common equity cost rates for the Non-Price
4 Regulated Proxy Group. To be conservative, I do not consider
5 the results of this analysis directly in my determination of
6 the reasonable range of ROEs attributable to the Utility Proxy
7 Group.

8
9 **VII. RANGE OF COMMON EQUITY COST RATES BEFORE ADJUSTMENTS**

10 **Q.** What is the range of indicated common equity cost rates
11 produced by your ROE models?

12
13 **A.** By applying multiple cost of common equity models to the
14 Utility Proxy Group and the Non-Price Regulated Proxy Group,
15 the indicated range of common equity cost rates attributable
16 to the Utility Proxy Group before any relative risk
17 adjustments is between 10.50 percent and 11.18 percent, as
18 shown on Document No. 1, page 2 (between 10.50 percent and
19 11.17 percent excluding the PRPM). I used multiple cost of
20 common equity models as primary tools in arriving at my
21 recommended common equity cost rate, because no single model
22 is so inherently precise that it can be relied on to the
23 exclusion of other theoretically sound models. Using
24 multiple models adds reliability to the estimated common
25 equity cost rate, with the prudence of using multiple cost of

1 common equity models supported in both the financial
2 literature and regulatory precedent.

3
4 As will be discussed below, Peoples has greater risk than the
5 Utility Proxy Group. Because of this, the indicated range of
6 model results based on the Utility Proxy Group must be
7 adjusted to reflect Peoples' greater relative risk.

8
9 **VIII. ADJUSTMENTS TO THE COMMON EQUITY COST RATE**

10 **Q.** What company-specific business risks did you consider for
11 your relative risk analysis?

12
13 **A.** As detailed below, I have considered flotation costs. I also
14 considered Peoples' smaller relative size.

15
16 **A.** FLOTATION COSTS

17 **Q.** What are flotation costs?

18
19 **A.** Flotation costs are those costs associated with the sale of
20 new issuances of common stock. They include market pressure
21 and the mandatory unavoidable costs of issuance (e.g.,
22 underwriting fees and out-of-pocket costs for printing,
23 legal, registration, etc.). For every dollar raised through
24 debt or equity offerings, the company receives less than one
25 full dollar in financing.

1 **Q.** Has the Commission supported the use of flotation cost
2 adjustments in past rate proceedings?

3
4 **A.** Yes. In Peoples' recent 2023 rate proceeding the Commission
5 noted:

6 In PGS's last rate case in 2008, we did not make a
7 specific adjustment for flotation costs, but in our
8 order we stated that we have traditionally recognized
9 a reasonable adjustment for flotation costs in the
10 determination of the investor required return...We find
11 witness D'Ascendis's method to determine the flotation
12 cost is credible and provided persuasive evidence for
13 his recommendation to include a flotation cost of 9
14 basis points.²³

15
16 **Q.** Why is it important to recognize flotation costs in the
17 allowed common equity cost rate?

18
19 **A.** It is important because there is no other mechanism in the
20 ratemaking paradigm through which such costs can be
21 recognized and recovered. Because these costs are real,
22 necessary, and legitimate, recovery of these costs should be
23 permitted. As noted by Morin:

24 The costs of issuing these securities are just as
25 real as operating and maintenance expenses or costs

1 incurred to build utility plants, and fair
2 regulatory treatment must permit the recovery of
3 these costs....

4 The simple fact of the matter is that common equity
5 capital is not free...[Flotation costs] must be
6 recovered through a rate of return adjustment.²⁴
7

8 **Q.** Should flotation costs be recognized whether or not there is
9 a stock issuance of additional shares during the test year?
10

11 **A.** Yes. As noted above, there is no mechanism to recapture such
12 costs in the ratemaking paradigm other than an adjustment to
13 the allowed common equity cost rate. Flotation costs are
14 charged to capital accounts and are not expensed on a
15 utility's income statement. As such, flotation costs are
16 analogous to capital investments, albeit negative, reflected
17 on the balance sheet. Recovery of capital investments relates
18 to the expected useful lives of the investment. Since common
19 equity has a very long and indefinite life (assumed to be
20 infinity in the standard regulatory DCF model), flotation
21 costs should be recovered through an adjustment to common
22 equity cost rate, even when there has not been an issuance
23 during the test year, or in the absence of an expected
24 imminent issuance of additional shares of common stock.
25

1 Historical flotation costs are a permanent loss of investment
2 to the utility and should be accounted for. When any company,
3 including a utility, issues common stock, flotation costs are
4 incurred for legal, accounting, printing fees and the like.
5 For each dollar of issuing market price, a small percentage
6 is expensed and is permanently unavailable for investment in
7 utility rate base. Since these expenses are charged to
8 capital accounts and not expensed on the income statement,
9 the only way to restore the full value of that dollar of
10 issuing price with an assumed investor required return of
11 10.00 percent is for the net investment, \$0.95, to earn more
12 than 10.00 percent to net back to the investor a fair return
13 on that dollar. In other words, if a company issues stock at
14 \$1.00 with 5.00 percent in flotation costs, it will net \$0.95
15 in investment. Assuming the investor in that stock requires
16 a 10.00 percent return on his or her invested \$1.00 (*i.e.*, a
17 return of \$0.10), the company needs to earn approximately
18 10.5 percent on its invested \$0.95 to receive a \$0.10 return.

19
20 **Q.** Do the common equity cost rate models you have used already
21 reflect investors' anticipation of flotation costs?

22
23 **A.** No. All of these models assume no transaction costs. The
24 literature is quite clear that these costs are not reflected
25 in the market prices paid for common stocks. For example,

1 Brigham and Daves confirm this and provide the methodology
2 utilized to calculate the flotation adjustment.²⁵ In
3 addition, Morin confirms the need for such an adjustment even
4 when no new equity issuance is imminent.²⁶ Consequently, it
5 is proper to include a flotation cost adjustment when using
6 cost of common equity models to estimate the common equity
7 cost rate.

8
9 Q. How did you calculate the flotation cost allowance?

10
11 A. I modified the DCF calculation to provide a dividend yield
12 that would reimburse investors for issuance costs in
13 accordance with the method cited in literature by Brigham and
14 Daves, as well as by Morin. The flotation cost adjustment
15 recognizes the actual costs of issuing equity that were
16 incurred by Peoples' parent, Emera, in its equity issuances
17 since 2016 when it acquired Peoples. Based on the issuance
18 costs shown on Document No. 8, an adjustment of 0.08 percent
19 is required to reflect the flotation costs applicable to the
20 Utility Proxy Group.

21
22 B. SIZE ADJUSTMENT

23 Q. Does Peoples' smaller size relative to the Utility Proxy Group
24 companies increase its business risk?

1 **A.** Yes. Peoples' smaller size relative to the Utility Proxy
2 Group companies indicates greater relative business risk for
3 the company because, all else being equal, size has a material
4 bearing on risk.

5
6 Size affects business risk because smaller companies
7 generally are less able to cope with significant events that
8 affect sales, revenues, and earnings. For example, smaller
9 companies face more risk exposure to business cycles and
10 economic conditions, both nationally and locally.
11 Additionally, the loss of revenues from a few larger customers
12 would have a greater effect on a small company than on a
13 bigger company with a larger, more diverse, customer base.

14
15 As further evidence that smaller firms are riskier, investors
16 generally demand greater returns from smaller firms to
17 compensate for less marketability and liquidity of their
18 securities. Kroll's Cost of Capital Navigator: U.S. Cost of
19 Capital Module ("Kroll") discusses the nature of the small-
20 size phenomenon, providing an indication of the magnitude of
21 the size premium based on several measures of size. In
22 discussing "Size as a Predictor of Equity Returns," Kroll
23 states:

24 The size effect is based on the empirical
25 observation that companies of smaller size are

1 associated with greater risk and, therefore, have
2 greater cost of capital [sic]. The "size" of a
3 company is one of the most important risk elements
4 to consider when developing cost of equity capital
5 estimates for use in valuing a business simply
6 because size has been shown to be a *predictor* of
7 equity returns. In other words, there is a
8 significant (negative) relationship between size
9 and historical equity returns - as size *decreases*,
10 returns tend to *increase*, and vice versa. [Footnote
11 omitted] [Emphasis in original].²⁷

12
13 Furthermore, in *The Capital Asset Pricing Model: Theory and*
14 *Evidence*, Fama & French note size is indeed a risk factor
15 which must be reflected when estimating the cost of common
16 equity. On page 38, they note:

17 . . . the higher average returns on small stocks
18 and high book-to-market stocks reflect unidentified
19 state variables that produce undiversifiable risks
20 (covariances) in returns not captured in the market
21 return and are priced separately from market
22 betas.²⁸

23
24 Based on this evidence, Fama & French proposed their three-
25 factor model which includes a size variable in recognition of

1 the effect size has on the cost of common equity.

2
3 Also, it is a basic financial principle that the use of funds
4 invested, and not the source of funds, is what gives rise to
5 the risk of any investment.²⁹ Eugene Brigham, a well-known
6 authority, states:

7 A number of researchers have observed that
8 portfolios of small-firms (sic) have earned
9 consistently higher average returns than those of
10 large-firm stocks; this is called the "small-firm
11 effect." On the surface, it would seem to be
12 advantageous to the small firms to provide average
13 returns in a stock market that are higher than those
14 of larger firms. In reality, it is bad news for
15 the small firm; **what the small-firm effect means is**
16 **that the capital market demands higher returns on**
17 **stocks of small firms than on otherwise similar**
18 **stocks of the large firms.** [Emphasis added]³⁰

19
20 Consistent with the financial principle of risk and return
21 discussed above, increased relative risk due to small size
22 must be considered in the allowed rate of return on common
23 equity. Therefore, the Commission's authorization of a cost
24 rate of common equity in this proceeding must appropriately
25 reflect the unique risks of Peoples, including its smaller

1 relative size, which is justified and supported above by
2 evidence in the financial literature.

3
4 **Q.** Is there a way to quantify a relative risk adjustment due to
5 Peoples' smaller size relative to the Utility Proxy Group?

6
7 **A.** Yes. Peoples has greater relative risk than the average
8 utility in the Utility Proxy Group because of its smaller
9 size compared with the utilities in those groups, as measured
10 by an estimated market capitalization of common equity for
11 the company.

12
13 As shown in page 1 of Document No. 8, Peoples' estimated
14 market capitalization is approximately \$2.693 billion,
15 compared with the market capitalization of the average
16 companies in the Utility Proxy Group of approximately \$8.011
17 billion as of January 15, 2025. The average company in the
18 Utility Proxy Group have a market capitalization of 3.0 times
19 the size of Peoples' estimated market capitalization.

20
21 As a result, it is necessary to upwardly adjust the indicated
22 range of common equity cost rates attributable to the Utility
23 Proxy Group to reflect the company's greater risk due to their
24 smaller relative size. The determination is based on the
25 size premiums for portfolios of New York Stock Exchange,

American Stock Exchange, and NASDAQ listed companies ranked by deciles for the 1926 to 2024 period. The average size premium for the Utility Proxy Group with a market capitalization of \$8,011.11 million falls in the 3rd decile, while the Company's estimated market capitalization of \$2,692.85 million places it in the 6th decile. The size premium spread between the 3rd decile and the 6th decile is 0.60 percent. Even though a 0.60 percent upward size adjustment is indicated, I applied a size premium of 0.20 percent to the company's indicated common equity cost rate in order to be conservative.

Q. Since Peoples is an indirectly owned operating subsidiary of Emera, why is the size of the total company not more appropriate to use when determining a business risk adjustment?

A. The return derived in this proceeding will not apply to Emera's operations as a whole, but only to Peoples. Emera is the sum of its constituent parts, including those constituent parts' ROEs. Potential investors in Emera are aware that it is a combination of operations in each state, and that each state's operations experience the operating risks specific to their jurisdiction. The market's expectation of Emera's return is commensurate with the realities of Emera's

1 composite operations in each of the states in which it
2 operates.

3
4 **Q.** What is your conclusion regarding an adjustment for the
5 company's specific business risks?

6
7 **A.** Based on my analysis, a business risk adjustment of 0.20
8 percent is appropriate for Peoples to account for the
9 company's smaller size. Even though my analysis of the
10 company's smaller size relative to the Utility Proxy Group
11 indicates an upward size adjustment of 0.60 percent, I
12 conservatively applied an overall business risk adjustment of
13 0.20 percent to the results as shown on page 2 of Document
14 No. 1.

15
16 **Q.** Please summarize your adjustments to the indicated ranges of
17 ROEs applicable to the Utility Proxy Group.

18
19 **A.** The summary of my adjustments for the company-specific
20 business risks and flotation costs to the indicated ranges of
21 ROEs applicable to the Utility Proxy Group are summarized in
22 page 2 of Document No. 1. As shown, the range of ROEs
23 applicable to the company is between 10.78 percent and 11.46
24 percent, or 10.78 percent and 11.45 percent excluding the
25 PRPM.

1 **IX. CONCLUSION**

2 **Q.** What is your recommended ROE for Peoples?

3
4 **A.** Given the indicated ROE range applicable to the company of
5 10.78 percent to 11.46 percent (10.78 percent to 11.45 percent
6 excluding the PRPM), I conclude that an appropriate ROE for
7 the company is 11.10 percent.
8

9 **Q.** In your opinion, is your proposed ROE of 11.10 percent fair
10 and reasonable to Peoples and its customers?
11

12 **A.** Yes, it is.
13

14 **Q.** In your opinion, is Peoples' proposed capital structure
15 consisting of 41.69 percent long-term debt and 54.70 percent
16 common equity fair and reasonable?
17

18 **A.** Yes, it is.
19

20 **Q.** Does this conclude your prepared direct testimony?
21

22 **A.** Yes.
